The agencies also considered, but are not adopting, an alternative approach of using a single set of distribution metrics that combine performance for low-income and moderate-income borrowers, respectively. The agencies considered, as some commenters noted, that such an alternative could simplify the Retail Lending Test by reducing the number of metrics, benchmarks, and performance ranges associated with each product line. However, on balance, the agencies believe that the separate distribution analyses for different income categories, while adding additional metrics and steps to the small business and small farm evaluation, leads to a more robust evaluation that provides transparency about lending performance to a bank's entire community.

Separate evaluation of retail lending to different small business and small farm revenue categories. As noted above, under the final rule, the agencies will analyze a bank's borrower distribution of lending to small businesses and to small farms in two separate gross annual revenue categories: businesses and farms with gross annual revenue of \$250,000 or less, and businesses and farms with gross annual revenue greater than \$250,000 but less than or equal to \$1 million. This is in contrast to the current approach, which analyzes a bank's distribution of lending to a single gross annual revenue category of \$1 million or less. As discussed in the agencies' proposal, the agencies believe that firms with gross annual revenue of \$250,000 or less have significant unmet credit needs and challenges securing financing.⁹²² Consistent with suggestions by some commenters, the agencies have determined that this additional category will better enable the agencies to understand the extent of small business and small farm credit needs served by banks. Conversely, the agencies believe that an approach with a single revenue category would allow a bank to achieve strong performance through serving only businesses and

⁹²² See 87 FR at 33938 (discussing the Federal Reserve's 2022 Small Business Credit Survey).

farms with gross annual revenues of between \$250,000 and \$1 million, and not meeting the needs of relatively smaller small businesses. Similar to the determination to separate low- and moderate-income categories discussed above, the agencies believe that the additional complexity of separate distribution analyses for different gross annual revenue categories is worth the benefits of a more robust evaluation that provides needed transparency about lending performance to a bank's entire community. Further, the agencies note that the final rule approach of separately evaluating a bank's small business and small farm lending to small businesses and small farms of different revenue categories is no more complex than separately evaluating a bank's closed-end home mortgage and automobile lending to borrowers of different incomes. The section-by-section analysis of final § __.42(a)(1) discusses the data collection, maintenance, and reporting provisions that will enable the agencies to analyze small business and small farm lending borrower distributions for both of the gross annual revenue categories described above.

Regarding comments that separately evaluating loans to businesses with gross annual revenue of \$250,000 or less could raise safety and soundness concerns, the agencies note that CRA does not require a bank to originate or purchase loans that are inconsistent with its safe and sound operation, and consideration of the constraints of safe and sound banking practices will be considered as part of a bank's performance context, pursuant to § __.21(d)(1), as warranted. As a result, in the event that a bank for which small business lending is a major product line is unable to serve businesses with gross annual revenue of under \$250,000 due to safety and soundness considerations, the agencies would take these circumstances into account when evaluating the bank's Retail Lending Test performance. In addition, the agencies believe that the design of the Borrower Market Benchmark helps to ensure that the Retail Lending Test does not encourage lending that is inconsistent with safe and sound banking practices. Specifically, the Borrower Market Benchmark is based on the share of loans made to businesses or farms by other lenders. As a result, a bank's performance expectations in a particular Retail Lending Test Area reflect the credit needs and opportunities associated with firms in that area that received a loan. In addition, the agencies also note that, as discussed in the section-by-section analysis of § __.22(f), the multiplier for "Low Satisfactory" performance based on the market benchmarks would be 80 percent. As a result, banks that are below the Borrower Market Benchmark by as much as 20 percentage points would receive at least a "Low Satisfactory" supporting conclusion for their lending to firms with revenue of under \$250,000.

Small business and small farm revenue thresholds— alternative thresholds considered. In finalizing the proposed approach of creating separate revenue categories based on gross annual revenue thresholds of \$250,000 and \$1 million, the agencies also considered, but declined to adopt, alternative gross annual revenue threshold levels suggested by commenters, such as a threshold of \$100,000 or \$500,000 instead of \$250,000, and a threshold of \$2 million instead of \$1 million.

Regarding the final rule gross annual revenue threshold of \$250,000, the agencies considered the potential benefits and tradeoffs of selecting an alternative threshold either higher or lower than the proposed level and believe that the proposed level appropriately balances the agencies' policy objectives. The agencies determined that a lower threshold could emphasize lending to the businesses and farms with the greatest unmet credit needs. According to the *2023 Report on Employer Firms: Findings from the 2022 Small Business Credit Survey*, employer firms with total annual revenues less than \$100,000 were substantially more likely to experience difficulties

obtaining financing than larger employer firms. However, based on the set of businesses included in the survey data, these businesses are less likely to be employers, which may indicate that a lower threshold could detract focus from small businesses that are employers and that have unmet credit needs. Furthermore, employer firms with total annual revenues less than \$250,000 also reported a greater likelihood of experiencing difficulties obtaining financing than larger employer firms, suggesting unmet credit needs among this group as well.⁹²³

Additionally, the agencies have considered that lending to businesses and farms with revenue of less than \$100,000 may not align with some bank business models. For example, as noted by at least one commenter, some banks may serve firms with revenues of less than \$100,000 primarily through products that do not qualify as small business loans, such as home equity lines of credit and consumer credit cards. Furthermore, the agencies considered that a gross annual revenue threshold of \$100,000 may not be suitable for analysis in higher cost markets where small business revenues are generally higher.

On the other hand, regarding a higher alternative gross annual revenue threshold level, such as \$500,000, the agencies considered that this category would reduce the emphasis of the Retail Lending Test on smaller firms, which may be more likely to have unmet credit needs that CRA is intended to help address, as discussed above. On balance, the agencies believe that the \$250,000 threshold will emphasize small business credit needs and opportunities while broadly comporting with bank business models and Retail Lending Test Areas.

Regarding commenter suggestions to consider a gross annual revenue threshold of \$2 million or \$2.5 million rather than \$1 million, the agencies believe that the proposed threshold level is appropriate, and that increasing this threshold would reduce the emphasis of evaluations on smaller firms, which the agencies believe may have greater unmet credit needs than relatively larger small businesses and farms, as discussed above. In addition, the agencies considered that the proposed gross annual revenue threshold of \$1 million is consistent with current examination procedures, which evaluate a bank's share of loans to businesses and farms with gross annual revenue of less than \$1 million.

Alternative approaches to evaluating small business and small farm lending borrower distributions. The agencies considered several alternative approaches, suggested by commenters, to evaluating the borrower distributions of a bank's small business and small farm lending. First, the agencies considered, but decline to adopt, suggestions to make the gross annual revenue threshold levels subject to agency discretion, or to incorporate other factors into the distribution analysis beyond the gross annual revenue of the firms served by a bank. For example, regarding commenter feedback on an option that would allow gross annual revenue threshold levels to vary across Retail Lending Test Areas, subject to agency discretion, the agencies believe this would introduce considerable uncertainty and inconsistency into the evaluation process, and that it is preferable to use consistent categories of small businesses and small farms for all CRA examinations. Consistent gross annual revenue categories also have the

⁹²³ See Federal Reserve Banks, *2023 Report on Employer Firms: Findings from the 2022 Small Business Credit Survey*, <https://www.fedsmallbusiness.org/survey/2023/report-on-employer-firms>. The cited data points were drawn from the data appendix of the report, available here: <https://www.fedsmallbusiness.org/survey>.

benefit of providing a bank with clarity and transparency into how its small business and small farm lending will be evaluated.

Second, the agencies also considered comments suggesting that the agencies establish thresholds based on the same criteria or algorithms used by banks to identify unmet credit needs, such as credit scores, financial analysis, and other factors. However, the agencies believe that gross annual revenue is an appropriate way of categorizing small businesses and small farms, and is consistently available. Furthermore, the agencies note that gross annual revenue is used in CRA evaluations currently, and that use of other criteria such as credit scores or other financial characteristics could require additional data reporting and could result in additional burden of adjusting to a new evaluation approach. In addition, the agencies considered that gross annual revenue information will be included in Section 1071 data, and that loans will be reported under Section 1071 based on a gross annual revenue threshold.

Third, the agencies considered giving positive consideration in the borrower distribution analysis to business loans or farm loans made to women-owned or minority-owned businesses or farms, regardless of the size of the business or farm (as measured in gross annual revenues). However, the agencies believe that such an approach would be complex to administer, and would be a departure from the current approach. In addition, the agencies note that the statute requires the agencies to assess a bank's record of meeting the credit needs of its entire community, expressly including low- and moderate-income communities.⁹²⁴

Finally, the agencies considered, but decline to adopt, a third revenue category of businesses and farms with gross annual revenues less than \$100,000. In reaching this determination, the agencies considered the additional complexity that this approach would entail, including metrics, benchmarks, performance ranges, and weights that would apply to the third category. In addition, the agencies believe that a two-category approach affords appropriate flexibility to banks to meet small business and small farm credit needs, while a three-category approach would create more granular and specific performance expectations, including having performance evaluated in a third "middle" revenue category. The agencies believe that a two-category approach appropriately balances limiting complexity while ensuring a robust evaluation of a bank's small business and small farm lending.

Geographic distribution analysis—underserved census tracts. Under the final rule, the agencies evaluate the geographic distribution of a bank's major product lines to low- and moderate-income census tracts, respectively. The agencies considered the alternative or additional approach, suggested by some commenters, of evaluating the geographic distribution of a bank's retail lending in underserved census tracts. However, the agencies determined that evaluating a bank's geographic distributions with respect to low- and moderate-income census tracts leverages the metrics and benchmarks utilized under the current approach. In addition, the agencies note that evaluating a bank's retail lending performance in low- and moderate-income census tracts comports with the statutory requirement that the agencies assess a bank's record of meeting the credit needs of its entire community, *including low- and moderate-income neighborhoods*.⁹²⁵ In contrast, the agencies believe that for purposes of evaluating lending

⁹²⁴ See 12 U.S.C. 2903(a)(1); *see also* 12 U.S.C. 2906(a)(1).

⁹²⁵ See 12 U.S.C. 2903(a)(1); *see also* 12 U.S.C. 2906(a)(1).

distributions under § __.22(e), identifying underserved neighborhoods based on criteria other than income would be a departure from the current approach and would add complexity.

§ __.22(e)(3) Geographic Distribution Measures

The Agencies' Proposal

As discussed above, the agencies proposed to evaluate the geographic distributions of a bank's major product lines by using certain metrics and benchmarks. Specifically, the proposed Geographic Bank Metrics compare the number of a bank's loans in a particular major product line that are located in low-income and moderate-income census tracts, respectively, to the total number of the bank's originated and purchased loans in the major product line in the facility-based assessment area, retail lending assessment area, or outside retail lending area. As discussed in greater detail in the section-by-section analysis of final § __.22(f), the agencies proposed to compare the Geographic Bank Metric for each distribution for each major product line to performance ranges calculated based on two benchmarks: a Geographic Market Benchmark that reflects the aggregate loan originations in low- and moderate-income census tracts across reporting lenders within a facility-based assessment area, retail lending assessment area, or outside retail lending area; and a Geographic Community Benchmark that reflects the potential lending opportunities in low- or moderate-income census tracts within a facility-based assessment area, retail lending assessment area, or outside retail lending area.

Comments Received

The agencies received numerous comments, discussed above, on the use of distribution metrics and benchmarks generally. In addition, the agencies received several comments that specifically addressed the proposed geographic distribution metrics and benchmarks.

Treatment of loans to middle- and upper-income borrowers. The agencies received comments related to the types of loans included in the Geographic Bank Metrics. Some commenters expressed concerns that the geographic distribution analysis as proposed would give positive consideration to home mortgage loans to middle- and upper-income borrowers located in low- and moderate-income census tracts. Commenter recommendations included excluding such loans from consideration to avoid contributing to displacement and gentrification. At least one commenter suggested excluding from consideration retail loans made to non-minority, middle-, and upper-income borrowers to better address displacement and gentrification in low- and moderate-income census tracts.

Use of census tracts. Another commenter stated that, for the home mortgage loan geographic distribution metrics and benchmarks, the agencies should use census block groups instead of census tracts, to avoid overlooking rural census tracts that may include areas of concentrated poverty apparent only at the census block group level.

Final Rule

For the reasons discussed below, the agencies are adopting the geographic distribution metrics and benchmarks generally as proposed.

- Final § __.22(e)(3)(i) provides that for each major product line, a Geographic Bank Metric is calculated pursuant to paragraph III.a of final appendix A.
- Final § __.22(e)(3)(ii) provides that for each major product line except automobile loans, a Geographic Market Benchmark is calculated pursuant to, as applicable, paragraph III.b

of final appendix A for facility-based assessment areas and retail lending assessment areas, and paragraph III.d of final appendix A for outside retail lending areas.

- Final § __.22(e)(3)(iii) provides that for each major product line, a Geographic Community Benchmark is calculated pursuant to, as applicable, paragraph III.c of final appendix A for facility-based assessment areas and retail lending assessment areas, and paragraph III.e of final appendix A for outside retail lending areas.

A summary of these calculations for facility-based assessment area and retail lending assessment areas can be found in the following table for each product line. Following a discussion of some preliminary issues, each of these metrics and benchmarks is discussed in more detail below.

Table 10 of § __.22(e)(3): Summary of Calculations for Geographic Distribution Measures

| Retail Lending Product Line | Geographic Bank Metric Percentage of bank loan originations and purchases in the following categories of designated census tracts out of all bank loans in the product line in the Retail Lending Test Area, by loan count | Geographic Market Benchmark Percentage of all reported loan originations in the following categories of designated census tracts, out of all reported loan originations in the product line in the Retail Lending Test Area, by loan count | Geographic Community Benchmark |
|---|---|---|---|
| Closed-End Home Mortgage Lending | Low-Income Census Tracts | Low-Income Census Tracts | Percentage of owner-occupied housing units in low-income census tracts |
| | Moderate-Income Census Tracts | Moderate-Income Census Tracts | Percentage of owner-occupied housing units in moderate-income census tracts |
| Small Business Lending | Low-Income Census Tracts | Low-Income Census Tracts | Percentage of businesses in low-income census tracts |

| | | | |
|---------------------------|-------------------------------|-------------------------------|---|
| | Moderate-Income Census Tracts | Moderate-Income Census Tracts | Percentage of businesses in moderate-income census tracts |
| Small Farm Lending | Low-Income Census Tracts | Low-Income Census Tracts | Percentage of farms in low-income census tracts |
| | Moderate-Income Census Tracts | Moderate-Income Census Tracts | Percentage of farms in moderate-income census tracts |
| Automobile Lending | Low-Income Census Tracts | Not applicable | Percentage of households in low-income census tracts |
| | Moderate-Income Census Tracts | Not applicable | Percentage of households in moderate-income census tracts |

Note: As discussed further in the section-by-section analysis of § __.22(e)(1), prior to the use of Section 1071 data, the bank metrics and market benchmarks for small business lending are based on loans to businesses with a loan amount of less than \$1 million, and for small farm lending, are based on loans to farms with a loan amount of less than \$500,000. In addition, prior to the use of Section 1071 data, the community benchmarks for small business lending and small farm lending are based on percentages of all businesses and all farms, respectively. Once Section 1071 data is used for CRA evaluations, the bank metrics and market benchmarks for small business and small farm lending will be based on loans to small businesses or small farms (*i.e.*, those with gross annual revenue of less than \$5 million), with no loan amount threshold, and the community benchmarks for small business lending and small farm lending will be based on percentages of small businesses and small farms (*i.e.*, those with gross annual revenue of less than \$5 million), respectively.

Treatment of loans to middle- and upper-income borrowers. The final rule adopts the proposed approach under which the geographic distribution metrics and benchmarks include all originated loans (and, for the geographic distribution metrics, purchased loans) in the major product line, including loans to middle- and upper-income borrowers located in low- and moderate-income census tracts. For example, the numerator of the Geographic Bank Metric for closed-end home mortgage loans in low-income census tracts would include all of a bank’s closed-end home mortgages to borrowers of any income level in low-income census tracts in the Retail Lending Test Area, including loans to middle- and upper-income borrowers. Similarly, the denominator would include all of the bank’s closed-end home mortgage loans in all census tracts in the Retail Lending Test Area, including loans to middle- and upper-income borrowers.

The agencies considered commenter feedback that by including all loans located in low- and moderate-income census tract regardless of borrower income, the proposed approach would give undue consideration to loans made to middle- and upper-income borrowers and may encourage displacement and gentrification. However, the agencies believe that there are potential benefits

to including these loans in the geographic distribution metrics and benchmarks, and that the combination of the geographic distribution and borrower distribution analyses appropriately balances consideration for loans made to low- and moderate-income borrowers with consideration for loans made in low- and moderate-income census tracts. Specifically, the agencies considered that while a loan made to a middle- or upper-income borrower located in a low-income census tract would count in both the numerator and denominator of the Geographic Bank Metric, such a loan would count in only the denominator of the Borrower Bank Metric. In this way, the agencies believe the combination of the geographic distribution analysis with the borrower distribution analysis helps to address commenter concerns that the approach would encourage gentrification and displacement.

In addition, the agencies considered that loans made to borrowers of any income level located in low- and moderate-income census tracts help to meet a credit need in a low- or moderate-income community. The agencies believe that positively considering such loans is consistent with the CRA statute's requirement that the agencies assess the institution's record of meeting the credit needs of its entire community, including low- and moderate-income neighborhoods. Relatedly, the agencies have considered that a low- or moderate-income census tract where borrowers of all income levels had difficulty obtaining a closed-end home mortgage to purchase or refinance an existing home would indicate that community credit needs are not being met. For example, the agencies have considered that the ability of prospective homebuyers of any income level to obtain a closed-end home mortgage to purchase a home, renovate an existing property, or refinance an existing home mortgage in a low-income census tract can promote home values, help revitalize the existing housing stock, and forestall disinvestment in low-income communities. The agencies have considered commenter feedback that loans to middle- or upper-income households in some low- and moderate-income census tracts could result in gentrification that leads to displacement and significantly decreases affordability over time. While the agencies are sensitive to the potential for gentrification and the accompanying challenges it presents for low- and moderate-income communities, the agencies believe that in conducting evaluations of lending in low- and moderate-income census tracts, the potential risks of gentrification need to be balanced against the potential harms that may come from unmet credit needs in low- and moderate-income communities.

Use of census tracts. The agencies are finalizing the use of census tracts, rather than census blocks or block groups, to construct geographic distribution metrics and benchmarks. Although the agencies considered that using census blocks or block groups could provide greater precision, the agencies believe that the operational challenges and privacy concerns created by this alternative approach outweigh the potential benefits. Specifically, the agencies believe it would not be possible to construct market and community benchmarks for census blocks or block groups, given that certain public data sources necessary to compute these benchmarks are not available at the census block group level. For example, Section 1071 data will include census tract information, but will not include address, census block, or census block groups. In addition, the agencies believe that it would be more difficult for banks to target lending to specific census blocks or block groups, which are geographically smaller areas than census tracts, and may consist of a portion of a neighborhood. Furthermore, the agencies considered that this alternative may introduce privacy concerns regarding specific loan recipients as the loan-level data collected for closed-end home mortgages, small business, and small farm loans would have to be reported and collected at the census block or block group level, which would increase the re-identification risk for these data.

Geographic Bank Metrics. As set forth in paragraph III.a of final appendix A, the Geographic Bank Metrics are calculated as the percentage of a bank’s loans in a particular major product line that are located in low- and moderate-income census tracts, respectively. This calculation is based on originated and purchased loans in a specific Retail Lending Test Area over the years in the evaluation period. For example, if a bank originated or purchased 25 total closed-end home mortgage loans in a facility-based assessment area over the years in the evaluation period and 5 of those loans were in low-income census tracts, its Geographic Bank Metric for closed-end home mortgage loans in low-income census tracts would be 0.2, or 20 percent.

$$\frac{\text{Bank Loans in Low – Income Tracts (5)}}{\text{Bank Loans (25)}} = \text{Geographic Bank Metric (20\%)}$$

Under the final rule, for each major product line, the agencies separately calculate a Geographic Bank Metric for low-income census tracts and for moderate-income census tracts, as discussed above. The agencies note that calculating the Geographic Bank Metrics in this way is consistent with current practice for evaluating a bank’s lending in low- and moderate-income census tracts.

Geographic Market Benchmarks—closed-end home mortgage loans, small business loans, and small farm loans. As set forth in paragraph III.b of final appendix A, the Geographic Market Benchmarks for facility-based assessment areas and retail lending assessment areas is calculated as the percentage of closed-end home mortgage loans, small business loans, or small farm loans that are located in low-income census tracts or moderate-income census tracts, respectively. This calculation is based on originated loans in the facility-based assessment area or retail lending assessment area over the years in the evaluation period reported by all lenders.

Table 11 of § __.22(e)(3): Summary of Calculations for Geographic Market Benchmarks

| Product line and category of lending evaluated | Geographic Market Benchmark Numerator | Geographic Market Benchmark Denominator |
|---|--|--|
| Closed-end home mortgage loans, low-income census tracts | Number of reported (HMDA) closed-end home mortgage loan originations in low-income census tracts in an area | Number of all reported (HMDA) closed-end home mortgage loan originations in an area |
| Closed-end home mortgage loans, moderate-income census tracts | Number of reported (HMDA) closed-end home mortgage loan originations in moderate-income census tracts in an area | Number of all reported (HMDA) closed-end home mortgage loan originations in an area |
| Small business loans, low-income census tracts, CRA data approach | Number of reported (CRA) loan originations of loan amount < \$1 million to | Number of all reported (CRA) loan originations of loan amount < \$1 million to businesses in an area |

| | | |
|--|---|--|
| | businesses in low-income census tracts in an area | |
| Small business loans, moderate-income census tracts, CRA data approach | Number of reported (CRA) loan originations of loan amount < \$1 million to businesses in moderate-income census tracts in an area | Number of all reported (CRA) loan originations of loan amount < \$1 million to businesses in an area |
| Small business loans, low-income census tracts, Section 1071 approach | Number of reported (Section 1071) loan originations to small businesses in low-income census tracts in an area | Number of all reported (Section 1071) loan originations to small businesses in an area |
| Small business loans, moderate-income census tracts, Section 1071 approach | Number of reported (Section 1071) loan originations to small businesses in moderate-income census tracts in an area | Number of all reported (Section 1071) loan originations to small businesses in an area |
| Small farm loans, low-income census tracts, CRA data approach | Number of reported (CRA) loan originations of loan amount < \$500,000 to farms in low-income census tracts in an area | Number of all reported (CRA) loan originations of loan amount < \$500,000 to farms in an area |
| Small farm loans, moderate-income census tracts, CRA data approach | Number of reported (CRA) loan originations of loan amount < \$500,000 to farms in moderate-income census tracts in an area | Number of all reported (CRA) loan originations of loan amount < \$500,000 to farms in an area |
| Small farm loans, low-income census tracts, Section 1071 approach | Number of reported (Section 1071) loan originations to small farms in low-income census tracts in an area | Number of all reported (Section 1071) loan originations to small farms in an area |
| Small farm loans, moderate-income census tracts, Section 1071 approach | Number of reported (Section 1071) loan originations to small farms in moderate-income census tracts in an area | Number of all reported (Section 1071) loan originations to small farms in an area |

Note: The transition to using Section 1071 data is discussed further in the section-by-section analysis of § __.22(e)(1).

For the outside retail lending area, the Geographic Market Benchmarks for closed-end home mortgage loans, small business loans, and small farm loans are determined by first calculating the benchmark for each individual MSA and for the nonmetropolitan area of a State that is part of the outside retail lending area (known as the “component geographic areas,” pursuant to final § __.18(b)(2)), and then calculating a weighted average of the benchmarks for those areas. Specifically, as set forth in paragraph III.d of final appendix A, the Geographic Market Benchmarks for outside retail lending areas are established by calculating, for each major product line—other than automobile loans—in each component geographic area of the outside retail lending area, a benchmark in low- or moderate-income census tracts, respectively. Calculation of these benchmarks for each component geographic area follows the method described above for calculating Geographic Market Benchmarks for facility-based assessment areas and retail lending assessment areas, as applicable. The benchmarks calculated for each component geographic area are then averaged, weighting each component geographic area by the number of the bank’s loans in the major product line originated and purchased in the component geographic area, relative to the number of the bank’s loans in the major product line originated and purchased in the outside retail lending area. More discussion of the process for creating benchmarks used in the outside retail lending area analysis follows later in this section.

Consistent with the proposed approach, the Geographic Market Benchmarks are intended to show the overall level of lending for each product line taking place in the Retail Lending Test Area in low- and moderate-income census tracts by all reporting lenders. The agencies note that calculating Geographic Market Benchmarks in this way is consistent with current practice for evaluating a bank’s lending in low- and moderate-income census tracts.

Geographic Community Benchmarks—closed-end home mortgage loans. As set forth in paragraphs III.c.1 and III.c.2 of final appendix A, the Geographic Community Benchmarks for closed-end home mortgage loans in facility-based assessment areas and retail lending assessment areas are calculated as the percentage of owned-occupied housing units in low- and moderate-income census tracts, respectively. This calculation is based on owner-occupied housing units in the facility-based assessment area or retail lending assessment area over the years in the evaluation period. Additional details regarding the calculations of community benchmarks, and an example, are provided below in this section.

Table 12 of § __.22(e)(3): Summary of Calculations for Geographic Community Benchmarks—Closed-end Home Mortgages

| Product line and category of lending evaluated | Geographic Community Benchmark Numerator | Geographic Community Benchmark Denominator | Primary data source |
|--|---|---|----------------------------|
| Closed-end home mortgage loans, low-income census tracts | Number of owner-occupied housing units in low-income census tracts in an area | Number of all owner-occupied housing units in an area | American Community Survey |

| | | | |
|---|--|---|---------------------------|
| Closed-end home mortgage loans, moderate-income census tracts | Number of owner-occupied housing units in moderate-income census tracts in an area | Number of all owner-occupied housing units in an area | American Community Survey |
|---|--|---|---------------------------|

For the outside retail lending area, the Geographic Community Benchmarks for closed-end home mortgage loans are determined by first calculating the benchmark for each component geographic area and then calculating a weighted average of the benchmarks for those areas. Specifically, as set forth in paragraph III.e of final appendix A, the Geographic Community Benchmarks for closed-end home mortgage loans in outside retail lending areas are established by calculating, in each component geographic area of the outside retail lending area, a benchmark for closed-end home mortgage loans in low- or moderate-income census tracts, respectively. Calculation of these benchmarks for each component geographic area follows the method described above for calculating Geographic Community Benchmarks for closed-end home mortgage loans in facility-based assessment areas and retail lending assessment areas. The benchmarks calculated for each component geographic area are then averaged, weighting each component geographic area by the number of the bank’s closed-end home mortgage loans originated and purchased in the component geographic area, relative to the number of the bank’s closed-end home mortgage loans originated and purchased in the outside retail lending area. More discussion of the process for creating benchmarks used in the outside retail lending area analysis follows later in this section.

Consistent with the proposal, the Geographic Community Benchmarks for closed-end home mortgage loans are based on the share of owner-occupied housing units in the Retail Lending Test Area that are in low- or moderate-income census tracts. Similar to the other Geographic Community Benchmarks, the agencies believe that the share of owner-occupied housing units in low- or moderate-income census tracts is an indicator of the potential lending opportunities for closed-end home mortgage loans in low- or moderate-income census tracts. Further, the agencies note that using the share of owner-occupied housing units in low- or moderate-income census tracts is consistent with current practice for evaluating a bank’s closed-end home mortgage lending in low- or moderate-income census tracts.

Geographic Community Benchmarks—small business loans and small farm loans. As set forth in paragraphs III.c.3 to III.c.6 of final appendix A, the Geographic Community Benchmarks for small business loans or small farm loans in facility-based assessment areas and retail lending assessment areas, as applicable, are calculated as the percentage of businesses or farms in low- or moderate-income census tracts, respectively.⁹²⁶ This calculation is based on businesses or farms in the facility-based assessment area or retail lending assessment area over the years in the evaluation period. Additional details regarding the calculations of community benchmarks, and an example, are provided below in this section.

⁹²⁶ For purposes of the Geographic Community Benchmarks for small business loans, the agencies exclude farms from the calculation of the percentage of businesses in low- or moderate-income census tracts, respectively.

Table 13 of § __.22(e)(3): Summary of Calculations for Geographic Community Benchmarks—Small Business Loans and Small Farm Loans

| Product line and category of lending evaluated | Geographic Community Benchmark Numerator | Geographic Community Benchmark Denominator | Primary data source |
|--|--|---|----------------------------|
| Small business loans, low-income census tracts, CRA data approach | Number of businesses in low-income census tracts in an area | Number of businesses in an area | Third-party data provider |
| Small business loans, moderate-income census tracts, CRA data approach | Number of businesses in moderate-income census tracts in an area | Number of businesses in an area | Third-party data provider |
| Small business loans, low-income census tracts, Section 1071 approach | Number of small businesses in low-income census tracts in an area | Number of small businesses in an area | Third-party data provider |
| Small business loans, moderate-income census tracts, Section 1071 approach | Number of small businesses in moderate-income census tracts in an area | Number of small businesses in an area | Third-party data provider |
| Small farm loans, low-income census tracts, CRA data approach | Number of farms in low-income census tracts in an area | Number of farms in an area | Third-party data provider |
| Small farm loans, moderate-income census tracts, CRA data approach | Number of farms in moderate-income census tracts in an area | Number of farms in an area | Third-party data provider |
| Small farm loans, low-income census tracts, Section 1071 approach | Number of small farms in low-income census tracts in an area | Number of small farms in an area | Third-party data provider |

| | | | |
|--|---|----------------------------------|---------------------------|
| Small farm loans, moderate-income census tracts, Section 1071 approach | Number of small farms in moderate-income census tracts in an area | Number of small farms in an area | Third-party data provider |
|--|---|----------------------------------|---------------------------|

Note: The transition to using Section 1071 data is discussed further in the section-by-section analysis of § __.22(e)(1).

For the outside retail lending area, the Geographic Community Benchmarks for small business loans and small farm loans are determined by first calculating the benchmark for each component geographic area, and then calculating a weighted average of the benchmarks for those areas. Specifically, as set forth in paragraph III.e of final appendix A, the Geographic Community Benchmarks for small business loans or small farm loans in outside retail lending areas are established by calculating, in each component geographic area of the outside retail lending area, a benchmark for small business loans or small farm loans in low- or moderate-income census tracts, respectively. Calculation of these benchmarks for each component geographic area follows the method described above for calculating Geographic Community Benchmarks for small business loans or small farm loans in facility-based assessment areas and retail lending assessment areas, as applicable. The benchmarks calculated for each component geographic area are then averaged, weighting each component geographic area by the number of the bank’s small business loans or small farm loans originated and purchased in the component geographic area, relative to the number of the bank’s small business loans or small farm loans originated and purchased in the outside retail lending area. More discussion of the process for creating benchmarks used in the outside retail lending area analysis follows later in this section.

Consistent with the proposal, the Geographic Community Benchmarks for small business loans or small farm loans are based on the share of small businesses or small farms in the Retail Lending Test Area that are in low- or moderate-income census tracts. For example, the Geographic Community Benchmark for small business loans in low-income census tracts in a facility-based assessment area would be the percentage of all businesses in the area that are located in a low-income census tract, based on available data that the agencies intend to disclose in aggregated form on a regular basis. Similar to the other Geographic Community Benchmarks, the agencies believe that the share of small businesses or small farms in low- or moderate-income census tracts is an indicator of the potential lending opportunities for small business loans or small farm loans in low- or moderate-income census tracts. Further, the agencies note that using the share of small businesses or small farms in low- or moderate-income census tracts is consistent with current practice for evaluating a bank’s small business or small farm lending in low- or moderate-income census tracts.

Following the transition to using Section 1071 data,⁹²⁷ the agencies would then adjust the methodology used to calculate the Geographic Community Benchmark to reflect changes in what businesses and farms are included in the Section 1071 data relative to the existing CRA small business and small farm data. Specifically, prior to the use of Section 1071 data, this benchmark would be based on the share of all businesses and farms that are located in each category of designated census tracts. Once Section 1071 data is used in CRA evaluations, this benchmark would be the share of small businesses and small farms with gross annual revenue of \$5 million or less that are located in each category of designated census tracts. This change reflects that Section 1071 data include only loans made to businesses and farms with gross annual revenue of \$5 million or less, and ensures that the bank metrics and benchmarks are calculated in a consistent fashion.⁹²⁸

Geographic Community Benchmarks—automobile loans. As set forth in paragraphs III.c.7 and III.c.8 of final appendix A, the Geographic Community Benchmarks for automobile loans in facility-based assessment areas are calculated as the percentage of households in low- and moderate-income census tracts, respectively. This calculation is based on households in the facility-based assessment area over the years in the evaluation period. Additional details regarding the calculations of community benchmarks, and an example, are provided below in this section.

Table 14 of § __.22(e)(3): Summary of Calculations for Geographic Community Benchmarks—Automobile Loans

| Product line and category of lending evaluated | Geographic Community Benchmark Numerator | Geographic Community Benchmark Denominator | Primary data source |
|---|---|---|----------------------------|
|---|---|---|----------------------------|

⁹²⁷ The transition amendments included in this final rule will, once effective, amend the definitions of “small business” and “small farm” to instead cross-reference to the definition of “small business” in the CFPB Section 1071 Final Rule. This will allow the CRA regulatory definitions to adjust if the CFPB increases the threshold in the CFPB Section 1071 Final Rule definition of “small business.” This is consistent with the agencies’ intent articulated in the preamble to the proposal and elsewhere in this final rule to conform these definitions with the definition in the CFPB Section 1071 Final Rule. The agencies will provide the effective date of these transition amendments in the *Federal Register* after Section 1071 data is available.

⁹²⁸ The agencies acknowledge that proposed appendix A.III.2.b specified that the Geographic Community Benchmarks for small business loans and small farm loans, prior to the transition to using Section 1071 data, would be based on the share of *small* businesses or *small* farms in an area that are located in low- or moderate-income census tracts. However, the final rule specifies that these Geographic Community Benchmarks, prior to the transition to using Section 1071 data, are based on the share of businesses or farms in an area that are located in low- or moderate-income census tracts, regardless of the size of these businesses and farms. The final rule approach is intended to ensure that the bank metrics and benchmarks are calculated in a consistent fashion.

| | | | |
|---|--|---------------------------------|---------------------------|
| Automobile loans, low-income census tracts | Number of households in low-income census tracts in an area | Number of households in an area | American Community Survey |
| Automobile loans, moderate-income census tracts | Number of households in moderate-income census tracts in an area | Number of households in an area | American Community Survey |

For the outside retail lending area, the Geographic Community Benchmarks for automobile loans (and all other retail lending benchmarks) are determined by first calculating the benchmark for each component geographic area, and then calculating a weighted average of the benchmarks for those areas. Specifically, as set forth in paragraph III.e of appendix A, the Geographic Community Benchmarks for automobile loans in an outside retail lending areas are established by calculating, in each component geographic area of the outside retail lending area, a benchmark for automobile loans in low- or moderate-income census tracts, respectively. Calculation of these benchmarks for each component geographic area follows the method described above for calculating Geographic Community Benchmarks for automobile loans in facility-based assessment areas. The benchmarks calculated for each component geographic area are then averaged, weighting each component geographic area by the number of the bank’s automobile loans originated and purchased in the component geographic area, relative to the number of the bank’s automobile loans originated and purchased in the outside retail lending area. More discussion of the process for creating benchmarks used in the outside retail lending area analysis follows later in this section.

Consistent with the proposal, the Geographic Community Benchmarks for automobile loans are based upon the share of households the Retail Lending Test Area that are in in low- or moderate-income census tracts. Similar to the other Geographic Community Benchmarks, the agencies believe that the share of households in low- or moderate-income census tracts is an indicator of the potential lending opportunities for automobile loans in low- or moderate-income census tracts. The agencies considered using the share of families in low- or moderate-income census tracts as the Borrower Community Benchmark, but determined that of the two options, the share of households has the benefit of carrying forward the current approach.

§ __.22(e)(4) Borrower Distribution Measures

The Agencies’ Proposal

As discussed above, the agencies proposed to evaluate the borrower distributions of a bank’s major product lines by using certain metrics and benchmarks. Specifically, the proposed Borrower Bank Metrics are calculated as the percentage of a bank’s loans to borrowers at varying income levels or gross annual revenue thresholds, relative to the total number of the bank’s loans in the facility-based assessment area, retail lending assessment area, or outside retail lending area. As discussed in greater detail in the section-by-section analysis of final § __.22(f), the agencies proposed to compare the Borrower Bank Metric for each distribution for

each major product line to performance ranges calculated based on two benchmarks: a Borrower Market Benchmark that reflects the aggregate lending to borrowers at varying income levels or gross annual revenue thresholds across lenders within a facility-based assessment area, retail lending assessment area, or outside retail lending area; and a Borrower Community Benchmark that reflects the potential lending opportunities at varying income levels or gross annual revenue thresholds within a facility-based assessment area, retail lending assessment area, or outside retail lending area.

Comments Received

The agencies received numerous comments, discussed above, on the use of distribution metrics and benchmarks generally. In addition, the agencies received several comments that specifically addressed the proposed borrower distribution metrics and benchmarks.

Treatment of purchased loans. A few commenters sought clarity on the treatment of purchased loans with respect to the borrower distribution metrics and benchmarks when income and revenue information is not reported or not available, such as for certain seasoned government mortgage loans. For example, some commenters recommended including purchased loans in the numerator of the Borrower Bank Metric when the bank has information demonstrating that the borrower is low- or moderate-income or has gross annual revenues of less than \$1 million, and excluding purchased loans from the numerator and denominator of the Borrower Bank Metric if the bank does not have borrower income or revenue information.

Borrower Community Benchmark for home mortgage loans. A number of commenters raised concerns about the agencies' proposal to use low- and moderate-income family counts to establish community benchmarks for analyzing the borrower distribution of home mortgage lending. For example, a few commenters suggested that the Borrower Community Benchmark for home mortgage loans should be based on the share of owner-occupied housing units in an area that are occupied by low- and moderate-income households, instead of the share of low- and moderate-income families. These commenters explained that using low- and moderate-income households that are owner-occupants, rather than low- and moderate-income families, would better account for differences in home prices and homeownership opportunities across the country. In addition, at least one commenter stated that the agencies may want to consider a Borrower Community Benchmark for home mortgage loans that is based on the low- and moderate-income share of households, including households that are not owner-occupants, as this would capture unrelated people sharing rental housing units who could become homeowners.

Another commenter generally regarded the proposed borrower distribution analysis favorably, but expressed concern that the Borrower Community Benchmark for closed-end home mortgage lending to low-income borrowers would greatly overestimate credit demand among these borrowers because incomes are too low relative to home prices in many parts of the country. The commenter conducted an analysis indicating that the proposed Borrower Community Benchmark for closed-end home mortgage loans to low-income borrowers was consistently higher than the corresponding Borrower Market Benchmark across 354 MSAs, such that the performance ranges calculated for closed-end home mortgage loans to low-income borrowers would always be based on the market benchmarks in these markets. Accordingly, the commenter suggested that the agencies consider alternative community benchmarks and alternative calibrations of the benchmarks to potentially create a better incentive for banks to

improve performance. The commenter also suggested that because the proposed Borrower Community Benchmark for closed-end home mortgage loans overestimates credit demand among low-income borrowers, it also underestimates credit demand among moderate-income borrowers.

Final Rule

For the reasons discussed below, the agencies are adopting the proposed borrower distribution metrics and benchmarks generally as proposed.

- Final § __.22(e)(4)(i) provides that for each major product line, a Borrower Bank Metric is calculated pursuant to paragraph IV.a of final appendix A.
- Final § __.22(e)(4)(ii) provides that for each major product line except automobile loans, a Borrower Market Benchmark is calculated pursuant to, as applicable, paragraph IV.b of final appendix A for facility-based assessment areas and retail lending assessment areas, and paragraph IV.d of final appendix A for outside retail lending areas.
- Final § __.22(e)(4)(iii) provides that for each major product line, a Borrower Community Benchmark is calculated pursuant to, as applicable, paragraph IV.c of appendix A for facility-based assessment areas and retail lending assessment areas, and paragraph IV.e of appendix A for outside retail lending areas.

A summary of these calculations for facility-based assessment area and retail lending assessment areas, as applicable, can be found in the following table for each product line. Following a discussion of some preliminary issues, each of these metrics and benchmarks is discussed in more detail below.

Table 15 of § __.22(e)(4): Summary of Calculations for Borrower Distribution Measures

| Retail Lending Product Line | Borrower Bank Metric <i>Percentage of bank loan originations and purchases to the following categories of designated borrowers, out of all bank loans in the product line in the Retail Lending Test Area, by loan count</i> | Borrower Market Benchmark <i>Percentage of all reported loan originations to the following categories of designated borrowers, out of all reported loan originations in the product line in the Retail Lending Test Area, by loan count</i> | Borrower Community Benchmark |
|---|--|---|-------------------------------------|
| Closed-End Home Mortgage Lending | Low-Income Borrowers | Low-Income Borrowers | Percentage of low-income families |

| | | | |
|-------------------------------|---|---|---|
| | Moderate-Income Borrowers | Moderate-Income Borrowers | Percentage of moderate-income families |
| Small Business Lending | Businesses with GAR \leq \$250,000 | Businesses with GAR \leq \$250,000 | Percentage of businesses with GAR \leq \$250,000 |
| | Businesses with GAR of greater than \$250,000 but less than or equal to \$1 million | Businesses with GAR of greater than \$250,000 but less than or equal to \$1 million | Percentage of businesses with GAR of greater than \$250,000 but less than or equal to \$1 million |
| Small Farm Lending | Farms with GAR \leq \$250,000 | Farms with GAR \leq \$250,000 | Percentage of farms with GAR \leq \$250,000 |
| | Farms with GAR of greater than \$250,000 but less than or equal to \$1 million | Farms with GAR of greater than \$250,000 but less than or equal to \$1 million | Percentage of farms with GAR of greater than \$250,000 but less than or equal to \$1 million |
| Automobile Lending | Low-Income Borrowers | Not applicable | Percentage of low-income households |
| | Moderate-Income Borrowers | Not applicable | Percentage of moderate-income households |

Note: As discussed further in the section-by-section analysis of § __.22(e)(1), prior to the use of Section 1071 data, the bank metrics and market benchmarks for small business lending are based on loans to businesses with a loan amount of less than \$1 million, and for small farm lending, are based on loans to farms with a loan amount of less than \$500,000. In addition, prior to the use of Section 1071 data, the community benchmarks for small business lending and small farm lending are based on percentages of all businesses and all farms, respectively. Once Section 1071 data is used for CRA evaluations, the bank metrics and market benchmarks for small business and small farm lending will be based on loans to small businesses or small farms (*i.e.*, those with gross annual revenue of less than \$5 million), with no loan amount threshold, and the community benchmarks for small business lending and small farm lending will be based on percentages of small businesses and small farms (*i.e.*, those with gross annual revenue of less than \$5 million), respectively.

Treatment of purchased loans. Consistent with the agencies’ proposal, under the final rule approach, purchased loans for which borrower income or revenue data are unavailable are counted in the denominator of the borrower distribution metrics and benchmarks, and not in the numerator of the borrower distribution metrics and benchmarks. If a bank provides the agencies with information indicating that purchased loans for which borrower income or revenue data are

unavailable were in fact made to low- or moderate-income borrowers or borrowers with gross annual revenues below \$1 million, the agencies may adjust the bank's recommended conclusion, as discussed in the section-by-section analysis of § __.22(g)(4). The agencies considered comments suggesting that if borrower income data are unavailable for purchased loans, then the loans should be excluded from the numerator and denominator of the borrower distribution metrics. However, the final rule does not adopt this approach because the agencies believe that such an approach could allow a bank to purchase middle- and upper-income loans for which income information is not available without factoring into the bank's distribution metrics. In addition, the agencies believe that it is preferable to include all of a bank's loans in its distribution metrics, and to consider potential adjustments to the bank's Retail Lending Test conclusions pursuant to § __.22(g)(4) and § __.21(d) as needed, to ensure that the distribution metrics comprehensively account for a bank's retail lending.

The final rule continues the current practice of using borrower income or revenue information at the time of the credit decision for purchased loans. As a result, a loan originated to a low- or moderate-income borrower, if sold to a third-party bank, would receive consideration as a low- or moderate-income loan for the purchasing bank regardless of the borrower's income at the time of purchase. The agencies believe that this approach will help to support liquidity for lenders that lend to low- or moderate-income borrowers and census tracts, in accord with the CRA's objective of encouraging banks to meet the credit needs of their entire communities. Furthermore, the agencies understand that it may not be feasible to obtain updated borrower income information for purchased loans.

Borrower Bank Metrics. As set forth in paragraph IV.a of appendix A, the Borrower Bank Metrics are calculated as the percentage of a bank's loans in a particular major product line to borrowers in each applicable income or revenue category, respectively. This calculation is based on originated and purchased loans in a specific Retail Lending Test Area over the years in the evaluation period. For example, if a bank originated or purchased 100 total closed-end home mortgage loans in a facility-based assessment area over the years in an evaluation period, and 20 of those loans were to low-income borrowers, then its Borrower Bank Metric for closed-end home mortgage loans to low-income borrowers would be 0.2, or 20 percent.

$$\frac{\text{Bank Loans to Low – Income Borrowers (20)}}{\text{Bank Loans (100)}} = \text{Geographic Bank Metric (20\%)}$$

For closed-end home mortgage loans and automobile loans, the agencies separately calculate the Borrower Bank Metric for low-income borrowers and moderate-income borrowers. For small business loans and small farm loans, the agencies separately calculate the Borrower Bank Metric for businesses or farms with gross annual revenues of: (1) \$250,000 or less; and (2) greater than \$250,000 but less than or equal to \$1 million. The agencies note that calculating the Borrower Bank Metrics in this way is generally consistent with the current practice for measuring a bank's lending to borrowers of various income and revenue categories.

Borrower Market Benchmarks—closed-end home mortgage loans, small business loans, and small farm loans. As set forth in paragraph IV.b of final appendix A, the Borrower Market Benchmarks for facility-based assessment areas and retail lending assessment areas are calculated as the percentage of closed-end home mortgage loans, small business loans, or small farm loans to borrowers in each income or revenue category, as applicable. This calculation is

based on originated loans in the facility-based assessment area or retail lending assessment area over the years in the evaluation period reported by all lenders.

Table 16 of § __.22(e)(4): Summary of Calculations for Borrower Market Benchmarks

| Product line and category of lending evaluated | Borrower Market Benchmark Numerator | Borrower Market Benchmark Denominator |
|--|---|---|
| Closed-end home mortgage loans, low-income borrowers | Number of reported (HMDA) closed-end home mortgage loan originations to low-income borrowers in an area | Number of all reported (HMDA) closed-end home mortgage loan originations in an area |
| Closed-end home mortgage loans, moderate-income borrowers | Number of reported (HMDA) closed-end home mortgage loan originations to moderate-income borrowers in an area | Number of all reported (HMDA) closed-end home mortgage loan originations in an area |
| Small business loans, GAR \leq \$250,000, CRA data approach | Number of reported (CRA) loan originations of loan amount \leq \$1 million to businesses with GAR \leq \$250,000 in an area | Number of all reported (CRA) loan originations of loan amount \leq \$1 million to businesses in an area |
| Small business loans, GAR \$250,000–\$1 million, CRA data approach | Number of reported (CRA) loan originations of loan amount \leq \$1 million to businesses with GAR greater than \$250,000 but less than or equal to \$1 million in an area | Number of all reported (CRA) loan originations of loan amount \leq \$1 million to businesses in an area |
| Small business loans, GAR \leq \$250,000, Section 1071 approach | Number of reported (Section 1071) loan originations to small businesses with GAR \leq \$250,000 in an area | Number of all reported (Section 1071) loan originations to small businesses in an area |
| Small business loans, GAR \$250,000–\$1 million, Section 1071 approach | Number of reported (Section 1071) loan originations to small businesses with GAR greater than \$250,000 but less than or equal to \$1 million in an area | Number of all reported (Section 1071) loan originations to small businesses in an area |
| Small farm loans, GAR \leq \$250,000, CRA data approach | Number of reported (CRA) loan originations of loan amount \leq \$500,000 to farms | Number of all reported (CRA) loan originations of |

| | | |
|--|--|--|
| | with GAR \leq \$250,000 in an area | loan amount \leq \$500,000 to farms in an area |
| Small farm loans, GAR \$250,000–\$1 million, CRA data approach | Number of reported (CRA) loan originations of loan amount \leq \$500,000 to farms with GAR greater than \$250,000 but less than or equal to \$1 million in an area | Number of all reported (CRA) loan originations of loan amount \leq \$500,000 to farms in an area |
| Small farm loans, GAR \leq \$250,000, Section 1071 approach | Number of reported (Section 1071) loan originations to small farms with GAR \leq \$250,000 in an area | Number of all reported (Section 1071) loan originations to small farms in an area |
| Small farm loans, GAR \$250,000–\$1 million, Section 1071 approach | Number of reported (Section 1071) loan originations to small farms with GAR greater than \$250,000 but less than or equal to \$1 million in an area | Number of all reported (Section 1071) loan originations to small farms in an area |

Note: The transition to using Section 1071 data is discussed further in the section-by-section analysis of § __.22(e)(1).

For the outside retail lending area, the Borrower Market Benchmarks for closed-end home mortgage loans, small business loans, and small farm loans are determined by first calculating the benchmark for each component geographic area, and then calculating a weighted average of the benchmarks for those areas. Specifically, as set forth in paragraph IV.d of final appendix A, the Borrower Market Benchmarks for outside retail lending areas are established by calculating, for each major product line—other than automobile loans—in each component geographic area of the outside retail lending area, a benchmark for each applicable income and revenue category, respectively. Calculation of these benchmarks for each component geographic area follows the method described above for calculating Borrower Market Benchmarks for facility-based assessment areas and retail lending assessment areas, as applicable. The benchmarks for each component geographic area are then averaged, weighting each component geographic area by the number of the bank’s loans in the major product line originated and purchased in the component geographic area, relative to the number of the bank’s loans in the major product line originated and purchased in the outside retail lending area. More discussion of the process for creating benchmarks used in the outside retail lending area analysis follows later in this section.

Consistent with the proposed approach, the Borrower Market Benchmarks are intended to show the overall level of lending for each product line taking place in the Retail Lending Test Area to borrowers of each applicable income and revenue category by all reporting lenders. The agencies note that calculating Borrower Market Benchmarks in this way is consistent with current practice for evaluating a bank’s lending to borrowers of various income and revenue categories.

Borrower Community Benchmarks—closed-end home mortgage loans. As set forth in paragraphs IV.c.1 and IV.c.2 of final appendix A, the Borrower Community Benchmarks for closed-end home mortgage loans to low- and moderate-income borrowers, respectively, in facility-based assessment areas and retail lending assessment areas are calculated as the percentage of all families that are low- and moderate-income families, respectively. This calculation is based on families in the facility-based assessment area or retail lending assessment area over the years in the evaluation period. Additional details regarding the calculations of community benchmarks, and an example, are provided below in this section.

Table 17 of § __.22(e)(4): Summary of Calculations for Borrower Community Benchmarks—Closed-End Home Mortgage Loans

| Product line and category of lending evaluated | Borrower Community Benchmark Numerator | Borrower Community Benchmark Denominator | Primary data source |
|---|---|---|----------------------------|
| Closed-end home mortgage loans, low-income borrowers | Number of low-income families in an area | Number of families in an are | American Community Survey |
| Closed-end home mortgage loans, moderate-income borrowers | Number of moderate-income families in an area | Number of families in an area | American Community Survey |

For the outside retail lending area, the Borrower Community Benchmarks for closed-end home mortgage loans (and all other retail lending benchmarks) are determined by first calculating the benchmark for each component geographic area, and then calculating a weighted average of the benchmarks for those areas. Specifically, as set forth in paragraph IV.e of final appendix A, the Borrower Community Benchmarks for closed-end home mortgage loans in outside retail lending areas are established by calculating, in each component geographic area of the outside retail lending area, a benchmark for closed-end home mortgage loans to low- or moderate-income borrowers, respectively. Calculation of these benchmarks for each component geographic area follows the method described above for calculating Borrower Community Benchmarks for closed-end home mortgage loans to low- or moderate-income borrowers in facility-based assessment areas and retail lending assessment areas. The benchmarks calculated for each component geographic area are then averaged together, weighting each component geographic area by the share of the bank’s closed-end home mortgage loans originated and purchased in the component geographic area, relative to the bank’s closed-end home mortgage loans originated and purchased in the outside retail lending area, calculated using loan count. More discussion of the process for creating benchmarks used in the outside retail lending area analysis follows later in this section.

Consistent with the proposal, the Borrower Community Benchmarks for closed-end home mortgage loans are based on the share of families in the Retail Lending Test Area that are low- or moderate-income. Similar to the other Borrower Community Benchmarks, the agencies

believe that the share of low- or moderate-income families is an indicator of the potential lending opportunities for closed-end home mortgage loans to low- or moderate-income borrowers. In deciding to define the benchmark as comprising low- or moderate-income families, as opposed to households, the agencies have placed significant weight on the fact that this is consistent with current practice for evaluating a bank's closed-end home mortgage lending to low- or moderate-income borrowers. The agencies believe this will aid in implementation and familiarity with the final rule approach. However, the agencies recognize that this benchmark would, therefore, not include individuals that the American Community Survey defines as comprising households but are not included in its definition of families, such as adults living alone, unmarried couples, and unrelated adults living as roommates.⁹²⁹ As a result, this benchmark would not capture some households that are mortgage borrowers or will become mortgage borrowers in the future. The agencies considered using the share of low- or moderate-income households as the Borrower Community Benchmark, but determined that of the two options, the share of low- or moderate-income families has the benefit of carrying forward the current approach. The agencies note that there is no distinction or consideration in the distribution analysis of whether a bank's home mortgage loans were made to borrowers that are family households or to borrowers that are non-family households; rather, the bank metrics reflect the bank's percentages of all loans to low- and moderate-income borrowers. Moreover, the agencies note that the decision to use family households to construct these community benchmarks is not intended to convey a preference for lending to family households rather than to non-family households. During and following implementation of the final rule, the agencies will continue to monitor this and other benchmarks to determine whether other indicators would better estimate the potential lending opportunities for each product line.

The agencies considered comments that the Borrower Community Benchmark for closed-end home mortgage loans to low-income borrowers—proposed as being low-income families as noted above—may overestimate potential demand for closed-end home mortgage loans among low-income families. However, the agencies believe that the benchmark adopted in the final rule accords with the CRA's emphasis on meeting the credit needs of the bank's entire community, which includes low-income families. For this reason, the agencies determined not to modify the Borrower Community Benchmark for closed-end home mortgage loans to low-income borrowers in a way that universally assumes significantly lower credit needs for these borrowers. In addition, as discussed in the section-by-section analysis for __.22(f), the agencies determined that the combination of the market and community benchmarks, and final rule multiplier values, result in appropriately calibrated performance ranges, and that Retail Lending Test conclusions of "Low Satisfactory" or higher are generally attainable.

Borrower Community Benchmarks—small business loans and small farm loans. As set forth in paragraphs IV.c.3 through IV.c.6 of final appendix A, the Borrower Community Benchmarks for small business loans or small farm loans in facility-based assessment areas and retail lending

⁹²⁹ According to the Census Glossary, a household includes "the related family members and all the unrelated people, if any, such as lodgers, foster children, wards, or employees who share the housing unit. A person living alone in a housing unit, or a group of unrelated people sharing a housing unit such as partners or roomers, is also counted as a household." Further information related to how households and families are defined in the American Community Survey can be found in the Census Glossary at <https://www.census.gov/glossary/?term=Household>.

assessment areas, as applicable, are calculated as the percentage of businesses or farms with gross annual revenues of more than \$250,000 but less than or equal to \$1 million, and with gross annual revenues of \$250,000 or less, respectively.⁹³⁰ This calculation is based on businesses or farms in the facility-based assessment area or retail lending assessment area over the years in the evaluation period. Additional details regarding the calculations of community benchmarks, and an example, are provided below in this section.

Table 18 of § __.22(e)(4): Summary of Calculations for Borrower Community Benchmarks—Small Business Loans and Small Farm Loans

| Product line and category of lending evaluated | Borrower Community Benchmark Numerator | Borrower Community Benchmark Denominator | Primary data source |
|--|---|---|----------------------------|
| Small business loans, GAR < \$250,000, CRA data approach | Number of businesses with GAR ≤ \$250,000 in an area | Number of businesses in an area | Third-party data provider |
| Small business loans, GAR \$250,000–\$1 million, CRA data approach | Number of businesses with GAR greater than \$250,000 but less than or equal to \$1 million in an area | Number of businesses in an area | Third-party data provider |
| Small business loans, GAR ≤ \$250,000, Section 1071 approach | Number of small businesses with GAR ≤ \$250,000 in an area | Number of small businesses in an area | Third-party data provider |
| Small business loans, GAR \$250,000–\$1 million, Section 1071 approach | Number of small businesses with GAR greater than \$250,000 but less than or equal to \$1 million in an area | Number of small businesses in an area | Third-party data provider |
| Small farm loans, GAR ≤ \$250,000, CRA data approach | Number of farms with GAR ≤ \$250,000 in an area | Number of farms in an area | Third-party data provider |

⁹³⁰ For purposes of the Borrower Community Benchmarks for small business loans, the agencies exclude farms from the calculation of the percentage of businesses in each gross annual revenues category.

| | | | |
|--|--|----------------------------------|---------------------------|
| Small farm loans, GAR \$250,000–\$1 million, CRA data approach | Number of farms with GAR greater than \$250,000 but less than or equal to \$1 million in an area | Number of farms in an area | Third-party data provider |
| Small farm loans, GAR ≤ \$250,000, Section 1071 approach | Number of small farms with GAR ≤ \$250,000 in an area | Number of small farms in an area | Third-party data provider |
| Small farm loans, GAR \$250,000–\$1 million, Section 1071 approach | Number of small farms with GAR greater than \$250,000 but less than or equal to \$1 million in an area | Number of small farms in an area | Third-party data provider |

Note: The transition to using Section 1071 data is discussed further in the section-by-section analysis of § __.22(e)(1).

For the outside retail lending area, the Borrower Community Benchmarks for small business loans and small farm loans (and all other retail lending benchmarks) are determined by first calculating the benchmark for each component geographic area, and then calculating a weighted average of the benchmarks for those areas. Specifically, as set forth in paragraph IV.e of final appendix A, the Borrower Community Benchmarks for small business loans or small farm loans in outside retail lending areas are established by calculating, in each component geographic area of the outside retail lending area, a benchmark for small business loans or small farm loans to small businesses or small farms of each applicable revenue category, respectively. Calculation of these benchmarks for each component geographic area follows the method described above for calculating Borrower Community Benchmarks in facility-based assessment areas and retail lending assessment areas, as applicable. The benchmarks calculated for each component geographic area are then averaged, weighting each component geographic area by the number of the bank’s small business loans or small farm loans originated and purchased in the component geographic area, relative to the number of the bank’s small business loans or small farms originated and purchased in the outside retail lending area. More discussion of the process for creating benchmarks used in the outside retail lending area analysis follows later in this section.

Consistent with the proposal, the Borrower Community Benchmarks for small business loans or small farm loans are based on the share of businesses and farms in the Retail Lending Test area in different revenue categories. For example, the Borrower Community Benchmark for small business loans with gross annual revenue of less than \$250,000 in a facility-based assessment area is the share of all businesses in the area with gross annual revenue of less than \$250,000. Similar to the other Borrower Community Benchmarks, the agencies believe that the share of businesses or farms of different sizes is an indicator of the potential lending opportunities for small business loans or small farm loans in the Retail Lending Test Area. Further, the agencies note that using the share of businesses or farms of different sizes is

generally consistent with current practice for evaluating a bank’s small business and small farm lending.

As described above with respect to the Geographic Community Benchmarks, following the transition to using Section 1071 data,⁹³¹ the agencies will adjust the methodology used to calculate the Borrower Community Benchmark to reflect changes in what businesses and farms are included in the Section 1071 data relative to the existing CRA small business and small farm data. Specifically, prior to the use of Section 1071 data, this benchmark would be based on the share of all businesses and farms that are designated borrowers. Once Section 1071 data is used in CRA evaluations, this benchmark would be the share of small businesses and small farms (*i.e.*, those with gross annual revenue of \$5 million or less) that are designated borrowers. This change reflects that Section 1071 data include only loans made to small businesses and small farms, and ensures that the bank metrics and benchmarks are calculated in a consistent manner.⁹³²

Borrower Community Benchmarks—automobile loans. As set forth in paragraphs IV.c.7 and IV.c.8 of final appendix A, the Borrower Community Benchmarks for automobile loans to low- and moderate-income borrowers, respectively, in facility-based assessment areas are calculated as the percentage of low- or moderate-income households, respectively. This calculation is based on households in the facility-based assessment area over the years in the evaluation period. Additional details regarding the calculations of community benchmarks, and an example, are provided below in this section.

Table 19 of § __.22(e)(4): Summary of Calculations for Borrower Community Benchmarks—Automobile Loans

| Product line and category of lending evaluated | Borrower Community Benchmark Numerator | Borrower Community Benchmark Denominator | Primary data source |
|---|---|---|----------------------------|
|---|---|---|----------------------------|

⁹³¹ The transition amendments included in this final rule will, once effective, amend the definitions of “small business” and “small farm” to instead cross-reference to the definition of “small business” in the CFPB Section 1071 Final Rule. This will allow the CRA regulatory definitions to adjust if the CFPB increases the threshold in the CFPB Section 1071 Final Rule definition of “small business.” This is consistent with the agencies’ intent articulated in the preamble to the proposal and elsewhere in this final rule to conform these definitions with the definition in the CFPB Section 1071 Final Rule. The agencies will provide the effective date of these transition amendments in the *Federal Register* after Section 1071 data is available.

⁹³² The agencies acknowledge that proposed appendix A.IV.2.b specified that the Borrower Community Benchmarks for small business loans and small farm loans, prior to the transition to using Section 1071 data, would be based on the share of businesses or farms of different sizes out of all *small* businesses or *small* farms in an area. However, the final rule specifies that these Borrower Community Benchmarks, prior to the transition to using Section 1071 data, are based on the share of businesses or farms of different sizes out of all businesses or farms in an area, regardless of the size of these businesses and farms.

| | | | |
|---|---|---------------------------------|---------------------------|
| Automobile loans, low-income borrowers | Number of low-income households in an area | Number of households in an area | American Community Survey |
| Automobile loans, moderate-income borrowers | Number of moderate-income households in an area | Number of households in an area | American Community Survey |

For the outside retail lending area, the Borrower Community Benchmarks for automobile loans (and all other retail lending benchmarks) are determined by first calculating the benchmark for each component geographic area, and then calculating a weighted average of the benchmarks for those areas. Specifically, as set forth in paragraph IV.e of final appendix A, the Borrower Community Benchmarks for automobile loans in outside retail lending areas are established by calculating, in each component geographic area of the outside retail lending area, a benchmark for automobile loans to low- or moderate-income borrowers, respectively. Calculation of these benchmarks for each component geographic area follows the method described above for calculating Borrower Community Benchmarks for automobile loans to low- or moderate-income borrowers in facility-based assessment areas. The benchmarks calculated for each component geographic area are then averaged together, weighting each component geographic area by the share of the bank’s automobile loans originated and purchased in the component geographic area, relative to the bank’s automobile loans originated and purchased in the outside retail lending area, calculated using loan count. More discussion of the process for creating benchmarks used in the outside retail lending area analysis follows later in this section.

The agencies believe that the share of low- or moderate-income households is an indicator of the potential lending opportunities for automobile loans in low- or moderate-income census tracts. The agencies considered using the share of families, rather than households, but determined that of the two options, the share of households has the benefit of carrying forward the current approach.

§ __.22(e)(3)(ii)-(iii) and § __.22(e)(4)(ii)-(iii) Benchmark Timing

The Agencies’ Proposal

In the proposal, the agencies addressed the issues of when the market and community benchmarks should be set for the evaluation period and which years of data to use to calculate the benchmarks. The agencies indicated that they were considering whether to calculate the community benchmarks using the most recent data available as of the first day of a bank’s CRA examination. However, the agencies noted that these data may not become available until during or after the evaluation period, and as a result, under this approach, the values of the community benchmarks may not be known at the outset of the evaluation period. The agencies requested feedback on alternative approaches to the timing of when the community benchmarks would be set for a bank’s evaluation.

Furthermore, the agencies indicated that they were considering whether to calculate the market benchmarks using all available reported data from the years of a bank’s evaluation period, recognizing that some evaluation periods could include a year for which reported data is not yet available at the time of the bank’s examination. The agencies also indicated that they were considering an alternative approach, under which the bank distribution metrics would be

based on data only from the same years over which the market distribution benchmarks are able to be measured. The agencies noted that this approach would have the advantage of setting performance standards for banks that correspond to the period, and the economic conditions during that period, over which an agency is evaluating a bank's performance. However, this approach would have the disadvantage of, in some circumstances, not fully covering a bank's recent lending.

Comments Received

A number of commenters provided specific feedback on timing issues related to the data used to calculate the proposed retail lending metrics and benchmarks. Some commenters raised concerns about the delayed availability, incompleteness, lack of transparency, or sources of the proposed benchmark data against which bank borrower distribution and geographic distribution metrics would be measured under the agencies' proposal.

Bank metrics and market benchmarks. Several commenters supported the agencies' proposal to base the bank distribution metrics on all of the data from the bank's evaluation period, while the market distribution benchmarks would be based on reported data that is available at the time of the examination. For example, a commenter asserted that all of a bank's reported data for the evaluation period should be used, even if all corresponding market data was not available at the time of the examination. Likewise, another commenter stated that, generally, bank volume and bank distribution metrics should be based on an average of a bank's annual performance over the evaluation period. Another commenter that supported the agencies' proposal stressed the importance of leveraging examiner discretion and performance context to evaluate lending where any bank volume or bank distribution data is unavailable. A commenter suggested that all data should be representative of the community at the time that the loan, investment, or service was originated or provided.

Community benchmarks. Some commenters did not support the option the agencies stated was under consideration to set community benchmarks using the most recent data available as of the first day of a bank's CRA examination. A commenter noted that setting community benchmarks with the most recent data at the time of the bank's examination may contribute to banks clustering CRA qualifying activities around examination time rather than throughout the evaluation period. This commenter and several others instead recommended that benchmarks be set with data from throughout the evaluation period. A commenter suggested that using a five-year average of available data could avoid the effects of sudden, sometimes unpredictable swings in demographic data on community benchmarks. Another commenter stated that the agencies should calculate the community benchmarks based on data that pertains to the years of the evaluation period, and did not support setting the community benchmarks based on data available prior to the evaluation period, or at the time of the bank's examination. Other commenters suggested that the benchmarks could instead be set annually. These commenters suggested that this approach would provide banks with appropriate notice about retail lending performance expectations.

Some commenters recommended making community benchmark data available in advance of evaluation periods. For example, a commenter recommended that a bank's community benchmarks be established at the beginning of each examination cycle and remain consistent throughout the evaluation period. Another commenter stated that as a matter of fairness and due process, banks should know the benchmarks prior to being evaluated, so that they can plan and

structure their CRA programs accordingly. A commenter similarly recommended that benchmarks be established based on the year prior to the start of an examination to allow for more consistency and alignment with the bank's metrics. Additionally, this commenter noted that in the event that circumstances have dramatically changed, such as in a global pandemic, an examiner could request more recent data.

Several commenters also suggested that, after being established at the beginning of an evaluation period, community benchmarks should decrease ("float down") if demographic data collected during the evaluation period would lead to lower benchmarks. These commenters variously noted that economic recessions, natural disasters, pandemics, significant variances in real estate prices, and other events could warrant a downward adjustment to the community benchmarks.

Several commenters expressed concern that certain community benchmark data, including FFIEC data, would not be available at the start of an examination. One of the commenters noted that this lag would result in banks being measured against inaccurate community benchmarks, and that the agencies should clearly explain how they would account for this. Another commenter suggested a transition period during which banks could opt in to being evaluated using the community benchmarks in order to allow the agencies to assess whether the benchmarks adequately reflected economic conditions. Another commenter recommended that the agencies retain the current CRA practices for flexibly establishing and considering community benchmarks (based on data from the time of a bank's evaluation period, but which are not published in advance of the evaluation period) in evaluations given their familiarity to bankers and examiners.⁹³³

Timing issues affecting both the market and community benchmarks. Several commenters expressed concerns regarding the availability of benchmark information, or lack thereof, prior to a bank's evaluation period. A commenter argued that not having benchmark data upon implementation of the final rule would be contrary to the agencies' stated objectives of clarity and certainty. This commenter and another commenter raised concerns about the ability of banks to collect, track, and analyze CRA performance using the proposed metrics, given the delayed availability of benchmark information, both currently and after the final rule is implemented. Likewise, other commenters stated that not knowing the benchmarks against which a bank's performance would be assessed before the bank's CRA evaluation periods would prevent the bank from engaging in appropriate, necessary planning. A commenter described the benchmarks as moving targets based on dated peer performance that could obscure the full story of a bank's performance. Another commenter expressed concern regarding the number of calculations used to arrive at the metrics and benchmarks, noting the many different data sources used to construct the metrics and benchmarks, and the varying timing of when these data are available. As a result, the commenter stated, the benchmarks will be subjective, as the bank will not know what data sources the examiners will use to establish them.

Some commenters addressed the proposal to establish benchmarks that would cover an entire evaluation period. For example, a commenter warned against aggregating data from a bank's entire evaluation period because a bank's major product lines or MSA delineations could change from one year to the next. This commenter stated that conducting examinations using annual

⁹³³ See, e.g., Interagency Large Institution CRA Examination Procedures (April 2014) at 6-8.

data for metrics and benchmarks, without combining and averaging that annual data, would better ensure that a bank’s retail lending performance is measured against appropriate demographic and market data. Another commenter stated that banks can have evaluation periods that are shorter or longer than three years, and that it would be problematic to always set benchmarks only for three-year periods. This commenter also indicated that the agencies’ proposed approach was further complicated by the fact that, during an evaluation period, low- and moderate-income census tracts can become middle- and upper-income census tracts, and *vice versa*.

Final Rule

The agencies have considered commenter feedback on this issue and have included provisions in sections V and VI of final appendix A that address the approach to setting, and the data used to calculate, community and market benchmarks. Specifically, the agencies intend to disclose the data used to calculate community benchmarks on an annual basis, in advance of each calendar year of an evaluation period. The agencies will calculate the market benchmarks at the time of the bank’s examination using data that corresponds to the years of a bank’s evaluation period. For purposes of a bank’s evaluation over a full evaluation period, each benchmark would be calculated for the entire evaluation period, rather than calculating separate benchmarks for each individual calendar year of the evaluation period. For both sets of benchmarks, the agencies intend to annually disclose the annual component of the benchmark that corresponds to each calendar year, and that would be used to calculate the benchmark for the entire evaluation period. For the community benchmarks, this disclosure would occur in advance of each calendar year, and for the market benchmarks, the disclosure would occur after a calendar year once reported data for that year is available.

Community benchmarks. Under the final rule approach, the agencies intend to disclose the annual components of the data used to calculate the community benchmarks in advance of each calendar year. At the time of a bank’s examination, the agencies will calculate the community benchmarks for the evaluation period, pursuant to the methodology in sections III and IV of final appendix A. For example, for a three-year evaluation period, for each community benchmark, the agencies intend to disclose available annual data in advance of each of the three calendar years of the evaluation period, and at the time of the bank’s examination, the agencies would calculate the community benchmarks based on three years of data.

Table 20 of § __.22(e): Example of community benchmark approach for a facility-based assessment area or retail lending assessment area—closed-end home mortgage lending to low-income borrowers

| | Number of low-income families | Number of families |
|--|-------------------------------|--------------------|
| Data provided prior to calendar year 1 | 10,000 | 90,000 |
| Data provided prior to calendar year 2 | 11,000 | 100,000 |

| | | |
|--|--------------------------------|---------|
| Data provided prior to calendar year 3 | 13,000 | 110,000 |
| Sum of years | 34,000 | 300,000 |
| Final community benchmark | 34,000/300,000 \approx 11.3% | |

In determining that community benchmark data would be set in advance of each calendar year of the evaluation period, the agencies have considered how to balance the objective of providing certainty to banks regarding performance standards with incorporating the most up-to-date performance context information into the metrics-based approach. The agencies believe this approach will provide appropriate advance notice of benchmarks and performance expectations to banks; each year a bank would have advance notice of the annual component of the community benchmark for that specific year, which a bank can use to monitor performance. As described above, the agencies would use an average of these annual data points to determine each community benchmark for the entire evaluation period. Under this approach, the agencies note that a bank would have access to all of the annual components of the community benchmark by the beginning of the final calendar year of each evaluation period, when the annual component of the benchmark for the final calendar year would be disclosed. Furthermore, as discussed in the section-by-section analysis of final § __.22(f), applicable performance ranges are based on the lower of the calibrated market benchmark and the calibrated community benchmark. As a result of disclosing the annual components of the community benchmarks, banks would have insight into the maximum level of retail lending to designated borrowers and in designated census tracts necessary to meet the performance ranges for each conclusion category. While the performance ranges used in an examination could be lower than those calculated by the community benchmark, they cannot exceed those based on the community benchmarks.

In addition, as a result of this approach, the agencies have considered that the data used for the community benchmarks approximately reflect the characteristics of the community during the bank's evaluation period. Prior to the beginning of each calendar year, the agencies intend to disclose annual components of the community benchmarks for the coming year of an evaluation period based on data sources that the agencies determine best reflect local conditions at the time, consistent with current practice of calculating community benchmarks based on data provided annually by the FFIEC.

The agencies also considered that the final rule approach will account for potential changes in the delineation of a Retail Lending Test Area during an evaluation period, because the community benchmark data for each calendar year would reflect the geographic composition of the Retail Lending Test Area in that year. For example, the agencies considered an example of a bank whose facility-based assessment area expands from a single county in the first calendar year of the evaluation period to a total of two counties in the second and third calendar years. The community benchmark data for the first calendar year would reflect the single county delineation, and the community benchmark data for the second and third calendar years would reflect the two-county designation. The agencies determined that calculating a multiyear ratio

reflecting all years in a bank's performance evaluation will result in a community benchmark that accounts for the changes in the bank's facility-based assessment area delineation without requiring any additional adjustments or weighting. The agencies considered this to be an important benefit of the proposed approach, since the delineations of facility-based assessment areas, retail lending assessment areas, and outside retail lending areas may change on an annual basis due to a variety of factors, such as changes in MSA definitions, or expansion of a bank's service area in a particular MSA.

The agencies also considered, but decline to adopt, an alternative approach of designating the final community benchmark levels in advance of the first year of the evaluation period. Under this alternative, a final community benchmark would be published prior to the bank's evaluation period based on data available at that time. As a result, this alternative approach would not involve calculating a multiyear ratio of annual community benchmark data released over the course of the evaluation period. The agencies considered that this alternative approach could provide additional certainty regarding the level of this benchmark. However, the agencies also considered that such an approach would necessitate using older data to construct the community benchmarks for each year in the bank's evaluation period, as noted by some commenters, which could result in certain performance context information not being incorporated into the community benchmarks. For example, the community benchmark data available at the beginning of the first year of a bank's evaluation period may reflect the composition of the population from two or more calendar years prior. By the beginning of the third calendar year of the bank's evaluation period, the community benchmark data could reflect the composition of the population from four or more calendar years prior. As a result, changes to, for example, the population or to the number of businesses or farms in those intervening years would not be accounted for in the older community benchmark data. In addition, the agencies considered that designating the final community benchmark in advance of a bank's evaluation period would not be possible in instances where MSA definitions change during an evaluation period, a Retail Lending Test Area expands or contracts during the evaluation period, or in which new census tract delineations are published and go into effect during the evaluation period. Consequently, the agencies determined that there would be significant operational challenges with an alternative approach of setting and fixing community benchmarks entirely in advance of the evaluation period.

The agencies also considered, but decline to adopt, an alternative approach of calculating benchmarks at the time of a bank's examination using data available at that time, and not setting the benchmark or providing data used to calculate the benchmark at any point in advance of the bank's examination. The agencies considered that, while this alternative approach would allow the community benchmarks to more closely reflect the composition of the population during the evaluation period, it would also significantly limit the information available to banks and the public regarding Retail Lending Test performance expectations in advance. In contrast, the agencies determined that the final rule approach of providing the annual components of the community benchmarks in advance of each calendar year of the evaluation period will more effectively provide advance notice of benchmark levels.

The agencies considered comments expressing timing concerns about the availability of the data used to compute community benchmarks and the timing of the bank's evaluation period. In adopting their final rule approach, the agencies intend to explore ways of streamlining data

availability (such as updating data on a more frequent basis than is currently done) to ensure that timely data is used to construct community benchmarks.

Market benchmarks. Pursuant to the final rule, the agencies will calculate the market benchmarks using the retail lending data from the years of the bank's evaluation period, and not from years prior to the evaluation period. This approach has the advantage of setting performance standards for banks based on contemporaneous data that reflect economic conditions during the period over which an agency is evaluating a bank's performance. The agencies have considered that this approach is consistent with existing practices, under which benchmarks are generally calculated based on data from the time of a bank's evaluation period and are not published in advance of the evaluation period. The agencies further believe that this approach is especially important to maintain in the final rule for the market benchmarks, which are intended to capture aspects of the performance context of an area that may emerge during the evaluation period, such as changes in economic conditions that may affect the demand for credit among low- and moderate-income households. The agencies determined that basing the market benchmarks on data from the evaluation period will appropriately contribute to standardization and transparency regarding evaluations of retail lending performance, because examiners generally would not need to qualitatively consider economic conditions that are already accounted for in the market benchmarks.

The agencies considered, but are not adopting, approaches recommended by some commenters to set the market benchmarks in advance of the evaluation period, or in advance of each calendar year of the evaluation period. The agencies considered that such alternative approaches would provide greater certainty to banks and the public regarding quantitative performance standards. However, the agencies have also considered that these alternative approaches would result in benchmarks that may not account for the performance context of an area in a specific year, because the data used to compute the market benchmarks would precede the bank's evaluation period and would not correspond to the overall lending in a community during a specific time period. As a result, under these alternative approaches, the agencies have considered that the market benchmarks would not provide the same function of incorporating performance context data into the metrics approach and could necessitate more often using qualitative considerations and agency discretion to account for changes in economic conditions or other changes in the market that occur during an evaluation period. The agencies have also considered that greater use of qualitative factors would counteract any potential increase in certainty derived from providing the benchmarks in advance. In addition, consistent with current practice, the agencies note that banks could consider recent market benchmarks for their Retail Lending Test Areas, in concert with census data and their own lending data, as part of their planning prior to and during a CRA evaluation period.

While the agencies' proposal also discussed alternative approaches for specifying in the regulation which years of data would be used to calculate a bank's metrics and market benchmarks in a given examination, the final rule does not specify such alternatives. However, in implementing the final rule, the agencies intend to take the approach described in the proposal of basing the metrics and market benchmarks on the same years of data, rather than allowing the market benchmarks to be based on data from a subset of the years of the evaluation period if data for the last year of an evaluation period is not yet available. In practice, for each major product line, the scope of the Retail Lending Test evaluation would be limited to those years in which the necessary data is available to calculate the relevant metrics and benchmarks. The agencies

considered that this approach ensures that the benchmarks reflect the performance context of the evaluation period. The agencies determined that this timing issue is more appropriately resolved in implementation, because a degree of flexibility is warranted to account for future changes in underlying data sources used to construct metrics and benchmarks, such as changes to the timing of when certain data is published.

Alternative to set benchmarks in advance and adjust at time of examination. For both the community benchmarks and the market benchmarks, the agencies considered, but are not adopting, an alternative “float-down” approach of setting each benchmark. This alternative would entail establishing each benchmark in advance of the evaluation period, recalculating that benchmark at the time of the bank’s examination using more current data, and selecting the lower of the two benchmarks for use in the evaluation. The agencies determined that this approach could result in a misalignment between the data used to calculate the metrics and corresponding benchmarks (*e.g.*, if a bank made a loan in a moderate-income census tract that was then reclassified to middle-income during an evaluation period) and would increase uncertainty regarding the ultimate level of the benchmarks. In addition, the agencies considered that this approach would introduce significant operational complexity for banks and the agencies due to the large number of data points that are necessary to construct multiple sets of benchmarks at different points in time for a single examination, and the varied timing of when the data sources are updated. The agencies also considered that under any approach of adjusting the benchmarks at the time of a bank’s examination, two banks with the same evaluation period whose examinations occur at different times could potentially have different benchmarks calculated for the same Retail Lending Test Area and evaluation period due to differences in the data available at the time of the two examinations. The agencies believe that these considerations outweigh any potential benefits of advance notice of benchmark levels achieved through this alternative.

The agencies considered, but are not adopting, the alternative approach suggested by some commenters to construct metrics and benchmarks that would apply to each calendar year of an evaluation period, rather than one set of metrics and benchmarks that apply to the entire evaluation period. The agencies determined that this alternative, on balance, would increase complexity. For example, for a three-year evaluation period, this alternative would require approximately three times as many metrics and benchmarks and associated calculations as the final rule approach. Furthermore, the agencies determined that the alternative approach would require an additional weighted average calculation for combining the performance of each individual calendar year into a conclusion for the overall evaluation period. The agencies determined that this alternative approach would therefore be inconsistent with commenter feedback suggesting reducing the complexity of the proposed Retail Lending Test.

The agencies have considered comments that under the proposed approach, the exact data sources used to designate the benchmarks would be unknown prior to a bank’s evaluation period. In implementing the final rule, the agencies intend to provide regular updates to banks and the public regarding the data applicable to CRA evaluations, as well as historical data regarding benchmarks in different areas. The agencies decided not to include specific data sources for community benchmarks in the final rule, or specific requirements for which years of data will be used to calculate community benchmarks, because exact data sources and timing may change over time. The agencies believe it is preferable to assess data sources and availability on an ongoing basis, and to regularly update CRA stakeholders, signaling any potential changes with

as much advance notice as possible. The agencies believe this approach is consistent with current practice, in that the exact data sources and timing of the various inputs for metrics and benchmarks under the current approach are subject to change.

Distribution Benchmarks in Outside Retail Lending Areas

The Agencies' Proposal

The agencies proposed to evaluate the distribution of a bank's major product lines in its facility-based assessment areas, retail lending assessment areas, and outside retail lending area, as applicable. The agencies further proposed to use generally the same approach to calculating the proposed distribution metrics and benchmarks in all three types of Retail Lending Test Areas.

However, in evaluating the distribution of a bank's major product lines in its outside retail lending area, the agencies proposed to tailor performance expectations for outside retail lending areas to match the opportunities in the geographic regions in which the bank lends, which may vary considerably across the country. In particular, the agencies proposed to tailor performance expectations by setting bank-specific tailored benchmarks, which would then be used to establish thresholds and performance ranges. These tailored benchmarks would be calculated as the average of local market and community benchmarks across the country, weighted by the respective percentage of the bank's total retail lending, by dollar amount, in each MSA and in the nonmetropolitan portion of each State outside of assessment areas in which the bank engages in each region.

The agencies sought feedback on whether the proposed tailored benchmarks appropriately set performance standards for outside retail lending areas, and on potential alternatives. The agencies discussed an alternative proposal to create nationwide market and community benchmarks that would apply to all banks, regardless of where their lending is concentrated. These nationwide benchmarks could be calculated using all census tracts in the nation as the geographic base. Another alternative on which the agencies invited commenter views was to tailor benchmarks using weights that would be individualized by the dollar amount of lending specific to each major product line, rather than the sum of all of a bank's outside-assessment area retail lending. Under this alternative, if a bank did a majority of its outside-assessment area closed-end home mortgage lending in MSA A, and a majority of its outside-assessment area small business lending in MSA B, the closed-end home mortgage tailored benchmarks would be weighted towards the benchmarks from MSA A, while the small business tailored benchmarks would be weighted toward MSA B.

Comments Received

Several commenters addressed the agencies' proposal to establish tailored benchmarks for outside retail lending areas that would be based on a bank's level of retail lending in different markets. Some commenters supported the proposed tailored benchmark approach. One of these commenters also indicated that the benchmarks could be more precisely tailored by calculating unique weights for each specific product line rather than calculating one set of weights for all product lines based on a bank's overall dollar volume of retail lending in each market as proposed.

Other commenters expressed a preference for uniform, nationwide benchmarks instead of the proposed tailored benchmarks, noting that tailored benchmarks would be overly complex and could be burdensome for smaller banks evaluated in these areas. Another commenter

recommended the agencies consider a separate approach of a nationwide analysis while also designating underserved communities that banks must demonstrate they are serving through their lending. A commenter suggested the agencies provide a separate approach to evaluating outside retail lending areas for internet-based banks akin to the evaluation for limited purpose banks. Several other commenters suggested the agencies permit examiners more discretion to apply performance context when evaluating outside retail lending areas and particularly when developing Retail Lending Test conclusions at the state level.

Final Rule

The agencies are adopting certain technical and substantive changes to the proposed benchmarks for outside retail lending areas.

For clarifying purposes in describing the calculations of metrics and benchmarks, the agencies use the term “component geographic area” in final § __.18 and appendix A to refer to any MSA or the nonmetropolitan area of any State, or portion thereof included within the outside retail lending area. As discussed in the section-by-section analysis of § __.18, component geographic areas of a bank’s outside retail lending area are the MSAs or the nonmetropolitan areas of any State, excluding: (1) the bank’s facility-based assessment areas and retail lending assessment areas; and (2) in a nonmetropolitan area, any county in which the bank did not originate or purchase any closed-end home mortgage loans, small business loans, small farm loans, or automobile loans if automobile loans are a product line for the bank.

Pursuant to paragraphs III.d, III.e, IV.d, and IV.e of appendix A, under the final rule, the agencies determine each benchmark for the outside retail lending area by calculating a weighted average of the benchmarks for each component geographic area. The weights for this calculation are based on the bank’s number of loans in each component geographic area in the relevant major product line.

- Following this approach, the agencies calculate benchmarks for the outside retail lending area as follows: The agencies first calculate a benchmark in each component geographic area for the relevant major product line, distribution analysis, and income category following the same method to calculate benchmarks in facility-based assessment areas and retail lending assessment areas. For example, for a bank that has closed-end home mortgage loans as a major product line in its outside retail lending area, a community and a market benchmark would be calculated for closed-end home mortgage loans to low-income borrowers in each component geographic area of the outside retail lending area, and for closed-end home mortgage loans to moderate-income borrowers in each component geographic area of the outside retail lending area.
- The agencies then calculate the percentage of the bank’s originated and purchased loans in the outside retail lending area for the relevant major product line, such as closed-end home mortgage loans, that are within each component geographic area by loan count. These percentages serve as the weights applied to the component geographic area.
- Finally, the agencies use these percentages to calculate a weighted average of the component geographic area benchmarks to produce a benchmark applicable to the outside retail lending area for the specific major product line, distribution analysis, and income category, such as the community and market benchmarks for evaluating a bank’s closed-end home mortgage loans to moderate-income borrowers.

For example, if a bank engaged in closed-end home mortgage lending in two different MSAs outside of its facility-based assessment areas and retail lending assessment areas, these MSAs are component geographic areas for purposes of constructing benchmarks for the outside retail lending area. In this example, the market benchmark for the closed-end home mortgage moderate-income borrower distribution is 10 percent in the first area, and 8 percent in the second area. Of the bank’s closed-end home mortgage loan originations and purchases in the outside retail lending area, 75 percent by loan count are in the first area, and 25 percent are in the second area. The bank’s outside retail lending area benchmark is calculated using a weighted average of the component area benchmarks with the weighting based on the bank’s percentage of closed-end home mortgage lending in each area by loan count. The bank’s outside retail lending area benchmark for closed-end home mortgage lending to moderate-income borrowers is $(0.10 \times 0.75) + (0.08 \times 0.25) = 0.095$, or 9.5 percent. This example is also reflected in Table 21:

Table 21 of § __.22(e): Example of Outside Retail Lending Area Benchmark Calculation

| | Component Geographic Areas | |
|--|---|------------|
| | MSA 1 | MSA 2 |
| Market Benchmark for Closed-End Home Mortgage Loans to Moderate-income Borrowers | 10 percent | 8 percent |
| Percentage of the Bank’s Lending, By Loan Count, in each Component Geographic Area | 75 percent | 25 percent |
| Weighted Average Calculation | $(0.1 \times 0.75) + (0.08 \times 0.25) = 0.095$, or 9.5 percent | |

The agencies determined that weighting by loan count, rather than by loan dollar volume, is appropriate for calculating outside retail lending area benchmarks because this approach would result in better alignment between the metrics and benchmarks than the proposed approach. Specifically, the agencies considered that distribution metrics for the outside retail lending area—as well as for facility-based assessment area and retail lending assessment areas—are calculated based on loan count, as discussed above in this section. The distribution metrics for the outside retail lending area do not incorporate the concept of weighting by loan dollars, or by deposit dollars; because the metrics are based on loan count, the outside retail lending area metrics effectively give greater weight to those component geographic areas in which the bank made a larger number of loans. To ensure consistency between the distribution metrics and benchmarks, the agencies therefore determined that it is preferable to use loan count when weighting the benchmarks of the component geographic areas.

The agencies also considered how to weight each component geographic area when calculating the benchmarks for the outside retail lending area and decided to adopt an alternative approach described in the proposal. Specifically, the agencies will calculate weights for the component geographic areas separately for each of a bank's major product lines in the outside retail lending area, rather than calculating one set of weights that would apply to the benchmarks for all major product lines. As noted by one commenter, the agencies determined that this alternative allows for the benchmarks to be more precise and more tailored for banks with multiple product lines in an outside retail lending area. The agencies believe that constructing the market and community benchmarks by weighting at the individual product line level will more accurately reflect the market conditions the bank actually faces in the geographic areas beyond its facility-based assessment areas and retail lending assessment areas than would benchmarks based on a combination of all of a bank's retail lending. For example, a bank might extend closed-end home mortgage loans nationwide by originating loans through brokers, while its small business and small farm originations might be more closely tied to branch-based delivery channels and thus only extend to geographic areas just beyond the periphery of its facility-based assessment areas and retail lending assessment areas. In this example, constructing benchmarks by weighting at the individual product level allows the benchmarks for small business and small farm lending to reflect market conditions in the geographic areas around the bank's assessment areas, while the benchmarks for closed-end mortgage lending reflect conditions in a broader national footprint. This distinction more accurately tailors the benchmarks to reflect the opportunities available to the bank than would a benchmark based on a combination of all of its small business, small farm, and closed-end home mortgage lending would.

