*Docket Number: 20-AAER-02*

## **Clarification Request**

Please provide clarification to the proposed express term requirements as related to the following:

1. Filter's packaging labeling: Many retailers / distributors buy a master pack of 10, 20 or more filters. Each of these filters are individually packaged and identified then put into a big brown box with limited information (usually just the part's type, filter number and qty). Would this master pack box need to be identified as per CEC's proposed requirement (info from Table Z-1 or Z-2) provided that each filter inside would be individually packaged and would include such information on their individual packaging?

2. Are air filters serving unitary residential supply ventilation fans or unitary residential heat or energy recovery ventilators included within the scope of the definition as shown below? The definition of air filter applies to residential ducted forced-air ventilation, heating or cooling systems. Would forced-air systems include unitary residential supply ventilation fans or unitary residential heat or energy recovery ventilators? For your reference, following is a link to an example of a unitary residential supply ventilation fan: <https://www.broan-nutone.com/en-us/product/freshairsystems/fin-180b-hw>. Following is a link to examples of unitary residential heat or energy recovery ventilators: <https://www.broan-nutone.com/en-us/fresh-air-systems/residential>.

For reference, following is the definition of air filter proposed by the draft express terms. "Air filter" means a disposable or reusable air-cleaning device with air filtering media encased in a frame of a nominal depth of no greater than 6.0 inches used for removing particulate matter from the air and designed for installation in residential ducted forced-air ventilation, heating or cooling systems.

(1) Air filter does not include:

(A) Electronic air cleaners;

(B) Filter media sold as rolls, i.e. not encased in a frame;

(C) Air filters designed and sold exclusively for installation in products other than residential ducted forced-air systems.
