Asphalt Pavement Rejuvenation

May 18, 2022

The City will begin sealing and rejuvenating areas of asphalt pavement at 14 locations the week of May 23, 2022, weather permitting. The project, which is estimated to take eight to twelve days to complete, is expected to seal approximately 32,600 square yards of pavement.

The project involves spraying a clear liquid sealant on the street which penetrates, rejuvenates, and seals the asphalt surface and binder by replenishing the lost oils and resins to the pavement, restoring its original desirable properties while improving the aggregate/asphalt bond. This process lengthens the pavement life and seals it against water infiltration, an important step in preserving our pavement infrastructure.

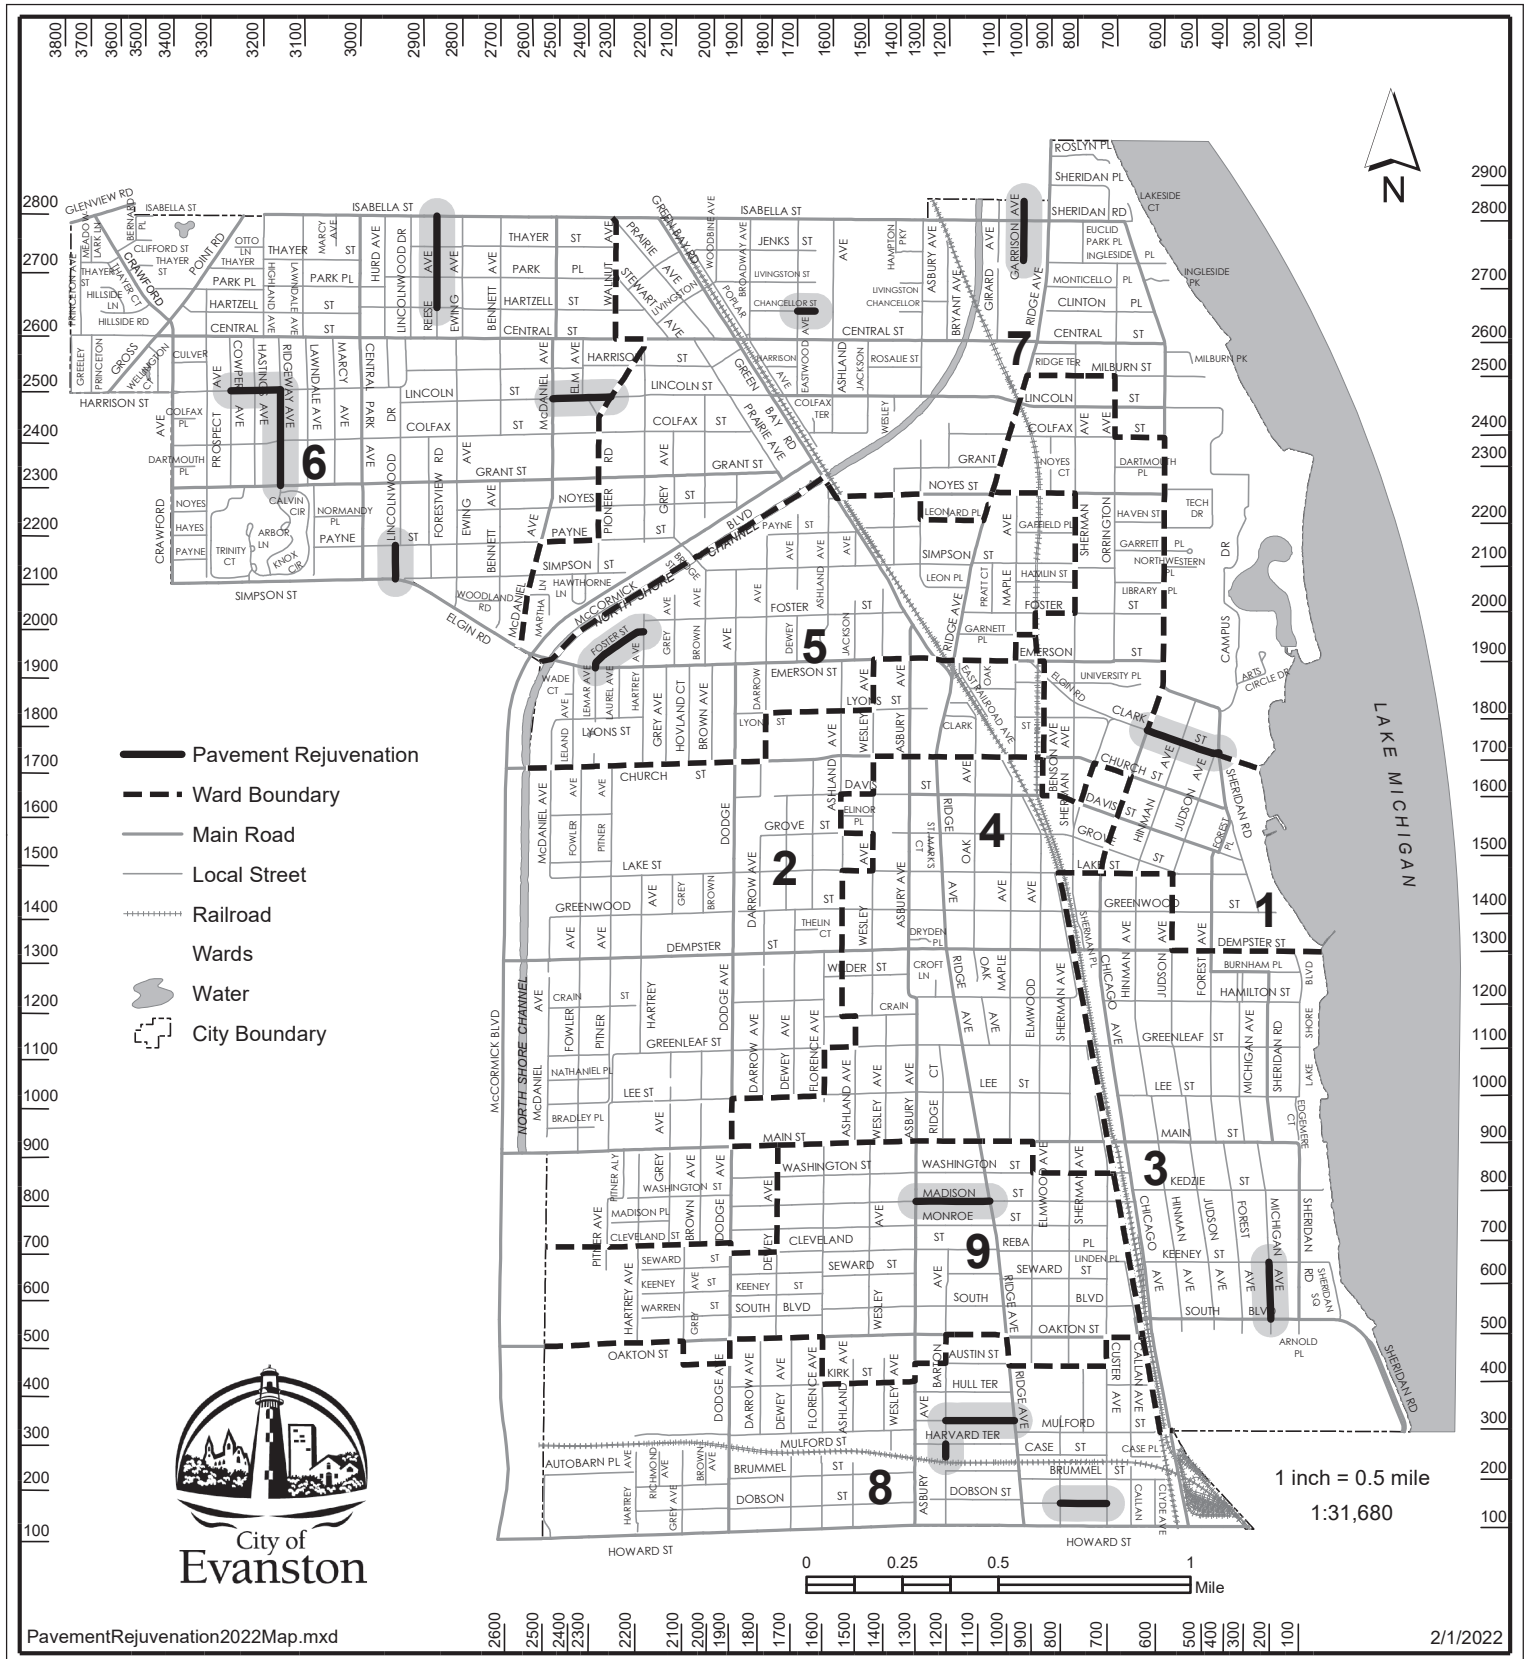

Once sealant is applied, a coating of limestone screenings or sand will be spread for traction while the material is absorbed. The street will be open for traffic approximately one hour after all steps of the application are finished. Street sweeping of the limestone/sand typically occurs the day after the pavement sealing is done.

Drivers should expect brief street closures in specific work zones as the work crews apply the sealant/rejuvenator. The street will open for traffic approximately one hour after all steps of the application are finished. **"No Parking"** restrictions, which will be posted 48 hours in advance, should be short in duration and specific to each work area. The work in each location is anticipated to take two to four hours to complete.

The contractor for this project is Corrective Asphalt Materials, 300 Daniel Boone Trail Roxana, IL.

The project is monitored by the City's Public Services Bureau. For questions and concerns, contact the Project Management Supervisor William Reed III, at 847-859-7725. General questions regarding street maintenance should be directed to the Acting Public Works Agency Director, at 3-1-1.