While this alternative introduces some additional complexity due to the need to calculate a separate set of weights for each major product line, the agencies determined that the added accuracy and tailoring of this alternative outweighs the additional complexity. In addition, the agencies also considered that, for a bank with a single major product line in its outside retail lending area, the alternative approach is generally less complex than the proposed approach. Specifically, under the final rule approach, the agencies would calculate one set of weights for the component geographic areas per product line, based on only the loans in that product line. In contrast, under the proposed approach, the weights for the component geographic areas would be based on all of the bank's product lines. For banks with two major product lines in the outside retail lending area, the agencies considered that the alternative approach would be moderately more complex, because the bank would have two sets of weights for the geographic component areas of its outside retail lending area. For banks with three or four major product lines in the outside retail lending area, the agencies considered that the alternative approach would add to this complexity. However, based on available data for closed-end home mortgage, small business, and small farm lending (automobile lending data is not available to include in this analysis), the agencies believe that a small percentage, approximately 7 percent, of banks would have all three of these product lines that meet the major product line standard in outside retail lending areas.

The agencies considered, but are not adopting, the alternative approach of setting uniform benchmarks for the outside retail lending area for all banks, without tailoring to the specific geographies in which a bank originated or purchased loans within its outside retail lending area. For example, this could include an alternative in which the benchmarks for the outside retail lending area would be calculated at the nationwide level, without averaging together the

benchmarks for a bank's specific component geographic areas. The agencies determined that, while this approach would reduce the complexity of the outside retail lending area evaluation, the benchmarks under this alternative would not reflect a bank's actual markets, which may vary substantially in retail credit needs and opportunities. For example, if a large bank's lending in its outside retail lending area is primarily in one component geographic area, the market and community benchmarks for that component geographic area may be substantially different from benchmarks calculated at the nationwide level. In contrast, the tailored benchmark approach adopted by the agencies is intended to set expectations for a bank's outside-assessment area retail lending to match the opportunities in the markets in which it lends. Under this approach, the agencies determined that component geographic areas with more of a bank's lending would appropriately carry greater weight in calculating the agencies' performance expectations for the outside retail lending area as a whole. In addition, markets in which the bank did zero lending would receive zero weight when calculating the outside retail lending area benchmarks, and hence have no influence on the bank's Retail Lending Test evaluation.

The agencies also acknowledge comments that performance context information may be relevant to assessing lending in outside retail lending areas, to the extent it is not already considered as part of the Retail Lending Test. Pursuant to final § __.21(d), the agencies would consider performance context information when applying the performance tests, including the Retail Lending Test. In addition, pursuant to final § __.22(g), the agencies would consider the specified additional factors when determining Retail Lending Test conclusions.

The agencies considered, but are not adopting, an alternative of creating a separate approach to the outside retail lending area evaluation for internet banks. The agencies also believe that constructing benchmarks by weighting lending in each individual product line provides sufficient flexibility in representing the market conditions in the geographic areas outside of a bank's assessment areas that a separate and unique approach to constructing benchmarks for internet banks is unnecessary. To the extent that the geographic areas covered by an internet bank's closed-end home mortgage, small business, or small farm lending differs from those of branch-based banks, the product-specific weighting approach used to construct benchmarks for outside retail lending areas will reflect those differences.

§ __.22(f) Retail Lending Test Recommended Conclusions

§ __.22(f)(1) In general

§ __.22(f)(2)(i) Geographic distribution supporting conclusions—geographic distribution supporting conclusions for closed-end home mortgage loans, small business loans, and small farm loans

§ __.22(f)(3)(i) Borrower distribution supporting conclusions—borrower distribution supporting conclusions for closed-end home mortgage loans, small business loans, and small farm loans

The Agencies' Proposal

For each of a bank's distribution metrics for each major product line, the agencies proposed to compare a bank's level of lending to specific quantitative standards.⁹³⁴ These standards would be set by a methodology that uses data for the geographic area matching the relevant distribution metric and

⁹³⁴ See proposed § __.22(d)(2)(ii) and (iii) and proposed appendix A.II to A.IV.

maintains some key parts of how examiners currently conduct examinations. In addition, the agencies proposed to standardize and make performance expectations more transparent relative to current CRA examinations. The agencies noted that current CRA guidance and examination procedures do not specify how much lending is necessary to achieve each conclusion.

The agencies proposed that each bank geographic and borrower distribution metric would be compared to a set of performance ranges that correspond to different conclusion categories: “Outstanding,” “High Satisfactory,” “Low Satisfactory,” “Needs to Improve,” and “Substantial Noncompliance.”⁹³⁵ As provided in the proposal, separate performance ranges would apply to geographic and borrower distribution metrics for each proposed major product line, with the exception of multifamily lending, and for each income level or revenue level, as applicable.⁹³⁶

The agencies proposed that the thresholds for these performance range categories would be calculated using community benchmarks and market benchmarks. Specifically, the agencies proposed to use the benchmarks to establish thresholds separating the conclusion categories.⁹³⁷ The agencies proposed that the benchmarks would be calibrated using multipliers, which are defined percentages for aligning the benchmarks with the agencies’ performance expectations for specific supporting conclusions.⁹³⁸ For each major product line and income category, the agencies proposed the process for determining thresholds illustrated in Table 22.⁹³⁹

⁹³⁵ See proposed appendix A.V.

⁹³⁶ See proposed § __.22(d)(2)(ii)(D)(2) and proposed appendix A.V.2.b and A.V.2.c (geographic distribution metrics) and proposed § __.22(d)(2)(iii)(D)(2) and proposed appendix A.V.2.d and A.V.2.e (borrower distribution metrics).

⁹³⁷ See proposed appendix A.V.2.b (geographic distribution performance) and proposed appendix A.V.2.d (borrower distribution performance).

⁹³⁸ See *id.*; see also Table 8 to proposed § __.22.

⁹³⁹ See *id.* The agencies explained their justifications for the thresholds. After considering alternatives of 25 percent and 50 percent for the “Needs to Improve” threshold, the agencies arrived at the conclusion that performance serving less than 33 percent of the market or community benchmark was an appropriate threshold to distinguish performance low enough to warrant the lowest conclusion category and performance that is not satisfactory but is more appropriately recognized as needing improvement. After considering alternative market benchmark thresholds of 75 percent and 70 percent and an alternative community threshold of 55 percent, the agencies arrived at a market benchmark threshold of 80 percent and the community benchmark threshold of 65 percent for the “Low Satisfactory” threshold in the proposal, reflecting performance that is adequate relative to opportunities. The agencies proposed the “High Satisfactory” threshold at 110 percent for the market benchmark in order to reserve the conclusion for banks that are not just average, but a meaningful increment above the average of local lenders. Similarly, a community benchmark threshold of 90 percent in the proposal established a “High Satisfactory” conclusion if a bank achieved close to per capita parity in its lending across different income groups. The agencies selected a market benchmark threshold of

Table 22 to § __.22(f): Proposed Thresholds for Specific Supporting Conclusion Categories

| | Select the Lesser of the Calibrated Market Benchmark and the Calibrated Community Benchmark to Determine Threshold for Supporting Conclusion Category | | |
|-----------------------|--|-----------|---|
| Supporting Conclusion | Calibrated Market Benchmark (Result of multiplying Market Benchmark and Market Multiplier) | | Calibrated Community Benchmark (Result of multiplying Community Benchmark and Community Multiplier) |
| “Outstanding” | 125 percent of the Market Benchmark | OR | 100 percent of the Community Benchmark |
| “High Satisfactory” | 110 percent of the Market Benchmark | OR | 90 percent of the Community Benchmark |
| “Low Satisfactory” | 80 percent of the Market Benchmark | OR | 65 percent of the Community Benchmark |
| “Needs to Improve” | 33 percent of the Market Benchmark | OR | 33 percent of the Community Benchmark |

The agencies analyzed historical bank lending data based on the proposed multipliers and estimated the recommended conclusions banks would have received. The agencies asked for feedback on alternatives to the proposed market and community multipliers for each conclusion category.

The agencies also noted in the proposal that the Board developed a search tool, which includes illustrative examples of the thresholds and performance ranges in a given geographic area, using historical lending data.⁹⁴⁰ This tool provides illustrative examples of the thresholds

125 percent for an “Outstanding” conclusion, setting a threshold well in excess of the average of local lenders, while simultaneously maintaining an attainable target for better bank performance. The agencies explained further that a market benchmark threshold of 125 percent ensures that an “Outstanding” conclusion is awarded only to banks that have demonstrated an exceptional level of performance. Finally, the agencies explained that setting the community benchmark threshold at 100 percent would be an appropriate aspirational goal for an “Outstanding” conclusion because bank metrics and market benchmarks are usually below the community benchmark and this benchmark threshold would represent equal per capita lending to communities of different income levels.

⁹⁴⁰ See Board, Community Reinvestment Act (CRA), “Proposed Retail Lending Test Thresholds Search Tool,” <https://www.federalreserve.gov/consumerscommunities/performance-thresholds-search-tool.htm>.

for the relevant performance ranges in each MSA, metropolitan division, and county based on historical lending from 2017-2019.⁹⁴¹

The agencies proposed to use the lesser of the two calibrated benchmarks (*i.e.*, the calibrated market benchmark and the calibrated community benchmark) to determine the applicable conclusion.⁹⁴² In addition, for the “Outstanding,” “High Satisfactory,” and “Low Satisfactory” thresholds, the proposed multiplier for the market benchmark would be higher than the multiplier for the community benchmark. The agencies explained that using the lesser of the two calibrated benchmarks would prevent the thresholds from becoming too stringent in markets with fewer opportunities to lend to lower-income communities or smaller establishments. The agencies also believed that this approach would tend to assign more favorable recommended conclusions in geographic areas where more banks were meeting the credit needs of the community. The agencies requested feedback on whether the proposed approach would set performance expectations too low in places where all lenders, or a significant share of lenders, are underserving the market and failing to meet community credit needs.

Comments Received

Approach to using the market and community benchmarks. The agencies received a range of comments regarding the proposal to use the lower of the calibrated benchmarks (the calibrated benchmark calculated using the market benchmark and the calibrated benchmark calculated using the community benchmark) when determining performance ranges—with a number of commenters supporting the proposed approach.

In contrast, a commenter indicated that using the lower of the calibrated benchmarks may fail to incentivize banks to provide small-dollar home mortgage loans that would better meet the credit needs of homebuyers in relatively low-cost low- and moderate-income communities. Another commenter indicated that the approach of using the lower of the two calibrated benchmarks would result in performance ranges that do not reflect credit demand in an area, and that it would be preferable to base the performance ranges on only the market benchmark.

A number of commenters offered alternative suggestions for developing the performance ranges, based upon using a weighted average of the calibrated market benchmark and the calibrated community benchmark, instead of using the lower of the two. For example, a commenter suggested that the agencies aggregate all calibrated benchmarks for a total CRA score or use a weighted average and consider all calibrated benchmarks to provide a range of comparators to evaluate how banks are meeting the needs of low- and moderate-income consumers. Another commenter suggested that selecting the lower calibrated benchmark, as proposed, could result in lower thresholds that inflate CRA ratings; for example, in an assessment area where the calibrated market benchmark is considerably lower than the calibrated community benchmark, all banks could be underperforming in making retail loans to low- and moderate-income borrowers and communities. To address this concern, this commenter also recommended that, in cases where the calibrated market benchmark is considerably lower than the calibrated community benchmark and where that gap is not explained by performance context, the agencies should calculate a weighted average of the two benchmarks and reduce the

⁹⁴¹ *See id.*

⁹⁴² *See* proposed appendix A.V.2.b (proposed geographic distribution performance) and proposed appendix A.V.2.d (proposed borrower distribution performance).

weight of the market benchmark, taking into account how much the benchmarks diverge and whether performance context factors explain part of the discrepancy. Another commenter similarly recommended that when the calibrated market benchmark is lower than the calibrated community benchmark, the threshold should be a weighted average of the two calibrated benchmarks, with 30 percent weight on the market benchmark and 70 percent weight on the community benchmark.

Stringency of performance ranges. The agencies received a number of comments regarding the multipliers and performance ranges in evaluating a bank's retail lending performance. Several commenters generally supported the agencies' proposed multipliers to align the market and community benchmarks with the agencies' performance expectations. For example, one commenter indicated that the agencies' proposed approach would result in conclusions that would meaningfully reflect distinctions in performance and avoid contributing to ratings inflation.

On the other hand, many other commenters stated that the proposed multipliers would set the thresholds for favorable conclusions overly stringently such that they would be unachievable. For example, a commenter opposed the performance ranges on the grounds that there has been no indication that banks' CRA activities and performance have declined in recent years and pointed out that Congress has not authorized the agencies to increase the stringency of CRA performance standards. This commenter suggested that the agencies should ensure that the final rule does not lead to a dramatic downward shift in the proportion of banks that receive "Outstanding" or "Satisfactory" conclusions and ratings, assuming that banks' underlying CRA retail lending performance remains on par with current levels. The commenter also stated it would be arbitrary and capricious to downgrade the ratings for a broad portion of the industry. Relatedly, another commenter indicated that the agencies should better recognize the amount of effort that banks with favorable CRA conclusions and ratings put in pursuant to the requirements of the current CRA regulations. Another commenter asserted that the performance ranges should be set so as to roughly match the current distribution of retail lending performance conclusions. A number of commenters asserted that the proposed approach would depress banks' overall Retail Lending Test conclusions, and that banks would routinely have to surpass their prior favorable retail lending performance levels, pursuant to the current regulations, to ensure that they would not receive "Needs to Improve" or "Substantial Noncompliance" conclusions pursuant to the proposed approach. A commenter questioned whether the agencies intentionally proposed multipliers to cause a sharp increase in "Low Satisfactory" and "Needs to Improve" conclusions, as the commenter asserted was reflected in the analysis presented in appendix A of the proposal.

A number of commenters asserted that the proposed performance ranges would make it mathematically impossible for all banks in a given assessment area to achieve favorable conclusions. A commenter expressed concern that the proposed benchmarks, although based on a consistent formula and set of data points, could create an unachievable target for many banks. This commenter indicated that it would be mathematically impossible for all of the banks in an assessment area to meet the proposed thresholds for "Outstanding" and "High Satisfactory" conclusions, and the proposal would instead result in a ratings distribution where more than one-third of banks failed. Another commenter stated that the proposal would make it increasingly challenging for banks to meet high thresholds year-over-year as they focus on increasing their retail lending in the same markets. A commenter expressed concern that it would be difficult for

a financial institution with a small geographic footprint and no low-income or moderate-income census tracts within its assessment areas to achieve better than “Low Satisfactory” conclusions.

Some commenters stated that the performance ranges approach was inappropriate because a bank’s metric could be compared to the performance of other banks based on the market benchmark, which these commenters described as equivalent to grading banks on a curve. A commenter noted that banks should be evaluated without regard to how other banks performed, and that all banks should be able to achieve an “Outstanding” or a “Satisfactory” conclusion.

A few commenters added that, in turn, the proposed performance ranges could incentivize unsafe and unsound risk-taking as banks competed more intensely against competitors in pursuit of favorable performance conclusions. For example, a commenter stated that the agencies should recalibrate the proposed performance ranges to be ratings-neutral for large banks, so that banks would not be incentivized to lower their standards of creditworthiness and potentially experience credit quality issues.

Several commenters suggested alternative multiplier formulations for establishing performance ranges. For example, commenters proposed that the community benchmark multipliers be calibrated differently by product line to reflect how different loan types serve low- and moderate-income consumers and communities differently. A commenter supported the agencies’ proposed multipliers but also recommended using the multipliers as a threshold compared to a “parity ratio” with the objective of reducing complexity. Under this suggestion, a bank’s metric would be calculated as a ratio of the bank’s percentage of loans to certain borrowers or census tracts relative to the corresponding benchmark. For example, if 11 percent of the bank’s closed-end home mortgage loans were to low-income borrowers, and the corresponding benchmark for this category is 10 percent, the bank’s ratio under this approach would be 110 percent. This ratio could be compared directly to the multipliers to determine the bank’s conclusion.

Another commenter suggested replacing the market and community benchmarks altogether with an evaluation system based on statistical confidence levels. Rather than evaluate a bank’s performance based on the difference between a bank’s metric and the market or community benchmark, this commenter suggested that the evaluation be based on the likelihood that the difference between the bank’s metric and the market benchmark was the result of random chance. In effect, this would replace the uniform thresholds that the proposed rule would apply to all banks in the same assessment area with ones that vary based upon the number of loans each bank originates or purchases in that assessment area and on the number of loans originated by the market as a whole.

Comments on specific conclusion thresholds and performance ranges. Other commenters expressed that the proposed performance ranges essentially put achieving “Outstanding” retail lending performance out of reach and would reduce banks’ incentives to increase retail lending to improve their retail lending performance. For example, a commenter noted that the high bar for an “Outstanding” conclusion would, contrary to the agencies’ goals, discourage banks from striving for “Outstanding” performance because they would have little incentive to develop or initiate responsive credit programs beyond those that will produce a “Satisfactory” conclusion. Another commenter noted that the benchmark for an “Outstanding” conclusion disadvantages banks with substantial market share compared to banks with smaller market share, which could more easily improve their lending distributions. A commenter stated that fewer than two percent

of current banking system assets would currently meet or exceed the market benchmark threshold for an “Outstanding” conclusion, so most banks would be motivated to seek only a “Satisfactory.” Another commenter noted that the proposed Retail Lending Test would account for 75 percent of retail performance, yet the performance ranges for Retail Lending Test are prohibitively high such that lowering them may encourage banks to strive for “Outstanding” performance. Another commenter stated that banks would not have a reasonable chance of attaining an “Outstanding” conclusion and also asserted that, based on the agencies’ own analysis, no bank with assets exceeding \$50 billion would achieve an “Outstanding.”

A number of commenters recommended specific alternative multiplier values for certain performance ranges or suggested adjustments to how the agencies would apply the performance ranges. A commenter suggested lowering multiplier values and, in turn, the thresholds for the performance ranges so that the “Outstanding” performance range would correspond to between 90 percent and 100 percent of the market benchmark and the “High Satisfactory” performance range would correspond to between 80 percent and 90 percent of the market benchmark. Another commenter recommended adjusting the performance ranges to more reasonably allow for a bank to achieve an “Outstanding” rating (and also to ensure that banks that achieve 100 percent of the market benchmark receive more than a “Low Satisfactory” conclusion). Another commenter suggested lowering some of the proposed multipliers for the market and community benchmarks. This commenter suggested that, for example, an “Outstanding” conclusion should correspond to the lesser of 110 percent or higher of the market benchmark or 100 percent or higher of the community benchmark. Conversely, another commenter suggested raising the “Needs to Improve” multiplier for the market benchmarks from 33 percent to 48 percent, so the community benchmark, unchanged at 33 percent, would be binding more often. This commenter also proposed to set the community benchmark for “Outstanding” higher than 100 percent to maintain a meaningful distinction between the benchmarks. Another commenter proposed alternative multiplier values to measure, and terminology to describe, retail lending performance. This commenter proposed to use the term “Adequate” to correspond to performance between 70 percent to 89 percent of market and community benchmarks, the term “Good” to correspond to performance between 90 percent and 109 percent of the two benchmarks, and the term “Excellent” to correspond to performance at 110 percent or more of the benchmarks.

Some commenters expressed that the distribution analysis should involve qualitative considerations and not be based solely on the performance ranges. For example, a commenter stated that the agencies should consider calculations with simpler thresholds that can be modified by examiners as informed by performance context. Another commenter further recommended that the agencies issue guidance stating that market benchmarks are not absolute criteria for conclusions.

One commenter stated that the agencies should develop guidance and a new appendix to replace proposed appendix A with more detailed descriptions of how ratings would correlate to how a bank’s performance compares against the benchmarks.

Final Rule

§ __.22(f) Retail Lending Test recommended conclusions

§ __.22(f)(1) In general

Final § __.22(f)(1) indicates that, with two exceptions, the agencies develop a Retail Lending Test recommended conclusion for each of a bank’s Retail Lending Test Areas based on the distribution analysis described in final § __.22(e) and using performance ranges, supporting conclusions, and product line scores. Consistent with the proposed approach, the agencies will develop a separate supporting conclusion for each category of designated census tracts and designated borrowers described in paragraphs V.a and VI.a of final appendix A. However, as specified in final §§ __.22(b)(5)(i) and __.22(c)(3)(iii)(A), the agencies do not develop a Retail Lending Test recommended conclusion if a bank has no major product lines in a Retail Lending Test Area or if a large bank lacks an acceptable basis for not meeting the Retail Lending Volume Threshold in a facility-based assessment area.

The term “supporting conclusion” represents a technical revision from the proposal intended to provide additional clarity regarding the agencies’ approach for developing Retail Lending Test recommended conclusions. The agencies believe this term helps to distinguish between: supporting conclusions that are assigned to each product line for each category of designated census tracts and designated borrowers; recommended conclusions that are assigned to each Retail Lending Test Area; and conclusions that are assigned to each Retail Lending Test Area, State, multistate MSA, and to the institution. Additionally, the agencies have employed the terms “designated census tract” (*i.e.*, low-income census tracts or moderate-income census tracts, as applicable) and “designated borrower” (*i.e.*, low-income borrowers; moderate-income borrowers; businesses with gross annual revenues of \$250,000 or less; businesses with gross annual revenues of more than \$250,000 but less than or equal to \$1 million; farms with gross annual revenues of \$250,000 or less; and farms with gross annual revenues of more than \$250,000 but less than or equal to \$1 million, as applicable) to streamline the regulatory text and increase clarity.

§ __.22(f)(2)(i) Geographic distribution supporting conclusions for closed-end home mortgage loans, small business loans, and small farm loans

§ __.22(f)(3)(i) Borrower distribution supporting conclusions for closed-end home mortgage loans, small business loans, and small farm loans

Overview

As provided in final § __.22(f)(2)(i), final § __.22(f)(3)(i), and section V of final appendix A, the agencies are finalizing the core methodology of their proposal to translate the proposed benchmarks into the four supporting conclusion performance thresholds for three product lines: closed-end home mortgage loans; small business loans; and small farm loans. Upon consideration of commenter input and additional analysis, the final rule includes modifications to several of the proposed multiplier values, and as a result, “Outstanding,” “High Satisfactory,” and “Low Satisfactory” Retail Lending Test conclusions are generally more attainable relative to the proposed approach.⁹⁴³

⁹⁴³ In addition, as discussed in the section-by-section analysis of final § __.22(d), unlike in the proposal, the agencies will not evaluate open-end home mortgage lending and multifamily

Table 23 compares the proposed multipliers to those adopted in the final rule.

Table 23 to Section __.22(f): Comparison of Market Multipliers and Community Multipliers in Proposed Rule and Final Rule

| | Market Multipliers | | Community Multipliers | |
|-------------------|----------------------|-------------------|-----------------------|-------------------|
| | <i>Proposed Rule</i> | <i>Final Rule</i> | <i>Proposed Rule</i> | <i>Final Rule</i> |
| Outstanding | 125 percent | 115 percent | 100 percent | 100 percent |
| High Satisfactory | 110 percent | 105 percent | 90 percent | 80 percent |
| Low Satisfactory | 80 percent | 80 percent | 65 percent | 60 percent |
| Needs to Improve | 33 percent | 33 percent | 33 percent | 30 percent |

Approach to using the market and community benchmarks. Consistent with the agencies’ proposal, under the final rule, the performance ranges are set by establishing thresholds for each conclusion category. Each threshold is determined by selecting the lesser of the following:

- The result of multiplying the market benchmark by the market multiplier (*i.e.*, the calibrated market benchmark); and
- The result of multiplying the community benchmark by the community multiplier (*i.e.*, the calibrated community benchmark).

The agencies would compare each metric to the performance ranges, and assign the corresponding supporting conclusion based on the lesser of calibrated community benchmark and the calibrated market benchmark. This approach is reflected in Table 24.

Table 24 to Section __.22(f): Thresholds for Defining Performance Ranges

| | Select the Lesser of the Two Calibrated Benchmarks | | |
|-----------------------|--|-----------|---------------------------------|
| Supporting Conclusion | Calibrated Market Benchmark | | Calibrated Community Benchmark |
| “Outstanding” | 115% of the Market Benchmark | OR | 100% of the Community Benchmark |

lending as major product lines; consequently, the agencies will not employ multipliers and performance ranges with respect to evaluating these loans. As discussed below, although the agencies will evaluate automobile lending as a product line, as applicable, the agencies will not evaluate automobile lending using same methodology as proposed or as applied to other product lines pursuant to final § __.22(f).

| | | | |
|---------------------|------------------------------|-----------|--------------------------------|
| “High Satisfactory” | 105% of the Market Benchmark | OR | 80% of the Community Benchmark |
| “Low Satisfactory” | 80% of the Market Benchmark | OR | 60% of the Community Benchmark |
| “Needs to Improve” | 33% of the Market Benchmark | OR | 30% of the Community Benchmark |

The agencies believe that as a result of the approach of using the lesser of the two calibrated benchmarks, coupled with the comparatively higher market multipliers relative to the community multipliers, “Low Satisfactory” and higher conclusions are generally attainable. Furthermore, the agencies believe this approach effectively distinguishes between “Outstanding,” “High Satisfactory,” and “Low Satisfactory” performance. For example, as discussed below, the agencies believe that a bank metric equal to 100 percent of the community benchmark represents “Outstanding” performance because it reflects a level of lending that is proportionate with the potential borrowers in the area. However, the agencies determined that a bank metric equal to 100 percent of the market benchmark does not represent “Outstanding” performance if the community benchmark is higher than the market benchmark. In this scenario, the bank’s performance is exactly average among lenders in the area, and the bank’s lending is not proportionate with the potential borrowers in the area because the relevant metric is lower than the community benchmark. Setting the market multipliers for an “Outstanding” supporting conclusion comparatively higher than the corresponding community multipliers therefore recognizes banks that are significantly exceeding, rather than only equaling, the market average in areas where the market benchmark is lower than the community benchmark. Likewise, for other supporting conclusion categories, setting the market multipliers higher than corresponding community multipliers reflects that, depending on market conditions and the performance context of an area, meeting or surpassing market benchmarks may generally be more attainable for a bank than meeting or surpassing community benchmarks.

In finalizing the proposed approach of selecting the lesser of the threshold based on the calibrated market benchmark and the threshold based on the calibrated community benchmark, the agencies also considered alternatives raised by commenters, including the suggestion to calculate an average of the two calibrated benchmarks rather than selecting the lesser of the two. The agencies have considered that calculating the average of the calibrated benchmarks could potentially address a scenario in which the calibrated market benchmark is significantly lower than the calibrated community benchmark due to lenders in the area not meeting the credit needs of the community, which could result in performance ranges that are unduly low. However, the agencies believe that averaging the two calibrated benchmarks could also result in performance ranges that are too stringent, especially in areas where the calibrated market benchmark is lower than the calibrated community benchmark. For example, in an area that lacks housing that is affordable for low-income families, the calibrated market benchmarks for closed-end home mortgage lending may be considerably lower than the corresponding calibrated community benchmarks, and the agencies believe that averaging the two calibrated benchmarks together could result in performance expectations that are set too high. The agencies also recognize that an approach suggested by commenters to average the two benchmarks only when the calibrated market benchmark is significantly lower than the calibrated community benchmark could

partially address this concern, but would present other challenges. Specifically, the agencies believe that averaging the two benchmarks only under certain conditions would increase the complexity of the Retail Lending Test and would be counter to the agencies' objectives of increasing the transparency and predictability of evaluations. Moreover, the agencies believe that the scenario of a Retail Lending Test Area in which lenders in the aggregate are not meeting community credit needs can be addressed through the application of the additional factor in final § __.22(g)(7). As discussed in the section-by-section analysis of final § __.22(g)(7), this additional factor provides that when determining Retail Lending Test conclusions, the agencies may consider "information indicating that the credit needs of the facility-based assessment area or retail lending assessment area are not being met by lenders in the aggregate, such that the relevant benchmarks do not adequately reflect community credit needs." As suggested by commenters, the application of this additional factor may take into account the performance context of a Retail Lending Test Area.

Regarding the commenter view that this additional factor could be applied based on the difference between the actual and predicted market benchmarks, the agencies are not adopting this approach in the final rule because further analysis is necessary to develop statistical models that calculate a predicted market benchmark, as discussed in the section-by-section analysis of final § __.22(g)(7).

Multiplier Values. In the final rule, as provided in section V of final appendix A, the agencies are adjusting downward certain proposed market multipliers and community multipliers applicable to closed-end home mortgage loans, small business loans, and small farm loans. As a result of these changes, the agencies believe that the final rule performance ranges are appropriately aligned with the conclusion categories and that the "Low Satisfactory" and higher conclusion categories on the Retail Lending Test are generally attainable. In making these adjustments, the agencies considered the comments discussed above that offered different perspectives on the stringency of the proposed Retail Lending Test. The agencies believe that the adjustments to multiplier values are responsive to comments that "Outstanding" and "High Satisfactory" conclusions would not be attainable under the proposed approach and that the proposed multiplier values would deter retail lending and raise safety and soundness risk.

Specifically, as informed by additional agency analysis described in the historical analysis section, below, the agencies have determined that "Outstanding," "High Satisfactory," and "Low Satisfactory" Retail Lending Test conclusions are generally attainable under the final rule approach. When applying the final rule approach to the 2018-2020 period, the agencies estimated that approximately 90 percent of banks included in the analysis would have achieved an "Outstanding," "High Satisfactory," or "Low Satisfactory" Retail Lending Test conclusion for the institution, and that a "High Satisfactory" conclusion would have been the most frequently assigned conclusion. Similarly, when calculating Retail Lending Test recommended conclusions for facility-based assessment areas based on the performance ranges approach, approximately 87 percent of facility-based assessment areas for banks included in the analysis would have received an "Outstanding," "High Satisfactory," or "Low Satisfactory" recommended conclusion, and a

“High Satisfactory” would have been the most frequently assigned recommended conclusion.⁹⁴⁴ The Retail Lending Test recommended conclusions assigned in retail lending assessment areas and outside retail lending areas would have been somewhat lower than in facility-based assessment areas, based on the agencies’ estimates; approximately 78 percent of retail lending assessment areas, and 71 percent of outside retail lending areas, for banks included in the analysis, would have received an “Outstanding,” “High Satisfactory,” or “Low Satisfactory” recommended conclusion. The agencies considered a number of data limitations and other factors when interpreting the results of the analysis of Retail Lending Test performance based on historical data, as discussed in the historical analysis section.

The agencies also considered comments that suggested that Retail Lending Test conclusions under the proposed approach would be significantly lower than those under the current approach, as well as those comments that the agencies should set multiplier values that result in a similar distribution of conclusions to the current approach. The agencies believe that the final rule multiplier values are appropriately aligned with the conclusion categories and that “Low Satisfactory” or higher Retail Lending Test conclusions are generally attainable. As also noted by some commenters, the agencies also believe that the performance ranges approach will more effectively distinguish between different levels of performance than the current approach, which lacks specific defined thresholds corresponding to each supporting conclusion category. Additionally, as noted above, the agencies intend to disclose data on the benchmarks and performance ranges that would assist banks in identifying Retail Lending Test Areas in which the bank may be underperforming, such that a bank may improve its performance accordingly.

The agencies also considered comments stating that it would be mathematically impossible for banks to meet the proposed thresholds or to achieve “Outstanding” or “High Satisfactory” conclusions. The agencies believe that the historical analysis indicates that “Outstanding,” “High Satisfactory,” and “Low Satisfactory” conclusions are generally attainable. Furthermore, the agencies considered that, as a result of the approach of using the lower of the two calibrated benchmarks to set the performance threshold for a given supporting conclusion, a bank surpassing the calibrated community benchmark for a given supporting conclusion will always receive at least that supporting conclusion. For example, a bank whose metric exceeds the calibrated community benchmark for “High Satisfactory” will receive a supporting conclusion of either “Outstanding” or “High Satisfactory” for the associated distribution test, even if the bank metric does not exceed the calibrated market benchmark for a “High Satisfactory” supporting conclusion. In addition, the agencies note that the final rule market multiplier for “Low Satisfactory” is 80 percent, consistent with the proposal. As a result, banks are never required to exceed the average of all lenders in a Retail Lending Test Area to achieve a “Low Satisfactory” supporting conclusion, and it is possible for all banks in a Retail Lending Test Area to exceed the “Low Satisfactory” threshold for any distribution. The agencies also determined that the level of the “Low Satisfactory” market multiplier reduces the possibility that the market benchmarks will increase over time in a manner that makes the performance ranges unattainable, because banks

⁹⁴⁴ The agencies did not estimate recommended conclusions for facility-based assessment areas in which the Bank Volume Metric did not surpass the Retail Lending Volume Threshold, which was approximately 3 percent of facility-based assessment areas in this analysis.

are not required to exceed the market average to attain a “Low Satisfactory” supporting conclusion.

Relatedly, the agencies believe that the final rule approach addresses concerns from some commenters that a bank with significant market share in an area would be unable to exceed the threshold for an “Outstanding” or “High Satisfactory” supporting conclusion that is based on the calibrated market benchmark. First, the agencies have adjusted the market multiplier for an “Outstanding” supporting conclusion from 125 percent to 115 percent. As a result, in a Retail Lending Test Area in which the “Outstanding” supporting conclusion performance range is based upon the calibrated market benchmark, a bank must exceed the market benchmark by 15 percent, rather than the proposed margin of 25 percent, to achieve an “Outstanding” supporting conclusion. The agencies believe that this change helps to make the “Outstanding” supporting conclusion more attainable relative to the proposal, particularly in areas where barriers to serving low- and moderate-income borrowers and low- and moderate census tracts make it challenging to surpass the calibrated community benchmark. Second, the agencies believe that the additional factor in final § __.22(g)(3)—the number of lenders whose reported home mortgage loans, multifamily loans, small business loans, and small farm loans and deposits data are used to establish the applicable Retail Lending Volume Threshold, geographic distribution market benchmarks, and borrower distribution market benchmarks—would allow the agencies to consider the scenario identified by commenters in which, due to a limited number of lenders included in the market benchmark for the area, the bank’s own lending comprises a significant share of the loans included in the market benchmark.⁹⁴⁵ Finally, as noted above, the agencies determined that the market multipliers do not mathematically limit a bank with a large market share in an area to any particular conclusion level, because surpassing the calibrated community benchmark for a given supporting conclusion ensures that a bank receives a supporting conclusion of at least that level.

Use of thresholds over time. The agencies also considered comments suggesting that the final rule’s performance ranges will increase and become unattainable over time as a result of banks attempting to exceed the market benchmarks. However, the agencies determined that the approach of using the lower of the calibrated market benchmark and the calibrated community benchmark addresses this concern. For example, in the event that the market benchmark increases over time, such that 115 percent times the market benchmark (*i.e.*, the calibrated market benchmark) exceeds 100 percent times the community benchmark (*i.e.*, the calibrated community benchmark), then the “Outstanding” supporting conclusion threshold would be based on the calibrated community benchmark. Any further increase in the market benchmark would not affect the performance range for an “Outstanding” supporting conclusion, since the calibrated market benchmark exceeds the calibrated community benchmark. In addition, as noted above, the market multiplier for a “Low Satisfactory” supporting conclusion under the final rule approach is 80 percent. As a result, a bank is never required to exceed the market benchmark in order to earn at least a “Low Satisfactory” supporting conclusion, and it is mathematically possible for all banks in a Retail Lending Test Area to earn a “Low Satisfactory” or higher supporting conclusion.

⁹⁴⁵ See also the section-by-section analysis of final § __.22(g).

Peer comparisons. The final rule retains the proposed approach of using both market benchmarks and community benchmarks to develop performance ranges, and does not adopt suggestions from commenters to remove peer comparisons from the Retail Lending Test evaluation approach to avoid what some commenters described as “grading on a curve.” The agencies note that the market and community benchmarks leverage current practice. The agencies’ proposal incorporates specific threshold calculations for each supporting conclusion category in order to reduce the potential for inconsistency that can occur without clear performance expectations when comparing a bank’s metrics and benchmarks, as well as to increase the transparency of evaluations. In addition, the agencies believe that the market benchmark is an essential component of the Retail Lending Test because it incorporates certain performance context information into the performance ranges in a manner that is consistent and transparent. Specifically, the agencies determined that the market benchmark reflects the credit needs and opportunities of an area, and can adjust to changes in those credit needs and opportunities over time in response to economic circumstances and other factors.

Furthermore, the agencies find that the final rule’s use of the lesser of the calibrated market benchmark and the calibrated community benchmark to set performance ranges does not constrain a bank's Retail Lending Test recommended conclusion and does not require a certain percentage of banks to receive any particular recommended conclusion in a Retail Lending Test Area. For example, because the performance threshold for each performance range is based on the lower of the calibrated market benchmark and the calibrated community benchmark, surpassing the calibrated community benchmark for an “Outstanding” supporting conclusion always results in an “Outstanding” supporting conclusion, regardless of the value of the calibrated market benchmark. In addition, the agencies find that even when all performance ranges are based on the calibrated market benchmarks it is possible for all banks in a Retail Lending Test Area to exceed the “Low Satisfactory” supporting conclusion threshold.

Safe and sound lending. The agencies considered comments that the proposed multipliers and performance ranges would potentially encourage banks to lend in an unsafe and unsound manner. However, as discussed above, the agencies believe that “Low Satisfactory” and higher conclusions are generally attainable under the final rule approach, and that banks can meet the credit needs of the community without resorting to unsafe and unsound lending. Specifically, the agencies’ analysis indicates that applying the final rule approach to historical lending data from 2018-2020 approximately 90 percent of banks included in the analysis would have received an overall Retail Lending Test conclusion of “Low Satisfactory” or higher at the institution level, with “High Satisfactory” the most frequent conclusion. In addition, final § __.21(d)(1) provides that the agencies will consider performance context reflecting whether a bank’s Retail Lending Test performance was constrained by safety and soundness limitations when assigning conclusions.

Lack of low- and moderate-income census tracts. The agencies considered a comment that in a facility-based assessment area with no low- or moderate-income census tracts a bank would not be able to achieve higher than a “Low Satisfactory” conclusion. The agencies note that under the proposed and final rule alike there would be no geographic distribution analysis in a Retail Lending Test Area with no low- and moderate- income census tracts, and the recommended conclusion would be based solely on the borrower distribution analysis. As a result, a lack of low- and moderate- income census tracts does not limit a bank’s recommended conclusion to a “Low Satisfactory.” In addition, as discussed in the section-by-section analysis of final

§ __.22(g), final § __.22(g)(6) provides that the agencies would consider whether there were very few or no low- and moderate-income census tracts when determining a bank’s conclusion in a nonmetropolitan facility-based assessment area or nonmetropolitan retail lending assessment area.

Separate multipliers for each product line. As proposed, the final rule incorporates one community multiplier and one market multiplier in determining each performance range threshold, applicable to all product lines (although market benchmarks and no multipliers would not apply in automobile lending evaluations). The agencies considered, but are not adopting, a commenter suggestion that the agencies develop a separate set of multipliers for each product line. The agencies considered that separate multipliers for each product line might help to account for differences in low- and moderate-income credit needs and opportunities across different types of products. However, the agencies determined that the approach of using a single set of multipliers for all product lines appropriately calibrates performance expectations and that the potential advantages of separate multipliers for each product line would be outweighed by the additional complexity of this approach. Specifically, the agencies considered that the proposed and final rule approaches include a single set of eight multipliers (four community multipliers and four market multipliers) while the alternative approach could include as many as 24 multipliers (eight multipliers each for closed-end home mortgage loans, small business loans, and small farm loans), and that the larger number of multipliers would increase the complexity of the Retail Lending Test.

“Parity ratio” and “statistical confidence” alternatives. The agencies are finalizing the proposed approach of comparing a bank’s metric to the performance ranges, and are not adopting the “parity ratio” or “statistical confidence” alternatives suggested by commenters. The agencies believe that it is more transparent and less complex to use bank metrics that reflect the bank’s percentage of loans to designated borrowers—rather than to use alternative bank metrics that are: (1) based on the bank’s percentage of loans to designated borrowers divided by the market benchmark or the community benchmark; or (2) based on the likelihood that the difference between the bank’s metric and the market benchmark was the result of random chance.

The agencies determined that the “parity ratio” alternative approach would reduce the transparency of the performance standards of the Retail Lending Test. The agencies believe that it is more transparent to calculate the metrics, benchmarks, and performance ranges in terms of the percentage of loans to designated census tracts and to designated borrowers. The parity ratio alternative would employ ratios that would need to be recalculated in order to assess what percentage of loans to designated census tracts and to designated borrowers, respectively, is needed in order to meet or surpass each performance range threshold.

The agencies also considered, but are not adopting, the “statistical confidence” approach, in which the performance ranges would be based on the likelihood that the difference between a bank’s metric and the market benchmark was the result of random chance. The agencies determined that, in addition to adding complexity, this approach would result in inconsistent performance standards for different banks. For example, in an MSA like the Baltimore-Columbia-Towson MSA, where 8.5 percent of closed-end mortgage loans were to low-income borrowers, a bank whose metric of 7.0 percent was based on 100 loans would be estimated to receive a “Low Satisfactory” supporting conclusion because the probability that the difference between its metric and the market benchmark is the result of random chance exceeds 10 percent. But other banks with the same metrics that originate or purchase 1,000 or 10,000 closed-end

mortgage loans would receive supporting conclusions of “Needs to Improve” or “Substantial Noncompliance,” respectively, because their metrics are less likely to have been caused by random chance on account of their larger loan counts.⁹⁴⁶ The agencies instead determined that it is preferable to apply the same benchmarks and performance ranges to all banks in the same Retail Lending Test Area.

Multipliers for “Outstanding” Supporting Conclusion. The agencies’ multipliers for the calibrated benchmarks used to determine the “Outstanding” supporting conclusion threshold are shown in Table 25.

Table 25 to § __.22(f): Calibrated Benchmarks for “Outstanding” Supporting Conclusion

| | Select the Lesser of the Calibrated Market Benchmark and the Calibrated Community Benchmark | | |
|-----------------------|--|-----------|--|
| Supporting Conclusion | Market Multiplier and Market Benchmark | | Community Multiplier and Community Benchmark |
| “Outstanding” | 115% of the Market Benchmark | OR | 100% of the Community Benchmark |

As indicated in section V of final appendix A, the agencies are setting the market multiplier at 115 percent for the calibrated market benchmark for an “Outstanding” supporting conclusion, which is 10 percentage points lower than the proposed level of 125 percent. In deciding to decrease the market multiplier for “Outstanding” performance, the agencies considered comments that the proposed level of 125 percent represents performance that is so significantly above average in an area that some banks may determine that it is not attainable, inadvertently discouraging such banks from pursuing an “Outstanding” conclusion. The agencies also considered comments that in a Retail Lending Test Area in which a bank holds significant market share, and in which the bank’s own lending is therefore a significant component of the market benchmark, it would be difficult to surpass the proposed level of 125 percent of the market benchmark.

In determining the appropriate level of the final rule’s “Outstanding” market multiplier, the agencies considered options suggested by commenters that performance greater than or equal to the average of all lenders in the area should receive an “Outstanding” supporting conclusion, including in an area in which the market benchmark is less than the community benchmark. However, the agencies generally do not believe that the “Outstanding” supporting conclusion should correspond to performance that is merely average among all lenders, unless the bank’s metric also surpasses the community benchmark (*i.e.*, unless the market benchmark is close to or

⁹⁴⁶ This example is based on data from the CRA Analytics Tables for the Baltimore-Columbia-Towson MSA. During the 2018-2020 evaluation period, there were 263,261 closed-end mortgages originated of which 22,281 were to low-income borrowers. The probabilities were calculated for the banks using a hypergeometric distribution, as suggested by the commenter. Supporting conclusions were assigned using the suggested thresholds of 1 percent for a “Needs to Improve” supporting conclusion and 10 percent for a “Low Satisfactory” supporting conclusion.

greater than the community benchmark, and therefore the threshold for an “Outstanding” supporting conclusion is based on the community benchmark). Rather, in cases where the “Outstanding” threshold is based on the market benchmark, the agencies believe that an “Outstanding” supporting conclusion should correspond to performance that is meaningfully above average. In reaching this determination, the agencies also considered comments that supported the proposed multiplier values as appropriately rigorous. Consequently, the agencies believe that the final rule multiplier value of 115 percent represents an appropriate reduction from the proposed levels that would address the concerns expressed by commenters, while also ensuring the “Outstanding” performance range corresponds to performance that is meaningfully above average in an area.

Consistent with the proposed approach, as indicated in section V of final appendix A the agencies are setting community multiplier for an “Outstanding” supporting conclusion at 100 percent. The agencies believe that setting this multiplier at 100 percent is appropriate because it represents lending to borrowers and census tracts of different income levels in equal proportion to community benchmarks reflecting the potential lending opportunities for designated borrowers and designated tracts of the same income (or gross annual revenue) levels, which aligns with CRA’s emphasis on serving the credit needs of the entire community. For example, if a bank’s metric for the moderate-income closed-end home mortgage borrower distribution in a Retail Lending Test Area is 20 percent and the community benchmark (*i.e.*, the percentage of families in the Retail Lending Test Area that are moderate-income families) is also 20 percent, then the bank’s share of lending to moderate-income families was proportionate to the share of moderate-income families in the area. A community multiplier greater than 100 percent would represent that a bank’s share of lending to designated borrowers and designated census tracts in a Retail Lending Test Area must be disproportionately high relative to the presence of those borrowers and census tracts in the area in order to merit an “Outstanding” supporting conclusion, which the agencies do not believe is an appropriate standard.

Multipliers for “High Satisfactory” Supporting Conclusion. The agencies’ multipliers for the calibrated benchmarks used to determine the “High Satisfactory” supporting conclusion threshold are shown in Table 26.

Table 26 to § __.22(f): Calibrated Benchmarks for “High Satisfactory” Supporting Conclusion

| | Select the Lesser of the Calibrated Market Benchmark and the Calibrated Community Benchmark | | |
|-----------------------|--|-----------|--|
| Supporting Conclusion | Market Multiplier and Market Benchmark | | Community Multiplier and Community Benchmark |
| “High Satisfactory” | 105% of the Market Benchmark | OR | 80% of the Community Benchmark |

As indicated in section V of final appendix A, the agencies are setting the market multiplier for the calibrated market benchmark used to determine a “High Satisfactory” supporting conclusion at 105 percent, five percentage points lower than the proposed level of 110 percent. The agencies decided to decrease this multiplier from the proposed level is based on similar

reasons as those discussed above with regard to the “Outstanding” market multiplier. In addition, the agencies believe that a “High Satisfactory” market multiplier at the proposed level of 110 percent would result in a “High Satisfactory” performance range that is overly narrow, ranging from 110 percent to 115 percent. The agencies also considered setting this multiplier at 100 percent so that the difference between the “Outstanding” and “High Satisfactory” market multipliers would be similar to the difference between the “High Satisfactory” and “Low Satisfactory” market multipliers. However, the agencies determined that the “High Satisfactory” market multiplier should result in a calibrated market benchmark that is at least slightly above the market benchmark, rather than equal to the market benchmark. In making this determination, the agencies decided that in an area where the performance ranges are based on the market benchmark, bank performance that is exactly equal to the market average, or only marginally above the market average, should correspond to a “Low Satisfactory.” The agencies believe that defining the “High Satisfactory” supporting conclusion category in this way will appropriately distinguish higher performance from performance that is average.

Consistent with the proposal, as indicated in section V of final appendix A, the agencies are setting the “High Satisfactory” community multiplier at 80 percent. Based on supervisory experience, the agencies believe that this multiplier appropriately represents a level of lending that is somewhat less than proportionate to the share of designated borrowers or designated census tracts in the Retail Lending Test Area, and sufficiently distinguishes a “High Satisfactory” supporting conclusion from an “Outstanding” supporting conclusion. This determination takes into consideration that opportunities to lend to designated borrowers or designated census tracts may be constrained to a level below the community benchmark. For example, the agencies note that some share of low-income families may not be in the marketplace for closed-end home mortgage loans for reasons beyond any ability of banks or other home mortgage lenders to market or structure loans that might meet their financial situations; accordingly, if 10 percent of families in a Retail Lending Test Area are low-income, for example, then a calibrated community benchmark of 8 percent is appropriate to set the threshold for a “High Satisfactory” supporting conclusion. Additionally, the agencies believe that lowering this multiplier below 80 percent would result in an overly broad performance range for a “High Satisfactory” supporting conclusion.

Multipliers for “Low Satisfactory” Supporting Conclusion. The agencies’ multipliers for the calibrated benchmarks used to determine the “Low Satisfactory” supporting conclusion threshold are shown in Table 27.

Table 27 to § __.22(f): Calibrated Benchmarks for “Low Satisfactory” Supporting Conclusion

| | Select the Lesser of the Calibrated Market Benchmark and the Calibrated Community Benchmark | | |
|-----------------------|--|-----------|--|
| Supporting Conclusion | Market Multiplier and Market Benchmark | | Community Multiplier and Community Benchmark |
| “Low Satisfactory” | 80% of the Market Benchmark | OR | 60% of the Community Benchmark |

Consistent with the proposed approach, as indicated in section V of final appendix A the agencies are setting the market multiplier for the calibrated market benchmark used to determine a “Low Satisfactory” supporting conclusion at 80 percent. The agencies believe that this multiplier value appropriately represents lending to designated borrowers or designated census tracts that is adequate, but that is also below average. The agencies considered alternative market multipliers of 75 percent and 70 percent, but decided that these levels would be too far below average to demonstrate adequately meeting community credit needs. In addition, the agencies considered that decreasing the multiplier would result in a “Low Satisfactory” performance range that is overly broad compared to the “High Satisfactory” performance range. The agencies also considered thresholds higher than 80 percent, such that “Low Satisfactory” supporting conclusions would be reserved for performance that is at least close to average. However, as discussed above, the agencies considered that setting the “Low Satisfactory” threshold at or close to the market average might impede the ability of all banks to obtain a “Low Satisfactory” or higher supporting conclusion in an area where the performance ranges are based on the market benchmark. Instead, at the final rule market multiplier value of 80 percent, the agencies believe that “Low Satisfactory” or higher performance is generally attainable for all banks.

As indicated in section V of final appendix A, the agencies are setting the community multiplier for “Low Satisfactory” at 60 percent, five percentage points lower than the proposed level of 65 percent. The agencies believe that a downward adjustment from the proposed level of this multiplier is appropriate to address commenter concerns regarding the stringency of the Retail Lending Test. The agencies also considered a community multiplier of 55 percent for a “Low Satisfactory” supporting conclusion, but determined that the multiplier should be meaningfully greater than 50 percent to reflect a bank adequately meeting community credit needs.

As noted above, in determining the market and community multiplier values for “Low Satisfactory” performance, the agencies considered that the “Low Satisfactory” conclusion reflects that a bank is adequately meeting the credit needs of its community. This is distinct from the “Needs to Improve” and “Substantial Noncompliance” conclusion categories, both of which reflect that a bank is not adequately meeting the credit needs of its community. The agencies note that both “High Satisfactory” and “Low Satisfactory” performance correspond to the overall “Satisfactory” rating category.

Multipliers for “Needs to Improve” Supporting Conclusion. The agencies’ multipliers for the calibrated benchmarks used to determine the “Needs to Improve” supporting conclusion threshold are shown in Table 28.

Table 28 to § __.22(f): Calibrated Benchmarks for “Needs to Improve” Supporting Conclusion

| | Select the Lesser of the Calibrated Market Benchmark and the Calibrated Community Benchmark | | |
|-----------------------|--|--|--|
| Supporting Conclusion | Market Multiplier and Market Benchmark | | Community Multiplier and Community Benchmark |

| | | | |
|--------------------|-----------------------------|-----------|--------------------------------|
| “Needs to Improve” | 33% of the Market Benchmark | OR | 30% of the Community Benchmark |
|--------------------|-----------------------------|-----------|--------------------------------|

Consistent with the proposed approach, as indicated in section V of final appendix A, the agencies are setting the market multiplier for the calibrated market benchmark used to determine a “Needs to Improve” supporting conclusion at 33 percent. The agencies believe that a “Substantial Noncompliance” supporting conclusion should be reserved for performance that is extremely inadequate, and determined that approximately one-third of the market benchmark is an appropriate standard. The agencies considered, but are not adopting, a suggested multiplier of 48 percent because the agencies believe that would result in assigning a “Substantial Noncompliance” supporting conclusion in cases where a bank’s performance is lacking, but is not extremely inadequate.

As indicated in section V of final appendix A, the agencies are setting the community multiplier for a “Needs to Improve” supporting conclusion at 30 percent, three percentage points lower than the proposed level of 33 percent. The agencies believe that this adjustment is appropriate because for all of the other supporting conclusion categories the community multiplier is a lower value than the market multiplier, which reflects that the community benchmark is often greater than the market benchmark.

Examples of Performance Ranges Methodology:

The following outlines how the performance ranges would be calculated and applied to a geographic distribution for closed-end home mortgage loans in moderate-income census tracts:

Geographic Bank Metric: A bank that originated or purchased 16 closed-end home mortgage loans in moderate-income census tracts out of 100 total closed-end home mortgage loans that the bank originated or purchased overall in the Retail Lending Test Area would have a Geographic Bank Metric of 16 percent.

Example 1a: Geographic Bank Metric

| Closed-end home mortgage loans in moderate-income census tracts | Total closed-end home mortgage loans | Geographic Bank Metric |
|--|---|-------------------------------|
| 16 | 100 | 16 percent |

Benchmarks: In a Retail Lending Test Area where 30 percent of owner-occupied housing units and 25 percent of all originated closed-end home mortgage loans were in moderate-income census tracts, the moderate-income Geographic Community Benchmark and Geographic Market Benchmarks for closed-end home mortgage loans would be 30 percent and 25 percent, respectively.

Example 1b: Geographic Community Benchmark and Geographic Market Benchmark

| | |
|---|--|
| Geographic Community Benchmark: Percent of owner-occupied housing units in moderate-income census tracts | Geographic Market Benchmark: Market percentage of closed-end home mortgage loan originations in moderate-income census tracts |
| 30 percent | 25 percent |

Performance ranges: The agencies calculate the thresholds for the relevant performance ranges using the corresponding benchmarks and multipliers below:

Example 1c: Calibrated Market Benchmarks

| Supporting Conclusion | Market Multiplier | Geographic Market Benchmark | Calibrated Market Benchmarks (Market Multiplier times Geographic Market Benchmark) |
|------------------------------|--------------------------|------------------------------------|---|
| “Outstanding” | 115 percent | 25 percent | 28.75 percent |
| “High Satisfactory” | 105 percent | 25 percent | 26.25 percent |
| “Low Satisfactory” | 80 percent | 25 percent | 20 percent |
| “Needs to Improve” | 33 percent | 25 percent | 8.25 percent |

Example 1d: Calibrated Community Benchmarks

| Supporting Conclusion | Community Multiplier | Geographic Community Benchmark | Calibrated Community Benchmarks (Community Multiplier times Geographic Community Benchmark) |
|------------------------------|-----------------------------|---------------------------------------|--|
| “Outstanding” | 100 percent | 30 percent | 30 percent |
| “High Satisfactory” | 80 percent | 30 percent | 24 percent |
| “Low Satisfactory” | 60 percent | 30 percent | 18 percent |

| | | | |
|--------------------|------------|------------|-----------|
| “Needs to Improve” | 30 percent | 30 percent | 9 percent |
|--------------------|------------|------------|-----------|

Example 1e: Performance Range Thresholds

| Supporting Conclusion | Calibrated Market Benchmark | Calibrated Community Benchmark | Performance Range Threshold (lesser of the calibrated benchmarks) |
|------------------------------|------------------------------------|---------------------------------------|---|
| “Outstanding” | 28.75 percent | 30 percent | 28.75 percent |
| “High Satisfactory” | 26.25 percent | 24 percent | 24 percent |
| “Low Satisfactory” | 20 percent | 18 percent | 18 percent |
| “Needs to Improve” | 8.25 percent | 9 percent | 8.25 percent |

In this example, the bank would receive a “Needs to Improve” supporting conclusion for closed-end home mortgage lending in moderate-income census tracts because the Geographic Bank Metric (16 percent) falls between the “Needs to Improve” supporting conclusion performance range threshold (8.25 percent) and the “Low Satisfactory” supporting conclusion performance range threshold (18 percent).

§ __.22(f)(2)(ii) *Geographic distribution supporting conclusions for automobile loans*

§ __.22(f)(3)(ii) *Borrower distribution supporting conclusions for automobile loans*

Final § __.22(f)(2)(ii) and (f)(3)(ii) provide that the agencies will develop supporting conclusions for a bank’s automobile lending based on a comparison of its bank metrics to geographic distribution and borrower distribution community benchmarks, as provided in final § __.22(e)(1)(ii) and section VI of final appendix A. The agencies are not establishing performance ranges for automobile lending in the final rule. The agencies believe that there would not be sufficient bank automobile lending data to construct robust market benchmarks and also that requiring data reporting to facilitate construction of market benchmarks would increase data reporting burden without a corresponding significant increase in the consistency and rigor of CRA evaluations, as is discussed further in the section-by-section analysis for final §§ __.22 and __.42. The agencies further believe that it would not be appropriate to develop automobile lending performance ranges based solely on community benchmarks, which do not account for changes in credit needs and opportunities in a Retail Lending Test Area over time in the same way as an approach that also uses market benchmarks. Consequently, under the final rule, the agencies will assign supporting conclusions for automobile lending performance by comparing bank metrics to community benchmarks.

Supporting conclusions for automobile lending will be assigned separately for: (1) lending in low-income census tracts; (2) lending in moderate-income census tracts; (3) lending to low-income borrowers; and (4) lending to moderate-income borrowers. However, unlike for other major product lines, the agencies are not setting specific thresholds distinguishing each supporting conclusion category for automobile lending.

Specifically, the agencies will identify appropriate supporting conclusions based on a comparison of the Geographic Bank Metric for automobile lending in each category of designated census tracts to the corresponding Geographic Community Benchmark. Similarly, the agencies will identify the appropriate supporting conclusion based on a comparison of the Borrower Bank Metric for automobile lending in each category of designated borrowers to the corresponding Borrower Community Benchmark.

This agencies' approach to evaluating automobile lending necessarily involves a greater degree of agency discretion than an approach that uses performance ranges, as is the case for other major product lines. The agencies believe that such discretion is appropriate given the relatively limited data available regarding automobile lending and the importance of performance context to evaluating a bank's automobile lending, such as whether the bank's loans were originated through direct or indirect channels. In addition, this approach is generally consistent with the current evaluation methods when consumer lending is evaluated, in which the agencies analyze the borrower and geographic distributions of a bank's consumer lending using a community benchmark without specific thresholds or performance ranges.⁹⁴⁷

Developing Product Line Scores in Each Retail Lending Test Area

§ __.22(f)(4) *Development of Retail Lending Test recommended conclusions*

§ __.22(f)(4)(i) *Assignment of performance scores*

The Agencies' Proposal

The agencies proposed to use a product line average to combine lending performance in the geographic and borrower distribution metrics for each major product line in a facility-based assessment area, retail lending assessment area, or outside retail lending area, as applicable.⁹⁴⁸ For example, a bank's closed-end home mortgage product line average in a facility-based assessment area would reflect its lending within four categories: (1) in low-income census tracts; (2) in moderate-income census tracts; (3) to low-income borrowers; and (4) to moderate-income borrowers.⁹⁴⁹ Similarly, if a bank had two major product lines in the facility-based assessment area—closed-end home mortgage loans and small business loans—the bank would receive a product line average for its closed-end home mortgage lending and a separate product line average for its small business lending.⁹⁵⁰ By calculating lending performance for each major product line in the same facility-based assessment area, retail lending assessment area, or outside retail lending area, as applicable, the agencies intended to provide greater transparency and enable stakeholders to better understand a bank's performance for each separate product line.

⁹⁴⁷ See, e.g., Interagency Large Institution CRA Examination Procedures (April 2014) at 6-8.

⁹⁴⁸ See proposed appendix A.V.2.c (geographic distribution performance) and proposed appendix A.V.2.e (borrower distribution performance).

⁹⁴⁹ See *id.*

⁹⁵⁰ See proposed appendix A.V.3.

The product line averages would also serve as the basis for determining a bank's recommended conclusion in each such area.

To calculate the product line average, the agencies proposed to first assign a performance score to each supporting conclusion, using a 10-point scale that associates each conclusion level with a score: "Outstanding" (10 points); "High Satisfactory" (7 points); "Low Satisfactory" (6 points); "Needs to Improve" (3 points); "Substantial Noncompliance" (0 points). The agencies would then compute a borrower income average and a geographic income average.

The proposal provided that the geographic income average would be a weighted average of the performance scores for the two geographic distribution supporting conclusions (*i.e.*, for low-income census tracts and moderate-income census tracts). The weights for this calculation would be the applicable community benchmark for the product line and income or revenue category to make the weight of the scores proportional to the population of potential borrowers in the assessment area.

- For example, for closed-end home mortgage lending, the weight for the low-income geographic distribution performance score would be:
 - o The percentage of owner-occupied housing units in low-income census tracts in the area (*i.e.*, the Geographic Community Benchmark for low-income census tracts) as a percentage of;
 - o The sum of the percentage of owner-occupied housing units in low-income census tracts (*i.e.*, the Geographic Community Benchmark for low-income census tracts) and the percentage of owner-occupied housing units in moderate-income census tracts (*i.e.*, the Geographic Community Benchmark for moderate-income census tracts).
- Likewise, for example, for closed-end home mortgage lending the weight for the moderate-income geographic distribution performance score (*i.e.*, the Geographic Community Benchmark for moderate-income census tracts) would be:
- The percentage of owner-occupied housing units in moderate-income census tracts in the area as a percentage of;
- The sum of the percentage of owner-occupied housing units in low-income census tracts (*i.e.*, the Geographic Community Benchmark for low-income census tracts) and the percentage of owner-occupied housing units in moderate-income census tracts (*i.e.*, the Geographic Community Benchmark for moderate-income census tracts).

The proposal provided that the borrower income average would be calculated in the same way, weighting the two income categories included in the borrower distribution analysis (*e.g.*, for closed-end home mortgages, the agencies would weight low-income borrowers and moderate-income borrowers) by the corresponding community benchmarks for each category (*e.g.*, for closed-end home mortgages, these are low-income families and moderate-income families).

The agencies would then calculate the average of the borrower income average and geographic income average to produce the product line average for each major product line in a facility-based assessment area, retail lending assessment area, or outside retail lending area, as applicable. In calculating each product line average, the agencies requested feedback on whether the borrower and geographic distributions for a specific product line should be weighted equally,

or whether borrower distributions should be weighted more heavily than the geographic distributions, either in general or depending on the performance context of the area.

Comments Received

Many commenters offered views on the agencies' Retail Lending Test proposal to develop product line averages based on borrower and geographic distribution conclusions for each of a bank's major product lines in its facility-based assessment areas, retail lending areas, and its outside retail lending area, as applicable. These commenters generally addressed whether the borrower income average and geographic income average for a specific product line should be weighted equally, or whether more weight should be assigned to the borrower income average compared to the geographic income average.

Comments regarding the approach to assigning a score to each supporting conclusion based on the proposed 10-point scale are summarized in the section-by-section analysis of final § __.21(e).

Comments on calculating borrower income average and geographic income average. A few commenters addressed the proposed approach for weighting the different income or revenue categories when calculating the borrower income average and the geographic income average. One commenter expressed support for the proposed approach of weighting the low- and moderate-income categories based on the community benchmarks, stating that these weights would reflect the demographics of the community. Another commenter instead stated that the agencies should prioritize low-income borrowers and census tracts over moderate-income borrowers and census tracts. Another commenter stated that it is not appropriate to strictly weight based on the percentage of low-income individuals. This commenter noted that many community banks will be more successful targeting activity to low- and moderate-income geographies rather than individuals, as individuals are not pre-screened by income level. Another commenter suggested that the agencies allow excellent performance in one distribution to compensate for less impressive performance in another.

Comments on calculating product line averages. A number of comments addressed the agencies' proposal to calculate each product line average by weighting borrower and geographic distribution scores equally, with some expressing support for the proposed approach.

Other commenters supported the proposed equal weighting generally, but recommended greater emphasis on the borrower distributions in certain circumstances, such as in rural areas and nonmetropolitan areas with few low- and moderate-income census tracts, or based on other performance context information. For example, one commenter suggested that in rural areas, the agencies should weight borrower distributions more heavily than geographic distributions. Another commenter suggested that, in determining the weighting approach, the agencies should consider that many low- and moderate-income individuals cannot afford to purchase homes or automobiles in poor states with very low median incomes, and that in high-cost and high-density urban areas many low- and moderate-income individuals live in rental housing and use public transportation instead of their own automobiles.

Other commenters stated that borrower distributions should generally be given more weight than geographic distributions in determining product line averages. One commenter stated that the borrower distributions should be weighted more heavily than the geographic distributions if the intended outcome is increased access to lending opportunities for low- and moderate-income

borrowers regardless of geographic boundaries. Other commenters recommended that the agencies weight the borrower distributions at 60 percent and the geographic distributions at 40 percent. One of these commenters asserted that employing this approach would better reflect the importance of lending to low- and moderate-income consumers as well as to low- and moderate-income communities. Some commenters stated that greater weighting on the borrower distribution would help to limit potential unintended consequences of gentrification and displacement. These commenters expressed that weighting the geographic distributions too heavily would create incentives for lending to higher-income borrowers in low- and moderate-income census tracts, which over time could result in displacement of low- and moderate-income residents. Another commenter noted that applying a greater weight to the borrower distributions would promote integration by emphasizing lending to low- and moderate-income individuals regardless of their location.

Although many commenters supported weighting borrower distributions more heavily, one commenter indicated that the agencies should weight geographic distributions more heavily in rural areas and areas with few low- and moderate-income census tracts, citing the lower demand for credit and other financial services in these areas.

Final Rule

Final § __.22(f)(4)(i) and sections V, VI, and VII of final appendix A provide that the agencies will calculate a product line score for each major product line in a Retail Lending Test Area in order to combine lending performance based on geographic and borrower distribution supporting conclusions and corresponding performance scores. The use of term “product line score” represents a clarifying change from the term in the proposal—“product line average”—in order to provide a more accurate description of what is being calculated, without any change in meaning from the proposal. This approach will serve to differentiate lending performance for each major product line in the same Retail Lending Test Area, providing transparency regarding why a bank received a particular Retail Lending Test recommended conclusion.

Scoring Approach. The agencies are finalizing the proposal that each supporting conclusion will be associated with a performance score with the following point values: “Outstanding” (10 points); “High Satisfactory” (7 points); “Low Satisfactory” (6 points); “Needs to Improve” (3 points); “Substantial Noncompliance” (0 points). This scoring approach is discussed in detail in the section-by-section analysis of final § __.21(e).

Calculating the geographic distribution average and borrower distribution average. The final rule retains the proposed approach for calculating a geographic distribution average and a borrower distribution average. The use of the terms “geographic distribution average” and “borrower distribution average” represent clarifying changes from the respective terms in the proposal—“geographic income average” and “borrower income average”—in order to provide a more accurate description of what is being averaged without any change in meaning. Each distribution average reflects the result of the geographic distribution analysis and borrower distribution analysis, respectively, and the agencies also note that the borrower distribution analysis does not involve “income” for small business loans and small farm loans. Accordingly, the agencies believe it is preferable not to use “income” in these terms.

For the geographic distribution average for all product lines, the agencies will calculate a weighted average of the performance scores corresponding to the supporting conclusion for lending in designated census tracts: (1) the supporting conclusion for lending in low-income

census tracts; and (2) the supporting conclusion for lending in moderate-income census tracts. This is illustrated in Table 29.

Table 29 to § __.22(f): Components of Geographic Distribution Average

| Product line | Geographic Distribution “Low” Supporting Conclusion Category | Geographic Distribution “Moderate” Supporting Conclusion Category |
|--|---|--|
| All product lines (Closed-end Home Mortgage Loans, Small Business Loans, Small Farm Loans, Automobile Loans) | Low-income census tracts | Moderate-income census tracts |

For the borrower distribution average for closed-end home mortgage loan and automobile loan product lines, the agencies will calculate a weighted average of the performance scores corresponding to lending to relevant categories of designated borrowers: (1) the supporting conclusion for lending to low-income borrowers; and (2) the supporting conclusion for lending to moderate-income borrowers.

For the borrower distribution average for small business loans and small farm loans, the agencies will likewise calculate a weighted average of the performance scores corresponding to lending to relevant categories of designated borrowers: (1) the supporting conclusion for lending to businesses with gross annual revenues of \$250,000 or less; (2) the supporting conclusion for lending to businesses with gross annual revenues of greater than \$250,000 but less than or equal to \$1 million; (3) the supporting conclusion for lending to farms with gross annual revenues of \$250,000 or less; and (4) the supporting conclusion for lending to farms with gross annual revenues of greater than \$250,000 but less than or equal to \$1 million. This is illustrated in Table 30.

Table 30 to § __.22(f): Components of Borrower Distribution Average

| Product line | Borrower Distribution “Low” Supporting Conclusion Category | Borrower Distribution “Moderate” Supporting Conclusion Category |
|--------------------------------|---|---|
| Closed-end Home Mortgage Loans | Low-income borrowers | Moderate-income borrowers |
| Small Business Loans | Businesses with gross annual revenues of \$250,000 or less | Businesses with gross annual revenues of greater than \$250,000 but less than or equal to \$1 million |
| Small Farm Loans | Farms with gross annual revenues of \$250,000 or less | Farms with gross annual revenues of greater than |

| | | |
|------------------|----------------------|---|
| | | \$250,000 but less than or equal to \$1 million |
| Automobile Loans | Low-income borrowers | Moderate-income borrowers |

When calculating a weighted average of these two components, the weights for each component would be based on Retail Lending Test Area demographics, a clarifying change in terminology from the proposal’s use of “community benchmarks” in order to more precisely describe the relevant calculations, as illustrated in Examples A-11 and A-12 in section VII of final appendix A. The agencies believe that the weighted average approach appropriately tailors the weighting approach to the characteristics of the Retail Lending Test Area in determining the weight to assign to each income or revenue category, as one commenter noted. Regarding the suggestion to assign greater weight to the low-income categories rather than the moderate-income categories, the agencies believe this could result in a weighting approach that does not reflect the relative level of credit needs and opportunities among low-income and moderate-income borrowers and census tracts. Regarding the suggestion not to strictly weight in the proposed method, the agencies believe that it is preferable to employ a consistent, quantitative approach to developing product line scores, to increase the predictability and transparency of evaluations and to limit agency discretion where possible. As described below, the agencies have made several non-substantive technical changes to section VII of final appendix A to clarify and add further detail to how the weights are calculated for purposes of computing the geographic distribution average and borrower distribution average.

Combining the geographic distribution average and borrower distribution average to develop a product line score. The final rule retains the proposed approach of combining the geographic distribution average and the borrower distribution average to calculate an overall score for each major product line. The agencies considered comments suggesting that they assign greater weight to the borrower income average than the geographic income average, but continue to believe that both the geographic and borrower distributions are important measures of how a bank is meeting its community’s credit needs and that equal weighting ensures that both distributions are important to overall conclusions.

The agencies also considered comments that the weight assigned to the geographic income average and borrower income average should vary depending on the performance context of an area. The agencies determined that the final rule weights for geographic distributions and borrower distributions will provide greater consistency and standardization, and that allowing the weights to vary depending on performance context would necessitate greater agency discretion that could increase complexity and increase uncertainty in evaluations. In addition, the agencies believe the approach of using weighted averages of a bank’s performance in different categories of lending to calculate each product line score will appropriately allow somewhat stronger performance in certain categories of lending to compensate for somewhat less strong performance in other categories. The agencies believe this affords appropriate flexibility to banks in meeting the credit needs of their community.

Regarding comments that some nonmetropolitan areas may not have low- or moderate-income census tracts, the agencies note that the additional factor in final § __.22(g)(6) may be considered when determining the bank’s conclusion, as discussed in the section-by-section analysis of final § __.22(g). In addition, consistent with the agencies’ proposal, in Retail

Lending Test Areas with no low- and moderate-income census tracts, and hence no geographic distribution scores, the agencies will set the product line score equal to the borrower distribution average.

Using Weighted Average of Product Line Scores for Retail Lending Test Recommended Conclusions

§ __.22(f)(4)(ii) *Combination of performance scores*

§ __.22(f)(4)(iii) *Retail Lending Test recommended conclusions*

The Agencies' Proposal

The agencies proposed that the Retail Lending Test recommended conclusion for a facility-based assessment area, retail lending assessment area, or outside retail lending area, as applicable, would be derived by taking a weighted average of all of the product line averages. The weight for each product line average would be the percentage of the dollar volume of originations and purchases of that product line for the bank in a facility-based assessment area, retail lending assessment area, or outside retail lending area. This percentage would be calculated out of the total dollar volume of originations and purchases from all product lines for the bank in that facility-based assessment area, retail lending assessment area, or outside retail lending area.⁹⁵¹ The agencies believed that this approach would give proportionate weight to a bank's product offerings, with more prominent product lines, as measured in dollars, having more weight on the bank's overall conclusion in an assessment area.⁹⁵²

The agencies believed that pursuant to this approach, the Retail Lending Test would be tailored to individual bank business models, as evaluations would be based on the lending a bank specializes in locally. Moreover, the agencies believed that weighting product lines by the dollar volume of lending recognizes the continued importance of home mortgage lending and small business lending to low- and moderate-income communities, which has been a focus of the CRA, while also accounting for the importance of consumer loans to low- and moderate-income individuals. The agencies requested feedback on whether loan count should be used in conjunction with, or in place of, dollar volume in weighting product line conclusions to determine the Retail Lending Test recommended conclusion, and corresponding performance score, in a facility-based assessment area, retail lending assessment area, or outside retail lending area.

Comments Received

A number of commenters addressed the agencies' proposal for combining a bank's product line averages for each major product line to determine its Retail Lending Test recommended conclusion for each facility-based assessment area, retail lending assessment area, or outside retail lending area. Commenters on this topic responded to the agencies' request for feedback on whether the weight assigned to each product line average should be based on the dollar volume of loans in each product line, the number of loans in each product line, or a combination of the two. Nearly all commenters on this topic favored some form of consideration for retail loan counts in weighting product line averages to determine the Retail Lending Test recommended

⁹⁵¹ See proposed appendix A.V.c and A.V.d.

⁹⁵² 87 FR 33884, 33947 (June 3, 2022).

conclusion in a facility-based assessment area, retail lending assessment area, or outside retail lending area.

Concerns with proposed approach. A number of commenters expressed concerns regarding the proposed approach of weighting product line averages solely based on the dollar volume of loans within each product line, with some expressing support for weighting based on the number of loans. One commenter indicated that using dollar volume alone would give less impact to lending activity in rural areas where home values are lower. Other commenters stated that the agencies' proposal would disadvantage banks that are meeting low- and moderate-income credit needs by originating more small-dollar loans. For example, one commenter asserted that the agencies' proposed weighting approach contradicted the CRA's purpose of focusing on low- and moderate-income lending by overemphasizing large-dollar closed-end home mortgage loans. Other commenters expressed a related concern that the proposed approach would underweight small business lending and consumer lending, given that small business loans and consumer loans are generally smaller in dollar value than home mortgage loans.

Alternative of weighting by combination of loan dollars and loan count. A number of commenters recommended basing the weight assigned to each product line average on a combination of the dollar amount and number of loans in each product line. A few commenters suggested that, under such an approach, smaller transactions could receive more weight in the distribution analysis, including small-dollar home mortgage loans. Another commenter stated that this approach would better account for the differences in the impact of a bank's lending across communities. For example, this commenter noted that even a relatively small number of loans could have substantial impact in communities with unmet credit needs. Other commenters emphasized that this approach would recognize bank lending that serves more consumers and businesses, as well as variations across different lending products. Another commenter tentatively supported (citing lack of visibility into the issue) using a combination of dollar volume and loan count because the approach would otherwise assign too much weight to home mortgage lending.

Alternative of weighting solely by loan count. A number of commenters cautioned against an alternative approach of weighting product lines scores solely based on the number of loans in each product line, without considering dollar volume. One commenter stated that this alternative could result in overemphasizing small business loans and credit card loans in the Retail Lending Test evaluation. Another commenter asserted that weighting product line averages by loan counts only would incorrectly discount the potential contribution of larger dollar loans made in areas with few opportunities.

Other alternative weighting approaches. A few commenters offered other alternative weighting methodologies. For example, one commenter indicated that if the agencies retained the proposed dollar volume weighting approach, they should also apply a multiplier to lower dollar value categories, such as automobile lending and other consumer lending, to increase parity among different types of retail lending products. Additionally, a commenter suggested the weighting should provide approximately a 40 percent-40 percent-20 percent weighting to home mortgage lending, small business lending, and consumer lending respectively, and suggested that the agencies use data to determine if this type of result is best achieved by dollar volume alone or dollar volume in combination with loan count. Further, this commenter expressed that weighting by loan count would equalize loans made to low- and moderate-income borrowers and more affluent borrowers that often have larger dollar home mortgage loans. However, in cases in

which a bank has a very high volume of small-dollar consumer loans in combination with sizable numbers of home mortgage loans and small business loans, the commenter suggested that a combination of dollar amount and loan counts may better prioritize home mortgage lending and small business lending.

Final Rule

As provided in final § __.22(f)(4)(ii), final § __.22(f)(4)(iii), and in section VII of final appendix A, with the exception of a facility-based assessment area of a large bank in which it lacked an acceptable basis for not meeting the Retail Lending Volume Threshold,⁹⁵³ the agencies will develop a Retail Lending Test recommended conclusion for each Retail Lending Test Area by calculating an average of the product line scores that the bank received on each of its major product lines in that Retail Lending Test Area. These product line scores are based on combining the performance scores for each supporting conclusion for each major product line. As noted above, the use of the term “product line score” rather than the term used in the proposal—“product line average”—is a clarifying change intended to provide a more accurate description of what is being calculated without any change in meaning.

Based on agency consideration of related comments, the final rule weights each product line score based on a combination of loan dollars and loan count associated with the product line, in contrast to the proposed approach of weighting each product line score solely by dollar amount. For example, if a major product line contained 50 percent of a bank’s loans in a Retail Lending Test Area in dollar amount and 30 percent of a bank’s loans in that area in loan count then the weight assigned to the product line score would be 40 percent. In reaching this determination, the agencies believe that the final rule approach would appropriately consider both the dollar amount of credit extended as well as the number of borrowers served. The agencies recognize that both dollar amount and loan count are important aspects of how a bank meets the credit needs of a community. The agencies considered comments that such an approach would assign relatively greater weight to product lines with large loan counts and small loan amounts, compared to the proposed approach. Some commenters suggested that this may be especially important for small business lending because small business loans could have smaller loan amounts than closed-end home mortgage loans, on average, depending on a bank’s strategy and product offerings. Although use of the combination of loan dollars and loan count involves somewhat more complex calculations than the proposed approach, the agencies believe that the benefits of the final rule, in terms of additional equity among major product lines, merit incorporating that additional complexity.

The weighted average of all product line scores is converted into a Retail Lending Test Area Score. The use of the term “Retail Lending Test Area Score” rather than the term in the proposal—“geographic product average”—is both intended to more accurately describe what is being calculated and also to reduce potential confusion with the term “product line score.”

Consistent with the proposed approach, the agencies will then develop a Retail Lending Test recommended conclusion corresponding with the conclusion category that is nearest to the Retail Lending Test Area Score, as follows: “Outstanding” (8.5 or more); “High Satisfactory” (6.5 or

⁹⁵³ See final § __.22(c)(3)(iii)(A).

more but less than 8.5); “Low Satisfactory” (4.5 or more but less than 6.5); “Needs to Improve” (1.5 or more but less than 4.5); “Substantial Noncompliance” (less than 1.5).⁹⁵⁴

§ __.22(g) Additional Factors Considered when Evaluating Retail Lending Performance

As provided in final § __.22(g), the agencies are finalizing their proposal, with certain clarifying, substantive, and technical changes, regarding consideration of additional factors when assigning a bank’s Retail Lending Test conclusions.⁹⁵⁵ The seven additional factors in the final rule account for circumstances in which the prescribed metrics may not accurately or fully reflect a bank’s lending distributions or in which the benchmarks may not appropriately represent the credit needs and opportunities in an area. The agencies will consider these additional factors in determining a bank’s Retail Lending Test conclusions, in addition to the bank’s recommended conclusion and performance context information in final § __.21(d), as described in final § __.22(h)(1)(ii) and in paragraph VII.d of final appendix A.

As described further below, final § __.22(g) adopts the four proposed additional factors, with certain clarifying and technical changes, as well as three other additional factors.

Furthermore, pursuant to final § __.22(g), certain additional factors will be considered when evaluating a bank’s performance in, as applicable, its retail lending assessment areas and its outside retail lending area—and not solely, as proposed, when evaluating the bank’s performance in its facility-based assessment areas.

The Agencies’ Proposal

The agencies proposed to consider certain additional factors that are indicative of a bank’s lending performance or lending opportunities, but which are not captured in the metrics and benchmarks, when reaching Retail Lending Test conclusions for facility-based assessment areas.⁹⁵⁶ Specifically, in proposed § __.22(e), the agencies provided that in addition to considering how a bank performs relative to the Retail Lending Volume Threshold described in proposed § __.22(c) and the performance ranges described in proposed § __.22(d), the agencies would evaluate the retail lending performance of a bank in each facility-based assessment area by considering four additional factors. These factors could inform the agencies adjusting upward or downward a Retail Lending Test recommended conclusion in a facility-based assessment area:

- Information indicating that a bank has purchased retail loans for the sole or primary purpose of inappropriately influencing its retail lending performance evaluation, including but not limited to subsequent resale of some or all of those retail loans or any indication that some or all of the loans have been considered in multiple banks’ CRA evaluations;⁹⁵⁷

⁹⁵⁴ See also the section-by-section analysis of final § __.28.

⁹⁵⁵ See *supra* note 145.

⁹⁵⁶ See proposed § __.22(e).

⁹⁵⁷ See proposed § __.22(e)(1).

- The dispersion of retail lending within the facility-based assessment area to determine whether there are gaps in lending not explained by performance context;⁹⁵⁸
- The number of banks whose reported retail lending and deposits data is used to establish the applicable Retail Lending Volume Threshold, geographic distribution thresholds, and borrower distribution thresholds;⁹⁵⁹ and
- Missing or faulty data that would be necessary to calculate the relevant metrics and benchmarks or any other factors that prevent the agencies from calculating a recommended conclusion.⁹⁶⁰

The agencies sought feedback on whether to consider a different or broader set of additional factors than those reflected in proposed § __.22(e), including oral or written comments about a bank's retail lending performance, as well as the bank's responses to those comments, in developing Retail Lending Test conclusions.

The agencies also sought feedback on whether to engage in ongoing analysis of HMDA data to identify banks that appear to engage in significant churning of home mortgage loans. Additionally, the agencies sought feedback regarding whether evidence of loan churning should be considered as an additional factor in evaluating a bank's retail lending performance.

Additionally, the agencies sought feedback on whether the distribution of retail lending in distressed and underserved census tracts should be considered qualitatively.

The agencies also requested feedback on whether to identify assessment areas where lenders may be underperforming in the aggregate and the credit needs of substantial parts of the community are not being met. The agencies would consider additional information to account for the possibility that the market benchmarks for the area may underestimate the credit needs and opportunities of the area. The agencies suggested that one manner in which they could identify such assessment areas would be by developing statistical models that estimate the level of the market benchmark that would be expected in each assessment area based on its demographics, such as income distributions or household compositions, as well as housing market conditions and economic activity. In seeking feedback on this approach, the agencies also suggested that a model could be constructed using data at the census tract or county level that are collected nationwide, and that an assessment area in which market benchmarks fell significantly below their expected levels could be considered underperforming for the relevant product line, distribution test, and income level.

Finally, the agencies sought feedback on whether to consider other factors, such as oral or written comments about a bank's retail lending performance, as well as the bank's responses to those comments, in developing Retail Lending Test conclusions. Additionally, the agencies suggested that they could identify underperforming markets using a relative standard or an absolute standard. Finally, the agencies suggested that, rather than designating a specific set of

⁹⁵⁸ See proposed § __.22(e)(2).

⁹⁵⁹ See proposed § __.22(e)(3).

⁹⁶⁰ See proposed § __.22(e)(4).

underperforming markets, they could use the difference between the actual and expected market benchmarks as an additional factor to consider in every assessment area.

Comments Received

Comments on proposed § __.22(e) generally addressed: whether to consider information indicating that a bank has purchased retail loans for the sole or primary purpose of inappropriately influencing its retail lending performance; whether and how markets in which lenders overall are underperforming in meeting community credit needs should be factored into the evaluation of bank performance; and whether the agencies should consider other factors regarding a bank's retail lending performance that were not proposed, such as oral or written comments about the bank's performance and the bank's responses to those comments.

Purchased retail loans for the sole or primary purpose of inappropriately enhancing retail lending performance. The agencies received numerous comments regarding the proposed additional factor allowing for adjustment of a Retail Lending Test recommended conclusion based on "information indicating that a bank has purchased retail loans for the sole or primary purpose of inappropriately influencing its retail lending performance evaluation, including but not limited to subsequent resale of some or all of those retail loans or any indication that some or all of the loans have been considered in multiple banks' CRA evaluations."

As described in the introduction to the section-by-section analysis of final § __.22, numerous commenters opposed consideration of purchased loans in the retail lending distribution analysis under the Retail Lending Test or recommended limiting consideration of purchased loans to specific types or purchased loans or specific circumstances.

In addition, several commenters expressed that the proposed additional factor was vague and would leave examiners with too much discretion to determine when retail loans were purchased solely or primarily for the purpose of inappropriately influencing the bank's retail lending performance evaluation. A few commenters recommended that the agencies establish a series of presumptions that would enable a bank to establish that its retail loan purchases do not meet the proposed additional factor. For example, a commenter suggested that a bank that sells loans extended to low- and moderate-income borrowers at the same rate that it sells loans extended to middle- and upper-income borrowers, should be presumed to not be engaged in activity that meets the proposed additional factor. Another commenter suggested that the agencies should impose a more stringent standard on large banks to prevent them from repeatedly purchasing and selling retail loans amongst one another to meet their CRA obligations; however, this commenter further stated that the agencies should balance the need for liquidity with the potential for repeated loan purchases by banks.

Several commenters suggested the agencies impose seasoning requirements where a bank must hold a particular loan for a certain time period to receive CRA consideration. Commenters varied on the suggested length of a seasoning period, ranging from 30 days to one year. In contrast, another commenter opposed any seasoning requirements because of the added liquidity and interest rate risk.

Alternatively, some commenters recommended that certain purchased retail loans should not be deemed to be inappropriately influencing a bank's Retail Lending Test performance evaluation. For example, a few commenters stated that the purchase of retail loans from a community organization should never reflect poorly on a bank because these loan purchases

effectively double such organizations' lending capacity. Another commenter stated that loans originated then sold to a housing finance agency or similar organization in connection with affordable housing programs should not be considered as inappropriately influencing a bank's Retail Lending Test performance evaluation, as these programs rely on correspondent lenders.

A few commenters opposed inclusion of this proposed additional factor in § __.22(e)(1), asserting that it would be difficult to discern a bank's motive for purchasing loans, and that, regardless of a bank's purpose, purchased loans can create liquidity and have a positive impact on low- and moderate-income borrowers and communities. A few other commenters recommended that, if this proposed additional factor is retained in the final rule, the agencies include in the regulatory text an explicit statement that purchased loans would not result in any penalty for banks under the Retail Lending Test absent clear evidence that the purchases met the additional factor.

Lenders overall underperforming in meeting community credit needs of facility-based assessment areas. A few commenters supported the identification of facility-based assessment areas in which lenders in the aggregate are underperforming such that the market benchmarks are too low. These commenters supported the agencies creating a statistical model to identify those underperforming facility-based assessment areas or to calculate the predicted market benchmark.

These commenters also raised points related to how to adopt or implement an additional factor that identifies facility-based assessment areas in which lenders in the aggregate are underperforming in meeting community credit needs. Another commenter suggested that after identifying such facility-based assessment areas with market benchmarks that are significantly lower than predicted by statistical models, the agencies could adjust impact factors to incentivize bank lending in these assessment areas. Another commenter stated that the agencies should consider this information as a factor in favor of adjusting banks' Retail Lending Test conclusions downwards in such facility-based assessment areas. This commenter suggested this approach would incentivize banks to improve their retail lending performance there. A commenter encouraged the agencies to implement a methodology to identify areas in which lenders in the aggregate are underperforming in meeting community credit needs, and recommended adjusting the borrower and geographic performance thresholds upwards in those areas. A different commenter raised concerns about how the agencies would determine that lenders in the aggregate are underperforming in an area. A commenter asserted that it would be difficult to identify these areas by comparing peer lenders alone; instead, the commenter recommended identifying facility-based assessment areas where market benchmarks are significantly lower than the predicted market benchmarks based on statistical models. Relatedly, a commenter encouraged the agencies to conduct further empirical research to identify underperforming markets based on the divergence between actual and predicted market benchmarks. This commenter recommended that, to motivate banks to better meet communities' retail lending needs, the agencies should use the predicted market benchmarks for evaluating banks' retail lending performance in the worst quartile of underperforming markets, and in the second worst quartile they should use a weighted average of the actual market benchmarks and the predicted market benchmarks.

Some commenters recommended specific information that the agencies should consider when identifying underperforming markets. For example, a commenter recommended that the agencies consider similarly sized markets based on population, gross domestic product, and total

number of businesses, and other variables that would allow facility-based assessment area comparisons in order to identify underperforming markets. This commenter supported defining an underperforming market as those markets measured at 65 percent or less of the expected value of the market benchmark—the same threshold as the proposed Retail Lending Test community benchmark for “Low Satisfactory” performance. Another commenter asserted that when identifying facility-based assessment areas in which lenders may be underperforming in the aggregate the agencies should employ factors not captured in the Retail Lending Test metrics and benchmarks; this commenter indicated that such factors could include consideration of the prevalence of alternative financing in a market, such as land contracts and rent-to-own arrangements, and low levels of small-dollar home mortgage lending in a market. In addition, a commenter asserted that the agencies should work with relevant stakeholders to develop data points to identify and model underperforming markets. This commenter also noted that some underperformance may be driven by a lack of demand for home mortgage lending and small business lending, noting that, for example, low- and moderate-income consumers might elect to rent housing in markets with high home prices.

A few commenters that agreed there is a potential for the market benchmarks to be artificially low as a result of collective underperformance also acknowledged the challenges associated with identifying these markets and developing a solution. For example, a commenter sought clarification on how appropriately identifying underperforming markets could counter the possibility that the market benchmarks might be set too low in some facility-based assessment areas, and others suggested the agencies should propose a solution for public comment.

Oral and written comments about a bank’s retail lending performance. Most commenters addressing this issue expressed support for the agencies considering other factors, such as oral and written comments submitted about a bank’s retail lending performance and the bank’s responses to those comments, in developing Retail Lending Test conclusions. A commenter noted that the agencies currently consider written comments in a bank’s public file regarding its retail lending and other CRA performance. In addition to submitted oral and written comments, other commenters suggested that the agencies consider any comments or complaints housed in other Federal repositories, and bank responses to stakeholder questions and comments, into their Retail Lending Test conclusions.

Some commenters addressed the effect that should be given to oral and written comments regarding a bank’s retail lending performance. A commenter suggested the agencies should issue draft CRA performance evaluations that identify the weight and consideration given to certain comments versus others. This commenter also said banks should be given the opportunity to review and rebut comments considered by the agencies. Similarly, other commenters emphasized that disclosing whether a Retail Lending Test conclusion was adjusted up or down based on feedback would incentivize stakeholder input and encourage banks’ accountability to the public. A commenter suggested that the agencies’ community affairs teams should combine any submitted oral and written comments with data, news articles, and other research for examiners to develop Retail Lending Test conclusions. This commenter added that it was imperative that the agencies clearly explain how Retail Lending Test adjustments might be made based upon community affairs teams’ input.

On the other hand, a commenter stated that the agencies should only consider written comments required to be included in a bank’s CRA public file in developing Retail Lending Test conclusions to limit the potential effect of social media posts and other potentially spurious

claims. Although acknowledging the value of community input, the commenter suggested this value must be balanced with the subjectivity of comments and the risk of creating an inaccurate representation of a bank's performance. This commenter highlighted the need for examiner training and suggested that examiners should only consider written comments where a bank has been given a reasonable opportunity to respond.

Evaluation of performance in distressed and underserved middle-income census tracts for banks with few or no low- and moderate-income census tracts. Commenters on this topic generally supported including a quantitative evaluation of the geographic distribution of retail lending in distressed and underserved middle-income census tracts for banks with few or no low- and moderate-income census tracts in their assessment areas. For example, commenters noted the importance of this approach to rural areas and nonmetropolitan areas, where poverty may exist outside of low- and moderate-income census tracts. A commenter noted that, primarily in rural areas, treating distressed and underserved census tracts like low- or moderate-income tracts would be preferable to conducting a qualitative review of these tracts. Another commenter suggested that evaluating bank activities in distressed and underserved middle-income census tracts would better help address gentrification relative to the current CRA regulations. A commenter indicated that the agencies should assess whether in rural areas with few low- and moderate-income census tracts including distressed and underserved middle-income census tracts, would truly increase the number of census tracts in which a bank could receive credit for lending within the geographic distribution analysis. This commenter added that the agencies' proposal regarding delineation of retail lending assessment areas in the nonmetropolitan areas of States might result in an overall sufficient number of low- and moderate-income census tracts in those assessment areas for a geographic distribution analysis. Relatedly, another commenter suggested that in assessment areas containing few or no low- and moderate-income census tracts, examiners could compare the median income in a given census tract to the state median income to determine whether a census tract was distressed or underserved during the evaluation period.

Final Rule

Additional factors, in general. The agencies continue to believe that the Retail Lending Test evaluation should include additional factors for consideration when determining Retail Lending Test conclusions for Retail Lending Test Areas. These additional factors and their application to the Retail Lending Test are provided in final §§ __.22(g) and __.22(h)(1)(ii), and in paragraph VII.d of final appendix A.

The agencies have made substantive and technical changes in final § __.22(g). First, to clarify the role of the additional factors in the Retail Lending Test, the introductory text to final § __.22(g) states that the additional factors, as appropriate, inform the agencies' determination of a bank's Retail Lending Test conclusion for each Retail Lending Test Area. The agencies intend the included language "inform the [Agency's] determination of a bank's Retail Lending Test conclusion" to be a clarifying change from the proposal that more explicitly links the additional factors to the determination of Retail Lending Test conclusions. In contrast, proposed § __.22(e) did not specifically refer to the determination of conclusions in the introductory text. Additionally, although the proposed introductory text stated that the additional factors may apply in evaluating a bank's performance in facility-based assessment areas, the final rule does not maintain this limitation. Instead, certain additional factors may apply in, as applicable, a bank's facility-based assessment areas, retail lending assessment areas, and outside retail lending area, as discussed below.

The additional factors included in final § __.22(g) allow the agencies to account for circumstances in which the prescribed metrics in final § __.22(e) may not accurately or fully reflect a bank's lending distributions or in which the benchmarks may not appropriately represent the credit needs and opportunities in the area. The agencies believe that it is preferable to state as specifically as possible the circumstances in which the agencies may assign a Retail Lending Test conclusion that is different from the Retail Lending Test recommended conclusion. Specifying these circumstances is intended to increase the consistency and certainty of Retail Lending Test evaluations, compared to an alternative in which such circumstances are unspecified and are left entirely to examiner discretion.

As discussed in the section-by-section analysis of final §§ __.21(d) and __.22(h), the agencies will also consider performance context factors when assigning Retail Lending Test conclusions. As in the proposal, pursuant to final § __.21(d), performance context related to a bank's retail lending performance that is not reflected in the distribution analysis can inform Retail Lending Test conclusions. For example, the agencies could consider a bank's past performance and safety and soundness limitations.

The final rule maintains, with certain clarifying and substantive changes discussed below, the four proposed additional factors. In consideration of comments received and additional agency analysis, the agencies have also added three new additional factors to final § __.22(g), relating to consideration of: (1) major product lines in retail lending assessment areas and outside retail lending areas with fewer than 30 loans; (2) lending in distressed or underserved nonmetropolitan middle-income census tracts where a bank's facility-based assessment area or retail lending assessment area includes very few or no low- and moderate-income census tracts; and (3) retail lending assessment areas and facility-based assessment areas where lenders in the aggregate are underperforming.

§ __.22(g)(1)

Pursuant to final § __.22(g)(1), the agencies may consider information indicating that a bank purchased closed-end home mortgage loans, small business loans, small farm loans, or automobile loans for the sole or primary purpose of inappropriately enhancing its retail lending performance, including, but not limited to, information indicating subsequent resale of such loans or any indication that such loans have been considered in multiple banks' CRA evaluations, in which case the agencies do not consider such loans in the bank's performance evaluation.

The agencies have incorporated clarifying changes into this additional factor. For clarity, the final rule specifies that this factor applies to the distribution analyses of closed-end home mortgage loans, small business loans, small farm loans, and automobile loans—rather than simply “retail loans,” as stated in the proposal. For additional clarity and specificity regarding the concept of a bank seeking to purchase loans in order to inappropriately improve its conclusions and ratings, the agencies have also changed the standard from a bank “inappropriately influencing,” as provided in the proposal, to a bank “inappropriately enhancing” its retail lending performance.

The final rule provides that if the agencies have determined that certain lending meets this additional factor, then the agencies will not consider those loans in a bank's performance evaluation. The agencies believe this provision gives appropriate additional detail regarding how this additional factor will be applied, and is consistent with the discussion in the agencies'

proposal that the additional factor would be used to adjust conclusions when there is evidence of inappropriate loan purchasing activity. The agencies believe that exclusion of such loans from the distribution analysis is appropriate because loans that a bank purchases and quickly resells for the sole or primary purpose of inappropriately enhancing the bank's evaluation may distort the distribution analysis and are not responsive to community credit needs.

In determining whether inappropriate purchasing activity has occurred, the agencies may consider a number of factors, including: (1) the bank's business strategy; (2) the timing of the purchases; (3) the timing of the resale of these loans relative to the purchases; and (4) the materiality of the purchases to the bank's Retail Lending Test recommended conclusion.

Additionally, the final rule does not limit application of this additional factor to a bank's facility-based assessment areas, as was proposed. Rather, the additional factor may also be considered in, as applicable, a bank's retail lending assessment areas and its outside retail lending area. The agencies believe that this flexibility is appropriate because inappropriate purchasing activity is not necessarily restricted to a bank's facility-based assessment areas.

In determining to include an additional factor addressing certain purchased loans that may inappropriately enhance a bank's recommended conclusion, the agencies considered commenter feedback regarding the potential benefits and tradeoffs of such a factor, including concerns from some commenters about the potential for multiple banks to receive CRA consideration for the same loans. The agencies believe that the additional factor in final § __.22(g)(1) will help to account for certain loan purchase activity that is not responsive to community credit needs, and will support a robust distribution analysis without removing purchased loans from the distribution analysis.

The agencies also considered comments that this additional factor may create uncertainty due to a lack of clear standards regarding when purchased loans would be deemed to be inappropriately enhancing a bank's evaluation. The agencies believe that it is appropriate to define this factor with sufficient flexibility to apply to different ways that a bank could potentially purchase loans to inappropriately enhance its evaluation. However, as discussed above, the agencies expect that this factor will be applied rarely. At the same time, the agencies believe that this factor is important for ensuring a robust distribution analysis in the rare instances in which it would be applied.

The agencies also believe that inclusion of this factor will not deter banks from purchasing loans for other reasons. The agencies will not apply this additional factor in instances where a bank has a business strategy of purchasing loans, for example, as a way of providing liquidity to originating lenders that lack secondary market access or purchasing distressed closed-end home mortgage loans from Ginnie Mae servicers. However, the agencies may, for example, consider this factor in the case of a bank that purchases 100 small business loans that it sells immediately or shortly after the close of the evaluation period, if the bank otherwise routinely purchases one or two small business loans each month during an evaluation period.

Regarding whether to analyze HMDA data to identify banks and Retail Lending Test Areas that have suspicious purchase activity, the agencies believe that such an analysis could facilitate targeted consideration in support of the additional factor in final § __.22(g)(1). If this analysis identified any bank Retail Lending Test Areas with suspicious purchase activity, the agencies would review those purchases more closely.

Regarding the suggestion that the agencies establish a series of presumptions that would enable a bank to establish that its retail loan purchases do not reflect inappropriate loan purchasing activity, the agencies believe that the evaluation of retail loan purchases and whether they reflect inappropriate loan purchasing activity are best handled on a case-by-case basis, given the flexibility of final § __.22(g)(1) as a qualitative additional factor.

Relatedly, the agencies decline to adopt in the final rule a minimum holding period after which a purchased loan would no longer be considered an inappropriately purchased loan. The agencies are sensitive to the possibility that imposing a minimum holding period (*e.g.*, from 30 days to one year, as suggested by commenters) may increase liquidity and interest rate risk. In addition, the agencies believe that not satisfying a minimum holding period does not necessarily indicate that a loan was purchased to inappropriately enhance a bank's performance evaluation. For example, a bank may purchase a loan from an originating lender that lacks secondary market access and then relatively shortly thereafter sell that loan to a government-sponsored enterprise, providing liquidity for the originating lender to make further loans, which would not constitute inappropriate loan purchasing activity. Finally, the agencies note that they face data limitations that would prevent consistent application of a minimum holding period, since this information is not consistently available to the agencies.

For the reasons stated above, the agencies believe that final § __.22(g)(1) appropriately addresses concerns about inappropriate loan purchasing activity in a manner that will serve to discourage intentional manipulation of a bank's CRA evaluation through loan purchases while more generally including loan purchases in the Retail Lending Test analysis.

§ __.22(g)(2)

Final § __.22(g)(2) includes a provision that the agencies may consider the dispersion of a bank's closed-end home mortgage, small business, small farm, or automobile lending within a facility-based assessment area to determine whether there are gaps in lending that are not explained by performance context. For example, under this additional factor, a Retail Lending Test recommended conclusion may be lowered where geographic lending patterns exhibit gaps in low- or moderate-income census tracts that cannot be explained by performance context.

The agencies believe that this factor is necessary because the geographic distribution analysis in facility-based assessment areas is conducted on an aggregate basis across an entire facility-based assessment area, and does not consider whether there are gaps in a bank's lending in certain census tracts. For example, this factor may be considered if a bank has a substantial number of loans in all census tracts within a facility-based assessment area except for several contiguous low- and moderate-income census tracts in the center of the facility-based assessment area in which the bank made zero loans, despite there being credit needs and opportunities in those census tracts as demonstrated by loans made by other lenders.

This additional factor is consistent with the current CRA regulations,⁹⁶¹ in which the agencies may evaluate the extent to which a bank is serving geographies in each income category and whether there are conspicuous gaps unexplained by performance context. Consistent with current practice, the agencies note that banks are not required to lend in every census tract in a

⁹⁶¹ See, *e.g.*, current 12 CFR __.22(b).

facility-based assessment area, and that performance context may explain why a bank was not able to serve one or more census tracts.

Consistent with the proposal, the agencies will apply this factor only in facility-based assessment areas. The agencies have determined that this additional factor is best applied to facility-based assessment areas because the dispersion analysis can take into account where the bank's deposit-taking facilities are located.

The final rule includes a conforming change to precisely reference applicable loan categories, specifying that this additional factor applies to reviews of closed-end home mortgage, small business, small farm, and automobile lending—rather than simply to reviews of “retail loans,” as provided in the proposal. The agencies note that these products are the potential Retail Lending Test major product lines that may be included in a distribution analysis, and that open-end home mortgage loans and multifamily loans will not be evaluated using a distribution analysis pursuant to the Retail Lending Test, as discussed further in the section-by-section analysis of final § __.22(d).

§ __.22(g)(3)

Consistent with the proposal, final § __.22(g)(3) provides, with some technical edits, that the agencies may consider the number of lenders whose reported home mortgage loans, multifamily loans, small business loans, and small farm loans and deposits data are used to establish the applicable Retail Lending Volume Threshold, geographic distribution market benchmarks, and borrower distribution market benchmarks. Specifically, the agencies believe that where there are very few banks reporting lending and deposits data, or where one bank has an outsized market share, the benchmarks may not provide an accurate measure of local opportunities. For example, in a facility-based assessment area where a bank's closed-end home mortgage loans are a major product line and no other lenders have a meaningful number of closed-end home mortgage loans it may be nearly impossible for the bank to meaningfully exceed the market benchmark, because the market benchmark in this instance would be almost entirely based on the bank's own lending. In such a scenario, the agencies may consider, for example, the bank's performance relative to the community benchmark as well as performance context factors to determine the bank's conclusion.

The agencies made a conforming change to replace “retail lending” with the more specific lending that would be included: home mortgage lending (*i.e.*, closed-end home mortgage lending and open-end home mortgage lending), multifamily lending, small business lending, and small farm lending—rather than simply “retail lending,” as provided in the proposal.

The agencies are also clarifying that this additional factor relates to geographic distribution benchmarks and borrower distribution benchmarks—rather than “geographic distribution, and borrower distribution thresholds,” as provided in the proposal. The agencies made this change because both the proposed and final rule Retail Lending Test approach includes geographic and borrower distribution “benchmarks,” and does not use the term “thresholds” to refer to these evaluation criteria.

Additionally, the final rule provides that this additional factor is based on the number of “lenders” rather than the number of “banks” whose data is used in the Retail Lending Test calculations. The geographic distribution and borrower distribution market benchmarks include all lenders in an area, and may not be limited to banks, depending on the specific data sources

used for these analyses. The agencies believe that considering all reporting lenders as part of this additional factor is appropriate because it is possible that an area may have a sufficient number of lenders to calculate reliable market benchmarks even if only one or two of those lenders are banks.

Final § __.22(g)(3) expands the application of this additional factor from solely a bank's facility-based assessment areas, as proposed, to also include, as applicable, its retail lending assessment areas and its outside retail lending area. This change accounts for potential circumstances in which a bank has a retail lending assessment area or outside retail lending area in which there are few or no other lenders, which may make the geographic and borrower distribution benchmarks less robust. For example, the hypothetical provided above for a facility-based assessment area could also occur in a retail lending assessment area in which a bank is the only lender that originated loans in a certain product line during the evaluation period.

§ __.22(g)(4)

Consistent with the proposal, final § __.22(g)(4) provides that the agencies may consider missing or faulty data that would be necessary to calculate the relevant metrics and benchmarks or any other factors that prevent the agencies from calculating a Retail Lending Test recommended conclusion. In such a case, the final rule provides that if unable to calculate a Retail Lending Test recommended conclusion, the agencies assign a Retail Lending Test conclusion based on consideration of the relevant available data. For example, a Retail Lending Test Area with a small number of owner-occupied housing units in low-income census tracts could be reported in the American Community Survey as having zero such units if none of those owner-occupied housing units were randomly selected to be part of the sample that received a survey. In such cases, it will not be possible to conduct a geographic distribution analysis using the otherwise prescribed approach for low-income census tracts even when the bank originated or purchased closed-end home mortgage loans in those low-income census tracts.

The agencies believe that this additional factor addresses commenter concerns regarding the evaluation of closed-end home mortgage loans in which borrower income is missing or unavailable. The agencies have considered commenter feedback that a bank may have a large volume of such loans, depending on the bank's business model and strategy. For example, banks that specialize in non-owner-occupied closed-end home mortgage loans, or that originate a large number of streamlined closed-end home mortgage refinancings, may have many loans for which borrower income is not available. As noted by some commenters, the borrower distribution metrics would count loans with missing or unavailable income information in the denominator, and not in the numerator, of the metric, which may result in the bank receiving a lower recommended conclusion than if these loans were excluded from the analysis or were, in fact, made to low- or moderate-income borrowers and had the requisite income information. For this additional factor, if the agencies have reason to believe that certain loans with missing or unavailable borrower income information were made to low- or moderate-income borrowers, then the agencies may consider this fact pattern when determining the Retail Lending Test conclusion. For example, this may include the situation raised by some commenters where a bank has purchased a portfolio of distressed Ginnie Mae closed-end home mortgage loans from a loan servicer. In this situation, based on available information, the agencies may determine that because a significant number of the loans for which borrower income was unavailable were likely made to low- or moderate-income borrowers, it is therefore appropriate to assign a higher conclusion than the bank's recommended conclusion. The use of this additional factor may also

include a bank that purchased a large number of non-owner-occupied closed-end home mortgage loans with missing or unavailable income information, if the bank is able to provide information to the agencies that some of the loans in question were made to low- or moderate-income borrowers.

Additionally, pursuant to the final rule, the agencies will apply this factor in a bank's facility-based assessment areas, as proposed—and, as applicable, its retail lending assessment areas and its outside retail lending area. The agencies believe that it is appropriate and necessary to account for any missing and faulty data that could impact the calculation of the Retail Lending Test metrics and benchmarks in any Retail Lending Test Area to ensure a robust evaluation.

For additional clarity, the agencies have changed two proposed references from “recommended conclusion” to “Retail Lending Test recommended conclusion.”

§ __.22(g)(5)

Newly added final § __.22(g)(5) provides that the agencies may consider whether the Retail Lending Test recommended conclusion does not accurately reflect the bank's performance in a Retail Lending Test Area in which one or more of the bank's major product lines consists of fewer than 30 loans.

Inclusion of this additional factor provides flexibility for instances in which a small number of loans constitutes a major product line. Because the major product line threshold approach in facility-based assessment areas and outside retail lending areas is based on the percentage of a bank's loans in a certain product line, a bank may have a small number of loans that constitute a major product line. For example, if a bank originated 20 small business loans in a facility-based assessment area, and had no other retail loans there, then small business loans would constitute a major product line in that facility-based assessment area and would be evaluated pursuant to the distribution analysis.

Based on supervisory experience and statistical analysis, the agencies believe that it is appropriate to consider additional information when interpreting and drawing conclusions from a distribution analysis of a very small number of loans. The agencies note that it is conceivable that a single loan origination or purchase could change a bank's recommended conclusion by multiple levels if the bank's total number of loans is very small, depending on the applicable performance ranges. For instance, the agencies considered the example of a bank with 20 loans in its small business loan major product line, in which one loan represents 5 percent of the bank's lending by loan count. As part of this example, the agencies assumed that the borrower distribution performance ranges for lending to businesses with gross annual revenues of \$250,000 or less include a “Low Satisfactory” threshold of 11 percent and a “High Satisfactory” threshold of 14 percent. In this example, the bank would fall into the “Needs to Improve” recommended conclusion category if two of its small business loans were to businesses with gross annual revenues of \$250,000 or less and into the “High Satisfactory” recommended conclusion category if three of its loans were to businesses with gross annual revenues of \$250,000 or less. The agencies believe that the change in the example bank's recommended conclusion based on only a single loan warrants consideration of other available information and potentially assigning a different conclusion than the recommended conclusion.

The agencies considered supervisory experience and simulated examples such as the hypothetical described above in determining that 30 loans is an appropriate threshold for when

this additional factor should apply. The agencies note that 30 units is a common minimum guideline for a sample to be considered “large” for statistical testing purposes.⁹⁶² The agencies emphasize that application of this additional factor does not mean that distribution results for major product lines consisting of fewer than 30 loans would be disregarded; rather, for Retail Lending Test Areas with major product lines consisting of fewer than 30 loans, the additional factor in final § __.22(g)(5) allows for additional discretion in determining the Retail Lending Test conclusion.

§ __.22(g)(6)

Newly added final § __.22(g)(6) specifies that the agencies may consider a bank’s closed-end home mortgage, small business, small farm, or automobile lending in distressed and underserved nonmetropolitan middle-income census tracts where a bank’s nonmetropolitan facility-based assessment area or nonmetropolitan retail lending assessment area includes very few or no low- and moderate-income census tracts.

In deciding to include this additional factor in the final rule, the agencies considered that certain facility-based assessment areas and retail lending assessment areas, particularly in nonmetropolitan areas, may have very few or no low- and moderate-income census tracts within their boundaries. In such circumstances, the agencies believe that considering lending in distressed and underserved nonmetropolitan census tracts may provide for a more fulsome evaluation of the bank’s retail lending. The agencies narrowly tailored this additional factor to instances in which there are very few or no low- and moderate-income census tracts to ensure that the geographic distribution analysis emphasizes low- and moderate-income census tracts and so that banks do not lend in distressed and underserved nonmetropolitan middle-income census tracts at the expense of lending in low- and moderate-income census tracts. The agencies considered specifying an exact number of low- and moderate-income census tracts at which this additional factor may be considered, but determined that a standard of “very few or no” will more appropriately allow for consideration of the performance context of an area, such as the percentage of census tracts in the area that are low- and moderate-income census tracts, the presence of lending opportunities in those census tracts, and the proximity of those census tracts to the bank’s facilities, if any. The agencies therefore believe that the “very few or no” standard provides appropriate flexibility while also narrowly tailoring application of this standard.

Final § __.22(g)(6) considers closed-end home mortgage lending, small business lending, small farm lending, and automobile lending in distressed and underserved nonmetropolitan middle-income census tracts as an additional factor rather than as a quantitative component of the geographic distribution analysis. The agencies believe that qualitative consideration is appropriate because the amount of emphasis given to a bank’s lending in distressed and underserved nonmetropolitan middle-income census tracts will depend on the performance context of the facility-based assessment area or retail lending assessment area, such as the

⁹⁶² Although the number of observations necessary for a statistical analysis can vary with the context and the statistical method being used, a common rule of thumb is that 30 observations is necessary for a large sample because the mean of 30 randomly drawn values will have a distribution that is approximately normal. See Sheldon M. Ross, *Introductory Statistics, Fourth Edition* (Academic Press, 2017) and Robert V. Hogg, Elliot A. Tanis, and Dale L. Zimmerman, *Probability and Statistical Inference, Ninth Edition* (Pearson Education, 2015).

lending needs and opportunities in any low- and moderate-income census tracts and the capacity of the bank to serve borrowers in any low- and moderate-income census tracts.

Final § __.22(g)(6) applies in nonmetropolitan facility-based assessment areas and nonmetropolitan retail lending assessment areas in which there are very few or no low- and moderate-income census tracts. The agencies do not believe that this additional factor should be considered in an outside retail lending area because outside retail lending areas are defined as the entire nationwide area outside of a bank's facility-based assessment areas and retail lending assessment areas, and as a result will generally contain multiple low- and moderate-income census tracts.

§ __.22(g)(7)

Overall. Final § __.22(g)(7) provides that the agencies will consider information indicating that the credit needs of the facility-based assessment area or retail lending assessment area are not being met by lenders in the aggregate, such that the relevant benchmarks do not adequately reflect community credit needs. The agencies believe that information indicating that the credit needs of a particular facility-based assessment area or retail lending assessment area are not being met by lenders in the aggregate could be sourced from, for example, research publications, other data sources accessible to the agencies, community contacts, and other performance context information pertaining to a facility-based assessment area or retail lending assessment area. In such facility-based assessment areas and retail lending assessment areas, the agencies may determine that the market benchmark is not an accurate measure of the credit needs and opportunities of low- and moderate-income borrowers, small businesses, or small farms, because lenders as a whole are not meeting their obligations to meet the credit needs of the entire community. Under this additional factor, the agencies will apply additional qualitative review of retail lending in areas where credit needs are identified as not being met by lenders in the aggregate, and the results of this additional qualitative review could inform Retail Lending Test conclusions.

In deciding to include this additional factor, the agencies considered the design of the retail lending distribution analysis and the results of such distribution analysis in a market where lenders may be underperforming in the aggregate and the credit needs of substantial parts of the community are not being met. As discussed in the section-by-section analysis of final § __.22(f), the agencies note that the performance ranges used to develop recommended conclusions under the final rule are based on the lower of the calibrated market benchmark and calibrated community benchmark. Moreover, the market benchmark is calculated from originated or purchased closed-end home mortgage loans, small business loans, and small farm loans in a facility-based assessment area that are reported by all lenders. As a result, in an area that is broadly underserved and where the calibrated market benchmark is lower than the calibrated community benchmark, the market benchmark may significantly underestimate the credit needs and opportunities in the area but would nonetheless be the basis for the performance ranges. This additional factor reflects that, in such an instance, the distribution analysis may not appropriately assess whether a bank has met the credit needs of the community, and the recommended conclusion may warrant adjustment based on consideration of performance context and other available information that speaks to credit needs and opportunities in the facility-based assessment area or retail lending assessment area.

The final rule provides that this additional factor may apply in facility-based assessment areas and in retail lending assessment areas, but not in an outside retail lending area. The agencies do not believe that it is necessary, or feasible, to consider this factor in an outside retail lending area because the lending in these areas is generally dispersed across multiple metropolitan and nonmetropolitan areas.

Statistical model. The final rule does not include a statistical model to identify underperforming areas in the final rule. However, the agencies intend to develop statistical models that would be designed to predict the level of the market benchmarks that would be expected in each facility-based assessment area and retail lending assessment area if it had adequately been served by lenders in general. The agencies acknowledge commenter feedback about the potential benefits and challenges of developing such a model. A statistical model could be used to determine whether the market benchmarks for a facility-based assessment area or retail lending assessment area were significantly below levels that would otherwise be expected based on its demographics (*e.g.*, income distributions, household compositions), housing market conditions (*e.g.*, housing affordability, the share of housing units that are rentals), and economic activity (*e.g.*, employment growth, cost of living). Market benchmarks that were found to be significantly lower than their expected levels would indicate that those market benchmarks could be underestimating the credit needs in that facility-based assessment area or retail lending assessment area. The agencies could use this information to help determine whether lenders as a whole were underperforming in a specific assessment area, which could inform the agencies' determination of a bank's Retail Lending Test conclusion. The agencies are considering how to develop an appropriate statistical model and would solicit additional feedback from the public in developing such a model.

Oral and written comments. The agencies have considered, but decline to adopt, commenter suggestions supporting inclusion of oral or written comments about a bank's retail lending performance as an additional factor as part of final § __.22(g) to inform Retail Lending Test conclusions. The agencies determined that oral or written comments about a bank's performance are appropriately accounted for under final § __.21(d). Specifically, final § __.21(d)(6) maintains the proposed performance context factor for "[t]he bank's public file, as provided in § __.43, including any written comments about the bank's CRA performance submitted to the bank or the [Agency] and the bank's responses to those comments." Including written public comments as a consideration in final § __.21(d)(6) allows the agencies the ability to consider public comments in light of a bank's overall performance context and to apply consideration of those comments to the appropriate performance test or tests—including the Retail Lending Test—and to the appropriate geographic level or levels. Additionally, final § __.21(d)(4) indicates that the agencies may consider oral and written comments about retail banking and community development needs and opportunities provided by the bank or other relevant sources, including, but not limited to, members of the community and community organizations. The agencies believe that it is preferable to consider public comments as part of a bank's overall performance context rather than specifically within final § __.22(g), which applies only to Retail Lending Test recommended conclusions for, as applicable, facility-based assessment areas, retail lending assessment areas, and outside retail lending areas, because public comments could relate to one or more performance tests as well as to a state, multistate MSA, or institution-level conclusion.

The agencies considered comments that the agencies should draft CRA performance evaluations that identify the weight and consideration given to certain comments versus others. Pursuant to final § __.21(d), the agencies will consider public comments as part of a bank's overall performance context in applying the performance tests and determining conclusions. In addition, the agencies note that CRA performance evaluations must include the facts and data informing a bank's conclusions and ratings; therefore, if information gleaned from public comments is part of the basis of a bank's conclusions, the agencies would include that information in performance evaluations.

Regarding the commenter suggestion that banks should be given the opportunity to review and rebut comments considered by the agencies, the final rule does not adopt this as part of the regulatory text for the applicable provision. However, the agencies believe that, at the time of a bank's examination, banks have the opportunity to provide the agencies with additional data and information related to any aspect of the bank's evaluation, including topics raised in public comments.

The agencies also considered the commenter suggestion that the agencies' community affairs teams should combine any submitted oral and written comments with data, news articles, and other research for examiners to develop Retail Lending Test conclusions. The agencies believe that final § __.21(d)(6) will allow the agencies to consider oral and written comments in conjunction with other data, news articles, and research as part of a bank's performance context.

The agencies also considered a commenter suggestion that the agencies should only consider written comments required to be included in a bank's CRA public file in developing Retail Lending Test conclusions, to limit the potential effect of social media posts and other potentially spurious claims. Pursuant to the public file requirements in final § __.43, submitted written comments, whether submitted directly to a bank or to an agency, will be available both for consideration and response by a bank and for public review. The agencies note that it may often not be feasible or appropriate to consider social media posts as information included as part of a bank's performance context; in addition to practical challenges, the agencies believe it could be challenging to determine whether remarks made by members of the public on social media were intended or appropriate for the agencies to consider in the bank's CRA evaluation. However, the agencies have discretion pursuant to final § __.21(d)(4) and (7) to consider oral and written comments, including those made to the agencies as part of the community contacts process; data made available through social media posts, if relevant to a bank's evaluation, could also be considered as performance context information as determined to be appropriate. As discussed further in the section-by-section analysis of final § __.46, the agencies note that they encourage the public to submit comments on bank performance either to the agency or to the bank so it can be included in the bank's public file as noted above.

§ __.22(h) Retail Lending Test Performance Conclusions and Ratings

In final § __.22(h) and section VIII of final appendix A, the agencies are adopting, with certain substantive, clarifying, and technical edits: the proposed approach for assigning performance scores to a bank's facility-based assessment areas, retail lending assessment areas, and outside retail lending area, as applicable, based on the bank's retail lending performance in those Retail Lending Test Areas; and calculating a weighted average of those performance scores to determine Retail Lending Test conclusions at the State, multistate MSA, and institution levels.

The Agencies' Proposal

§ __.22(h)(1) *Conclusions*

With reference to proposed § __.28 and proposed appendix C, proposed § __.22(f)(1) provided that the agencies would assign Retail Lending Test conclusions for a bank's performance in its facility-based assessment areas, retail lending assessment areas, and outside retail lending area, as applicable. As described in section VI of proposed appendix A and proposed appendix C, conclusions assigned for a bank's performance in facility-based assessment areas and retail lending assessment areas, as applicable, would form the basis for State, multistate MSA, and institution Retail Lending Test conclusions. Conclusions in a bank's outside retail lending area would also factor into the institution Retail Lending Test conclusion.⁹⁶³

As also described in section VI of proposed appendix A, the agencies intended to combine the performance scores for a bank's facility-based assessment areas, retail lending assessment areas, and its outside retail lending area, as applicable, using a standardized weighted average approach, to develop State, multistate MSA, and institution conclusions. The proposed approach aimed to ensure that the bank's retail lending performance in every one of its markets would influence conclusions at the State, multistate MSA, and institution levels, as appropriate.

In addition, the agencies proposed that the weights for State and multistate MSA conclusions would be calculated by averaging together the performance in each facility-based assessment area and retail lending assessment area, as applicable. In doing so, the bank's performance in each assessment area (facility-based assessment area or retail lending assessment area, as applicable) would be weighted by calculating the simple average of:

- The dollars of deposits that the bank sourced from a facility-based assessment area or retail lending assessment area, as a percentage of all of the bank's deposits sourced from facility-based assessment areas or retail lending assessment areas, as applicable, in the State or multistate MSA; and
- The dollars of the bank's retail lending in a facility-based assessment area or retail lending assessment area, as a percentage of all of the bank's retail loans in facility-based assessment areas and retail lending assessment areas, as applicable, in the State or multistate MSA.⁹⁶⁴

When evaluating retail lending performance for the institution, the agencies proposed considering performance in a bank's outside retail lending area, as applicable, in addition to performance in a bank's facility-based assessment areas and retail lending assessment areas, as applicable. Specifically, the agencies proposed that the weights assigned to each geographic area for purposes of calculating institution conclusions would be the simple average of:

- The percentage reflecting the dollars of deposits that the bank sourced from each area (a facility-based assessment area, retail lending assessment area, or outside retail lending area) relative to all of the bank's deposits; and

⁹⁶³ See proposed § __.22(a) and proposed appendix C.

⁹⁶⁴ See proposed appendix A.VI.

- The percentage reflecting the dollars of the bank’s retail lending in each area (a facility-based assessment area, retail lending assessment area, or its outside retail lending area) relative to all of a bank’s retail lending.⁹⁶⁵

For Retail Lending Test conclusions in a State and multistate MSA, as applicable, and for the institution, the agencies proposed to tailor the approach for deposits data used for these weights, as discussed further in the section-by-section analyses of §§ __.12 and __.42(a)(7) and (b)(3). For deposits data, the agencies proposed to use the annual average amount of a bank’s deposits collected from each area averaged over the years of the relevant evaluation period, if the bank collected and maintained this data.⁹⁶⁶ For any banks evaluated under the Retail Lending Test that did not collect deposits data, the agencies proposed to use the deposits assigned to the banks’ branches in each area, as reported in the FDIC’s Summary of Deposits data, averaged over the years of the relevant evaluation period.⁹⁶⁷

§ __.22(h)(2) Ratings

With reference to proposed § __.28 and proposed appendix D, proposed § __.22(f)(2) provided that the agencies would incorporate a bank’s Retail Lending Test conclusions into a bank’s State, multistate MSA, and institution ratings.

Comments Received

Commenters that addressed proposed § __.22(f) and section VI of proposed appendix A generally focused on the proposed weights assigned to facility-based assessment area, retail lending assessment area, and outside retail lending area conclusions, as applicable.

Several commenters supported the proposal to calculate weights for a bank’s facility-based assessment area, retail lending assessment area, and outside retail lending area conclusions, as applicable, based on the average of a bank’s combined share of deposits and retail loans within each area. For example, a commenter representing rural areas indicated that the weighting approach is reasonable as it reflects a bank’s service area as measured by deposits and loans, notwithstanding that rural areas might not often receive a large weight. Another commenter expressed support for the agencies’ approach, including displaying a bank’s Retail Lending Test performance score as it would add transparency and reveal further distinction into a bank’s performance.

However, other commenters expressed concerns with the agencies’ proposed approach, including that it would result in outside retail lending areas receiving too much weight or that it was overly complex. Some commenters recommended that the agencies consider emphasizing facility-based assessment areas by assigning them greater weight than retail lending assessment areas. In addition, a commenter indicated that the agencies’ proposed approach involving “rounding” of raw performance scores as part of developing State, multistate MSA, and institution conclusions could cause a bank’s institution Retail Lending Test conclusion to deviate significantly from the bank’s actual performance. This commenter noted a hypothetical scenario in which a bank’s Retail Lending Test Area performance score of 4.49 would be rounded to 4.5

⁹⁶⁵ See *id.*

⁹⁶⁶ See *id.*

⁹⁶⁷ See *id.*

and, in turn, rounded up to a 6 (“Low Satisfactory” conclusion) whereas a similar Retail Lending Test Area performance score of 4.44 would be rounded down to 4.4 and, in turn, rounded down to a 3 (“Needs to Improve” conclusion)—and indicated that if the second rounding dynamic occurred across multiple Retail Lending Test Areas (or even in a single heavily-weighted Retail Lending Test Area) the effect on the bank’s Retail Lending Test conclusions and overall rating could potentially be significant.

Some commenters suggested alternatives, including: simplifying the calculations to allow banks to better understand their performance and course correct as needed; weighting facility-based assessment area performance based upon the relative share of bank deposits or the amount of retail lending, by loan count, and separately evaluating non-facility-based assessment area lending at the institution level; and basing weighting of different areas on examiners’ assessment of banks’ retail lending patterns and their judgment regarding how much weight to assign outside retail lending area lending.

Final Rule

Overview of § __.22(h) and Section VIII of Appendix A

In final § __.22(h)(1), the agencies are adopting the proposed approach to assigning conclusions for a bank’s Retail Lending Test performance, with edits to reflect final rule revisions to other Retail Lending Test sections. Final § __.22(h)(1) includes references to final § __.28, section VIII of final appendix A, and final appendix C. In final § __.22(h) and section VIII of final appendix A, the agencies modified the final rule approach for calculating a bank’s percentage of retail lending in each Retail Lending Test Area for purposes of determining these weights and also made minor wording changes to improve readability and increase consistency with other performance test conclusions and ratings provisions throughout the final rule.

The final rule provides, in section VIII of final appendix A, the following:

- *Performance scores for Retail Lending Test Areas.* The agencies translate the Retail Lending Test conclusion for each Retail Lending Test Area (facility-based assessment areas, retail lending assessment areas, and an outside retail lending area, as applicable) into a numerical performance score.
- *Performance scores for States and multistate MSAs.* The agencies take a weighted average of performance scores across facility-based assessment areas and retail lending assessment areas, as applicable, to calculate a performance score for each state and multistate MSA.
- *Performance score for the institution.* The agencies take a weighted average of performance scores across all applicable Retail Lending Test Areas to calculate a performance score for the institution.

Conclusions for states, multistate MSAs, and the institution: The agencies develop a conclusion corresponding with the conclusion category that is nearest to the Retail Lending Test performance score for each state, multistate MSA, and for the institution. As discussed further below, the weighted average of each Retail Lending Test Area is calculated using the following: (1) percentage of deposits in the specific geographic area out of all the deposits in Retail Lending Test Areas in the State, Multistate MSA, or institution, as applicable; and (2) percentage of

lending in the specific geographic area out of all the lending in product lines in Retail Lending Test Areas in the State, Multistate MSA, or institution.⁹⁶⁸

Use of performance scores. As noted, the final rule approach retains a system of assigning performance scores to a bank's facility-based assessment areas, retail lending assessment areas, and outside retail lending area, as applicable, based on the bank's retail lending performance in those Retail Lending Test Areas. Under the final rule, the agencies then calculate a weighted average of those performance scores to determine Retail Lending Test conclusions at the State and multistate MSA levels and for the institution.

With respect to commenter perspectives that the agencies' proposed approach required an excessive number of calculations and was overly complex, the agencies believe that the methodology adopted in the final rule is appropriate for transparently, comprehensively, and consistently assessing a bank's retail lending performance when assigning conclusions. In particular, the agencies believe that the use of a standardized quantitative approach to weighting Retail Lending Test Areas is preferable to the current evaluation approach, which does not assign a specific weight to assessment area conclusions in a standardized manner, including in limited-scope assessment areas.

The final rule retains the proposed approach of assigning a performance score to each Retail Lending Test Area based on the conclusion assigned for the bank's retail lending performance in that area, as follows: "Outstanding" (10 points); "High Satisfactory" (7 points); "Low Satisfactory" (6 points); "Needs to Improve" (3 points); "Substantial Noncompliance" (0 points).⁹⁶⁹ The agencies have considered concerns from some commenters regarding the use of these five performance score values corresponding to each conclusion category. However, the agencies believe that it is appropriate to use these performance scores when determining a bank's conclusions at the State, multistate MSA, and institution levels, rather than to use the Retail Lending Test Area Score (which could be, for example, 6.5 or 8) that is calculated pursuant to final § __.22(f) (*i.e.*, after combining all of a bank's product line scores in a Retail Lending Test Area for purposes of determining Retail Lending Test recommended conclusions). The agencies note that the Retail Lending Test Area Score does not take into account the additional factors provided in final § __.22(g), which would be considered when assigning the Retail Lending Test Area conclusion. In addition, pursuant to final § __.21(d), the agencies may consider performance context information before assigning a conclusion. As a result, the agencies believe that it is appropriate to use the performance score associated with the bank's conclusion, rather than the bank's Retail Lending Test Area Score, to determine State, multistate MSA, and institution conclusions. Consequently, although Retail Lending Test Area Scores will play a significant role when the agencies assign conclusions, the agencies will also take qualitative considerations into account, and these considerations may, where appropriate, lead to adjustments of the conclusions that the agencies would otherwise have assigned.

Using both deposits and retail lending to weight Retail Lending Test performance in different Retail Lending Test Areas. The final rule retains the proposed approach of weighting

⁹⁶⁸ See final appendix A.VIII.

⁹⁶⁹ See the section-by-section analysis of final § __.21(f) for a more detailed discussion of the specific scoring for each conclusion category.

each Retail Lending Test Area in a standardized, quantitative manner, and does not adopt alternatives suggested by commenters to qualitatively adjust these weights or to assign greater weights to certain areas based on factors other than the bank's deposits and retail lending. As discussed further below, the agencies modified the final rule approach for calculating a bank's percentage of retail lending in each Retail Lending Test Area for purposes of determining these weights.

The agencies believe that the final rule approach reflects that a bank's presence in a particular Retail Lending Test Area—and hence the importance of its performance in that Retail Lending Test Area in an overall evaluation of its retail lending—is grounded in its customer bases for both deposits and retail loans. Accordingly, the agencies have determined that both a bank's deposit customer base and its retail lending customer base in a particular Retail Lending Test Area should inform the weight assigned to the performance score for that area when determining conclusions at the State, multistate MSA, and institution levels.

The agencies believe that the final rule approach provides greater consistency, predictability, and transparency than some suggested alternatives, which would introduce a certain amount of inconsistency due to the increased role of agency discretion in assigning weights to Retail Lending Test Area conclusions. The agencies also considered, but decline to adopt, an alternative to base Retail Lending Test Area weights purely on deposits, rather than on a combination of deposits and retail lending. In making this determination, the agencies considered that basing Retail Lending Test Area weights purely on deposits would mean that, if a bank did a very large amount of its retail lending in a market from which it drew few deposits, its lending performance there would only have a small influence on its overall Retail Lending Test conclusion. Alternatively, basing weights purely on retail lending could result in a bank's record of serving the credit needs of the communities from which it draws only a small amount of deposits having little bearing on its overall conclusion. For example, under a retail lending-only weighting alternative, if a bank performed poorly in a facility-based assessment area due to making fewer retail loans than necessary to meet the Retail Lending Volume Threshold that low level of lending would mean that the resulting facility-based assessment area conclusion would carry little weight in the corresponding State, multistate MSA, or institution conclusions, even if the bank draws a significant proportion of its deposits from that facility-based assessment area.

Pursuant to the section VIII of final appendix A, the agencies will determine the percentage of a bank's deposits in a specific Retail Lending Test Area as follows: (1) for a bank that collects, maintains, and reports deposits data as provided in final § __.42, the calculation is determined using the bank's annual average daily balance of deposits reported by the bank in counties in the Retail Lending Test Area; and (2) for a bank that does not collect, maintain, and report deposits data as provided in final § __.42, this calculation is determined using the deposits assigned to facilities reported by the bank in the Retail Lending Test Area in the FDIC's Summary of Deposits data.⁹⁷⁰

Because the FDIC's Summary of Deposits data assigns all deposits to facility locations, and all facilities will be located in a facility-based assessment area, the deposits assigned to retail lending assessment area and outside retail lending area performance scores for banks that do not collect and maintain deposits data will always be zero. The weight of the retail lending

⁹⁷⁰ See final appendix A.VIII.a.1 and A.VIII.b.1.

assessment area and outside retail lending area performance score for such a bank will, therefore, be one-half of the percentage of retail lending the bank conducted in a given retail lending assessment area. As a result, for a bank not required to collect deposits data that obtains deposits from outside of its facility-based assessment areas, electing to collect deposits data for use in the bank's evaluation may increase the weight placed on the bank's performance in its retail lending assessment areas and outside retail lending area and decrease the weight placed on its facility-based assessment areas, as the concentration of deposits attributed there may be reduced to some degree. The agencies determined that this approach allows appropriate flexibility to banks with assets less than or equal to \$10 billion to decide whether to collect deposits data for the purposes of CRA evaluations. Such a bank may take into consideration the areas from which the bank sources deposits, and the potential burden and complexity associated with additional data collection, maintenance, and reporting for the bank. Such a bank may also take into consideration the broader definition of deposits (including U.S., State, and local government deposits and deposits from foreign entities) that are included in the FDIC's Summary of Deposits data, as compared to the narrower definition of deposits data used for banks that collect, maintain, and report deposits data.

Pursuant to section VIII of final appendix A, the agencies will determine the percentage of a bank's retail lending in a specific Retail Lending Test Area using not only a bank's dollar amount of retail lending but, rather—as discussed in the section-by-section analysis of final § __.12—a combination of loan dollars and loan count. Specifically, the agencies will use the average of: (1) the ratio calculated using loans measured in dollar amount; and (2) the ratio calculated using loans measured in number of loans, to determine the percentage of a bank's originated and purchased closed-end home mortgage loans, small business loans, small farm loans, and automobile loans (if automobile loans are a product line for the bank) in a facility-based assessment area, retail lending assessment area, or outside retail lending area, as applicable.

As explained in the section-by-section analysis of final § __.12, adopting a combination of loan dollars and loan count-based approach for weighting conclusions better tailors the Retail Lending Test to accommodate individual bank business models, insofar as the agencies have determined that use of this combination helps to account for differences across product lines, bank strategies, and geographic areas, relative to an approach that uses only loan dollars or only loan count. Additionally, the agencies believe that both loan dollars and loan count reflect different aspects of how a bank has served the credit needs of a community, with loan dollars representing the total amount of credit provided and loan count representing the number of borrowers served.

§ __.22(h)(1)(i) In general

§ __.22(h)(1)(ii) Retail Lending Test Area conclusions

Retail Lending Test Conclusions for States and Multistate MSAs

With some modifications relative to the proposal, section VIII of final appendix A describes the agencies' methodology for assigning a bank's Retail Lending Test conclusions for the State and multistate MSA levels. Specifically, the agencies will develop a bank's Retail Lending Test conclusions for States and multistate MSAs based on Retail Lending Test conclusions for its facility-based assessment areas and retail lending assessment areas, as applicable, in those States and multistate MSAs. In addition to incorporating the combination of loan dollars and loan

count definition, the agencies have made certain clarifying and technical changes to the proposal to streamline the description of the methodology and improve readability.

As provided in paragraph VIII.b of final appendix A, the agencies will calculate a bank’s Retail Lending Test performance score based on a weighted average of performance scores from facility-based assessment areas and retail lending assessment areas, as applicable, within each respective State or multistate MSA. Specifically, the weights for each facility-based assessment area and retail lending assessment area in this calculation will be the simple average of the following two percentages, calculated over the years in the evaluation period:

- The percentage of deposits that the bank draws from the area, out of all of the dollars of deposits in the bank drawn from facility-based assessment areas and retail lending assessment areas in the respective State or multistate MSA, pursuant to final § __.28(c); and
- Based on a combination of loan dollars and loan count, the percentage of the bank’s loans in the area, as a percentage of all of the bank’s loans in facility-based assessment areas and retail lending assessment areas in the respective State or multistate MSA, pursuant to final § __.28(c). The loans included in this calculation will be originations and purchases of closed-end home mortgage loans, small business loans, small farm loans, and automobile loans (if automobile loans are a product line for the bank).

As proposed and as provided in paragraph VIII.c of final appendix A, based on this performance score, the agencies will develop a Retail Lending Test conclusion corresponding with the conclusion category that is nearest to the Retail Lending Test performance score for each State or multistate MSA, as illustrated in Table 31 below. The agencies will then consider relevant performance context factors provided in final § __.21(d) before assigning a Retail Lending Test conclusion for the State or multistate MSA.

Table 31 to § __.22(h): Performance Scores and Conclusions

| Range | Conclusion |
|--------------------------------|-----------------------------|
| 8.5 or more | “Outstanding” |
| 6.5 or more, but less than 8.5 | “High Satisfactory” |
| 4.5 or more, but less than 6.5 | “Low Satisfactory” |
| 1.5 or more, but less than 4.5 | “Needs to Improve” |
| Less than 1.5 | “Substantial Noncompliance” |

Institution Retail Lending Test Conclusions

With some modifications relative to the proposal, paragraphs VIII.b through VIII.d of final appendix A describes the agencies’ methodology for assigning a bank’s Retail Lending Test conclusions for the institution. Paragraphs VIII.b and VIII.c of final appendix A provide that the agencies will develop a bank’s Retail Lending Test conclusion for the institution based on its Retail Lending Test conclusions for its facility-based assessment areas, retail lending assessment areas, and outside retail lending area, as applicable. The agencies made certain changes to the proposal to incorporate the combination of loan dollars and loan count definition and streamline the description of the methodology and improve readability.

As provided in paragraph VIII.c of final appendix A, the agencies will calculate a bank’s Retail Lending Test performance score for the institution based on a weighted average of

performance scores from all applicable Retail Lending Test Areas. Specifically, the weights for each Retail Lending Test Area in this calculation will be the simple average of the following two percentages, calculated over the years in the evaluation period:

- The percentage of deposits the bank draws from each Retail Lending Test Area out of all of the dollars of deposits in all of the bank’s Retail Lending Test Areas; and
- Based on a combination of loan dollars and loan count, the percentage of the bank’s loans in each Retail Lending Test Area, as a percentage of all of the bank’s loans in all of the bank’s Retail Lending Test Areas. The loans included in this calculation will be originations and purchases of closed-end home mortgage loans, small business loans, small farm loans, and automobile loans (if automobile loans are a product line for the bank).

As proposed and as provided in paragraphs VIII.c and VIII.d of final appendix A, based on this performance score, the agencies will develop a Retail Lending Test conclusion corresponding with the conclusion category that is nearest to the Retail Lending Test performance score for the institution, as illustrated in Table 31 above. The agencies will then consider relevant performance context factors provided in final § __.21(d) before assigning a Retail Lending Test conclusion for the institution.

Examples A-16 and A-17 in section VIII of appendix A illustrates how facility-based assessment area, retail lending assessment area, and outside retail lending area conclusions, as applicable, will be weighted in order to develop institution conclusions.

§ __.22(h)(1)(ii)(A) and (B) Exceptions

§ __.22(h)(1)(ii)(A) Facility-based assessment areas with no major product line

§ __.22(h)(1)(ii)(B) Facility-based assessment areas in which a bank lacks an acceptable basis for not meeting the Retail Lending Volume Threshold

Final § __.22(h)(1)(ii)(A) and (B) provide for two exceptions to the general Retail Lending Test conclusions methodology described in final § __.22(h)(1)(i).

First, final § __.22(h)(1)(ii)(A) provides that the agencies will assign a bank a Retail Lending Test conclusion for a facility-based assessment area in which it has no major product line—and, consequently, the agencies are not able to apply the distribution analysis in final §§ __.22(d) through (f)—based upon its performance on the Retail Lending Volume Screen, the performance context factors information in final § __.21(d), and the additional factors in § __.22(g).

Second, final § __.22(h)(1)(ii)(B) provides that the agencies will assign a bank a Retail Lending Test conclusion for a facility-based assessment area in which the bank lacks an acceptable basis for not meeting the Retail Lending Volume Threshold pursuant to final § __.22(c)(3)(iii).⁹⁷¹

⁹⁷¹ See the section-by-section analysis of final § __.22(c) for additional information regarding how the agencies assign facility-based assessment area conclusions for large banks and, separately, for intermediate banks and small banks that opt to be evaluated under the Retail Lending Test where these banks lack an acceptable basis for not meeting the Retail Lending Volume Threshold.

§ __.22(h)(2) Ratings

With reference to final § __.28 and final appendix D, final § __.22(h)(2) adopts the agencies' proposal to incorporate a bank's Retail Lending Test conclusions for, as applicable, the State, multistate MSA, and institution levels into, as applicable, its State, multistate MSA, and institution ratings.

Analysis of the final rule using historical data

The agencies analyzed historical bank lending performance under the final rule Retail Lending Test approach, including final rule provisions for the Retail Lending Volume Screen and the performance ranges as applied to the distribution metrics, using historical data on bank retail lending and other information in the CRA Analytics Data Tables. The analysis used data from 2018-2020 to calculate bank metrics, benchmarks, and weights, except where otherwise noted. Using this historic data, the agencies:

- Estimated recommended conclusions for Retail Lending Test Areas;
- Estimated Retail Lending Test conclusions at the institution level;
- Compared bank performance based on the proposed multiplier values to performance based on the final rule multiplier values; and
- Compared performance across different bank asset size categories, metropolitan and nonmetropolitan areas, and time periods.

The analysis informed the agencies' decisions regarding the Retail Lending Test approach in various ways. Specifically, the analysis informed the agencies' determination that the final rule multiplier values produce performance ranges that are generally attainable for "Outstanding," "High Satisfactory," or "Low Satisfactory" performance. As described further below, a large majority of banks included in this historical analysis are estimated to have performed at a level consistent with an institution-level conclusion of "Outstanding," "High Satisfactory," or "Low Satisfactory" based on the final rule provisions. In addition, the analysis informed the agencies' determination that the performance ranges for a "Low Satisfactory" or higher conclusion are generally attainable across a variety of circumstances, such as different Retail Lending Test Areas, bank asset-size categories, metropolitan and nonmetropolitan areas, and time periods.

Description of analysis. The agencies considered a number of factors in interpreting the results of this analysis, including certain data limitations that result in the analysis diverging from the final rule approach to calculating metrics and benchmarks.

First, the agencies considered that the analysis is retrospective and, therefore, not a prediction of future evaluation results. In this regard, the agencies believe that the analysis estimates how banks would have performed in recent years under the final rule but does not necessarily describe how banks will perform in future years. For example, the agencies considered that, once the final rule is implemented, the increased consistency and transparency of the CRA examination process under the final rule may result in banks altering their behavior in ways that cause their metrics and the market benchmarks to deviate from the patterns observed historically. In addition, the agencies considered that macroeconomic conditions and banking practices in the future may differ from those in the historical periods that are examined here.

Second, the agencies considered that the set of banks included in this analysis differ from the full group of banks that will be evaluated under the Retail Lending Test. Specifically, the analysis is limited to intermediate and large banks (based on the asset-size categories in the final rule) that reported both CRA small business and small farm loan data and HMDA data and does not include unreported loans in any bank metrics calculated in the analysis. The agencies do not have data to evaluate unreported loans, and therefore determined not to estimate the recommended conclusions and overall conclusions of banks that may have unreported closed-end home mortgage, small business, or small farm lending. Most large banks are reporters for both CRA small business and small farm loan data and HMDA data, but most intermediate banks are non-reporters of either CRA small business and small farm loan data, HMDA data, or both.⁹⁷² As a result, the set of banks included in the analysis is not necessarily representative of all banks that will be evaluated under the Retail Lending Test, in particular intermediate banks that may be underrepresented because they are less likely to report both CRA and HMDA data. The set of banks analyzed also does not include banks that were, during the timeframe of the analysis, designated as wholesale or limited purpose banks—because these banks will generally not be evaluated under the Retail Lending Test—or banks evaluated under an approved strategic plan.

Third, the agencies could not analyze loans to businesses and farms with gross annual revenues of \$250,000 or less, because existing data does not include an indicator identifying loans to small businesses and small farms at this gross annual revenue level. Instead, the analysis estimates performance using a single designated borrower category for loans made to businesses or farms with gross annual revenues of \$1 million or less. Furthermore, the agencies note that the analysis does not take into account the potential impact of transitioning to Section 1071 data, which, as described in the section-by-section analysis of final §§ __.22(e) and __.51, would result in changes to the population of small business and small farm loans considered in the metric and benchmark calculations.

Fourth, because the deposits data that will be collected for large banks with assets greater than \$10 billion is not yet available, this analysis used the FDIC’s Summary of Deposits data as the sole source of deposits data for all banks, since this data is available both for each bank as a whole and also reflects bank deposits assigned to branch locations. As a result, the analysis likely overestimates the deposits of the largest banks because the FDIC’s Summary of Deposits data uses a broader definition of deposits, in that it includes deposits from governments and foreign entities, than the data collected under the final rule for large banks with assets greater than \$10 billion. In addition, because the FDIC’s Summary of Deposits does not report deposits data based on a depositor’s location, the analysis assigned all bank deposits to facility-based assessment areas, even when the deposits might have been collected from depositors in retail lending assessment areas or outside retail lending areas. As a result, because deposits data is used as part of the final rule approach to weighting different Retail Lending Test Area performance, the analysis likely assigns less weight to performance in retail lending assessment areas and outside retail lending areas than will be assigned under the final rule for banks that are required to report deposits data pursuant to final § __.42(b)(3) or that opt to report this data.

⁹⁷² See current 12 CFR __.42(b)(1). See also, e.g., 12 CFR 1003.3.

Fifth, because the HMDA data collected prior to the 2018 calendar year do not distinguish originated or purchased home mortgage loans that were closed-end from those that were open-end, all home mortgage loans reported in HMDA for years prior to 2018 were assumed to be closed-end home mortgage loans.⁹⁷³

Sixth, the analysis does not incorporate the final rule's requirement that large banks delineate facility-based assessment areas that consist of at least one or more whole counties, as discussed in the section-by-section analysis of final § __.16. In contrast, the current regulations allow large banks to delineate partial-county assessment areas. Rather than make assumptions regarding how facility-based assessment area delineations might change under the final rule relative to current practice, the analysis uses the actual assessment areas designated by both large and intermediate banks at the time to delineate each bank's facility-based assessment areas, including when a large bank's assessment area delineation includes a partial county.

Seventh, the analysis does not incorporate any evaluation of automobile lending, due to the unavailability of automobile lending data necessary to include in the analysis. This limitation impacts any bank that would have been designated as a majority automobile lender during the analysis period pursuant to the final rule standard and any bank that might have opted to have its automobile lending evaluated during the analysis period.

Finally, this analysis does not take into account aspects of the final rule that would involve agency discretion, such as the Retail Lending Volume Screen acceptable basis factors provided in final § __.22(c)(3)(i), the additional factors provided in final § __.22(g), and performance context information provided in final § __.21(d).

As a result of the factors, including data limitations, discussed above, the agencies consider the results of this analysis to be estimates, and the results described here should be understood to only approximate how banks included in these analyses would have performed under the final rule Retail Lending Test.

Final Rule Multipliers. As discussed in more detail in the section-by-section analysis of final § __.22(f), the final rule uses lower values for some of the Retail Lending Test multipliers relative to those proposed in the NPR. The analysis of the changes to the multipliers are provided in Table 32, which shows a higher estimated distribution of institution-level conclusions on the Retail Lending Test during the 2018-2020 time period using the multipliers for the final rule compared to those proposed in the NPR. Specifically, using the final rule multipliers, more banks included in the analysis received "Outstanding" or "High Satisfactory" estimated conclusions and fewer banks received "Low Satisfactory" or "Needs to Improve" estimated conclusions. As noted in the section-by-section analysis of final § __.22(f), the agencies consider "Low Satisfactory" performance to represent that a bank is adequately meeting the credit needs of its community and consider "High Satisfactory" and "Low Satisfactory" conclusions to both correspond to the overall rating category of "Satisfactory." Aside from the different multiplier values, the Retail Lending Test approach was applied as described in the

⁹⁷³ While home mortgage lenders were not required to report open-end home mortgage loans in HMDA prior to 2018, they had the option of doing so. Consequently, some of the reported loans may have been open-end home mortgage loans, though it is not possible to ascertain for certain how many of the reported loans were open-end home mortgage loans.

final rule—both as applied to the NPR multipliers and the final rule multipliers—subject to the limitations listed above. To better focus on the impact of changing the multipliers on the estimated recommended conclusions assigned for each bank’s loan distributions, the Retail Lending Volume Screen was not applied in this part of the analysis.

Table 32 to § __.22: Estimated Institution-Level Retail Lending Test Conclusions, 2018-2020

| | Final Rule Approach with NPR Multipliers | | Final Rule Approach with Final Rule Multipliers | |
|-------------------------------------|--|---------|---|---------|
| | Frequency | Percent | Frequency | Percent |
| Institution-Level Conclusion | | | | |
| “Outstanding” | 39 | 7.2 | 57 | 10.5 |
| “High Satisfactory” | 236 | 43.3 | 257 | 47.2 |
| “Low Satisfactory” | 209 | 38.3 | 181 | 33.2 |
| “Needs to Improve” | 60 | 11.0 | 49 | 9.0 |
| “Substantial Noncompliance” | 1 | 0.2 | 1 | 0.2 |

Note: Table 32 shows the estimated distribution of institution-level conclusions on the Retail Lending Test over the 2018-2020 period for a set of intermediate and large banks that were both CRA and HMDA reporters, using the multipliers proposed in the NPR (left columns) and adopted in the final rule (right columns). Bank asset size was determined using 2019 and 2020 year-end assets data. Wholesale banks, limited purpose banks, strategic plan banks, and banks that did not have at least one facility-based assessment area in a U.S. State or the District of Columbia were excluded from the analysis. Facility-based assessment areas that were not delineated in 2020 were also excluded. The analysis used home mortgage, small business, small farm, deposits, and demographic data from the CRA Analytics Data Tables. The Retail Lending Volume Screen was not applied in this analysis.

Table 33 shows the results of the same analysis when the Retail Lending Volume Screen was applied to facility-based assessment areas of large banks included in the analysis; under this analysis, a “Needs to Improve” conclusion was assigned to those banks’ facility-based assessment areas that do not meet the Retail Lending Volume Threshold and that would have otherwise received a conclusion of “Low Satisfactory” or higher based on the distribution analysis. Specifically, this part of the analysis shows that fewer banks would have received conclusions of “Outstanding” or “High Satisfactory,” and more banks would have received

“Needs to Improve” conclusions, compared to the analysis that did not incorporate the Retail Lending Volume Screen, regardless of whether the multipliers used are from the NPR or the final rule. Table 33 also shows that the multipliers from the final rule resulted in more banks receiving conclusions of “High Satisfactory” or “Outstanding” and fewer receiving conclusions of “Needs to Improve” than using the NPR multipliers, even when the Retail Lending Volume Screen was applied.

The agencies note that this part of the analysis does not take into account the acceptable basis factors in final § __.22(c)(3)(i), and therefore may overestimate the frequency at which a bank would have been assigned a “Needs to Improve” conclusion in facility-based assessment areas where the Bank Volume Metric was lower than the Retail Lending Volume Threshold.⁹⁷⁴ The analysis does not incorporate the Retail Lending Volume Screen for intermediate banks, because, under the final rule, facility-based assessment areas of intermediate banks in which the Bank Volume Metric is below the Retail Lending Volume Threshold are assigned a recommended conclusion that more directly includes consideration of the lending distribution analysis.⁹⁷⁵

Table 33 to § __.22: Estimated Institution-Level Retail Lending Test Conclusions, 2018-2020, with Retail Lending Volume Screen Applied

| | Final Rule Approach with NPR Multipliers | | Final Rule Approach with Final Rule Multipliers | |
|-------------------------------------|--|---------|---|---------|
| | Frequency | Percent | Frequency | Percent |
| Institution-Level Conclusion | | | | |
| “Outstanding” | 36 | 6.6 | 51 | 9.4 |
| “High Satisfactory” | 227 | 41.7 | 252 | 46.2 |
| “Low Satisfactory” | 214 | 39.3 | 186 | 34.1 |
| “Needs to Improve” | 67 | 12.3 | 55 | 10.1 |

⁹⁷⁴ The agencies also note that if a bank would have received a “Substantial Noncompliance” conclusion based on the distribution analysis then the agencies have assigned it a “Substantial Noncompliance” conclusion for purposes of this analysis. Otherwise, for purposes of this analysis as noted above, a bank that did not meet the Retail Lending Volume Threshold was assigned a “Needs to Improve” conclusion.

⁹⁷⁵ See final § __.22(c)(3)(iii)(B) and the accompanying section-by-section analysis.

| | | | | |
|-----------------------------|---|-----|---|-----|
| “Substantial Noncompliance” | 1 | 0.2 | 1 | 0.2 |
|-----------------------------|---|-----|---|-----|

Note: Table 33 shows the estimated distribution of institution-level conclusions on the Retail Lending Test over the 2018-2020 period for a set of intermediate and large banks that were both CRA and HMDA reporters, using the multipliers proposed in the NPR (left columns) and adopted in the final rule (right columns). Bank asset size was determined using 2019 and 2020 year-end assets data. Wholesale banks, limited purpose banks, strategic plan banks, and banks that did not have at least one facility-based assessment area in a U.S. State or the District of Columbia were excluded from the analysis. Facility-based assessment areas that were not delineated in 2020 were also excluded. The analysis used home mortgage, small business, small farm, deposits, and demographic data from the CRA Analytics Data Tables. For facility-based assessment areas of large banks in which the Bank Volume Metric was below the Retail Lending Volume Threshold, this analysis assigned a conclusion of “Needs to Improve” to the facility-based assessment area.

Bank Asset Size. Consistent with the agencies’ proposal, in the final rule, the Retail Lending Test will apply to large and intermediate banks, and to small banks that elect to be evaluated under this performance test. Accordingly, the agencies’ have considered estimates for the Retail Lending Test conclusions at the institution level for banks of different asset sizes.

Specifically, Table 34 shows the results of an analysis of performance under the Retail Lending Test approach in the final rule for banks included in the analysis in three different asset-size categories: intermediate banks; large banks with assets less than or equal to \$10 billion; and large banks with assets greater than \$10 billion. As with Tables 32 and 33, the results in Table 34 reflect performance on the Retail Lending Test at the institution level. The Retail Lending Volume Screen is not applied in this institution-level analysis.

As shown in Table 34, estimated performance was similar across the asset-size groups, with the majority of banks in each group receiving either a “High Satisfactory” or “Low Satisfactory” estimated conclusion, with “High Satisfactory” being somewhat more common than “Low Satisfactory.” Intermediate banks more frequently received estimated conclusions of “Outstanding” or “Needs to Improve” than large banks, and one intermediate bank was the only bank in the set of banks analyzed to receive an estimated conclusion of “Substantial Noncompliance.” The share of intermediate banks included in the analysis receiving a “Needs to Improve” or “Substantial Noncompliance” estimated conclusion is somewhat higher than for large banks. Approximately 88 percent of intermediate banks, 92 percent of large banks with assets less than or equal to \$10 billion, and 95 percent of large banks with assets greater than \$10 billion received an estimated conclusion “Outstanding,” “High Satisfactory,” or “Low Satisfactory.” Over 60 percent of intermediate banks, 51 percent of large banks with assets less than or equal to \$10 billion, and 67 percent of large banks with assets greater than \$10 billion received an estimated conclusion of “Outstanding” or “High Satisfactory.” The agencies have determined, based on this data, that the final rule performance ranges for estimated conclusions of “Low Satisfactory” or higher are generally attainable for intermediate and large banks. In addition, as noted above, this analysis does not reflect the performance context considerations in final § __.21(d) or the additional factors in final § __.22(g), which will inform conclusions under the final rule.

Table 34 to § __.22: Estimated Institution-Level Retail Lending Test Conclusions, 2018-2020, with Final Rule Multipliers (Percentage of Banks)

| | Bank Asset Size | | | |
|-------------------------------------|-----------------|----------------------|----------------------|-------|
| | Intermediate | Large, Assets <\$10B | Large, Assets \$10B+ | Total |
| Number of banks | 203 | 237 | 105 | 545 |
| Institution-Level Conclusion | | | | |
| “Outstanding” | 14.4 | 7.6 | 9.4 | 10.5 |
| “High Satisfactory” | 46.0 | 43.5 | 57.5 | 47.2 |
| “Low Satisfactory” | 27.2 | 40.5 | 28.3 | 33.2 |
| “Needs to Improve” | 11.9 | 8.4 | 4.7 | 9.0 |
| “Substantial Non-compliance” | 0.5 | 0.0 | 0.0 | 0.2 |

Note: Table 34 shows the estimated distribution of institution-level conclusions on the Retail Lending Test over the 2018-2020 period for a set of intermediate and large banks that were both CRA and HMDA reporters, using the final rule multipliers. Bank asset size was determined using 2019 and 2020 year-end assets data. Wholesale banks, limited purpose banks, strategic plan banks, and banks that did not have at least one facility-based assessment area in a U.S. State or the District of Columbia were excluded from the analysis. Facility-based assessment areas that were not delineated in 2020 were also excluded. The analysis used home mortgage, small business, small farm, deposits, and demographic data from the CRA Analytics Data Tables. The Retail Lending Volume Screen was not applied in this analysis.

Table 35 shows the same analysis broken out by different bank asset-size categories—intermediate banks, large banks with assets less than or equal to \$10 billion, and large banks with greater than \$10 billion in assets—using the NPR multipliers. The impact of the change to the multipliers in the final rule relative to the proposed multipliers was generally consistent across bank sizes. As demonstrated by comparing Tables 34 and 35, across all three asset-size groups, the final rule multipliers increased the estimated share of banks receiving an “Outstanding” conclusion between 2.5 to 4 percentage points and reduced the estimated share of banks receiving a “Needs to Improve” conclusion by 1 to 3 percentage points.

Table 35 to § __.22: Estimated Institution-Level Retail Lending Test Conclusions, 2018-2020, with NPR Multipliers (Percentage of Banks)

| | Bank Asset Size | | | |
|-------------------------------------|-----------------|------------------------|------------------------|-------|
| | Intermediate | Large Assets <\$10B | Large Assets \$10B+ | Total |
| Number of banks | 203 | 237 | 105 | 545 |
| Institution-Level Conclusion | | | | |
| “Outstanding” | 10.4 | 5.1 | 5.7 | 7.2 |
| “High Satisfactory” | 41.6 | 40.1 | 53.8 | 43.3 |
| “Low Satisfactory” | 34.7 | 43.5 | 34.0 | 38.3 |
| “Needs to Improve” | 12.9 | 11.4 | 6.6 | 11.0 |
| “Substantial Non-compliance” | 0.5 | 0.0 | 0.0 | 0.2 |

Note: Table 35 shows the estimated distribution of institution-level conclusions on the Retail Lending Test over the 2018-2020 period for a set of intermediate and large banks that were both CRA and HMDA reporters, using the proposed multipliers. Bank asset size was determined using 2019 and 2020 year-end assets data. Wholesale banks, limited purpose banks, strategic plan banks, and banks that did not have at least one facility-based assessment area in a U.S. State or the District of Columbia were excluded from the analysis. Facility-based assessment areas that were not delineated in 2020 were also excluded. The analysis used home mortgage, small business, small farm, deposits, and demographic data from the CRA Analytics Data Tables. The Retail Lending Volume Screen was not applied in this analysis.

Retail Lending Assessment Areas and Outside Retail Lending Areas. As discussed in more detail in the section-by-section analysis of final § __.17 and throughout the section-by-section analysis of final § __.22, under the final rule the agencies will evaluate the retail lending performance of certain large banks in retail lending assessment areas. The agencies will also evaluate the retail lending of large banks (as well as that of certain intermediate and small banks) in their outside retail lending area. To understand how banks may have performed in 2018-2020 in these areas under the final rule approach, Table 34 shows the estimated distribution of Retail Lending Test recommended conclusions that banks included in the analysis would have received in facility-based assessment areas, retail lending assessment areas, and outside retail lending areas. Specifically, the analysis shows that at least two-thirds of these banks are estimated to receive an “Outstanding,” “High Satisfactory,” or “Low Satisfactory” recommended conclusion, with banks receiving a higher proportion of “Needs to Improve” conclusions in outside retail lending areas (28 percent) and in retail lending assessment areas (20.6 percent) when compared to facility-based assessment areas (8.8 percent).

The agencies considered several aspects of these results. First, the agencies considered that, while performance under the final rule provisions are lower in retail lending assessment areas and outside retail lending areas, a significant majority of banks included in the analysis received conclusions of “Outstanding,” “High Satisfactory,” or “Low Satisfactory” in these areas. The agencies believe that this is an indication that the final rule performance ranges are generally attainable, because historical bank performance is relatively strong when applying the final rule evaluation standards.

The agencies also considered that estimated bank conclusions at the institution level reflect strong overall performance, with approximately 90 percent of banks in the data set receiving an “Outstanding,” “High Satisfactory,” or “Low Satisfactory” estimated conclusion at the institution level as shown above in Table 32. This reflects the final rule Retail Lending Test approach that allows for stronger performance in some geographic areas to potentially compensate for weaker performance in other geographic areas. This can take place because the institution-level Retail Lending Test conclusion is based on a weighted average of a bank’s performance in each facility-based assessment area, each retail lending assessment area, and the outside retail lending area, as applicable. As a result, for a bank with multiple Retail Lending Test Areas, receiving a “Needs to Improve” conclusion in one or more areas may, depending on the weight of each area, be compensated for by strong performance in other geographic areas. The agencies also note that the requirement that a large bank receive at least a “Low Satisfactory” conclusion in 60 percent of its facility-based assessment areas and retail lending assessment areas in order to receive a “Satisfactory” institution-level rating can impact whether stronger performance in some areas may compensate for weaker performance in other areas. As shown in Table 36, the agencies note that at an aggregate level for all banks included in this analysis, 74 percent of bank lending by dollar volume was in facility-based assessment areas, 18 percent was in outside retail lending areas, and 8 percent was in retail lending assessment areas.

The agencies also note that, under the current approach, banks are generally not evaluated for retail lending performance outside of areas where they maintain deposit-taking facilities. As a result, the analysis does not include any changes that could have resulted in bank performance under this approach.

Table 36 to § __.22: Estimated Retail Lending Test Area Recommended Conclusions with Final Rule Multipliers, 2018-2020

| | Retail Lending Test Area Type | | | | | |
|-----------------------------|---------------------------------|---------|------------------------------|---------|---------------------------------|---------|
| | Facility-Based Assessment Areas | | Outside Retail Lending Areas | | Retail Lending Assessment Areas | |
| Percent of all bank lending | 74% | | 18% | | 8% | |
| | Frequency | Percent | Frequency | Percent | Frequency | Percent |
| Recommended Conclusion | | | | | | |
| “Outstanding” | 1,460 | 21.1 | 14 | 4.0 | 130 | 18.0 |
| “High Satisfactory” | 2,742 | 39.5 | 85 | 24.1 | 218 | 30.1 |
| “Low Satisfactory” | 1,827 | 26.4 | 152 | 43.1 | 214 | 29.6 |

| | | | | | | |
|---------------------------------------|-----|-----|----|------|-----|------|
| “Needs to Improve” | 613 | 8.8 | 99 | 28.0 | 149 | 20.6 |
| “Substantial Noncompliance” | 52 | 0.8 | 3 | 0.8 | 13 | 1.8 |
| Below Retail Lending Volume Threshold | 239 | 3.4 | -- | -- | -- | -- |

Note: Table 36 shows the estimated distribution of Retail Lending Test Area recommended conclusions on the Retail Lending Test over the 2018-2020 period for a set of intermediate and large banks that were both CRA and HMDA reporters, using the final rule multipliers. Bank asset size was determined using 2019 and 2020 year-end assets data. Wholesale banks, limited purpose banks, strategic plan banks, and banks that did not have at least one facility-based assessment area in a U.S. State or the District of Columbia were excluded from the analysis. Facility-based assessment areas that were not delineated in 2020 were also excluded. The analysis used home mortgage, small business, small farm, deposits, and demographic data from the CRA Analytics Data Tables. Facility-based assessment areas of large banks in which the Bank Volume Metric was below the Retail Lending Volume Threshold are presented in the row labeled “Below Retail Lending Volume Threshold,” and are not included in any conclusion category, because these banks' retail lending would be subject to a qualitative review and would not automatically receive a recommended conclusion. The “Percent of all bank lending” was calculated using all closed-end home mortgage loans, small business loans, and small farm loans, based on a combination of loan dollars and loan count.

Table 37 shows the same analysis broken out by different Retail Lending Test Areas— facility-based assessment areas, retail lending assessment areas, and outside retail lending areas— using the NPR multipliers. Similar patterns are observed when the analysis is conducted using the multipliers proposed in the NPR (Table 37). The analysis shown in Table 37, as with the other analyses described above, indicates that the multipliers included in the final rule produce a higher estimated distribution of recommended conclusions than the multipliers proposed in the NPR.

Table 37 to § __.22: Estimated Retail Lending Test Area Recommended Conclusions with NPR Multipliers, 2018-2020

| | Retail Lending Test Area Type | | | | | |
|-------------------------------|---------------------------------|---------|------------------------------|---------|---------------------------------|---------|
| | Facility-Based Assessment Areas | | Outside Retail Lending Areas | | Retail Lending Assessment Areas | |
| Percent of all bank lending | 74% | | 18% | | 8% | |
| | Frequency | Percent | Frequency | Percent | Frequency | Percent |
| Recommended Conclusion | | | | | | |

| | | | | | | |
|---------------------------------------|-------|------|-----|------|-----|------|
| “Outstanding” | 1,082 | 15.6 | 12 | 3.4 | 95 | 13.1 |
| “High Satisfactory” | 2,762 | 39.8 | 65 | 18.4 | 240 | 33.1 |
| “Low Satisfactory” | 2,076 | 29.9 | 161 | 45.6 | 207 | 28.6 |
| “Needs to Improve” | 717 | 10.3 | 112 | 31.7 | 168 | 23.2 |
| “Substantial Noncompliance” | 57 | 0.8 | 3 | 0.8 | 14 | 1.9 |
| Below Retail Lending Volume Threshold | 239 | 3.4 | -- | -- | -- | -- |

Note: Table 37 shows the estimated distribution of Retail Lending Test Area recommended conclusions on the Retail Lending Test over the 2018-2020 period for a set of intermediate and large banks that were both CRA and HMDA reporters, using the proposed multipliers in the NPR. Bank asset size was determined using 2019 and 2020 year-end assets data. Wholesale banks, limited purpose banks, strategic plan banks, and banks that did not have at least one facility-based assessment area in a U.S. State or the District of Columbia were excluded from the analysis. Facility-based assessment areas that were not delineated in 2020 were also excluded. The analysis used home mortgage, small business, small farm, deposits, and demographic data from the CRA Analytics Data Tables. Facility-based assessment areas of large banks in which the Bank Volume Metric was below the Retail Lending Volume Threshold are presented in the row labeled “Below Retail Lending Volume Threshold,” and are not included in any conclusion category, because these banks’ retail lending would be subject to a qualitative review and would not automatically receive a recommended conclusion. The “Percent of all bank lending” was calculated using all closed-end home mortgage loans, small business loans, and small farm loans, based on a combination of loan dollars and loan count.

Facility-Based Assessment Area Location. Under the final rule, the agencies will apply the Retail Lending Test metrics, benchmarks, and performance ranges across different metropolitan and nonmetropolitan geographic areas, and the approach is intended to adjust for differences in credit needs and opportunities in different areas. Table 38 compares the estimated distribution of recommended Retail Lending Test conclusions for facility-based assessment areas located in MSAs and those located in the nonmetropolitan portion of States for banks included in the analysis. Specifically, the analysis shows that the distributions in MSAs and nonmetropolitan areas are similar overall. This analysis informed the agencies’ determination that the performance ranges are generally attainable in both metropolitan and nonmetropolitan areas.

Table 38 to § __.22: Estimated Facility-Based Assessment Area Recommended Conclusions for Metropolitan and Nonmetropolitan Areas, 2018-2020

| | Nonmetropolitan | | MSA | |
|--|-----------------|---------|-----------|---------|
| | Frequency | Percent | Frequency | Percent |

| Recommended Conclusion | | | | |
|---------------------------------------|-----|------|-------|------|
| “Outstanding” | 472 | 25.6 | 988 | 19.4 |
| “High Satisfactory” | 685 | 37.2 | 2,057 | 40.4 |
| “Low Satisfactory” | 447 | 24.3 | 1,381 | 27.1 |
| “Needs to Improve” | 159 | 8.6 | 454 | 8.9 |
| “Substantial Noncompliance” | 19 | 1.0 | 33 | 0.6 |
| Below Retail Lending Volume Threshold | 61 | 3.3 | 178 | 3.5 |

Note: Table 38 shows the estimated distribution of facility-based assessment area recommended conclusions on the Retail Lending Test in nonmetropolitan and metropolitan areas over the 2018-2020 period for a set of intermediate and large banks that were both CRA and HMDA reporters, using the final rule multipliers. Bank asset size is determined using 2019 and 2020 year-end assets data. Wholesale banks, limited purpose banks, strategic plan banks, and banks that do not have at least one facility-based assessment area in a U.S. State or the District of Columbia were excluded from the analysis. Facility-based assessment areas that were not delineated in 2020 were also excluded. The analysis used home mortgage, small business, small farm, deposits, and demographic data from the CRA Analytics Data Tables. Facility-based assessment areas of large banks in which the Bank Volume Metric was below the Retail Lending Volume Threshold are presented in the row labeled “Below Retail Lending Volume Threshold,” and are not included in any conclusion category, because these banks' retail lending would be subject to a qualitative review and would not automatically receive a recommended conclusion.

Time Period. Table 39 shows the distribution of estimated institution-level conclusions on the Retail Lending Test for banks included in the analysis for five three-year time periods: 2006-2008; 2009-2011; 2012-2014; 2015-2017; and 2018-2020. For this analysis, the agencies applied the final rule approach for calculating the metrics, performance ranges, and weights to all five periods, to gain further insight into historical bank performance over different time periods under this approach. Because the benchmarks are based on community and market data from each evaluation period, the resulting performance ranges applied to a specific Retail Lending Test Area vary across evaluation periods. As discussed in the section-by-section analysis of final § __.22(e), the agencies believe that this approach to setting benchmarks allows the performance ranges to reflect changes in credit needs and opportunities over time.

As shown in Table 39, the share of banks included in the analysis that would have received institution-level conclusions of “High Satisfactory” is estimated to have remained relatively stable over time at around 48 percent on average (ranging from 42.6 percent to 53.2 percent). In addition, the analysis shows a trend of declining “Outstanding” estimated conclusions and increasing “Low Satisfactory” and “Needs to Improve” estimated conclusions at the institution level over this time period.

Supplementary analyses conducted by the agencies suggest that the decline in “Outstanding” estimated conclusions over time is associated with changing small business lending patterns. As

shown in Table 40, between the 2006-2008 and 2018-2020 time periods, the share of Retail Lending Test Areas where the estimated product line score for small business lending was consistent with an “Outstanding” conclusion (*i.e.*, the product line score is 8.5 or higher) declined by 22 percentage points from 56.9 percent to 33.9 percent. In contrast, as shown in Table 41, for closed-end home mortgage loans, the estimated product line scores consistent with an “Outstanding” conclusion were comparatively flat (increasing slightly from 22.3 percent in 2006-2008 to 24.4 percent in 2018-2020).

Table 39 to § __.22: Estimated Institution-Level Retail Lending Test Conclusions, 2006-2020 (Percentage of Banks)

| | Evaluation Period | | | | |
|-------------------------------------|-------------------|-----------|-----------|-----------|-----------|
| | 2006-2008 | 2009-2011 | 2012-2014 | 2015-2017 | 2018-2020 |
| Institution-Level Conclusion | | | | | |
| “Outstanding” | 38.4 | 32.7 | 19.3 | 15.5 | 10.5 |
| “High Satisfactory” | 47.6 | 42.6 | 49.8 | 53.2 | 47.2 |
| “Low Satisfactory” | 11.8 | 20.9 | 24.0 | 25.8 | 33.2 |
| “Needs to Improve” | 1.8 | 3.9 | 6.7 | 5.5 | 9.0 |
| “Substantial Noncompliance” | 0.4 | 0.0 | 0.2 | 0.0 | 0.2 |

Note: Table 39 shows the estimated distribution of institution-level conclusions on the Retail Lending Test over five three-year periods for a set of intermediate and large banks that were both CRA and HMDA reporters, using the final rule multipliers. The numbers shown are the percentage of banks in each conclusion category within each period. Bank asset size was determined using assets data from the last two years of the period. Wholesale banks, limited purpose banks, strategic plan banks, and banks that did not have at least one facility-based assessment area in a U.S. State or the District of Columbia were excluded from the analysis. Facility-based assessment areas of large banks that were not delineated in the final year of the period were also excluded. The analysis used home mortgage lending, small business lending, small farm lending, deposits, and demographic data from the CRA Analytics Data Tables. Separate breakouts for open- and closed-end home mortgages were not available prior to 2018. The Retail Lending Volume Screen was not applied in this analysis.

Table 40 to § __.22: Small Business Lending Performance, 2006-2020 (Percentage of Retail Lending Test Areas, categorized by product score)

| | Period | | | | |
|--|-----------|-----------|-----------|-----------|-----------|
| | 2006-2008 | 2009-2011 | 2012-2014 | 2015-2017 | 2018-2020 |
| | | | | | |

| | | | | | |
|---------------------------------------|------|------|------|------|------|
| Performance in RLTA | | | | | |
| 8.5+ (“Outstanding”) | 56.9 | 50.9 | 41.6 | 36.2 | 33.9 |
| 6.5 - 8.5 (“High Satisfactory”) | 30.8 | 30.7 | 35.5 | 39.2 | 34.4 |
| 4.5 - 6.5 (“Low Satisfactory”) | 10.0 | 13.8 | 17.4 | 18.3 | 21.4 |
| 1.5 - 4.5 (“Needs to Improve”) | 1.8 | 3.9 | 4.8 | 5.8 | 9.4 |
| 0 - 1.5 (“Substantial Noncompliance”) | 0.5 | 0.7 | 0.7 | 0.5 | 0.9 |

Table 41 to § __.22: Closed-End Home Mortgage Performance, 2006-2020 (Percentage of Retail Lending Test Areas, categorized by product score)

| | Period | | | | |
|---------------------------------------|-----------|-----------|-----------|-----------|-----------|
| | 2006-2008 | 2009-2011 | 2012-2014 | 2015-2017 | 2018-2020 |
| Performance in RLTA | | | | | |
| 8.5+ (“Outstanding”) | 22.3 | 22.8 | 25.2 | 23.7 | 24.4 |
| 6.5 - 8.5 (“High Satisfactory”) | 32.1 | 28.5 | 30.1 | 28.5 | 29.1 |
| 4.5 - 6.5 (“Low Satisfactory”) | 27.5 | 27.6 | 25.3 | 26.7 | 27.0 |
| 1.5 - 4.5 (“Needs to Improve”) | 14.5 | 16.6 | 16.0 | 16.6 | 16.8 |
| 0 - 1.5 (“Substantial Noncompliance”) | 3.5 | 4.5 | 3.4 | 4.4 | 2.7 |

Note: Tables 40 and 41 show the estimated distribution of bank-Retail Lending Test Area product scores mapped to conclusion categories on the Retail Lending Test over five three-year periods for a set of intermediate and large banks that were both CRA and HMDA reporters, using the final rule multipliers. The numbers shown are the percentage of bank Retail Lending Test Areas in each conclusion category within each period. Bank asset size was determined using assets data from the last two years of the period. Wholesale banks, limited purpose banks, strategic plan banks, and banks that do not have at least one facility-based assessment area in a U.S. State or the

District of Columbia were excluded from the analysis. Facility-based assessment areas of large banks that were not delineated in the final year of the period were also excluded. The analysis used home mortgage, small business, small farm, deposits, and demographic data from the CRA Analytics Data Tables. Separate breakouts for open- and closed-end home mortgages were not available prior to 2018. The Retail Lending Volume Screen was not applied in this analysis.

§ __.23(a)(3) Exclusion

Current Approach

Under current CRA regulations, the service test, which only applies to large banks, establishes four criteria for evaluating retail services: (1) the current distribution of branches among low-, moderate-, middle-, and upper-income census tracts;⁹⁷⁶ (2) a bank’s record of opening and closing branches, particularly branches in low- or moderate-income geographies or that primarily serve low- or moderate-income individuals;⁹⁷⁷ (3) the availability and effectiveness of alternative systems for delivering retail banking services (or non-branch delivery systems) in low- and moderate-income geographies and to low- and moderate-income individuals;⁹⁷⁸ and (4) the range of services provided in low-, moderate-, middle-, and upper-income geographies and the degree to which the services are tailored to meet the needs of those geographies.⁹⁷⁹

The Agencies’ Proposal

In § __.23(a)(1), the agencies proposed a new Retail Services and Products Test that would evaluate the following for large banks: (1) delivery systems and (2) credit and deposit products responsive to the needs of low- and moderate-income individuals and census tracts.⁹⁸⁰ Under this test, the agencies proposed to use a predominately qualitative approach while incorporating quantitative measures as guidelines. For the first part of the test, in § __.23(b), the proposal

⁹⁷⁶ See current 12 CFR __.24(d)(1).

⁹⁷⁷ See current 12 CFR __.24(d)(2).

⁹⁷⁸ See current 12 CFR __.24(d)(3). Under the OCC’s CRA regulation, current 12 CFR 25.24(d)(3) provides that alternative delivery systems include “ATMs, ATMs not owned or operated exclusively for the bank or savings association, banking by telephone or computer, loan production offices, and bank-at-work or bank-by-mail programs.” Under the Board’s CRA regulation, current 12 CFR 228.24(d)(3) provides that alternative delivery systems include “ATMs, ATMs not owned or operated by or exclusively for the bank, banking by telephone or computer, loan production offices, and bank-at-work or bank-by-mail programs.” Under the FDIC’s CRA regulation, current 12 CFR 345.24(d)(3) describes alternative delivery systems as “RSFs, RSFs not owned or operated by or exclusively for the bank, banking by telephone or computer, loan production offices, and bank-at-work or bank-by-mail programs.”

⁹⁷⁹ See current 12 CFR __.24(d)(4).

⁹⁸⁰ See proposed § __.23(a)(1).

sought to achieve a balanced evaluation framework that, depending on bank asset size, considered the following bank delivery systems: (1) branch availability and services; (2) remote service facility availability; and (3) digital and other delivery systems.⁹⁸¹ For the second part of the test, in § __.23(c), the proposal aimed to evaluate a bank's efforts to offer credit and deposit products responsive to the needs of low- and moderate-income individuals, small businesses, and small farms depending on bank asset size.⁹⁸² The agencies also proposed in § __.23(a)(2) that activities considered for a bank under the Community Development Services Test may not also be considered under the Retail Services and Products Test. (For a discussion of the evaluation of community development services, see the section-by-section analysis for the Community Development Services Test in § __.25.)

The agencies proposed a tailored approach to the Retail Services and Products Test based on a large bank's asset size. As discussed in more detail in the section-by-section analysis of § __.23(b) and § __.23(c), for large banks with assets of \$10 billion or less in both of the prior two calendar years, based on the assets reported on its four quarterly Call Reports for each of those calendar years, the agencies proposed making certain components optional to reduce the data burden of new data collection requirements for banks within this asset category. For large banks with assets of over \$10 billion, the agencies proposed requiring the full evaluation under the proposed Retail Services and Products Test.

Comments Received

Many of the commenters addressing the Retail Services and Products Test generally supported the agencies' proposal, although there were differences among commenters on how to apply the test, with several of these commenters making recommendations on how the test could be improved. A few commenters argued that the test's quantitative guidelines do not add value in measuring bank performance, but supported the use of both qualitative and quantitative approaches if banks are given the opportunity to explain performance that falls short of the targets. Other commenters recommended that the test include a more rigorous assessment of retail banking and services, with two commenters noting that, while there are improvements to the service test, the test needs further developing to guide examiners against ratings inflation. Two commenters believed the test should be applied to small and intermediate banks to determine the effectiveness and impact of retail services and products, with one of these commenters believing application to these banks would be critical to ensuring branches are present in low-income communities and communities of color. One other commenter suggested that some activities included under the proposed Community Development Services Test—financial literacy and technical assistance to small businesses—should instead be included under the Retail Services and Products Test. A few other commenters recommended that direct and indirect consumer lending be evaluated quantitatively in the Retail Lending Test, but also qualitatively in the Retail Services and Products Test.

A few commenters recommended that aspects of the test be more flexible to address different business models and account for recent and future changes in digital banking. One of these commenters expressed concern that the proposed Retail Services and Products Test could be

⁹⁸¹ See proposed § __.23(b).

⁹⁸² See proposed § __.23(c).

interpreted as requiring a bank to provide particular products and services deemed to be beneficial to low- and moderate-income people and requested clarification that this was not intended. This commenter also believed that the test would be inconsistent with both the agencies' stated goal of tailoring the framework to different business models and the safe and sound statutory requirement. A few commenters also suggested that the agencies avoid making peer-based comparisons under the final rule in which one particular bank is penalized for not offering a particular product or service that is offered by another bank.

Some commenters provided recommendations for incorporating race and ethnicity into the proposed Retail Services and Products Test. One commenter asserted that all elements of the agencies' proposed Retail Services and Products Test applicable to low- and moderate-income consumers and communities could also be applied to minority consumers and communities. This commenter indicated, for example, that in addition to evaluating branching in low- and moderate-income communities the agencies could evaluate branching in minority communities. Another commenter asserted that the banking industry increasingly resorts to providing digital access to financial services and products and services to reduce costs, but in doing so risks further excluding minority consumers and communities given that they then have both less access to branches and more limited digital capabilities than white consumers and communities. A commenter expressed the view that the agencies should expand qualitative reviews in the Retail Services and Products Test to provide consideration for activities that close the racial wealth gap by affirmatively serving racial minority consumers and communities. This commenter provided examples such as special purpose credit programs targeted to minority consumers, affirmative marketing and offering of affordable products to minority consumers, and responsible lending practices to prevent displacement. Another commenter proposed that positive consideration be given for special purpose credit programs, small-dollar home mortgage programs, limited English proficiency products, and products for first-generation homebuyers, indicating that they all contributed to racial equity in housing. This commenter added that incentivizing bank activities with first-time, socially disadvantaged homebuyers would meaningfully address the racial minority home ownership gap. One commenter stated that the agencies, when evaluating the distribution of services and products to low- and moderate-income consumers and communities, should assess a bank's strategies and initiatives to serve, and the responsiveness of the bank's services and products to, the needs of minority consumers and communities. Another commenter asserted that the CRA regulations should incentivize banks to meet the credit needs of minority communities in a variety of ways, including by creating products and services specifically responsive to minority community needs, placing branches in majority-minority neighborhoods, and investing in community development projects that serve minority communities. A commenter asserted that banks that only offer expensive products that do not serve community needs should be adversely rated. Another commenter stated that agencies should evaluate the qualitative impact of all bank lending, and prohibit predatory practices like negative amortization, interest-only loans, and adjustable-rate mortgages. A number of commenters asserted that whether a bank maintains branches in minority communities should be a performance factor. For example, a commenter stated that the agencies should consider a bank's branch distribution across tracts with different racial demographics, including majority-minority census tracts, in comparison to the aggregate distribution. The agencies have considered these comments and are addressed in section III.C of this **SUPPLEMENTARY INFORMATION**.

Final Rule

For the reasons discussed below, the agencies are adopting, with certain revisions, the proposed scope and framework of the Retail Services and Products Test in § __.23(a)(1). More specifically, the agencies are revising the description of the scope of final § __.23(a)(1) by clarifying that the test evaluates the availability and accessibility of a bank's retail banking services and products and the responsiveness of those services and products to the needs of the bank's entire community, including but not limited to low- and moderate-income individuals, families, or households and low- and moderate-income census tracts, as well as the needs of small businesses and small farms. In response to comments, the agencies are also removing the word "targeted" from the regulatory text in this paragraph to make clear that this evaluation does not mandate that banks make available certain products or services or target certain populations. In addition, as explained in more detail in the section-by-section analysis of § __.23(b) (retail banking services) and § __.23(c) (retail banking products), the agencies are making certain revisions to the components of the Retail Services and Products Test upon consideration of the comments received.

The agencies are also adding clarity in final § __.23(a)(2) that branches, for the purposes of the Retail Services and Products Test, also include a main office of a bank, if the main office is open to, and accepts deposits from, the general public. It was the intent of the agencies to consider a main office that offers deposits and is open to the general public as part of the test. No change in meaning is intended and this addition is meant to provide clarity to the evaluation.

Finally, to ensure that bank activities that are considered under the Retail Services and Products Test are not also considered under the Community Development Services Test, the agencies are retaining the exclusion as proposed in final § __.23(a)(3), with a technical edit to change the word "activities" to "services." The agencies believe the use of the word "services" rather than "activities" more clearly represents the types of activities evaluated under both the Community Development Services Test and the Retail Services and Products Test.

As explained in the proposal, the agencies are drawing on the existing approach used to evaluate a bank's retail services, while also updating and standardizing the evaluation criteria to reflect the now widespread use of mobile and online banking. Although some commenters expressed concern with how benchmarks are applied, the agencies believe that utilizing both a quantitative and qualitative approach to the test achieves the goals of maintaining the current approach to retail services while better standardizing the evaluation criteria. The agencies are sensitive to concerns about examiner judgment and understand the need to provide examiners guidance on applying the test. The agencies note that, while examiner judgment is an important part of the CRA evaluation process, the agencies will endeavor to minimize unnecessary subjectivity and increase consistency among examiners by providing updated guidance, training, and standards applicable to evaluations under this test while also attempting to guard against ratings inflation. The agencies believe that measured examiner judgment is necessary to account for the unique characteristics of a bank, including its constraints, business model, and the needs of its community. The agencies are also clarifying that the intent of the Retail Services and Products Test is not to mandate that a bank offer particular products or programs or to evaluate or penalize a bank based on the types of products or services its peers offer. Rather, the agencies intend to measure the availability and responsiveness of a bank's retail services to the needs of its communities.

The agencies also considered commenters' recommendation to require the evaluation of the Retail Services and Products Test for small and intermediate banks. As explained in the section-

by-section analysis of § __.21 (performance tests), § __.29 (small banks) and § __.30 (intermediate banks), these banks have more limited capacities and are less able to offer as wide a range of retail services and products as their larger counterparts. Requiring this test would increase the burden on these banks without sufficient compensating benefits. The agencies believe that additional consideration for activities under the Retail Services and Products Test for small and intermediate banks without a requirement to collect additional data is appropriate, as it may encourage additional activities in low- and moderate-income communities, without imposing additional burden. The agencies also considered commenters' recommendations with respect to the evaluation of other activities, such as financial literacy and technical assistance to small businesses. The agencies, however, believe that services such as these are best evaluated under the Community Development Services Test. Evaluating community development services separately from the Retail Services and Products Test underscores the importance of these services for fostering partnerships among different stakeholders, building capacity, and creating the conditions for effective community development.

§ __.23(b) Retail Banking Services

§ __.23(b)(1) Scope of evaluation

The Agencies' Proposal

For large banks with assets of over \$10 billion, the agencies proposed in § __.23(b), to evaluate the full breadth of a bank's delivery systems by both maintaining an emphasis on branches and increasing the focus on digital and other delivery channels. Specifically, the agencies proposed to evaluate three components of the bank's performance: (1) branch availability and services in proposed § __.23(b)(1); (2) remote service facility availability in proposed § __.23(b)(2); and (3) digital and other delivery systems in proposed § __.23(b)(3). The proposal required large banks with assets of \$10 billion or less to be evaluated only under the first two components of delivery systems, unless the bank requested additional consideration of its digital and other delivery systems and collected the requisite data.⁹⁸³ The agencies asked for feedback on whether the evaluation of digital and other delivery systems should be optional or required for banks with assets of \$10 billion or less as proposed, or alternatively, whether the agencies should maintain current evaluation standards for alternative delivery systems for banks within this tier. The current evaluation standards include, for example, the ease of access and use, reliability of the system, range of services delivered, cost to consumers as compared with the bank's other delivery systems, and rate of adoption and use.

Comments Received

Most commenters that addressed branch availability and services, and remote service facility availability agreed that branches remain an important component in the evaluation of a bank's delivery systems, with some of these commenters noting that availability of branches curtails the proliferation and use of predatory lenders in those areas. Other commenters questioned the application of the evaluation to digital banks with relatively few or no branches or remote service facilities.

Some commenters suggested that banks deemed to be performing at a "High Satisfactory" or "Outstanding" level on the proposed Retail Lending Test should receive a presumption that their

⁹⁸³ See proposed §§ __.23(b) and __.42(a)(4)(ii).

distribution channels are sufficiently serving low- and moderate-income communities, or at least receive a relatively perfunctory evaluation of their channels of distribution. One commenter asked for clarity on how the evaluation criteria will be used to assess branch availability and services, remote service facility availability, digital alternatives, and other delivery systems in practice. Another commenter expressed concern that banks maintaining branches in underserved areas with little commercial or lending activity would be unable to pass the Retail Lending Volume Screen forcing these banks to close branches in these underserved areas and disincentivizing potential new market entrants from growing into rural markets. Two other commenters asked that the agencies consider the following: clarify that delivery services would be evaluated holistically to consider whether all delivery channels together effectively meet the needs of a bank's customers and communities; mitigate business-related factors behind branch closures; determine the weight of each type of delivery system, including branches, based on the bank business model and in proportion to the bank's use of such systems; provide favorable consideration for branch openings in low- and moderate-income communities and other areas of need; and apply a totality of the circumstances approach that includes, *e.g.*, the availability and responsiveness of the bank's branches and services in low- or moderate-income census tracts and to low- or moderate-income individuals, customer complaints or testimonials, and the bank's own policies and procedures.

One commenter argued that the proposal over-emphasizes delivery systems without acknowledging that banks are effectively meeting the needs of low- and moderate-income consumers through existing delivery channels. This commenter further stated that the emphasis on physical branches makes it likely that the rule would need to be updated again, as digital banking becomes more common. Another commenter asserted that the proposed framework to evaluate the distribution of a bank's branches and remote service facilities penalizes banks that primarily operate through their branch and ATM network and appears to favor a business model with few or no branches. This commenter urged the agencies to consider, instead, an evaluation of branches and ATMs that can only be favorably considered in a bank's Retail Services and Products Test conclusion.

Most commenters that addressed the agencies' request for comment on whether large banks with assets of \$10 billion or less should be subject to an evaluation of their digital and other delivery systems recommended that all large banks, including those with assets of \$10 billion or less, should be subject to this evaluation. A few of these commenters suggested that, at minimum, the agencies should consider evaluating large banks with assets of \$10 billion or less under this component, if a certain amount of their deposit activity (*e.g.*, one third) is generated from digital channels. One commenter recommended that the evaluation should be optional for banks in the intermediate bank category and above. Another commenter recommended that military banks or banks serving military and veteran customers that have assets of \$10 billion or less have the ability to request additional consideration of its digital delivery systems and other delivery systems. Another commenter suggested that CRA modernization should be used to encourage small and intermediate banks to incorporate digital channels and capabilities, including through partnerships with fintechs, to better reach low- and moderate-income consumers and small businesses. By contrast, some commenters recommended that evaluation of digital and other delivery systems should remain optional for all large banks. One other commenter stated that the asset threshold for optional evaluation of this component of \$10 billion or less was too low and recommended that it be increased to \$100 billion or less.

Final Rule

The final rule adopts § __.23(b) with technical edits related to the organization of the retail banking services evaluation. Specifically, final § __.23(b) renames the section header from “delivery systems” to “retail banking services” and adds the same terminology throughout the regulatory text where appropriate. No change in meaning is intended and this revision is meant to provide clarity that the evaluation measures the availability and accessibility of a bank’s retail banking services, including through delivery systems such as branches. The final rule also includes a revision related to the consideration of digital delivery systems and other delivery systems for large banks with assets of \$10 billion or less as of December 31 in either of the prior two calendar years that do not operate branches or remote service facilities. The agencies are also making the clarification that the respective evaluations of bank branches or remote service facilities only apply to a particular bank if the bank has one or more branches or remote service facilities. Specifically the final rule requires large banks with assets of over \$10 billion to be evaluated for their delivery systems under: final § __.23(b)(2), (branch availability and services) if the bank operates one or more branches, final § __.23(b)(3) (remote service facility availability), if the bank operates one or remote service facilities, and final § __.23(b)(4) (digital delivery systems and other delivery systems) (*see* the section-by-section analysis of § __.23(b)(2) and (b)(3) for additional details). Large banks, including military banks,⁹⁸⁴ with assets of \$10 billion or less that have branches will be evaluated only under the first two components unless they opt for consideration of digital delivery systems and other delivery systems. Further, military banks that are small and intermediate banks may also request consideration for digital and other delivery systems pursuant to § __.29(b) or § __.30(b), as applicable.

In response to comments, the final rule clarifies that a large bank that had assets of \$10 billion or less as of December 31 in either of the prior two calendar years and that does not operate branches will be evaluated only for its digital delivery systems and other delivery systems under § __.23(b)(4). This is a change from the proposal, which required the evaluation of this component only for large banks with assets of over \$10 billion. The agencies believe requiring the evaluation of digital delivery systems and other delivery channels for branchless large banks with assets of \$10 billion or less is appropriate, recognizing that such banks do not deliver retail services to their customers through branches.

⁹⁸⁴ As discussed in the section-by-section analysis of final § __.21(a)(5), the agencies are adopting a new paragraph in the final rule to clarify the evaluation of military banks. Under the final rule, the agencies will evaluate a military bank that chooses to delineate the entire United States and its territories as its sole facility-based assessment area because its customers are not located within a defined geographic area, as specified in final § __.16(d), exclusively at the institution level based on the bank’s performance in its sole facility-based assessment area. For purposes of the final Retail Services and Products Test, the agencies will evaluate these banks at the facility-based assessment area level pursuant to the provisions of final § __.16 for retail banking services, and, as with other large banks with assets of \$10 billion or less, military banks can request the evaluation of digital delivery systems and other delivery systems at the institution level.

However, the agencies decline to require in the final rule an evaluation of digital delivery systems and other delivery systems for all large banks as suggested by some commenters. The agencies remain sensitive to the impact of new data collection requirements for large banks with assets of \$10 billion or less, and believe it is preferable to only require this evaluation component for such banks with no branches as described above. The agencies believe requiring evaluation of the digital delivery systems and other delivery systems of branchless banks with assets of \$10 billion or less ensures that the delivery systems of such banks are evaluated, while appropriately tailoring the approach for banks with assets of \$10 billion or less, which may have less capacity to meet new data collection requirements.

The agencies note that the approach used in the final rule for evaluating a large bank's retail banking services would leverage quantitative benchmarks to inform the branch and remote service facility availability analysis and provide favorable qualitative consideration for branch locations in certain geographic areas. In comparison to the current CRA regulations, the final rule also more fully evaluates digital and other delivery systems, as applicable, in recognition of the trend toward greater use of online and mobile banking.

The agencies decline to adopt the recommendation from some commenters that a large bank receiving a "High Satisfactory" or "Outstanding" level of performance on the Retail Lending Test should be exempted in some way from a Retail Services and Products Test evaluation or be awarded a presumptive conclusion under the Retail Services and Products Test. The agencies believe that a high level of performance in the Retail Lending Test does not obviate the importance of evaluating how well the bank serves its community through branches and other delivery systems. The agencies believe that the branch distribution and availability, remote services availability, and digital delivery systems and other delivery systems evaluations are important components in evaluating how well a bank is meeting the credit needs of its communities, including low- and moderate-income individuals, families, or households and low- and moderate-income census tracts. The agencies note that in determining how well the bank serves its communities through retail services and products, as explained in more detail in the section-by-section analysis of § __.23(d), the final rule considers the bank's business model and other performance context factors when evaluating the bank's retail banking services. Examiners will account for, among other things, mitigating factors for closing branches and whether the bank's delivery channels are meeting the needs of the bank's communities and customers.

§ __.23(b)(2) *Branch Availability and Services*

§ __.23(b)(2)(i) *Branch Distribution*

§ __.23(b)(2)(i)(A) *Branch Distribution Metrics*

§ __.23(b)(2)(i)(B) *Benchmarks*

Current Approach

Under the current CRA regulations, the service test performance criteria for retail banking services place primary emphasis on full service branches while still considering alternative delivery systems.⁹⁸⁵ Interagency guidance explains that the principal focus is on an institution's

⁹⁸⁵ See current 12 CFR __.24(d).

current distribution of branches and its record of opening and closing branches, particularly branches located in low- or moderate-income geographies or that primarily serve low- or moderate-income individuals.⁹⁸⁶ An evaluation of a large bank's branch locations involves a review primarily of information gathered from a bank's public file.⁹⁸⁷ Using various methods, the agencies evaluate the distribution of branches across census tracts of different income levels relative to the percentage of census tracts by income level, households (or families), businesses, and population in the census tracts.

The Agencies' Proposal

The agencies proposed to evaluate a large bank's distribution of branches among low-, moderate-, middle-, and upper-income census tracts, compared to a series of quantitative benchmarks⁹⁸⁸ that reflect community and market characteristics as the first component of the delivery systems evaluation. Specifically, the agencies proposed, in § __.23(b)(1)(i)(A), to consider the number and percentage of the bank's branches within low-, moderate-, middle-, and upper-income census tracts, referred to as branch distribution metrics, using the data in proposed § __.23(b)(1)(i)(B), referred to as benchmarks, to evaluate a bank's branch distribution among low-, moderate-, middle-, and upper-income census tracts.⁹⁸⁹ The agencies further proposed that consideration of the branch distribution metrics in a facility-based assessment area would be informed by benchmarks for the distribution of census tracts, households, total businesses, and all full-service bank branches by census tract income level.⁹⁹⁰ Each income level and data point (census tracts, households, businesses, and branches) would have a benchmark, specific to each assessment area.⁹⁹¹ The agencies asked for feedback on whether the agencies should use the percentage of families and total population in an assessment area by census tract income level in addition to the other comparators listed (i.e., census tracts, households, and businesses) for the assessment of branches and remote service facilities.

As explained more fully below, in the section-by-section analysis of § __.23(b)(1)(i)(C), the agencies also proposed to consider the availability of branches in low or very low branch access census tracts, middle- and upper-income census tracts in which branches deliver services to low- and moderate-income individuals, distressed or underserved nonmetropolitan middle-income census tracts, and Native Land Areas.

Comments Received

Several commenters supported the application of branch distribution metrics and benchmarks, and recommended removal of examiner judgment by providing examiners with enough guidance on how to apply the metrics and weigh the distribution of benchmarks to guard

⁹⁸⁶ See Q&A § __.24(d)—1.

⁹⁸⁷ See FFIEC, Interagency Large Institution CRA Examination Procedures (Apr. 2014), https://www.ffiec.gov/cra/pdf/cra_exlarge.pdf.

⁹⁸⁸ See proposed § __.23(b)(1)(i)(B).

⁹⁸⁹ See proposed § __.23(b)(1)(i)(A)-(B).

⁹⁹⁰ See proposed § __.23(b)(1)(i)(B)(I)-(4).

⁹⁹¹ See *id.*

against ratings inflation. Commenters also expressed a range of views in response to the agencies' request for feedback on whether the percentage of families and total population should be used as additional comparators to those in the proposal to assess branches and remote service facilities. A vast majority of commenters that responded to this request stated that introducing these additional data points would be unnecessary and redundant given the comparators proposed in the rule such as census tracts, households, and businesses. One commenter believed the use of total population in an assessment area by census tract would be an unreliable indicator due to population income shifts over time. Another commenter recommended instead that the agencies consider external factors, such as commuting patterns, which may impact branch access. One commenter suggested broadening the criteria for evaluating a bank's branch distribution so that the agencies consider the population density and amount of economic activity in a particular census tract. Another commenter suggested information such as public transportation and accessibility should also be considered. One commenter requested clarification on how the agencies arrived at the benchmarks for branch distribution as they appeared to be arbitrary.

Final Rule

The agencies are adopting proposed § __.23(b)(1)(i)(A) (branch distribution metrics) and (b)(1)(i)(B) (benchmarks), renumbered in the final rule as § __.23(b)(2)(i)(A) and (b)(2)(i)(B), respectively, with minor word changes for clarity and with no change in meaning intended.⁹⁹² The agencies believe that the analysis of a bank's branch distribution through the use of metrics and benchmarks is appropriate to promote more transparency and consistency in the evaluation process and are incorporating and building upon on current practices. Examiners will be able to compare a bank's branch distribution to local data to help determine whether branches are accessible in low- or moderate-income communities, to households of different income levels, and to businesses in the assessment area.

In light of the comments received, the agencies have determined that the benchmarks sufficiently measure branch distribution. As a result, the agencies believe that other external data factors such as commuting patterns, public transportation, population density, and other factors are not necessary for this analysis. The agencies plan to provide guidance to examiners on how to consider market and demographic benchmarks when comparing to branch distribution. However, the agencies note that examiners will continue to have the ability to consider qualitative factors to inform the analysis of a bank's branch distribution.

In response to the commenter that requested the agencies provide clarification on how they arrived at the benchmarks, as explained in the proposal, the agencies believe that the three community benchmarks are important to provide additional context for each assessment area. The percentage of census tracts in a facility-based assessment area by income level enables the agencies to compare a bank's distribution of branches in census tracts of each income level to the overall percentage of those census tracts in the assessment area. For example, if 20 percent of a bank's branches are located in low-income census tracts in an assessment area, and 10 percent of census tracts in the assessment area are low-income, the agencies may consider the bank to have a relatively high concentration of branches in low-income census tracts. The percentage of households and the percentage of total businesses in the facility-based assessment area by census tract income level are important complements to the percentage of census tracts in

⁹⁹² See *supra* note 145.

a facility-based assessment area by income level, because households, businesses, and farms reflect a bank’s potential customer base, and may not be distributed evenly across census tracts. Therefore, the agencies would consider all benchmark levels to inform a judgment about the bank’s branch distribution in the market.

As further explained in the proposal, the agencies also believe that using a new aggregate measurement of branch distribution—referred to as a market benchmark⁹⁹³—that would measure the distribution of all full-service bank⁹⁹⁴ branches in the same facility-based assessment area by census tract income, would improve the branch distribution analysis in several ways. First, having such data would give examiners more information for determining the extent that branch services are provided in census tracts of different income levels. Second, examiners would have market data on branches within facility-based assessment areas to identify the extent that census tracts of various income levels are served by other banks’ branches relative to community benchmarks. For example, if few other banks have branches in low-income or moderate-income census tracts within a given area, then a bank’s higher share would indicate responsive or meaningful branch activity relative to their peers.

§ __.23(b)(2)(i)(C) *Geographic Considerations Access*

The Agencies’ Proposal

In addition to the consideration of branch metrics in § __.23(b)(1)(i)(A) and benchmarks in § __.23(b)(1)(i)(B) for the evaluation of a bank’s branch distribution analysis, the agencies also proposed to consider the availability of branches in the following geographic areas: (1) low or very low branch access census tracts; (2) middle- and upper-income census tracts in which branches deliver services to low- and moderate-income individuals; (3) distressed or underserved nonmetropolitan middle-income census tracts; and (4) Native Land Areas.

In § __.23(b)(1)(i)(C)(I), the agencies proposed providing favorable consideration for banks that operate branches in “low branch access census tracts” or “very low branch access census tracts.”⁹⁹⁵ The agencies proposed definitions for these two types of census tracts.⁹⁹⁶ A census tract would qualify as low branch access or very low branch access based on the number of bank branches, including branches of commercial banks, savings and loan associations, and credit unions found within a certain distance of the census tract’s center of population.⁹⁹⁷ Low branch access census tracts would have been those in which there is only one branch within this distance

⁹⁹³ The aggregate number of branches in an assessment area figure in a market benchmark is comprised of full-service and limited-service branch types as defined in the FDIC’s Summary of Deposits.

⁹⁹⁴ The agencies intend to issue guidance to explain the term “full-service bank” and how the agencies will apply the term.

⁹⁹⁵ See proposed § __.23(b)(1)(i)(C)(I).

⁹⁹⁶ See proposed § __.12.

⁹⁹⁷ See *id.*

or within the census tract itself, and very low branch access census tracts would have been those in which there are no branches within this distance or within the census tract itself.⁹⁹⁸

The agencies indicated in the proposal that they were considering two distance-based approaches: (1) the proposed “fixed distance approach;” and (2) the alternative “local approach,” to determine the relevant distance threshold for each census tract. The agencies also considered a second, more qualitative alternative, which did not set specific geographic distances in the identification of areas that may experience limited access to branches.

Proposed approach to low and very low branch access (fixed distance approach). In the proposed approach, a fixed distance threshold would be established based on whether the census tract is in an urban, suburban, or rural area.⁹⁹⁹ Urban areas would have a distance threshold of two miles, suburban areas would have a distance threshold of five miles, and rural areas would have a distance threshold of 10 miles.¹⁰⁰⁰ The agencies proposed providing the following scenarios with favorable consideration: (1) a bank opens a branch that alleviates one or more census tracts’ very low branch access status; or (2) a bank maintains a branch in one or more census tracts’ low branch access status. In addition, the agencies proposed assessing whether a bank provides effective alternatives for reaching low- and moderate-income individuals, communities, and businesses when closing a branch that would lead to one or more census tracts being designated low or very low branch access. The agencies sought feedback on how narrowly designations of low branch access and very low branch access should be tailored so that banks may target additional retail services appropriately.

Alternative approach to low and very low branch access (local alternative approach). In the alternative approach described by the agencies in the **SUPPLEMENTARY INFORMATION** of the proposal, a separate local area would be identified for each set of central counties of a metropolitan area and metropolitan division, the outlying counties of each metropolitan area and metropolitan division, and the nonmetropolitan counties of each State, as defined by the Office of Management and Budget. This alternative approach would determine the distance thresholds for defining low and very low branch access census tracts relative to local variation in population density and land-use patterns, and would adjust over time as branches open and close. The agencies sought feedback on how geographies should be divided to appropriately identify different distance thresholds and whether a fixed distance standard, such as that in the proposed approach, or a locally determined distance threshold, such as in the alternative approach, would be most appropriate when identifying areas with limited branch access.

Qualitative alternative approach to evaluating areas with few or no branches (qualitative alternative approach). Under a qualitative alternative approach described by the agencies in the **SUPPLEMENTARY INFORMATION** of the proposal, the agencies would not define a “low branch access census tract,” a “very low branch access census tract,” or any similar term. Instead, in addition to considering the bank’s branch distribution metrics compared to benchmarks and record of opening and closing branches for each facility-based assessment area, the agencies would undertake a qualitative consideration of certain factors related to low- and

⁹⁹⁸ See *id.*

⁹⁹⁹ See proposed § __.12.

¹⁰⁰⁰ See *id.*

moderate-income census tracts with few or no branches. These factors may include considering the availability of a bank's branches; the bank's actions to maintain branches; the bank's actions to otherwise deliver banking services; and specific and concrete actions by a bank to open branches in these areas.

Under the proposed and alternative approaches, the agencies proposed providing the following scenarios with favorable consideration: (1) a bank opens a branch that alleviates one or more census tracts' very low branch access status; or (2) a bank maintains a branch in one or more census tracts' low branch access status. In addition, the agencies proposed assessing whether a bank provides effective alternatives for reaching low- and moderate-income individuals, communities, and businesses when closing a branch that would lead to one or more census tracts being designated low or very low branch access. The agencies sought feedback on how narrowly designations of low branch access and very low branch access should be tailored so that banks may target additional retail services appropriately.

Lastly, the agencies sought feedback on whether the presence of credit unions should be considered under any of the proposed approaches, and on other alternative approaches or definitions that should be considered in designating places with limited branch access.

Comments Received

In response to the agencies' proposed fixed distance approach and the alternative local distance approach, commenters were divided in their views on which of the two approaches would be most appropriate to use in determining the relevant distance threshold for census tracts proposed to be defined as low or very low branch access. Several commenters supported the fixed distance approach, with one commenter stating it would create a more consistent framework. This commenter argued that the local approach may disincentivize banks from adding branches in low branch access areas as it would result in the distance threshold decreasing in the next evaluation. By contrast, other commenters argued that the local approach would be preferable, with one of these commenters stating that the local approach has a broader reach and is a more precise measure due to the local context. A few other commenters asked for clarification on how low and very low branch access would be considered in the examination, with one of these commenters further noting that the concept lacked clarity with respect to the impact opening or closing of branches would have on these geographies. One commenter suggested that a smaller distance, such as a quarter mile, should be used in densely populated areas. Another commenter suggested that the definitions of "low" and "very low" branch access should connect to branches per population and rates of unbanked and underbanked populations, and that the agencies should consider community input in making a final determination.

Commenters' views on how geographies should be divided were generally in line with the proposed approach. However, one commenter recommended that the agencies use existing data tools to delineate or divide geographies for each distance threshold. For example, the agencies could use a combination of the FFIEC's guidance on census tracts to delineate or divide geographies for each distance threshold and the USDA's Economic Research Service, which provides rural-urban codes to classify how commutable certain rural and urban census tracts are based on urbanization, population density, and daily commuting patterns.

In response to how often local distances for the alternative local distance approach, if adopted, should be updated, some commenters recommended different frequencies including: updating in real-time using geographic mapping applications; annually; over a period of under

three years; and no more frequently than every five years so as not to exacerbate issues regarding distance thresholds decreasing, and the resulting increase in areas being designated as low branch access.

Some commenters expressed a range of views with respect to whether credit union branches should be considered in the geographic considerations. Most of these commenters believed that credit union locations should not be considered for several reasons, including that credit unions are not subject to CRA, have limitations in their membership that could disqualify members of the community from utilizing their services, and pursue very different models from banks. Two commenters believed credit union locations should be included, with one commenter stating that credit union product offerings are very similar to those of banks. One commenter noted that if activities evaluated under the CRA are offered by credit unions, then their locations should be considered.

Final Rule

The agencies are not finalizing proposed § __.23(b)(1)(i)(C)(1) to provide consideration for the availability of branches in low or very low branch access census tracts in the evaluation of a bank's branch distribution analysis. In making this determination, the agencies considered several points. As noted by some commenters, the agencies considered that while each of the approaches identified by the agencies had benefits, there were also downsides to each approach. The decision to remove these criteria is responsive to comments received regarding limitations of each of the methodologies proposed in terms of including local context, minimizing unnecessary complexity in the final rule, and avoiding unintended effects. Furthermore, the agencies believe that, without direct consideration of low and very low branch access areas, the final rule already includes sufficient consideration for branches in additional geographic areas which supplement the benchmarks based on tract-level median incomes. The final rule includes additional geographic considerations for areas that include: middle- and upper-income census tracts with branches delivering services used by low- and moderate-income individuals, families, or households; distressed or underserved nonmetropolitan middle-income census tracts that are defined, in part, based on being remote and lacking population density; and Native Land Areas. These additional geographic considerations are discussed below.

§ __.23(b)(2)(i)(C)(1) Middle- and Upper-Income Census Tracts

§ __.23(b)(2)(i)(C)(2) Distressed or Underserved Nonmetropolitan Middle-Income Census Tracts

§ __.23(b)(2)(i)(C)(3) Native Land Areas

The Agencies' Proposal

In addition to the agencies' proposal to designate low and very low branch access census tracts, the agencies proposed providing qualitative consideration for banks operating branches in other geographic areas.¹⁰⁰¹ These areas would be favorably considered when evaluating overall accessibility of delivery systems, including to low- and moderate-income populations.

Specifically, in § __.23(b)(1)(i)(C)(2), the agencies proposed providing qualitative consideration for retail branching in middle- and upper-income census tracts if a bank can

¹⁰⁰¹ See proposed § __.23(b)(1)(i)(C)(2)-(4).

demonstrate that branch locations in these geographies deliver services to low- or moderate-income individuals.¹⁰⁰² The agencies sought feedback on what information banks should be required to provide to demonstrate the delivery of such services to low- or moderate-income individuals.

In addition, in § __.23(b)(1)(i)(C)(3), the agencies proposed providing qualitative consideration for banks that operate branches in a “distressed or underserved nonmetropolitan middle-income census tract” as defined in proposed § __.12. The agencies sought feedback on whether branches in distressed or underserved nonmetropolitan middle-income census tracts should receive qualitative consideration without additional bank documentation that the branch provides services to low- or moderate-income individuals. Finally, in § __.23(b)(1)(i)(C)(4), the agencies proposed providing qualitative consideration if banks operate branches in “Native Land Areas” as defined in proposed § __.12.

Comments Received

With respect to providing consideration for retail branching in middle- and upper-income census tracts, several commenters supported favorable qualitative consideration based on proximity to low- or moderate-income census tracts or if a bank can demonstrate with data that these locations deliver services to low- and moderate-income individuals. However, a few commenters opposed giving qualitative consideration for retail branching in higher-income census tracts, with one commenter stating that it could be used to avoid opening branches in low- or moderate-income census tracts. A few other commenters also opposed giving qualitative credit for branches in middle- and upper-income census tracts on the basis that it would be redundant, with one commenter explaining that if the agencies adopt the proposal to consider deposit products used by customers residing in low- or moderate-income census tracts, regardless of the location of the branch providing the product, that performance measures would already capture branches in non-low- or moderate-income census tracts that effectively offer deposit products to customers residing in low- or moderate-income census tracts.

Some commenters generally supported favorable qualitative consideration for branches located in distressed and underserved nonmetropolitan middle-income census tracts. A few commenters supported consideration only if documentation is provided that demonstrates these branches serve low- or moderate-income individuals. Two of these commenters noted that deposits data could be utilized to support usage by low- or moderate-income individuals. Other commenters supported the addition of positive consideration for banks that operated branches in Native Land Areas. One commenter requested that U.S. military installations be added to the list of geographies where banks could receive additional consideration if they have branches placed in these geographies.

Final Rule

After considering the comments received, the agencies are adopting proposed § __.23(b)(1)(i)(C)(2)-(4), renumbered in the final rule as § __.23(b)(2)(i)(C)(1)-(3), largely as proposed with clarifying edits. In evaluating the overall accessibility of retail banking services, including to low- and moderate-income individuals, families, or households and low- and moderate-income census tracts, the agencies believe it appropriate to provide qualitative

¹⁰⁰² See proposed § __.23(b)(1)(i)(C)(2).

consideration for operating branches in: (1) middle- and upper-income census tracts in which branches deliver services to low- and moderate-income individuals, families, or households to the extent that low- and moderate-income individuals, families, or households use the services offered; (2) distressed and underserved nonmetropolitan middle-income census tracts; and (3) Native Land Areas.

The agencies believe that it is appropriate to extend qualitative consideration to bank branches providing retail banking services to low- and moderate-income individuals, families, or households because access to those services is integral to the financial well-being of low- and moderate-income individuals, families, or households wherever they reside. Furthermore, the agencies agree with the commenters' recommendation that, to ensure that the services provided confer an actual benefit to low- and moderate-income individuals, families, or households, the consideration of branches in middle- and upper-income census tracts should include a requirement that banks demonstrate the extent to which low- and moderate-income individuals, families, or households utilize the services at these branch locations. Accordingly, the final rule provides that if a bank seeks consideration for a branch located in a middle- or upper-income census tract, the bank should be prepared to provide documentation that indicates the extent to which low- or moderate-income individuals, families, or households use the services offered. To the extent helpful, the agencies will consider providing additional guidance to banks or examiners regarding how banks could demonstrate both that their branches in middle- or upper-income tracts deliver services to low- or moderate-income individuals, families, or households, and the extent to which low- and moderate-income individuals, families, or households use the services offered.

The agencies expect banks to use available information to demonstrate the degree to which bank branch services in middle- and upper-income census tracts are used by low- and moderate-income individuals, families, or households. However, in response to commenters who suggested the use of deposits data for these purposes, the agencies note that the deposits data reported to the agencies at the county level under final § __.42(b)(3) does not have the necessary information for the agencies to use that data in making a determination whether branches are used by low- or moderate-income individuals, families, or households. In addition, deposits data reported to the agencies under final § __.42(b)(3) will be reported only by large banks with assets over \$10 billion, as well as other banks that may opt in to reporting these data. As a result, these data will not be useful for determining the income level of the census tracts where depositors live or the depositors' income level. However, despite the limitations of deposits data, the agencies encourage banks to use information available to the bank to demonstrate that branches outside of low- and moderate-income census tracts are serving low- and moderate-income individuals, families, or households.

The agencies also believe that qualitative consideration should be given to the availability of branches in distressed or underserved nonmetropolitan middle-income census tract because, given the economic characteristics of these areas, residents, businesses, and farms may have limited access to financial services. Additionally, in facility-based assessment areas where there are few or no low- and moderate-income census tracts, the consideration of bank branch availability in distressed or underserved census tracts could provide examiners with additional insight into the bank's overall branch availability.

The agencies also recognize that branch access is limited for many Native communities and consider it appropriate to emphasize bank placement of branches in Native Land Areas.¹⁰⁰³ As previously discussed in § __.13(j), majority-Native American counties have an average of two bank branches compared to the nine-branch average in nonmetropolitan counties and well below the 27-branch overall average for all counties.¹⁰⁰⁴ For that reason, the final rule provides additional qualitative consideration for bank branches located in Native Land Areas. In response to one commenter who suggested additional consideration of branches on military installations the agencies note that statistics from the 2015 to 2019 American Community Survey show that current active-duty and reserve members of the military, as well as veterans live in households with higher incomes than households that do not contain veterans and decline the inclusion of this addition to the final rule.

Finally, the agencies believe that other changes to the final rule regarding the positive consideration of deposits products address concerns raised by some commenters regarding the redundancies of considering deposits products used by customers in low- and moderate-income census tracts, regardless of branch location.

§ __.23(b)(2)(ii) *Branch Openings and Closings*

§ __.23(b)(2)(iii) *Branch Hours of Operation and Services*

Current Approach

Under current CRA regulations, the agencies evaluate a bank's branch openings and closings during the evaluation period relative to the bank's branch distribution and consider if any changes impacted low- or moderate-income census tracts and accessibility for low- or moderate-income individuals.¹⁰⁰⁵

The Agencies' Proposal

In reviewing a bank's branch availability and services, in proposed § __.23(b)(1)(ii), the agencies proposed to evaluate a bank's record of opening and closing branch offices in facility-based assessment areas since the previous examination to inform the degree of accessibility of banking services to low- and moderate-income individuals and in low- and moderate-income census tracts. Specifically, the agencies proposed to include an assessment of whether branch openings and closings improved or adversely affected the accessibility of its delivery systems, particularly in low- and moderate-income census tracts and to low- and moderate-income individuals.

In proposed § __.23(b)(1)(iii)(A), the agencies proposed to evaluate the reasonableness of branch hours in low- and moderate-income census tracts compared to middle- and upper-income census tracts, including but not limited to whether branches offer extended and weekend hours.

¹⁰⁰³ See Miriam Jorgensen and Randall K.Q. Akee, *Access to Capital and Credit in Native Communities: A Data Review*, Native Nations Institute (Feb. 2017), https://www.novoco.com/sites/default/files/atoms/files/nni_find_access_to_capital_and_credit_in_native_communities_020117.pdf.

¹⁰⁰⁴ Information calculated using Summary of Deposits (2020).

¹⁰⁰⁵ See current 12 CFR __.24(d)(2); see also Q&A § __.24(d)—1.

The agencies also proposed in § __.23(b)(1)(iii)(B) to evaluate the range of services provided at branch locations that improve access to financial services or decrease costs for low- or moderate-income individuals. The agencies proposed further that examples of such services could include, but are not limited to:

- Providing bilingual/translation services;¹⁰⁰⁶
- Free or low-cost check cashing services, including government and payroll check cashing services;¹⁰⁰⁷
- Reasonably priced international remittance services;¹⁰⁰⁸ and
- Electronic benefit transfer accounts.¹⁰⁰⁹

The agencies sought feedback on whether there are other branch-based services that could be considered as responsive to low- and moderate-income needs. The agencies also proposed in § __.23(b)(1)(iii)(C) to evaluate the degree to which branch services are responsive to the needs of low- and moderate-income individuals in a bank's facility assessment area.

Comments Received

Several commenters emphasized the importance of branches, with some recommending additional consideration as an incentive for banks that operate and maintain branches in low- or moderate-income, rural, minority, or Native communities. Other commenters recommended stronger consequences, including negative consideration, such as penalties, for banks closing branches in low- and moderate-income and majority- minority communities, including Native American communities. Some commenters recommended that the agencies analyze branch closures over a period of time that is longer than the examination period and implement related quantitative performance metrics. Another commenter believed that qualitative factors should be used, as it would be unreasonable to draw conclusions about branch accessibility by relying only on quantitative calculations of physical branch distribution. Two commenters requested guidance related to how a disproportionate number of closings or openings in a low- or moderate-income census tract would impact the service test score.

Commenters provided a variety of examples of other branch-based services that could be considered responsive to low- and moderate-income needs. Examples of such services included language services geared to individuals with limited English proficiency, including at ATM and other remote facilities; other culturally appropriate services and resources; individual tax identification number (ITIN) accounts; credit-builder loans; other products and services targeting low- and moderate-income consumers, including but not limited to low- and moderate-income consumers with disabilities; free notary services; free or low-cost money orders; access for people with prior banking issues, such as those flagged in ChexSystems; and activities that address potential fraud. One commenter suggested the ability to come into a branch while also being able to meet with a loan officer virtually as an example of a branch-based service that

¹⁰⁰⁶ See proposed § __.23(b)(1)(iii)(B)(1).

¹⁰⁰⁷ See proposed § __.23(b)(1)(iii)(B)(2).

¹⁰⁰⁸ See proposed § __.23(b)(1)(iii)(B)(3).

¹⁰⁰⁹ See proposed § __.23(b)(1)(iii)(B)(4).

should receive consideration. Other commenters suggested that deposit-taking automated services and ATMs/interactive teller machines could be considered responsive branch-based services, with one of these commenters particularly noting those in banking deserts could be considered responsive to low branch access areas. A few commenters expressed support for, and noted the importance of, banking services including hours of operation and services responsive to low- and moderate-income individuals and in low- and moderate-income communities. Other commenters requested that when evaluating banking services such as extended hours and ATM placement, the agencies should consider different business models (*e.g.*, a grocery store in middle- or upper-income areas) and clarify that a bank would not be expected to offer such hours at branches located in low- or moderate-income census tracts if the bank does not do so at similarly-situated branches located in middle- or upper-income census tracts.

Final Rule

The agencies are finalizing § __.23(b)(1)(ii) (branch openings and closings) and (b)(1)(iii) (branch hours of operation and services) as proposed, renumbered in the final rule as § __.23(b)(2)(ii) and (b)(2)(iii), respectively, with technical edits not intended to have a change in meaning, including revisions of the language with respect to “check cashing services” and “electronic benefit transfer accounts.”

Regarding branch openings and closings, the final rule builds on the agencies’ current practice in which the evaluation includes an assessment of whether branch openings and closings improved or adversely affected the accessibility of the bank’s retail banking services, particularly to low- and moderate-income census tracts and low- and moderate-income individuals, families, or households. In response to commenters who recommended using incentives for banks opening or penalties for closing branches in communities of need, the agencies note that the quantitative measures of final § __.23(b)(1)(ii) are a single aspect of the branch availability evaluation that, similar to the current CRA regulations, extends positive consideration for branch openings increasing accessibility of banking services to low- and moderate-income individuals, families, or households and census tracts. Similarly, branch closings that limit or otherwise restrict the availability of retail banking for the same individuals and geographies are also considered in evaluating bank performance. Under the final rule, examiners will also use qualitative factors, such as performance context, to draw conclusions regarding a bank’s openings and closings of branches, which may impact a bank’s performance for this evaluation. Importantly, although not considered for purposes of the CRA evaluation, the agencies do consider opening and closing branches in minority areas for purposes of fair lending reviews.

Also in response to comments, the agencies further note that evaluating branch opening and closings over a different time period than the time period during which other activities are evaluated with respect to the Retail Services and Products Test and other tests would make it difficult to measure the bank’s overall CRA performance within the set evaluation period. The agencies believe that accounting for branch openings and closings within the same evaluation period as all other bank activities gives a clear overall picture of how well the bank is serving its community within a set time period.

With respect to the bank’s hours of operation and services in low- and moderate-income census tracts, the agencies considered comments regarding the consideration of different business models and branch hours expectations in the final rule. The agencies believe the evaluation should remain qualitative and that it is not appropriate to require that branches offer

extended or weekend hours. For that reason, final § __.23(b)(1)(iii)(A) considers the reasonableness of bank branch hours in low- and moderate-income census tracts in comparison to middle- and upper-income census tracts as the primary qualitative consideration. Whether a branch offers extended or weekend hours is only one means through which the bank can demonstrate the reasonableness of its hours in low- and moderate-income census tracts. During their review, examiners will consider a range of qualitative factors, including the bank's business model.

The agencies received a variety of suggestions from commenters as to additional responsive branch-based services and considered whether these suggested services should be added to the agencies' proposed list of services considering the range of services in final § __.23(b)(1)(iii)(B). However, the agencies do not believe that it is necessary to add the additional examples suggested by commenters to the list provided in the final rule because it is not an exhaustive list. The agencies note that examiners may consider additional services provided at bank branches in low-, moderate-, middle-, and upper-income census tracts. Moreover, with respect to some recommendations made by commenters, such as providing CRA consideration for language services for individuals with limited English proficiency and other culturally appropriate services and resources, the agencies agree that this type of activity should be eligible for CRA credit; therefore, the Retail Services and Products Test includes bilingual and translation services in the evaluation of branch services. Other recommendations, such as placement of ATMs and extended hours are also already considered in the Retail Services and Products Test. The agencies are adopting § __.23(b)(1)(iii)(C) as proposed with minor edits as commenters supported responsive retail banking services.

§ __.23(b)(3) Remote Service Facility Availability

Current Approach

Currently, examiners determine whether a large bank's non-branch or alternative delivery systems¹⁰¹⁰, such as ATMs, are available and effective in providing retail banking services in low- and moderate-income areas and to low- and moderate-income individuals.¹⁰¹¹ With respect to alternative delivery systems, examiners consider factors such as: the ease of access and use; reliability of the system; range of services delivered; cost to consumers as compared with the bank's other delivery systems; and the rate of adoption and use.¹⁰¹² Examiners also consider any information a bank maintains and provides to examiners to demonstrate that the bank's

¹⁰¹⁰ The Board's and OCC's current CRA regulations provide an exemplary and non-exhaustive list of alternative systems for delivering retail banking services which include: "ATMs, ATMs not owned or operated by or exclusively for the bank, banking by telephone or computer, loan production offices, and bank-at-work or bank-by-mail programs." See current 12 CFR __.24(d)(3). Under the FDIC's CRA regulations, current 12 CFR 345.24(d)(3) describes alternative delivery systems as "RSFs, RSFs not owned or operated by or exclusively for the bank, banking by telephone or computer, loan production offices, and bank-at-work or bank-by-mail programs."

¹⁰¹¹ See Interagency Large Institution CRA Examination Procedures; see also Q&A § __.24(d)(3)—1.

¹⁰¹² See Q&A § __.24(d)(3)—1.

alternative delivery systems are available to, and used by, low- or moderate-income individuals, such as data on customer usage or transactions.¹⁰¹³ Although examiners may consider several factors, evaluations of non-branch delivery systems generally focus on the distribution of the bank's ATMs across low-, moderate-, middle-, and upper-income census tracts, and a comparison of that distribution to the percentage of census tracts by income level, households (or families), businesses, or populations across these census tracts, particularly low- and moderate-income census tracts. Examiners also review the types of services offered by a bank's ATMs (*i.e.*, deposit-taking and cash-only) and consider other qualitative factors that improve access to ATMs in low- and moderate-income census tracts.

The Agencies' Proposal

The agencies proposed to separately evaluate a large bank's remote service facility availability¹⁰¹⁴ from the bank's digital and other delivery systems in order to focus on the availability of these facilities and leverage community benchmarks in the evaluation. In comparison to the current CRA regulations, the agencies proposed an independent evaluation of remote service facilities to underscore the effects these facilities have on low- and moderate-income individuals and communities.

As with the branch distribution analysis, the agencies proposed to evaluate the bank's distribution of remote service facilities among low-, moderate-, middle-, and upper-income census tracts in § __.23(b)(2)(i), referred to as metrics, compared to the three data points in § __.23(b)(2)(ii), referred to as benchmarks, which would complement a qualitative evaluation. The agencies proposed that an evaluation of a bank's remote service facilities distribution metrics would be informed by comparing those metrics to the following benchmarks, which are specific to each facility-based assessment area: (1) the percentage of census tracts in the facility-based assessment area that are low-, moderate-, middle-, and upper-income census tracts;¹⁰¹⁵ (2) the percentage of households in the facility-based assessment area that are in low-, moderate-, middle-, and upper-income census tracts;¹⁰¹⁶ and (3) the percentage of total businesses in the facility-based assessment area that are in low-, moderate-, middle-, and upper-income census tracts.¹⁰¹⁷ The evaluation would also include an assessment of remote service facilities in low- and moderate-income census tracts and changes to the placement of remote service facilities since the previous examination.

In addition to using the community benchmarks, in § __.23(b)(2)(iii), the agencies proposed to consider whether the bank offers customers fee-free access to out-of-network ATMs in low- and moderate-income census tracts.

¹⁰¹³ *See id.*

¹⁰¹⁴ The agencies to define "remote service facility" to mean an automated, virtually staffed, or unstaffed banking facility owned or operated by, or operated exclusively for, the bank, such as an ATM, interactive teller machine, cash dispensing machine, or other remote electronic facility at which deposits are received, cash dispersed, or money lent. *See* proposed § __.12.

¹⁰¹⁵ *See* proposed § __.23(b)(2)(ii)(A).

¹⁰¹⁶ *See* proposed § __.23(b)(2)(ii)(B).

¹⁰¹⁷ *See* proposed § __.23(b)(2)(ii)(C).

Comments Received

There was no consensus among commenters regarding the evaluation of remote service facilities such as ATMs. A few commenters did not support the consideration of ATMs when evaluating a bank's presence in low- or moderate-income communities, with one of these commenters noting that ATMs are not the same as full-service branches. A few other commenters made specific recommendations for CRA consideration, which included considering ATM placement in low- and moderate-income geographies on an optional basis or providing favorable consideration in the Retail Services and Products Test conclusion but not downgrading a bank if it does not place a certain number of ATMs in low- and moderate-income census tracts, and favorably considering a bank's policy to reimburse fees when customers access out-of-network ATMs or partner with third-party ATM networks that have robust coverage of low- and moderate-income areas. One commenter asked for clarification on how seasonal ATMs would be considered in the evaluation.

Final Rule

The agencies are adopting proposed § __.23(b)(2)(i) and (b)(2)(ii), renumbered in the final rule as § __.23(b)(3)(i) and (b)(3)(ii), pertaining to the remote service facilities distribution metrics and benchmarks, respectively, with a revision to add the availability of remote service facilities in other geographies and other technical edits, as explained below. The agencies believe that the use of metrics and benchmarks will allow for the comparison of a bank's remote service facilities availability to local data (i.e., percentage of census tracts, households, and total businesses) to help determine whether remote service facilities are accessible in low- or moderate-income communities, to individuals of different income levels, and to businesses in the assessment area and are incorporating and building on current practice. The agencies believe this type of comparison requires robust data that would not be generated with an optional evaluation. Accordingly, the agencies decline to follow commenters' suggestion to make this an optional evaluation for large banks.

The agencies agree with commenter suggestions that both branches and remote service facilities remain an important component in the evaluation of a bank's delivery systems as a means to obtain credit and banking services. For that reason, the agencies are further adopting final § __.23(b)(3)(i)(C) with respect to additional geographic considerations to mirror the other geographic areas considered for branches in final § __.23(b)(2)(i)(C). The agencies also agree that while both are important, remote service facilities are not the same as branches and retained the remote service facility evaluation independent from the branch evaluation. The agencies believe that commenters' concerns that bank performance on the Retail Services and Products Test may be downgraded if it does not have ATMs in low- or moderate-income census tracts will also be addressed by the additional consideration of remote service facilities in: (1) middle- and upper-income census tracts in which a remote service facility delivers services to low- and moderate-income individuals, families, or households, to the extent that low- and moderate-income individuals, families, or households use the services offered; (2) distressed or underserved nonmetropolitan middle-income census tracts; and (3) Native Land Areas.

Finally, the agencies are adopting § __.23(b)(2)(iii), renumbered in the final rule as § __.23(b)(3)(ii), as proposed. As explained in the proposal, the agencies believe that bank partnerships with out-of-network ATM providers may contribute to expanded access to financial services and may assist with lowering access costs, which can be particularly important in low-

and moderate-income census tracts. The agencies changed the heading to the paragraph to conform to the regulatory text which referenced ATMs. A commenter's suggestion to consider seasonal ATMs may be considered in future guidance.

§ __.23(b)(4) *Digital Delivery Systems and Other Delivery Systems*

Current Approach and the Agencies' Proposal

Currently, examiners determine whether a large bank's non-branch or alternative delivery systems, such as mobile and online banking services, and telephone banking are available and effective in providing retail banking services in low- and moderate-income areas and to low- and moderate-income individuals. Examiners consider factors such as the ease of access and use, reliability of the system, range of services delivered, cost to consumers as compared with the bank's other delivery systems, and rate of adoption and use. Examiners also consider any information a bank maintains to demonstrate that the bank's alternative delivery systems are available to, and used by, low- or moderate-income individuals, such as data on customer usage or transactions.

The agencies proposed to evaluate the availability and responsiveness of a bank's digital delivery systems (e.g., mobile and online banking services) and other delivery systems (e.g., telephone banking, bank-by-mail, and bank-at-work programs), including to low- and moderate-income individuals, as the third component of the delivery systems evaluation in proposed § __.23(b)(3). The agencies proposed to require this evaluation for large banks with assets over \$10 billion, and to permit large banks with assets of \$10 billion or less to opt to have this component of delivery systems evaluated under the Retail Services and Products Test.¹⁰¹⁸

The agencies explained in the proposal that they believe that it is important to evaluate a bank's retail banking services and products comprehensively and recognize that banks deliver services beyond branch and remote service facilities. Because usage of online and mobile banking delivery systems by households is pervasive and is expected to continue to grow, the agencies further explained that these trends support a renewed focus on the evaluation of digital and other delivery systems while also recognizing that many consumers continue to rely on branches.

The agencies proposed using three factors to evaluate the availability and responsiveness of a bank's digital and other delivery systems: (1) digital activity by individuals in low-, moderate-, middle-, and upper-income census tracts;¹⁰¹⁹ (2) the range of digital and other delivery systems;¹⁰²⁰ and (3) the bank's strategy and initiatives to serve low- and moderate-income individuals with digital and other delivery systems.¹⁰²¹ Regarding the first factor, the agencies proposed to measure digital activity by individuals in low-, moderate-, middle-, and upper-income census tracts and provided examples of information that could be used to inform this

¹⁰¹⁸ See proposed § __.23(b).

¹⁰¹⁹ See proposed § __.23(b)(3)(i).

¹⁰²⁰ See proposed § __.23(b)(3)(ii).

¹⁰²¹ See proposed § __.23(b)(3)(iii).

analysis.¹⁰²² The proposal included examples such as the number of checking and savings accounts opened digitally, and account holder usage data by type of digital and other delivery system.¹⁰²³ The agencies proposed evaluating this data using census tract income level since banks have stated that they do not routinely collect customer income data at account opening.¹⁰²⁴ With respect to the second factor, the agencies proposed to qualitatively consider the range of a bank's digital and other delivery systems, including but not limited to: online banking; mobile banking; and telephone banking.¹⁰²⁵ In addition, the agencies proposed to consider a bank's strategies and initiatives to meet low- and moderate-income consumer needs through digital and other delivery systems.¹⁰²⁶ The agencies explained that these strategies and initiatives could include, for example, marketing and outreach activities to increase uptake of these channels by low- and moderate-income individuals or partnerships with community-based organizations serving targeted populations.

The agencies sought feedback on additional ways to evaluate the digital activity of individuals in low-, moderate-, middle-, and upper-income census tracts, as part of a bank's digital and other delivery systems evaluation. Additionally, the agencies sought feedback on whether affordability should be one of the factors used in evaluating digital and other delivery systems and, if so, what data the agencies should consider. Finally, the agencies sought feedback on comparators that could be considered to assess the degree to which a bank is reaching individuals in low- or moderate-income census tracts through digital and other delivery systems.

Comments Received

Some commenters expressed concern that the data and methodology for reviewing a bank's digital and other delivery systems would be too rigid when considering the quantitative metrics and the use of proxies (such as the number of checking accounts opened digitally in low- or moderate-income areas). These commenters further raised concerns that these metrics do not assess whether a bank's delivery systems are accessible to low- or moderate-income consumers. One commenter supported the evaluation of mobile and online banking. One commenter, while supportive of the agencies' proposal, noted that there are limitations in evaluating a number of the proposed activities at a census-tract level, particularly in nonmetropolitan areas, and urged the agencies to provide, instead, full qualitative consideration for this component. A few commenters generally stated that accessibility and responsiveness of a bank's digital and other delivery systems are not accurately measured by account opening and usage rates. One of these commenters suggested the final rule should focus on evaluation of the accessibility of a bank's digital and other delivery systems and the bank's approaches for serving low- or moderate-income individuals with these systems, rather than focusing on account opening and usage rates associated with these systems. Other commenters recommended comparative data such as customer location, click rates on promotional emails, broadband

¹⁰²² See proposed § __.23(b)(3)(i).

¹⁰²³ See proposed § __.23(b)(3)(i)(A) and (B).

¹⁰²⁴ See proposed § __.23(b)(3)(i).

¹⁰²⁵ See proposed § __.23(b)(3)(ii).

¹⁰²⁶ See proposed § __.23(b)(3)(iii).

access, and Federal Communications Commission data to assess the degree to which a bank is reaching low- or moderate-income consumers through digital and other delivery systems.

A number of commenters responded to the agencies' request for feedback on ways to further evaluate the digital activity by individuals in low-, moderate-, middle-, and upper-income census tracts as part of the agencies' evaluation of a bank's digital and other delivery systems. Some commenters suggested the agencies should consider product design, marketing, and product uptake via delivery systems on a qualitative basis. Another commenter recommended assessing how active digital accounts are across income levels, comparing a bank to its peers with a market benchmark, displaying data on digital activity in the CRA performance evaluation tables, and verifying representations that modes of access to digital services are available to low- or moderate-income census tracts.

A majority of commenters responding to the agencies' request for feedback agreed that affordability should be a factor in evaluating digital and other delivery systems. Most of these commenters recommended that data on costs and fees, such as overdraft, monthly account maintenance, minimum balance, and dormant account fees, among others, should be collected to determine affordability, with one commenter suggesting low- and moderate-income individuals should be charged lower or no fees for digital services. One commenter recommended considering the difference in fees between in-person application and digital applications to determine if these fees allow for a different level of digital access. One commenter indicated that the agencies should develop specific standards to require banks engaged in digital banking to avoid discriminatory or predatory practices.

Final Rule

Throughout final § __.23(b)(4), the agencies are adopting new definitions of “digital delivery system” and “other delivery system” (based on the substantive provision of proposed § __.23(b)(3)) in order to distinguish and make clear the types of systems encompassed in each delivery channel. The final rule defines “digital delivery system” to mean a “channel through which banks offer retail banking services electronically, such as online banking or mobile banking.”¹⁰²⁷ Under the final rule “other delivery system” is defined to mean a “channel, other than branches, remote services facilities, or digital delivery systems, through which banks offer retail banking services.”¹⁰²⁸ This may include telephone banking, bank-by-mail, or bank-at-work.¹⁰²⁹ In addition, the agencies are clarifying in final § __.23(b)(4) that the evaluation of digital delivery systems and other delivery systems is conducted at the institution level. This change is also consistent with the proposed and final rule approaches described in appendix C.¹⁰³⁰

Specifically, the agencies are finalizing as proposed § __.23(b)(3)(ii), renumbered in the final rule as § __.23(b)(4)(i), regarding the agencies' evaluation of the range of services and products offered by a large bank. Final § __.23(b)(4)(i) provides that, when evaluating the availability

¹⁰²⁷ See final § __.12.

¹⁰²⁸ See *id.*

¹⁰²⁹ See *id.*

¹⁰³⁰ See proposed appendix C.c.3.i.A.2; see also final appendix C.c.3.i.A.2.

and responsiveness of a bank's digital delivery systems and other delivery systems, the agencies consider the range of retail banking services and retail banking products offered through digital delivery systems and other delivery systems. By considering the range of digital delivery systems and other delivery systems, the agencies may then consider additional detail related to those systems, such as the bank's strategy and initiatives to serve low- and moderate-income individuals, families, or households and activity by individuals, families, or households related to those systems.

The agencies are revising proposed § __.23(b)(3)(iii), renumbered in the final rule as § __.23(b)(4)(ii), with additional language in response to commenter feedback that the bank's strategy and initiatives to serve low- and moderate-income individuals, families, or households with digital delivery systems and other delivery systems should be evaluated by considering factors such as cost, features, and marketing. This list of non-exhaustive factors adopted by the agencies were some of the factors recommended by commenters to measure the affordability of digital delivery systems or other delivery systems or otherwise measure the effectiveness of the bank's strategy or initiatives related to those systems. The agencies believe this modification is appropriate and enables consideration of affordability and effectiveness of digital and delivery systems without increasing the data collection burden.

Further, the agencies are revising proposed § __.23(b)(3)(i)(A), renumbered in the final rule as § __.23(b)(4)(iii)(A), to clarify that the number of checking and savings accounts opened during each calendar year of the evaluation period digitally and through other delivery systems are considered by the agencies as evidence of digital delivery systems and other delivery systems. The agencies are also revising proposed § __.23(b)(3)(i)(B) in response to comments, renumbered in the final rule as § __.23(b)(4)(iii)(B), to provide that the agencies will consider the number of checking and savings accounts opened digitally and through other delivery systems that are *active* at the end of each calendar year during the evaluation period as evidence of digital delivery systems and other delivery systems, rather than require banks to provide accountholder usage data, by type, of digital delivery systems and other delivery systems. The agencies believe this revision will reduce the burden for banks providing these data and will build on other data elements in the rule. To provide further clarity, certainty, and consistency in the required information for this evaluation, the agencies removed the "such as" language in proposed § __.23(b)(3)(i), renumbered in the final rule as § __.23(b)(4)(iii), because the agencies consider the checking and savings account information described in paragraphs (b)(3)(i)(A) and (b)(3)(i)(B) of final § __.23. In final § __.23(b)(4)(iii)(C), the agencies indicate that they will consider any other bank data that indicates that bank digital delivery systems and other delivery systems are available to low- and moderate-income individuals, families, or households and low- and moderate-income census tracts.

In response to the commenter that suggested the agencies should provide a fully qualitative consideration for digital and other delivery systems, the agencies decline to implement this recommendation because a strictly qualitative review, without standardized data, limits the evaluation of this component across banks by not providing certainty and consistency in elements reviewed under this component. In addition, without specific data elements, the data banks provide may not support the accessibility and usage of digital delivery systems and other delivery systems. The agencies believe that the quantitative consideration of digital delivery systems and other delivery systems activity, informed by specific data points, combined with the qualitative consideration of the bank's range of services and products and their strategies and

initiatives strikes the right balance to evaluate this component fully. The agencies believe this evaluation is especially important for banks that will not be evaluated under the other components of retail banking services such as branches and remote service facilities.

Although commenters expressed concerns about the rigidity of the data and methodology for reviewing a bank's digital delivery systems and other delivery systems, and that the measures do not adequately represent accessibility or usage of digital delivery systems and other delivery systems by low- or moderate-income individuals, families, or households, the agencies believe these measures are sufficient without additional data collection requirements other than the data collection requirements in the final rule. Moreover, given that banks have stated that they do not typically collect customer income data at account opening for deposit customers, the agencies believe using census tract income level is an appropriate approach.

In response to these concerns and commenters' feedback for other data that may be used to measure availability of digital delivery systems and other delivery systems, the agencies are adopting new § __.23(b)(4)(iii)(C) to allow banks to provide any other data, other than the data required in final paragraphs (b)(4)(iii)(A) and (b)(4)(iii)(B) of this section, to demonstrate that their digital delivery systems and other delivery systems are available to individuals and in census tracts of different income levels, including low- and moderate-income individuals, families, or households, and low- and moderate-income census tracts. The agencies believe this addition will allow banks the flexibility to provide additional information along with the data proposed.

The agencies have carefully considered other recommendations made by commenters, including click rates on promotional emails, broadband access, and others, but have determined, in their supervisory experience, that the data points as finalized will achieve the agencies' goal to provide clarity, consistency, and transparency in the evaluation of a bank's digital delivery systems and other delivery systems without significantly increasing burden to banks.

§ __.23(c) Retail Banking Products Evaluation

§ __.23(c)(1) Scope of Evaluation

Current Approach

Under the current CRA regulations, retail credit products and programs are qualitatively evaluated under the large bank lending test. A bank's lending performance is evaluated by, among other things, its "use of innovative or flexible lending practices in a safe and sound manner to address the credit needs of low- and moderate-income individuals or geographies."¹⁰³¹ Current interagency guidance provides examples that illustrate the range of practices that examiners may consider when evaluating the innovativeness or flexibility of a bank's lending practices and notes that when evaluating such practices, examiners will not be limited to reviewing the overall variety and specific terms and conditions of the credit product themselves.¹⁰³² Examiners also consider whether, and the extent to which, innovative or flexible

¹⁰³¹ See current 12 CFR __.22(b)(5).

¹⁰³² See Q&A § __.22(b)(5)—1.

terms or products augment the success and effectiveness of the bank's loan programs that are intended to address the credit needs of low- or moderate-income geographies or individuals.¹⁰³³

A bank's retail deposit products and services are evaluated under the current service test for large banks, which as explained in the section-by-section analysis of § __.23(a)(1), establishes four criteria for evaluating retail services.¹⁰³⁴ The fourth criterion of the service test—the range of services provided in low-, moderate-, middle-, and upper-income geographies and the degree to which the services are tailored to meet the needs of those geographies¹⁰³⁵—is the primary consideration given to deposit products in the current test. Examiners consider information from the bank's public file and other information provided by the bank that are related to the range of services generally offered at their branches, such as loan and deposit products, and the degree to which services are tailored to meet the needs of particular geographies.¹⁰³⁶ Current interagency guidance also explains that examiners will consider retail banking services that improve access to financial services or decrease costs for low- or moderate-income individuals.¹⁰³⁷ More specifically, interagency guidance identifies low-cost deposit accounts among the examples of retail banking services that improve access to financial services, or decrease costs, for low- or moderate-income individuals.¹⁰³⁸ Examiners also review data regarding the costs and features of deposit products, account usage and retention, geographic location of accountholders, and any other relevant information available, which demonstrates that a bank's services are tailored to meet the convenience and needs of its assessment areas, particularly in low- and moderate-income geographies or to low- and moderate-income individuals.¹⁰³⁹

The Agencies' Proposal

In the second part of the Retail Services and Products Test, the agencies proposed in § __.23(c), an evaluation that focused on large bank: (1) credit products and programs responsive to the needs of low- and moderate-income individuals, small businesses, and small farms; and (2) deposit products responsive to the needs of low- and moderate-income individuals. When applicable to a particular bank, bank performance on both the credit products and programs and the deposit products components of the Retail Services and Products Test would be assessed at the institution level.¹⁰⁴⁰ Evaluation of both these components would be required for large banks with assets over \$10 billion in both of the prior two calendar years, based on the assets reported on its four quarterly Call Reports for each of those calendar

¹⁰⁴⁰ *See* proposed appendix C.c.3.i.

years.¹⁰⁴¹ The proposal required evaluation of only the first component – the responsiveness of credit products and programs – for banks with assets of \$10 billion or less,¹⁰⁴² while all large banks with assets of \$10 billion or less could request additional consideration for their responsive deposit products.

Comments Received

A variety of commenters commented on the proposal to evaluate the responsiveness of credit products and programs and deposit products. Overall, most of these commenters supported the general concepts of the proposal and provided a variety of suggestions for how best to evaluate a bank’s credit and deposit products. A few commenters urged the agencies to provide both a quantitative and qualitative review of responsive credit and deposit products, with a few commenters stating that all features of credit and deposit products should be evaluated including, for example, terms, rates, fees, defaults, and collections. A few other commenters also recommended that the agencies: review the quality of all bank credit and deposit products; evaluate not only the bank’s offering of products, but also how effectively banks connect consumers to these products; consider programs that measure the financial health of consumers; and evaluate all products and programs offered by bank affiliates, subsidiaries, and partnerships for potential evasion of usury caps and other abusive practices. One commenter stated that accessibility and affordability of responsive products and services in low- and moderate-income neighborhoods should be compared against responsive products and services in middle- and upper-income neighborhoods at the assessment area level. Another commenter suggested that the agencies make the focus of the examination not on whether a bank has responsive products “on the shelf,” but the extent to which such products are marketed to, and used by, low- and moderate-income and underserved individuals and communities.

Final Rule

In the final rule, the agencies are adopting § __.23(c) largely as proposed, to evaluate the responsiveness of a bank’s credit products and programs and deposit products, with technical edits related to the overall organization of the scope of the evaluation of retail banking products and revisions to conform to changes made throughout the final rule to provide clarity regarding how the agencies will consider these retail banking products in the evaluation of the Retail Services and Products Test.

Specifically, final § __.23(c) renames the section header from “credit products and programs and deposit products” to “retail banking products evaluation” for conciseness and added the same terminology in the regulatory text where appropriate. No change in meaning is intended with this revision since the evaluation of retail banking products includes credit products and programs and deposit products. The agencies note, however, that the evaluation of retail banking products does not include an evaluation of other products and programs that are not credit products or programs and deposit products such as insurance and financial investment products. In addition, new final § __.23(c)(1) reorganizes and clarifies the scope of the evaluation of credit products and programs in final § __.23(c)(2) and deposit products in final § __.23(c)(3) to

¹⁰⁴¹ See *id.*; see also proposed appendix C.c.3.B.

¹⁰⁴² See proposed § __.23(c).

conform to organizational changes made to the evaluation of delivery systems in § __.23(b) and to other tests in the final rule.

Specifically, final § __.23(c)(1) provides that the agencies evaluate a bank's retail banking products under paragraphs (c)(2) and (c)(3) of this section at the institution level. Final § __.23(c)(1)(i) provides that the agencies will evaluate the credit products and programs of all large banks. Final § __.23(c)(1)(ii) provides that the agencies will evaluate the deposit products of large banks that had assets over \$10 billion as of December 31 in both of the prior two calendar years.¹⁰⁴³ Moreover, consistent with the proposal, under the final rule, the agencies will evaluate the deposit products of large banks that had assets of \$10 billion or less as of December 31 in either of the prior two calendar years only at the bank's option.¹⁰⁴⁴

As explained in the proposal, evaluating credit products and programs and deposit products together in the same test, which as explained above is a change from the current practice, is intended to provide a more holistic evaluation of credit products and program and deposit products that work in tandem to facilitate credit access for low- and moderate-income individuals, families, or households. The agencies believe this change will facilitate a more robust evaluation of a bank's performance with respect to meeting the credit needs of its community, as this evaluation also incorporates important qualitative factors that capture a bank's commitment to serving low- and moderate-income individuals, families, or households, residents of low- and moderate-income census tracts, small businesses, and small farms.

While the agencies agree with commenters perspective that quantitative factors can play a role in determining whether a product or service is responsive, the agencies also believe that a qualitative evaluation should be the predominate method of measuring the responsiveness of retail banking products because it allows for a well-rounded review of the bank's retail banking products, as well as the consideration of the impact such products and programs have on low- and moderate-income individuals, families, or households, and low- and moderate-income census tracts. Although the agencies intend to address many of commenters' suggestions for how to best evaluate a bank's retail banking products through examination procedures and interagency guidance, the agencies also note that examiners may qualitatively consider aspects of retail banking products, such as the features, accessibility, and affordability of such products and programs, to determine whether they are responsive to the needs of low- and moderate-income individuals, families, and households. The agencies believe that, as finalized, § __.23(c) is consistent with the agencies' goal of encouraging the availability of responsive products to low- and moderate-income individuals, families, or households.

The agencies are also making additional revisions to § __.23(c)(2) (credit products and programs) and § __.23(c)(3) (deposit products) that are described below in the respective section-by-section analysis.

§ __.23(c)(2) Credit Products and Programs

Current Approach

¹⁰⁴³ See final § __.23(c)(1)(ii)(A).

¹⁰⁴⁴ See final § __.23(c)(1)(ii)(B).

As discussed above, the current CRA regulations provide consideration for a bank's use of innovative or flexible lending practices in a safe and sound manner to address the credit needs of low- and moderate-income individuals or geographies.¹⁰⁴⁵

The Agencies' Proposal

The agencies proposed in § __.23(c)(1), to qualitatively evaluate the responsiveness of a large bank's credit products and programs to the needs of low- and moderate-income individuals (including through low-cost education loans), small businesses, and small farms.¹⁰⁴⁶ The agencies also proposed in § __.23(c)(1) that they would evaluate whether the bank's credit products and programs are conducted in a safe and sound manner. To qualify for consideration, the agencies proposed to consider relevant information about a bank's credit products and programs, including information provided by the bank and from the bank's public file.¹⁰⁴⁷

The proposal did not provide a specific list of retail lending products and programs that qualified under this provision.¹⁰⁴⁸ Instead, in proposed § __.23(c)(1)(i) through (c)(1)(iii), the agencies proposed an illustrative list of broader categories of responsive credit products and programs that may be responsive to the needs of low- and moderate-income individuals, small businesses, and small farms. Consistent with safe and sound operations, responsive credit may include, but is not limited to, credit products and programs that, in a safe and sound manner: (1) facilitate home mortgage and consumer lending for low- or moderate-income borrowers;¹⁰⁴⁹ (2) meet the needs of small businesses and small farms, including to the smallest businesses and smallest farms;¹⁰⁵⁰ and (3) are conducted in cooperation with MDIs, WDI, LICUs, or Treasury Department-certified CDFIs.¹⁰⁵¹

The agencies requested feedback regarding whether the CRA regulations should list special purpose credit programs as an example of a responsive credit product or program that facilitates home mortgage and consumer lending targeted to low- or moderate-income borrowers. The agencies also requested feedback on whether there are other categories of responsive credit products and programs, offered in a safe and sound manner, that should be taken into consideration when deciding whether to give qualitative consideration to credit products and programs, and whether the agencies should provide specific or general guidance regarding what credit products and programs may be considered especially responsive.

Comments Received

Comments regarding how to evaluate credit products and programs. Several commenters supported the agencies' proposal to evaluate credit products and programs under the Retail

¹⁰⁴⁵ See current 12 CFR __.22(b)(5)

¹⁰⁴⁶ See proposed § __.23(c)(1).

¹⁰⁴⁷ See proposed §§ __.23(c)(1) and __.43(a)(5).

¹⁰⁴⁸ See proposed § __.23(c)(1).

¹⁰⁴⁹ See proposed § __.23(c)(1)(i).

¹⁰⁵⁰ See proposed § __.23(c)(1)(ii).

¹⁰⁵¹ See proposed § __.23(c)(1)(iii).

Services and Products Test. Some commenters identified what they viewed as shortcomings in the proposal and requested clarification or offered suggestions for improvement. For instance, a few commenters asserted that a final rule needs to define, and include an analysis of, affordability based on interest rate caps and/or fees, or establish standards for both consumer and mortgage loans to determine the appropriate level of CRA consideration to grant a financial institution.

Commenters also urged the agencies to develop an ability-to-repay standard, with some noting that the agencies need to regulate third party out-of-state bank partnerships with entities such as payday loan dealers to address what was characterized as evasion of usury limits. A few commenters suggested evaluating credit products, including mortgage and home equity loans that address existing barriers to homeownership, such as stringent underwriting criteria, appraisal bias, and other factors. One of these commenters also suggested that credit products must be offered responsibly and sustainably to small business owners, such as by examining the product's annual percentage rate.

In addition, several commenters urged the agencies to expand the scope of the impact factor review to also include the proposed Retail Services and Product Test. These commenters suggested that the agencies incorporate an analysis of loan pricing and consumer product terms to ensure that retail products are meeting local needs instead of extracting wealth, and further recommended that the agencies evaluate how well loan products match local needs and give credit to activities that close the racial wealth gap by affirmatively serving communities of color. A few commenters stated that CRA rules should clearly penalize branch closures and poor coverage in low- and moderate-income, BIPOC and rural communities. Other commenters stated that the agencies should include in impact scoring branch openings in low- and moderate-income communities, communities of color, and rural communities. These comments are also discussed in the section-by-section analysis of § __.15.

A few commenters objected to the inclusion of credit products, particularly consumer loans, in the evaluation, with one commenter stating that the agencies did not provide implementation guidelines, while the other commenters expressed concern that the public did not have a meaningful opportunity to understand and comment on the requirement to evaluate consumer loans within this test. One commenter suggested that the agencies' proposed analysis of consumer loans as a type of credit product or program would be a departure from the CRA's historical focus on home mortgage and small business loans because consumer loans do not provide the type of foundational, wealth-building credit that the CRA has traditionally focused on promoting and incentivizing; the commenter also indicated that consumer loans may be a poor fit for meeting the needs of low-and moderate-income communities. One commenter recommended that the agencies provide further clarity on how banks will be evaluated for responsiveness under this test.

Comments regarding consumer loans other than automobile loans. Several commenters recommended a qualitative evaluation of consumer loans and made suggestions about the nature and scope of the qualitative evaluation. In general, these commenters expressed that examiners should perform a qualitative analysis to ensure that a bank's consumer lending is responsible and sustainable, such as loan marketing, language access, repayment rates, loan terms, loan pricing (including interest and fees), delinquency and default rates, and collection practices. A commenter suggested that the agencies conduct an analysis of the annual percentage rate (APR) that a bank charges on its consumer loans and compare the bank's APR to the average APR for

the relevant market. Another commenter recommended that the agencies harmonize their CRA regulations as much as possible with the Interagency Lending Principles for Offering Responsible Small-Dollar Loans to further signal regulatory stability and encourage banks to offer more small-dollar loan products, which the commenter characterized as a net benefit to consumers.¹⁰⁵² In contrast, another commenter encouraged the agencies to consider expanded metrics under the Retail Services and Products Test for evaluating the impact of unsecured consumer debt, including loan modifications directly negotiated between the bank and the borrower (without the involvement of a for-profit debt settlement company), as well as a bank's repayment policies regarding concessions to borrowers experiencing financial hardships.

Comments regarding other categories of responsive credit products. The agencies received a number of comments and suggestions regarding additional categories and examples of responsive credit products and programs for consideration. Beyond the proposed products and programs to be considered, the categories suggested by commenters included: affordable products geared to borrowers with limited English proficiency; programs that use alternative data such as rent, utilities, and telecom payments to assist in loan decisioning for applicants who would not otherwise be eligible for mortgage loans based on traditional credit scores; and small dollar mortgages and small loan alternatives to payday lending. Commenters also suggested: credit products offering lower rates after a borrower establishes a payment history; mortgage and home improvement loans with low down payment requirements for first generation homebuyers; mortgage products that are equivalent to the loan products of the Federal Housing Administration, Veteran Affairs, Federal Home Loan Banks, and Housing Financing Agencies; auto and other consumer lending that reduce reliance on high-cost predatory debt; other lending programs and underwriting that do not discriminate against individuals with criminal records; microfinance products and small business lending products that incorporate an evaluation of loan quality and pricing; affordable small installment loan programs; responsive loan products offered by NeighborWorks affiliates; debt repayment and modification programs and policies; negative consideration for predatory activities; responsive loan products that finance equitable media; and personal loans for manufactured housing. Other commenters stated that purchased loans from institutions that do not have the ability to sell loans to the GSEs, or other access to secondary markets, should receive favorable consideration under the Retail Services and Products Test to encourage banks to set up purchasing programs for these loans. One commenter discouraged the agencies from including additional regulatory requirements that have not been specifically vetted in the proposal. Instead, this commenter encouraged the agencies to adopt a final regulation that will allow future guidance to address new approaches as they are developed.

Comments regarding whether the agencies should provide specific or general guidance regarding categories of credit products and programs considered most responsive. Commenters addressing this request for feedback expressed mixed views. Some commenters noted that it was preferable to provide general criteria so as not to discourage a bank from pursuing impactful and responsive activities that may deviate from the specific examples. One commenter stated that guidance should be left general and institutions should be allowed to self-certify responsive products and then justify their choices.

¹⁰⁵² See OCC, FDIC, Board, NCUA, "Interagency Lending Principles for Offering Responsible Small-Dollar Loans" (May 2020), <https://www.fdic.gov/news/press-releases/2020/pr20061a.pdf>.

In contrast, other commenters expressed support for specific guidance. For instance, one commenter supported specific guidance on types of credit products and programs considered especially responsive, with the stipulation that the bank may pursue other impactful or responsive activities that may not be included in the guidance. Commenters urged the agencies to incorporate into the rule: a local qualitative analysis of credit products (and usage) to assure banks meet local needs; reviews of bank lending that include an affordability analysis; penalties such as downgrades for abusive products and practices; and an evaluation of retail credit products that emphasizes the extent to which responsive products are marketed to and used by low- and moderate-income and underserved individuals and communities. Another commenter stated that banks should not be able to pass their CRA examination if they only offer expensive products that do not actually serve the needs of the community. Two commenters suggested that banks should be downgraded for harm such as discrimination, displacement, and fee gouging. A few commenters also suggested that the agencies consider the environmental and climate impact of bank credit products. Some commenters recommended that the CRA framework include scrutiny of bank financing of polluting activities and the associated disparate impact on access to credit in low- and moderate-income communities and communities of color. These comments also suggested the agencies should impose penalties for financing industries that contribute to climate change, particularly in low- and moderate-income neighborhoods, while not financing renewable or clean energy. Other commenters recommended that the agencies provide an illustrative and non-exhaustive list of what the agencies deem to be products and programs that are especially responsive and, when possible, include products that specifically will not qualify as responsive. Commenters suggested the agencies include a submission process, similar to the agencies' proposed confirmation process for community development activities, with one commenter recommending that there be a clear process for banks and strategic partners to seek pre-approval on a given program before fully implementing new ideas. Another commenter suggested that the agencies recommend specific credit products if they have research or studies that support their recommendation.

Comments regarding special purpose credit products. Commenters universally supported the final rule listing special purpose credit programs as an example of a responsive credit product or program that facilitates mortgage and consumer lending targeted to low- or moderate-income borrowers. Some commenters requested that the final rule specify that special purpose credit programs can include programs that focus on either people or communities of color. These commenters supported favorable consideration for special purpose credit programs in CRA examinations and asserted that the agencies should more explicitly recognize the importance of special purpose credit programs as a critical way for banks to serve minority communities. A commenter recommended that the agencies clarify that special purpose credit programs targeted to the needs of minority consumers and communities, and not solely to low- and moderate-income consumers and communities, are highly responsive programs for CRA purposes. Another commenter suggested that the agencies confer "impact points" across all CRA performance tests for banks with special purpose credit programs targeted to racial, ethnic, and other underserved groups. This commenter also suggested that each bank should be required to offer at least one special purpose credit program. Another commenter indicated that special purpose credit programs should be targeted to Black low- and moderate-income consumers and communities and not to other low- and moderate-income consumers and communities that have historically benefited more from CRA. Some of these commenters noted that special purpose credit programs are an important part of the remedy for targeting formerly redlined

neighborhoods and people of color. Other commenters recommended that the final rule specify that special purpose credit products can include home mortgage lending, small business lending, consumer lending, or deposit products. One commenter believed that an explicit provision in the final rule that banks will receive CRA credit for qualified special purpose credit programs at both the bank level, and when targeted geographically to specific areas, at the assessment area level, would encourage more banks to utilize special purpose credit programs as a tool to help disadvantaged individuals. Another commenter addressed the significant uncertainty that exists with special purpose credit programs, noting that the rules could change in the future, leaving them exposed to risk of fair lending violations, and asked for clearer guidance from regulators and examiners. However, two commenters noted that the inclusion of special purpose credit programs would be consistent with recent HUD guidance that the use of such programs in accordance with ECOA and Regulation B is lawful under the Fair Housing Act.

Final Rule

The agencies are adopting § __.23(c)(1), renumbered in the final rule as § __.23(c)(2), largely as proposed pertaining to the evaluation of a bank's credit products and programs, with clarifying edits. Moreover, and as discussed in more detail below, the agencies are also finalizing as proposed the categories of responsive credit products and programs in final § __.23(c)(2)(i), (c)(2)(ii), and (c)(2)(iii). The agencies are also adopting new (c)(2)(iv) and (c)(2)(v) to include low-cost education loans and special purpose credit programs, respectively, as separate categories of responsive credit products and programs.

In final § __.23(c)(2), the agencies are retaining the expectation that the bank's credit products and programs are conducted in a safe and sound manner. The agencies are also adding regulatory text that provides they evaluate whether a bank's credit products and programs are responsive to the credit needs of the bank's entire community as well as the residents of low- and moderate-income census tracts. Consequently, final § __.23(c)(2) provides that the agencies evaluate whether a bank's credit products and programs are, consistent with safe and sound operations, responsive to the credit needs of the bank's entire community, including the needs of low- and moderate-income individuals, families, or households, residents of low- and moderate-income census tracts, small businesses, and small farms. Final § __.23(c)(2) then provides a non-exhaustive list of credit products and programs that the agencies consider responsive.

Qualitative evaluation of responsive credit products and programs. The final rule in § __.23(c)(2) retains a qualitative evaluation of responsive credit products and programs in the Retail Services and Products Test. As explained in the proposal, the agencies believe that using *responsiveness* as part of the evaluation standard instead of the current *innovative and flexible* standard better captures the focus on community credit needs. The agencies also believe that using the term *responsiveness* helps improve consistency of terminology throughout the final rule. The agencies further believe this approach is preferable to including it as part of the more metrics-based Retail Lending Test because it pairs a qualitative evaluation of the responsiveness of a bank's lending products and programs with other qualitative criteria under the Retail Services and Products Test. The agencies believe that the qualitative consideration of credit products and programs is consistent with the intent to emphasize the impact of the product or program in helping to meet the credit needs of low- and moderate-income individuals, families, or households, residents of low- and moderate-income census tracts, small businesses, and small farms.

The agencies considered the comments asserting that the agencies need to define, and include an analysis of, affordability based on interest rate caps and/or fees, or establish standards for both consumer and mortgage loans to determine the appropriate level of CRA consideration to grant a financial institution, and the comments urging the agencies to develop an ability-to-repay standard. The agencies also considered a commenter’s recommendation to harmonize the CRA regulations as much as possible with the existing principles for offering responsible small-dollar loans. As an initial matter, the agencies note that the CRA statute does not give the agencies the authority to impose substantive requirements on the types of credit products and programs a bank offers as recommended by commenters. Instead, the agencies’ focus under the CRA is on the bank’s record of meeting community credit needs consistent with safe and sound operations, which includes sound underwriting practices for all lending. For example, in May 2020, the agencies, together with the NCUA, issued a set of principles to encourage supervised banks, savings associations, and credit unions to offer responsible small-dollar loans to customers for both consumer and small business purposes to meet customers’ short-term credit needs.¹⁰⁵³ Banks are assessed for compliance with numerous consumer laws, including Section 5 of the FTC Act¹⁰⁵⁴ and others. Banks that make loans in violation of laws, rules, or regulations, either directly or as a result of failing to properly manage relationships with third parties, may be subject to enforcement action. As a result of any such violations, banks may also be subject to a downgrade of their CRA rating pursuant to final § __.28, if they engage in discriminatory or other illegal credit practices with respect to their credit products and programs.

In response to commenter suggestions to expand metrics for evaluating the impact of unsecured consumer debt under the Retail Services and Products Test, the agencies note that to the extent that certain loan products and services are responsive to the needs of low- and moderate-income individuals, households, or families, small businesses, and small farms, they may be given consideration. In addition, the agencies believe that the qualitative approach to evaluation under final § __.23(c)(2) is a better measure of the responsiveness of credit products.

After considering the comments, the agencies determined that a separate category to evaluate barriers to homeownership was unnecessary. The final rule provides that credit products that overcome barriers to homeownership for low- and moderate-income first-time homebuyers are responsive credit products falling within the category of “credit products and programs that facilitate home mortgage lending for low- and moderate-income borrowers.”

In response to the commenter that asked for additional clarity on how the agencies will evaluate banks for responsiveness under this test, the agencies intend to evaluate responsiveness consistent with current interagency guidance. More specifically, when evaluating responsiveness, examiners will consider three important factors: quantity, quality, and performance context. Examiners will evaluate the volume and type of an institution’s activities, for example, loans and services, as a first step in evaluating the institution’s responsiveness the needs of the bank’s communities, including the needs of low- and moderate-income individuals, families, or households, residents of low- and moderate-income census tracts, small businesses, and small farms. In addition, an assessment of “responsiveness” will encompass the qualitative aspects of performance, including the effectiveness of the activities. For example, some

¹⁰⁵³ *See id.*

¹⁰⁵⁴ *See* 15 U.S.C. 45.

activities require specialized expertise or effort on the part of the institution or provide a benefit to the community that would not otherwise be made available. In some cases, a smaller loan may have more benefit to a community than a larger loan. In other words, when evaluated qualitatively, some activities are more responsive than others. Activities are more responsive if they are successful in meeting identified credit and community development needs. Examiners also evaluate the responsiveness of an institution's activities to credit and community development needs in light of the institution's performance context, as explained in more detail in the section-by-section analysis of § __.21(d). That is, examiners consider the institution's capacity, its business strategy, the needs of the community, and the opportunities for lending and services in the community.

In response to the comments that suggested that the public did not have a meaningful opportunity to understand and comment on the requirement to evaluate consumer loans within this test, the agencies note that they explicitly indicated in the proposal their intent to potentially consider consumer loans as a type of credit product and provided opportunity to comment on this approach. The 90-day comment period is consistent with the requirements of the Administrative Procedures Act and, in the agencies' supervisory experience, provided sufficient time for public consideration and comment. Indeed, the agencies received many detailed and thoughtful comments on the issue of whether consumer loans should be considered as credit products.

The agencies have considered concerns described by commenters that considering the responsiveness of consumer loans under credit products and programs departs from prior agency practice that traditionally focuses on wealth-building products such as home mortgages and small business loans. The agencies conclude that they are authorized by the CRA to evaluate a bank's consumer loans in assessing a bank's record of meeting the credit needs of their entire community, including low- and moderate-income census tracts. The agencies also do not agree with the commenter's suggestion that reviewing the responsiveness of consumer loans should be limited because they have a limited usefulness for low- and moderate-income communities.

The agencies considered commenter suggestions to expand the scope of the impact and responsiveness factors to include such review in the Retail Services and Product Test. The agencies believe that the test in the final rule sufficiently considers qualitative factors, including the responsiveness and availability of products and services to low- and moderate-income individuals, families, or households; residents of low- and moderate-income census tracts; and small businesses and small farms. To the extent retail banking products and retail banking services are responsive to the needs of these groups, the agencies may provide CRA consideration.

Categories of responsive credit products and programs. With respect to the categories of responsive credit products and programs, as noted above, the agencies are adopting, with technical edits, proposed § __.23(c)(1)(i), renumbered in the final rule as § __.23(c)(2)(i) (credit products and programs that facilitate home mortgage and consumer lending); proposed § __.23(c)(1)(ii), renumbered in the final rule as § __.23(c)(2)(ii) (credit products and programs that meet the credit needs of small businesses and small farms); and proposed § __.23(c)(1)(iii), renumbered in the final rule as § __.23(c)(2)(iii) (credit products and programs that are conducted in cooperation with MDIs, WDIs, LICUs, or CDFIs). Specifically, final § __.23(c)(2)(i), (c)(2)(ii), and (c)(2)(iii) removes "in a safe and sound manner" from each of the categories of responsive credit products and programs. The agencies determined the references were unnecessary and repetitive of the reference to "in a safe and sound manner" in final

§ __.23(c)(2). In addition, the agencies are making a clarifying revision to § __.23(c)(2)(ii) changing “smallest businesses” and smallest farms” to those “with gross annual revenue of \$250,000 or less.”

The agencies believe that inclusion of these categories of credit products and programs is important because they outline broader categories of non-exhaustive examples of credit products and programs that are responsive to community credit needs. The final rule recognizes the unique needs of low- and moderate-income borrowers, small businesses, and small farms, and attempts to encourage the provision of credit to these groups. Under the final rule, the agencies are retaining § __.23(c)(2)(i), credit products and programs that “facilitate mortgage and consumer lending targeted to low- or moderate-income borrowers,” as one category of responsive credit products and programs. Small-dollar mortgages and consumer lending programs that utilize alternative credit histories in a manner that would benefit low- or moderate-income individuals could be examples of a responsive credit product or program in this category. The agencies are revising final § __.23(c)(2)(ii), to encompass credit products and programs that “meet the needs of small businesses and small farms, including small businesses and small farms with gross annual revenues of \$250,000 or less,” as another category of responsive credit products or programs. Examples in this category include microloans (such as loans of \$50,000 or less) and patient capital to entrepreneurs through longer-term loans. Finally, the agencies are also retaining § __.23(c)(2)(iii), credit products and programs that are conducted in cooperation with MDIs, WDIs, LICUs, or CDFIs, as a category of responsive credit products and programs. Examples include home mortgage loans and small business loans that banks purchase from MDIs, WDIs, LICUs, and CDFIs. The agencies acknowledge the importance of supporting institutions such as CDFIs, MDIs, CDFIs, and LICUs in their efforts to provide access to credit and other financial services in traditionally underserved communities. Bank purchases of MDI, WDI, LICU, and CDFI loans can provide necessary liquidity to these lenders and extend their capability to originate loans to low- and moderate-income individuals, families, or households, in low- and moderate-income census tracts, and to small businesses and small farms.

The agencies have considered the recommendations made by commenters regarding other categories of responsive credit products and programs. As discussed above, the agencies are finalizing § __.23(c)(2) without a more detailed list of categories of responsive credit products or programs. The agencies agree with commenters who do not believe that a more detailed list of products and programs is warranted in the regulation. The agencies believe that the approach taken is appropriate because the proposed list is broad and recognizes that bank credit products and programs may vary to meet the needs of different communities and may be dependent on a bank’s business model and focus. Moreover, given that the list of categories of responsive credit products and programs is not exhaustive, the list permits examiners to consider additional products and programs and allows sufficient flexibility for the agencies to consider new approaches as they are developed.

The agencies appreciate other recommendations, such as programs to provide affordable credit products to individuals with limited English proficiency, and note that some suggestions may also qualify as a responsive credit product or program. For instance, in the proposal, the agencies listed examples of credit products that can be challenging for consumers to obtain because they generate less revenue for a bank than larger loans, because borrowers do not have

sufficient down payments, or because consumers have limited conventional credit histories.¹⁰⁵⁵ Some of the suggested products also contain these characteristics. Other suggestions, such as responsive loan products that finance equitable media, fall outside of the scope of this regulation.

The agencies note that commenter suggestion to consider purchased loans under the Retail Services and Products Test is unnecessary given that these loans are already considered under the Retail Lending Test (which addresses liquidity support for institutions raised by this comment). However, purchased loans could potentially be considered under this component of the Retail Services and Products Test if a bank purchased a responsive credit product identified in § __.23(c)(2); for example, a loan that was purchased from an MDI or CDFI would be considered.

The agencies are sensitive to concerns from some commenters who believe that a detailed list or specific guidance is needed to provide banks with certainty, which is often needed before implementing new ideas. However, as explained in the proposal, the agencies believe that a specific list of retail lending products and programs within the regulation could have the unintended consequence of constraining bank efforts to meet the credit needs of its communities and pursuing more impactful activities that may deviate from the specific examples. Nevertheless, the agencies acknowledge that a more detailed list of examples of responsive credit products and programs could be provided outside of the regulation and will continue exploring the feasibility of whether such a list would be helpful to provide banks and partners with additional certainty regarding qualifying activities under the Retail Services and Products Test. Similarly, in reference to suggestions from commenters that the agencies develop and provide a non-exhaustive illustrative list of qualifying activities, the agencies have committed to assessing whether to provide additional guidance regarding qualifying responsive credit products outside of the regulation.

Regarding recommendations from commenters on evaluating credit products that impact the environment or lead to displacement, the agencies have developed a criterion under final § __.13(i) that will qualify loans and investments that help improve the disaster preparedness and weather resiliency of such communities. The agencies did not find it appropriate to restrict the types of consumer products and programs because the agencies did not find persuasive evidence that consumer products and programs had environmental or displacement impacts.

Low-Cost Education Loans. To clarify that low-cost education loans, as defined in final § __.12, are an example of responsive credit products and programs under the Retail Services and Products Test, the agencies are adopting new final § __.23(c)(2)(iv) as a fourth category of responsive credit products and programs. Although the agencies proposed “evaluating the responsiveness of a large bank’s credit products and programs to the needs of low- and moderate-income individuals (including through low-cost education loans),” the agencies believe it is appropriate to separately enumerate low-cost education loans given the explicit CRA statutory requirement that the agencies consider low-cost education loans provided by banks to low-income borrowers as a factor when evaluating the bank’s record of meeting community credit needs.¹⁰⁵⁶

¹⁰⁵⁵ See 87 FR 33884, 33966 (June 2022).

¹⁰⁵⁶ See 12 U.S.C. 2903(d).

Special Purpose Credit Products. In response to comments received, the agencies are also adopting new final § __.23(c)(2)(v), which adds special purpose credit programs under 12 CFR 1002.8 as a fifth category of responsive credit programs, regardless of whether the special purpose credit programs includes income limitations. In response to comments and the agencies’ internal considerations, the agencies decided to add this category rather than to include special purpose credit program as an example of a program that facilitates mortgage and consumer lending targeted to low- or moderate-income borrowers. This decision is based on the fact that not all special purpose credit programs have income limitations, and some do not necessarily target low- and moderate-income borrowers, which means that these programs may be ineligible under final § __.23(c)(2)(i). Moreover, as banks consider how they may expand access to credit to better address specific social needs, the agencies believe including special purpose credit programs as a category of responsive credit products and programs eligible for CRA consideration will encourage creditors to explore opportunities to develop these programs consistent with applicable law, including, but not limited to, ECOA and Regulation B, as well as applicable safe and sound lending principles. The inclusion of special purpose credit programs is particularly important given that in February 2022, several Federal agencies issued an interagency statement to remind creditors of the ability under ECOA and Regulation B to establish special purpose credit programs to meet the credit needs of specified classes of persons.¹⁰⁵⁷ Importantly, the agencies do not determine whether a program qualifies for special purpose credit program status, banks with questions about any aspect of ECOA and Regulation B’s special purpose credit program provisions may consult their appropriate regulatory agencies.

§ __.23(c)(3) *Deposit Products*

Current Approach

As discussed above, a bank’s retail deposit products and services are evaluated under the current service test for large banks, primarily as part of the range of services provided in low-, moderate-, middle-, and upper-income geographies and the degree to which the services are tailored to meet the needs of those geographies.¹⁰⁵⁸

The Agencies’ Proposal

In proposed § __.23(c)(2) the agencies proposed modernizing the existing evaluation of a bank’s deposit products and services by adding a more explicit focus on the financial inclusion of deposit products and by adding specific measures for evaluation, such as availability and usage.¹⁰⁵⁹ Specifically, for large banks with assets of over \$10 billion in both of the prior two calendar years, based on the assets reported on its four quarterly Call Reports for each of those calendar years, the agencies proposed to evaluate the availability and usage of a bank’s deposit

¹⁰⁵⁷ See Board, FDIC, NCUA, OCC, CFPB, HUD, U.S. Dept of Justice, Federal Housing Finance Agency, “Interagency Statement on Special Purpose Credit Programs Under the Equal Credit Opportunity Act and Regulation B” (Feb. 22, 2022), *e.g.*, <https://www.fdic.gov/news/financial-institution-letters/2022/fil22008.html>.

¹⁰⁵⁹ See proposed § __.23(c)(2).

products that are responsive to the needs of low- and moderate-income individuals.¹⁰⁶⁰ This evaluation would be optional for large banks with assets of \$10 billion or less, though the agencies requested feedback on whether the evaluation should be required for these banks.¹⁰⁶¹

Comments Received

The agencies received a number of comments addressing the proposed evaluation of deposit products responsive to the needs of low- and moderate-income individuals. The commenters were generally supportive of the proposal, although some provided recommendations for improvement. For instance, one commenter urged the agencies to also evaluate the responsiveness of deposit products for small businesses and claimed that their exclusion from the test would disadvantage banks with a small business lending model. A few commenters suggested that the agencies consider the quality of the products offered as measured, for example, by the deposit account revenue derived from overdraft or insufficient fund fees. One commenter urged the agencies to require the collection of the income of the consumers receiving responsive deposit accounts; however, two commenters opposed such a requirement stating that large banks do not collect income information related to the opening of accounts, and even if they did, the data collected would have to be updated regularly. Another commenter recommended that the agencies mirror the 1995 CRA rules' performance standards by evaluating the responsiveness of deposit products using qualitative factors, while allowing banks to support their evaluation of performance. Another commenter recommended expanding consideration of deposit products to the needs of military personnel, veterans, and their families.

In contrast, a few commenters opposed the inclusion of a bank's deposit products in the evaluation of the test altogether. These commenters asserted that: there is no statutory basis in the CRA for evaluating the features of bank deposit products; there is no statutory basis for regulating these products under the CRA; the CRA is not the appropriate vehicle through which to regulate a bank's product offerings and associated fees; and the proposed approach contains no apparent limiting principle and leaves unanswered key questions regarding the scope of agency authority to evaluate deposit products. One of these commenters suggested the evaluation of deposit products should serve only as performance context, but not as a mandatory element or minimum requirement.

In response to the agencies' request for feedback on whether, in addition to deposit accounts, there are other products or services that encourage retail banking activities that may increase credit access, the agencies received several comments which provided suggestions on other retail services or products that may increase access to credit in addition to deposit accounts. The most common recommendation across the variety of commenters was financial counseling. Other commenters suggested products or services such as: credit-building loans; small dollar loans for homeowners and small businesses; GSE pilot programs; community land trusts; direct deposit advances; secured credit cards; and refund transfers.

The agencies received several comments in response to the request for feedback on whether large banks with assets of \$10 billion or less should be subject to a responsive deposit products

¹⁰⁶⁰ See proposed § __.23(c) (application to large banks with assets of over \$10 billion), (c)(2)(i) (availability), and (c)(2)(ii) (usage).

¹⁰⁶¹ See proposed § __.23(c).

evaluation with mixed views. Two commenters argued that this component should be required for large banks with assets of \$10 billion or less as it is for large banks with assets of over \$10 billion, with one suggesting that intermediate banks should be provided with a formal option for electing to be considered under the proposed Retail Services and Products Test. A few commenters went further and suggested that this component should be required for banks of all asset sizes, as they all should be responsive to the deposit needs of people in the bank's delineated assessment areas in order to ensure that low- and moderate-income families have easy access to banking products. In contrast, other commenters favored the proposal's optionality for large banks with assets of \$10 billion or less stating it is an important factor that should be maintained. One commenter noted that while larger banks can have a disproportionate impact because of their ability to scale products more effectively, requiring this additional evaluation could hinder scaling innovative products. Another commenter suggested that banks with assets \$10 billion or less have the option of a qualitative review with the focus on product design and demonstration of products being openly available.

Final Rule

As explained below, the agencies are finalizing § __.23(c)(2), renumbered in the final rule as § __.23(c)(3), largely as proposed to provide for the evaluation of the availability of deposit products responsive to low- and moderate-income individuals, families, or households, renumbered in the final rule as § __.23(c)(3)(i), and the usage of deposit products, renumbered in the final rule as § __.23(c)(3)(ii). The agencies also made clarifying changes, including but not limited to a change to the heading.

The agencies conclude that they have statutory authority to evaluate responsive large bank deposit products under the final rule. While the operational provisions of the CRA instructs the agencies to evaluate a bank's record of meeting the credit needs of its communities,¹⁰⁶² the agencies have found that there is a sufficient nexus between deposit products and the provision of credit such that, to comprehensively assess large bank performance for banks with more than \$10 billion in assets, it is appropriate to evaluate deposit accounts responsive to the needs of low- and moderate-income individuals, families, or households. For the reasons described below, the availability of bank deposit products that meet the needs of low- and moderate-income individuals, families, or households frequently assume a foundational role in the ability for individuals to access credit responsive to their particular needs.

First, the agencies believe that deposit products are important for supporting the credit needs of low- and moderate-income individuals, families, or households because they increase credit access by helping individuals improve their financial stability and build wealth through deposit accounts.¹⁰⁶³ A greater focus on responsive deposit products could strengthen a bank's ability to serve the credit needs of its communities.

¹⁰⁶² See 12 U.S.C. 2903(a)(1) and 2906(a)(1).

¹⁰⁶³ See, e.g., Ryan M. Goodstein, Alicia Lloro, Sherrie L. Rhine, & Jeffrey M. Weinstein, *What accounts for racial and ethnic differences in credit use?*, 55 J. of Consumer Affairs (2021);

Second, deposit products can help consumers qualify for loans by facilitating consumers' savings so that they can post collateral and to pay transactions costs. Consumers frequently rely on deposit accounts to save for and then fund the down payment for a house, the money down on a car, or the initial capital for a small business. Deposit products may also assist consumers in improving their credit scores. Features like scheduled recurring or automatic bill payments, check writing privileges, and quick availability of funds make it much easier for consumers to make payments on time and build their credit scores. Data from consumers' use of deposit accounts are also sometimes included in credit evaluations as "alternative data." While the use of these data is not currently widespread, the agencies have encouraged the responsible use of alternative data and noted that it could expand the availability of credit.

Finally, deposit products are a pathway for a bank customer to establish an ongoing relationship with a bank. Customers who hold deposit products have contact with a bank—either physically or electronically—every time they perform a transaction. Banks can use various touch points to market credit products, explain how credit products can help consumers meet financial needs, and provide services to improve consumers' financial literacy. The bank also obtains valuable information from interactions with their customers. Some banks rely on "relationship lending," or using this "soft" data based on an ongoing relationship with a customer to make underwriting decisions.¹⁰⁶⁴

Data and empirical studies support the idea that deposit accounts facilitate lending and improved financial outcomes. A 2019 study provides some causal evidence that increases in consumers' access to deposit accounts led to increased savings, increased net worth, and increased holdings of various types of credit.¹⁰⁶⁵ The effects could be more important for low-income consumers, since the increases in bank access they study were larger in places where incomes were lower. There also is a strong correlation between deposit accounts and mainstream credit, though this correlation could be for several other reasons as well.¹⁰⁶⁶

FDIC, 2017 FDIC National Survey of Unbanked and Underbanked Households, (October 2018), <https://www.fdic.gov/analysis/household-survey/2017/index.html>; Michael Barr, Jane K. Dokko, & Benjamin J. Keys, *And Banking for All?* (Board, Working Paper No. 2009-34, 2009), <https://www.federalreserve.gov/pubs/feds/2009/200934/200934pap.pdf>.

¹⁰⁶⁴ Elyas Elyasiani & Lawrence G. Goldberg, *Relationship lending: a survey of the literature*, 56 J. of Econ. & Bus 315-330 (2004).

¹⁰⁶⁵ Claire Celerier & Adrien Matray, *Bank-Branch Supply Financial Inclusion and Wealth Accumulation*, 32 Rev. of Fin. Stud. 4767-4809 (Dec. 2019); A related study uses a different design to provide evidence that exposure to banking as a child leads to higher credit scores and lower delinquency rates as an adult: James R. Brown, J. Anthony Cookson & Rawley Z. Heimer, *Growing up without finance*, 134 J. Fin. Econ. 591-616 (Dec. 2019).

¹⁰⁶⁶ One reason why there could be a correlation without causation is omitted variable bias. Consumers who have bank accounts could also be more likely to have credit because of some other characteristic that would lead to both. For example, consumers with higher incomes

The agencies note that deposit products are considered under the existing CRA framework.¹⁰⁶⁷ The agencies retain discretion under the final rule to consider other factors and features in determining if a deposit product is responsive to low- and moderate-income individuals, families, or households. Examples of products that meet the responsiveness standard include accounts certified by the Cities for Financial Empowerment as meeting the Bank On National Account standard, which precludes overdraft and insufficient funds fees, and “second-chance accounts.” Savings accounts targeted toward low- or moderate-income individuals, families, or households such as Family Self-Sufficiency Accounts are another example of a product that would be considered responsive. These are not exclusive examples, and the agencies will be able to consider other factors. The agencies decided not to require the collection of income for consumers opening accounts to help determine responsiveness because the burden could present a barrier to bank participation in offering such products.

In response to the recommendation that the agencies mirror the 1995 CRA rules’ performance standards, the agencies believe that the approach taken in the final rule modernizes the existing evaluation of a bank’s products and services by adding a more explicit focus on the financial inclusion potential of these products and by adding specific measures for evaluation, such as availability and usage.

The agencies are sensitive to concerns raised by some commenters that the final rule should not operate in a way that regulates or otherwise requires banks to provide certain deposit products. The agencies note that evaluation of deposit product in final § __.23(c)(3) does not regulate or set the prices of a bank’s product offerings and associated fees. Furthermore, as described below in § __.23(d)(1), the evaluation of a bank’s deposit products only contributes positively to a bank’s Retail Services and Products Test conclusion.

The agencies have considered the comments, and after further analysis, the agencies have decided against requiring a responsive deposit product assessment for banks with assets of \$10 billion or less, but instead retain it as an option for such banks. The agencies are sensitive to concerns that institutions with assets of \$10 billion or less may not have sufficient resources for the data collection contemplated by this assessment. Additionally, the required data collection for this evaluation could be burdensome.

The agencies decline commenter suggestions to make the consideration of deposit accounts a type of performance context or otherwise make it a type of evaluation in the Retail Services or Products Test an optional requirement for all large banks. As discussed above, because the agencies believe that deposit accounts responsive to the needs of low- and moderate-income individuals play a vital role in the access to credit products, it is appropriate to require the consideration for banks with assets greater than \$10 billion and provide banks with assets of \$10 billion or less an option to have their responsive deposit accounts considered.

are more likely to own bank accounts and higher incomes also make it easier for consumers to borrow. For the statistic, see FDIC, Table 10.1, “Use of Credit by Bank Account Ownership, 2017–2021,” of the *2021 FDIC National Survey of Unbanked and Underbanked Households* (Oct. 2022), <https://www.fdic.gov/analysis/household-survey/2021report.pdf>.

¹⁰⁶⁷ See e.g., current 12 CFR __.24(d)(4); see also Q&A § __.24(a)—1 and Q&A § __.24(d)(4)—1.

The agencies considered the comments on whether, in addition to deposit accounts, there are other products or services that encourage retail banking activities that may increase credit access. While the agencies believe that most suggestions provided by commenters in response to the question may actually increase access to credit, these recommendations are generally captured in other parts of the rule. For example, a bank may receive consideration for financial counseling as a type of community development service under § __.13(1) and § __.25 of the final rule.

§ __.23(c)(3)(i) *Availability of Deposit Products Responsive to the Needs of Low- and Moderate-Income Individuals, Families, or Households*

The Agencies' Proposal

The agencies proposed to evaluate in § __.23(c)(2)(i) whether a bank offers deposit products that have features and cost characteristics that, consistent with safe and sound operations, include, but are not limited to: (1) low-cost features;¹⁰⁶⁸ (2) features facilitating broad functionality and accessibility;¹⁰⁶⁹ and (3) features facilitating inclusivity of access.¹⁰⁷⁰ The agencies proposed taking these three types of features into consideration when evaluating whether a particular deposit product has met the “responsiveness to low- and moderate-income needs” standard.

The agencies requested comment on whether the features of cost, functionality, and inclusion of access are appropriate for establishing whether a deposit product is responsive to the needs of low- and moderate-income individuals or whether other features or characteristic should be considered. The agencies also requested comment on whether a minimum number of features should be met in order to be considered “responsive.”

Comments Received

The agencies received several comments in response to their request for feedback on whether there are other features or characteristics that the agencies should consider. These commenters were generally supportive of the proposed features to determine if a deposit product is responsive. Most commenters generally agreed that considering the features of cost, functionality, and accessibility to determine if a deposit product is responsive to the needs of low- and moderate-income individuals is appropriate. Some commenters made additional recommendations. For example, one commenter agreed with the list of features, but urged the agencies to clarify that a responsive product needs to be both low-cost and accessible. Another commenter supported the approach but recommended that the agencies include a fourth feature – wealth enabling opportunities, such as financial wellness coaching, wealth building advice, credit repair, money management assistance, and bank career training opportunities. A few commenters suggested that banks should be evaluated not only for offering, for example, Bank On accounts, which preclude the assessment of overdraft and insufficient funds fees, but for actually connecting consumers with such accounts. Other commenters recommended expanding the features to consider whether the deposit product: is inclusive of immigrant communities or is part of the Veterans Benefits Banking Program; provides noncustodial accounts for foster youth;

¹⁰⁶⁸ See proposed § __.23(c)(2)(i)(A).

¹⁰⁶⁹ See proposed § __.23(c)(2)(i)(B).

¹⁰⁷⁰ See proposed § __.23(c)(2)(i)(C).

ensures that people with disabilities and older adults have equal access to the products; if the deposit product is a checking account, is free, with no overdraft fees, and with features such as bill pay and debit cards; or is a second chance account that requires no ChexSystems approval and has no, or low, fees.

A few commenters expressed concern about the proposed cost features. Some of these commenters urged the agencies to ensure that the evaluation of a bank's deposit products would not depend on a comparison to peer banks, while a few other commenters warned the agencies against regulating costs and fees, asserting that the statute does not authorize the agencies to do so. Two commenters encouraged the agencies to omit the evaluation of deposit products or at least clarify that the enumerated factors will be reviewed holistically and will not serve as a checklist. Similarly, another commenter noted that the analysis of low-cost features could force banks to offer certain products at particular prices and fees and urged the agencies to implement safeguards to prevent the evaluation from causing such a result.

Only a few commenters addressed whether a certain number of features should be met. These commenters stated that setting a minimum threshold for consideration of responsiveness was not necessary, with one of these commenters explaining that product design offsets may be required to ensure a product is viable in a marketplace and that, in the course of an examination, a bank should be able to explain how the product is responsive to the needs of its particular community. However, one of the commenters urged the agencies to also compare a bank's products to their peers' offerings. A few commenters expressed concern that the proposed list of relevant features implies that any one feature would make a product responsive, and therefore requested that the agencies clarify that in order to be responsive to the needs of underserved consumers, deposit products must be both low-cost and accessible, and that low-cost refers both to front-end fees and back-end fees.

Final Rule

The agencies are finalizing § __.23(c)(2)(i), renumbered in the final rule as § __.23(c)(3)(i), as proposed, to evaluate whether a bank offers deposit products that have features and characteristics responsive to the needs of low- and moderated-income individuals, families, or households, including low-cost features, features facilitating broad functionality and accessibility, and features facilitating inclusivity of access.

The agencies believe the proposed features are appropriate and sufficient. For instance, consideration of deposit products with low-cost features is consistent with current guidance, and cost issues remain a prevalent reason cited by unbanked individuals as to why they do not have a bank account.¹⁰⁷¹ As such, the agencies believe that low-cost should remain a feature of responsive deposit product despite concerns expressed by some commenters.

Similarly, the agencies are retaining in the final rule features facilitating broad functionality and accessibility and facilitating inclusivity of access, which are also consistent with current guidance.¹⁰⁷² The agencies believe that the ability to conduct transactions and access funds in a timely manner is highly relevant for lower-income individuals or unbanked and underserved

¹⁰⁷¹ See FDIC, *2021 FDIC National Survey of Unbanked and Underbanked Households* (Oct. 2022), <https://www.fdic.gov/analysis/household-survey/2021report.pdf>.

¹⁰⁷² See Q&A § __.24(a)—1; Q&A § __.24(d)(4)—1.

individuals, who otherwise might acquire financial services at a higher cost from predatory sources, and that research indicates that prior bank account problems remain barriers for consumers who are unbanked.¹⁰⁷³

While some of the recommended additional features suggested by commenters may be helpful in establishing responsiveness, the agencies believe that the features in the final rule are sufficient without adding burden. The proposed standards for responsiveness, in addition to being consistent with current guidance, also align with the national account standards issued by the Cities for Financial Empowerment Fund's Bank On program, which are regarded with favorable CRA consideration today.¹⁰⁷⁴ The Bank On national account standards were informed by the FDIC's Model Safe Accounts Template, a set of guidelines for offering cost-effective transactional and savings accounts that are safe and affordable, and meet the needs of underserved consumers.¹⁰⁷⁵

The agencies note that, in response to the commenter that recommended adding wealth-enabling opportunities as a fourth feature, this section focuses on deposit products that are responsive to low- and moderate-income individuals, families, or households. The agencies believe that the features listed in the regulation, which are not exclusive, do create opportunities to build wealth. In addition, a number of the commenter suggested additions would be considered under the Community Development Services Test. Lastly, the list in the regulation is broad and not exhaustive; therefore, it allows examiners the flexibility to consider some of the additional features recommended by commenters that are not explicitly listed.

With respect to commenter suggestions that the agencies set a minimum number of features for consideration of responsiveness, the agencies do not believe it is necessary. In reaching this decision, the agencies balanced concerns about being overly prescriptive in establishing standards, while recognizing that categories, including cost and broad functionality and accessibility, are important considerations in determining responsiveness. However, the agencies are noting that in order to be responsive to the needs of underserved consumers, deposit products should have both low-cost and accessible characteristics, and that low-cost features should refer both to front-end fees and back-end fees.

The Agencies' Proposal

The agencies also proposed in § __.23(c)(2)(ii), to evaluate usage of responsive deposit products in § __.23(c)(2)(ii)(A) through (c)(2)(ii)(C), by considering, for example: (1) the number of responsive accounts opened and closed during each year of the evaluation period in low-, moderate-, middle-, and upper-income census tracts, respectively;¹⁰⁷⁶ (2) the percentage of total responsive deposit accounts compared to total deposit accounts for each year of the evaluation period;¹⁰⁷⁷ and (3) marketing, partnerships, and other activities that the bank has undertaken to promote awareness and use of responsive deposit accounts by low- and moderate-income individuals.¹⁰⁷⁸ The agencies also proposed considering outreach activity undertaken to promote awareness and use of responsive deposit accounts by low- and moderate-income individuals. In particular, the agencies proposed giving qualitative consideration to marketing, partnerships, and other activities to attract low- and moderate-income individuals.

The agencies requested feedback regarding whether the proposed usage factors are appropriate for an evaluation of responsive deposit products and whether the agencies should consider the total number of active deposit products relative to all active consumer deposit accounts offered by the bank, which was proposed in § __.23(c)(2)(ii)(B) as an example of a usage feature. The agencies also requested feedback on whether the agencies should take other information into consideration when evaluating the responsiveness of a bank's deposit products under proposed § __.23(c)(2)(ii), such as the location where the responsive deposit products are made available.

Comments Received

Comments related to the appropriateness of usage factors. The agencies received several comments expressing differing opinions in response to whether the proposed usage factors are appropriate for an evaluation of responsive deposit products and whether the agencies should consider the total number of active deposit products relative to all active consumer deposit accounts offered by the bank. Commenters were overwhelmingly in support of the general usage factors even though many also suggested additions to, and clarifications of, the factors. Another commenter urged the agencies to create a market benchmark to compare a bank's percentage of accounts in low- and moderate-income census tracts to peer data and also suggested that openings and closings are a useful indicator that should be paired with evaluation of transaction activity, marketing, and partnerships. Another commenter suggested the agencies should add analysis of higher-cost products and fees, including overdraft, ATM, and maintenance fees by geography.

By contrast, some commenters believed the proposed usage factors were not appropriate and requested that the agencies measure deposit products qualitatively and only require an optional, if any, evaluation of the usage factors. One of these commenters asserted that quantitative factors such as usage are not appropriate for a qualitative assessment of deposit products nor are they an accurate measure to assess the responsiveness of deposit products. Other commenters urged the agencies to provide optional evaluation of usage rates and account openings by people

¹⁰⁷⁶ See proposed § __.23(c)(2)(ii)(A).

¹⁰⁷⁷ See proposed § __.23(c)(2)(ii)(B).

¹⁰⁷⁸ See proposed § __.23(c)(2)(ii)(C).

in low- and moderate-income census tracts as a means for banks to show that they are reaching low- and moderate-income individuals given that these rates are an imperfect proxy for actual rates of usage by low- and moderate-income individuals. A few of these commenters also noted that it may be extremely burdensome to try to accurately evaluate or monitor these factors quantitatively. For instance, two commenters suggested that usage of deposit products in low- and moderate-income areas cannot accurately reflect the overall “responsiveness” and “availability” of a bank’s deposit products to low- and moderate-income individuals, with one of these commenters stating that there is no data that suggests low- and moderate-income individuals live only, or primarily, in low- and moderate-income census tracts, and the other commenter noting there is data that suggests there are significantly more low- and moderate-income individuals living in middle- and upper-income tracts combined, than low- and moderate-income people living in low- and moderate-income tracts combined.

Comments related to the consideration of total number of active responsive deposit products relative to all active consumer deposit accounts offered by the bank. There was similar disagreement with respect to whether the agencies should consider the total number of active responsive deposit products relative to all active consumer deposit accounts offered by the bank as proposed in § __.23(c)(2)(ii)(B). A few commenters opposed this approach for several reasons, including that the approach lacks accuracy, since low- and moderate-income individuals do not necessarily have the resources to open multiple accounts compared to middle- and upper-income individuals, which: skews comparison; would be too complex and challenging for most non-CDFI institutions; is not probative of whether a bank is adequately serving low- and moderate-income individuals because there may be valid reasons for closing accounts; and is more qualitative than it is quantitative. Another commenter expressed concern about whether the total number of active responsive deposit products relative to all active consumer deposit accounts offered by the bank would be an indicator of responsiveness because, if a bank offers an account opening reward, there could be a surge in account openings and a drop after the reward is no longer offered. Instead, this commenter recommended that the agencies consider deposit account closures in the same manner as deposit account openings are evaluated in terms of responsiveness. Conversely, two other commenters generally supported the proposal and agreed that the ratio of active responsive deposit products relative to all active deposit accounts would be an appropriate metric for evaluation, with one of these commenters also noting that this metric must also be compared to the performance of peers. Another group supported considering the number of responsive accounts opened and closed during each year of the evaluation period in low-, moderate-, middle- and upper-income census tracts.

Comments related to the review of marketing, partnerships, and other activities to promote awareness and use of responsive deposit accounts. Various commenters supported the review of marketing materials. One commenter agreed with assessing whether products are marketed to and used by low- and moderate-income individuals and communities. Another commenter recommended that examiners engage community stakeholders in this assessment to better assess the extent and rigor of the bank’s activities.

Comments related to whether other information, such as location, should be taken into consideration in the evaluation of responsive deposit accounts. A variety of commenters discussed whether other information, such as location, should be taken into consideration when evaluating the responsiveness of a bank’s deposit products under proposed § __.23(c)(2)(ii). A few commenters were supportive of including a review of the location where the responsive

deposit product is made available. For instance, a commenter noted that location of a product's availability is reflective of its responsiveness, but cautioned that a product offered in-branch in a low-income census tract is unlikely to be responsive if the product is not marketed or staff are not trained in its design and purpose. Another commenter encouraged the agencies to also consider how a customer's inability to access a location, and perceived safety near a location, influences how and when they make deposits. Another commenter recommended that the agencies assess whether responsive deposit products are offered in branches and at remote service facilities in low- and moderate-income census tracts. Two other commenters suggested the agencies look to the Federal Reserve Bank of St. Louis' Bank On National Data Hub for workable metrics for account engagement and whether a deposit product is responsive to the needs of low- and moderate-income communities.

However, a commenter cautioned the agencies against using geography as a primary factor in determining whether a bank's deposit products and delivery channels are serving low- and moderate-income individuals, because some low- and moderate-income individuals reside outside low- and moderate-income areas and there is a lower concentration of low- and moderate-income individuals in census tracts outside metropolitan areas. Instead, this commenter urged the agencies to focus the evaluation on qualitative factors, such as a bank's strategies and initiatives for reaching low- and moderate-income individuals as well as an assessment of whether the bank's deposit offerings are responsive to their needs, and consider performance context when evaluating products and services. A commenter expressed the view that the agencies should always consider additional information, but cautioned against stipulating a requirement because it could have the unintended consequence of limiting innovation. This commenter further noted that full impact of a responsive product should be subject to examiner judgement based on location and other limiting factors in order to encourage credit for particularly impactful products without adding to reporting burden. Other commenters provided recommendations on useful information to review including affordability of deposit accounts for low- and moderate-income communities by comparing and refining, if necessary, fee information collected in Call Report data.

Final Rule

The agencies are finalizing proposed § __.23(c)(2)(ii), renumbered in the final rule as § __.23(c)(3)(ii), by retaining the usage factors in renumbered § __.23(c)(3)(ii)(A) through (c)(3)(ii)(C). The usage factors include the consideration of the percentage of *responsive* deposit accounts compared to total deposit accounts for each year in final § __.23(c)(3)(ii)(B). The agencies are adopting new § __.23(c)(3)(ii)(D) in the final rule. This provision is intended to offer banks the flexibility to provide any other information not captured by paragraphs (c)(3)(ii)(A) through (c)(3)(ii)(C) of final § __.23 that demonstrates usage of deposit products responsive to the needs of low- and moderate-income individuals, families, or households. The agencies are also making clarifying edits.

Regarding the usage factors and in response to commenters' concerns about burden, the agencies will require examiners to rely on data provided by banks and will not include depositor income levels. The agencies agree with commenters who assert that the usage factors are appropriate.

For instance, the information about deposit account openings and closings could be an approximate indicator of the extent to which the needs in low- and moderate-income areas are

being met. The comparison of responsive deposit accounts to total deposit accounts is intended to give a sense of the magnitude of the commitment to broadening the customer base to include low- and moderate-income individuals, families, or households. Also, bank outreach and marketing may contribute to the successful take-up of deposit products targeted to low- and moderate-income individuals, families, or households. These factors are important criteria to help facilitate evaluating whether a bank's deposit products are responsive to the needs of low- and moderate-income individuals, families, or households.

Although the agencies considered the commenters' recommendations, such as the creation of a market benchmark, comparison of performance to peers, and concerns that the usage features of account opening by people in low- and moderate-income geographies is not a perfect measure of actual usage by low- and moderate-income individuals, the agencies believe that the approach taken in the final rule balances the needs for flexibility against the increased burden that may result from enhanced data collection and monitoring of low- and moderate-income individual's, family's, or household's usage of the accounts.

The agencies also decided not to adopt commenter suggestions to only measure deposit products qualitatively. Quantitative data such as information on account openings could be used to measure the penetration or usage of the responsive product in low- and moderate-income areas. Lastly, the agencies believe that focusing on the income level of census tracts (even with its limitations), rather than depositor income, reflects stakeholder feedback that banks do not collect depositor income levels for deposit accounts.

As noted above, the agencies are also adopting new § __.23(c)(3)(ii)(D) as a catchall provision that offers banks the flexibility to provide any additional information that "demonstrates usage of the bank's deposit products that have features and cost characteristics responsive to the needs of low- and moderate-income individuals, families, or households and low- and moderate-income census tracts." The agencies carefully considered the contrasting comments that responded to the agencies' request for feedback on the consideration of other information and were persuaded by commenter statements regarding the value of reviewing all information, including location, to determine whether a bank's deposit products are serving low- and moderate-income individuals, families, or households.

The agencies are sensitive to concerns regarding the use of geography as a primary factor in determining whether a bank's deposit products serve low- and moderate-income individuals, families, or households and agree that many low- and moderate-income individuals reside outside of low- and moderate-income areas and there is less concentration of low- and moderate-income individuals, families, or households by census tracts outside metropolitan areas. However, on balance, the agencies believe that using geography as a proxy is the best measure of responsiveness of a bank's products in reaching and serving low- and moderate-income individuals, families, or households given available data and the need to minimize burden.

The agencies recognize that some of the additional recommended information suggested by commenters could be helpful in determining responsiveness, and believe that the approach taken in the final regulation provides flexibility for agency consideration without adding burden. The agencies will continue the practice of reviewing public file information for the locations of available services and products. The information needed to make a determination is in the public file, and examiners can use bank management interviews to confirm findings and inquire as to

any discrepancy in offerings or terms, without adding burden. Additionally, the review of responsive deposit products will consider performance context.

§ __.23(d) Retail Services and Products Test Performance Conclusions and Ratings

§ __.23(d)(1) Conclusions

Current Approach

Currently, § __.24(d) of the CRA regulation requires the agencies to evaluate the availability and effectiveness of a bank's systems for delivering retail banking services and the extent and innovativeness of its community development services.¹⁰⁷⁹ The conclusions assigned by the agencies are informed by a qualitative evaluation, are determined at the assessment area level, and are descriptive of the bank's performance relating to: (1) accessibility of delivery systems, (2) its record of opening and closing branches, (3) business hours and services, and (4) its community development services. Based on a bank's performance in these four areas, examiners reach an overall assessment area conclusion for the service test.

The Agencies' Proposal

In proposed § __.23(d)(1), the agencies proposed to assign conclusions for a bank's Retail Services and Products Test performance in each facility-based assessment area, State, multistate MSA, and at the institution level in accordance with proposed § __.28 and proposed appendix C of the CRA regulations. The agencies proposed, in appendix C, that a bank's conclusions for its performance in the bank's facility-based assessment areas would form the basis for conclusions at the State, multistate MSA, and institution levels. As applicable, a bank's performance conclusion at the institution level would have also been informed by the bank's performance regarding digital and other delivery systems under proposed § __.23(b)(3) and credit products and programs and deposit products under proposed § __.23(c).¹⁰⁸⁰

Facility-based Assessment Area Retail Services and Products Test Conclusion. The agencies proposed, in paragraph c.1.i of appendix C, to reach a single conclusion for a bank's performance under the Retail Services and Products Test in each of the bank's facility-based assessment areas based on two of the *delivery systems* components: (1) branch availability and services, and (2) remote service facility availability. The agencies would evaluate these two components qualitatively using community and market benchmarks (as described above in the section-by-section analysis of § __.23(b)(1) and (b)(2)) to inform the conclusions along with performance context for each facility-based assessment area. Based on an assessment of the evaluation criteria associated with branch availability, branch-based services, and remote service facility availability, the bank would be assigned a conclusion corresponding with the conclusion category nearest to the performance score as follows: "Outstanding" (10 points); "High Satisfactory" (7 points); "Low Satisfactory" (6 points); "Needs to Improve" (3 points); or "Substantial Noncompliance" (0 points).¹⁰⁸¹

¹⁰⁷⁹ See current 12 CFR __.24(d)(1)-(4).

¹⁰⁸⁰ See proposed appendix C.c.

¹⁰⁸¹ See proposed appendix C.c.1.ii.

State and Multistate MSA Retail Services and Products Test Conclusions. The agencies proposed, in paragraph c.2 of appendix C, to develop State and multistate MSA level conclusions for the Retail Services and Products Test based exclusively on the bank's performance in its facility-based assessment areas. The agencies would then calculate the simple weighted average of a bank's conclusions across its facility-based assessment areas in each relevant State and multistate MSA. The point value assigned to each assessment area conclusion would be weighted by its average share of loans and share of deposits of the bank within the assessment area, out of all the bank's dollars of retail loans and dollars of deposits in facility-based assessment areas in the State or multistate MSA area, as applicable, to derive a State-level score.¹⁰⁸² Similar to the proposed weighting approach for assigning Retail Lending Test conclusions, pursuant to proposed § __.42(a)(7), deposits would be based on collected and maintained deposits data for banks that collect deposits data, and on the FDIC's Summary of Deposits for banks that do not collect deposits data.¹⁰⁸³ The State level score would then be rounded to the nearest conclusion category point value to determine the Retail Services and Products Test conclusion for the State or multistate MSA.¹⁰⁸⁴

Institution Retail Services and Products Test Conclusion. The agencies proposed to assign a Retail Services and Products Test conclusion for the institution based on the combined assessment of both parts of the test: *delivery systems* and *credit and deposit products*.¹⁰⁸⁵

Delivery systems evaluation. The agencies proposed in section c.3.i.A.1 and 2 of appendix C that a bank's *delivery systems* evaluation would be based on the three proposed parts of the delivery systems evaluation, as applicable: (1) branch availability and services; (2) remote service facility availability; and (3) digital and other delivery systems. The first two parts of the evaluation would apply for all large banks at the facility-based assessment area and aggregated to form a branch and remote service facilities subcomponent conclusion at the institution level. For large banks with assets of over \$10 billion and large banks with assets of \$10 billion or less that elect to have digital and other delivery systems considered, the agencies proposed evaluating digital and other delivery systems at the institution level. For large banks with assets of \$10 billion or less that do not elect to have their digital and other delivery systems considered, the institution-level delivery systems evaluation would be based exclusively on the bank's branch availability and services and remote service facility availability.

The agencies proposed that examiners would derive the institution delivery systems evaluation by considering the bank's performance for each of the three parts of the delivery system evaluation and allowing for examiner discretion to determine the appropriate weight that should be given to each part. The agencies also indicated that examiners would take into account a bank's business model and strategies when determining the appropriate weighting.

Credit products and programs and deposit products evaluation. The agencies proposed in paragraph c.3.i.B of proposed appendix C, that a bank's credit and deposit products evaluation would be based on the performance for the applicable parts of the credit and deposit products

¹⁰⁸² See proposed appendix C.c.2.

¹⁰⁸³ See *id.*; see also proposed appendix A.VII.I.

¹⁰⁸⁴ See proposed appendix C.c.2.

¹⁰⁸⁵ See proposed appendix C.c.3.i.

evaluation, which are: (1) the responsiveness of credit products and programs to the needs of low- and moderate-income individuals, small businesses, and small farms; and (2) deposit products responsive to the needs of low- and moderate-income individuals. The agencies proposed to apply the first part of the evaluation to all large banks at the institution level. The agencies also proposed evaluating the bank's deposit products at the institution level for large banks with assets of over \$10 billion and for large banks with assets of \$10 billion or less electing to have their responsive deposit products considered. For large banks with assets of \$10 billion or less that do not elect to have their responsive deposit products considered, the institution-level credit products and programs and deposit products evaluation would be based exclusively on the responsiveness of a bank's credit products and programs to the needs of low- and moderate-income individuals, small businesses, and small farms.

As with the delivery systems evaluation, the agencies proposed that examiners, considering performance context, would reach a determination at the institution level for the *credit and deposit products* evaluation of: "Outstanding" (10 points); "High Satisfactory" (7 points); "Low Satisfactory" (6 points); "Needs to Improve" (3 points); or "Substantial Noncompliance" (0 points).¹⁰⁸⁶

Retail Services and Products Test conclusion for the institution. The agencies proposed to assign a Retail Services and Products Test conclusion based on a combined assessment of the bank's delivery systems evaluation and the credit and deposit products evaluation, as applicable. The agencies proposed that examiner judgment would be relied upon to determine the appropriate weighting between these two parts of the Retail Services and Products Test for purposes of assigning the institution conclusion, in recognition of the importance of local community credit needs and bank business model and strategy in determining the amount of emphasis to give delivery systems and credit and deposit products, respectively. Based on this consideration, the agencies would assign an institution-level conclusion on the Retail Services and Products Test. This conclusion would be translated into a performance score using the following mapping: "Outstanding" (10 points); "High Satisfactory" (7 points); "Low Satisfactory" (6 points); "Needs to Improve" (3 points); or "Substantial Noncompliance" (0 points).

The agencies requested feedback on a series of questions regarding the proposed approach. With respect to the evaluation of delivery systems, the agencies asked whether branches and remote services facilities should be evaluated at the assessment area level and digital and other delivery systems at the institution level, as proposed. The agencies also asked whether the proposed weighting of the digital and other delivery systems component relative to the physical delivery systems according to bank business model, as demonstrated by the share of consumer accounts opened digitally, was appropriate; whether weighting should be based on performance context; or whether a different approach was appropriate. With respect to the evaluation of credit and deposit products, the agencies requested feedback on whether the two subcomponents (credit and deposit products) should receive equal weight, or should be based on examiner judgement and performance context. The agencies also asked whether each subcomponent should receive its own conclusion that would be combined with the delivery systems evaluation for an overall institution conclusion, or whether favorable performance in the credit and deposit

¹⁰⁸⁶ See proposed appendix C.c.ii.

products evaluation should be used solely to upgrade the delivery systems conclusion. The agencies further asked how test conclusions should be determined for banks with assets of \$10 billion or less that opt to be evaluated on their digital delivery systems and deposit products. Finally, the agencies requested feedback on whether each part of the Retail Services and Products Test should receive equal weighting.

Comments Received

Delivery systems evaluation. There was no consensus among the commenters responding to the agencies' request for feedback regarding the appropriateness of the proposed approach to evaluate the bank's delivery systems (branches and remote service facilities) at the assessment area level, and their digital and other delivery systems at the institution level. A few commenters supported evaluating each subcomponent as proposed by the agencies. One of these commenters noted that this approach would be appropriate, particularly given that digital delivery systems are consistent across the institution and that the institution-level assessment provides the best allocation of a limited regulatory burden budget given the cost of developing, promoting, and maintaining high quality systems. Some commenters supported evaluating both subcomponents at the same level, and at both the assessment area and institution levels, with another commenter stating local responsiveness to needs is best evaluated at the assessment area level.

With respect to the agencies' proposal to weight the digital and other delivery systems component relative to the physical delivery systems and according to the bank's business model (as demonstrated by the share of consumer accounts opened digitally), commenters were also divided. One commenter was supportive of the agencies' approach and found the proposal appropriate, while commenters preferred that weighting be determined based on performance context, stating that it is key to understanding the position of a bank. A few other commenters asserted that the weighting should be determined based on both business model and performance context, while another commenter recommended that weighting should be appropriate to the bank's business model. Two commenters were of the view that, because low- and moderate-income customers rely more heavily on branches, the physical delivery component should weigh more (*e.g.*, a bank that gathers 50 percent or more of its deposits from branches should have a weight for their physical delivery systems and their digital delivery systems of two-thirds and one-third, respectively). One commenter recommended that the agencies offer flexible weighting based on a bank's business model for the three types of delivery systems (branches, remote service facilities, and digital and other). Several other commenters recommended that banks with few or no physical branches or remote service facilities should be evaluated on their primary delivery channels, *e.g.*, their digital delivery systems. Another commenter stated that the share of consumer accounts opened digitally should be the metric and that it is not clear why physical delivery systems are relevant and how much a bank's business model should be factored into the evaluation unless the bank offers no digital banking services.

Credit and deposit products evaluation. In response to how the agencies should weight the two subcomponents of the credit and deposit products evaluation, commenters provided a variety of recommendations. Two commenters recommended that the two subcomponents generally receive equal weighting, with one commenter recommending that if a bank is mostly a lender, credit products should be weighted more heavily, and conversely, if the bank mostly offers deposit services, deposit products should be weighted more heavily. This commenter also recommended that examiners should not determine weights since it would be too subjective, and that the agencies should develop a table of weights based on business models. Another

commenter similarly recommended that examiners should not determine the weights, but recommended that credit products receive greater weight, expressing the view that providing credit has a more significant beneficial impact on the community. Two commenters expressed a different view, stating that examiner judgment and performance context should be used to determine the relative weight of the two subcomponents, with one of these commenters stating that doing so would impart flexibility with regard to a bank's business model, assessment area characteristics, and product demand. Two other commenters believed weighting should be determined based on the business model and performance context, and another commenter asserted that weighting should also depend on the importance of each product to the communities in the assessment area.

A few commenters addressed the agencies' request for feedback concerning how the credit and deposit products evaluation should be considered when developing a bank's overall Retail Services and Products Test conclusion. Most of these commenters recommended that the evaluation should have its own conclusion rather than use the evaluation to upgrade the delivery systems conclusion, with one commenter stating that the credit and deposit products evaluation should be considered a qualitative factor in the Retail Lending Test.

Weighting the components to derive the institution conclusion. A small number of commenters responded to the agencies' request for comment on whether each part of the Retail Services and Products Test should receive equal weighting to derive the institution's conclusion or vary the weight based on business model and performance context. A few commenters supported weighting each part of the test based on business model and performance context, with one of these commenters stating it would encourage responsiveness and innovation. Another one of these commenters also stated that weighting should be treated much like the current innovative and flexible lending test to supplement the rating. Another commenter supported an overall institution conclusion with the appropriate weighting of each composite evaluation and recommended that the agencies weight delivery systems conclusions less than the other systems conclusions if they are deemed less critical. Two other commenters generally supported equal weight for each part of the test, with one of these commenters also recommending consideration of business model but not relying on examiner judgment to establish the weight. Some commenters expressed concern that digital banks may not have data or products to be evaluated under this test and, given the great deal of examiner judgment provided under the proposal, that it is unknown whether examiners would disregard those tests, adding significant uncertainty for the assessed institution. Other commenter recommendations included the following: the delivery systems portion of the test should be given more weight, and if the agencies provide additional guidance on the impact and responsiveness of an activity, then each part of the test should be weighted according to the specific guidance; a clearly-defined grading system should be created that emphasizes lending, branches, fair lending performance, and responsible loan products for working class families; and banks should not be permitted to pass if they fail to serve communities with branches and affordable and accessible products, and provide banking and deposit products equitably, as can happen with strict numerical weighting systems.

Final Rule

The agencies are adopting § __.23(d)(1) largely as proposed, assigning conclusions for a bank's Retail Services and Products Test in each facility-based assessment area, State, multistate MSA, and at the institution level in accordance with final § __.28 and final appendix C of the CRA regulations. As explained in more detail below, the agencies are also revising proposed

appendix C to provide that the agencies will consider the bank's performance regarding its retail banking products, as applicable, to determine whether the bank's performance contributes positively to the bank's overall Retail Services and Products Test conclusion. The agencies are also clarifying in appendix C that consideration of a bank's retail banking products evaluated at the institution level may include retail banking products offered in facility-based assessment areas and nationwide. As a result of the revisions made in the final rule to the proposed conclusions for retail banking products, the agencies are also revising proposed appendix C with respect to a bank's overall institution Retail Services and Products Test conclusion. Specifically, final section c.3.i.B.3 of appendix C is revised to clarify that "[t]he bank's lack of responsive retail products does not adversely affect the bank's Retail Services and Products Test performance conclusion." Final § __.23(d)(1) is also revised to add that "[i]n assigning conclusions under this performance test, the [Agency] may consider performance context information as provided in § __.21(d). The evaluation of a bank's retail banking products under paragraph (c) of this section may only contribute positively to the bank's Retail Services and Products Test conclusion."

Delivery systems conclusion. Conclusions in the final rule with respect to the delivery systems, component of the test are based on the conclusions for each of the three parts of the delivery systems evaluation: branch availability and services, remote service facility availability, and digital and other delivery systems. Consistent with the proposal, the final rule evaluates branches and remote service facilities for all large banks at the facility-based assessment area level and then aggregates those conclusions to form a branch availability and services and remote service facility availability subcomponent conclusion at the institution level, as provided in paragraph c.1 of final appendix C.

The final rule evaluates digital and other delivery systems for large banks with assets of over \$10 billion, large banks with assets of \$10 billion or less that have no branches, and large banks with assets of \$10 billion or less that elect to have digital and other delivery systems considered. The agencies will develop an institution-level conclusion for these banks' digital and other delivery systems subcomponent. The agencies believe it is appropriate to evaluate digital and other delivery systems at the institution level because the features of this subcomponent are generally not place-based and may extend beyond facility-based assessment areas. Digital and other delivery systems are also generally consistent across the institution.

In the final rule, the institution-level delivery systems conclusion for large banks with assets of \$10 billion or less that have branches and do not elect to have their digital and other delivery systems considered will be based exclusively on the evaluation of such bank's branch availability and services and remote service facility availability.

The final rule also contemplates that examiner judgment will be relied upon to determine the appropriate weight that should be given to each subcomponent of delivery systems at the institution level based on the bank's business model and performance context. As noted in the proposal, this approach for developing delivery systems conclusions is intended to provide the agencies with the flexibility to take into account the unique business models and strategies of different banks. For example, if a majority of the bank's new deposit accounts are opened via digital channels during the evaluation period, then the agencies may give more weight to the digital and other delivery systems conclusion.

The agencies considered and appreciate commenters' suggestions regarding how weighting of the subcomponents of delivery systems should be determined. The agencies note that the final rule will not require weighting as demonstrated by the share of consumer accounts opened digitally. As noted above, the final rule adds consideration of performance context, which is important to understanding the bank's business model and strategy. The agencies believe that dictating the specific measures in the regulation for how to derive conclusions for delivery systems could also be limiting. On balance, the agencies believe that the approach in the final rule will provide flexibility to banks and examiners to consider other factors, while minimizing burden.

Retail banking products conclusion. In response to comments, and to conform to changes made in the test, the agencies will evaluate the bank's performance regarding its retail banking products and determine whether the bank's performance contributes positively to the bank's Retail Services and Products Test. Under the final rule, examiner judgment and performance context will be considered in determining the responsiveness of a bank's retail banking products.

The lack of responsive retail banking products will not adversely affect the evaluation of the bank's Retail Services and Products Test performance. If the bank presents and has the data to support that its credit products and programs are responsive to the needs of low- and moderate-income individuals, families, or households, residents of low- and moderate-income census tracts, small businesses and small farms, and are offered and used, such data will be presented in the CRA performance evaluation. However, if a bank does not offer or originate, or does not provide for consideration, any credit products and programs responsive to the credit needs of low- and moderate-income individuals, families, or households, residents of low- and moderate-income census tracts, small businesses, or small farms, the CRA performance evaluation will state as such.

If the bank presents and has the data to support that its deposit products are responsive to the needs of low- and moderate-income individuals, families, or households, and are offered and used, the agencies will evaluate such data for positive consideration under this test. If the agencies provide positive consideration of deposit products, such consideration will be presented in the CRA performance evaluation. If the bank does not offer any deposit products responsive to the needs of low- or moderate-income individuals, families, or households, such information will not be reflected in the CRA performance evaluation.

The agencies believe that permitting agency discretion and performance context to be used to determine the impact of any positive consideration of retail banking products is appropriate because it would impart flexibility to consider a bank's business model and strategy. The agencies determined that evaluating the retail banking products solely for positive consideration rather than weighting was appropriate given the nature of the review. The agencies also acknowledge concerns about examiner subjectivity, but on balance, the agencies believe that the approach in the final rule will allow banks more flexibility and will take into consideration bank sizes, business models, and the retail banking product needs of the local communities served by the bank. The agencies also disagree with comments that recommended that credit or deposit products should receive greater weight in the final rule. The agencies believe that both credit products and programs and deposit products have a beneficial impact on the community and that the agencies should not be constrained in evaluating banks with varying business models.

In response to commenters that suggested including retail banking products as a qualitative factor in the Retail Lending Test, the agencies disagree and believe that the Retail Lending Test should maintain its primarily quantitative approach to evaluating retail lending. The agencies believe further that the Retail Services and Products Test is the appropriate place to evaluate these products and programs qualitatively. The quantitative approach to the Retail Lending Test is discussed more in-depth in that section of the preamble.

Retail Services and Products Test Conclusion. For the reasons stated above, the agencies are not finalizing an institution-level conclusion based on conclusions derived for delivery systems and credit and deposit products as proposed. Instead, the delivery systems evaluation will receive a conclusion, and the agencies will determine whether the retail banking products evaluation contributes positively to the bank's Retail Services and Products Test conclusion. The agencies will consider a bank's retail banking products offered in facility-based assessment areas and nationwide in determining whether the evaluation of retail banking products contributes positively to the bank's Retail Services and Products Test. The agencies believe that this consideration supports the agencies' objectives to adapt to changes in the banking industry as banks offer products and programs beyond their branch locations.

The final rule also provides for agency discretion, considering a bank's business model and other performance context factors, to determine the appropriate weight to give each subcomponent of the retail banking services evaluation and to assess the responsiveness of a bank's retail banking products. The agencies agree with commenters who supported weighting each part of the test based on business model and performance context because the flexibility could encourage responsiveness and innovation. The agencies disagree, however, with the recommendations to establish definitive weighting for each part of the test or a strict numerical grading system. While the agencies are sensitive to concerns that relying on agency discretion, bank business model, and performance context may run counter to the stated objective of more certainty, the agencies believe that this approach is appropriate because it allows for flexibility without increased burden on banks.

§ __.23(d)(2) Ratings

Current Approach and the Agencies' Proposal

Current § __.24(f) of the CRA regulations provides that the agencies rate each large bank's service test performance pursuant to current appendix A. Under current appendix A, each bank's performance is assigned of the following five ratings: "Outstanding," "High Satisfactory," "Low Satisfactory," "Needs to Improve," or "Substantial Noncompliance." As noted above, retail services are part of the overall service test rating along with community development services. Therefore, retail services do not get their own rating in the current regulations. Instead, the ratings for retail services are determined pursuant to section (b)(3)(i)-(v) of current appendix A. The ratings are determined at the State, multistate MSA, and institution levels.

The agencies proposed to incorporate a bank's Retail Services and Products Test conclusions into its State, multistate MSA, and its institution ratings as provided in § __.28 and appendices C and D.

Final Rule

The agencies received no comments related to the specific language in § __.23(d)(2) about the agencies' proposal to assign ratings and are finalizing § __.23(d)(2) as proposed, with

technical edits not intended to have a change in meaning. The final rule incorporates the changes in conclusions noted above into the ratings for the Retail Services and Products Test pursuant to final § __.28 and final appendices C and D. The agencies are clarifying that business model and performance context are considered when assigning conclusions as well as the ratings for the bank's performance under the Retail Services and Products Test. Also, included specifically for the evaluation of a bank's retail banking products, the agencies will determine whether the bank's performance contributes positively to the bank's Retail Services and Products Test conclusion and rating.

§ __.24 Community Development Financing Test

§ __.24 In General

Current Approach

Under current CRA regulations and interagency examination procedures, the agencies assess community development loans and community development investments (community development financing activities) differently based on the asset size and business model of a bank.¹⁰⁸⁷ For small banks, the agencies consider community development investments only at a bank's option for consideration of an "Outstanding" rating for the institution overall.¹⁰⁸⁸ The agencies may consider a small bank's community development loans as part of lending-related activities under the lending test applicable to small banks as discussed in the section-by-section analysis of § __.29. For intermediate small banks and wholesale and limited purpose banks, the agencies consider community development loans, community development investments, and community development services together under the applicable community development test.¹⁰⁸⁹

For large banks, the agencies consider community development loans together with retail loans as part of the lending test, while the agencies consider community development investments separately in the investment test.¹⁰⁹⁰ A large bank receives consideration for both the number and dollar amount of community development loans originated and community development investments made during the evaluation period, as well as the remaining book value of community development investments the bank made during prior evaluation periods that remain on the bank's balance sheet. Under the current evaluation framework, banks do not receive consideration for community development loans that remain on a bank's balance sheet from prior evaluation periods.

For banks that are not small banks, the current rule also includes consideration of qualitative factors, including the innovativeness and complexity of community development financing activities, the responsiveness of the bank to credit needs in its assessment areas, and the degree of leadership the bank exhibits through its activities. The agencies assign conclusions at the

¹⁰⁸⁷ The current performance tests and standards are included in subpart B of the current rule.

¹⁰⁸⁸ See current appendix A—Ratings; Q&A § __.26(d)—1.

¹⁰⁸⁹ See current 12 CFR __.25(c) and current 12 CFR __.26(c).

¹⁰⁹⁰ See current 12 CFR __.22 and current 12 CFR __.23.

assessment area level based on both the number and dollar amount of community development financing activities, as well as the qualitative factors.

The current approach emphasizes community development financing activities that serve one or more of a bank's assessment areas but also allows for flexibility in the geographic scope and focus of activities, subject to certain conditions. A community development financing activity that specifically serves an assessment area receives consideration, as does a community development financing activity that serves a broader statewide or regional area containing one or more of a bank's assessment areas.¹⁰⁹¹ For a bank with a nationwide footprint, this could include community development loans and investments that are nationwide in scope.¹⁰⁹² In addition, if a bank has met the community development needs of its assessment areas, it may also receive consideration for community development financing activities within a broader statewide or regional area that includes an assessment area that do not benefit its assessment area.¹⁰⁹³

The Agencies' Proposal

In § __.24 of the NPR, the agencies proposed a new Community Development Financing Test applicable to large banks and any intermediate bank that opted to be evaluated under this test.¹⁰⁹⁴ The proposed Community Development Financing Test consisted of community development financing metrics, applicable benchmarks, and an impact review. The agencies proposed using these components to evaluate banks' community development loans and investments in facility-based assessment areas, States and multistate MSAs where banks have facility-based assessment areas, and in the nationwide area. These metrics, as compared to benchmarks and the impact reviews, would inform conclusions at those levels.

The agencies proposed using the bank community development financing metrics to measure the dollar value of a bank's community development loans¹⁰⁹⁵ and community development investments¹⁰⁹⁶ together, relative to the bank's capacity, as reflected by the dollar value of deposits. The proposed benchmarks would reflect local context, including the amount of community development financing activities in the applicable area by other banks, as well as national context that would provide additional information for the evaluation of facility-based assessment areas. The agencies would use the benchmarks in conjunction with the metrics to assess a bank's performance. The proposed metrics and benchmarks would provide additional consistency and clarity in evaluating a bank's community development financing activities under

¹⁰⁹¹ See current 12 CFR __.12(h)(2)(ii); see also Q&A § __.12(h)—6.

¹⁰⁹² Q&A § __.23(a)—2.

¹⁰⁹³ Q&A § __.12(h)—6.

¹⁰⁹⁴ The agencies also proposed evaluating wholesale and limited purpose banks under the Community Development Financing Test for Wholesale and Limited Purpose Banks, as discussed in proposed § __.26.

¹⁰⁹⁵ See proposed § __.12.

¹⁰⁹⁶ *Id.*

the otherwise qualitative evaluation under the proposed Community Development Financing Test.

The impact review, in proposed § __.15, would evaluate the impact and responsiveness of a bank's community development loans and investments through the application of a series of specific qualitative factors described in more detail in the section-by-section analysis of § __.15. The impact review would provide appropriate recognition under the Community Development Financing Test of community development loans and investments that are considered to be particularly impactful and responsive to community needs, including loans and investments that may be relatively small in dollar amount.

Comments Received

The agencies received many comments on the proposed Community Development Financing Test in § __.24 from a variety of commenters. Although some commenters supported parts of the proposed Community Development Financing Test, other commenters objected to certain aspects of the proposed performance test, including some commenters that opined that the proposed performance test was too complicated, would weaken the CRA rule, or would water down community development investments. Some of these commenters offered alternative options for the agencies to consider. The proposed rule, comments received, and final rule are described in more detail below.

Final Rule

The agencies considered the comments on proposed § __.24 and are finalizing the Community Development Financing Test with the substantive, conforming, clarifying, and technical revisions discussed below.¹⁰⁹⁷ As with the proposal, the final Community Development Financing Test applies to large banks, and to intermediate banks that opt into the test. Consistent with the current rule and the proposal, the Community Development Financing Test is a qualitative evaluation; however, the final rule builds on the current rule by introducing standardized metrics and benchmarks that examiners will use to inform their evaluation of bank's capacity to engage in community development financing activity. The metrics and benchmarks included in the final Community Development Financing Test increase consistency by providing examiners with standardized information to evaluate bank community development financing performance. Nonetheless, the final Community Development Financing Test is a qualitative evaluation of banks' community development loans and investments in facility-based assessment areas, States, and multistate MSAs (as applicable pursuant to § __.28(c)),¹⁰⁹⁸ and the nationwide area because the final rule does not include thresholds for determining conclusions.¹⁰⁹⁹

¹⁰⁹⁷ See *supra* note 145.

¹⁰⁹⁸ Final § __.28(c) explains when the agencies evaluate and conclude on a bank's performance in a State or multistate MSA. See the section-by-section analysis of final § __.28(c).

¹⁰⁹⁹ As discussed below, the agencies could consider adding thresholds to the Community Development Financing Test in the future after reviewing and analyzing data on community development loans and investments and once they have experience applying the new metrics and benchmarks.

In addition to the proposed metrics and benchmarks that the agencies are adopting in the final rule, in response to comments, the agencies included an additional investment metric and benchmark for evaluating community development investments in the nationwide area for large banks that had assets greater than \$10 billion. The final rule also includes consideration of the impact and responsiveness of banks' community development loans and investments. The final rule does not prescribe weighting for community development loans or investments within the Community Development Financing Test, nor does it prescribe weighting for the metrics and benchmarks or impact and responsiveness review components.

Banks Subject to the Community Development Financing Test

Current Approach

Under the current rule, the agencies evaluate community development loans and investments for both large banks and intermediate small banks under the tests applicable to those banks. As discussed above, the agencies evaluate large banks' community development lending and investments under the lending test in current § __.22 and the investment test in current § __.23. The agencies evaluate intermediate small banks' community development loans, community development investments, and community development services under the community development test in current § __.26(c).

The Agencies' Proposal

The proposed Community Development Financing Test, in § __.24, applicable to large banks and to intermediate banks that opted into the test, combined the evaluation of community development loans and investments into a single test. As proposed, the agencies would continue to evaluate intermediate banks' community development loans, community development investments, and community development services using a community development test modeled on the community development test in current § __.26(c). The proposal provided, however, that intermediate banks could elect evaluation under proposed § __.24.

Comments Received

As discussed above in the section-by-section analysis of § __.21, the agencies received comments on the applicability of the performance tests and standards to different sizes and types of banks. For example, a commenter suggested that the proposal to eliminate the community development test for certain banks would eliminate those banks' accountability for providing community development financing activities and branches in underserved communities and lacks justification. Another commenter stated that the agencies should require intermediate banks to be evaluated under the proposed Community Development Financing Test, as opposed to making it optional. The commenter suggested that subjecting both large and intermediate banks to the new test would create consistency among banks and examiners and provide others in the community development industry with a common understanding of how the agencies evaluate banks.

Final Rule

The agencies are finalizing these provisions of the rule as proposed; the final Community Development Financing Test will apply to all large banks and to intermediate banks that opt into the performance test. The agencies included clarifying edits in § __.24 of the final rule to reference intermediate banks that opt into the test. Although the agencies understand the

concerns raised by the commenters, as discussed in greater detail above in the section-by-section analysis of § __.21, the agencies believe that the additional burden of requiring the Community Development Financing Test for intermediate banks was not justified after accounting for these banks' more limited capacity to engage in community development loans and investments. Further, for the reasons discussed above, the agencies also believe that the changes to the asset size thresholds for banks appropriately balance the burden of meeting the requirements of the Community Development Financing Test with the need to assess a bank's record of helping to meet the credit needs of its community.

Combined Consideration of Community Development Loans and Investments

Current Approach

Under the current rule, as discussed above, the agencies separately evaluate large banks' community development loans and investments. The agencies evaluate a large bank's community development loans under the lending test in current § __.22 along with its retail lending. The agencies evaluate a large bank's community development investments under the investment test in current § __.23. For intermediate small banks, as noted above, the agencies evaluate community development loans, community development investments, and community development services under a single community development test in current § __.26(c) of the current rule.

The Agencies' Proposal

In § __.24 of the NPR, the agencies proposed to evaluate community development loans and investments together under the Community Development Financing Test to allow banks to make the community development loans or investments that are best suited to their expertise and most needed for the community development projects the banks are financing. The agencies intended for the proposed approach to simplify the evaluation of community development loans and investments while addressing concerns expressed by some stakeholders that the current approach favors one form of financing over another. The agencies believed that the proposed metrics would appropriately measure both community development loans and investments. As discussed, the agencies would also consider the impact and responsiveness of community development loans and investments as part of the proposed impact review.

Comments Received

The agencies received many comments on the proposal to combine the evaluation of community development lending and investments into a single Community Development Financing Test in proposed § __.24. The majority of commenters objected to the combined evaluation of community development loans and investments under a single test or urged the agencies to retain separate evaluations for these activities within the Community Development Financing Test.

Some commenters supported combining the evaluation of community development loans and investments into a single Community Development Financing Test. Reasons provided by these commenters for supporting a single Community Development Financing Test include that it: (1) can be challenging for smaller banks to make community development investments; (2) would eliminate the unintended consequences of a mismatch in the type of funds a project needs and the funding banks will receive credit for providing; (3) would allow banks to have the flexibility to create and implement a broader variety of business plans, while serving low- and moderate-

income individuals and communities in a more efficient manner; (4) can be difficult to distinguish between whether a financing activity is equity or debt, such as with investment structures that are credit-enhanced loans; (5) would avoid privileging one type of funding over the other, allowing the needs of the project to dictate the financing vehicle; (6) would provide banks with greater flexibility in determining the most effective financing structures for developments; and (7) would allow banks to meet community development needs in local communities through lending if 12 CFR part 24 requirements restrict a bank's ability to make investments. Even amongst the commenters that supported the combined evaluation of community development loans and investments, however, certain commenters noted sensitivity to concerns about banks overlooking community development investments.

In contrast, most commenters on this issue objected to the combined evaluation of community development loans and investments and predominantly focused on the potential disruptive or negative impact that the proposed test could have on community development investment markets. Commenters expressed concern that the proposal would allow banks to meet their CRA obligations through community development lending, instead of through community development investments, the latter of which are often harder to make. For example, commenters stated that banks may engage in fewer community development investments because equity investments generally require more costly capital, have a longer term and higher origination costs, are more illiquid, and carry greater risk. Other commenters expressed concern that banks may make fewer grants and donations because these activities, even with consideration as an impactful and responsive factor pursuant to final § __.15, are smaller dollar activities that will not factor significantly in the proposed metrics and benchmarks. One of these commenters suggested the agencies consider grants under the Community Development Services Test with a metric specific to grants and contributions to nonprofit organizations.

Commenters also noted that combining the evaluation of community development loans and investments may not result in the best financing for a particular community or project. A commenter expressed concern that the proposed Community Development Financing Test may incentivize financial institutions to select one financing option over the other, without considering which option would be more beneficial for the project. The commenter noted that capital stacks required for community development initiatives vary from one project to another, and impactful projects may be delayed if the proper capital cannot be obtained.

Many of the commenters that objected to the combined evaluation of community development loans and investments expressed concern that eliminating the current, separate tests could have a particularly negative impact on the equity tax credit markets. Certain commenters expressed concern that the proposed approach could disincentivize or result in banks making fewer LIHTC or NMTC investments because these investments are often more complex and may have lower returns than community development loans. Other commenters noted that the current investment test has served as an incentive for banks to engage in these types of loans and investments and banks make up a large portion of the LIHTC and NMTC markets. Further, a few commenters asserted that any decrease in the appetite for LIHTC will likely result in fewer affordable housing deals, as well as higher costs, which will translate into decreased affordability for projects that do get built.

Other commenters focused on the potential impact that eliminating the current investment test could have on CDFI investments, with some stating that eliminating the current investment test could cause a shift in banks' CRA activity away from making equity investments in, or

providing grants to, CDFIs, which are labor and time intensive but impactful. A commenter also stated that eliminating the current investment test could discourage bank investment in community development venture capital funds and other CDFIs that provide flexible risk capital to businesses and projects in low-income communities, noting that these funds cannot be prudently capitalized with debt.

Other commenters said that focusing primarily on the dollar volume of lending and investment transactions, without also evaluating the number of transactions and originations, favors larger loans that are easier to make instead of more impactful, and generally smaller, investments and loans. Further, at least one individual and a community development organization stated that combining consideration of community development loans and investments into a single test would remove longstanding precedent where the agencies base a portion of banks' CRA performance on community development investments.

Suggestions for Addressing Concerns with Combined Evaluation of Community Development Loans and Investments. To address their concerns about combined evaluation of community development loans and investments, commenters provided several suggestions for revisions or alternatives to the proposed Community Development Financing Test. As discussed below, commenter suggestions included retaining the current performance evaluation tests, adding subtests to the proposed Community Development Financing Test, and implementing other methods of ensuring banks continue to make community development investments, such as specifying weightings and minimums. Certain commenters also focused their suggestions on particular aspects of the community development investment markets, including the tax credit markets, grants, and mortgage-backed securities.

Certain commenters suggested retaining versions of the current performance tests, which evaluate community development loans and investments separately. Specifically, a commenter supported retaining the current large bank three-test evaluation, where the agencies evaluate the relative merits of lending, investments, and services separately. A few commenters, suggested that the agencies should consider all lending under the Retail Lending Test and all investments under the Community Development Financing Test.

Other commenters suggested that the agencies incorporate separate community development lending and community development investment subtests into the Community Development Financing Test. Some of these commenters suggested that including separate subtests would encourage banks to make LIHTC investments, grants, and equity equivalent investments. These commenters also suggested weighting for the tests ranging from 15 percent to greater than 50 percent for the investment. As discussed in the section-by-section analysis of § __.21(a), other commenters recommended a single community development test and certain of these commenters recommended weighting for the subtests as follows, community development lending (weighted 25 percent), community development investments (weighted 20 percent), and community development services (weighted 5 percent).

Commenters also provided other suggestions for ensuring that community development investments receive appropriate emphasis under the final rule. Some commenters suggested that, to ensure that banks still make community development investments, the agencies should require a minimum amount of community development financing activities to be in the form of equity investments. One of these commenters stated that a portion of this investment minimum should not be tied to tax credits. Another commenter suggested as an alternative that the agencies

should not assign a bank an “Outstanding” rating without an adequate level of equity investments.

Instead of including an investment minimum in the Community Development Financing Test, certain commenters suggested that the agencies include investment-based metrics and benchmarks in the performance test. Commenters stated the Community Development Financing Test should include some or all of the following: (1) an institution-level equity metric and benchmark; (2) a measurement of the new institution-level equity investments over time to identify reductions; or (3) a high-impact metric and benchmark. Some of these commenters believe that banks should not receive a higher score on the Community Development Financing Test than on this recommended equity investment metric. Certain commenters suggested structuring the investment metric like the proposed institution-level Community Development Financing Metric, to measure community development equity investments in the numerator and deposits in the bank in the denominator. A few of these commenters recommended excluding mortgage-backed securities from the metric or benchmark.

Commenters also offered suggestions for how the agencies could incorporate the metrics or benchmarks into the Community Development Financing Test. Certain commenters recommended the agencies use an equity benchmark based on a comparison of investments to deposits as a peer comparator and assign higher Community Development Financing Test ratings to banks that devote a larger portion of their community development financing activities to equity investments. One of these commenters also suggested the agencies use a benchmark that measures total equity investments—exclusive of mortgage-backed securities—as a percentage of a bank’s total community development loans and investments as a peer comparator. A commenter further suggested that a high equity metric could be considered as a factor for an “Outstanding” rating.

Some commenters also suggested that the agencies monitor levels of equity investments compared to the current baseline level, both for individual banks and nationwide, and take action to prevent reductions in equity investments, with certain commenters focusing specifically on reductions in tax credit investments. One of these commenters also encouraged examiners to potentially downgrade banks that have significantly cut back their investments without a reasonable explanation. Relatedly, a commenter suggested that, in lieu of a separate investment test, the agencies could require data collection on community development loans and investments to identify imbalances between the categories.

Commenters also made other recommendations for how the agencies could continue to ensure that banks participate in the affordable housing and tax credit markets. In the absence of a separate investment test, commenters strongly urged the agencies to: (1) put mitigating factors in place to protect LIHTC investments; (2) establish another robust mechanism to motivate both intermediate and large banks to participate in the equity markets for NMTCs and other effective community development tax credit investments; or (3) otherwise implement strong mechanisms to preserve impactful equity investments in affordable housing and community development. For example, a commenter requested that the agencies ensure that the rule reviews separately and helps increase affordable housing tax credits investments and lending.

Other commenters recommended that the agencies limit credit for investments in mortgage-backed securities so that the mortgage-backed securities investment option does not overwhelm the Community Development Financing Test. Commenter recommendations included: (1)

limiting credit for mortgage-backed securities to 20-25 percent of the institution-level Community Development Financing Test conclusions and ratings; (2) requiring a two-year holding period for mortgage-backed securities, with a retrospective review of the holding period applied to the next bank examination; (3) counting only the first or second purchase of mortgage-backed securities; or (4) counting only the value of affordable loans in a qualifying mortgage-backed security, rather than the full value of the security.

Final Rule

The agencies are adopting the Community Development Financing Test as proposed with the combined evaluation of community development loans and investments. To address commenter concerns, however, the final rule includes a Bank Nationwide Community Development Investment Metric¹¹⁰⁰ and a Nationwide Community Development Investment Benchmark,¹¹⁰¹ for large banks that have assets greater than \$10 billion, discussed in greater detail below in the section-by-section analysis of § __.24(e).

The agencies carefully considered commenters' concerns about the potential negative or disruptive impact that combining the evaluation of community development loans and investments could have on banks' provision of community development investments, including tax credit investments, CDFI investments, affordable housing investments, and grants and other small dollar investments and loans. The agencies also considered the reasons for combining consideration of community development loans and investments, both those articulated in the proposal and provided by commenters.

After weighing the potential benefits and consequences of adopting the Community Development Financing Test as proposed, the agencies continue to believe that the combined evaluation of community development loans and investments will best serve the interests of banks and communities by providing flexibility for banks to focus on the community development financing methods most consistent with their expertise. The combined evaluation of community development loans and investments also will enable banks to identify the financing most needed for a community development project without regard to how that loan or investment would affect the bank's CRA evaluation. Further, the agencies considered that there are circumstances in which banks are not competitive for certain types of community development loans or investments or there are limited opportunities in particular markets for one or the other type of financing. Combining the evaluation of community development loans and investments into a single Community Development Financing Test will reduce the consequences of these supply and demand issues on banks' CRA evaluations.

Nonetheless, the agencies understand that certain community development investments involve significant time and effort, are complex, and play an important role in supporting much-needed community development, including affordable rental housing and economic development in low- and moderate-income communities and other underserved communities. The agencies did not intend for the proposed Community Development Financing Test to incentivize banks to make fewer impactful investments. To mitigate the potential risk that banks may put less emphasis on community development investments, the final rule includes both a Bank

¹¹⁰⁰ See final § __.24(e)(2)(iii).

¹¹⁰¹ See final § __.24(e)(2)(iv).

Nationwide Community Development Investment Metric and a Nationwide Community Development Investment Benchmark for banks with assets greater than \$10 billion. Under the final rule, the new investment metric and benchmark may only contribute positively to a bank's performance under the Community Development Financing Test.

Several commenters suggested that if the agencies retained a single Community Development Financing Test, the test should incorporate an investment metric and benchmark. The agencies agree that including these components in the Community Development Financing Test would allow the agencies to better understand the level of community development investments that banks are making, both individually and collectively. The agencies considered the other more specific suggestions provided by commenters for addressing the potential negative impact of eliminating the current investment test and determined that the addition of the Bank Nationwide Community Development Investment Metric and the Nationwide Community Development Investment Benchmark will provide sufficient additional information within the otherwise qualitative evaluation envisaged under the Community Development Financing Test. These metrics and benchmarks are part of a holistic consideration of a bank's community development financing performance; some of the more specific recommendations are better addressed through the impact and responsiveness review in § __.15 (e.g., implementing a mechanism to recognize tax credit investments) or could inappropriately emphasize a particular type of community development investment that may not—in an examiner's view—be appropriate or necessary for a particular bank or community (e.g., recognizing a particular type of equity investment for a bank that does not have the expertise to engaging in that activity). The structure and applicability of the Bank Nationwide Community Development Investment Metric and the Nationwide Community Development Investment Benchmark are discussed below.

Community Development Loan and Investment Evaluation Methodology, In General

Inclusion of Metrics and Benchmarks in the Community Development Financing Test

Current Approach

As noted above, the agencies currently evaluate large bank community development loans and investments in their assessment areas under the lending test in § __.22 and the investment test in § __.23. In contrast, the agencies consider intermediate small bank community development activities under a single community development test in current § __.26 that assesses loans, investments, and services. The applicable tests include performance criteria for evaluating the number and amount of a bank's community development loans and community development investments.

For banks that are not small banks, the current approach also includes the evaluation of certain qualitative factors, such as the innovativeness and complexity of the bank's community development loans and investments. The current approach relies on examiner judgment to conclude on bank performance. Examiners apply the performance criteria in accordance with the CRA regulations, interagency examination procedures, and the agencies' guidance (including the Interagency Questions and Answers).¹¹⁰²

Under the current rule, the agencies do not use standard metrics or benchmarks for evaluating community development loans and investments. Rather, the agencies weight community

¹¹⁰² See Q&A § __.21(a)—1.

development financing activities based on how responsive the loans and investments are to community needs.¹¹⁰³ Banks with a smaller dollar volume of highly responsive community development loans or investments may receive similar conclusions and ratings as banks with a larger dollar volume of less responsive loans and investments. In the absence of standard metrics and benchmarks, however, stakeholders have noted that there is substantial variability between agencies and between examiners within the same agency in how much weight a particular community development loans or investment receives.

The Agencies' Proposal

The agencies sought to address some of the criticism of the current performance tests and standards by introducing standardized metrics and benchmarks in proposed paragraph § __.24(b) and (c) of the Community Development Financing Test, which applied to facility-based assessment areas, States and multistate MSAs, as applicable, and the nationwide area.¹¹⁰⁴ Although the agencies included metrics and benchmarks to the Community Development Financing Test, due to the currently limited data on community development lending and lack of data on community development investments, the agencies did not include thresholds in the test. As a result, the proposed Community Development Financing Test remained a qualitative evaluation informed by the proposed metrics and benchmarks that would continue to rely on examiner judgment to assess the dollar volume of community development loans and investments and conclude on bank performance. The agencies believed the use of uniform metrics and benchmarks would improve the consistency and clarity of evaluations as compared to the current approach. Further, the agencies introduced a more formalized impact review in the proposal for assessing performance under the Community Development Financing Test.

Comments Received

Some commenters that addressed the Community Development Financing Test stated that the proposed test included improvements compared to the current approach. Specifically, a few of these commenters identified the inclusion of metrics and benchmarks in the Community Development Financing Test as an improvement on the current framework. A commenter stated that using consistent metrics and benchmarks would provide greater uniformity and clarity under this test.

However, a few commenters, including some commenters that supported the proposed revisions, expressed concern that the Community Development Financing Test did not contain sufficient rigor, structure, or standards to guide examiner judgment in assigning performance scores and ratings. A few commenters stated that the Community Development Financing Test needed to be further developed to prevent ratings inflation and to make CRA evaluations more consistent and less subjective. Commenters also recommended that the agencies issue guidance illustrating how performance under the Community Development Financing Metric would correspond to a performance score.

¹¹⁰³ See Q&A § __.21(a)—2.

¹¹⁰⁴ The Community Development Financing Test metrics and benchmarks as they apply to specific geographic areas are discussed in greater detail below.

Other commenters urged the agencies to extend the rigor of the proposed large bank lending test¹¹⁰⁵ to the other tests or suggested how the agencies could evaluate performance under the Community Development Financing Test. For example, a commenter stated that the Community Development Financing Test should incorporate thresholds tied directly to conclusions in the quantitative portion of the evaluation—similar to the Retail Lending Test—and stated that the agencies should add structure to the qualitative portion of the evaluation, including how the Community Development Financing Test maps to facility-based assessment area conclusions. The commenter provided, as an example, that if a bank had a much higher score than other banks on either the local or national benchmarks, it would likely score an “Outstanding.” At least one local government commenter recommended the agencies base the Community Development Financing Test on the lower of a bank’s nationwide area or facility-based assessment area performance. Further, a commenter stated that an appendix could more clearly explain how performance under the Community Development Financing Test relates to ratings.¹¹⁰⁶

Other commenters emphasized the importance of flexibility or tailoring in evaluating a bank’s community development loans and investments. Specifically, a financial institution expressed concern that many MSAs and counties do not have sufficient community development lending and investment opportunities, particularly in rural areas; therefore, the commenter stated, any metrics or measurements included in the final rule must be flexible. A commenter also recommended that the agencies consider community needs in determining the relevance of a bank’s performance using the proposed Community Development Financing Metric.

Final Rule

After considering the comments on the structure and rigor of the Community Development Financing Test, the agencies have decided to finalize the test as proposed without adding thresholds for measuring banks’ performance under the metrics and the applicable benchmarks. The agencies continue to believe the use of uniform metrics and benchmarks will improve the consistency and clarity of CRA evaluations relative to the current approach because they provide standard data that examiners can use to inform conclusions. While the agencies also believe that consistency could be improved using thresholds in the Community Development Financing Test, current data limitations¹¹⁰⁷ preclude the agencies’ ability to explore including thresholds in the test at this time. The agencies note that they could consider thresholds in a future rulemaking once they have accumulated data and have experience applying the metrics and benchmarks. For now, the agencies intend to issue guidance to further clarify how they will apply the Community Development Financing Test.

¹¹⁰⁵ The commenters referenced the “large bank lending test;” however, the agencies understand these commenters to be referring to the Retail Lending Test in proposed § __.22.

¹¹⁰⁶ For a discussion of how performance test scores are aggregated to develop ratings under the final rule, see the section-by-section analysis of final § __.28.

¹¹⁰⁷ Currently, the CRA rule requires data collection on the aggregate number and aggregate amount of community development loans originated or purchased. The current rule does not require data collection for community development investments. See current 12 CFR __.42(b)(2).

The agencies also note the importance of flexibility in evaluating bank performance under the Community Development Financing Test, including the importance of considering the particular circumstances of individual banks and the needs and opportunities of the communities where banks operate. The Community Development Financing Test generally remains qualitative in nature with standardized metrics and benchmarks to promote consistency. The agencies considered that the dollar volume of a loan or investment does not always provide a complete picture of the impact that a loan or investment has on a community. In consideration of comments received, and based on supervisory experience, the agencies believe that in some instances, a small dollar loan or investment that is targeted to a specific community need can have a greater impact than a larger dollar loan or investment that is less targeted, such as a mortgage-backed security. Therefore, regardless of whether the agencies consider adding thresholds to the Community Development Financing Test after they have analyzed data collected under § __.42 of the final rule, qualitative consideration of community development loans and investments will remain an integral part of the Community Development Financing Test.¹¹⁰⁸ In particular, the Community Development Financing Test includes the impact and responsiveness review discussed in the section-by-section analyses of §§ __.15 and __.24(b), which provides enhanced qualitative consideration for certain community development loans and investments. In addition, performance context remains a part of an examiner’s evaluation of a bank’s performance under the Community Development Financing Test. Therefore, the agencies are adopting the proposed framework for the evaluation of community development financing performance as proposed for facility-based assessment areas, States and multistate MSAs, and the nationwide area with the substantive and clarifying edits discussed in this section-by-section analysis along with other conforming and technical edits.

§ __.24(a)(1) In general

Current Approach and Proposal

The current rule generally provides that retail loans, except multifamily affordable housing loans (*i.e.*, multifamily loans that meet the definition of community development in 12 CFR __.12(g)), may not be considered as community development loans.¹¹⁰⁹ However, for current intermediate small banks that are not subject to HMDA reporting, a home mortgage loan, small business loan, and a small farm loan may be considered, at the bank’s option, as a community development loan, provided it meets the definition of “community development.”¹¹¹⁰ Consistent with the current approach, the agencies proposed to exclude retail loans receiving consideration under the proposed Retail Lending Test from receiving consideration under the proposed Community Development Financing Test as a general principle.¹¹¹¹ Also consistent with the current approach, the proposal provided an exception in which a multifamily loan described in proposed § __.13(b) may be considered under both the Retail Lending Test and the

¹¹⁰⁸ See the section-by-section analysis of § __.21 for discussion of performance context consideration, and the section-by-section analysis of final § __.15 for a discussion of the impact and responsiveness review.

¹¹⁰⁹ See current 12 CFR __.23(b) and Q&A § __.42(b)(2)—1. See also Q&A § __.12(h)—2.

¹¹¹⁰ Q&A § __.12(h)—3.

¹¹¹¹ See proposed § __.24(a)(i).

Community Development Financing Test.¹¹¹² In addition, the proposed rule allowed that an intermediate bank that is not required to report a home mortgage loan, a small business loan, or a small farm loan may opt to have the home mortgage loan, small business loan, or small farm loan considered either under the Retail Lending Test in § __.22 or, if the loan is a qualifying activity pursuant to § __.13, under the Community Development Financing Test or the intermediate bank community development evaluation in § __.29, as applicable. The agencies aimed to reduce the potential for double counting a loan, thereby potentially skewing results.

Comments Received

A few commenters suggested that the agencies eliminate the exclusion set forth in proposed § __.24(a)(2)(i) for considering retail loans with a community development purpose under the Community Development Financing Test. Reasons provided for eliminating the exclusion included that the proposed exclusion of retail loans could produce unintended results once the agencies replace the CRA definition of “small business loan” with a definition based on the CFPB’s Section 1071 Final Rule. One of the commenters explained that many community development loans are made to special purpose, startup, or nonprofit entities that do not have gross annual revenues of more than \$5 million. The commenter suggested that the proposed Retail Lending Test would incentivize banks to distribute their small business loans in a particular way but would not provide incentives for banks to make small business loans that satisfy the community development definition, which can be especially impactful loans. The commenter further explained that there would be no “double counting” of small business loans if the Community Development Financing Test allowed for certain small business loans to qualify as community development loans because the Retail Lending Test and the Community Development Financing Test would evaluate different aspects of the same qualifying small business loan.

Final Rule

In the final rule, the agencies eliminated the exclusion for considering certain types of retail loans under the Community Development Financing Test consistent with the changes to the community development loan and community development investment definitions and the Retail Lending Test in final § __.22, discussed above.¹¹¹³ The Retail Lending Test and the Community Development Financing Test generally considers different aspects of a bank’s lending. For example, in the agencies’ view, considering loans that meet the definition of “small business loan” for purposes of the Retail Lending Test under the Community Development Financing Test if those loans support community development would not result in double counting. The Retail Lending Test focuses on the distribution of the number of loans while the Community Development Financing Test considers the dollar volume of loans.

The agencies also considered commenters’ suggestions that the Community Development Financing Test consider the number of community development loans and investments in addition to the dollars to ensure that smaller loans and investment are not ignored. The agencies did not modify the Community Development Financing Test to include this suggestion. As is

¹¹¹² See proposed § __.24(a)(ii).

¹¹¹³ Along with eliminating the exclusion, the agencies eliminated the exceptions (in proposed § __.24(a)(2) and (a)(3)) to the exclusions as they are no longer necessary.

discussed elsewhere, the agencies also believe that smaller, more impactful loans and investments are an important way of helping to meet community credit needs. However, the mechanism in the final rule for incentivizing those types of loans and investments is the impact and responsiveness review. Further, under performance context, examiners can consider any information about retail banking and community development needs and opportunities provided by the bank or other relevant sources, including, but not limited to, members of the community, community organizations, State, local, and tribal governments, and economic development agencies.¹¹¹⁴ If a bank fails to meet identified community needs and only engages in large dollar, low-impact community development loans and investments, the agencies could consider that information when concluding on a bank's performance. Finally, as discussed above, the agencies determined that they would remove the exclusion under the Community Development Financing Test for certain retail loans with a community development purpose because the tests evaluate different aspects of a bank's lending. If the agencies incorporated consideration of the number of community development loans and investments into the Community Development Financing Test, it would eliminate this distinction and the rationale for the agencies supporting the removal of the exclusion.

§ __.24(a)(2) and Section I of Appendix B

Inclusion of Prior Period Loans and Valuation of Community Development Financing Activities

Valuation and Allocation of Community Development Loans and Investments

Current Approach

The agencies currently consider the dollar value of community development loans based on their origination or purchase value. Because the agencies do not consider community development loans originated or purchased during a prior evaluation period that remain on a bank's balance sheet (prior period community development loans) under the current framework, a renewed or refinanced loan is valued as an origination based on the value of the loan in the year it was renewed or refinanced. Under the current rule, the agencies consider community development investments based on (1) the value of the investment in the year it was made for investments made during the current evaluation period and (2) the outstanding book value of the investment at the end of the evaluation period for investments made during a prior evaluation period. The agencies also consider the total value of legally binding commitments to extend credit or invest. As explained in the Interagency Questions and Answers, the agencies currently provide guidance on the valuation of equity type or equity equivalent investments, which allows banks to consider a portion of these investments under the current lending¹¹¹⁵ and investment tests.¹¹¹⁶ The current rule does not include metrics and benchmarks that are calculated on an annual basis; therefore, the agencies consider the dollar value of each community development loan or investment qualitatively for the evaluation period.

The Agencies' Proposal

¹¹¹⁴ See final § __.21(d)(4).

¹¹¹⁵ See current 12 CFR __.22.

¹¹¹⁶ See current 12 CFR __.23; see also Q&A § __.22(d)—1 and Q&A § __.23(b)—1.

The agencies proposed that the Community Development Financing Test would consider the dollar value of community development loans and investments originated or made during the evaluation period, as well as prior period loans and investments that remain on a bank's balance sheet.¹¹¹⁷ The proposal included consideration of prior period community development loans, in addition to investments, to incentivize banks to provide patient capital and to disincentivize unnecessary short-term lending and churning loans by refinancing, renewing, or modifying a loan each evaluation period to receive ongoing credit for the activity. Further, the proposed change would improve internal consistency in the rule by treating prior period loans the same as prior period investments, which receive consideration under the current rule. In appendix B, the proposal described the numerator for the metrics and benchmarks used in §§ __.24 and __.26, which includes: (1) community development loans originated and community development investments made; (2) the increase in an existing community development loan that is renewed or modified; and (3) the outstanding value of community development loans originated or purchased and community development investments made in previous years that remain on the bank's balance sheet.

Comments Received

Inclusion of new and prior period community development loans and investments. Several commenters provided feedback on the inclusion of both new community development loans and investments and prior period community development loans and investments in the proposed Community Development Financing Test metrics and benchmarks. Commenters' views on this issue varied. Certain commenters supported the proposal to consider both new and prior period community development loans and investments on a bank's balance sheet in the metrics and benchmarks. These commenters noted that the proposal would reduce artificial inflation of banks' balance sheets, lessen the incentive for CRA-motivated loan churn, and remove the incentive to provide artificially short terms for community development loans and investments, which can impede community groups' ability to project capital availability.

Other commenters suggested that the agencies should be careful in how they implement the inclusion of new and prior period lending in the community development ratio.¹¹¹⁸ Some of these commenters acknowledged the importance of providing credit for prior period loans to incentivize long-term patient capital but asserted that the agencies should not allow banks to substantially reduce originations of impactful loans. A few commenters stated that banks should be incentivized to make new community development loans and investments in each evaluation period, noting that a significant drop in new financing should be a cause for concern. A few other commenters suggested limiting the inclusion of prior period community development lending to loans from the previous examination cycle. A commenter also asserted that the agencies should not give repeated credit for loans with low impact or harmful features (*e.g.*, a loan for a property where the landlord maintains the building in poor condition).

Other commenters opposed consideration of prior period community development loans. One of these commenters stated that allowing banks to carry prior period community

¹¹¹⁷ See proposed appendix B.1.

¹¹¹⁸ The agencies understand the commenter's reference to "community development ratio" to be a reference to the proposed community development financing metrics.

development loans and investments into their current review period will disincentivize new investment,¹¹¹⁹ cutting down overall CRA investment in historically disinvested communities. At least one commenter recommended the agencies limit credit for prior period loans to nonprofits and use the impact and responsiveness review to incentivize meeting unmet longer-term credit needs elsewhere.

Lastly, a commenter requested that the agencies develop a streamlined process for inclusion of prior period activities during subsequent CRA examinations. The commenter believed that redundancies in “re-proving” a loan or investment in each examination cycle, after it has already been qualified by an examiner, is inefficient and the elimination of the need to “re-prove” could aid both the bank and its regulator.

Community development loan and investment valuation. The agencies received a few comments on how to value community development loans and investments. These commenters identified certain forms of community development lending and investment that they believed should be valued in certain ways. A few commenters recommended that the full value of legally binding commitments to lend or invest, rather than the amount drawn, receive CRA consideration in the final rule. One of these commenters explained that if banks do not receive CRA consideration for commitments to fund future affordable housing projects, such commitments would evaporate and cause a decrease in new affordable housing units.

Commenters also provided feedback on the valuation of equity equivalent investments, particularly in CDFIs. Specifically, a commenter supported the creation of a mechanism for recognizing banks’ equity equivalent investments in CDFIs. The commenter noted that the proposed quantitative measures in the Community Development Financing Test would treat equity equivalent investments in CDFIs the same as standard debt products.

A commenter stated that the agencies should grant extra credit to banks that syndicate or sponsor funds supporting LIHTC or NMTC projects, consistent with the now-rescinded OCC 2020 CRA Final Rule. Commenters also requested that the agencies clarify how they would consider different loans and investments under a new CRA rule.

A few commenters expressed that the rule needs to be clear about the treatment of purchased and renewed community development loans. A commenter suggested that: (1) “purchased” community development loans and investments should be treated the same as “originated” community development loans and investments; and (2) renewals (with full underwriting) of lines of credit should receive consideration as “originated” loans.

Final Rule

Inclusion of new and prior period community development loans and investments. Under the final rule, banks will receive consideration for new community development loans and investments and community development loans and investments that remain on a bank’s balance

¹¹¹⁹ The agencies understand the commenter’s reference to “investment” to be a reference to the flow of new money into the community; not to the defined term “community development investment.”

sheet.¹¹²⁰ The agencies considered the comments about including prior period community development loans and investments in the Community Development Financing Test metrics and benchmarks and determined to finalize the rule as proposed. The agencies believe that providing consideration for both new originations and purchases and community development loans and investments that remain on a bank's balance sheet is a more accurate reflection of a bank's financing efforts and strikes the appropriate balance between incentivizing new community development loans and patient capital for community development projects. As discussed below, under the current framework, to receive credit for community development loans in each evaluation period, banks would need to renew or refinance the loans. In contrast, the agencies currently consider community development investments that remained on a bank's balance sheet in an evaluation period.

The agencies understand that the practice of renewal and refinancing of community development loans for the purpose of getting additional CRA consideration presented practical planning challenges for organizations engaged in community development projects because the financing was unpredictable. By providing consideration for both community development loans or investments that remain on a bank's balance sheet, the agencies believe the final rule will incentivize banks to engage in new loans and provide the length and type of financing that is most appropriate for the community development project and the bank's business model and expertise.

The agencies determined not to limit consideration for community development loans and investments that remain on a bank's balance sheet to loans and investments originated or purchased during the prior evaluation cycle or to loans and investments with nonprofit organizations because these limitations would not further the goal of incentivizing banks to provide patient capital matched to the needs of the organization engaging in the community development project. With respect to limiting the length of consideration to community development loans and investments made in the prior evaluation period, the agencies note that CRA evaluation periods are typically about three years in length.¹¹²¹ Based on the agencies' experience, it can take much longer than three years for an organization to raise capital and bring a community development project to completion. Limiting consideration for prior period community development loans and investments to the evaluation period following the one in which the loans or investments were originated, purchased, or made would perpetuate the mismatch between the needs of the community development project and the financing provided by banks. In addition, the length of evaluation periods, rather than the length of time the activity had an impact on the community benefited or served, may impact the consideration that banks receive for community development loans and investments.

With respect to community development financing activities involving nonprofit organizations, the agencies also do not believe that there is a reason to treat community development loans and investments involving nonprofit organizations differently than other

¹¹²⁰ See final appendix B.I.a.1. The method for valuing community development loans and investments is discussed below.

¹¹²¹ There is some variation in the length of evaluation periods between agencies and due to bank size or specific bank circumstances; however, in general, CRA evaluation periods are at least two years and not longer than five years in length.

types of community development loans and investments. As discussed in the section-by-section analysis for § __.13, the agencies gave considerable thought to the types of loans and investments that support community development. In § __.13 of the final rule, the agencies specify whether an activity must involve a nonprofit organization for the agencies to consider it to support community development. If a loan or investment meets the requirements of § __.13, the agencies do not believe it is appropriate to impose further limitations on the amount of credit a bank receives for that loan or investment. The agencies believe that all community development loans and investments are designed to help meet community needs; to the extent that a community development loan or investments is particularly impactful or responsive, the mechanism for addressing that in a CRA evaluation is the impact and responsiveness review in § __.15, not limitations on the length of time that the bank can get credit for the community development loan or investment that remains on the bank's balance sheet.

In response to commenters concerns about providing repeated credit for lower impact or harmful community development loans and investments, the agencies do not believe this is a reason for limiting credit for prior period community development loans or investments. Under the final rule, the appropriate Federal financial supervisory agency determines whether a loan or investment supports community development when the loan or investment is originated, made, or purchased. If the appropriate Federal financial supervisory agency later identifies that there is evidence of discriminatory or other illegal credit practices pursuant to § __.28(d), it will consider that information in the bank's CRA evaluation.

Community development loan and investment valuation. After considering the comments regarding valuing community development loans and investments, the agencies are finalizing an annual valuation methodology; however, the agencies are clarifying this aspect of the proposal to explain how the final rule values different forms of community development loans and investments.

The agencies believe that annual valuation of community development loans and investments is appropriate because banks receive consideration for the full dollar volume of the loan or investment in the year that it is originated, purchased, or made and the remaining value on a bank's balance sheet in other years. This valuation methodology helps to incentivize new loans and investments by both giving full credit for new loans and investments and diminishing the value as the loan or investment is paid off or changes value. Annual valuation also allows the agencies to calculate the metrics and benchmarks for banks with different evaluation periods because they can include the annual value in the appropriate calculations, which enhances consistency in the consideration of community development loans and investments.

The agencies added further detail to paragraph I.a of appendix B in two areas. First, the agencies clarified the general description of the inputs for the numerator¹¹²² and added a

¹¹²² Final § __.24 provides that the Community Development Financing Test evaluates a bank's record of helping to meet the credit needs of its entire community through community development loans and community development investments. As provided in final § __.21, under certain circumstances this evaluation will include community development loans and

description for the inputs for the denominator for the metrics and benchmark calculations in §§ __.24 and __.26. These descriptions provide the annual building blocks for the metrics and benchmark calculations in the Community Development Financing Test (*i.e.*, the annual dollar volume¹¹²³ of community development loans and community development investments and the annual dollar volume of deposits).¹¹²⁴

Second, the agencies clarified how to value different forms of community development loans and investments for purposes of calculating the metrics and benchmarks, including by adding additional detail and explaining that the calculations are determined annually. The proposal described determining the value of community development loans originated and community development investments made, the increase in an existing community development loan that is renewed or modified, and the outstanding value of community development loans originated or purchased and community development investments made in previous years that remain on the bank's balance sheet.¹¹²⁵ As was clear from the comments, this description did not sufficiently explain how the agencies would value all forms of community development loans and investments or for what period the agencies would value the loans and investments. Under the final rule, and consistent with the proposal, banks value community development loans and investments annually as of December 31 of each calendar year. The annual dollar volume of a community development loan or investment will depend on whether the loan or investment is new to the bank that year or is a loan or investment from a prior year.

The agencies also clarified in paragraph I.a of appendix B of the final rule that they will treat purchased loans the same as loans originated and investments made in a year. In proposed appendix B, the agencies explained how they would value purchased community development loans that remain on a bank's balance sheet. Commenters noted that the agencies should also explain how to value a community development loan purchased by a bank in the year of purchase. Consistent with current practice, under the final rule, appendix B explains that the agencies will value a purchased community development loan the same way as an origination in the year the bank originated the loan. In the agencies' experience, a secondary market for

investments of operations subsidiaries or operating subsidiaries, as applicable, other affiliates, consortiums, and third parties. To ensure that the rule clearly provides that the agencies will consider community development loans and investments from all of these entities when appropriate, not just those of a bank or its operations subsidiaries or operating subsidiaries, as applicable, final appendix B.I.a clarifies that the agencies include community development loans and community development investments "attributed to the bank pursuant to § __.21(b) and (c)" in the numerator of the metrics and benchmarks in the Community Development Financing Test. This is a clarifying revision that is not intended to have a substantive effect.

¹¹²³ As discussed in the section-by-section analysis of final § __.24(b)(1), for purposes of consistency in the final rule, the agencies changed the description in the final rule to use only the word "volume" instead "value" in final § __.24 and final appendix B. The agencies do not intend this to be a substantive change.

¹¹²⁴ For use in the metrics and benchmarks calculations in final § __.26, final appendix B.I.a.2.ii also includes a description of the "annual dollar volume of assets."

¹¹²⁵ See proposed appendix B.1.

community development loans ensures that banks can manage their balance sheets based on their business models and capacity and are not disincentivized from seeking out new opportunities because they cannot free up capital to pursue those opportunities. The final rule also provides additional detail on the valuation of legally binding commitments to lend and invest. The agencies determined that banks should receive credit for the full dollar volume committed for all legally binding commitments to extend credit and legally binding commitments to invest. However, the agencies also determined that after the commitment is made the valuation depends on whether the commitment has been drawn upon.

The agencies considered that valuing a commitment to extend credit or invest only on the drawn portion of the commitment would put banks that entered into commitments at a disadvantage because these banks would have committed resources and may not have capacity to originate, purchase, or make other community development loans and investments. Further, the agencies consider legally binding commitments to extend credit or invest a necessary tool in financing certain community development projects, and, for that reason, included commitments in the definition of community development loan and community development investment. If the agencies limited credit for commitments to extend credit or invest to the drawn portion of the commitment, the disadvantage created could disincentivize banks from making commitments, which could impact the viability of certain community development projects. However, the agencies also recognize that once a commitment has been drawn upon, the drawn portion of a commitment to extend credit or invest is no longer a “commitment” but is an outstanding loan or investment. Therefore, to give appropriate value to commitments, non-drawn commitments are valued based on the full dollar volume committed, but commitments that have been drawn upon are valued based on a combination of both the outstanding dollar volume of the commitment and the drawn portion of the commitment. Specifically, final appendix B includes a footnote that the dollar volume of a legally binding commitment to extend credit or legally binding commitment to invest in any given calendar year is (1) the full dollar volume committed; or (2) if drawn upon, the combined dollar volume of the outstanding commitment and any drawn portion of the commitment.¹¹²⁶

The final rule also clarifies how the agencies will value refinances and renewals in the year of the refinance or renewal and in subsequent years.¹¹²⁷ The agencies’ clarifications to the valuation of refinances and renewals are to ensure that banks receive consideration for these loans or investments without incentivizing banks to churn loans solely for the purpose of receiving credit in each evaluation period. Under the final rule, the agencies will provide banks with credit for the dollar volume of any increase in the calendar year to an existing community

¹¹²⁶ See footnote 1 to final appendix B.I.a.1.i.A.

¹¹²⁷ The agencies note that refinances and renewals are treated differently under the Retail Lending Test in final § __.22 and the Community Development Financing Test in final § __.24 because of differences between the performance tests. Specifically, because the Community Development Financing Test considers the dollar volume of community development loans and investments, it was necessary that the rule provide a method for valuing refinances and renewals that balanced the incentives for new originations and patient capital. Therefore, for purposes of the Community Development Financing Test, refinances and renewals are addressed and valued separately from originations and purchases.

development loan that is refinanced or renewed and in an existing community development investment that is renewed.¹¹²⁸

Banks will receive credit for the outstanding dollar volume of community development loans originated or purchased in previous calendar years and community development investments made in previous calendar years, as of December 31 of each calendar year that the loan or investment remains on the bank's balance sheet.¹¹²⁹ Banks will also receive credit for the outstanding dollar volume, less any increase in the same calendar year, of a community development loan a bank refinanced or renewed in a calendar year subsequent to the calendar year of origination or purchase, as of December 31 for each calendar year that the loan remains on the bank's balance sheet, and an existing community development investment renewed in a calendar year subsequent to the calendar year of the investment, as of December 31 for each calendar year that the investment remains on the bank's balance sheet.¹¹³⁰ As discussed above, the agencies believe that these valuation methods strike the appropriate balance between incentivizing new community development loans and investments and encouraging patient capital.

The agencies proposed to value the outstanding value of community development loans originated or purchased and community development investments made in previous years based on the value that remained on the bank's balance sheet on the last day of each quarter of the year, averaged across the four quarters of the year. The final rule instead values these community development loans and investments based on the value as of December 31 of each calendar year that the loan or investment remains on the bank's balance sheet. The agencies made this revision in response to overall comments received about the complexity and burden of the proposed rule. The agencies believe this change simplifies the rule and appropriately balances burden associated with data collection under the final rule with the need for data to calculate the metrics and benchmarks.

The agencies determined not to treat equity equivalent investments and syndications differently than other community development loans and investments. Under the final rule, community development loans and investments are considered in the single Community Development Financing Test. This contrasts with the current rule where large banks are separately evaluated under different tests for community development loans and investments. Therefore, the final rule eliminates the motivation for accounting for a portion of an equity equivalent investment as a loan and a portion as an investment to receive consideration under each of the current lending and investment tests.¹¹³¹ Under the final rule, if an equity equivalent investment supports community development pursuant to § __.13, the agencies will provide consideration for the full value of the investment under the Community Development Financing Test. Further, if the equity equivalent investment or syndication is consistent with one of the impact and responsiveness factors, banks will receive additional qualitative consideration for the investment. The agencies believe that this combined quantitative and qualitative consideration

¹¹²⁸ See final appendix B.I.a.1.i.B.

¹¹²⁹ See final appendix B.I.a.1.i.C.

¹¹³⁰ See final appendix B.I.a.1.i.D.

¹¹³¹ See current 12 CFR __.22 and current 12 CFR __.23.

of equity equivalent investments and syndications under the Community Development Financing Test appropriately accounts for the value of these investments and further enhanced valuations are not necessary.

With respect to the comments regarding “re-proving” in a later evaluation period that a loan or investment that remains on a bank’s balance sheet supports community development, the agencies expect that they will engage in data integrity assessments under the final rule consistent with their current practices. In general, the agencies take a measured approach to data integrity to reduce burden. Under the final rule, community development loans and investments generally remain qualifying for a bank as long as the loan or investment remains on the bank’s balance sheet, even if the agency has determined that the loan or investment no longer meets the requirements of § __.13.1132 For this reason, in most circumstances banks need only maintain the information used to substantiate that the loan or investment supported community development at the time it was originated, purchased, or made.

Denominator for the Community Development Financing Test, Paragraph I.a of Appendix B

In considering the comments on the valuation of community development loans and investments, as well as other comments about the metric and benchmark calculations, the agencies determined that additional information regarding the inputs to the calculations would help clarify the rule. Therefore, in addition to the revisions and clarifications that the agencies made to the numerator of the metrics and benchmarks in final paragraph I.a of appendix B, the agencies also provided additional clarifications to the denominator for the metrics and benchmarks.

The final rule provides in paragraph I.a.2.i of appendix B that for purposes of the metrics and benchmarks in § __.24, the appropriate Federal financial supervisory agency calculates an annual dollar volume of deposits in a bank that is specific to each metric or benchmark for each calendar year in the evaluation period. The final rule describes this as the annual dollar volume of deposits and that term is used in the calculations for the Community Development Financing Test. The final rule goes on to reference the source of deposits for banks based on the definition of deposit in § __.12. Specifically, the final rule states that for a bank that (1) collects, maintains, and reports deposits data as provided in § __.42, the annual dollar volume of deposits is determined using the annual average daily balance of deposits in the bank as provided in bank statements (*e.g.*, monthly, or quarterly) based on the deposit location and (2) does not collect, maintain, and report deposits data as provided in § __.42, the annual dollar volume of deposits is determined using the deposits assigned to each branch pursuant to the Summary of Deposits data.

§ __.24(a)(2) Allocation of Community Development Financing Activities (and Paragraph I.b of Appendix B)

Current Approach

Under the current rule, community development loans and investments must benefit a bank’s assessment areas or a broader statewide or regional area that includes at least one of a bank’s

¹¹³² See final § __.14(a)(2)(ii).

assessment areas.¹¹³³ The current rule does not include specific provisions for the allocation of the dollar value of community development loans and investments in circumstances where a bank cannot clearly attribute the loan or investment to one or more of its assessment areas.¹¹³⁴

The Agencies' Proposal

In § __.24 and section 14 of appendix B of the NPR, the agencies proposed an approach to consistently allocate the dollar value of community development loans and investments for the purpose of calculating the metrics and benchmarks used in the Community Development Financing Test. The agencies intended that the proposed approach would attribute the dollar value of community development loans and investments to the geographic areas benefited or served by the loan or investment and provide certainty that community development loans and investments benefiting geographic areas outside of a bank's facility-based assessment areas would receive consideration, as provided for in the proposed rule.

The agencies proposed that banks would allocate the dollar amount of community development loans and investments to one or more counties,¹¹³⁵ States, or the nationwide area, depending on specific documentation or the geographic scope of the activity. As proposed, at the facility-based assessment area level, the agencies would sum the dollar value of community development loans and investments assigned to the counties within the facility-based assessment area in calculating the Bank Assessment Area Community Development Financing Metric and the benchmarks applicable to facility-based assessment areas, which would inform the facility-based assessment area conclusions. In States in which a bank has at least one facility-based assessment area, the agencies would sum the dollar value of community development loans and investments allocated to the State and to any counties within the State to calculate the Bank State Community Development Financing Metric and the benchmark applicable to the State. In multistate MSAs in which a bank has at least one facility-based assessment area, the agencies would sum the dollar value of community development loans and investments allocated to the multistate MSA and to any counties within the multistate MSA to calculate the Bank Multistate MSA Community Development Financing Metric and the benchmark applicable to the multistate MSA. In the nationwide area, the agencies would sum the dollar value of all of a bank's community development loans and investments—those allocated to counties, States, multistate MSAs, and the nationwide area—to calculate the Bank Nationwide Community Development Financing Metric and the proposed benchmark applicable to the nationwide area.

The agencies believed this approach would allow for metrics that consistently measure performance at the different levels and was intended to support a balance between emphasizing facility-based assessment area performance and considering community development loans and investments that benefit geographic areas outside of those assessment areas. The agencies intended that the proposed approach would emphasize facility-based assessment area performance because it would allow the agencies to measure the dollar value of community development loans and investments that specifically serve a facility-based assessment area,

¹¹³³ See Q&A § __.12(h)—6.

¹¹³⁴ See Interagency Large Institution CRA Examination Procedures, appendix (April 2014).

¹¹³⁵ Under the proposal and the final rule, “county” means “any county or statistically equivalent entity as defined by the U.S. Census Bureau.” See proposed § __.12 and final § __.12.

distinct from community development loans and investments that serve a broader geographic area or that primarily serve other areas. At the same time, the proposal also would have considered all community development loans and investments in the nationwide metric.¹¹³⁶ The agencies believed this would provide additional certainty and flexibility relative to the current approach and allow banks the opportunity to conduct impactful and responsive community development loans and investments in areas that may have few assessment areas.

The agencies proposed to determine the geographic scope of a community loan or investment based on information provided by the bank, and as needed, publicly available information and information provided by government or community sources that demonstrates that the activity serves individuals or census tracts located within the area. Proposed § __.24 also cross-referenced proposed section 14 of appendix B, where the agencies proposed to allocate a community development loan or investment that benefited a single county to that county. For an activity that benefited multiple counties, the agencies proposed two options for allocating the dollar value of the activity. Under the first proposed option, if a bank produced documentation for an activity specifying the appropriate dollar amount to assign to the counties benefited by the activity, then the bank would allocate the dollar value of the activity accordingly at the county level. In the alternative, if a bank did not produce documentation specifying how to allocate the loan or investment to the geographic area benefited or served by the particular activity, the bank would allocate the dollar amount based on the proportion of low- and moderate-income families in the applicable areas.

Under the second proposed option, for a community development loan or investment that served multiple counties but not an entire statewide area, the agencies proposed that banks would allocate the dollar amount of the loan or investment across the counties served, in proportion to the percentage distribution of low- and moderate-income families across those counties.¹¹³⁷ The agencies proposed that community development loans or investments that served one or more States, but not the entire nation, would be allocated at the State level, and not to specific counties within the State, based on the proportion of low- and moderate-income families in each State.¹¹³⁸ Lastly, the agencies proposed that for a community development loan or investment with a nationwide scope, for which the bank did not provide documentation, the bank would allocate loan or investment to the institution level and not to specific States or counties.¹¹³⁹ The agencies believed the use of demographic data for allocating the dollar value of community development loans and investments without documentation of locations served would provide certainty and consistency compared to the current approach and would reflect the population served by community development financing activities.

The agencies sought feedback on other data points that the agencies could use for allocating community development loans and investments and may more appropriately reflect the population served, such as total population or number of small businesses. The agencies also sought feedback regarding whether community development loans and investments that cannot

¹¹³⁶ See proposed § __.24(c)(4)(ii)(A).

¹¹³⁷ See proposed appendix B.14.

¹¹³⁸ *Id.*

¹¹³⁹ *Id.*

be allocated to a specific county or State should be considered at the highest geographic level benefited or served by a loan or investment instead of being allocated to multiple counties or counties within States based upon the distribution of all low- and moderate-income families. In addition, the agencies sought feedback on what methodology should be used to allocate the dollar value of activities to specific counties for activities that serve multiple counties (*i.e.*, allocate based on the distribution of low- and moderate-income families or some other method).

Comments Received

In general, commenters that provided feedback on the allocation of community development loans and investments did not object to including an allocation method in the rule. Commenters' opinions varied, however, on how to allocate these community development loans and investments. A commenter generally supported the proposed geographic flexibility for allocating the dollar value of community development loans and investments under the Community Development Financing Test, which the commenter stated could help bring community development capital to more neighborhoods away from areas where banks have branches—especially Native and rural communities.

Commenters expressed differing views on whether to allocate community development loans and investments based on the percentage of low- and moderate-income families when banks did not provide specific documentation for allocating a loan or investment. A few commenters supported the agencies proposed approach of allocating community development loans or investments in proportion to the percentage of low- and moderate-income families. Other commenters instead recommended that the agencies allocate community development financing activities based on the distribution of low- and moderate-income households. One of these commenters supported its position by explaining that this allocation method reflects the intended beneficiaries of CRA. As an alternative, a commenter suggested that the agencies could use a simpler approach of allocating community development loans and investments based on the distribution of all families. Another commenter recommended the agencies use an allocation approach based on the proportion of low- and moderate-income families, small businesses, and small farms. The commenter also recommended the agencies conduct targeted impact assessments using surveys and other research tools that gauge how much and which residents or businesses benefit the most from banks' community development loans and investments in each assessment area.

Commenters also provided opposing views on whether, in the absence of specific documentation, the agencies should allocate community development loans and investments at the highest geographic level. A few commenters objected to allocating community development financing activities at the highest geographic level. For example, a state government commenter stated that the Community Development Financing Test is intended to measure banks' loans and investments against benchmarks that reflect local context, which the commenter asserted is incongruous with the idea that a bank with a nationwide footprint could include community development loans and investments that are nationwide in scope. The commenter believes that banks should have the burden of demonstrating local-, county-, or State-level impact. Another commenter requested that banks receive credit at the assessment area level for housing credit investments made anywhere in the State where a bank has more than one assessment area.

Commenters offered several alternatives to allocating at the highest geographic level including that the agencies should: (1) make best efforts to ensure that they assign community

development loans and investments in a manner that is consistent with the bank's preferences, as well as with standard industry practices; (2) permit geographic allocation based on allocation or side letters; (3) base allocations on the capital committed for an investment, even if the fund has not identified all of its specific development sites or other projects; (4) allocate loans and investments to each assessment area as the loan or investment indicates or equally to each applicable assessment area served; (5) allocate based on the purpose, mandate, or function of the organization or activity, including which geographic areas are served; or (6) permit the bank and the recipient of the loan or investment to identify a reasonable geographic allocation (*e.g.*, allow banks to rely on geographic allocations provided by the recipient or consortium).

In contrast, a few commenters supported allocating community development loans and investments that cannot be allocated to a certain area at the highest geographic level, whether that be the State, multistate MSA, or institution level. One of these commenters noted that, if the community development loans and investments are broad reaching, the State, county, or regional planning commission may have accompanying metrics the agencies could use in assessing the impact on a State or county. Another commenter expressed that allocating a community development loan or investment across multiple counties would create an impossible burden for many of the local (and often nonprofit) bank partners that help banks serve their communities. Some commenters recommended allocating community development loans and investments at the institution level.

Final Rule

The agencies are finalizing the allocation provisions included in the proposed rule with certain revisions to clarify how banks will allocate community development loans and investments. Section __.24(a)(2) of the final rule provides that the agencies consider community development loans and investments allocated pursuant to paragraph I.b of appendix B. Final paragraph I.b of appendix B includes the specific allocation provisions that were included in proposed section 14 of appendix B, with clarifying revisions.¹¹⁴⁰

The agencies determined that permitting banks to choose between allocating community development loans and investments based on specific documentation or the geographic scope of an activity provided the appropriate level of flexibility. As such, the final rule retains both options. The agencies considered feedback from certain commenters noting that banks should have flexibility in allocating community development loans and investments. Further, the agencies considered the options provided by commenters for allocating community development loans and investments, including permitting the use of side letters, considering allocation information from the recipient, or basing allocations on the purpose, mandate, or function of the recipient of the loan or investment.

The agencies continue to believe it is important that banks can receive consideration in specific geographic areas if they are able to demonstrate that a community development loan or investment, or a portion of a loan or investment, benefited or served a particular area. Allowing for allocation based on specific documentation enhances the accuracy of the metrics and benchmarks in the Community Development Financing Test. Further, it provides an incentive

¹¹⁴⁰ The Community Development Financing Test for Limited Purpose Banks includes a similar provision for allocation in final § __.26(c)(2), which also cross-references final appendix B.I.b.

for banks to serve particular communities by including a method for the bank to get consideration for the whole or a specific portion of a community loan or investment in the area benefited or served.

Under the final rule, the agencies would consider any documentation provided by the bank that specifies the appropriate dollar volume of a community development loan or investment to assign to each county, such as the specific addresses and dollar volume associated with each address, or other information that indicates the specific dollar volume of the loan or investment that benefited or served each county. Consistent with commenters' suggestions, specific documentation could include, but would not be limited to, side or allocation letters; information on the purpose, mandate, or function of the organization that received the community development loan or investment; or any other information that reasonably demonstrates the specific dollar volume of the activity that benefited or served a county. The agencies removed the word "accounting" before "information" to clarify that they did not intend to limit the type of information considered strictly to information related to accounting; information could also include, for example, a mission statement for the organization that received the community development loan or investment.

If a bank does not provide specific documentation, the agencies determined it is appropriate to allocate a community development loan or investment to the highest geographic level that the activity benefits or serves (*i.e.*, county, State, multistate MSA,¹¹⁴¹ or nationwide area) based on the geographic scope¹¹⁴² of the loan or investment and in proportion to the percentage of low- and moderate-income families in the area benefited or served by the loan or investment. Following consideration of the comments, the agencies determined that allocating at the highest geographic level benefited or served appropriately balances the burden of allocating community development loans and investments at a more granular level with the desire for accuracy of the metrics and benchmarks. If a community development loan or investment has a geographic scope of benefiting or serving one or more entire States, multistate MSAs, or the nationwide area and the bank cannot attribute the loan or investment to any particular county, then the loan or investment will be allocated to the State(s) or multistate MSA(s) that the activity benefits or serves or, if the activity benefits or serves the nationwide area, to the nationwide area. Consequently, a bank will not receive consideration for community development loans or investments allocated to a State, multistate MSA, or the nationwide area in its lower geographic-level evaluations. For the purposes of allocating community development loans and investments, the agencies consider low- or moderate-income families to be located in a State or multistate MSA, as applicable, consistent with final § __.28(c). The agencies determined that this was

¹¹⁴¹ The NPR discussed allocating at the multistate MSA level. The agencies did not include this level of allocation in proposed appendix B. The final rule includes allocation at the multistate MSA level because allocation at this level is necessary based on the structure of the proposal and the final rule.

¹¹⁴² The agencies determine the highest geographic level for allocating a community development financing activity based on the geographic scope of the activity. For example, the agencies would allocate an investment in a statewide economic development fund for which the bank does not have specific documentation identifying projects financed at the county level to the State—not the nationwide area.

appropriate because allocating community development financing activities to the county, State, or multistate MSA level in the absence of specific documentation that the loan or investment benefited or served that area could result in an artificial inflation of the metrics and benchmarks because the loan or investment may not have benefited or served one of the geographic areas where the agencies are allocating a portion of the dollar value. Further, allocating part of a community development loan or investment to a county, State, or multistate MSA that did not actually benefit from that loan or investment may disincentivize banks from engaging in more targeted loans and investments that do benefit or serve those areas.

The agencies also considered the comments suggesting alternatives to the proposed approach of allocating community development loans and investments in proportion to the percentage of low- and moderate-income families in the geographic area benefited or served. The agencies are finalizing allocation based on the percentage of low- and moderate-income families because they believe this: (1) is consistent with the CRA statute's and CRA regulations' focus on helping to meet the credit needs of a bank's entire community, including low- and moderate-income communities; and (2) it does not introduce additional complexity that would result from allocating based on a combination of low- and moderate-income families, small businesses, and small farms. The agencies determined that other options for allocating community development loans or investments, such as allocation based on all families or dividing between facility-based assessment areas, lacked the connection to low- and moderate-income communities that the agencies believe is at the core of the CRA. Further, the agencies considered commenter feedback and determined that it was not appropriate to allocate one type of activity, such as housing tax credit investments, differently than other types of activities because the mechanism for recognizing particularly impactful activities under the final rule is the impact and responsiveness review. The final rule includes the following table outlining how community development loans and investments will be allocated:

Table 42 to Appendix B: Community Development Loan or Community Development Investment Allocation

| Community Development Loan or Community Development Investment Benefits or Serves | Allocation Approach if Specific Documentation is Available | Allocation approach based on Geographic Scope of Activity |
|--|---|---|
| One county | Allocate to county | NA |
| Multiple counties that are part of one State or multistate MSA | Allocate to counties | Allocate to counties in proportions equivalent to the distribution of low- and moderate-income families |
| One State or multistate MSA | Allocate to counties | Allocate to the State or multistate MSA |

| | | |
|---|----------------------|--|
| Multiple States or multistate MSAs, less than the entire nation | Allocate to counties | Allocate to the States or multistate MSAs, as applicable, based on the proportion of low- and moderate-income families in each State or multistate MSA |
| Nationwide area | Allocate to counties | Allocate to the nationwide area |

Final paragraph I.b.2.ii.B of appendix B also includes a footnote explaining that for purposes of allocating community development loans and investments, the agencies consider low- or moderate-income families to be located in a State or multistate MSA, as applicable, consistent with final § __.28(c). As noted above, the agencies also made several clarifying edits to proposed § __.24(a) and paragraph I.b of appendix B. The agencies divided proposed § __.24(a) into two paragraphs, so that the allocation paragraph¹¹⁴³ is independent of the general paragraph describing the performance test.¹¹⁴⁴ The agencies removed the portion of proposed § __.24(a) referencing the documentation that banks can provide, or the agencies will use, to support the allocation of community development loans and investments because this concept is adequately addressed in paragraph I.b of appendix B of the final rule. Under the final rule, paragraph I.b.1 of appendix B provides that, as appropriate, the appropriate Federal financial supervisory agency may also consider publicly available information and information provided by government or community sources that demonstrates that a community development loan or community development investment benefits or serves a facility-based assessment area, State, or multistate MSA, or the nationwide area. The agencies intend that these changes will clarify, but not substantively alter, the proposal.

Further, the agencies reorganized paragraph I.b of appendix B and added additional detail to explain the allocation process for community development loans and investments. First, following the paragraphs on valuation in paragraph I.a.i of appendix B, paragraph I.a.ii explains that to calculate the metrics and benchmarks provided in §§ __.24 and __.26, the agency includes all community development loans and community development investments that are allocated to the specific facility-based assessment area, State, multistate MSA, or nationwide area, respectively, in the numerator for the metric and benchmarks applicable to that geographic area and then cross references paragraph I.b of appendix B, which includes the allocation provisions. Second, the agencies included in paragraph I.b.1 of appendix B cross references to § __.42(a)(5)(ii)(D) and __.42(a)(5)(ii)(E), which explain the data a bank must provide to support the allocation of a community development loan or investment. The agencies also made other conforming revisions.

§ __.24(b) Facility-based Assessment Area Evaluation

¹¹⁴³ See final § __.24(a)(2).

¹¹⁴⁴ See final § __.24(a)(1).

Current Rule and The Agencies' Proposal

As discussed above, the agencies currently evaluate banks' community development performance in banks' assessment areas. The agencies proposed to continue evaluation of community development financing activities in facility-based assessment areas consistent with the current rule.

Comments Received

Commenters generally supported the continued evaluation of community development financing performance in facility-based assessment areas. The comments regarding specific aspects of the proposed facility-based assessment area evaluation, including the applicable metrics, benchmarks, impact review, and conclusions are discussed below in the relevant section-by-section analyses.

*Final Rule*¹¹⁴⁵

Under the final rule, the appropriate Federal financial supervisory agency evaluates a bank's community development financing performance in a facility-based assessment areas using (1) the Bank Assessment Area Community Development Financing Metric in § __.24(b)(1); (2) the applicable benchmarks, which include the Assessment Area Community Development Financing Benchmark and the MSA and Nonmetropolitan Nationwide Community Development Financing Benchmarks (referred to as the local and national benchmarks in the section-by-section analysis of § __.24(b)(2)); and (3) the impact and responsiveness review in § __.24(b)(3). The final rule also provides that the agency assigns conclusions for a bank's facility-based assessment areas pursuant to paragraph d.1 of appendix C. This section includes conforming and technical edits to update the numbering in the rule and other wording for purposes of consistency and clarity that are not intended to have a substantive effect.

§ __.24(b)(1) Bank Assessment Area Community Development Financing Metric

The Agencies' Proposal

The agencies proposed in § __.24(b)(1) to use a Bank Assessment Area Community Development Financing Metric to measure the dollar value of a bank's community development loans and investments compared to deposits from the bank's deposit accounts¹¹⁴⁶ in the facility-based assessment area. As discussed below, the agencies also proposed comparing this metric to certain benchmarks for the purpose of informing the evaluation of bank performance.¹¹⁴⁷

¹¹⁴⁵ As discussed in the section-by-section analysis of final § __.21(a)(5), the agencies are adopting a new paragraph in the final rule to clarify the evaluation of military banks. Under the final rule, the agencies will evaluate a military bank that chooses to delineate the entire United States and its territories as its sole facility-based assessment area because its customers are not located within a defined geographic area, as specified in final § __.16(d), exclusively at the institution level based on the bank's performance in its sole facility-based assessment area. For purposes of the final Community Development Financing Test, the agencies will evaluate these banks pursuant to the facility-based assessment area provisions in final § __.24(b).

¹¹⁴⁶ See proposed § __.12 (defining "deposits").

¹¹⁴⁷ See proposed § __.24(b)(2).

Bank Assessment Area Community Development Financing Metric—Numerator. The agencies proposed in § __.24(b)(1) and section 2 of appendix B that the Bank Assessment Area Community Development Financing Metric would be the ratio of a bank’s community development financing dollars (the numerator) that serve the facility-based assessment area, averaged over the years of the evaluation period, relative to the dollar value of the deposits from the bank’s deposit accounts (the denominator) in a bank’s facility-based assessment area, averaged over the evaluation period.

The agencies proposed that the numerator of the Bank Assessment Area Community Development Financing Metric would be a bank’s annual average of dollars of community development loans and investments that serve a facility-based assessment area.¹¹⁴⁸ As discussed above, for each year in an evaluation period this calculation would include the dollar amount of all community development loans originated and community development investments made in that year. The agencies also proposed to include the dollar amount of any increase in an existing community development loan that is renewed or modified in that year.¹¹⁴⁹ The proposed numerator would also include the quarterly average value of community development loans and community development investments originated or purchased in a prior year that remained on a bank’s balance sheet on the last day of each quarter during the evaluation period.¹¹⁵⁰ Considering the outstanding balance of a loan or investment in bank’s metric on an annual basis would make long-term financing beneficial to a bank’s metric.

Bank Assessment Area Community Development Financing Metric—Denominator. The proposed denominator of the Bank Assessment Area Community Development Financing Metric would be a bank’s annual average dollar amount of deposits from the bank’s deposit accounts sourced from a facility-based assessment area during the evaluation period.¹¹⁵¹ As proposed in § __.42, collecting and maintaining deposits data would be required for banks with assets greater than \$10 billion as of December 31 in both of the prior two calendar years and optional for banks with assets of \$10 billion or less as of December 31 of either of the prior two calendar years.¹¹⁵² Under the proposal, banks that collected and maintained deposits data under proposed § __.42 would compute the average deposits (calculated based on average daily balances as provided in statements such as monthly or quarterly statements, as applicable) for depositors located in the assessment area.¹¹⁵³ An annual average would then be computed across the years of the evaluation period. The agencies proposed that, for banks that do not collect and maintain deposits data under proposed § __.42, CRA evaluations would use the Summary of Deposits data in order to tailor data requirements for these banks.

¹¹⁴⁸ See proposed § __.24(b)(1) and proposed appendix B.1.

¹¹⁴⁹ See proposed appendix B.1.

¹¹⁵⁰ *Id.*

¹¹⁵¹ *Id.*

¹¹⁵² The proposed rule was silent as to whether intermediate banks that opted into the Community Development Financing Test could opt to collect and maintain deposits data for purposes of calculating the Community Development Financing Test metrics.

¹¹⁵³ See proposed § __.42(b)(5).

This denominator was an indicator of a bank's financial capacity to conduct community development loans and investments because deposits are a major source of bank funding for loans and investments. The agencies considered that, in their view, the greater a bank's volume of deposits, the greater its capacity and CRA obligation to lend and invest would become.¹¹⁵⁴ Therefore, the proposed approach for the Bank Assessment Area Community Development Financing Metric would establish a proportionately greater obligation to serve facility-based assessment areas for banks with a greater presence in that market.

As an alternative, the agencies considered basing the Bank Assessment Area Community Development Financing Metric denominator on the share of a bank's depositors residing in a facility-based assessment area. Using this alternative, the agencies would calculate the denominator by multiplying the bank's institution level deposits by the percentage of the bank's depositors that reside in a facility-based assessment area. For example, if the bank had a total of \$100,000,000 in deposits and one percent of the bank's depositors resided in a given facility-based assessment area, then the denominator for that assessment area's metric would be $\$100,000,000 \times .01 = \$1,000,000$. The objective of this alternative approach would be to more evenly allocate a bank's CRA obligations across markets, including less affluent markets in which a bank's depositors hold relatively small amounts of deposits, because deposits would be allocated to facility-based assessment areas in proportion to the number of depositors. However, the agencies considered that this option would require all large banks and any intermediate banks that opt into the Community Development Financing Test to collect and maintain the number of depositors residing in each of their facility-based assessment areas and in other geographic areas because this information is not available from existing data such as the Summary of Deposits data.

Comments Received

The agencies received several comments on the proposed Bank Assessment Area Community Development Financing Metric.¹¹⁵⁵ Commenters generally supported the proposed metric; however, at least one commenter objected and recommended the agencies use only the number of loans and investments and consider their overall impact in assessing banks' CRA performance. Further, some comments on the proposed metric may reflect a misunderstanding of the proposed calculations.

Bank Assessment Area Community Development Financing Metric—numerator. With respect to the proposed calculation of the numerator of the Bank Assessment Area Community Development Financing Metric, the agencies received several comments expressing differing views on the proposal for averaging banks' on balance sheet community development loans and investments for purposes of the Bank Assessment Area Community Development Financing Test Metric numerator. A commenter objected to using a three-year average of community development loans and investments because the loan values would likely decrease over that time,

¹¹⁵⁴ See 12 U.S.C. 2901.

¹¹⁵⁵ The agencies note that comments on the Bank Assessment Area Community Development Financing Metric related to the calculation of the metric apply equally to the other metrics in the Community Development Financing Test. These comments will not be separately discussed when considering the other metrics in this performance test.

which the commenter stated would devalue community development loans. The commenter urged the agencies to consider an approach where the Bank Assessment Area Community Development Financing Test Metric numerator is the sum of: (1) the annual average of community development loans and investments originated or purchased in a prior evaluation period that remain on a bank's balance sheet; and (2) the total of all of community development loans and investments originated or purchased during the current evaluation period, without annual averaging.¹¹⁵⁶ The commenter stated this approach would promote the provision of long-term capital since banks would still receive credit for remaining balances in the next evaluation period while encouraging community development financing generally by allowing banks to realize the full value of their community development loans and investments in the current evaluation period.

Another commenter stated that the proposed methodology of the Bank Assessment Area Community Development Financing Metric would artificially inflate the numerator by giving consideration during the current review period for activities in each year. The commenter suggested that a better way of encouraging patient capital would be to consider "past" loans and investments to refer only to prior evaluation period activities. Notwithstanding these concerns, the commenter suggested that if the agencies proceed with finalizing the current proposal, the final rule should include three additional ratios: (1) current community development financing activity divided by deposits; (2) past community development financing activity divided by deposits; and (3) total community development financing activity divided by deposits. Another commenter also expressed concern that providing consideration for current review period activities each year would limit the number of new loan originations.

Bank Assessment Area Community Development Financing Metric—denominator. Commenters that provided feedback on the denominator for the Bank Assessment Area Community Development Financing Metric and other metrics in the Community Development Financing Test generally expressed a preference for using the dollar value of deposits as proposed. Commenters generally did not support the alternative of using the share of bank depositors residing in a facility-based assessment area as the Bank Assessment Area Community Development Financing Metric denominator.

Commenters provided several reasons for their objection to the alternative denominator. One commenter noted that obtaining accurate data on the actual share of bank depositors residing in an assessment area would be difficult. Another commenter stated that the agencies' proposed approach of using deposits as the Bank Assessment Area Community Development Financing Metric denominator was simpler and offered a more realistic chance for obtaining accurate data. Another commenter stated that it understood the agencies' desire to account for population and resource differences across assessment areas but that it was not clear the alternative approach would accomplish this goal. Lastly, a commenter noted that the spirit of the CRA includes how well banks are lending compared to where they are taking deposits.

The agencies also sought feedback regarding whether the source of deposits data for the Bank Assessment Area Community Development Financing Metric denominator should be collected deposits data or the Summary of Deposits data for banks with assets less than or equal to \$10 billion. Some commenters supported the proposed use of Summary of Deposits data for

¹¹⁵⁶ The agencies note that the commenter's suggestion is generally consistent with the proposal.

the denominator for banks with assets of \$10 billion or less. A commenter also recommended that all banks, not just banks with assets less than or equal to \$10 billion, use Summary of Deposits data for the Bank Assessment Area Community Development Financing Metric denominator. This commenter suggested that banks may voluntarily collect and maintain deposits data for the sake of ensuring accurate metrics and weights.

Alternatively, some commenters preferred using collected deposits data for the denominator. Specifically, certain commenters recommended that the agencies should require deposits data collection for all large banks for use in determining the denominator. One of these commenters stated that collected deposits data more accurately reflect bank performance under the Community Development Financing Test. Another commenter recommended allowing banks to rely on Summary of Deposits data to mitigate compliance burden but suggested that banks may opt to collect and report deposits data to offset the risk of inaccuracy associated with the use of Summary of Deposits data.

Final rule

After considering the comments, the agencies are finalizing the Bank Assessment Area Community Development Financing Metric as proposed with certain revisions, including clarifying and conforming revisions, to final § __.24(b)(1) and paragraph II.a of final appendix B (proposed as section 2 of appendix B).

Bank Assessment Area Community Development Financing Metric—numerator. With respect to the numerator of the Bank Assessment Area Community Development Financing Metric, the commenters focused on: (1) the types of loans and investments included in the numerator; (2) when banks originated, purchased, or made those loans and investments; and (3) whether they were averaged annually over the evaluation period. As discussed in the section-by-section analysis of § __.24(a), the agencies considered how to value community development loans and investments to encourage patient capital while still giving appropriate consideration for new community development loans and investments and believe that the final rule strikes the right balance.

The agencies considered the alternatives suggested by commenters, including averaging only the annual value of prior period community development loans and investments and adding additional metrics if the rule is finalized as proposed. The agencies determined not to adopt these or other alternatives. Because the same metrics and benchmarks apply to all banks evaluated under the Community Development Financing Test, banks that want to differentiate themselves will need to increase their community development lending and investments in comparison to their peers. Banks that substantially reduce the amount of new community development lending and investments will likely perform poorly in comparison to peers that maintain or increase their level of community development lending and investment. For this reason, the introduction of standard metrics and benchmarks will encourage banks to increase their community development lending and investment.

The agencies also note that the Community Development Financing Test includes consideration of the performance context information provided in § __.21(d), as further discussed in that section-by-section analysis. Performance context that the agencies may consider under the final rule includes: (1) information regarding a bank's past performance; (2) any information about community development needs and opportunities; and (3) any other information the appropriate Federal financial supervisory agency deems relevant. Given that the

agencies will use the metrics and benchmarks to inform a qualitative assessment of a bank's community development financing performance, an examiner could consider these performance context factors in concluding on a bank's performance in circumstances where the bank has substantially reduced the amount of new community development loans and investments during an evaluation period.

Bank Assessment Area Community Development Financing Metric—denominator. The agencies considered commenter feedback on the Bank Assessment Area Community Development Financing Metric denominator and for this purpose, deposits are an indicator of a bank's financial capacity to conduct community development loans and investments because deposits are a major source of bank funding for loans and investments. Although the alternative described in the proposal of using the share of a bank's depositors residing in an facility-based assessment area for the denominator may have allowed the agencies to more evenly allocate a bank's CRA obligations across markets—including less affluent markets in which the bank's depositors hold relatively small amounts of deposits—the burden associated with this option outweighs the benefit of using depositors as the denominator because it would require data collection for all banks evaluated under the Community Development Financing Test. Using deposits as the denominator is consistent with the spirit of the CRA because it enables the agencies to assess the extent to which banks are reinvesting in the communities where they take deposits.

The agencies also considered the comments regarding the use of deposits data collected pursuant to § __.42 as opposed to the Summary of Deposits data in the denominator for the Bank Assessment Area Community Development Financing Metric. The split in commenters' views on this issue reflects the inherent tradeoffs associated with each option. While use of collected deposits data would make the Bank Assessment Area Community Development Financing Metric more accurate, collecting data on deposits would be a new data collection requirement that imposes burden on banks. In contrast, although using Summary of Deposits data in the denominator eliminates the burden on banks to collect data, it may not accurately reflect the dollar volume of deposits drawn from a particular geographic area. The agencies are adopting the final rule as proposed because it balances the tradeoff between increased burden associated with collecting, maintaining, and reporting deposits data and the accuracy of the deposits data.

The final rule requires banks that had assets greater than \$10 billion to collect, maintain, and report deposits data. It is important to tailor the requirement to collect, maintain, and report deposits data in order to only apply to banks with greater resources. The agencies determined that, due to the greater resources of banks that had assets greater than \$10 billion, these banks have the capacity to collect, maintain, and report more accurate data and the benefit of more accurate deposits data outweighs the burden of collecting, maintaining, and reporting that data. *See* the section-by-section analysis of § __.42. For banks that had assets less than or equal to \$10 billion, the final rule uses Summary of Deposits data in the denominator, thereby limiting the burden for these banks. Nonetheless, because certain banks that had assets of less than or equal to \$10 billion may have dispersed deposits or the assignment of the banks' deposits under the Summary of Deposits data may not reflect the actual location of the deposits, the final rule provides these banks with the option to collect, maintain, and report deposits data. Providing this option mitigates the potential negative consequences of using Summary of Deposits data in the denominator because banks that would not perform well compared to their peers using Summary of Deposits data will be able to choose to collect, maintain, and report deposits data pursuant to

final § __.42 to provide a fuller and more accurate picture of their community development lending and investment.

§ __.24(b) – *clarifying, conforming, and technical revisions to the facility-based assessment area evaluation.* Although the agencies are finalizing the facility-based assessment area evaluation, including the Bank Assessment Area Community Development Financing Metric, substantively as proposed, as noted by commenters, the structure of proposed § __.24 and appendix B may be confusing. To address that concern, the agencies revised aspects of the final rule for clarity and consistency. With respect to the facility-based assessment area evaluation, the agencies included technical revisions to cross reference the sections of the final rule that include the metrics, benchmarks, and the impact and responsiveness review as well as how the agencies assign conclusions.¹¹⁵⁷ The agencies also enhanced the descriptions of the metrics and benchmarks in final § __.24 and clarified the calculations in appendix B by segmenting the descriptions into steps and adding sample formulas to the examples. These edits are intended to eliminate unintended inconsistencies and inaccuracies in the calculations in the final rule and improve the ability to understand and apply the metrics and benchmarks in the final Community Development Financing Test.

Under the final rule, § __.24(b)(1) provides that the Bank Assessment Area Community Development Financing Metric measures the dollar volume of a bank’s community development loans and community development investments¹¹⁵⁸ that benefit or serve a facility-based assessment area compared to those deposits in the bank that are located in the facility-based assessment area, calculated pursuant to paragraph II.a of appendix B.

Paragraph I.a.1 of appendix B of the final rule provides that the appropriate Federal financial supervisory agency calculates an annual dollar volume of community development loans and community development investments based on the annual dollar volume of these loans and investments. Paragraph I.a.2.i of appendix B of the final rule provides that the agency also determines the annual dollar volume of deposits. The agencies use the annual dollar volume of community development loans and investments and the annual dollar volume of deposits to calculate the Bank Assessment Area Community Development Financing Metric pursuant to paragraph II.a of appendix B. Paragraph II.a of appendix B includes the three steps for calculating the Bank Assessment Area Community Development Financing Metric. Specifically, the agency calculates the Bank Assessment Area Community Development Financing Metric by: (1) summing the bank’s annual dollar volume of community development loans and community development investments that benefit or serve the facility-based assessment area for each year in the evaluation period (sum of community development loans and investments); (2) summing the annual dollar volume of deposits located in the facility-based assessment area (sum of deposits);

¹¹⁵⁷ See, e.g., final § __.24(b).

¹¹⁵⁸ The agencies consider a bank’s community development loans and investments to include those community development loans and investments that the bank is required or elects to have the agencies consider under final § __.21(b) and (c) (*i.e.*, community development loans and investments conducted by operations subsidiaries or operating subsidiaries, as applicable, other affiliates, third parties, or consortiums).

and (3) dividing the result of the sum of community development loans and investments by the sum of deposits.

The agencies made a technical change to consistently use the term “dollar volume” when describing community development loans and investments and deposits in the Bank Assessment Area Community Development Financing Metric. The agencies also revised the phrase used to describe deposits in the Bank Assessment Area Community Development Financing Metric. In the proposal, community development loans were compared to “deposits from the bank’s deposit accounts.” The agencies determined that this description could be misinterpreted to mean the bank’s own accounts (*i.e.*, accounts containing the bank’s money). To clarify the denominator, the final rule uses the phrase “deposits in the bank.”

The agencies made conforming revisions to the remainder of final § __.24 and final appendix B to reflect these clarifying, conforming, and technical revisions.

§ __.24(b)(2) Benchmarks

The Agencies’ Proposal

The agencies proposed establishing local¹¹⁵⁹ and national¹¹⁶⁰ benchmarks for each facility-based assessment area. To help develop facility-based assessment area conclusions, the agencies would compare the Bank Assessment Area Community Development Financing Metric to both (1) an Assessment Area Community Development Financing Benchmark (local benchmark) and, as applicable, (2) a Metropolitan or a Nonmetropolitan Nationwide Community Development Financing Benchmark (national benchmarks).¹¹⁶¹ These benchmarks would enable the agencies to compare an individual bank’s community development financing performance to other banks in a clear and consistent manner. The agencies based the proposed benchmarks on the aggregate amount of community development loans and investments and the total dollar value of deposits in the bank’s facility-based assessment area or nationwide area, among all large banks.

As proposed, the aggregate amounts of deposits for these benchmarks would be based on reported deposits data for banks that had assets greater than \$10 billion and the Summary of Deposits data for banks that had assets less than or equal to \$10 billion, using the deposits assigned to branches located in each assessment area for which the benchmark is calculated.¹¹⁶² The agencies sought feedback on the proposed approach to using the Summary of Deposits data for calculating community development financing benchmarks, the tradeoffs of the proposed approach, and potential alternatives to the proposed approach.

The proposed approach of using both local and national benchmarks would provide the agencies, banks, and the public with additional context about the local level of community development lending and investment that could help to interpret and set goals for performance. For example, a bank whose metric fell short of the local benchmark, in a facility-based assessment area where the local benchmark is much lower than the national benchmark, could be

¹¹⁵⁹ See proposed § __.24(b)(2)(i) and proposed appendix B.3.

¹¹⁶⁰ See proposed § __.24(b)(2)(ii) and proposed appendix B.4.

¹¹⁶¹ See proposed § __.24(b)(2)(i) and (b)(2)(ii).

¹¹⁶² See proposed § __.12 (defining “deposits”) and proposed appendix B.3 and B.4.

considered to have conducted a relatively low volume of loans and investments. The agencies also intended the national benchmarks to provide a baseline for evaluating the level of a particular bank’s community development loans and investments in a facility-based assessment area with few or no other large banks from which to calculate a local benchmark. In the preamble to the proposed rule, the agencies suggested the benchmarks would be made publicly available, for example, in dashboards.

*Assessment Area Community Development Financing Benchmark.*¹¹⁶³ The agencies provided in section 3 of proposed appendix B that the numerator for the Assessment Area Community Development Financing Benchmark would be the annual average dollar amount of all large banks’ community development financing activities in the facility-based assessment area during the evaluation period. Under this proposed section, the denominator for the Assessment Area Community Development Financing Benchmark would be the annual average of the total dollar amount of all deposits held in the assessment area by large banks. The agencies proposed that the deposits in the facility-based assessment area would be the sum of: (1) the annual average of deposits in counties in the facility-based assessment area by all banks that had assets greater than \$10 billion over the evaluation period, as reported under proposed § __.42; and (2) the annual average of deposits assigned to branches in the facility-based assessment area by all large banks that had assets less than or equal to \$10 billion, according to the Summary of Deposits data, over the evaluation period.¹¹⁶⁴

$$\frac{\text{Annual average of local CD loans + CD investments}}{\text{Annual average of local deposits}} = \text{Assessment Area Community Development Financing Benchmark}$$

The Assessment Area Community Development Financing Benchmark would reflect local conditions that vary across assessment areas, such as the level of competition from other banks and the availability of community development opportunities, which may contribute to differences in the level of community development lending and investment across communities and within a community across time. The agencies considered that using a standard local benchmark would improve the consistency of the current evaluation approach, which does not include consistent data points that reflect local levels of community development lending and investment.

Metropolitan and Nonmetropolitan Nationwide Community Development Financing Benchmarks. In § __.24(b)(2)(ii), the agencies proposed to develop separate nationwide community development financing benchmarks for all metropolitan areas and all nonmetropolitan areas (the national benchmarks), respectively. The agencies would apply one of these national benchmarks to each facility-based assessment area, depending on whether the

¹¹⁶³ The agencies note that many of the comments on the Assessment Area Community Development Financing Benchmark apply equally to the other benchmarks in the Community Development Financing Test. This **SUPPLEMENTARY INFORMATION** does not separately discuss these comments when considering the other benchmarks in this performance test.

¹¹⁶⁴ See proposed appendix B.2.

facility-based assessment area was located in a metropolitan area or nonmetropolitan area.¹¹⁶⁵ Based on the agencies' analysis, the ratio of banks' community development loans and investments to deposits is higher in metropolitan facility-based assessment areas than in nonmetropolitan assessment areas.¹¹⁶⁶ The agencies proposed setting the national benchmark separately for metropolitan and nonmetropolitan areas to help account for differences in the level of community development opportunities in these areas.

The agencies proposed that the numerator for the national benchmarks would be the annual average of the total dollar amount of all large banks' community development loans and investments (in either metropolitan or nonmetropolitan areas, depending on the facility-based assessment area) during the evaluation period. The proposed denominator was the annual average of the total dollar amount of deposits (again, either in metropolitan or nonmetropolitan areas) during the evaluation period. Under the proposal, the deposits in the metropolitan or nonmetropolitan areas would be the sum of: (1) the annual average of deposits in counties in the metropolitan or nonmetropolitan areas reported by all banks that had assets greater than \$10 billion over the evaluation period (as reported under proposed § __.42); and (2) the annual average of deposits assigned to branches in the metropolitan or nonmetropolitan areas by all banks that had assets less than or equal to \$10 billion, according to the Summary of Deposits data, over the evaluation period.¹¹⁶⁷

$$\frac{\text{Annual average of nationwide metropolitan CD loans + CD investments}}{\text{Annual average of nationwide metropolitan deposits}} \\ = \text{Nationwide Community Development Financing Benchmark-Metropolitan}$$

¹¹⁶⁵ See proposed § __.24(b)(2)(ii) and proposed appendix B.4.

¹¹⁶⁶ The analysis used a sample of 5,735 assessment areas from large retail bank performance evaluation records from 2005 to 2017 in the Board's CRA Analytics Data Tables, which note the dollar volume of current period community development loan originations, as well as current period and prior period community development investments in each assessment area. The total dollar volume of community development loans and investments was divided by the length in years of each examination evaluation period, to produce an annual average for each assessment area evaluation. The Summary of Deposits data was used to identify the dollar volume of deposits associated with the corresponding bank's branches in the assessment area, which is the best available approach for estimating the dollar volume of deposits associated with each of a bank's assessment areas. The aggregate ratio of annualized dollars of community development loans and investments to dollar volume of deposits was computed separately for all metropolitan assessment areas and all nonmetropolitan assessment areas in the sample, respectively. Under this analysis, the metropolitan ratio was 1.4 percent, and the nonmetropolitan ratio was 0.9 percent, based on exams from 2014 to 2017. The metropolitan ratio remained significantly larger than the nonmetropolitan ratio when limiting the sample to only full-scope examinations, across different periods of the sample, and when computing the median ratio of all examinations, rather than a mean.

¹¹⁶⁷ See proposed § __.24(b)(2)(ii) and proposed appendix B.4.

$$\frac{\text{Annual average of nationwide nonmetropolitan CD loans + CD investments}}{\text{Annual average of nationwide nonmetropolitan deposits}}$$

= Nationwide Community Development Financing Benchmark-Nonmetropolitan

Timing of benchmark data. The agencies also considered whether they should calculate and fix the benchmarks based on community development lending, community development investment, and deposits data that are available at least one year in advance of the end of the evaluation period. For example, for a three-year evaluation period ending in December 2024, the agencies could determine the benchmarks for that evaluation period using data over the three-year timeframe spanning from 2021 to 2023. This alternative would have provided additional certainty that the benchmarks that a bank would be compared to would not change in the final year of an evaluation period. However, the agencies did not propose this alternative because they believed the benchmarks to which a bank is compared under this alternative may not reflect the credit needs and opportunities in the assessment area to the same degree as the proposed approach, which calculated the benchmarks based on the years in the evaluation period, especially if there were significant changes in community development opportunities during the final year of the evaluation period.

Comments Received

Local and national benchmarks. Commenters that addressed the agencies' proposal to compare the Bank Assessment Area Community Development Financing Metric to both local and national benchmarks expressed varying views regarding the use of the proposed benchmarks. Certain commenters supported the use of local and national benchmarks stating that the benchmarks would create more transparency and consistency across performance evaluations and more certainty as to whether banks will receive credit for community development loans and investments outside of facility-based assessment areas. For example, a commenter expressed the view that the local and national benchmarks would encourage more investments in underserved communities, as well as in statewide and national funds.

A few other commenters expressed support for the inclusion of the local benchmarks in the Community Development Financing Test but opposed or expressed reservations about the national benchmarks. These commenters provided several reasons for objecting to the use of national benchmarks, including that: (1) they would compare a regional bank's performance against that of much larger, nationwide banks, thereby requiring regional banks to attempt to make up for quantitative deficiencies in the comparison of the bank's metric to the benchmarks through qualitative considerations; (2) the availability of community development loans and investments varies considerably from region to region; and (3) they fail to account for peculiarities or limitations in an assessment area or factors beyond a bank's control. One of these commenters requested that if the agencies retain the nationwide area benchmarks,¹¹⁶⁸ the final rule should allow banks the option of a nationwide area review. A few commenters expressed concern that a formulaic approach for the use of benchmarks may have unintended consequences due to its lack of nuance. One of these commenters stated that a national benchmark is not appropriate in facility-based assessment areas with low levels of community development lending and investments because opportunities in these areas tend to be limited and

¹¹⁶⁸ The agencies understand the commenter to be referring to the proposed national benchmarks.

a national benchmark could be unduly demanding. The commenter noted that, on the other hand, use of a national benchmark in facility-based assessment areas with high levels of community development lending and investment opportunities could be unduly lenient.

The agencies also asked for feedback on the appropriate method for using the local and national benchmarks. Commenters generally supported allowing examiner judgement regarding the use of benchmarks. However, consistent with the comments on enhancing the rigor of the Community Development Financing Test, discussed above, other commenters preferred that the agencies standardize the use of benchmarks, with one commenter stating that the agencies should only use examiner judgement until they collect community development lending and investment data and identify patterns.

Other commenters requested that the agencies provide examiners with guidelines for using the local and national benchmarks. For example, a few commenters expressed concern that the proposal failed to provide enough guidelines for comparing the Bank Assessment Area Community Development Financing Metric to either the local or national benchmarks making it possible for an examiner to inflate a rating by choosing the lowest comparator benchmark.

Certain comments suggested additional guidelines for the local and national benchmarks. A few commenters suggested the agencies establish the following guidelines: (1) weight the national benchmark at 60 percent and local benchmark at 40 percent in facility-based assessment areas where the local benchmark is lower than the national benchmark to motivate banks to exceed the local benchmark; and (2) weight the local benchmark at 60 percent and the national benchmark at 40 percent in facility-based assessment areas where the local benchmark is higher than the national benchmark. These commenters further suggested that the agencies could refine these weights by determining the distribution of local benchmarks as measured by percentiles or other distances from the median or mean benchmarks. A commenter suggested that examiners could tailor the weighting of the local and national benchmarks to emphasize the stronger of the two ratios for a bank's facility-based assessment areas.

Timing of benchmark data. The agencies also sought feedback on what other considerations they could undertake to ensure clarity and consistency in the benchmark calculations. Specifically, the agencies sought feedback on whether they should calculate the benchmarks based on data available prior to the end of the evaluation period or align calculation of the benchmarks with data available at the beginning and end of the evaluation period.

In response, a few commenters supported aligning data with the evaluation period while others noted that the agencies should set benchmarks based on data that are available prior to a bank's evaluation period. One of the commenters that supported aligning the benchmark calculations with the beginning and end of the evaluation period specified that the agencies should do so in the initial year implementing the new CRA regulations to determine changes in performance levels. The commenter suggested, however, that the agencies may not need this process in subsequent periods.

In contrast to the commenters that supported using data from the evaluation period to establish the benchmarks, other commenters requested that the agencies make the benchmarks known to banks in advance of evaluation periods. One of these commenters stated that this approach would ensure that banks know the target to which they are being held, and the community would have a clear standard to which they can hold banks accountable. Another

commenter stated that it is a fundamental matter of fairness and due process that banks know the benchmarks the agencies will use to evaluate banks' performance prior to the evaluation period.

Certain commenters offered alternatives to using data as of the end of the evaluation period. A few of these commenters recommended that the benchmarks be set annually, based on the most recent year that data are available, which would align with the proposed annual assessment. For example, data from year one would be available in year two, and the agencies could use that data to set the benchmarks for year three. These commenters stated that this approach would provide banks more transparency and predictability and avoid applying different benchmarks to comparable banks depending on the timing of their evaluation periods. To offer greater clarity, another commenter suggested the agencies use data available by the start of every year, even if it means the agencies use lagging data. To calculate the benchmarks, a commenter recommended that the agencies average data for the examination period to best reflect any market shifts or changing circumstances. The commenter also recommended that the agencies should use the maximum amount of data available for the CRA examination even if the available market data do not match up perfectly in terms of availability at the time of the examination.

Final Rule

After considering the comments on the local and national benchmarks, the agencies are finalizing the benchmarks as proposed with certain clarifying revisions. The final rule provides in § __.24(b)(2) that the appropriate Federal financial supervisory agency compares the Bank Assessment Area Community Development Financing Metric¹¹⁶⁹ to (1) the Assessment Area Community Development Financing Benchmark¹¹⁷⁰ and (2) either the MSA or Nonmetropolitan Nationwide Community Development Financing Benchmark, depending on whether the facility-based assessment area is within an MSA or a nonmetropolitan area.¹¹⁷¹

The agencies considered commenters' concerns with applying the national benchmark to evaluate community development lending and investments in facility-based assessment areas. However, the local and national benchmarks are both useful tools for examiners and will help to improve consistency in CRA performance evaluations. As explained in the proposal, the local and national benchmarks provide useful information for understanding how a bank's community development lending and investment compares to other banks in their local markets and nationwide. In particular, the local benchmark is based on community development lending and investment in a facility-based assessment area for large banks, and, therefore, provides insight into the performance of other banks operating in the same community, while the national benchmark provides a baseline comparator for the nationwide performance of all large banks in MSAs or nonmetropolitan areas, as applicable.

The agencies are sensitive to the concerns raised by commenters about variations in lending and investment between regions, economic cycles, and types of banks. For this reason, the agencies emphasize that the benchmarks provide standardized data points that the agencies will consider in evaluating banks' community development lending and investment, but performance context remains an important part of CRA performance evaluations. Through performance

¹¹⁶⁹ See final § __.24(b)(1).

¹¹⁷⁰ See final § __.24(b)(2)(i).

¹¹⁷¹ See final § __.24(b)(2)(ii).

context, examiners can consider any variations in lending and investment among banks and the reasons for those variations, such as those noted by commenters, and account for a bank's particular circumstances in concluding on performance in a facility-based assessment area. In those circumstances where the local benchmarks may lack robust data due to limited market participants, the agencies may rely more heavily on the national benchmark because the local benchmark may provide less meaningful information against which to compare a bank's performance. The agencies may also rely more heavily on supervisory experience and performance context, particularly market opportunities and bank capacity and constraints, in considering a bank's performance under the Community Development Financing Test in these circumstances.

The agencies also determined that, under the final rule, they will calculate the local and national benchmarks using data from the evaluation period, as proposed with clarifying revisions. The agencies understand commenters' concerns that using community development lending and investment and deposits data that correspond to the years in the evaluation period would mean that banks would not know the benchmarks in advance of conducting the community development lending and investments that the agencies will compare to those benchmarks. However, lagging benchmarks (*i.e.*, benchmarks based on data from before the evaluation period) would be an inappropriate measure given that they would not reflect lending and investment conducted contemporaneous to the community development loans and investments considered in a bank's CRA performance evaluation. Based on our supervisory experience, the agencies have observed that changes in economic cycles and other external factors influence the level of community development lending and investment that banks engage in during a given year. For that reason, using more timely data for comparison, coupled with consideration of performance context, will result in the most useful information for evaluating bank performance under the Community Development Financing Test.

Consistent with the revisions to the Bank Assessment Area Community Development Financing Metric, the agencies made conforming revisions to streamline the discussion of the benchmarks in final § __.24(b)(2) and clarify the calculation of the benchmarks in paragraphs II.b and II.c of final appendix B. The agencies intend for these revisions to clarify the final rule and eliminate inconsistencies that were present in the proposal.

The local benchmark is provided in final § __.24(b)(2)(i), which applies in each facility-based assessment area. Under the final rule, the Assessment Area Community Development Financing Benchmark measures the dollar volume of community development loans and investments that benefit or serve the facility-based assessment area for all large banks compared to deposits located in the facility-based assessment area for all large banks. The appropriate Federal financial supervisory agency calculates the local benchmark pursuant to paragraph II.b of final appendix B, which provides that the agency calculates the Assessment Area Community Development Financing Benchmark for each facility-based assessment area by: (1) summing all large banks' annual dollar volume of community development loans and investments that benefit or serve the facility-based assessment area for each year in the evaluation period (sum of community development loans and investments); (2) summing all large banks' annual dollar volume of deposits located in the facility-based assessment area for each year in the evaluation period (sum of deposits); and (3) dividing the result of the sum of community development loans and investments by the result of the sum of deposits.

The final rule includes the national benchmarks in final § __.24(b)(2)(ii). The MSA Nationwide Community Development Financing Benchmark¹¹⁷² applies to a bank’s facility-based assessment areas within an MSA. The MSA Nationwide Community Development Financing Benchmark measures the dollar volume of community development loans and investments that benefit or serve MSAs in the nationwide area for large banks compared to deposits located in the MSAs in the nationwide area for all large banks. The Nonmetropolitan Nationwide Community Development Financing Benchmark¹¹⁷³ applies to a bank’s facility-based assessment areas within a nonmetropolitan area. The Nonmetropolitan Nationwide Community Development Financing Benchmark measures the dollar volume of community development loans and investments that benefit or serve nonmetropolitan areas in the nationwide area for large banks compared to deposits located in nonmetropolitan areas in the nationwide area for all large banks. The appropriate Federal financial supervisory agency calculates the MSA and Nonmetropolitan Nationwide Community Development Financing Benchmarks pursuant to paragraph II.c of final appendix B.¹¹⁷⁴

The agency calculates the MSA and Nonmetropolitan Nationwide Community Development Financing Benchmarks by: (1) summing all large banks’ annual dollar volume of community development loans and investments that benefit or serve MSAs or nonmetropolitan areas in the nationwide area for each year in the evaluation period (sum of community development loans and investments); (2) summing all large banks’ annual dollar volume of deposits located in MSAs or nonmetropolitan areas in the nationwide area for each year in the evaluation period (sum of deposits); and (3) dividing the result of the sum of community development loans and investments by the result of the sum of deposits.¹¹⁷⁵

§ __.24(b)(3), (c)(2)(iii), (d)(2)(iii), (e)(2)(v) Impact and Responsiveness Review

Current Approach

Under the current rule, the performance criteria in the large bank lending test and investment test and the community development test applicable to intermediate small banks include several qualitative components. The lending test includes consideration of a bank’s use of innovative or flexible lending practices in a safe and sound manner to address the credit needs of low- or moderate-income individuals or census tracts.¹¹⁷⁶ The agencies consider, under the investment test: (1) the innovativeness or complexity of community development investments; and (2) the responsiveness of community development investments to credit and community development

¹¹⁷² See final § __.24(b)(2)(ii)(A). In the proposal, this benchmark was described as the Metropolitan Nationwide Community Development Financing Benchmark. In the final rule, the agencies retitled this benchmark the MSA Nationwide Community Development Financing Benchmark to more accurately reflect the geographic areas included in the calculation.

¹¹⁷³ See final § __.24(b)(2)(ii)(B).

¹¹⁷⁴ See final § __.24(b)(2)(ii)(C).

¹¹⁷⁵ See final appendix B.II.c.

¹¹⁷⁶ See current 12 CFR __.22(b)(5). The current rule uses the defined term “geographies,” which means census tracts.

needs.¹¹⁷⁷ For intermediate small banks, the community development test includes consideration of a bank's responsiveness to community development lending, investment, and service needs through community development loans, investments, and services.¹¹⁷⁸ These qualitative performance criteria are components of the current performance tests and standards and the agencies consider these components in conjunction with the bank's performance context in evaluating a bank's community development lending and investment.

The interagency examination procedures reference these performance criteria without elaborating on how to identify whether certain community development loans or investments are particularly innovative, flexible, complex, or responsive, as applicable. Over time, stakeholders indicated that these concepts were not well understood, and the agencies endeavored to provide additional clarity through the Interagency Questions and Answers.¹¹⁷⁹ Although these Interagency Questions and Answers provided some additional guidance, questions remained as to what types of community development loans, investments, or services were considered most responsive or impactful to a community because of the extent or manner in which they helped to meet community needs.

The Agencies' Proposal

To complement the community development financing metrics and benchmarks, the agencies proposed evaluating the impact and responsiveness of a bank's community development loans and investments in facility-based assessment areas, States and multistate MSAs, as applicable, and the nationwide area.¹¹⁸⁰ The qualitative evaluation in proposed § __.24 would draw on the impact factors defined in proposed § __.15, and on any other performance context information, as provided in proposed § __.21(e), considered by the agencies to determine how the bank's community development loans and investments were responsive to the geographic area's community development needs and opportunities. This approach would advance the CRA's purpose by ensuring a strong emphasis on the impact and responsiveness of community development loans and investments in meeting community credit needs; increase consistency in the evaluation of qualitative factors relative to the current approach by creating clear factors to consider; and foster transparency for banks and the public by providing information about the type and purpose of community development loans and investments considered to be particularly impactful or responsive.

Consideration of qualitative factors as a supplement to the dollar-based metrics and benchmarks was aligned with the CRA's purpose of strengthening low- and moderate-income communities by more fully accounting for factors that may reflect the overall impact or responsiveness of a community development loan or investment. First, a qualitative review could consider the responsiveness of community development loans and investments to local context, including community development needs and opportunities that vary from one community to another. Banks and their community partners may make great effort to design a

¹¹⁷⁷ See current 12 CFR __.23(e)(2) and (3).

¹¹⁷⁸ See current 12 CFR __.26(c)(4).

¹¹⁷⁹ See Q&A § __.21(a)—3 and Q&A § __.21(a)—4.

¹¹⁸⁰ See proposed § __.24(b) and (c).

community development loan or investment to reflect this context and address specific credit needs of the community, which can further the loan's or investment's impact or responsiveness.

Second, a qualitative evaluation was important for emphasizing relatively small loans or investments that nonetheless have a significant positive impact on the communities served. For example, grants and other monetary or in-kind donations that support organizations providing assistance to small businesses tend to have small dollar balances relative to loans to larger businesses, but they are critically important for addressing small business credit needs. Third, the qualitative evaluation could emphasize community development loans and investments that serve low- and moderate-income populations and census tracts that have especially high community development needs, which often entail greater complexity and effort on the part of the bank. This emphasis helps to encourage community development loans and investments that reach a broad range of low- and moderate-income communities, including those that are more challenging to serve. Finally, the qualitative review could emphasize specific categories of community development loans and investments aligned with the CRA's purpose of strengthening credit access for a bank's communities, including low- and moderate-income communities, such as loans and investments that support specified mission-driven financial institutions.

To promote greater consistency and transparency in the evaluation approach, the agencies noted in the NPR that they would consider whether a bank's community development loans and investments met the impact factors defined in proposed § __.15,¹¹⁸¹ based on information provided by the bank, local community data, community feedback, and other performance context information.

Given the current lack of data to set thresholds, the agencies proposed that this process initially would be qualitative in nature. Specifically, the agencies explained in the proposed rule that they would consider a bank's community development loans and investments that meet each impact factor but would not use multipliers or specific thresholds to directly tie the impact review factors to specific conclusions. Under the proposed rule, a more significant volume of community development loans and investments that align with the impact review factors would positively affect conclusions. In the proposed rule, the agencies indicated that after banks report and the agencies analyze additional community development lending and investment data, the agencies could consider whether the agencies should implement additional approaches, such as quantitative measures, to evaluate impact and responsiveness.

Comments Received

Impact and responsiveness review, in general. The agencies received several comments on the inclusion of an impact review in the Community Development Financing Test. Certain commenters supported this aspect of the proposed rule; however, other commenters expressed concerns, in particular with the lack of clarity regarding its application as discussed further in the section-by-section analysis of § __.15.

Specifically, a few commenters stated that the proposal's incorporation of an impact and responsiveness review in the Community Development Financing Test would encourage high-quality community development loans and investments. A commenter stated that the impact review should expressly incorporate the actual quality of a community development loan or

¹¹⁸¹ *Id.*

investment, rather than a simple categorical assessment. This commenter, as well as another, stated that the agencies should use the impact review to uplift impactful or innovative small-dollar activities that banks might otherwise perceive as too risky, complex, or small to pursue.

Other commenters expressed concerns with the lack of clarity on how the impact review would affect conclusions. For example, certain commenters stated that it was unclear how the agencies would apply the impact review and whether the impact and responsiveness factors would have enough of an effect on banks' actions to mitigate disincentives created by the proposed Community Development Financing Test. Another commenter supported greater transparency in the impact review and generally more transparency in the methodologies and considerations used by examiners in forming performance context, as well as some of the justifications banks provide to support the inclusion of community development loans and investments in their Community Development Financing Test evaluation.

Weighting of the Metrics and Benchmarks and the Impact and Responsiveness Review Components. The proposal asked what approaches would enhance the clarity and consistency for assigning conclusions under the Community Development Financing Test, such as assigning separate conclusions for the metric and benchmarks component and the impact review component. The agencies also sought feedback from commenters regarding the appropriate weighting for each of these components. The agencies asked, for example, if they should weight both components equally or weight the metric and benchmarks component more than the impact review component.

In response to these questions, commenters provided varying views on the appropriate weighting of the metrics and benchmarks and the impact review components of the Community Development Financing Test. A few commenters advocated for weighting one component more than the other. Certain commenters stated that the agencies should give significant weight to the impact review component. One of these commenters stated that, in general, the impact review component should carry the most weight because smaller investments have an outsized impact and should carry more weight than higher dollar investments that have materially less impact. In contrast, certain commenters favored weighting the metrics and benchmarks component more, with a commenter stating that a higher weight for the metrics and benchmarks component would ensure banks conduct reasonable amounts of community development lending and investments while still providing qualitative consideration.

Some commenters suggested specific weighting for the metrics and benchmarks and the impact review components of the Community Development Financing Test. A few commenters supported a weight of 60 percent for the metrics and benchmarks component and 40 percent for the impact review component, explaining that assigning more weight to the metrics and benchmarks ensures a minimal level of community development financing activity in each assessment area. At least one of these commenters, however, stated that the agencies should also consider the provision of small dollar, high impact financing that can be more responsive to community needs. Another commenter stated that it would support a slightly heavier weight for the metrics and benchmarks component, of between 55 to 75 percent, and a lower weight for the impact review component, of between 25 to 45 percent.

Alternatively, certain commenters supported a more flexible approach, with one commenter recommending that the agencies, rather than assigning separate conclusions for the metric and benchmarks and the impact review components, consider using them to assess performance

trends or patterns across banks. Nonetheless, the commenter stated that, if the agencies derive separate conclusions for these components, they could weight each component and then reduce or increase the overall bank performance score based on the outcome.

Impact review metrics. The agencies also sought feedback on whether they should consider publishing standard metrics in performance evaluations, such as the percentage of a bank's activities that meet one or more impact criteria. Commenters expressed different views on incorporating performance standards into the impact review.

Certain commenters supported developing standards or metrics for the impact review. For example, a commenter suggested that developing metrics for the impact review would provide greater consistency and transparency. Another commenter stated that the agencies should consider both the dollar volume and number of activities in an impact review metric to give credit to small-scale loans and investments. Other commenters agreed with adding metrics to the impact review, noting that, as currently constructed, the impact review could lead to the inconsistent or careless application of examiner discretion. At least one of the commenters that supported the inclusion of impact metrics expressed concern about how these metrics would be designed.¹¹⁸² The commenter believes that without additional data, it is infeasible to develop an effective model to measure the responsiveness of impactful activities or to incorporate the impact factors into the quantitative Community Development Financing Test. Once additional data are collected, the commenter supports ultimately publishing standard metrics outlining the percentage of a bank's activity that meet an impact factor, as well as additional relevant qualitative data.

A few commenters provided suggestions for an impact review metric. Specifically, commenters suggested that the agencies could improve the impact review by: (1) including a metric based on the percentage of a bank's community development loans and investments that meet one or more of the specific impact factors;¹¹⁸³ (2) adding a score, rating, and weight to the review as part of the Community Development Financing Test; or (3) adding a quantitative measure of community development financing in persistent poverty counties and counties with low levels of finance and including the percentage of activities that involved collaboration and partnerships with public agencies and community-based organizations.

A few commenters shared views on how the agencies should count activities with MDIs, WDIs, LICUs, and CDFIs as part of a bank's CRA evaluation. For example, although not phrased as a metric for the impact review, a few commenters recommended that a "multiplier" be applied to activities with CDFIs and MDIs, with an additional commenter recommending that

¹¹⁸² Another commenter strongly encouraged the agencies to commit to additional public engagement around the impact and responsiveness factors as community development lending and investment data are collected over the coming years.

¹¹⁸³ The commenter also stated that a system for weighting specific impact and responsiveness review factors and assigning points could be developed over time as more data become available to add more rigor and clarity to the impact and responsiveness review component.

additional multiplier consideration be considered for MDIs that are CDFIs.¹¹⁸⁴ Certain commenters also recommended that the final rule tie activities with CDFIs, MDIs, WDIs, LICUs, and variations of these entities to banks receiving an “Outstanding” rating.

On the other hand, certain commenters expressed reservations with adding metrics to the impact review. A commenter suggested that metrics alone do not tell the complete story of a bank’s CRA efforts and recommended that the agencies retain performance context in some capacity in evaluating a bank’s performance. Another commenter noted that the need for greater clarity and consistency should be balanced with examiner discretion and formal metrics could lead to unintentional credit allocation. The commenter noted that the risk of government credit allocation was a central concern of the CRA authors and plays a prominent role in the legislative history of the statute.

Other commenters offered additional suggestions for how to encourage greater consistency and clarity in the impact review. A commenter suggested that the agencies consider how the CDFI Fund and CDFIs conduct impact reviews and determine if they should replicate these reviews for CRA examinations. The commenter also recommended that the agencies conduct a review of examiners to determine how equitable and consistent they are at reviewing for community development impact.

Final Rule

The agencies considered the comments on the proposed impact review as it applies to the Community Development Financing Test and are finalizing the test to include this component as proposed with technical revisions, including renaming the component “the impact and responsiveness review” as discussed in the section-by-section analysis of § __.15. As such, under the final rule, the impact and responsiveness review component will be a qualitative assessment applied by examiners and considered in conjunction with the metric and benchmarks component. Further, as discussed in the section-by-section analysis of § __.15, the agencies determined it was not appropriate to add a score, or to establish metrics or a weighting framework for this component of the Community Development Financing Test at this time. However, as noted in the NPR, a more significant volume of community development loans and investments that align with the impact and responsiveness review factors will positively affect conclusions.

Under the final rule, the appropriate Federal financial supervisory agency will review the impact and responsiveness of the bank’s community development loans and community development investments that benefit or serve a facility-based assessment area, as provided in final § __.15. The final rule includes the impact and responsiveness component as a separate paragraph to make clear that this component is distinct from the metrics and benchmarks component. Further, the agencies consider the impact and responsiveness review to be one

¹¹⁸⁴ Certain commenters also recommended that the final rule tie activities with CDFIs, MDIs, WDIs, LICUs, or variations of these entities to banks receiving an “Outstanding” rating. The agencies note that community development activities with these entities are included as impact and responsiveness review factors under final § __.15. *See the* section-by-section analysis of § __.15 for additional information.

component of a comprehensive evaluation, with metrics, benchmarks, and impact and responsiveness reviews considered holistically in developing a performance conclusion.

As discussed above, one of the agencies' objectives in issuing the NPR was to provide greater clarity and consistency in the application of the regulations. The agencies believe that providing a list of impact and responsiveness factors in final § __.15 is a strong first step in that direction. As discussed in the section-by-section analysis of § __.15, the approach of identifying specific factors in § __.15(b) will result in a more standardized qualitative evaluation relative to current practice. In addition, this approach is intended to foster transparency by providing the categories the agencies will consistently review in considering the impact and responsiveness of a bank's community development activities. The final rule's impact and responsiveness review draws on decades of supervisory experience in applying the qualitative performance criteria in the current rule. Based on that experience, the agencies identified the factors that, in general, indicate that a particular loan or investment not only has a community development purpose as required under final § __.13, but is likely to be especially effective in helping to meet community needs associated with that community development purpose.

Although the agencies considered commenters' concerns about, and recommendations for, clarifying the application of the impact and responsiveness review, the current data limitations preclude introducing a score, additional standards, metrics, or weights into the rule at this time. In the absence of data, the agencies cannot assess the overall extent to which banks are engaging in impactful or responsive community development loans and investments. Further, given the lack of available data, the agencies do not have insight into: whether it is reasonable for banks to engage in limited impactful or responsive community development loans or investments; whether it is the dollar volume or number of impactful or responsive loans and investments that is most relevant; or whether there are other criteria that the agencies should consider in evaluating the impact and responsiveness of a bank's community development loans and investments, as an assessment of the level of impact or responsiveness of a community development loan or investment. Under final § __.42, large banks will be required to collect, maintain, and report information related to the impact and responsiveness factors, which will provide the agencies with useful data going forward.¹¹⁸⁵

Nonetheless, the agencies believe that some of the suggestions provided by commenters would be useful to examiners in their consideration of the impact and responsiveness of a bank's community development loans and investments. To that end, the agencies will consider issuing guidance for examiners to help improve clarity regarding the application of the impact and responsiveness review component in the near term. The agencies anticipate that guidance might include examples of criteria that examiners could consider in evaluating the impact and responsiveness of a bank's community development loans and investments, including: (1) the percentage of a bank's community development loans and investments that meet one or more impact and responsiveness factors; (2) the dollar volume and number of community development loans that meet one or more impact and responsiveness factors; and (3) reasons for providing more or less weight to the impact and responsiveness component of the Community Development Financing Test. Further, the agencies note that adding metrics, weighting for the metrics and benchmarks and impact and responsiveness components, points for conclusions, or

¹¹⁸⁵ See final § __.42(a)(5)(ii)(C) and (b)(2).

other mechanisms to improve clarity could be considered in a future rulemaking once data are collected and analyzed, which would provide an opportunity for additional public engagement on this topic.

§ __.24(b), (f) Facility-Based Assessment Area Conclusions

Under the current rule, and as discussed in greater detail in the section-by-section analysis of § __.28, the agencies conclude on banks' performance for each performance test or standard in each MSA and nonmetropolitan portion of each State with an assessment area.¹¹⁸⁶

The Agencies' Proposal

The agencies proposed to assign a Community Development Financing Test conclusion in a facility-based assessment area by considering the Bank Assessment Area Community Development Financing Metric relative to the local and national benchmarks, in conjunction with the impact review of the bank's activities.¹¹⁸⁷ Based on an assessment of these factors, the bank would receive a conclusion of "Outstanding," "High Satisfactory," "Low Satisfactory," "Needs to Improve," or "Substantial Noncompliance" in each facility-based assessment area.

The agencies also considered approaches that would automatically combine the metric, benchmarks, and impact review to assign conclusions in a standardized way. However, as discussed above in the section-by-section analysis of § __.24(a), the community development financing data that are currently available are not sufficient to determine an approach that includes specific thresholds and weights for different components. Instead, the agencies explained in the proposed rule that the approach for combining these standardized factors would initially rely on examiners' judgment. The agencies further explained that analysis of community development data collected under a new rule eventually may allow for developing additional quantitative procedures for developing conclusions.

Comments Received

As explained above, the agencies received numerous comments suggesting that they include additional standards, thresholds, or other mechanisms in the Community Development Financing Test that would allow for greater standardization in concluding on performance under the Community Development Financing Test. Several commenters also provided feedback on the agencies' proposal to include quantitative and qualitative components in the proposed Community Development Financing Test. Certain commenters supported inclusion of both quantitative and qualitative components. Further, a commenter stated that it hopes that a metrics-based approach will not overshadow qualitative aspects of bank community development lending and investments.¹¹⁸⁸

Final rule

¹¹⁸⁶ See e.g., Interagency Large Institution CRA Examination Procedures (April 2014).

¹¹⁸⁷ See proposed §§ __.24(d) and __.28 and proposed appendix C.d.

¹¹⁸⁸ Other comments related to the assignment of conclusions under the applicable performance tests are addressed in the section-by-section analysis of § __.28.

The agencies are finalizing the conclusion provision for facility-based assessment area performance under the Community Development Financing Test as proposed with technical and clarifying revisions. The agencies addressed the comments related to the rigor of the Community Development Financing Test, including the extent to which it should be quantitative or qualitative in design above in the section-by-section analysis of § __.24(a). Further, as discussed above, the agencies determined that the Community Development Financing Test should remain a qualitative evaluation informed by standardized metrics and benchmarks, as well as an impact and responsiveness review with standardized factors, to improve consistency across banks and the agencies.

Final § __.24(f)(1), therefore, provides that, pursuant to § __.28 and appendix C, the appropriate Federal financial supervisory agency assigns conclusions for a bank's Community Development Financing Test performance in each facility-based assessment area. Consistent with the other performance tests in the final rule, final § __.24(f) clarifies that in assigning conclusions under the Community Development Financing Test, the agency may consider performance context information as provided in § __.21(d) to make clear that performance context remains an important part of examiners' evaluation of community development financing performance.

§ __.24(c) State Community Development Financing Evaluation

Current Approach

As discussed above, the current rule considers community development loans and investments that serve a bank's assessment areas or the broader statewide or regional areas that include a bank's assessment areas. The agencies base statewide community development performance, in part, on consideration of community development loans and investments in: (1) the bank's assessment areas in the State; and (2) a broader statewide or regional area that includes the bank's assessment areas in the State and that support organizations or activities with a purpose, mandate, or function that includes serving individuals or geographies in the bank's assessment areas. For banks that have been responsive to the needs of their assessment areas, the agencies will also consider any community development loans and community development investments in the broader statewide or regional area that includes the institution's assessment areas in the State but that do not: (1) directly benefit an assessment area in the state; or (2) support organizations or activities with a purpose, mandate, or function that includes serving geographies or individuals located within the bank's assessment area.¹¹⁸⁹

The Agencies' Proposal

To evaluate a bank's State community development financing performance, the agencies proposed in § __.24(c)(2) and section 15 of appendix B to consider a weighted average of the bank's performance in facility-based assessment areas within a State, as well as the bank's performance on a statewide basis, via a statewide score. The statewide score would account for the totality of the bank's community development loans and investments in the State—combining community development loans and investments that are inside and outside of facility-based assessment areas—relative to the bank's total deposits across the State. The agencies believed the combination of these two components would emphasize facility-based assessment

¹¹⁸⁹ See Q&A § __.12(h)—6.

area performance, while still allowing banks the option to conduct and receive consideration for community development loans and investments outside of facility-based assessment areas in the State.

Weighted average of facility-based assessment area performance. The agencies proposed averaging a bank’s Community Development Financing Test conclusions across its facility-based assessment areas in each State, as one component of the bank’s Community Development Financing Test conclusion at the State level.¹¹⁹⁰ The conclusion assigned to each facility-based assessment area would be mapped to a point value, consistent with the approach explained for assigning Retail Lending Test conclusions: “Outstanding” (10 points); “High Satisfactory” (7 points); “Low Satisfactory” (6 points); “Needs to Improve” (3 points); “Substantial Noncompliance” (0 points).¹¹⁹¹ The proposed resulting score for each facility-based assessment area would be assigned a weight, calculated as the average of the percentage of retail loans, and the percentage of deposits associated with the facility-based assessment area (both measured in dollars), out of all of the bank’s retail loans, as defined in the proposal, and deposits in facility-based assessment areas in the State.¹¹⁹² Similar to the proposed weighting approach for assigning Retail Lending Test conclusions, the agencies would base deposits on collected and maintained deposits data for banks that collect this data, and on the Summary of Deposits data for banks that do not collect deposits data pursuant to this rule.¹¹⁹³ Using these weights and scores, the agencies would calculate the weighted average of the facility-based assessment area scores as one component to determine the State conclusion.¹¹⁹⁴

The agencies believed the proposed approach would ensure that they incorporated performance in all facility-based assessment areas into the State conclusion, proportionate to the bank’s amount of business activity in each facility-based assessment area. The agencies further believed that incorporating conclusions for all facility-based assessment areas into the State conclusion would create a clear emphasis on facility-based assessment area performance, including smaller markets.

The agencies proposed that examiners would also assign a statewide score for each State in which a bank delineates a facility-based assessment area that the agencies did not consider as part of a multistate MSA score.¹¹⁹⁵ Under the proposal, the statewide score would be assigned after considering the bank’s Bank State Community Development Financing Metric, the State Community Development Financing Benchmark, and a statewide impact review.

Bank State Community Development Financing Metric. The agencies proposed in § __.24(c)(2)(ii)(A) and section 5 of appendix B that they would calculate the Bank State Community Development Financing Metric using the same formula as the Bank Assessment Area Community Development Financing Metric and would include all of a bank’s community

¹¹⁹⁰ See proposed § __.24(c)(2)(i) and proposed appendix B.15 and B.16.

¹¹⁹¹ See the section-by-section analysis of § __.22(h) for discussion of the point scale.

¹¹⁹² See proposed appendix B.7.

¹¹⁹³ See proposed appendix B.5.

¹¹⁹⁴ See proposed § __.24(c)(2)(i) and proposed appendix B.15 and B.16.

¹¹⁹⁵ See proposed § __.24(c)(2)(ii) and proposed appendix B.15.

development loans and investments and deposits in the State without distinguishing between those inside or outside of the bank’s facility-based assessment areas.

For example, the agencies proposed that if a bank conducted an annual average of \$200,000 in qualifying community development loans and investments and had an annual average of \$10 million in deposits associated with a State during an evaluation period, the Bank State Community Development Financing Metric for that evaluation period would be 2.0 percent.

$$\frac{CD\ loans+CD\ investments\ (\$200,000)}{deposits\ (\$10,000,000)} =$$

Bank State Community Development Financing Metric (2.0 percent)

The inclusion of all community development loans and investments and deposits in the State evaluation reflected the agencies’ expectation that a bank should conduct a volume of community development loans and investments commensurate with its total capacity in a State. Therefore, the agencies explained in the proposed rule that the proposed metric would provide the option for, but would not require, banks to conduct and receive consideration for community development loans and investments outside of facility-based assessment areas, but within the States that include those facility-based assessment areas. The proposed metric did not distinguish between community development loans and investments conducted inside and outside a facility-based assessment area. However, if a bank was unable to conduct sufficient community development loans and investments within facility-based assessment areas due to lack of opportunity or high competition, the proposed metric permitted the bank to receive consideration for community development loans and investments conducted within the State but outside of facility-based assessment areas.

State Community Development Financing Benchmarks. Similar to the facility-based assessment area approach described above, the agencies proposed establishing benchmarks that would allow examiners to compare a bank’s performance to other banks in comparable areas. The proposed benchmarks included: (1) a statewide benchmark called the State Community Development Financing Benchmark;¹¹⁹⁶ and (2) a benchmark that the proposed rule tailored to each bank’s facility-based assessment areas called the State Weighted Assessment Area Community Development Financing Benchmark.¹¹⁹⁷ The agencies intended the use of two benchmarks to provide examiners with additional context and points of comparison on which to base the statewide score. For example, for a bank that primarily collects deposits or conducts community development loans and investments outside of its facility-based assessment areas in a State, the agencies may rely primarily on the State Community Development Financing Benchmark. In contrast, for a bank that collects deposits and conducts community development loans and investments primarily within its facility-based assessment areas, the agencies may rely more heavily on the State Weighted Assessment Area Community Development Financing Benchmark, which is tailored to the bank’s facility-based assessment areas to account for the level of competition and available opportunities in those areas.

¹¹⁹⁶ See proposed appendix B.6.

¹¹⁹⁷ See proposed appendix B.7 and B.17.

The agencies proposed that the first benchmark, the State Community Development Financing Benchmark,¹¹⁹⁸ would be defined similarly to the local benchmark used for the facility-based assessment area evaluation and it would include all community development loans and investments and deposits across the entire State. Under the proposal, the numerator would include the dollars of community development loans and investments by all large banks across the State, and the denominator would include the dollars of deposits held by all large banks across the State. The proposal provided that deposits in the State would be the sum of: (1) the annual average of deposits in counties in the State reported by all large banks that had assets greater than \$10 billion over the evaluation period (as reported under proposed § __.42); and (2) the annual average of deposits assigned to branches in the State by all large banks that had assets less than or equal to \$10 billion, according to the Summary of Deposits data, over the evaluation period.¹¹⁹⁹

The agencies proposed that the rule would define the second benchmark, the State Weighted Assessment Area Community Development Financing Benchmark, as the weighted average of Assessment Area Community Development Financing Benchmarks across all of the bank's facility-based assessment areas in the State.¹²⁰⁰ The proposal weighted each local benchmark based on the facility-based assessment area's percentage of retail loans, as defined in the proposal, and the percentage of deposits (both measured in dollars) within the facility-based assessment areas of the State, the same weighting approach as described for the weighted average of the bank's facility-based assessment area conclusions.¹²⁰¹

The agencies proposed to evaluate the impact and responsiveness of a bank's community development loans and investments for each State at a statewide level, using the same impact review approach as described previously for facility-based assessment areas.¹²⁰² The agencies proposed that the impact review would encompass all community development loans and investments in a State, including those inside and outside of facility-based assessment areas. Pursuant to the proposed impact review, examiners would consider the extent to which the bank's community development loans and investments met the impact factors, based on information provided by the bank, local community data, community feedback, and other performance context information.

*Comments Received*¹²⁰³

¹¹⁹⁸ See proposed § __.24(c)(2)(ii)(B)(1) and proposed appendix B.6.

¹¹⁹⁹ See proposed § __.24(c)(2)(ii)(B)(1) and proposed appendix B.6.

¹²⁰⁰ See proposed § __.24(c)(2)(ii)(B)(2) and proposed appendix B.7 and B.17.

¹²⁰¹ See proposed § __.24(c)(2)(ii)(B)(2) and proposed appendix B.7 and B.17.

¹²⁰² See proposed § __.24(c)(1)(ii) and proposed appendix B.15.

¹²⁰³ As discussed above, commenters generally did not distinguish between geographic areas when discussing their views on the metrics, benchmarks, and impact and responsiveness review in the proposed Community Development Financing Test. With noted exceptions, these aspects

The agencies sought feedback on the proposal to weight a bank’s facility-based assessment area Community Development Financing Test performance in States, multistate MSAs, and the nationwide area by the average share of loans and deposits. Most commenters that provided feedback supported the proposed approach. However, a commenter stated that weighting Community Development Financing Test performance by the share of loans and deposits in a facility-based assessment area may result in larger areas disproportionately contributing to the overall rating. The commenter also requested that the agencies provide clearer guidance on how to weight performance in large metropolitan areas, smaller metropolitan areas, and rural counties. Another commenter suggested that the agencies should encourage, rather than allow, community development lending and investment outside of a bank’s facility-based assessment areas by ensuring those activities receive equal weight in the upper-level considerations.¹²⁰⁴ A commenter strongly encouraged the agencies to integrate an impact and responsiveness review into each level of the Community Development Financing Test.

Final Rule

The agencies considered the commenters’ feedback and determined to finalize the State Community Development Financing Test evaluation as proposed, including with respect to weighting facility-based assessment area performance, with clarifying revisions and certain conforming edits. Under the final rule, § __.24(c) includes the provisions related to the evaluation of community development loans and investments in a State.

After considering the comments, the agencies are adopting a methodology to calculate the weighted average of facility-based assessment area performance, which retains consistency in the weighting of facility-based assessment areas across the four performance tests.¹²⁰⁵ The agencies based the approach in the final rule on the proposed approach but included conforming revisions consistent with the revisions discussed in the section-by-section analysis of § __.22(h) and appendix A. The agencies considered the comments that expressed concerns related to the proposed weighting methodology, particularly as those comments relate to the revised weighting methodology in the final rule. The agencies continue to believe that promoting internal consistency with respect to the Retail Lending Test is appropriate and that limiting variation in weighting methodologies limits unnecessary complexity and ensures that the agencies consider

of the performance test are similarly structured regardless of geographic area. Therefore, in considering the State, multistate MSA, and nationwide area evaluation, the agencies considered the comments on the metrics, benchmarks, and impact and responsiveness review discussed in the section-by-section analysis of final § __.16 and made conforming revisions to other aspects of the final rule as appropriate. This section and the sections that follow, therefore, address additional comments specific to the relevant provision of the proposed and final rule.

¹²⁰⁴ By “upper-level considerations” the agencies understand the commenter to be referring to the State, multistate MSA, and nationwide area conclusions and ratings.

¹²⁰⁵ See the section-by-section analysis of § __.22(h) for a discussion of the weighting methodology based on deposits and a combination of loan count and loan amount. The weighting methodology applies to the weighted average of facility-based assessment area performance conclusions in a State (final § __.24(c)(1)), and the State Weighted Assessment Area Community Development Financing Benchmark (final § __.24(c)(2)(ii)(B)).

community development loans and investments in the geographic areas where banks are operating.

Under § __.24(c) of the final rule, the appropriate Federal financial supervisory agency will evaluate a bank’s community development financing performance in a State, pursuant to final §§ __.19 and __.28(c), using two components. Final § __.24(c) also provides that the agency will assign a conclusion for each State based on a weighted combination of those components. The agencies added a cross reference to § __.19 for clarity and to improve consistency with final § __.25. Under the final rule, the agencies clarified in final § __.28(c) the scope of State and multistate MSA evaluations based on where the agencies conclude on performance.¹²⁰⁶

Component one is the weighted average of facility-based assessment area performance conclusions in a State.¹²⁰⁷ Under this component, the appropriate agency considers the weighted average of a bank’s Community Development Financing Test conclusions for its facility-based assessment areas within a State, pursuant to paragraph IV of appendix B. This section of appendix B provides that the agency calculates component one of the combined performance score, as set forth in paragraph II.p.2.i of final appendix B, for the Community Development Financing Test in final § __.24¹²⁰⁸ in each State by translating the Community Development Financing Test conclusions for facility-based assessment areas into numerical performance scores consistent with the table below.

Table 43 of § __.24: Translation of Community Development Financing Test Conclusion in Performance Scores

| Conclusion | Performance Score |
|---------------------------|--------------------------|
| Outstanding | 10 |
| High Satisfactory | 7 |
| Low Satisfactory | 6 |
| Needs to Improve | 3 |
| Substantial Noncompliance | 0 |

Section IV of final appendix B provides that the appropriate Federal financial supervisory agency calculates the weighted average of facility-based assessment area performance scores for a State. To determine the weighted average for a State, the agency considers facility-based assessment areas in the State pursuant to final § __.28(c).

¹²⁰⁶ See the section-by-section analysis of § __.28.

¹²⁰⁷ See final § __.24(c)(1).

¹²⁰⁸ Final appendix B.IV also applies to the Community Development Services Test in final § __.25.

Under the final rule, each facility-based assessment area performance score is weighted by the average the following two ratios:

(1) The ratio measuring the share of the bank's deposits in the facility-based assessment area, calculated by:

(a) summing, over the years in the evaluation period, the bank's annual dollar volume of deposits¹²⁰⁹ in the facility-based assessment area;

(b) summing, over the years in the evaluation period, the bank's annual dollar volume of deposits in all facility-based assessment areas in the State; and

(c) dividing the result of the first calculation by the result of the second calculation; and

(2) The ratio measuring the share of the bank's loans in a facility-based assessment area, based on the combination of loan dollars and loan count, as defined in § __.12, calculated by dividing:

(a) the bank's closed-end home mortgage loans, small business loans, small farm loans, and, if a product line for the bank, automobile loans in the facility-based assessment area originated or purchased during the evaluation period; by

(b) the bank's closed-end home mortgage loans, small business loans, small farm loans, and, if a product line for the bank, automobile loans in all facility-based assessment areas in the State originated or purchased during the evaluation period.¹²¹⁰

Component two of the final rule's State evaluation is State performance. Under component two, the appropriate Federal financial supervisory agency considers a bank's community development financing performance in a State using the State metric and benchmarks and a review of the impact and responsiveness of the bank's community development loans and investments.¹²¹¹ Specifically, the agency will consider the Bank State Community Development Financing Metric, calculated pursuant to paragraph II.d of appendix B,¹²¹² compared to the (1) State Community Development Financing Benchmark, calculated pursuant to paragraph II.e of

¹²⁰⁹ Under the final rule, for a bank that reports deposits data pursuant to final § __.42(b)(3), the bank's annual dollar volume of deposits in a facility-based assessment area is the total of annual average daily balances of deposits reported by the bank in counties in the facility-based assessment area for that year. Further, for a bank that does not report deposits data pursuant to final § __.42(b)(3), the bank's annual dollar volume of deposits in a facility-based assessment area is the total of deposits assigned to facilities reported by the bank in the facility-based assessment area in the Summary of Deposits for that year.

¹²¹⁰ Final appendix B.IV also applies to the multistate MSA and nationwide area evaluations as provided in final § __.24(d) and (e).

¹²¹¹ For a discussion of the final impact and responsiveness review in the Community Development Financing Test, see the section-by-section analysis of § __.24(b)(3), (c)(2)(iii), (d)(2)(iii), (e)(2)(v).

¹²¹² See final § __.24(c)(2)(i).

appendix B¹²¹³ and (2) State Weighted Assessment Area Community Development Financing Benchmark, calculated pursuant to paragraph II.f of appendix B. In addition, the agency will consider the impact and responsiveness review of the bank's community development loans and investments within the State as part of component two.¹²¹⁴

The agencies made conforming edits to the Bank State Community Development Financing Metric and State Community Development Financing Benchmark and related sections of final appendix B consistent with the changes made to the similar metric and benchmarks applicable in facility-based assessment areas. The agencies also clarified, for purposes of calculating the State metrics and benchmarks, when community development loans, community development investments, and deposits in a bank are included in the State-level metric and benchmark calculations by cross referencing final § __.28(c).¹²¹⁵

The agencies also made clarifying and conforming edits to the State Weighted Assessment Area Community Development Financing Benchmark to simplify the description, to make it easier to understand, and to promote consistency in the weighting methodology across performance tests. Under the final rule, the State Weighted Assessment Area Community Development Financing Benchmark is the weighted average of the bank's Assessment Area Community Development Financing Benchmarks for each facility-based assessment area within the State, calculated pursuant to paragraph II.f of final appendix B. The appropriate Federal financial supervisory agency calculates the final State Weighted Assessment Area Community Development Financing Benchmark by averaging all of the bank's Assessment Area Community Development Financing Benchmarks¹²¹⁶ in a State for the evaluation period, after weighting each pursuant to paragraph II.o of final appendix B.

Under final paragraph II.o of final appendix B, for State evaluations, the appropriate agency calculates the weighted average of Assessment Area Community Development Financing Benchmarks for a bank's facility-based assessment areas in each State by considering the facility-based assessment areas in a State pursuant to final § __.28(c).

The agencies weight the Assessment Area Community Development Financing Benchmarks in the final rule by the average of the following two ratios:

(1) The ratio measuring the share of the bank's deposits in the facility-based assessment area, calculated by:

¹²¹³ See final § __.24(c)(2)(ii)(A).

¹²¹⁴ See final § __.24(c)(2).

¹²¹⁵ Whether the agencies include community development loans and investments in the State evaluation depends on whether the bank has a facility-based assessment area in the State and whether the State is located in a multistate MSA. For additional discussion, see the section-by-section analysis of § __.28(c).

¹²¹⁶ See final appendix B.II.b.

(a) summing, over the years in the evaluation period, the bank's annual dollar volume of deposits¹²¹⁷ in the facility-based assessment area;

(b) summing, over the years in the evaluation period, the bank's annual dollar volume of deposits in all facility-based assessment areas in the State; and

(c) dividing the result of the calculation in (a) by the result of the calculation in (b); and

(2) The ratio measuring the share of the bank's loans in a facility-based assessment area, based on the combination of loan dollars and loan count, as defined in § __.12, calculated by dividing:

(a) the bank's closed-end home mortgage loans, small business loans, small farm loans, and, if a product line for the bank, automobile loans in the facility-based assessment area originated or purchased during the evaluation period; by

(b) the bank's closed-end home mortgage loans, small business loans, small farm loans, and, if a product line for the bank, automobile loans in all facility-based assessment areas in the State originated or purchased during the evaluation period.

The agencies are also adopting the impact and responsiveness review as part of component two of the State evaluation as proposed with clarifying and conforming revisions discussed in the section-by-section analysis of §§ __.15 and __.24(b)(3). In response to the commenters' questions, the agencies note that, under the proposed and final Community Development Financing Test, the agencies would apply the impact and responsiveness review to the evaluation of community development loans and investment for all geographic levels.¹²¹⁸ The agencies believe that it is appropriate to consider the impact and responsiveness at all geographic levels because it ensures that impactful or responsive community development loans and investments conducted outside of a bank's facility-based assessment areas are considered. Further, given the weighting methodology for the State, multistate MSA, and nationwide area performance scores, the agencies consider a portion of the impact and responsiveness of a community development loan or investment conducted in a facility-based assessment area in the weighted average of facility-based assessment area performance and a portion is considered in the State.¹²¹⁹

§ __.24(c), (f) State Performance Score and Conclusion Assignment (and paragraph II.p of appendix B)

¹²¹⁷ As provided above in the discussion of final appendix B.IV, for a bank that reports deposits data pursuant to final § __.42(b)(3), the bank's annual dollar volume of deposits in a facility-based assessment area is the total of annual average daily balances of deposits reported by the bank in counties in the facility-based assessment area for that year. For a bank that does not report deposits data pursuant to final § __.42(b)(3), the bank's annual dollar volume of deposits in a facility-based assessment area is the total of deposits assigned to facilities reported by the bank in the facility-based assessment area in the Summary of Deposits for that year.

¹²¹⁸ See final § __.24(c)(2)(iii); (d)(2)(iii); and (e)(2)(v).

¹²¹⁹ Under the final rule, the same is true for the consideration of the impact and responsiveness review under the multistate evaluation in final § __.24(d) and nationwide area evaluation in final § __.24(e).

The Agencies' Proposal

The agencies proposed to assign statewide Community Development Financing Test conclusions, as applicable.¹²²⁰ Section 15 of proposed appendix B provided that statewide conclusions would reflect two components, with weights on both components tailored to reflect the bank's business model, which would result in a state performance score for the applicable State. Pursuant to the proposal, the two components were: (1) the bank's weighted average assessment area performance score; and (2) the bank's statewide score. The agencies proposed in section 15 of appendix B that they would assign a statewide score corresponding to the conclusion categories described above: "Outstanding" (10 points); "High Satisfactory" (7 points); "Low Satisfactory" (6 points); "Needs to Improve" (3 points); "Substantial Noncompliance" (0 points). The statewide score would reflect a comparison of the Bank State Community Development Financing Metric to the state community development financing benchmark and the state weighted average community development financing benchmark, as well as the impact review of the bank's activities.

Under the proposal, the amount of weight that the agencies would apply to the facility-based assessment area performance and to the statewide performance would depend on the bank's percentage of deposits (based on collected deposits data and on the Summary of Deposits data, as applicable) and retail loans, as defined in the proposal.¹²²¹

The agencies proposed to tailor the weighting of the average assessment area performance and the statewide score to the individual bank's business model, while still preserving the option for every bank to be meaningfully credited for activities outside of its facility-based assessment areas.¹²²² For a bank that does most of its retail lending and deposit collection within its facility-based assessment areas, for example, the agencies viewed those facility-based assessment areas as the primary community a bank serves. The agencies therefore believed the average facility-based assessment area performance deserved a larger portion of the weight in the combined state performance score.

To ensure that the agencies also meaningfully credited any community development loans and investments a bank undertakes outside of its facility-based assessment areas, the agencies proposed to give equal weight to the average assessment area performance and statewide score for banks whose business model is strongly branch-based.¹²²³ Because community development loans and investments that serve facility-based assessment areas would contribute both to the statewide score as well as in the weighted average of facility-based assessment area conclusions, equally weighting these two components effectively would give greater weight to assessment area performance while still meaningfully considering those community development loans and investments that banks conduct outside of their facility-based assessment areas.

On the other end, for banks with retail lending and deposit collection that occurs almost entirely outside of the bank's facility-based assessment areas (such as primarily online lenders),

¹²²⁰ See proposed §§ __.24(d) and __.28, proposed appendix B.15, and proposed appendix C.d.

¹²²¹ See proposed appendix B.15.

¹²²² *Id.*

¹²²³ *Id.*

the agencies believed those assessment areas largely do not represent the entire community the bank serves. The agencies, therefore, proposed to weight the statewide score more heavily than the weighted average assessment area performance score for such a bank.¹²²⁴ The agencies also proposed that banks with business models in between these two ends would use weights that are correspondingly in between.

Specifically, to determine the relative weighting as described in Table 45 below, the agencies proposed to use the simple average of: (1) the percentage of a bank's retail loans in a State, by dollar volume, that the bank made in its facility-based assessment areas in that State, and (2) the percentage of a bank's deposits from a State, by dollar volume, that the bank sourced from its facility-based assessment areas in that State.

The agencies further proposed that banks that have a low percentage of deposits and retail loans within their facility-based assessment areas would have a greater emphasis placed on their statewide performance compared to the weighted average of their facility-based assessment area performance.¹²²⁵ Conversely, the agencies would place more equal weight on statewide performance and the weighted average of facility-based assessment area performance for banks that have a high percentage of deposits and retail loans within their facility-based assessment areas. Thus, to develop the State Community Development Financing Test conclusion, the agencies proposed the State performance score to be the score that would result from averaging: (1) the bank's weighted average facility-based assessment area performance score; and (2) the bank's statewide score. The agencies would then round the State performance score to the nearest point value corresponding to a conclusion category: "Outstanding" (10 points); "High Satisfactory" (7 points); "Low Satisfactory" (6 points); "Needs to Improve" (3 points); "Substantial Noncompliance" (0 points).

The agencies believed that taking into account both the bank's facility-based assessment area performance and its statewide performance would build off of the current approach to considering community development loans and investments in broader statewide and regional areas that include a banks' assessment areas and aimed to achieve a balance of objectives. First, considering assessment area performance encourages banks to serve the communities where they have a physical presence and where their knowledge of local community development needs and opportunities is often strongest. Second, considering statewide performance provides banks the option to pursue impactful community development opportunities that may be located partially or entirely outside of their facility-based assessment areas, without requiring them to do so. Third, because facility-based assessment area activities are considered in the State evaluation as well, the proposed approach would give greater emphasis to activities within facility-based assessment areas than to activities outside of assessment areas, but the amount of weight would be tailored to each bank's business model in the state. As a result, the agencies believed the proposal would encourage banks that are primarily branch-based to focus on serving their facility-based assessment areas, while banks that have few loans and deposits in facility-based assessment areas, such as banks that operate primarily through online delivery channels, would be evaluated mostly on a statewide basis.

¹²²⁴ *Id.*

¹²²⁵ *Id.*

Under the proposal, the percentage of deposits assigned to facility-based assessment areas for banks that do not collect and maintain deposits data would always be 100 percent because the Summary of Deposits data attributes all deposits to bank branches. The average of the percentage of home mortgage loans, small business loans, and small farm loans and deposits in facility-based assessment areas for such a bank would, therefore, not account for the bank's depositors that are located outside of its facility-based assessment areas. In the proposal, the agencies recognized that this would generally result in a higher weight on the bank's assessment area performance score unless the bank chooses to collect and maintain these data.

Comments Received

Certain commenters offered suggestions for determining Community Development Financing Test performance scores and conclusions. A commenter suggested that in addition to weighting facility-based assessment area performance, the agencies should: (1) set a threshold for smaller facility-based assessment areas that requires that they have a low satisfactory or higher rating to ensure those facility-based assessment areas receive sufficient attention; and (2) require banks with 60 percent or more of their community development loans and investments in facility-based assessment areas to also have a 50 percent weight for facility-based assessment area performance. Another commenter similarly stated that the agencies should place more than the proposed weight on facility-based assessment area performance. Lastly, a commenter stated that if a bank fails in any of its assessment areas, it should receive a rating of "Needs to Improve" or below.

Final Rule

The agencies are finalizing the provisions for determining the State performance score and corresponding conclusion as proposed with certain clarifying and conforming revisions.¹²²⁶ In considering the importance of facility-based assessment area performance within a State, the agencies determined that it was not appropriate to place additional weight on performance in facility-based assessment areas relative to performance outside of facility-based assessment areas because, as discussed above: (1) the agencies evaluate facility-based assessment areas separately under final § __.24(b); (2) the agencies consider facility-based assessment area community development financing performance under component one of the State evaluation of the Community Development Financing Test;¹²²⁷ and (3) community development loans and investments in facility-based assessment areas are included in the Bank State Community Development Financing Metric. In the agencies' view, these three levels of consideration for community development loans and investments in facility-based assessment areas provide appropriate emphasis while still allowing banks to receive consideration for loans and investments outside of these areas. Further, the agencies believe that this flexibility will incentivize banks to engage in community development lending and investments in underserved areas that may not be proximate to many bank branches. For a bank that focuses its community development lending and investments on its facility-based assessment areas, performance in facility-based assessment areas and in the State will be equivalent. The agencies believe that the

¹²²⁶ See final §§ __.24(c) and (f), and final appendix B.II.p.

¹²²⁷ See final § __.24(c)(1).

proposed weighting of facility-based assessment area performance¹²²⁸ and statewide performance¹²²⁹ in determining State performance scores and assigning conclusions emphasizes the importance of banks helping to meet the credit needs of their facility-based assessment areas while still permitting consideration of community development loans and investments outside of those areas. As discussed in the proposal, the agencies believe this approach builds off the current approach to considering community development loans and investments in the broader statewide and regional areas that include a banks' assessment areas and aims to achieve a balance of objectives. Further, this approach creates more certainty for banks regarding whether they will receive consideration for community development loans and investments outside of facility-based assessment areas.

The final rule balances the objectives of encouraging banks to serve the communities where they have a physical presence and where their knowledge of local community development needs and opportunities is often strongest with the ability to pursue impactful community development opportunities that may be located partially or entirely outside of their facility-based assessment areas.¹²³⁰ As such, the final rule gives greater emphasis to community development loans and investments within facility-based assessment areas because those loans and investments are included in the State performance score and tailors the amount of weight to each bank's business model in the State. The agencies believe this approach will encourage banks that are primarily branch-based to focus on serving their facility-based assessment areas, while banks that have few loans and deposits in facility-based assessment areas, such as banks that operate primarily through online delivery channels, will have greater emphasis on their statewide community development loans and investments.

The agencies also considered the comments about ensuring that smaller facility-based assessment areas receive sufficient attention. The agencies addressed this issue in the final rule through a requirement that large banks with a combined total of 10 or more facility-based assessment areas and retail lending assessment areas in any State may not receive a rating of "Satisfactory" or "Outstanding" in the respective State unless the bank received an overall facility-based assessment area or retail lending assessment area conclusion of at least "Low Satisfactory" in 60 percent or more of the total number of its facility-based assessment areas and retail lending assessment areas in that State.¹²³¹

Under the final rule, the appropriate Federal financial supervisory agency calculates a performance score for the State Community Development Financing Test based on the weighted

¹²²⁸ *Id.*

¹²²⁹ *See* final § __.24(c)(2).

¹²³⁰ As with the proposal, under the final rule, banks may, but are not required to, engage in community development lending and investment outside of facility-based assessment areas because loans and investments in those areas are included in the statewide evaluation.

¹²³¹ *See* the section-by-section analysis of final § __.28(b)(4)(ii) and final appendix D.g.2.ii. As discussed in final appendix D, these requirements also apply to conclusions for multistate MSAs and for the institution. *See also* the section-by-section analysis of § __.51 (this requirement only applies to facility-based assessment areas for purposes of the first evaluation under this final rule).

combination of the two components, pursuant to paragraph II.p of final appendix B.¹²³² The agency then assigns a conclusion corresponding with the conclusion category that is nearest to the performance score for a bank’s performance under the Community Development Financing Test in each State pursuant to final § __.28(c) as shown in the table below.¹²³³

Table 44 of § __.24: Translation of Community Development Financing Test Conclusion in Performance Scores

| Performance Score | Conclusion |
|-------------------------------|---------------------------|
| 8.5 or more | Outstanding |
| 6.5 or more but less than 8.5 | High Satisfactory |
| 4.5 or more but less than 6.5 | Low Satisfactory |
| 1.5 or more but less than 4.5 | Needs to Improve |
| Less than 1.5 | Substantial Noncompliance |

Specifically, under paragraph II.p.2 of final appendix B, the appropriate Federal financial supervisory agency bases the Community Development Financing Test combined performance score for a State on: (1) component one – the weighted average of the bank’s performance scores corresponding to facility-based assessment area conclusions in that State;¹²³⁴ and (2) component two – the bank score for metric and benchmark analyses and the impact and responsiveness review.¹²³⁵ For component one, the final rule provides that the agency derives performance scores based on a weighted average of the performance scores corresponding to conclusions for facility-based assessment areas in each State, calculated pursuant to section IV of final appendix B. For component two, the final rule provides that for each State, the agency determines a statewide performance score corresponding to a conclusion category (shown in the table below) by considering the relevant metric and benchmarks and a review of the impact and responsiveness of the bank’s community development loans and community development investments.¹²³⁶

Using the results of components one and two, the appropriate agency determines a combined performance score corresponding to a conclusion category by taking the weighted average of two

¹²³² As provided in final appendix B.II.p, the combined score also applies to the multistate MSA evaluation and the nationwide evaluation, with certain differences for the nationwide area discussed in the section-by-section analysis of final § __.24(e).

¹²³³ See final appendix B.II.p.1.

¹²³⁴ See final appendix B.II.p.2.i.

¹²³⁵ See final appendix B.II.p.2.ii.

¹²³⁶ See *id.*

components.¹²³⁷ The two components the agencies use to determine weighting are: (1) the percentage, calculated using the combination of loan dollars and loan count, of the bank’s total originated and purchases closed-end home mortgage lending, small business lending, small farm lending, and automobile lending, as applicable, in its facility-based assessment areas out of all of the bank’s originated and purchased closed-end home mortgage lending, small business lending, small farm lending, and automobile lending, as applicable, in the State during the evaluation period;¹²³⁸ and (2) the percentage of the total dollar volume of deposits in its facility-based assessment areas out of all of the deposits in the bank in the State during the evaluation period.¹²³⁹ The weighting is calculated as provided in the table below (*see* paragraph II.p.2.iii.B of final appendix B).

Table 45 to § __.24: Component Weights for Combined Performance Score

| Average of the percentage of deposits and percentage of loans | Weight on Component 1 | Weight on Component 2 |
|--|------------------------------|------------------------------|
| Greater than or equal to 80% | 50% | 50% |
| Greater than or equal to 60% but less than 80% | 40% | 60% |
| Greater than or equal to 40% but less than 60% | 30% | 70% |
| Greater than or equal to 20% but less than 40% | 20% | 80% |
| Below 20% | 10% | 90% |

The agencies believe that a weighting of 50 percent on the average facility-based assessment area performance score and 50 percent on the statewide score is appropriate for banks whose deposits and retail lending occurs predominantly or entirely within their facility-based assessment areas. As described above, community development loans and investments that benefit the bank’s facility-based assessment areas would also contribute to the statewide score, so the agencies believe any weighting on the statewide score of less than 50 percent would not provide meaningful credit for activities that occur outside the bank’s facility-based assessment areas. For a branch-based bank that conducts most of its community development financing activity within its facility-based assessment areas, the statewide score would largely, or entirely, reflect the performance inside its facility-based assessment areas. Relatedly, the agencies also believe that a bank whose deposits and retail lending occurs predominantly or entirely within

¹²³⁷ *See* final appendix B.II.p.2.iii.

¹²³⁸ *See* final appendix B.II.p.2.iii.A.1.

¹²³⁹ *See* final appendix B.II.p.2.iii.A.2. For purposes of this paragraph, “deposits” excludes deposits reported under final § __.42(b)(3)(ii).

their facility-based assessment areas have the capacity to engage in community development financing activity there, and so a weight of less than 50 percent on the average facility-based assessment area performance score would also be inappropriate.

Starting from that baseline of 50 percent weighting of the statewide score for banks that are predominantly or entirely focused on serving its facility-based assessment areas, the agencies believe that increasing the weight on the statewide score proportionately with the extent of the bank's retail lending and deposit taking outside of its facility-based assessment areas appropriately tailors the weights to individual banks' business models. This proportionate increase in the weight on the statewide score is reflected in the increasing percentages in the weight on component 2 column of Table 45 as the percentage of the bank's loans and deposits from facility-based assessment areas falls. To reduce the complexity of the rule, the agencies are categorizing the weights into five segments as shown in Table 45. The weight on the statewide score grows steadily as the percentage of the bank's retail loans and deposits inside its facility-based assessment areas falls, until banks whose retail lending and deposit taking is predominantly or entirely outside its facility-based assessment areas receive a Community Development Financing Test State performance score based almost entirely on their statewide score. The agencies again note that the statewide score also reflects performance within a bank's facility-based assessment areas, in addition to community development financing activities in other parts of the applicable State.

The State performance score and conclusion provisions include conforming revisions to improve consistency across the final rule, including the use of the combination of loan dollars and loan count in the weighting methodology, conforming revisions to final § __.24(f)(1) consistent with the revisions to the facility-based assessment area conclusion discussion above, and other formatting and technical changes.

The agencies are also finalizing the State ratings provisions in final § __.24(f)(2) as proposed.

§ __.24(d) Multistate MSA Community Development Financing Test Evaluation

Current Approach

The agencies currently evaluate a bank's performance in a multistate MSA when the bank has a main office, branch, or deposit-taking ATM in two or more States in the multistate MSA. The current approach to evaluating community development activities in a multistate MSA is consistent with the process for evaluating performance in a State, discussed above.

The Agencies' Proposal

In § __.24(c)(3) of the NPR, the agencies proposed evaluating performance under the Community Development Financing Test in a multistate MSA consistent with the approach to evaluating performance in a State. The agencies proposed to assign Community Development Financing Test conclusions for multistate MSAs in which a bank has branches in two or more states of the multistate MSA.¹²⁴⁰ The agencies proposed to employ the same approach for assigning conclusions for States to multistate MSAs, with the same components as the State

¹²⁴⁰ See proposed §§ __.24(d), __.28, proposed appendix B.15, and proposed appendix C.d.

evaluation.¹²⁴¹ The proposed multistate MSA conclusion would reflect a weighted average of facility-based assessment area conclusions within the multistate MSA, and would also reflect: (1) a Bank Multistate MSA Community Development Financing Metric; (2) a Multistate MSA Community Development Financing Benchmark; (3) a Multistate MSA Weighted Assessment Area Community Development Financing Benchmark; and (4) an impact review.

Comments Received

The agencies did not receive comments that were specific to the proposed evaluation of community development loans and investments in multistate MSAs.

Final Rule

The agencies are finalizing the proposed multistate MSA Community Development Financing Test evaluation with clarifying and conforming revisions consistent with the State evaluation. The agencies renumbered proposed § __.24(c)(3) to final § __.24(d) consistent with the other formatting revisions to final § __.24. Under final § __.24(d), the appropriate Federal financial supervisory agency will evaluate banks' community development lending and investments in multistate MSAs, pursuant to final §§ __.19 and __.28(c), using the same two components as the State evaluation. Specifically, the agency will evaluate a bank's community development financing performance in a multistate MSA based on the: (1) weighted average of facility-based assessment area performance in the multistate MSA;¹²⁴² and (2) multistate MSA performance.¹²⁴³

Under the final rule, the appropriate agency assigns a conclusion for a bank's performance in each multistate MSA, as applicable, based on a weighted combination of these two components pursuant to final paragraph II.p of final appendix B and the weighting in section IV of appendix B of the final rule. As noted in the proposal, the multistate MSA Community Development Financing Test provisions are consistent with the State Community Development Financing Test provisions and the agencies made additional conforming revisions throughout final § __.24(d) and paragraphs II.g, II.h, and II.i of final appendix B.

§ __.24(e) Nationwide Area Community Development Financing Test Evaluation

Current Approach

Currently, the agencies assign institution-level ratings for the applicable performance tests based on a bank's performance in the States and multistate MSAs where the bank has assessment areas. Banks' community development loans and investments are considered at the assessment area-, State-, multistate MSA-, or institution-level depending on whether the loan or investment has a purpose, mandate, or function of serving an assessment area or the broader statewide or regional areas that include a bank's assessment areas.¹²⁴⁴ The agencies also determine the relative significance of performance in the different States and multistate MSAs and factor that

¹²⁴¹ See proposed appendix B.16.

¹²⁴² See final § __.24(d)(1).

¹²⁴³ See final § __.24(d)(2).

¹²⁴⁴ See, e.g., Interagency Large Institution CRA Examination Procedures, appendix (April 2014).

performance into the institution-level ratings based on: (1) the significance of the institution's community development loans, investments, and services compared to (a) the institution's overall activities; (b) the number of other institutions and the extent of their lending, investments, and services in the relevant areas; and (c) the lending, investment, and service opportunities in the relevant areas; and (2) demographic and economic conditions in the relevant areas.¹²⁴⁵

The Agencies' Proposal

In proposed §§ __.24(c) and __.28, section 15 of proposed appendix B, and section d of proposed appendix C, the agencies proposed to evaluate a bank's community development lending and investments in the nationwide area and assign Community Development Financing Test conclusions for the institution-level using a similar approach to that for evaluating performance and assigning conclusions at the State level. The proposed approach would use a combination of a weighted average of facility-based assessment area conclusions in the nationwide area and a nationwide area score that reflects: (1) a Bank Nationwide Community Development Financing Metric; (2) a Nationwide Community Development Financing Benchmark; (3) a Nationwide Weighted Assessment Area Community Development Financing Benchmark; and (4) an impact and responsiveness review.

Weighted average of facility-based assessment area performance. The agencies proposed, in § __.24(c)(4)(i), considering a weighted average of a bank's Community Development Financing Test conclusions across all of its facility-based assessment areas as one component of the bank's Community Development Financing Test institution-level conclusion.¹²⁴⁶ As with the State evaluation approach, the agencies intended that this approach would emphasize facility-based assessment area performance by directly linking a bank's facility-based assessment area conclusions to the institution conclusion. Under the proposal, the conclusion assigned to each assessment area would be mapped to a point value as follows: "Outstanding" (10 points); "High Satisfactory" (7 points); "Low Satisfactory" (6 points); "Needs to Improve" (3 points); "Substantial Noncompliance" (0 points). The agencies proposed that this resulting score for each facility-based assessment area would be assigned a weight, calculated as the average of the percentage of retail loans and the percentage of deposits of the bank within the facility-based assessment area (both measured in dollars), out of all of the bank's retail loans and deposits in facility-based assessment areas (based on collected deposits data and on the Summary of Deposits data, as applicable).¹²⁴⁷ Using these weights and scores, the agencies would calculate the weighted average of the facility-based assessment area scores to determine the institution-level performance score. The weighted average approach would ensure that performance in each facility-based assessment area is incorporated into the institution conclusion, with greater emphasis given to the areas where a bank has a greater business presence.

Nationwide area score. The agencies proposed in § __.24(c)(4)(ii) that examiners would assign a nationwide area score for the institution based on a Bank Nationwide Community Development Financing Metric, the nationwide benchmarks, and a nationwide impact review.

¹²⁴⁵ See, e.g., Interagency Large Institution CRA Examination Procedures (April 2014).

¹²⁴⁶ See proposed § __.24(c)(4)(i).

¹²⁴⁷ See proposed appendix B.16.

Bank Nationwide Community Development Financing Metric. The agencies proposed that examiners would calculate the Bank Nationwide Community Development Financing Metric¹²⁴⁸ using the same formula for the State metric, including all of a bank’s community development loans and investments, and deposits in the bank in the numerator and denominator, respectively.

Nationwide Community Development Financing Benchmarks. In proposed § __.24(c)(4)(ii)(B), the agencies proposed establishing benchmarks that would allow examiners to compare a bank’s performance to other banks in similar areas. The proposed benchmarks included a single nationwide benchmark applied to all banks called the Nationwide Community Development Financing Benchmark and a benchmark that was tailored to each bank’s facility-based assessment areas called the Nationwide Weighted Assessment Area Community Development Financing Benchmark. The agencies intended the use of two benchmarks to provide additional context and points of comparison in order to develop the nationwide area score.¹²⁴⁹

Under the proposal, the agencies would develop the proposed nationwide benchmarks in the same way as the proposed statewide benchmarks. The proposed Nationwide Community Development Financing Benchmark included all community development loans and investments reported by large banks in the numerator, and all deposits in those banks in the denominator. Under the proposal, the deposits in the nationwide area would be the sum of: (1) the annual average of deposits in counties in the nationwide area reported by all large banks with assets of over \$10 billion over the evaluation period (as reported under proposed § __.42); and (2) the annual average of deposits assigned to branches in the nationwide area by all large banks with assets of \$10 billion or less, according to the Summary of Deposits data, over the evaluation period.

The agencies proposed to define the Nationwide Weighted Assessment Area Community Development Financing Benchmark as the weighted average of the facility-based assessment area community development financing benchmarks across all of the bank’s facility-based assessment areas and the agencies would weight the benchmark based on the facility-based assessment area’s percentage of retail loans and percentage of deposits (both measured in dollars) within the facility-based assessment areas of the State using the same weighting approach as described for the weighted average of the bank’s facility-based assessment area conclusions.¹²⁵⁰

¹²⁴⁸ See proposed § __.24(c)(4)(ii)(A).

¹²⁴⁹ The agencies note that the proposal included Metropolitan and Nonmetropolitan Nationwide Community Development Financing Benchmarks applicable to the evaluation of community development lending and investments in facility-based assessment areas, described as “national benchmarks.” The proposed nationwide area Community Development Financing Test evaluation would not use these national benchmarks because it evaluates a bank’s community development financing performance in all geographic areas in the nationwide area, irrespective of whether the banks’ community development loans or investments are in MSAs or nonmetropolitan areas, and factors in facility-based assessment area performance through the weighted assessment area benchmarks.

¹²⁵⁰ See proposed § __.24(c)(4)(ii)(B)(2).

Impact review. Similar to the proposed State evaluation approach, the agencies proposed in § __.24(c)(4)(ii) and section 15 of appendix B to evaluate the impact and responsiveness of a bank's community development loans and investments at the institution level, using the same impact review approach as described above for facility-based assessment areas and States. The agencies proposed to conduct an institution-level impact review in order to assess the impact and responsiveness of *all* of an institution's community development loans and investments, including those inside and outside of facility-based assessment areas. The agencies considered this to be especially important for the evaluation of a bank that elects to conduct community development loans and investments that serve areas outside of its facility-based assessment areas, so that the impact and responsiveness of those activities is considered. As described above, the agencies would consider the impact and responsiveness of the bank's community development loans and investments to community needs, and would consider the impact review factors, among other information.

Nationwide area score assignment. As provided in section 15 of proposed appendix B, the agencies proposed to assign a nationwide area score that reflected the bank's overall dollar volume of community development loans and community development investments and overall impact and responsiveness of those loans and investments, corresponding to the conclusion categories as follows: "Outstanding" (10 points); "High Satisfactory" (7 points); "Low Satisfactory" (6 points); "Needs to Improve" (3 points); "Substantial Noncompliance" (0 points). This nationwide area score would reflect a comparison of the Bank Nationwide Community Development Financing Metric to the nationwide and weighted assessment area benchmarks, as well as the impact review of the bank's community development financing activities.

Comments Received

Other than the comments discussed above, the agencies did not receive comments specific to the evaluation of a bank's community development loans and investments in the nationwide area or conclusions at the institution level. However, certain comments discussed above are relevant to these evaluations and conclusions. Specifically, some commenters objected to consideration of community development lending and investment outside of facility-based assessment areas because they believe that consideration of lending and investments in broader geographic areas is not consistent with the CRA statute's focus on local communities. Further, as discussed in the section-by-section analysis of § __.24(a), many commenters expressed concern with the absence of an investment test as a separate test or a component of the Community Development Financing Test overall.

Final Rule

In final § __.24(e) (renumbered proposed section § __.24(c)(4)), the agencies are finalizing the proposed nationwide area evaluation of the Community Development Financing Test with certain revisions. Consistent with the proposal, the final rule includes two components for the nationwide area evaluation. The first component consists of the weighted average of facility-based assessment area performance in the nationwide area. The second component consists of an evaluation of all of the bank's community development lending and investments in the nationwide area—both inside and outside of a bank's facility-based assessment areas. As with the proposal, and discussed in greater detail below, the agencies will base consideration of a bank's nationwide area performance under the second component on a Bank Nationwide Community Development Financing Metric, the two nationwide community development

financing benchmarks, and an impact and responsiveness review with conforming revisions consistent with the changes discussed above related to the State and multistate MSA Community Development Financing Test evaluations.

The agencies continue to believe, as discussed above, that it is appropriate to consider community development loans and investments outside of banks' facility-based assessment areas. The agencies believe that the construction of the nationwide area evaluation puts appropriate emphasis on banks' lending and investment in banks' facility-based assessment areas while also permitting banks to help meet the credit needs of their entire communities, particularly underserved areas with limited bank presence. This framework is aimed at ensuring that banks reinvest in the communities from which they draw deposits while also eliminating barriers in the current framework that have resulted in a mismatch in the supply and demand of community development financing activities in certain geographic areas.

As discussed above in the section-by-section analysis of § __.24(a), to respond to commenters concerns about the potential that banks may shift away from conducting community development investments in favor of community development loans, the final rule also includes a Bank Nationwide Community Development Investment Metric and a Nationwide Community Development Investment Benchmark as part of the nationwide area performance considerations for large banks that have assets greater than \$10 billion. In the agencies' view, including an investment metric and benchmark for the nationwide area is appropriate because it serves as a check on the level of banks' overall community development investments. The agencies determined that including an investment metric in the evaluation of facility-based assessment areas, States, or multistate MSAs may impose an incentive on banks to make a community development investment instead of a community development loan solely to perform well against the metric as compared to the benchmark, even if that investment was not in the best interest of the particular community or project. By limiting consideration of the Bank Nationwide Community Development Investment Metric and Nationwide Community Development Investment Benchmark to the nationwide area evaluation, banks have the flexibility to engage in the most appropriate type of financing for each community development project while still giving the agencies a view into how a bank's overall community development investment activity compares to its peers.

After considering commenter feedback, the agencies determined that the Bank Community Development Investment Metric and the Nationwide Community Development Investment Benchmark should exclude mortgage-backed securities. Although mortgage-backed securities serve a purpose in creating liquidity and helping banks to meet the credit needs of their communities, these types of community development investments do not involve the complexities associated with certain other community development investments. Further, given the existing markets for mortgage-backed securities, banks may readily engage in these types of investments if appropriate for their business model. For these reasons, the agencies believe that the consideration of community development investments within the nationwide area evaluation should focus on the extent to which banks are making community development investments other than mortgage-backed securities, which may involve competitive challenges, significant lead times, or otherwise be more complex for a bank to make.

The agencies also determined that the Bank Nationwide Community Development Investment Metric as compared to the Nationwide Community Development Investment Benchmark may only contribute positively to a bank's Community Development Financing Test

conclusion for the institution.¹²⁵¹ The agencies considered that there may be circumstances in which banks are not competitive for, or have limited opportunities to make, community development investments in particular geographic areas; however, provided that the agencies determine that banks are helping to meet community development needs overall based on the application of the Community Development Financing Test (exclusive of the investment metric and benchmark comparison), banks should be able to receive the conclusion and rating that the agency determines is appropriate. Nonetheless, the agencies believe the Bank Nationwide Community Development Investment Metric will incentivize banks to meet community needs and opportunities through community development investments because it: (1) adds transparency regarding a bank's level of community development investments; and (2) provides additional information that the agencies can consider positively in assessing a bank's performance under the Community Development Financing Test that may provide a more nuanced perspective on the bank's performance.

§ __.24(e)(1) Nationwide area evaluation – component one

Under final § __.24(e)(1)—the weighted average of facility-based assessment area performance in the nationwide area—the appropriate Federal financial supervisory agency consider the weighted average of the performance scores corresponding to a bank's conclusions for the Community Development Financing Test for its facility-based assessment areas within the nationwide area, calculated pursuant to paragraph IV of final appendix B.

§ __.24(e)(2) Nationwide area evaluation – component two

Under final § __.24(e)(2)—nationwide area performance—the appropriate Federal financial supervisory agency considers a bank's community development financing performance in the nationwide area using a community development financing metric and benchmarks that consider all community development loans and investments in the nationwide area and, in the case of banks with over \$10 billion in assets, a metric and benchmark focused on community development investments in the nationwide area. Component two also includes consideration of the impact and responsiveness of the bank's community development loans and investments.

Specifically, under the final rule, component two includes a Bank Nationwide Community Development Investment Metric in § __.24(e)(2)(iii). The appropriate agency applies this metric to large banks that had assets greater than \$10 billion. The Bank Nationwide Community Development Investment Metric measures the dollar volume of the bank's community development investments that benefit or serve all or part of the nationwide area, excluding mortgage-backed securities, compared to the deposits located in the nationwide area for the bank. The agency calculates this metric pursuant to paragraph II.m of final appendix B. The formula for calculating the Bank Nationwide Community Development Investment Metric is consistent with the other metrics included in the Community Development Financing Test.

Under final § __.24(e)(2)(iv), the appropriate agency compares the Bank Nationwide Community Development Investment Metric to the Nationwide Community Development Investment Benchmark that measures the dollar volume of community development investments that benefit or serve all or part of the nationwide area, excluding mortgage-backed securities, of all large banks that had assets greater than \$10 billion compared to deposits located in the

¹²⁵¹ See final § __.24(e)(2)(iv) and final appendix B.II.p.2.ii.

nationwide area for all such banks. The agency calculates this benchmark pursuant to paragraph II.n of final appendix B. The formula for calculating the Nationwide Community Development Investment Benchmark is consistent with the other benchmarks included in the Community Development Financing Test. As noted above, final § __.24(e)(2)(iv) provides that this comparison may only contribute positively to the bank's Community Development Financing Test conclusion for the institution.

As noted above, in the final rule, paragraph II.p.2.ii of appendix B also provides that in the nationwide area, for large banks with assets greater than \$10 billion, the agency considers whether the bank's performance under the Nationwide Community Development Investment Metric, compared to the Community Development Investment Benchmark, contributes positively to the bank's Community Development Financing Test conclusion.

Lastly, the agencies are finalizing the impact and responsiveness review in final § __.24(e)(2)(v) in the nationwide area as proposed with conforming edits. As noted in the proposal and above, the nationwide area Community Development Financing Test provisions are generally consistent with the State and multistate MSA Community Development Financing Test provisions. The agencies made additional conforming revisions throughout final § __.24(e) and paragraphs II.j, II.k, II.l of final appendix B.

§ __.24(e), (f) Nationwide Area Evaluation and Community Development Financing Test Performance Conclusions and Ratings

The Agencies' Proposal

The agencies proposed that a bank's weighted average assessment area performance score would be averaged with its nationwide area score to produce an institution performance score, with weights on both components tailored to reflect the bank's business model.¹²⁵² As proposed for the calculation of the State score, the amount of weight applied to the facility-based assessment area performance and to the nationwide area performance would depend on the bank's percentage of deposits and retail loans that are within its facility-based assessment areas. Under the proposal, the agencies used weights equivalent to those proposed for calculating the combined State performance score, to tailor the weighting to the bank's business model while still allowing all banks to receive meaningful credit for activities outside their facility-based assessment areas.¹²⁵³ The agencies intended the proposed weighting approach for the nationwide area evaluation to achieve the same balance as the State weighting approach by emphasizing facility-based assessment area performance, allowing flexibility to receive consideration for activities outside of facility-based assessment areas, and tailoring the amount of weight on facility-based assessment area performance to bank business model. Banks that have a low percentage of deposits and retail loans within their facility-based assessment areas would have a stronger emphasis on their nationwide area score than on their weighted average of facility-based assessment area conclusions. Conversely, banks that have a high percentage of deposits and retail loans within their facility-based assessment areas would have approximately equal weight on their nationwide area score and on their weighted average of facility-based assessment area conclusions. The agencies proposed that they would then round the institution performance

¹²⁵² See proposed appendix B.15.

¹²⁵³ See *id.*

score to the nearest point value corresponding to a conclusion category: “Outstanding” (10 points); “High Satisfactory” (7 points); “Low Satisfactory” (6 points); “Needs to Improve” (3 points); “Substantial Noncompliance” (0 points), to develop the Institution Community Development Financing Test conclusion.

Comments Received

Other than the comments discussed above regarding the evaluation of community development loans and investments outside of banks’ facility-based assessment areas, the agencies did not receive specific comments on the calculation of the institution conclusion.

Final Rule

The agencies are finalizing the institution conclusion provisions for the Community Development Financing Test as proposed with conforming revisions. Final § __.24(e) provides that the appropriate Federal financial supervisory agency evaluates a bank’s community development financing performance in the nationwide area, pursuant to final § __.19,¹²⁵⁴ using the two components discussed above and assign a conclusion for the institution based on the weighted combination of the two components discussed above and as provided in paragraph II.p of final appendix B and the weighting of conclusions as provided in section IV of final appendix B. As noted in the proposal, the nationwide area Community Development Financing Test provisions are consistent with the State and multistate MSA Community Development Financing Test provisions and the agencies made conforming revisions throughout final § __.24(e) and paragraphs II.j, II.k, II.l of final appendix B.

Under the final rule, § __.24(f)(1) provides that the agency assigns performance conclusions for the Community Development Financing Test for the institution pursuant to final § __.28 and final appendix C. Further, final § __.24(f)(2) provides that pursuant to final § __.28 and appendix D, the agency incorporates a bank’s Community Development Financing Test conclusions into its institution ratings.

Miscellaneous Comments and Technical and Conforming Changes

Comments Received

The agencies received several comments on miscellaneous portions of the Community Development Financing Test. The agencies also discuss various conforming changes to the Community Development Financing Test below.

A commenter recommended that the agencies not only consider the dollar volume of community development transactions, but also the units or number of transactions undertaken by the bank during any given year or examination cycle. The commenter explained that counting the number of units or transactions closed by the institution in any given cycle can be compared year-to-year and cycle-to-cycle to inform the picture of a bank’s community development financing performance. Similarly, a commenter suggested that if the Community Development Financing Test is retained, the agencies should require that a reasonable number of transactions

¹²⁵⁴ The cross-references to final § __.19 are consistent with similar revisions to the State evaluation in final § __.24(c) and the multistate MSA evaluation in final § __.24(d). Unlike those paragraphs, final § __.24(e) does not cross-reference final § __.28(c) because those provisions are not applicable to the institution conclusions.

and originations be maintained and considered under the performance test to limit the moral hazard of banks pursuing the largest loans and avoiding rural America.

A commenter also suggested the following modifications to the Community Development Financing Test: (1) calculating the percentage of community development loans and investments that were committed to persistent poverty counties and counties with low levels of financing; and (2) reporting the percentage of community development loans and investments that involved collaboration and partnerships with public agencies and community-based organizations.

Final Rule

The agencies did not add to the final rule a metric measuring the percentage of community development loans and investments that were committed to persistent poverty counties and counties with low levels of financing. The agencies structured the Community Development Test to have different components that serve distinct purposes. Under the final Community Development Financing Test, the impact and responsiveness review is the mechanism for considering community development loans and investments in persistent poverty counties and other underserved geographic areas. The agencies believe that the impact and responsiveness review is the appropriate means of considering these types of loans and investments because it provides an incentive through enhanced consideration as opposed to a comparison across banks. Banks operate in different markets with different business strategies and community needs and opportunities. As such, where some banks may be positioned to engage in community development lending and investment in persistent poverty counties, other banks may not have similar opportunities. Therefore, the suggested metric likely would not provide useful information for the agencies' evaluation of performance under the Community Development Financing Test.¹²⁵⁵

The agencies similarly did not add a requirement for reporting the percentage of community development loans and investments that involved collaboration and partnerships with public agencies and community-based organizations. The agencies do not believe that this information is necessary for assessing bank performance under the Community Development Financing Test. Further, as discussed above, the agencies determined not to consider the number of transactions under the Community Development Financing Test.¹²⁵⁶

Other Technical and Conforming Changes

In addition to the changes discussed above, the agencies made several non-substantive technical and conforming changes to the final Community Development Financing Test in final § __.24 and final appendix B. The agencies' intent in making these changes, along with the other technical, clarifying, or conforming revisions discussed through this section-by-section analysis, was to be responsive to the overarching comments that the proposal was too complex and difficult to understand. First, the agencies reformatted final § __.24(a) to delineate the different components of the paragraph. The agencies also revised the terminology to be more consistent both within final § __.24 and throughout the rule. For example, the final rule uses the

¹²⁵⁵ For the agencies to determine if such a metric could usefully inform evaluation of bank performance under the Community Development Financing Test, the agencies would need to analyze data on lending and investments in these areas, which are unavailable at this time.

¹²⁵⁶ See the section-by-section analysis of § __.24(a).

phrase “benefits or serves” in all places where the proposal had used one of those terms or the combined phrase. These and similar types of changes are not intended to have a substantive effect; rather, the agencies intend for these changes to clarify the rule by eliminating unnecessary variation that could introduce ambiguity.

Second, the agencies revised the format of the Community Development Financing Test by restructuring proposed § __.24(c) to separate the State, multistate MSA, and nationwide area evaluations into distinct paragraphs in final § __.24.¹²⁵⁷ As discussed above, the agencies also streamlined the description of the metrics and benchmarks throughout final § __.24 and clarified the calculation of the metrics and benchmarks in final appendix B by describing each step in the calculation separately and adding sample formulas for clarity. The agencies made additional clarifying revisions to final appendix B, including: (1) reformatting and reorganizing the appendix to include sections with subparagraphs; and (2) adding summary paragraphs describing the inputs for the numerators and denominators of the metrics and benchmarks included in final §§ __.24 and __.26.

Third, similar to the revisions made to final appendix A to improve clarity and readability, the agencies reorganized final appendix B into four separate sections. These sections are organized by topic and the sections of the final rule to which they relate. The substantive aspects of these sections are discussed above. The sections of final appendix B are as follows:

- *Section I – Community Development Financing Tests—Calculation Components and Allocation of Community Development Loans and Community Development Investments.* This section includes the inputs for the metrics and benchmarks numerators and denominators in final §§ __.24 and __.26 and the methods for valuing and allocating community development loans and investments.
- *Section II – Community Development Financing Test in final § __.24—Calculations for Metrics, Benchmarks, and Combining Performance Scores.* This section includes all the calculations for the metrics and benchmarks in the Community Development Financing Test in final § __.24. The section also includes methodology for calculating the combined score for facility-based assessment area conclusions, the metrics and benchmarks analyses, and the impact and responsiveness reviews.
- *Section III – Community Development Financing Test for Limited Purpose Banks in final § __.26—Calculations for Metrics and Benchmarks.* This section of final appendix B relates to the Community Development Financing Test for Limited Purpose Banks and is discussed in the section-by-section analysis of final § __.26.
- *Section IV – Weighting of Conclusions.* This section applies to the development of conclusions for a bank’s performance under the Community Development Financing Test in final § __.24 and the Community Development Services Test in final § __.25. The section provides the methodology for weighting the performance scores corresponding to conclusions in each State or multistate MSA, as applicable, pursuant to final § __.28(c), and the nationwide area.

¹²⁵⁷ See final § __.24(c) (State), (d) (multistate MSA), and (e) (nationwide area).

In summary, the agencies are adopting final § __.24 and final appendix B with the revisions discussed above.

§ __.25 Community Development Services Test

Current Approach

The agencies currently evaluate a large bank's provision of community development services, along with retail banking services, as part of the service test.¹²⁵⁸ For intermediate small banks and wholesale and limited purpose banks, the agencies evaluate community development services, community development loans, and community development investments under a single community development test.¹²⁵⁹ Generally, the agencies do not evaluate community development services for small banks.¹²⁶⁰

The current service test is largely qualitative and evaluates the extent to which a bank provides community development services and the extent to which those services are innovative or responsive to community needs.¹²⁶¹ Examiners may consider measures including the number of: (1) low- and moderate-income participants; (2) organizations served; (3) sessions sponsored; and (4) bank staff hours dedicated.¹²⁶² The agencies assess innovation and responsiveness by considering whether a community development service requires special expertise and effort by the bank, the impact of a particular activity on community needs, and the benefits received by a community.¹²⁶³

Under the current rule, the agencies consider services performed by a third party on the bank's behalf under the service test if the community development services provided enable the bank to help meet the credit needs of its communities.¹²⁶⁴ Indirect community development services that enhance a bank's ability to deliver credit products or deposit services within its community and that can be quantified may be considered under the current service test if those services have not been considered already under the lending or investment test.¹²⁶⁵

The Agencies' Proposal

The agencies proposed in § __.25 to separately evaluate a large bank's performance of community development services under the Community Development Services Test. For all large banks, the agencies proposed to evaluate each facility-based assessment area based on (1) the extent to which a bank provides community development services and (2) the impact and

¹²⁵⁸ See current 12 CFR __.24(a).

¹²⁶³ See *id.*

¹²⁶⁴ Q&A § __.24(e)—1.

¹²⁶⁵ *Id.*

responsiveness of those services pursuant to proposed § __.15.¹²⁶⁶ In addition, the agencies proposed a quantitative metric (the Bank Assessment Area Community Development Service Hours Metric), described further below, for large banks with average assets of more than \$10 billion.¹²⁶⁷

Under the proposal, the facility-based assessment area conclusions would form the basis of conclusions for each State, multistate MSA, and the nationwide area.¹²⁶⁸ For each of these areas, conclusions would be based on two components: (1) a bank’s weighted average of its community development services performance in its facility-based assessment areas within a State, multistate MSA, and nationwide area; and (2) an evaluation of its community development services outside its facility-based assessment areas but within the State, multistate MSA, and nationwide area.¹²⁶⁹

Unlike the current approach,¹²⁷⁰ the proposal did not provide for community development services consideration where a third party (other than an affiliate) performs those services pursuant to an agreement in which the bank pays for those services.¹²⁷¹ The proposal also included a definition of community development services in proposed § __.25(d), which is discussed in the section-by-section analysis of § __.12.

Comments Received

The agencies received many comments on proposed § __.25. A few commenters generally supported the proposed Community Development Services Test. However, many commenters believed the proposed test would facilitate misplaced examiner discretion and urged the agencies to develop guidelines to ensure consistency. Several commenters stated that the proposed Community Development Services Test is insufficiently robust, with at least one of these commenters asserting the scope of activities is too narrow. In addition, a few commenters expressed concern that the test was inappropriately focused on the number of volunteer hours and not the type or quality of the volunteer activities, and advocated for a qualitative consideration of community development services.

Some commenters suggested that if the agencies do not establish a consolidated community development test (*i.e.*, one performance test that considers community development financing and community development services),¹²⁷² the agencies should strengthen the Community Development Services Test by making the test more closely resemble the “responsiveness”

¹²⁶⁶ See proposed § __.25(b).

¹²⁶⁷ See *id.*

¹²⁶⁸ See proposed § __.25(c).

¹²⁶⁹ See proposed § __.25(c) and proposed appendix B.16.

¹²⁷⁰ See Q&A § __.24(e)—1.

¹²⁷¹ See proposed § __.21(c) (outlining when community development services performed by an affiliate may be considered).

¹²⁷² See the section-by-section analysis of final § __.21(a) for discussion on creating a single consolidated community development performance test that evaluates community development loans, investments, and services.

consideration proposed in the Retail Services and Products Test. At least one commenter reasoned that the proposed Community Development Services Test has a disproportionately high weight for a limited number of eligible or impactful activities.

Final Rule

The agencies are adopting the Community Development Services Test with substantive, technical, clarifying, and conforming edits discussed below. In addition, the agencies made revisions to the proposed definition of “community development services” and moved the definition to final § __.12, which is discussed in the section-by-section analysis of § __.12.

As adopted, the Community Development Services Test remains largely qualitative and does not include the proposed Bank Assessment Area Community Development Service Hours Metric. The performance test also maintains the proposed consideration of the impact and responsiveness of a bank’s community development services. The agencies believe the final rule provides greater consistency compared to the current rule and is responsive to commenter concerns about the potential for inconsistent application of the tests. For example, final § __.25(b) and (c) formalize agency considerations in determining the extent to which a bank provides community development services (*e.g.*, the total hours of community development services performed by the bank; the capacities in which bank employees or board members served) and creates a standard set of data points to facilitate the review in final § __.42(a)(6). In contrast to the current rule, the agencies added clarity by outlining types of community development services deemed impactful and responsive in final § __.15.¹²⁷³

Further, the agencies believe, based on supervisory experience, that a qualitative evaluation of community development services is appropriate and consistent with how the agencies currently evaluate community development services. Community development services do not lend themselves easily to a metrics-based approach because, as described further below, the evaluation includes consideration of the needs and opportunities available in a particular area, as well as a bank’s resources and business model. To limit potentially misplaced discretion and rating inflation, the agencies intend to provide guidance and training to examiners on the Community Development Services Test, such as how to apply the impact and responsiveness review, and when to apply the upward adjustment in final § __.25(c)(2). In response to commenter feedback regarding responsiveness, the final rule requires community development services evaluated under the Community Development Services Test to support community development, as described in final § __.13, and to be related to the provision of financial services.¹²⁷⁴

The agencies did not receive comments on the proposal’s exclusion of CRA consideration for community development services performed by a non-affiliate third party. The agencies believe paying such a party to perform service hours does not qualify as “the performance of volunteer services by a bank’s or affiliate’s board members or employees.” However, this sort of

¹²⁷³ See the section-by-section analysis of final § __.15 for additional discussion specific to the impact and responsiveness consideration.

¹²⁷⁴ See the section-by-section analysis of § __.12 for discussion of the definition of community development services.

activity may qualify as a community development investment as a “monetary or in-kind donation.”¹²⁷⁵ Thus, the final rule maintains this exclusion.¹²⁷⁶

§ __.25(a) Community Development Services Test

The Agencies’ Proposal

The agencies proposed in § __.25(a) to evaluate a bank’s record of helping to meet the community development services needs of the bank’s facility-based assessment areas, States, multistate MSA, and nationwide area. The agencies defined community development services in proposed § __.25(d) and explained that the agencies would consider publicly available information and information provided by the bank, government, or community sources that demonstrates that the activity includes serving individuals or census tracts located within the facility-based assessment area, State, multistate MSA, or nationwide area, as applicable.

Comments Received and Final Rule

The agencies received one comment specific to this proposed paragraph. This commenter suggested that the scope of community development services in proposed § __.25(a) should specifically include that “[f]or military banks and banks serving military and veteran communities, these community development services may occur on or near military installations and worldwide.” The agencies do not believe these proposed edits are warranted. As discussed in the section-by-section analysis of § __.16(d), military banks whose customers are not located within a defined geographic area may delineate a single facility-based assessment area consisting of the entire United States and its territories. For banks that elect this delineation pursuant to final § __.16(d) and are also subject to the Community Development Services Test, the agencies will evaluate community development services in its facility-based assessment area, which would include military installations within the United States and its territories. The agencies do not include military installations worldwide, consistent with the other parts of the final rule where the agencies only consider activities within the United States and its territories.

The agencies are adopting proposed § __.25(a) with conforming, clarifying, and technical edits. Specifically, the agencies conformed the language in each introductory paragraph across the performance tests so that the language mirrors the statute by replacing the proposed references to the bank’s facility-based assessment areas, States, multistate MSAs, and the nationwide area with “the entire community.”¹²⁷⁷ In addition, the agencies eliminated the reference to where to find the definition of community development services within proposed § __.25 because all definitions are now in final § __.12.

Similar to the proposed approach in § __.25(a), the final rule, renumbered as § __.25(a)(2), provides that the agencies consider information provided by the bank and may consider publicly available information and information provided by government or community sources that

¹²⁷⁵ See the section-by-section analysis of § __.12 for discussion on whether community development services performed by a third party may qualify as a “monetary or in-kind donation” within the definition of “community development investment.”

¹²⁷⁶ See the section-by-section analysis of § __.21(b) for discussion on treatment of services performed by affiliates.

¹²⁷⁷ See final § __.25(a)(1).

demonstrates that a community development service benefits or serves a facility-based assessment area, State, multistate MSA, or the nationwide area. The agencies made clarifying edits to the proposed provision to specify that while the agencies will consider information provided by the bank to determine whether a particular community development service benefits or serves a particular area, the agencies may, at their option, consider publicly available information or information from government or community sources.

§ __.25(b) Facility-Based Assessment Area Evaluation

The Agencies' Proposal

The agencies proposed in § __.25(b)(1) to review a bank's provision of community development services by considering one or more of the following types of information: (1) the total number of community development services hours performed by the bank; (2) the number and type of community development services activities offered; (3) for nonmetropolitan areas, the number of activities related to the provision of financial services; (4) the number and proportion of community development services hours completed by, respectively, executives and other employees of the bank; (5) the extent to which community development services are used, as demonstrated by information such as the number of low- or moderate-income participants, organizations served, and sessions sponsored; or (6) other evidence that the bank's community development services benefit low- or moderate-income individuals or are otherwise responsive to community development needs.

For large banks with average assets greater than \$10 billion, the agencies proposed in § __.25(b)(2) a quantitative metric--the Bank Assessment Area Community Development Service Hours Metric--to measure the average number of community development service hours per full-time equivalent employee. The agencies proposed calculating the metric by dividing a bank's aggregate hours of community development services activity during the evaluation period in a facility-based assessment area by the number of full-time equivalent employees in a facility-based assessment area. The proposal did not include a peer benchmark in which to compare the Bank Assessment Area Community Development Service Hours Metric. However, the agencies stated in the proposed rule that the collection and analysis of community development service hours data under the proposed rule might allow for future development of peer benchmarks.

The agencies also proposed to evaluate the impact and responsiveness of the bank's community development services in a facility-based assessment area pursuant to proposed § __.15.

Comments Received

Commenters offered varying feedback on the proposed evaluation of community development services in facility-based assessment areas, including, but not limited to, the Bank Assessment Area Community Development Service Hours Metric and whether the benefit associated with using the metric exceeded the burden of collecting and reporting this data point. A few commenters supported the proposed metric, noting, generally, that the metric's value would exceed any burden to the bank, or that the metric imposed limited burden to the bank. A commenter highlighted the metric's ability to provide meaningful comparison at the local level but suggested further refinement to the calculation so that the metric would consider the number of months in the evaluation period. At least a few commenters supporting the metric said that reporting the data would not be burdensome to banks because they already collect these data.

Another commenter stressed that the collection of community development services data is fundamental to evaluating performance under the performance test.

Other commenters opposed the Bank Assessment Area Community Development Service Hours Metric. These commenters generally believed the metric's benefit did not outweigh the burden of reporting the additional data. A commenter questioned the utility of the metric where the proposed community development services evaluation would include other non-quantitative bases and examiner discretion. Further, the commenter found the metric duplicative of other parts of the proposed Community Development Services Test, such as the consideration of the number of hours for all community development services performed by a bank as well as the proportion of community development service hours completed by bank executives and other bank employees. Another commenter believed the proposed test without the metric would be sufficient.

In response to the agencies' question in the proposed rule on whether to apply the Bank Assessment Area Community Development Service Hours Metric to all large banks, including those with average assets of \$10 billion or less, a few commenters endorsed requiring all large banks to report this metric, with a couple of these commenters also endorsing the application of the metric to intermediate small banks.¹²⁷⁸ One commenter opposed requiring banks with assets \$10 billion or less to report the Bank Assessment Area Community Development Service Hours Metric, though it expressed general support for recording volunteer hours.

A few commenters raised concerns about operationalizing the metric, such as challenges related to employees self-reporting and tracking hours, recording the location of a community development services provided virtually, and defining a full-time equivalent employee. A few commenters supported the inclusion of executives in the definition of full-time equivalent employee. Other commenters suggested that the agencies should not discount service hours for part-time employees, or that the metric should exclude "non-exempt staff" from the definition of full-time equivalent employment if the final rule requires community development services be related to the provision of financial services. A couple of commenters cautioned that the increasing prevalence of remote working arrangements and back-office locations would make allocating full-time equivalent bank employees to a particular geographic area challenging and could lead to anomalous results.

A few commenters responded specifically on whether the agencies should develop benchmarks and thresholds to compare the Bank Assessment Area Community Development Service Hours Metric once such data are available. In general, some commenters opposed the development of such benchmarks and thresholds because they would be too burdensome, whereas other commenters tended to support developing benchmarks to facilitate comparison across banks. One commenter believed the metric's comparison to a peer benchmark should greatly influence the conclusions.

The agencies also sought feedback on whether to include an additional executive-only metric in which the agencies would assess community development service hours per executive for large banks with assets of over \$10 billion. The agencies received only a few comments about

¹²⁷⁸ The proposed rule did not include the term "intermediate small bank."

this metric, each of which noted that a separate metric for executive service hours would not add any rigor to the performance test.

A couple of commenters suggested prescribed weighting within the facility-based assessment area to promote consistency and rigor. For example, a commenter suggested assigning a 50 percent weight for the Bank Assessment Area Community Development Service Hours Metric and a 50 percent weight for the qualitative factors in proposed § __.25(b)(1). Another commenter suggested that hours spent volunteering as a board member or in other leadership roles for a community development organization should be weighted more heavily than other community development services because the former requires a greater commitment.

Final Rule

Final § __.25(b) adopts the proposed qualitative approach to evaluate a large bank's community development services in a facility-based assessment area with substantive, clarifying, and technical changes. As mentioned previously, the final rule does not include the Bank Assessment Area Community Development Service Hours Metric in the Community Development Services Test. Upon consideration of the comments, the agencies believe the metric would have increased the rule's complexity and burden with limited benefit to assessing community development services, particularly since the agencies do not have sufficient data to establish a peer benchmark for comparison with the Bank Assessment Area Community Development Service Hours Metric. The agencies recognize the challenges identified by commenters in defining a full-time equivalent employee and recognize that a bank's full-time equivalent employees may not be an appropriate measure or proxy for the expectation of the amount of community development services a bank should provide. A bank's decision on the number and types of employees (*e.g.*, full-time, part-time, contract, seasonal) could be driven by many factors other than community development services capacity. Relatedly, the agencies asked whether the final rule should include a definition of "full-time employee." This definition is no longer necessary because the final rule does not include the proposed Bank Assessment Area Community Development Service Hours Metric, which used this term.

The final rule does not include an executive-only metric in response to commenter feedback that the metric would not add rigor to the test. Correspondingly, the agencies removed a related consideration—the number and proportion of community development services hours performed by executives and other bank employees—from the list of considerations when evaluating a bank's provision of community development services in a facility-based assessment area.¹²⁷⁹

The agencies streamlined and reorganized the list of considerations in proposed § __.25(b)(1). The final rule does not include the proposed consideration—the number of activities related to the provision of financial services in nonmetropolitan areas—because this concept is inherent in the definition of community development services in final § __.12.¹²⁸⁰ Further, the agencies condensed the proposed considerations in § __.25(b)(1)(v) and (b)(1)(vi) into final § __.25(b)(4). Proposed § __.25(b)(1)(v)—the extent to which community

¹²⁷⁹ See proposed § __.25(b)(1)(iv). Final § __.12 requires that all community development services be related to the provision of financial services. See the section-by-section analysis of § __.12 for discussion of the definition of community development services.

¹²⁸⁰ See proposed § __.25(b)(1)(iii).

development services are used, as demonstrated by information such as the number of low- and moderate-income participants, organizations served, and sessions sponsored, as applicable—provided examples of the catch-all provision in proposed § __.25(b)(1)(vi). Thus, final § __.25(b)(4) incorporates both concepts without an intended change in meaning. Final § __.25(b)(4) provides that the review of community development services in a facility-based assessment area may include “[a]ny other evidence demonstrating that the bank’s community development services are responsive to community development needs, such as the number of low- and moderate-income individuals that are participants, or number of organizations served.”

The agencies made other conforming edits to track the data collection and maintenance requirements in final § __.42(a)(6), which requires the collection and maintenance of community development services data regarding the capacity in which a bank employee or board member served.¹²⁸¹ The final rule explicitly identifies this consideration in § __.25(b)(2). The aligning of this provision to the data collection and maintenance requirements in the final rule results in replacing “executive” with “board member.” Bank executives remain included in the term “employee,” and the agencies clarified that consideration of the capacity served also applies to board members. In addition, proposed § __.25(b)(1)(ii) would have included the number and type of community development services offered. Consistent with the terminology in data collection and maintenance in the final rule,¹²⁸² the agencies clarified in final § __.25(b)(1) that the agencies may consider, as appropriate, the number of community development services attributable to each type of community development described in § __.13(b) through (l). Finally, the agencies changed the outline levels to clarify that the impact and responsiveness review in final § __.15 may be among the considerations in assigning a conclusion for a facility-based assessment area.¹²⁸³

The final rule does not prescribe a specific weighting for the Community Development Services Test evaluation of each facility-based assessment area. Without the proposed Bank Assessment Area Community Development Service Hours Metric, the commenter suggestions for weighting the metric compared to other considerations in the facility-based assessment area are no longer necessary. The agencies considered establishing weighting within the performance test or otherwise reducing examiner discretion but determined that examiner discretion is appropriate. For example, it is difficult to conclude, as suggested by a commenter, that hours volunteering as a board member for an organization that supports community development is always more impactful and responsive than hours volunteering in a non-leadership capacity. Instead, the agencies believe that they should base the impact and responsiveness of a community development service on the needs of a particular community. Examiner discretion in this test is also consistent with current practice and consistent with the final Community Development Financing Test and the Retail Services and Product Test.¹²⁸⁴

§ __.25(c) *State, Multistate MSA, or Nationwide Area Evaluation*

¹²⁸¹ Final § __.42(a)(6)(i)(E).

¹²⁸² See final § __.42(a)(6).

¹²⁸³ See final § .25(b)(5).

¹²⁸⁴ See also discussion above under Community Development Services Test – In General.

§ __.25(d) Community Development Services Test Performance Conclusions and Ratings
The Agencies' Proposal

The proposal provided that the facility-based assessment area conclusions would form the basis of conclusions at the State, multistate MSA, and nationwide area.¹²⁸⁵ Pursuant to proposed § __.25(c) and paragraph 16 of proposed appendix B, for each of these areas, the agencies would develop conclusions based on two components: (1) a bank's weighted average of its community development services performance conclusions in its facility-based assessment areas within a State, multistate MSA, or the nationwide area, as applicable under § __.18; and (2) an evaluation of a bank's community development services outside its facility-based assessment areas but within the State, multistate MSA, and nationwide area. The agencies recognized that the current rule includes beneficial flexibility that can also result in uncertainty about which community development services will qualify for CRA consideration. For example, under the current approach, if examiners determine that a bank conducted a community development service in a broader statewide or regional area that does not benefit an assessment area and that the bank has not been responsive to the needs of its assessment areas, the bank will not receive consideration for that activity.¹²⁸⁶ This aspect of the current approach caused uncertainty for banks because they would not know if examiners had determined they were responsive to the needs of their assessment areas until the point of their CRA examination, after the bank had engaged in the activities considered in the examination. With the proposed rule, the agencies intended to achieve a balance between prioritizing facility-based assessment area performance, and providing certainty that the agencies would consider community development services in other areas.

Under proposed § __.25(c), the agencies would base weighting under the first component on the average of two numbers: the bank's share of retail loans within the facility-based assessment area compared to the applicable geographic area (State, multistate MSA, or nationwide area); and a bank's share of deposits within the facility-based assessment area compared to the applicable geographic area.¹²⁸⁷ Paragraph 16 of proposed appendix B provided the calculations for weighting conclusions in a State, for a multistate MSA, and for the institution, respectively. In a State, the agencies would weight a bank's performance test conclusion in each facility-based assessment area using the simple average of the percentages of, respectively, statewide bank deposits associated with the facility-based assessment area and statewide retail loans that the bank originated or purchased in the facility-based assessment area. The statewide percentages of deposits and retail loans associated with each facility-based assessment area would be based upon, respectively, the dollar volumes of deposits and loans in each facility-based assessment area compared with, respectively, the statewide dollar totals of deposits and loans within facility-based assessment areas of that State. Put another way, the proposal provided that the agencies would weight conclusions at the State-level by averaging: (1) the dollar volume of deposits in a facility-based assessment area within the State divided by the dollar volume of deposits in the bank in that State; and (2) a bank's dollar volume of retail loans in a facility-based assessment

¹²⁸⁵ See proposed § __.25(c).

¹²⁸⁶ See Q&A § __.12(h)—(6).

¹²⁸⁷ See also proposed appendix B.16.

area within the State divided by the dollar volume of retail loans in that State. The agencies would use the same approach for weighting conclusions for the multistate MSA and institution.

The second component in proposed § __.25(c)(2) provided that any upward adjustment of the performance score derived from the weighted average of the facility-based assessment area performance (*i.e.*, component one) would be based on an evaluation of community development services performed outside the facility-based assessment area. That evaluation could include: the number, hours, and type of community development service activities; the proportion of activities related to the provision of financial services, as described in proposed § __.25(d)(3); and the impact and responsiveness of these activities.¹²⁸⁸

Finally, proposed § __.25(e)(1) provided that the agencies assign community development services conclusions at the facility-based assessment area, the State, multistate MSA, and institution level, as provided in proposed § __.28 and appendix C. Proposed § __.25(e)(2) provided that the agencies incorporate those conclusions into its State, multistate MSA, and institution ratings.

Comments Received

A commenter expressed concern with the lack of guidelines for potential upward adjustments based on community development services performed outside of facility-based assessment areas. This commenter recommended establishing a minimal level of service that must be performed outside a facility-based assessment area to be eligible for an upward adjustment, and recommended prohibiting banks with a “Needs to Improve” or “Substantial Noncompliance” in its facility-based assessment areas from receiving this upward adjustment. In addition, this commenter said the performance of community development services outside of facility-based assessment areas should clearly exceed the performance within facility-based assessment areas as measured by hours per employee or impact.

Final Rule

The agencies adopt final § __.25(c) as proposed with technical and conforming edits. To ensure consistency with final § __.25(b), the agencies replaced the considerations list in proposed § __.25(c)(2) with a reference to the similar factors in final § __.25(b)(1) through (b)(5). This change adds a catch-all provision (described further in the section-by-section analysis of § __.25(b)) to ensure the agencies may consider other evidence demonstrating that the bank’s community development services outside facility-based assessment areas are responsive to community development needs. In addition, the replacement of the consideration list in proposed § __.25(c)(2) with final § __.25(c)(2) removes consideration of the proportion of community development services related to the provision of financial services¹²⁸⁹ because the final rule requires all community development services to be related to the provision of financial services (*see* the section-by-section analysis of § __.12).

Consistent with the proposal, the final rule permits an upward adjustment based on the consideration of community development services outside of a bank’s facility-based assessment area; however, banks subject to final § __.25 are not required to provide such services outside

¹²⁸⁸ *See* proposed § __.25(c)(2).

¹²⁸⁹ *Compare* proposed § __.25(c)(2)(ii), *with* final § __.25(c)(2).

their facility-based assessment areas.¹²⁹⁰ Consideration of community development services in areas outside of the facility-based assessment area recognizes impactful community development opportunities that serve areas with high unmet community development needs, including those areas in which few banks have a facility-based assessment area or a concentration of loans subject to final § __.22.

The final rule does not impose additional limitations or restrictions on when the upward adjustment may be applied, as suggested by a few commenters. In general, banks perform community development services in areas where employees or board members are located (*i.e.*, main office and branches), which is also generally where a facility-based assessment area must be delineated. Thus, the agencies do not believe additional limitations or restrictions are necessary.

The agencies also made conforming edits to clarify that the agencies evaluate performance in the nationwide area but conclude at the institution level. The final rule removes two errant references to proposed § __.18, the consideration of community development services outside of a bank's facility-based assessment areas, in proposed § __.25(c) and (c)(1). The reference to this consideration, renumbered as final § __.19, should be limited to component two in final § __.25(c)(2). The weighting of the conclusions remains substantively comparable to the proposed weighting in paragraph 16 of proposed appendix B but includes clarifying edits in final appendix B. See the section-by-section analysis of § __.24(c) and (d) for additional discussion on the Weighting of Conclusions in section IV of final appendix B, which also applies to the final Community Development Financing Test.

The agencies adopt the proposed conclusions and ratings provision as final § __.25(d) with technical and conforming edits. Final § __.25(d)(1) provides that the agencies will assign conclusions under this test in each facility-based assessment area, State, or multistate MSA, and institution, pursuant to final § __.28 and paragraph e of final appendix C. In addition, final § __.25(d)(1) includes conforming edits to clarify that the agencies may consider performance context as provided in final § __.21(d) when assigning conclusions.¹²⁹¹ Final § __.25(d)(2) provides that the agencies incorporate conclusions under this performance test into the State or multistate MSA ratings, as applicable, and its institution rating pursuant to final § __.28 and appendix D.

§ __.26 Limited Purpose Banks

Current Approach

Under current § __.25, the agencies evaluate a wholesale or limited purpose bank's community development loans, community development investments, and community development services under one community development test.¹²⁹² The agencies give consideration to the number and dollar amount of community development loans, community development investments, and community development services,¹²⁹³ both inside a bank's

¹²⁹⁰ See final § __.25(c)(2).

¹²⁹¹ See the section-by-section analysis of § __.21(d) for additional discussion.

¹²⁹² See current 12 CFR __.25(a).

¹²⁹³ See current 12 CFR __.25(c)(1).

assessment areas or in a broader statewide or regional area that includes the bank’s assessment areas, and outside of its assessment areas if the needs of the bank’s assessment areas are adequately addressed.¹²⁹⁴ The qualitative factors include the innovativeness or complexity of these activities, the bank’s responsiveness to credit and community development needs, and the extent to which investments are not routinely provided by private investors.¹²⁹⁵ In addition, the evaluation under the current test considers performance context, including, but not limited to, a bank’s capacity and constraints and the performance of similarly situated lenders.¹²⁹⁶ A wholesale or limited purpose bank may provide examiners with any information it deems relevant to the evaluation of its community development lending, investment, and service opportunities in its assessment areas.¹²⁹⁷

The Agencies’ Proposal

The agencies proposed in § __.26 to maintain a wholesale or limited purpose bank designation and that these banks would be evaluated under the proposed Community Development Financing Test for Wholesale or Limited Purpose Banks.¹²⁹⁸

Final Rule

As discussed in the section-by-section analysis of § __.12, the final rule eliminates the proposed definition of “wholesale bank” and revises the proposed definition of “limited purpose bank” to encompass banks generally considered either “limited purpose banks” or “wholesale banks” under the current or proposed regulations. The final rule replaces references to wholesale banks in the proposal with limited purpose banks. The final rule maintains the option for a bank to request designation as a limited purpose bank with evaluation pursuant to the Community Development Financing Test for Limited Purpose Banks in final § __.26. This test employs qualitative and quantitative factors similar to current examination procedures. In addition, the institution-level conclusion will consider a community development financing metric and certain benchmarks, as well as a community development investment metric and benchmark.

The agencies received several comments on various aspects of proposed § __.26 from a diverse group of commenters.¹²⁹⁹ These comments, and the final rule, are discussed in detail below.¹³⁰⁰

§ __.26(a) Bank Request for Designation as a Limited Purpose Bank

Current Approach

¹²⁹⁴ See current 12 CFR __.25(e)(1), (2).

¹²⁹⁵ See current 12 CFR __.25(c)(2), (3).

¹²⁹⁶ See current 12 CFR __.21(b).

¹²⁹⁷ See Q&A § __.21(b)(2)—1.

¹²⁹⁸ See proposed § __.26.

¹²⁹⁹ A few commenters supported maintaining existing guidance for wholesale and limited purpose banks from the Interagency Questions and Answers. The agencies plan to review the applicability of existing Interagency Questions and Answers during the transition period.

¹³⁰⁰ See *supra* note 145.

To receive a designation as a wholesale or limited purpose bank under the current rule, current § __.25(b) provides that a bank shall file a request in writing to the appropriate Federal financial supervisory agency at least three months prior to its desired designation. If approved, the designation remains in effect until the bank requests revocation of the designation or until one year after the appropriate agency notifies the bank that its designation has been revoked.¹³⁰¹

The Agencies' Proposal

The agencies proposed in § __.26(a) to maintain the current designation provision with technical edits. The proposal maintained the option to file a written request to be designated as a wholesale or limited purpose bank.¹³⁰² An approved designation would remain in effect until the bank requests revocation or until one year after the bank was notified that the appropriate Federal financial supervisory agency has revoked the designation on its own initiative.¹³⁰³

Comments Received and Final Rule

A few commenters asked that the agencies clarify that those banks designated as wholesale or limited purpose banks under the current rule do not need to reapply to receive such a designation under the new framework. The agencies confirm that banks currently designated as wholesale or limited purpose banks do not need to reapply under the final rule. As is the case under the current rule, the appropriate Federal financial supervisory agency may notify a bank that the designation has been revoked pursuant to final § __.26(a) if the agency determines the bank no longer qualifies for the limited purpose bank designation, or the bank may request revocation.¹³⁰⁴ The agencies did not receive other comments specific to proposed § __.26(a), and therefore adopt § __.26(a) as proposed with technical and conforming edits, including a nomenclature change from “wholesale or limited purpose banks” to “limited purpose banks.”¹³⁰⁵

§ __.26(b) Performance Evaluation

Current Approach

The current community development test for wholesale or limited purpose banks in § __.25 evaluates community development loans, community development investments, and community development services under one performance test. Wholesale or limited purpose banks have flexibility to satisfy their CRA obligation by engaging in any combination of community development lending, investments, or services, but are not required to engage in each activity.¹³⁰⁶

¹³⁰¹ See current 12 CFR __.25(b).

¹³⁰² See proposed § __.26(a).

¹³⁰³ See *id.*

¹³⁰⁴ Banks designated as wholesale banks under the current regulation will automatically be considered limited purpose banks under the final rule unless the appropriate Federal financial supervisory agency notifies the bank that the designation has been revoked pursuant to final § __.26(a) or the bank requests revocation.

¹³⁰⁵ See the section-by-section analysis of § __.12 for additional discussion on the nomenclature change.

¹³⁰⁶ See Q&A § __.25(f)—1.

Consequently, in theory, a wholesale or limited purpose bank could receive a “Satisfactory” rating by performing only community development services. In practice, under the current rule, the agencies’ supervisory experience suggests it would be unusual for a bank to receive a “Satisfactory” rating based solely or even primarily on community development services. Based on the agencies’ supervisory experience, more commonly, community development loans and community development investments are the predominant activities that determine community development ratings for wholesale or limited purpose banks.

The Agencies’ Proposal

The agencies proposed to evaluate a wholesale or limited purpose bank’s community development loans and community development investments under the Community Development Financing Test for Wholesale or Limited Purpose Banks in proposed § __.26.¹³⁰⁷ Wholesale or limited purpose banks could request additional consideration for community development services that would qualify under the proposed Community Development Services Test, which the appropriate Federal financial supervisory agency could consider to adjust the bank’s institution rating from “Satisfactory” to “Outstanding.”¹³⁰⁸ Thus, under the proposal, wholesale or limited purpose banks would not be able to rely solely on community development services to obtain a “Satisfactory” rating.

Comments Received

A few commenters raised concerns related to the elimination of the ability of wholesale banks to rely on community development services to achieve a baseline “Satisfactory” rating. These commenters opined that this change may require wholesale banks to make significant changes to their business models or seek a costly strategic plan. One of these commenters stated that the agencies neglected to consider the safety and soundness implications of eliminating the ability of wholesale banks to rely on community development services to achieve a “Satisfactory” rating. Further, this commenter argued that the agencies failed to provide a reasoned analysis for the policy change and failed to weigh wholesale banks’ reliance interests on the ability to use community development services to achieve a “Satisfactory” rating compared to the agencies’ policy objectives. In particular, this commenter questioned why wholesale banks would not be afforded the same ability as large banks to rely on community development services to achieve a baseline “Satisfactory” rating.

Some commenters responded directly to the question in the proposed rule on whether wholesale or limited purpose banks should have the option to submit services to be reviewed on a qualitative basis at the institution level without having to opt into the Community Development Services Test, as proposed, or whether wholesale or limited purpose banks that wish to receive consideration for community development services should be required to opt into the proposed Community Development Services Test. A few commenters supported consideration of community development services without having to opt into the Community Development Services Test. One of these commenters supported the consideration of community development services for wholesale or limited purpose banks regardless of a bank’s institution rating under the modified Community Development Financing Test. Another of these commenters suggested the

¹³⁰⁷ See proposed § __.26(c).

¹³⁰⁸ See proposed § __.26(b)(2).

agencies should clarify that the performance of community development services is not required for wholesale or limited purpose banks to receive an overall rating of “Outstanding” if that bank otherwise demonstrates outstanding community development financing performance.

In contrast, a few commenters disagreed with the proposed approach to consider community development services if a wholesale or limited purpose bank requests consideration. These commenters believed that the agencies should evaluate community development services for all banks and eliminate the provision that allows requesting additional consideration. One of these commenters warned that the proposal would increase subjectivity and could reduce nationwide community development services.

Final Rule

The agencies adopt in final § __.26(b)(2)(i) the proposed treatment of community development services for limited purpose banks. Under this approach, limited purpose banks have the option to submit community development services for consideration; however, these banks will not be able to rely solely or primarily on community development services to obtain a “Satisfactory” rating under the final Community Development Financing Test for Limited Purpose Banks. The agencies acknowledge commenter concerns that final § __.26 may restrict some flexibility available to limited purpose banks under the current rule; however, the agencies’ supervisory experience indicates it would be unusual for a wholesale or limited purpose bank under the current rule to achieve a “Satisfactory” rating by relying solely or primarily on community development services, as opposed to community development lending or investments. Moreover, the treatment of community development services in final § __.26(b)(2)(i) achieves the agencies’ longstanding goal of emphasizing community development loans and investments. Understanding that limited purpose banks are not subject to the Retail Lending Test, the agencies place greater emphasis on community development loans and investments to ensure equity across business models. The agencies do not believe that there is a safety and soundness implication related to the inability of a limited purpose bank to rely on community development services to achieve a “Satisfactory” rating. Consistent with the proposal, the final rule in § __.21(f) does not require a bank to originate or purchase loans or investments or to provide services that are inconsistent with safe and sound banking practices.

The agencies acknowledge the final rule’s different treatment of community development services between limited purpose banks and large banks. The final rule provides that the agencies evaluate a large bank’s community development services regardless of performance under the Community Development Financing Test in final § __.24, whereas the agencies consider a limited purpose bank’s community development services if that bank requests consideration and only where the institution rating would otherwise be “Satisfactory.” The agencies do not believe limited purpose banks are disadvantaged by this distinction. The consideration of community development services for limited purpose banks can only positively affect the institution rating, but in order to prioritize community development loans and investments, the agencies limited the application of this consideration to banks that would otherwise have a “Satisfactory” institution rating. In contrast, the rule does not apply an expectation that limited purpose banks conduct community development services. For large banks, which generally have business models better structured to perform community development services due to larger branch networks and more employees, there is an expectation that they perform community development services, and therefore the evaluation can negatively affect a large bank’s institution rating.

The agencies considered the comments related to whether a bank should be required to opt into the Community Development Services Test to receive consideration for community development services. Under such a scenario, the agencies would evaluate a limited purpose bank pursuant to the Community Development Services Test, which could negatively affect the bank’s conclusions and ratings. The agencies decline to require limited purpose banks seeking consideration for community development services to opt into the Community Development Services Test because the agencies want to encourage performance of community development services without creating the expectation that these banks must perform community development services. Because limited purpose banks generally have a smaller branch network and limited branch staff to perform community development services compared to large banks, the agencies adopt the proposed approach for community development services—a limited purpose bank need not opt into the Community Development Services Test, but it may request, at its option, additional consideration for community development services if it would otherwise receive a “Satisfactory” rating at the institution level.¹³⁰⁹ The agencies limit the consideration to banks that would otherwise receive a “Satisfactory” rating to prioritize community development loans and investments.

The agencies confirm that submitting community development services for consideration is not necessary for a limited purpose bank to receive an “Outstanding” rating where that bank’s community development financing performance under final § __.26 by itself is otherwise “Outstanding.”

In addition, the agencies clarified that a limited purpose bank may receive additional consideration at the institution level for providing low-cost education loans to low-income borrowers, regardless of the limited purpose’s bank’s overall institution rating.¹³¹⁰ The agencies made this revision to ensure consistency with the CRA statute, which provides that for all banks, regardless of bank type, the agencies shall consider, as a factor, such low-cost education loans.¹³¹¹

§ __.26(c) Community Development Financing Test for Limited Purpose Banks – In General

The Agencies’ Proposal

Proposed § __.26(c) provided for the evaluation of wholesale and limited purpose banks based on the banks’ record of helping to meet the community development financing needs in facility-based assessment areas, States, multistate MSAs, and the nationwide area through the banks’ provision of community development loans and community development investments. Further, the agencies would consider information provided by the bank and could consider, as needed, publicly available information and information provided by government or community sources. The agencies proposed that community development loans and investments should be allocated pursuant to section 14 of proposed appendix B, which would be consistent with the allocation provisions under the Community Development Financing Test in proposed § __.24.

Comments Received and Final Rule

¹³⁰⁹ See final § __.26(b)(2)(i).

¹³¹⁰ See final § __.26(b)(2)(ii).

¹³¹¹ See 12 U.S.C. 2903(d).

The agencies did not receive comments specific to the proposed scope provision in § __.26(c). The agencies, therefore, adopt this provision with technical and conforming edits. Specifically, as with final §§ __.24 and __.25, the final rule removes the proposed references to the bank's facility-based assessment areas, States, and multistate MSAs in which the bank has facility-based assessment areas, as applicable, and the nationwide area, including consideration of performance context to conform the language to the statute and across the introductory paragraphs in the final performance tests. The final rule moves the proposed language on what documentation the agencies will or may consider to paragraph I.b of appendix B of the final rule, where the allocation discussion is more fully described. Final § __.26(c)(2) updates the cross-reference to the allocation method in paragraph I.b of appendix B, which is the same allocation method as the Community Development Financing Test in final § __.24. See the section-by-section analysis of § __.24(a) for additional discussion of comments and the final rule related to the allocation method. Finally, the final rule updates headings and terminology for clarity and consistency.

§ __.26(d) Facility-Based Assessment Area Evaluation

§ __.26(e) State or Multistate MSA Evaluation

The Agencies' Proposal

For each facility-based assessment area, the agencies proposed to evaluate a wholesale or limited purpose bank based on the total dollar value of a bank's community development loans and community development investments (*i.e.*, community development financing activity) that serve the facility-based assessment area for each year and a review of the impact of those activities in the facility-based assessment area under proposed § __.15.¹³¹² As discussed in more detail below, the facility-based assessment area conclusions would form the basis of the conclusion at the State, multistate MSA, and nationwide area level, along with review of the bank's community development financing activity that serves the State or multistate MSA during the evaluation period.¹³¹³

For each State or multistate MSA conclusion, the agencies proposed to assign a conclusion based on a combination of two components: (1) a wholesale or limited purpose bank's community development financing performance in its facility-based assessment areas in the State or multistate MSA area; and (2) the dollar value of community development financing performance that serves the State or multistate MSA during the evaluation period, and a review of the impact of these activities in the State or multistate MSA under § __.15.¹³¹⁴ Unlike the Community Development Financing Test in proposed § __.24, the proposed Community Development Financing Test for Wholesale or Limited Purpose Banks did not include prescribed weighting for considering these two components, and the proposed evaluation in a facility-based assessment area, State, or multistate MSA did not include a metric. The agencies proposed the Wholesale or Limited Purpose Bank Community Development Financing Metric for the nationwide area only (as opposed to the facility-based assessment area, State, or multistate MSA)

¹³¹² See proposed § __.26(d).

¹³¹³ See proposed § __.26(e)(1) and (f)(1).

¹³¹⁴ See proposed § __.26(e).

because of the difficulties associated with apportioning bank assets to specific facility-based assessment areas, States, or multistate MSAs.

The agencies sought feedback on how to increase certainty in the evaluation of a wholesale or limited purpose bank's community development financing performance for a facility-based assessment area, including whether to apply a metric and what the denominator should be.

Comments Received

In response to the agencies' request for feedback on whether to apply a metric and what the denominator should be, a few commenters supported establishing a metric for facility-based assessment areas. One of these commenters suggested the agencies use a variation of the OCC's procedure for allocating Tier 1 Capital across assessment areas. Similarly, another commenter stated that a model currently exists within CRA whereby a percentage of a bank's Tier 1 Capital that is dedicated to community development investment activity is used as a benchmark for performance. The commenter believed this approach would not be complicated. A few commenters advocated for using deposits in the denominator in response to this question.

One commenter that supported including a metric for facility-based assessment areas also supported establishing a benchmark. This commenter suggested that for banks with over \$10 billion in assets, the benchmark could be based on the share of the bank's deposits it collects from a facility-based assessment area multiplied by the bank's institution community development financing benchmark. For banks with assets of \$10 billion or less, the commenter suggested that the benchmark should be based upon the share of the U.S. population (or alternatively, the share of the U.S. low- and moderate-income population) residing in the facility-based assessment area, multiplied by the bank's community development financing benchmark.

Final Rule

The final rule adopts § __.26(d) and (e) as proposed with certain technical and conforming edits, including reorganizing text, adding paragraph headers, and clarifying the text. The agencies evaluate in each facility-based assessment area a bank's dollar volume of community development loans and investments that benefit or serve the facility-based assessment area and the impact and responsiveness review of these loans and investments.¹³¹⁵ In each State or multistate MSA, the agencies evaluate and assign a conclusion based on the facility-based assessment area conclusion and the dollar volume of the limited purpose bank's community development loans and investments that serve the State or multistate MSA and the impact and responsiveness review of these loans and investments.¹³¹⁶ Also, consistent with the proposal, the final rule does not include a metric for the evaluation of the facility-based assessment area, State, or multistate MSA because a limited purpose bank's total assets cannot be easily apportioned to those areas.

The agencies considered alternatives suggested by commenters to establish a metric with another denominator, such as capital or deposits, which would allow for the application of a metric at a level other than the nationwide area. However, the agencies determined that these alternatives were not appropriate for several reasons. First, the agencies do not believe capital

¹³¹⁵ See final § __.26(d).

¹³¹⁶ See final § __.26(e).

would be an appropriate denominator to evaluate limited purpose banks in any area.¹³¹⁷ A bank's capital levels are driven by several factors that do not relate to CRA, such as lower risk tolerance or higher risk exposure. In this way, capital would not be an accurate or consistent measure of a bank's capacity to meet its community's needs. Second, the agencies concluded that a denominator of deposits is not an appropriate or useful measure because at least some limited purpose banks accept deposits on a limited basis or not at all, as discussed in detail in the section-by-section analysis of § __.26(f) below. Without a metric for facility-based assessment areas, States, or multistate MSAs, there is limited benefit to establishing a corresponding benchmark. Thus, the agencies are not establishing a metric or benchmark to evaluate community development financing performance in an area other than the nationwide area for limited purpose banks.

§ __.26(f) Nationwide Area Evaluation

Nationwide Area Evaluation – In General

Proposed § __.26(f) provided for the evaluation of community development financing performance of a wholesale and limited purpose bank in a nationwide area based on that bank's community development financing performance in all of its facility-based assessments areas, the Wholesale or Limited Purpose Bank Community Development Financing Metric, and a review of the impact of the bank's nationwide community development activities. Section 18 of proposed appendix B provided additional detail on how the agencies would calculate the Wholesale or Limited Purpose Bank Community Development Financing Metric. The agencies did not propose a benchmark in which to compare the Wholesale or Limited Purpose Bank Community Development Financing Metric. The agencies received numerous comments on various aspects of this proposed provision, which are discussed below along with the final provision.

Limited Purpose Bank Community Development Financing Metric—Numerator

The Agencies' Proposal and Comments Received

Proposed § __.26(f) provided that the numerator of the Wholesale or Limited Purpose Bank Community Development Financing Metric measured the average total dollar value of a bank's community development loans and community development investments over the evaluation period as specified in section 18 of proposed appendix B.¹³¹⁸ A commenter requested

¹³¹⁷ The agencies acknowledge that examiners, in some cases, may have considered capital as an informal measure of a wholesale or limited purpose bank's community development financing capacity, as was asserted by a few commenters. However, such practice was neither consistently applied across agencies, nor was it consistently applied within any agency.

¹³¹⁸ See proposed appendix B.8.i.

clarification that the numerator would be measured consistent with how non-wholesale and limited purpose banks are measured, as set forth in paragraph 1 of proposed appendix B.¹³¹⁹

Final Rule

The final rule provides that the metric's numerator measures the dollar volume of a limited purpose bank's community development loans and community development investments that benefit or serve all or part of the nationwide area, and updates the cross-reference to paragraph III.a of final appendix B.¹³²⁰ As described more fully in the section-by-section analysis of § __.24(a)(3) and section I of appendix B, the final rule more clearly describes how the agencies will value different forms of community development loans and community development investments.¹³²¹ In addition, the final rule confirms the inputs to the numerator are the same for the metrics in final §§ __.24 and __.26.¹³²²

Limited Purpose Bank Community Development Financing Metric—Denominator

The Agencies' Proposal and Comments Received

The denominator of the Wholesale or Limited Purpose Bank Community Development Financing Metric in proposed § __.26(f) consisted of the bank's quarterly average total assets.¹³²³ The agencies reasoned that the unique business models of wholesale and limited purpose banks, particularly the fact that at least some wholesale and limited purpose banks accept deposits only on a limited basis or not at all, necessitate a different denominator from large banks.

A majority of those commenting on the denominator supported using total assets, rather than deposits, in the denominator. One of these commenters agreed that total assets is a better measure of the capacity of wholesale and limited purpose banks to perform community development financing activities. Another commenter stated that if assets are not used, the absolute dollar amount of community development financing activity loses meaning since wholesale and limited purpose banks will have differing amounts of assets and thus differing capacities to engage in community development financing activities. A few other commenters stated that deposits as the denominator may not work well for all wholesale and limited purpose banks, particularly those that do not collect deposits on a large scale. Another commenter identified a potential discrepancy related to the denominator of the proposed Wholesale or

¹³¹⁹ Proposed appendix B.1 provided, in relevant part, that the annual community development financing activity for purposes of proposed § __.24 included: (1) the dollar amount of all community development loans originated and community development investments made in that year; (2) the dollar amount of any increase in an existing community development loan that is renewed or modified in that year; and (3) the outstanding value of community development loans originated or purchased and community development investments made in previous years that remain on the bank's balance sheet on the last day of each quarter of the year, averaged across the four quarters of the year.

¹³²⁰ See final § __.26(f)(2)(i).

¹³²¹ See final appendix B.I.a.1.i.

¹³²² See *id.*

¹³²³ See proposed § __.26(f)(2) and proposed appendix B.18.

Limited Purpose Bank Community Development Financing Metric where there is a reference to weighting by deposits in proposed appendix B.¹³²⁴

A few commenters recommended the denominator be based on “CRA-eligible assets.” One of these commenters explained that although they supported the elimination of the use of a deposits-based metric for wholesale and limited purpose banks, a denominator of total assets may result in a metric that fails to account for broad differences in business models. The commenters supporting use of CRA-eligible assets suggested excluding foreign assets, central bank placements, and short-term extensions of credit from total assets. These commenters conveyed that these particular assets do not increase a bank’s capacity to provide community development financing. One of these commenters remarked that it has been the agencies’ supervisory practice to exclude certain assets like central bank placements from the denominator used to determine some wholesale or limited purpose banks’ CRA obligations under the current community development test. This commenter also identified the exclusion of foreign deposits from the denominator of the Community Development Financing Metric for large banks in proposed § __.24 as evidence that the agencies recognize that CRA obligations should not be tied to a bank’s foreign business activity.

A few commenters supported deposits as the denominator for the metric. One of these commenters believed that deposits—in particular, domestic deposits—would be a more accurate measure of the capacity of wholesale banks, given their limited retail lending business, and that using deposits would be consistent with the Community Development Financing Metric for large retail banks.

Without providing details, a few commenters also stated that the complex method proposed to calculate balances quarterly to achieve additional credit could be simplified and still materially represent CRA performance of these banks.

Final Rule

After considering the comments, the agencies determined that assets, rather than deposits or another measure, represent a more appropriate and consistent measure of community development financing capacity for limited purpose banks. The agencies have determined that a denominator based on either deposits or “CRA-eligible assets” would not represent a useful measure of the expectation of community development financing volume for a limited purpose bank. Some limited purpose banks accept deposits on a limited basis or not at all, which would result in an artificially low community development financing expectation. Further, limiting the denominator to CRA-eligible assets would defeat the goals of the Limited Purpose Bank Community Development Financing Metric. Although the agencies recognize that not all bank assets would or could be used for community development (*e.g.*, fixed assets or reserve requirements), the goal of the metric is to create a standard measure of what percentage of the bank’s assets were loaned or invested in community development. To the extent the metric is not representative of a particular bank’s performance, the final rule provides examiners with

¹³²⁴ Specifically, this commenter noted that proposed appendix B.18.iii references proposed appendix B.16.iii, which provides weighting by total assets. However, proposed appendix B.18.iii otherwise indicates weighting by deposits.

discretion in drawing conclusions from the metric and the metric's comparison to the benchmarks, as described below.

Moreover, the agencies do not believe that foreign assets and short-term credit should reduce a bank's capacity to engage in community development loans or investments, or reduce a bank's expectation of the amount of such lending or investing. The agencies also do not believe that the exclusion of foreign deposits from the Community Development Financing Metric's denominator in final § __.24 suggests that the agencies recognize that CRA obligations should not be tied to a bank's foreign business activity. The exclusion of foreign deposits from the definition of deposits in final § __.12 should not be compared to the inclusion of foreign assets in the denominator of the Limited Purpose Bank Community Development Financing Metric. First, the metrics in final § __.24 have a denominator of "deposits," which, for the majority of banks subject to those metrics, has an exclusion narrower than all foreign deposits.¹³²⁵ Second, the exclusion from the definition of deposits is tied to a category in the Call Report definition of deposits. The commenter did not specify what category "foreign assets" would represent, nor do the agencies believe there is an asset category in the Call Report comparable to foreign government deposits that would warrant a similar exclusion.

In regards to the assertion from a commenter that current supervisory practice excludes certain assets like central bank placements from determining wholesale or limited purpose banks' community development lending and investment capacity, the agencies acknowledge that in some cases examiners may have considered assets as an informal measure of a wholesale or limited purpose bank's community development capacity and may have excluded certain assets from the informal measure; however, such practice was neither consistently applied across or within agencies. The selection of assets for the denominator of Limited Purpose Bank Community Development Financing Metric aims to provide that missing consistency across and within the agencies.

Therefore, the agencies adopt a denominator for the Limited Purpose Bank Community Development Financing Metric in final § __.26(f)(2) based on assets, as proposed, with conforming and non-substantive changes. Specifically, the final rule references "assets," as opposed to the proposal's "total assets," which conforms to the new definition of assets in final § __.12. In addition, final § __.26(f)(2) updates the reference for calculating the metric to the applicable appendix provision to paragraph III.a of final appendix B. As provided in the final rule, the denominator continues to be a bank's annual dollar volume of assets for each year in the evaluation period.¹³²⁶ Annual dollar volume of assets continues to be calculated by averaging the assets for each quarter in the calendar year.¹³²⁷

In summary, the final rule includes clarifying edits to the numerator and denominator of the Limited Purpose Bank Community Development Financing Metric in final § __.26(f) as well as technical and conforming edits consistent with above discussions.

¹³²⁵ The denominator excludes domestically held deposits of foreign governments or official institutions, or domestically held deposits of foreign banks or other foreign financial institutions. *See* the section-by-section analysis of § __.12 (defining "deposits").

¹³²⁶ *See* final § __.26(f)(2) and final appendix B.III.a.3.

¹³²⁷ *See* final appendix B.I.a.2.ii.

Limited Purpose Bank Community Development Financing Benchmarks

The Agencies' Proposal

The proposal did not include benchmarks associated with the proposed Wholesale or Limited Purpose Bank Community Development Financing Metric; however, the agencies asked in the proposed rule whether a benchmark should be established to measure a wholesale or limited purpose bank's community development financing performance at the institution level. If so, the agencies also asked whether the proposed Wholesale or Limited Purpose Bank Community Development Financing Metric should be compared to the Nationwide Community Development Financing Benchmark applicable to all large banks or whether the agencies should establish a benchmark tailored to wholesale and limited purpose banks. The agencies explained that a tailored benchmark would be based on the community development financing activity of all wholesale and limited purpose banks compared to assets of all wholesale and limited purpose banks.

Comments Received

A few commenters supported a tailored benchmark, as described by the agencies, in which wholesale and limited purpose banks would be grouped to establish a benchmark. This group of commenters believed the approach would ensure a more representative peer comparison and a more accurate evaluation of a wholesale and limited purpose bank's CRA performance.

Most commenters on this topic opposed applying the nationwide community development financing benchmark to wholesale and limited purpose banks and instead favored a benchmark tailored by business model if the agencies include a benchmark in the final rule. Many of these commenters highlighted the significant differences of business models compared to large banks and the significant differences in business models among those banks approved as wholesale and limited purpose banks. For example, a commenter said it would be inappropriate to implement a benchmark that would compare community development financing activities of a custody bank with those of a credit card bank. Another commenter stated that using the nationwide metric applicable to all large banks would undermine the intention of the agencies to create a framework that recognizes differences in business models.

A small number of commenters opposed the establishment of a benchmark of any kind in § __.26. One such commenter opined that it would be difficult to establish a meaningful and fair benchmark for wholesale or limited purpose banks because the population of these banks is relatively small and their business models varied.

Prior to establishing any benchmark for wholesale and limited purpose banks, a couple of commenters urged the agencies to collect and evaluate appropriate data. In this way, these commenters suggested that the data would allow agencies to determine whether peer comparisons should be confined to other wholesale and limited purpose banks or whether a comparator can include all large banks.

Final Rule

The agencies are adopting a final rule that compares the Limited Purpose Bank Community Development Financing Metric to two benchmarks – the Nationwide Limited Purpose Bank Community Development Financing Benchmark and the Nationwide Asset-Based Community

Development Financing Benchmark.¹³²⁸ The Nationwide Limited Purpose Community Development Financing Benchmark measures the dollar volume of limited purpose banks' community development loans and community development investments reported pursuant to final § __.42(b) that benefit and serve all or part of the nationwide area compared to assets for those limited purpose banks, calculated pursuant to paragraph III.b of final appendix B.¹³²⁹ Specifically, the agencies will divide: (1) the sum of limited purpose banks' annual dollar volume of community development loans and community development investments reported pursuant to final § __.42(b) that benefit or serve all or part of the nationwide area for each year in the evaluation period; by (2) the sum of the annual dollar volume of assets of limited purpose banks that reported community development loans and community development investments pursuant to final § __.42(b) for each year in the evaluation period.¹³³⁰

The Nationwide Asset-Based Community Development Financing Benchmark measures the dollar volume of community development loans and community development investments that benefit or serve all or part of the nationwide area of all banks that reported pursuant to final § __.42(b) compared to assets of those banks, calculated pursuant to paragraph III.c of final appendix B.¹³³¹ Specifically, the agencies will divide: (1) the sum of the annual dollar volume of community development loans and community development investments of all banks that reported pursuant to final § __.42(b) that benefit or serve all or part of the nationwide area for each year in the evaluation period; by (2) the sum of the annual dollar volume of assets of all banks that reported community development loans and community development investments pursuant to final § __.42(b) for each year in the evaluation period.¹³³²

The agencies believe that benchmarks would be a useful tool to evaluate performance. The agencies also recognize the varied business models among limited purpose banks and agree that a single benchmark may not be a strong comparator or accurate representation of the amount of community development financing activity that should be performed by each bank. Thus, the agencies adopt two benchmarks, both of which will serve as comparators or reference tools and will be considered along with performance context and the impact and responsiveness review. These benchmarks are not intended to be thresholds that a bank must meet or exceed to obtain a "Satisfactory" or higher rating. For this same reason, the agencies do not believe it is necessary to postpone implementation of the benchmark to collect additional data.

The agencies decline to establish a benchmark for each business model. Currently, the population of limited purpose banks and wholesale banks is limited. A further subdivision of those banks by business model would create categories with very few banks from which to construct the benchmarks, which would not create a robust comparison.

Limited Purpose Bank Community Development Investment Metric and Benchmark.

¹³²⁹ See final § __.26(f)(2)(ii)(A).

¹³³⁰ See final appendix B.III.b.

¹³³¹ See final § __.26(f)(2)(ii)(B).

¹³³² See final appendix B.III.c.

The Agencies' Proposal, Comments Received, and Final Rule

The proposed Community Development Financing Test for Wholesale Banks and Limited Purpose Banks did not include an investment-related metric or benchmark; however, a number of commenters that addressed the proposed Community Development Financing Test in § __.24 were concerned that the structure of that performance test provided insufficient incentive to make community development investments.¹³³³ In response to those comments, and as described further in the section-by-section analysis of § __.24(e), the final rule includes an investment metric and benchmark—the Bank Nationwide Community Development Investment Metric and Nationwide Community Development Investment Benchmark—in the final Community Development Financing Test.¹³³⁴ To maintain consistency with the Community Development Financing Test applicable to large banks, the agencies adopt a similar investment metric and benchmark in the Community Development Financing Test for Limited Purpose Banks that is applicable to limited purpose banks with assets greater than \$10 billion.¹³³⁵ For limited purpose banks with assets greater than \$10 billion as of December 31 in both of the prior two calendar year, the final rule provides that the agencies will consider the Limited Purpose Bank Community Development Investment Metric and the Nationwide Asset-Based Community Development Investment Benchmark in evaluating the nationwide area.¹³³⁶ Further, the comparison of the Limited Purpose Bank Community Development Investment Metric to the Nationwide Asset-Based Community Development Investment Benchmark may only contribute positively to the bank's Community Development Financing Test for Limited Purpose Banks conclusion for the institution.¹³³⁷ See the section-by-section analysis of final § __.24(e) for a discussion of why the agencies limited this comparison to a positive contribution.

The Limited Purpose Bank Community Development Investment Metric measures the dollar volume of the bank's community development investments that benefit or serve all or part of the nationwide area, excluding mortgage-backed securities, compared to the bank's assets, calculated pursuant to paragraph III.d of final appendix B.¹³³⁸ Specifically, the agencies calculate the Limited Purpose Bank Community Development Investment Metric by dividing: (1) the sum of the bank's annual dollar volume of community development investments, excluding mortgage-backed securities, that benefit or serve the nationwide area for each year in the evaluation period; by (2) the sum of the bank's annual dollar volume of assets for each year in the evaluation period.¹³³⁹

The agencies compare the Limited Purpose Bank Community Development Investment Metric to the Nationwide Asset-Based Community Development Investment Benchmark, which measures the dollar volume of community development investments that benefit or serve all or

¹³³³ See the section-by-section analysis of § __.24(e).

¹³³⁴ See final § __.24(e)(2)(iii) and (iv).

¹³³⁵ See final § __.26(f)(2)(iii) and (iv).

¹³³⁶ See final § __.26(f)(2)(iii) and (iv).

¹³³⁷ See final § __.26(f)(2)(iv)(A).

¹³³⁸ See final § __.26(f)(2)(iii).

¹³³⁹ See final appendix B.III.d.

part of the nationwide area, excluding mortgage-backed securities, of all banks that had assets greater than \$10 billion, compared to assets for those banks, calculated pursuant to paragraph III.e of final appendix B.¹³⁴⁰ Specifically, the agencies calculate the Nationwide Asset-Based Community Development Investment Benchmark by dividing: (1) the sum of the annual dollar volume of community development investments, excluding mortgage-backed securities, of all banks that had assets greater than \$10 billion, as of December 31 in both of the prior two calendar years, that benefit or serve all or part of the nationwide area for each year in the evaluation period; by (2) the sum of the annual dollar volume of assets of all banks that had assets greater than \$10 billion, as of December 31 in both of the prior two calendar years, for each year in the evaluation period.

The Nationwide Asset-Based Community Development Investment Benchmark includes all banks, including limited purpose banks and banks subject to an approved strategic plan, with assets greater than \$10 billion. Because there is a limited number of limited purpose banks with assets greater than \$10 billion, the agencies determined it is necessary to include all banks with assets greater than \$10 billion to ensure a robust benchmark.

§ __.26(g) Community Development Financing Test for Limited Purpose Banks Performance Conclusions and Ratings

The Agencies' Proposal

Proposed § __.26(g) provided that the agencies assign conclusions for a wholesale or limited purpose bank's community development financing performance in each facility-based assessment area, State, multistate MSA, and the nationwide area, as provided in proposed § __.28 and appendix C. Further, the agencies proposed that these conclusions would be incorporated into the State, multistate MSA, and institution ratings. Although the proposed Community Development Financing Test for Wholesale or Limited Purpose Banks did not include a specific reference to performance context, proposed § __.21(d) provided that the agencies may consider performance context information in applying the performance tests to the extent that performance context is not considered as part of the tests.

Comments Received and Final Rule

A few commenters addressing the performance test, in general, underscored the importance of performance context. These commenters specified that the agencies should ensure that the final rule does not rely solely on the proposed Wholesale or Limited Purpose Bank Community Development Financing Metric, but rather should apply a broader view that considers the unique and varying circumstances under which wholesale and limited purpose banks operate.

In response to commenter requests for additional clarity on performance context, the agencies clarified in final § __.26(g)(1) that the agencies may consider the performance context as provided in final § __.21(d) when assigning conclusions.¹³⁴¹ Other than the comments on performance context, the agencies did not receive comments on this paragraph. Therefore, the agencies adopt § __.26(g) as proposed with the additional clarifying edit that the agencies may consider performance context in assigning conclusions as well as technical and conforming edits.

¹³⁴⁰ *See id.*

¹³⁴¹ *See* the section-by-section analysis of § __.21(d) for additional discussion.

§ __.27 Strategic plan

§ __.27(a) *Alternative election*

Current Approach

Currently, the strategic plan option is available to all types of banks,¹³⁴² although it has been used mainly by nontraditional banks¹³⁴³ and banks that make a substantial portion of their loans beyond their branch-based assessment areas. The strategic plan option is intended to provide banks flexibility in meeting their CRA obligations in a manner that is responsive to community needs and opportunities and appropriate considering their capacities, business strategies, and expertise. The current CRA regulations require the agencies to assess a bank's record of helping to meet the credit needs of its assessment areas under a strategic plan if: the bank has submitted the plan for regulatory approval; the plan has been approved; the plan is in effect; and the bank has been operating under an approved plan for at least one year.¹³⁴⁴

The Agencies' Proposal

The agencies proposed retaining the strategic plan option as an alternative method for evaluation under the CRA,¹³⁴⁵ and requested feedback on whether the option should continue to be available to all banks. The agencies proposed that banks electing to be evaluated under a plan would continue to be required to request approval for the plan from the appropriate Federal financial supervisory agency.¹³⁴⁶ The agencies proposed to add clarity to the existing rule by including that the agencies will assess a bank's record of helping to meet the credit needs of its facility-based assessment areas and, as applicable, its retail lending assessment areas and other geographic areas served by the bank at the institution level under a plan.

Comments Received

Most commenters addressing the strategic plan option agreed that a strategic plan option should remain available to all banks, particularly for branchless banks and banks with unique business models. A few commenters did not support the proposed strategic plan option. One of the commenters stated that the option should only be available to those banks that provide evidence that they would fail the "traditional" CRA examination process through no fault of their own. Another commenter objected to the strategic plan option and recommended phasing it out entirely. This commenter argued that the strategic plan option adds a level of complexity to the CRA framework and noted that it is unclear why the option should be made available when the proposed plan requirements have the same assessment area requirements and performance test

¹³⁴² See current 12 CFR __.21(a)(4); current 12 CFR __.27(a).

¹³⁴³ Non-traditional banks are those that do not extend retail loans (small business, small farm, home mortgage loans, and consumer loans) as major product lines or deliver banking services principally from branches.

¹³⁴⁴ See current 12 CFR __.27(a)(1)-(4).

¹³⁴⁵ See proposed § __.27(a).

¹³⁴⁶ See *id.*

standards that would apply to any other bank. One other commenter recommended that the agencies either eliminate or significantly improve the strategic plan option in the proposal.

Final Rule

The agencies are adopting in the final rule the proposed strategic plan option as an alternative method of evaluation in § __.27(a) with one technical change. Specifically, the final rule removes the requirement in proposed § __.27(a)(1) that a bank submit “the plan to the [Agency] as provided for in this section,” as duplicative.¹³⁴⁷ The agencies believe it is unnecessary to include a separate requirement in final § __.27(a), given that “Submission of a draft plan” is a required element of § __.27(f) and must be performed prior to plan approval (*see* the section-by-section analysis of § __.27(f)). As a result of this change, proposed § __.27(a)(2)-(4) is renumbered in the final rule as § __.27(a)(1)-(3).

The agencies believe that the strategic plan option should continue to be available to any bank if the bank sufficiently justifies that the appropriate Federal financial supervisory agency should evaluate it under a plan rather than the performance tests that would apply in the absence of an approved plan. The agencies believe that it is appropriate to use strategic plans to evaluate banks with business models that are not conducive to evaluation under the performance tests that would apply in the absence of an approved plan. These may include, for example, banks that do not offer—or only nominally offer—product lines as defined in the rule, do not maintain traditional delivery systems, or only offer niche products to a targeted market.

The agencies have considered the recommendation from a few commenters to eliminate the strategic plan as an option for evaluating a bank’s performance under the CRA and have decided to retain the option. Even though banks that elect evaluation under a plan would be subject to the same performance tests that would apply in the absence of an approved plan, the agencies believe the strategic plan option is appropriate because it can afford a bank the opportunity to offer modifications or additions that would more meaningfully reflect a bank’s record of helping meet the credit needs of its community, so long as the bank also justifies why its business model is outside the scope of, or is inconsistent with, one or more aspects of the otherwise applicable performance tests, as discussed further in the section-by-section analysis of § __.27(d). In response to the commenter that believed the strategic plan option needed to be improved in order for it to continue to be offered, the agencies note that they made significant revisions to this option in the final rule to ensure that it is clear when the performance tests that would apply in the absence of an approved plan are appropriately applied and represent a meaningful measure of the bank’s CRA performance, while allowing tailored modifications and additions for those few banks that maintain a business model that is outside the scope of, or is inconsistent with, one or more aspects of the performance tests.

Lastly, the agencies do not believe a bank should need to fail or provide evidence that it would fail the performance tests before submitting a request for evaluation under an approved strategic plan. The agencies have been careful to adopt a set of performance tests that the agencies believe are tailored to provide a meaningful evaluation of the vast majority of banks under the CRA. However, the agencies also recognize that there is a population of banks that maintain unique business models and whose record of serving their communities would be more

¹³⁴⁷ *See* proposed § __.27(a)(1).

appropriately evaluated under a plan. Although it has been the agencies' experience that banks that do not perform satisfactorily under the current performance tests and standards are more likely to choose the strategic plan option, the agencies believe it would be inappropriate to establish this as a criterion for a bank to elect the option. The agencies believe that the incorporation of the performance tests in a plan pursuant to § __.27(c)(2), clearer justification requirements pursuant to § __.27(d)(1), and clearer justification elements pursuant to § __.27(d)(2), will prevent widespread adoption of the strategic plan option as a way for banks to avoid a metrics-based evaluation approach.

§ __.27(b) Data requirements

Current Approach and the Agencies' Proposal

Currently, the agencies' approval of a plan does not affect the bank's obligation, if any, to report data as required by current § __.42.¹³⁴⁸ The agencies did not propose any substantive changes to current § __.27(b) pertaining to the data reporting requirements of a bank evaluated under an approved plan.

Comments Received

A few commenters addressed the agencies' proposed data requirements for banks evaluated under an approved plan. One commenter stated that the agencies' proposal effectively eliminates the strategic plan option by defaulting to a rigid one-size-fits-all by requiring, among other things, the same data collection and reporting requirements that would otherwise apply to the bank. Another commenter recommended adding language to the proposed data reporting requirements that would allow banks to request exemptions for data requirements through the plan submission process.

Final Rule

The agencies are adopting § __.27(b) as proposed with a retitling to reflect a technical change. While proposed as "data reporting," the agencies are retitling this paragraph as "data requirements" to reflect that banks that do not operate under a plan not only have data reporting obligations, but requirements to collect and maintain the data as well.

The agencies believe that the benefits of capturing consistent data (regardless of whether a bank is under a strategic plan) outweigh the burden to banks electing the strategic plan option of collecting, maintaining, and reporting the data. Also, as banks under a plan are generally subject to the same performance tests that would apply in the absence of an approved plan, the availability of data remains a critical element of the plan evaluation process. As not all data in final § __.42 are required to be reported, the agencies are making a technical change in final § __.27(b) to add that the obligation to *collect and maintain* data required by final § __.42, in addition to obligation to report data, is not affected by the agency's approval of a plan.

Similarly, the agencies have determined not to allow exemptions from the data requirements for banks evaluated pursuant to a strategic plan. The agencies have considered commenter feedback that the maintenance of data under the plan limits the flexibility of the strategic plan option; however, the agencies believe the data provide them with the necessary tools to effectively evaluate the bank's performance under the applicable performance tests incorporated

¹³⁴⁸ See current 12 CFR __.27(b).

into the strategic plan, as it does with respect to the performance tests generally. Further, the agencies do not believe there is a scenario under which the data under final § __.42 would not provide value to the plan evaluation process. Finally, the required data collection, maintenance, and reporting preserves the bank's ability to revert to evaluation under the performance tests in final §§ __.22 through __.26 and §§ __.29 through __.30, as appropriate, in the event the bank desires to terminate the plan during the term due to a change in circumstances.

§ __.27(c) Plans in general

Current Approach

Currently, plans may have a term of no more than five years and any multi-year plan must include annual interim measurable goals under which the agencies would evaluate the bank's performance.¹³⁴⁹ A bank with more than one assessment area may prepare either a single plan for all of its assessment areas or multiple plans for one or more of its assessment areas.¹³⁵⁰ Affiliated institutions may prepare a joint plan if the plan provides measurable goals for each institution, and activities may be allocated among institutions at the institutions' option, provided that the same activities are not considered for more than one institution.¹³⁵¹

The Agencies' Proposal

Consistent with the current rule, the agencies proposed in § __.27(c)(1) that plans have a term of no more than five years and any multi-year plan must include annual interim measurable goals under which the agencies would evaluate the bank's performance. The agencies also proposed in § __.27(c)(2) that a bank with more than one assessment area could prepare: (1) a single plan for all of its facility-based assessment areas and, as applicable, retail lending assessment areas and geographic areas outside of its facility-based assessment areas and retail lending assessment areas at the institution level, with goals for each geographic area; or (2) separate plans for one or more of its facility-based assessment areas and, as applicable, retail lending assessment areas, and geographic areas outside of its facility-based assessment areas and retail lending assessment areas at the institution level.¹³⁵²

Lastly, in proposed § __.27(c)(3), the agencies specified the requirements for the treatment of activities of a bank's operations subsidiaries or operating subsidiaries, as applicable, and other affiliates. First, proposed § __.27(c)(3)(i) clarified that the activities of the bank's operations subsidiaries or operating subsidiaries must be included in its plan or be evaluated under the performance tests that would apply in the absence of an approved plan, unless the subsidiary is already subject to CRA requirements. Second, proposed § __.27(c)(3)(ii) provided that at the bank's option: activities of other affiliates may be included in a plan as long as those activities are not claimed by another institution subject to the CRA; affiliated banks could prepare a joint plan if the plan provides measurable goals for each institution; and banks may allocate affiliate activity among institutions, as long as the activities are not claimed by more than one institution subject to the CRA. Finally, proposed § __.27(c)(3)(iii) stated that the allocation methodology

¹³⁴⁹ See current 12 CFR __.27(c)(1).

¹³⁵⁰ See current 12 CFR __.27(c)(2).

¹³⁵¹ See current 12 CFR __.27(c)(3).

¹³⁵² See proposed § __.27(c)(2)(i)-(ii).

among affiliate institutions must reflect a reasonable basis and must not be designed solely to artificially enhance any bank's performance.

Comments Received

The agencies did not receive specific comments on the term of a strategic plan or the requirement for interim measurable goals for multi-year plans. Commenters also did not provide specific feedback on whether banks should prepare single plans or separate plans for different assessment areas or include affiliate activities in their strategic plans.

The agencies did, however, receive several comments on their proposal to require that a bank evaluated under an approved plan delineate retail lending assessment areas. One commenter opposed being required to delineate retail lending assessment areas under the strategic plan option altogether. Several other commenters supported banks having the ability to negotiate and justify whether to delineate retail lending assessment areas with the appropriate Federal financial supervisory agency. A commenter supported retail lending assessment area delineations for a bank under a strategic plan based on concentrations of lending without a particular numerical threshold. Another commenter indicated that intermediate banks pursuing the strategic plan option should have the same requirement for delineating retail lending assessment areas as large banks. Another commenter agreed that, while there may be situations where it is appropriate for a strategic plan bank to be evaluated in facility-based assessment areas and retail lending assessment areas, a more flexible approach should be encouraged. Similarly, a commenter also requested that, to increase flexibility, strategic plan banks should be allowed to choose the geographies they serve beyond facility-based assessment areas.

Final Rule

The agencies are finalizing proposed § __.27(c) with several modifications in each of the four areas covered in this paragraph, including substantial reorganization to provide additional clarity.¹³⁵³

The agencies received no comments regarding the term of plans in proposed § __.27(c)(1) and are finalizing this provision as proposed with respect to the requirement to limit the length of a plan term to no more than five years; however, the requirement in proposed § __.27(c)(1) that a multi-year plan must include annual interim measurable goals has been removed to reflect the fact that goals are not expected with respect to every evaluation component of the performance test, as plans may also include performance criteria and other measurements that correspond to unmodified performance tests and are not tied to specific goals. Nevertheless, the agencies continue to expect annual measurable goals with respect to any components that are established in conjunction with eligible modifications and additions to the performance tests as explained further in the section-by-section analysis of § __.27(g).

Although no comments were directed specifically at this area, the agencies are also finalizing proposed § __.27(f)(1), renumbered in the final rule as § __.27(c)(2), pertaining to the requirement that a bank include the same performance tests in a plan, as required in § __.27(g)(1), with certain technical changes and restructuring for additional clarity. While originally proposed in the plan content section under § __.27(f), the principle that a bank's plan must include the same performance tests that would apply in the absence of an approved plan,

¹³⁵³ See *supra* note 145.

subject to certain eligible modifications and additions, was moved to final § __.27(c), which discusses plans in general, given that it serves as a foundational tenet of the strategic plan option. This provision references the plan content provision as discussed in more detail in the section-by-section analysis of § __.27(g), where the requirement to include a performance test, any adjustments, optional evaluation components, modifications, and additions to the performance tests allowed by the agencies are memorialized.

Under the current regulation, many banks that have chosen to utilize the strategic plan option have done so as their banks conduct a significant volume of activities outside of their assessment area(s). As the performance tests adopted in the final rule expand the consideration of loans, investments, services, and products outside of the facility-based assessment areas, the agencies believe that many of the banks that are currently operating under plans may no longer need to utilize the strategic plan option. Even for banks that will continue to pursue the strategic plan option because they possess a business model that is outside the scope of, or is inconsistent with, one or more aspects of the performance tests that would apply in the absence of an approved plan, the agencies believe those banks should continue to be evaluated under the aspects of the performance tests that the agencies would otherwise apply to the bank.

Importantly, proposed § __.27(f)(1) also included a requirement that the plan specify how many of the bank's activities were outside the scope of otherwise applicable performance tests and why being evaluated pursuant to a plan would be a more appropriate means to assess its record of helping to meet the credit needs of its community than if it were evaluated pursuant to the otherwise applicable performance tests. This aspect of the proposal was adopted in the final rule as § __.27(d) with clarifying revisions and conforming changes, and is explained in more detail below in the section-by-section analysis of that section.

The agencies are finalizing proposed § __.27(c)(2), renumbered in the final rule as § __.27(c)(3), pertaining to the preparation of a plan for banks with multiple assessment areas, with revisions to clarify and streamline the language in the final rule. More specifically, final § __.27(c)(3)(i) continues to permit banks to prepare a single plan or develop separate plans for its facility-based assessment areas, retail lending assessment areas, outside retail lending area, or other geographic areas (such as the State, multistate MSA, or the institution level overall) that would be evaluated in the absence of an approved plan.

The final rule also adopts new § __.27(c)(3)(ii) to clarify that any of these geographic areas that are not included in the approved plan but would be evaluated in the absence of a plan, will be evaluated pursuant to the performance tests that would apply in the absence of an approved plan. For example, a large bank that maintains one facility-based assessment area and two retail lending assessment areas could seek and obtain approval for a strategic plan that covers only the facility-based assessment area. In this case, the two retail lending assessment areas would be evaluated pursuant to the Retail Lending Test without any modifications or additions. The agencies believe adding this provision to the final rule will provide a bank with multiple assessment areas clarity on how the agencies will apply the applicable performance tests in areas outside of the plan. This also addresses commenters' sentiment that the agencies adopt a more flexible approach by allowing a strategic plan to cover some but not all bank assessment areas.

Further, in response to commenter feedback suggesting that banks should be able to justify the exclusion or elimination of retail lending assessment areas altogether, the agencies believe that banks that opt to be evaluated under an approved plan must be evaluated under the same

geographic areas (facility-based assessment areas, retail lending assessment areas, outside retail lending area, States, and multistate MSAs, if applicable) the bank would be evaluated if it had not chosen to operate under an approved plan.

In response to commenters' feedback that the threshold for establishing retail lending assessment areas should be adjusted for banks under a plan, the agencies believe it is more equitable to maintain parity in the treatment of banks, whether operating under a plan or not. The agencies do not believe there is a reason for treating banks operating under a strategic plan differently than other banks if they meet the requirements for delineating a retail lending assessment area. Retail lending assessment areas are already limited to large banks that meet minimum loan reporting thresholds in these areas; therefore, the agencies believe that in these circumstances the evaluation of banks' performance for these geographies would be valuable. It should also be noted that the threshold for establishing retail lending assessment areas in general was modified upon consideration of commenter feedback as explained in more detail in the section-by-section analysis of § __.17.

The agencies received no comments regarding proposed § __.27(c)(3), renumbered in the final rule as § __.27(c)(4), pertaining to the treatment of activities of a bank's operations subsidiaries or operating subsidiaries and other affiliates for a bank evaluated under a plan, and are finalizing as proposed with several technical changes. Specifically, consistent with the proposal, final § __.27(c)(4)(i) requires activities of an operations subsidiary or operating subsidiary to be included in the bank's plan (unless the subsidiary is a bank that is independently subject to CRA). However, final § __.27(c)(4)(ii) provides separate provisions for other affiliate activities: final § __.27(c)(4)(ii)(A) clarifies that a bank may include loans, investments, services, and products of any affiliate in their plan (as long as they are not included in the CRA performance of any other bank); and final § __.27(c)(4)(ii)(B) addresses joint plans for affiliated banks. Affiliated banks may develop joint plans provided they specify how the applicable performance tests and eligible modifications and additions apply to each bank. The final rule also clarifies that the consideration of affiliate activities under a plan must be consistent with the general restrictions in final § __.21(b)(3), such as the bank's need to collect, maintain, and report data on affiliate activities, as applicable. Finally, the agencies are finalizing, with technical changes, proposed § __.27(c)(3)(iii), renumbered in the final rule as § __.27(c)(4)(ii)(C), pertaining to the methodology for allocating affiliate loans, investments, services, and products for a bank evaluated under a plan. The final rule requires that, with respect to a bank affiliate's loans, investments, services, and products included in a bank's plan, or a joint plan of affiliated banks: (1) the loans, investments, services, and products may not be included in the CRA performance evaluation of another bank; and (2) the allocation of affiliates' loans, investments, services, and products to a bank, or among affiliated banks, must reflect a reasonable basis for the allocation and may not be for the sole or primary purpose of inappropriately enhancing any bank's CRA evaluation.

§ __.27(d) *Justification and appropriateness of plan election*

The Agencies' Proposal

Proposed § __.27(f)(1), required banks that elect to be evaluated under a strategic plan to include the same performance tests and standards that would otherwise be applied under the proposed rule, unless the bank is substantially engaged in activities outside the scope of these tests. The agencies also proposed to require banks to specify in their draft plan why being

evaluated pursuant to a plan would be a more appropriate means to assess its record of helping to meet the credit needs of its community than if it were evaluated pursuant to the otherwise applicable performance tests and standards.

Comments Received

A few commenters addressed this aspect of the agencies' proposal. A commenter stated that the agencies' proposal effectively eliminates the strategic plan option by defaulting to rigid one-size-fits-all assessment area delineation requirements (including retail lending assessment areas), data collection and reporting requirements, and performance standards that would otherwise apply to the bank unless it provides an acceptable rationale for alternative consideration (such as being substantially engaged in activities outside the scope of these performance tests). Relatedly, a few commenters indicated that the agencies should provide additional information on the justification that would be required to pursue the strategic plan option.

Final Rule

In response to commenters requesting that the agencies provide clarity on the justification required to pursue a strategic plan option, the agencies are adopting new § __.27(d), which addresses the requirement that the draft plan provide a justification regarding how the bank's activities are outside the scope of, or are inconsistent with, the performance tests that would apply in the absence of an approved plan, and why being evaluated pursuant to a plan would more meaningfully reflect its record of helping to meet the credit needs of its community than if it were evaluated in the absence of a plan. In the final rule, § __.27(d) more comprehensively explains how a bank can justify its use of the strategic plan option. More specifically, § __.27(d)(1) requires that the plan must include justifications for each of the following aspects of the plan due to the bank's business model if included in the bank's plan: optional evaluation components; eligible modifications or additions to the applicable performance tests; additional geographic areas; and the ratings and conclusions methodology (*see* the section-by-section analysis of § __.27(g)).¹³⁵⁴

Further, § __.27(d)(2) in the final rule clarifies that each justification must specify the following elements:

- Why the bank's business model is outside the scope of, or inconsistent with, one or more aspects of the performance tests that would apply in the absence of a plan. In order for a bank to eliminate or modify any aspect of the otherwise applicable performance tests and be evaluated under different standards than those banks that are not operating under a plan, the agencies believe it is important that the bank supports how their business model is inconsistent with the performance tests;
- Why evaluating the bank pursuant to any aspect of a plan in § __.27(d)(1) would be more meaningful than if it was evaluated in the absence of an approved plan. Beyond demonstrating how one or more aspects of the otherwise applicable performance tests are inconsistent with their business model, the agencies believe it is also critical to support how any optional evaluation components, eligible modifications or additions, additional geographic areas, and rating and conclusions methodologies that are laid out in the plan

¹³⁵⁴ *See* final § __.27(d)(1)(i)-(iv).

offer a superior evaluation than the performance tests that would apply in the absence of a plan; and

- Why the optional performance components and eligible modifications or additions in the plan meet the standards of § __.27(g)(1) and (g)(2) as applicable. This aspect of the justification makes it clear that the bank must provide a justification for each optional performance component and eligible modification or addition that is made part of the plan.¹³⁵⁵

For example, with respect to the last element, if a plan consisted of modifications and additions in the form of (1) adjusted performance test weightings, (2) the addition of a review of open-end home mortgage lending under the Retail Lending Test, and (3) established goals related to the bank's community development financing metric under the Community Development Financing Test, the draft plan must include justifications for each of these three modifications and additions.

In response to commenter feedback regarding the rigidity of the performance standards and other aspects of the proposed rule in the absence of an acceptable rationale for alternative consideration, the agencies believe that the final rule benefits from a more consistent approach to evaluating banks with multiple performance tests that correspond to the size and business model of the large variety of banks found throughout the nation. While the strategic plan option was designed to offer flexibility for banks with unique business models, the agencies believe that a robust justification provision fosters parity and consistency in the CRA evaluation of banks of all sizes. Further, the agencies believe this provision provides greater clarity for banks and agency supervisory staff, and ensures that strategic plan banks are held to the same standards as non-strategic plan banks.

§ __.27(e) *Public participation in initial draft plan development*

Current Approach

Currently, the regulation has three public participation requirements for a bank to complete during the development of a plan. First, the bank must informally seek suggestions from the public in the assessment area(s) covered by the plan while developing the plan.¹³⁵⁶ Second, once the plan is initially developed, the bank must formally solicit public comment on the plan for at least 30 days by publishing notice in at least one newspaper of general circulation in each assessment area covered by the plan.¹³⁵⁷ Finally, during the formal public comment period, the bank must make copies of the plan available for review by the public at no cost in all bank offices in any assessment area covered by the plan, as well as provide copies upon request for a reasonable fee to cover copying and mailing, if applicable.¹³⁵⁸

The Agencies' Proposal

¹³⁵⁵ See final § __.27(d)(2)(i)-(iii).

¹³⁵⁶ See current 12 CFR __.27(d)(1).

¹³⁵⁷ See current 12 CFR __.27(d)(2).

¹³⁵⁸ See current 12 CFR __.27(d)(3).

The agencies proposed in § __.27(d)(1) to continue to require a bank to informally seek input from members of the public in its facility-based assessment areas covered by the plan while developing the plan. The agencies also proposed in § __.27(d)(2) that, once a bank had developed a draft plan, the bank would be required to submit the initial draft plan for publication on its appropriate Federal financial supervisory agency's website, as well as publish the draft plan on their own website if the bank has a website (or if the bank does not maintain a website by publishing notice in at least one print newspaper or digital publication of general circulation in each facility-based assessment area covered by the plan, or for military banks in at least one print newspaper or digital publication of general circulation targeted to members of the military) for a period of at least 30 days. The proposal also clarified that the draft plan should include instructions to the public on how they could submit comments both electronically and at a postal address.¹³⁵⁹ Proposed § __.27(d)(3) continued to require banks to make copies of the plan available during the formal comment period at all offices in areas covered by the plan and upon request for a reasonable copying and mailing fee.

Lastly, the agencies sought feedback regarding whether the agencies should announce pending plans in the same manner as they announce upcoming CRA examination schedules and completed CRA examinations and ratings.

Comments Received

Most commenters were generally supportive of the agencies' proposal, with some commenters offering modifications or alternatives. A commenter expressed the view that a bank should be given the option of whether to post its plan notice and draft plan on its website or to publish the notice in at least one print newspaper or digital publication of general circulation. Other recommendations concerning publishing plans included suggestions that the agencies circulate plans over e-mail to ensure a high level of community engagement and avoid incorporating any more restrictive announcements, postings, or requirements into the final rule for strategic plans.

One commenter stated that banks should make an affirmative effort to engage community-based organizations led by people of color and women as well as a range of advocacy organizations working on behalf of communities and should document how many and which of these organizations they engaged. Several other commenters indicated that a bank should be able to give greater weight to input received on a draft plan from organizations serving or located in regions represented within the plan.

Final Rule

The agencies are finalizing proposed § __.27(d), renumbered in the final rule as § __.27(e), pertaining to the public participation requirements, with a revision to expand the timeframe for formally soliciting public comment and several technical and clarifying changes. While the current and proposed rule allowed for a 30-day period for the bank to formally solicit public comments on the initial draft plan, the agencies believe that the public participation component of the plan development process is critical and that additional time is appropriate to ensure that members of the public have the time to review the initial draft plan and provide informed input

¹³⁵⁹ *See id.*

to a bank. Consistent with the desire to increase public participation in the plan development process, the agencies are expanding the formal public comment period to 60 days.¹³⁶⁰

While a few commenters advocated for more flexibility or for the agencies to limit any new announcement or posting requirements, the agencies believe the proposed modifications that add requirements to post initial draft plans on the appropriate Federal financial supervisory agency's website and bank's website, if the bank maintains one, are necessary as this is the most convenient and efficient way for most members of the public to become aware of and access initial draft plans. As discussed in the proposal, the expansion of the availability of initial draft plans online is important, as it has been the agencies' experience that plans rarely garner public comments when distributed solely through notifications in the local newspaper.

The agencies are also adopting in the final rule a new requirement in § __.27(e)(1)(ii)(A) and (B), which requires banks with websites to publish their initial draft plans on their website and for all banks (including those with websites) to publish notice in at least one newspaper of general circulation in each facility-based assessment area. Although the agencies did not propose requiring banks with a website to also provide notice in a print newspaper, the agencies believe this change is consistent with the agencies' objective to promote transparency and enhance public participation with respect to draft plans and to acknowledge that notice in a newspaper is how the rule has made the public aware of plans for decades under the current regulation and there may be stakeholders that continue to rely on that form of notice.¹³⁶¹ The agencies believe that further distribution through other mechanisms, as recommended by commenters (such as through e-mail), would not be practical and would cause unnecessary burden without sufficient benefit.

Further, while the agencies sought feedback on the advantages and disadvantages of announcing pending or draft plans using the same means the agencies use to announce upcoming examination schedules or completed CRA examinations and CRA ratings, the agencies received no comments directly addressing this issue. After weighing the benefits and burden of announcing initial draft plans, the agencies determined that announcing initial draft plans (for example, through an agency press release) would be impractical, as it would need to occur in real time in order to be useful given the 60-day comment period. As discussed previously, the final rule includes a requirement to publish initial draft plans on the bank's and appropriate agency's website, and community groups and other members of the public have demonstrated an ability to monitor the agencies' websites to access other similar information to participate in the CRA feedback process (such as announcements of pending bank applications).

With respect to proposed § __.27(d)(1), a technical change was made to the language, which suggested that seeking informal suggestions was limited to members of the public in the bank's facility-based assessment areas. In final § __.27(e)(1)(i), the reference to facility-based assessment areas was removed to make clear that it may be appropriate for banks to seek informal input from other members of the public depending on the circumstance, such as organizations that serve public stakeholders nationally or in retail lending assessment areas. Also, the agencies do not believe that that they should dictate specifically how a bank should

¹³⁶⁰ See final § __.27(e)(1)(ii).

¹³⁶¹ See current 12 CFR __.27(d)(2).

seek input or suggestions from members of the public. While commenters suggested that the regulation should state an affirmative obligation to engage with or place greater weight on input from certain types of organizations (such as those led by women or people of color, or organizations that serve the region covered by the plan), the agencies believe that each bank and its public stakeholders are unique; therefore, it would be inappropriate for the agencies to dictate from whom and how banks solicit and consider public input in conjunction with plan development.

The final rule also clarifies the public engagement requirements for military banks.¹³⁶² In addition to the website publishing requirements under final § __.27(e)(1)(ii)(A), and notwithstanding the newspaper publishing requirements in final § __.27(e)(1)(ii)(B), the final rule requires that a military bank publish notice in at least one print newspaper of general circulation targeted to members of the military, if available. Otherwise, the military bank must publish notice in a digital publication targeted to members of the military.

Lastly, final § __.27(e)(1)(iii) provides that a bank must include on its website and in a newspaper notice, a means by which members of the public can electronically submit and mail comments to the bank on its initial draft plan.¹³⁶³ Also, the agencies are finalizing proposed § __.27(d)(3), renumbered as § __.27(e)(2), with minor clarifying technical changes, with no change in meaning intended. Consistent with the current rule,¹³⁶⁴ during the formal public comment solicitation period, a bank must make copies of the initial draft plan available for review at no cost in any facility-based assessment area covered by the plan, and provide copies of the plan upon request for a reasonable fee to cover copying and mailing.

§ __.27(f) *Submission of a draft plan*

Current Approach

Currently, the regulation requires a bank to submit its plan to its appropriate Federal financial supervisory agency at least three months prior to the proposed effective date of the plan and to include a description of its efforts to seek suggestions from the public, any written comments received, and the initial draft plan (if it was revised in light of the comments received).¹³⁶⁵

The Agencies' Proposal

The agencies proposed to maintain the requirements in current § __.27(e) with additional clarifications regarding some aspects of those requirements. Consistent with the current rule, proposed § __.27(e) required the same three-month submission timeframe from banks prior to the proposed effective date of the plan. The proposal also maintained the current requirement that the submission of the plan include a description of the bank's efforts to seek suggestions from the public but clarified that this must include who was contacted and how the information was gathered. Lastly, the proposal also expanded the request for any written comments to

¹³⁶² See final § __.27(e)(1)(ii)(C).

¹³⁶³ See final § __.27(e)(1)(iii).

¹³⁶⁴ See current 12 CFR __.27(d)(3).

¹³⁶⁵ See current 12 CFR __.27(e).

include more broadly any written or other input on the plan that was received by the public and the initial draft plan if it was revised in light of the input.

Comments Received

The agencies received one comment addressing this aspect of the proposal. Specifically, a commenter indicated that the information a bank submits should also include a comprehensive list of the comments and recommendations it received and the bank's response to this input.

Final Rule

The agencies are finalizing proposed § __.27(e), renumbered in the final rule as § __.27(f), with several technical changes to reflect the timing requirements in days and to more clearly identify the materials that a bank must submit to the appropriate Federal financial supervisory agency in conjunction with the draft plan. Consistent with other timing requirements in the final rule that are based on calendar days, the three-month timeframe for submission of the plan before it is proposed to become effective has been changed to a substantially equivalent 90 days. Also, consistent with the other documentation to support public participation in the proposal (*e.g.*, description of efforts to seek public input, written and other public input received, initial draft plan before it was revised in light of public input), the agencies added the following to the list of items that must be submitted in conjunction with a draft plan, as applicable: proof of notice notification; any written comments or other public input received; an explanation of any relevant changes made to the initial plan in light of public input received; and an explanation for why any suggestions or concerns received by the public regarding the plan were not addressed.¹³⁶⁶ These changes are responsive to the commenter that addressed this aspect of the proposal, as the final rule requires the bank to submit any written or other input received and to add explanations of how this input was or was not integrated into the plan, which will serve as the bank's response to this input. As discussed previously, the agencies believe public participation is critical to the plan development process, and the additional items added to accompany the plan submission allow the agencies to ensure that the requirements under final § __.27(e) are met, and to better understand how public input was considered and integrated into the plan.

§ __.27(g) Plan content

Current Approach

The current regulation requires a bank to specify measurable goals in its plan for helping meet the credit needs of each assessment area covered by the plan, particularly the needs of low- and moderate-income geographies (*i.e.*, census tracts) and individuals, through lending, investment, and services, as appropriate.¹³⁶⁷ A bank must address all three performance categories and, unless the bank has a wholesale or limited purpose designation, shall emphasize lending and lending-related activities.¹³⁶⁸ Further, the current regulation permits banks to submit additional information to its appropriate Federal financial supervisory agency on a confidential

¹³⁶⁶ See final § __.27(f)(1)-(4).

¹³⁶⁷ See current 12 CFR __.27(f)(1)(i).

¹³⁶⁸ See current 12 CFR __.27(f)(1)(ii).

basis, provided the goal plans are sufficiently specific to enable the appropriate Federal financial supervisory agency and the public to judge the merits of the plan.¹³⁶⁹

The current regulation also requires a bank to specify measurable goals in its plan that constitute “satisfactory” performance and to optionally establish goals that constitute “outstanding” performance.¹³⁷⁰ If the bank submits goals for both levels of performance and the appropriate agency approves the plan, the agency will consider the bank eligible for an “outstanding” rating. If the bank does not substantially meet the plan goals, the bank also has the option to elect in its plan to have its performance evaluated under the performance test or standards that would otherwise apply in the absence of a plan.¹³⁷¹

The Agencies’ Proposal

The agencies proposed revisions to current § __.27(f), including substantive and technical changes. In proposed § __.27(f)(1), the agencies required that a bank’s draft plan include the same performance tests and standards that would otherwise be applied under the CRA regulations, unless the bank is substantially engaged in activities outside of the scope of the performance tests. The proposal required that the draft plan specify how these activities are outside the scope of the otherwise applicable performance tests and standards and why being evaluated pursuant to a plan would be a more appropriate means to assess the bank’s record of helping to meet the credit needs of its community than if it were evaluated pursuant to the otherwise applicable performance tests and standards.

Proposed § __.27(f)(2) required that the draft plan incorporate measurable goals for all geographical areas that would be included pursuant to the performance tests and standards that would otherwise apply in the absence of approved plan.

Proposed § __.27(f)(3)(i) required a bank, pursuant to these tests and standards, to specify measurable goals in its draft plan for helping to meet the following, as applicable:

- retail lending needs of, as applicable, its facility-based assessment areas, retail lending assessment areas, and outside retail lending area that are covered by the draft plan;
- retail services and products needs of its facility-based assessment areas and at the institution level that are covered by the draft plan;
- community development financing needs of its facility-based assessment areas, States, multistate MSAs, and nationwide areas that are covered by the draft plan; and
- community development services needs of its facility-based assessment areas and other geographic areas served by the bank that are covered by the draft plan.

In a bank’s draft plan, the agencies proposed that a bank must consider public comments and its capacity and constraints, product offerings, and business strategy in developing goals in these

¹³⁶⁹ See current 12 CFR __.27(f)(2).

¹³⁷⁰ See current 12 CFR __.27(f)(3).

¹³⁷¹ See current 12 CFR __.27(f)(4).

four performance test areas.¹³⁷² The proposal also required that the bank’s draft plan include a focus on the credit needs of low- and moderate-income individuals, small businesses, small farms, and low- and moderate-income census tracts, and explain how the plan’s measurable goals are responsive to the characteristics and credit needs of, as applicable, the assessment areas and geographic areas served by the bank, considering public comment and the bank’s capacity and constraints, product offerings, and business strategy.¹³⁷³

In developing measurable goals related to retail lending, the agencies proposed that a bank incorporate measurable goals in its draft plan for each major product line. However, banks have the option to develop additional goals that cover other lending-related activities based on the bank’s specific business strategy.¹³⁷⁴ Moreover, proposed § __.27(f)(3)(v) provided that if the bank’s plan goals related to retail lending do not incorporate the Retail Lending Test’s metric-based methodology, the bank must explain why incorporation of the methodology is not appropriate. Further, for banks that would otherwise have community development loan and community development investment requirements, proposed § __.27(f)(3)(vi) required that a bank include an explanation as to why measurable goals do not incorporate, as applicable, the metric-based methodology in the Community Development Financing Test or the Community Development Financing Test for Wholesale or Limited Purpose Banks as described in proposed §§ __.24 and __.26, respectively, or the community development performance standards for intermediate banks as provided in proposed § __.29(b)(2).

The agencies proposed in § __.27(f)(4) to retain the current regulatory language with respect to a bank’s ability to submit additional information regarding the plan to the agencies on a confidential basis. Further, the agencies proposed similar language to the current regulation that requires banks to specify in its plan measurable goals that constitute “Satisfactory” performance and provides them the option to specify goals for “Outstanding” performance. Lastly, in proposed § __.27(f)(6), the agencies continued to provide the option for banks to be evaluated under the performance tests and standards that would otherwise apply in the absence of a plan if the bank failed to substantially meet its plan goals.

Comments Received

Many commenters agreed that flexibility, particularly with regard to assessment areas, performance tests and standards, and the establishment of goals, should be maintained. These commenters did not share the concern expressed by other commenters that banks could use the strategic plan option to avoid more stringent CRA requirements, noting that appropriate guardrails, such as public comment and regulatory approval, would be in place.

At least one commenter believed the proposed regulatory text would discourage banks from selecting the strategic plan option, stating this could result in changing the bank’s business strategy. To avoid this unintended consequence, this commenter recommended deleting the word “substantially,” and instead include language that a different approach may be more appropriate for a bank’s business model. In addition, when referencing that a plan must address all performance tests and standards that would otherwise be applied, the commenter requested

¹³⁷² See proposed § __.27(f)(3)(ii).

¹³⁷³ See proposed § __.27(f)(3)(iii).

¹³⁷⁴ See proposed § __.27(f)(3)(iv).

that the agencies retain the language under the current regulations that “a different emphasis, including a focus on one or more performance categories, may be appropriate if responsive to the characteristics and credit needs of its assessment area(s), considering public comment and the bank’s or savings association’s capacity and constraints, product offerings, and business strategy.”

A number of commenters expressed concern that the agencies’ strategic plan option proposal lacks flexibility and, thereby, defeats the original purpose of plans. Some of these commenters recommended that the agencies preserve the flexible features afforded plans under the current CRA regulations. In particular, these commenters identified assessment areas, in-scope products, measurable goals, and test weights as current areas of flexibility. Some of these commenters made recommendations, including that the agencies: explicitly state in the final rule that not all performance tests would be required for banks where they are not applicable and that banks that are primarily consumer lenders be allowed to include consumer loans under their plans; provide flexibility for weighting the four main performance tests at the institution level for all strategic plan banks if the final rule does not provide that accommodation for all banks; and clarify whether banks may continue to use self-executing provisions that allow certain changes to take effect upon the occurrence of a particular event. Another commenter believed that the proposed changes to the plan would shift its focus from meeting community needs, including community development investments and community engagement, to meeting strict tests and monitoring generic benchmarks.

Final Rule

In response to comments that advocated for greater flexibility in the development of plans, the agencies made significant revisions aimed to clarify the plan content requirements in proposed § __.27(f), renumbered as final § __.27(g). These revisions also ensure that there are guardrails to prevent banks from opting out of a “more stringent” evaluation under the applicable default performance tests, including to retain parity among banks not evaluated under an approved strategic plan and those that are. The agencies believe the revisions in the final rule provide stakeholders with more objective rules under the strategic plan option that define when the standard performance tests apply and when eligible additions and modifications are allowed and appropriate. Also, while proposed § __.27(f) consistently referenced “draft plan” when addressing plan content requirements, final § __.27(g) omits the term “draft” to clarify that these plan content requirements also apply to approved plans. As a draft plan is developed solely for the purpose of obtaining agency approval, all of the requirements of final § __.27(g) would apply at the draft stage as well.

Proposed § __.27(f)(1) provided that “[a] bank’s draft plan must include the same performance tests and standards that would otherwise be applied under this part, unless the bank is substantially engaged in activities outside the scope of these tests,” and must specify how these activities are outside the scope of the performance tests and why being evaluated under a plan would be more appropriate. As explained above, the concepts in proposed § __.27(f)(1) were restructured in the final rule and are now discussed in final § __.27(c) and (d), which detail plans in general and the justification and appropriateness of plan election, respectively (*see* the section-by-section analysis of § __.27(c) and (d)). As a result, final § __.27(g) requires that the plan must meet the requirements of final § __.27(g), as well as those outlined in final § __.27(c) and (d). In response to the commenter that expressed concern that the proposed regulatory text would force a bank to change its business model, the agencies believe the revisions proposed in

§ __.27(f) provide sufficient flexibility to accommodate different business models. By requiring justifications for any modifications and additions and relating them to areas where the performance tests that would apply in the absence of an approved plan are outside the scope of, or are inconsistent with, the bank's business model, the agencies believe that they have provided sufficient flexibility while also providing guardrails to prevent a bank from inappropriately eliminating performance tests for which it has the capacity to deliver results.

Final § __.27(g)(1) adopts the language that was proposed in § __.27(f)(3)(iii) to require the draft plan to focus on the credit needs its entire community, including low- and moderate-income individuals, families, and households; low- and moderate-income census tracts; and small businesses and small farms, and to describe how the plan is responsive to the characteristics and credit needs of its facility-based assessment areas, retail lending assessment areas, outside retail lending area, and other geographic areas served by the bank with a technical edit. The reference in proposed § __.27(f)(3)(iii) explaining how the plan's measurable goals are responsive to these areas was revised to reflect that the bank's responsiveness can be demonstrated by any component of the plan, including those components that are not tied to measurable goals. This provision, in conjunction with the variety of eligible modifications and additions permitted under final § __.27(g)(2), is responsive to the commenter that expressed concern that the strategic plan option would shift focus from meeting credit needs to a strict adherence to the tests and benchmarks.

In final § __.27(g)(1), the agencies are also clarifying that a bank must specify the components in the plan for helping meet various needs, as applicable, in the various geographical areas served by the bank. These needs are similar to the ones that were delineated in proposed § __.27(f)(3) and include those related to retail lending, retail banking services and retail banking products, community development loans, community development investments, and community development services. However, the language was amended from the proposal to reflect that the plan must specify any components of the draft plan that help meet these needs – not only measurable goal components.

Also, upon consideration of perspectives of commenters that had concerns that the strategic plan option would be used to avoid more stringent CRA requirements and those that urged the maintenance of flexible criteria under the option (including giving banks the ability to eliminate a performance test, if not applicable), the agencies added more specificity to the requirements in final § __.27(g)(1)(i) through (iv) that detail the components that a bank must include in its plan depending on the size of the bank and the bank's product offerings. The agencies believe these provisions clarify the agencies' proposal and keep the bank accountable for results under the applicable performance tests that can be reasonably applied to the bank, while offering appropriate flexibility when the bank's business model is outside the scope of, or is inconsistent with, one or more of the performance tests that would apply in the absence of an approved plan, which include limited circumstances that may justify the elimination of a performance test.

For instance, in order to assess its efforts in helping meet retail lending needs, final § __.27(g)(1)(i) requires a bank that originates or purchases loans in a product line evaluated under the Retail Lending Test in final § __.22 or originates or purchases loans evaluated pursuant to the Small Bank Lending Test in final § __.29(a)(2) to include the applicable test in its strategic plan. A large bank that offers residential mortgage loans that would be considered under the Retail Lending Test would need to include that performance test in its plan. In contrast, a bank that originates consumer loans, and does not originate any other loans considered under the

Retail Lending Test, would not be required to include the Retail Lending Test in its plan. Also, a large bank would not need to include in its strategic plan the Retail Services and Products Test if it does not maintain any delivery systems¹³⁷⁵ or the Community Development Services Test in a facility-based assessment area where the large bank has no employees.¹³⁷⁶ It is important to note that all banks (other than small banks that have no community development requirements under § __.29) must include the otherwise applicable community development test in their plan,¹³⁷⁷ as the agencies do not believe there are circumstances where these banks do not have the capacity to deliver some volume of community development investments or loans. Also, final § __.27(g)(1)(ii) through (iv) make it clear that any bank can add a component of a performance test that relates to a need that is not covered in the performance tests that would apply in the absence of an approved plan. For example, although large banks generally are required to include community development services, delivery systems, credit products or programs, and deposit products, any other bank may also include a component of these in its plan. Additionally, a small bank could add goals related to community development loans and community development investments to its plan. While these banks would not be required to perform in these areas under the performance tests that would apply in the absence of an approved plan, a bank may wish to add these components to compensate for the elimination or modifications of other performance test components in their plan.

In response to commenters that urged flexibility regarding the development of plans and the agencies' desire to add clarity regarding the requirements in final § __.27(g)(1) related to the elimination or additions to the applicable performance tests, the agencies are adopting new § __.27(g)(2) to detail the eligible modifications or additions that may be made to the components within the performance tests that would apply in the absence of an approved plan if justified under final § __.27(d). Similar to final § __.27(g)(1), final § __.27(g)(2)(i) through (iv) detail the modifications and additions that the rule would allow in the four areas of retail lending, retail banking services and products, community development loans and investments, and community development services. For instance, with respect to retail lending, small banks may be able to support the omission of the loan-to-deposit or assessment area concentration performance criteria pursuant to § __.29, as well as add annual measurable goals for its retail lending activity.¹³⁷⁸ As an example, a small bank that originates residential mortgage lending throughout the country (with a nominal concentration of loans in its facility-based assessment area) may be able to justify the elimination of the assessment area concentration performance criterion and develop goals that correspond to its geographic and borrower distribution in nationwide residential mortgage lending. For a bank otherwise evaluated under the Retail Lending Test, in its plan, a bank may add additional products outside those that are considered pursuant to final § __.22 (*e.g.*, closed-end home mortgage loans, small business loans, small farm loans, and automobile loans).¹³⁷⁹ For example, this flexibility allows a bank to be evaluated with

¹³⁷⁵ See final § __.27(g)(1)(ii)(A).

¹³⁷⁶ See final § __.27(g)(1)(iv)(A).

¹³⁷⁷ See final § __.27(g)(1)(iii)(A)-(C).

¹³⁷⁸ See final § __.27(g)(2)(i)(A)(1)-(2).

¹³⁷⁹ See final § __.27(g)(2)(i)(B)(1).

respect to its consumer loan products. As an additional example, a large bank could add open-end home mortgage lending with accompanying goals that would be considered under the plan in addition to the major product lines that are already required pursuant to § __.22.

When adding measurable goals related to additional products or sub-products, final § __.27(g)(2)(i)(B)(2) permits the bank to apply different product weights that allow for averaging together the performance across the added products in combination with the other standard major product lines required to be evaluated under the Retail Lending Test or including those loan products in the numerator of the Bank Volume Metric. For example, if a bank justifies the addition of open-end home mortgage loans under the Retail Lending Test in its plan to be evaluated in conjunction with its product lines, the bank could treat the open-end home mortgage loans as an additional product line and calculate a weighted average based on a combination of loan dollars and loan count across all major product lines consistent with section VII of final appendix A.

Under the plan option, final § __.27(g)(2)(i)(B)(3) also allows the bank to use alternative weighting when combining the borrower and geographic distribution analyses. Under the Retail Lending Test, these two measures each account for 50 percent of the recommended conclusion unless there are no low- and moderate-income census tracts; however, under a plan, a bank may adjust these weightings for a specific product line if it can justify why the standard weighting does not represent the most appropriate evaluation of these criteria. For example, an intermediate bank may be able to support lowering the weight of the geographic distribution measure (and therefore increase the weighting of the borrower distribution measure) related to performance in a facility-based assessment area that is comprised of 60 census tracts and only one census tract is considered low- or moderate-income. In this circumstance, it may be appropriate to adjust weighting to account for the lack of economic diversity in the geographic areas that make up the bank's assessment area.

Additional modifications and additions are allowed for retail banking services and retail banking products pursuant to final § __.27(g)(2)(ii) if a bank can provide sufficient justification. First, a large bank may add a measurable goal for any component of the Retail Services and Product Test.¹³⁸⁰ For example, a bank may establish a goal to maintain branches in low- and moderate-income census tracts within its sole facility-based assessment area that mirror or exceed the corresponding percentages of households in those tracts. Second, a large bank may remove a component of the Retail Services and Products Test in limited circumstances. For example, if the bank does not offer any remote service facilities, the bank could remove that component from the test.¹³⁸¹ Third, pursuant to final § __.27(g)(2)(ii)(C), large banks may assign specific weights to the applicable components of the test to reach a conclusion. In final § __.23, there are no defined weightings to consider in formulating conclusions or ratings for the Retail Services and Products Test; however, a bank may establish weightings that clarify how the existing and modified components are combined to arrive at conclusions or ratings under the plan. Finally, as only large banks must comply with the Retail Services and Products Test, final § __.27(g)(2)(ii)(D) clarifies that banks other than large banks may include retail banking services and retail banking products components and accompanying measurable goals in their

¹³⁸⁰ See final § __.27(g)(2)(ii)(A).

¹³⁸¹ See final § __.27(g)(2)(ii)(B).

plans at their option. For instance, an intermediate bank could establish a goal for delivering Bank On-certified accounts to consumers in its facility-based assessment area to compensate for modifications it made with respect to the Retail Lending Test.

Additional modifications and additions are allowed for community development loans and community development investments pursuant to final § __.27(g)(2)(iii). First, a bank “may specify annual measurable goals for community development loans, community development investments, or both.”¹³⁸² This provision requires that any measurable goals in this area must be based on a percentage or ratio of the bank’s community development loans and community development investments, presented either on a combined or separate basis, relative to the bank’s capacity (typically reflected as deposits or assets), accounting for the community development needs and opportunities in an applicable geographic area. For instance, while the final rule does not establish specific thresholds to evaluate a bank’s community development financing metric relative to comparable benchmarks for the Community Development Financing Test, a large bank could set an annual goal in the form of a target percentage (based on the benchmark or some other reasonable measure). For instance, a large bank could establish an annual goal of 1.25 percent for its Bank Assessment Area Community Development Financing Metric, which would mean the bank’s community development loans and community development investments were 1.25 percent of the bank’s deposits in that assessment area. Alternatively, the bank could establish an annual goal for this metric as a percentage of the corresponding benchmark, such as 125 percent of the Assessment Area Community Development Financing Benchmark. A bank could also establish measurable goals for all or just a particular type of a bank’s community development loans or community development investments. As another example, a large bank could establish annual measurable goals based on the dollar volume of its purchase or maintenance of LIHTC investments relative to the bank’s deposits. Other modifications in this area include using assets (in lieu of deposits) as an alternative denominator¹³⁸³ or additional benchmarks¹³⁸⁴ to evaluate a community development financing metric. For example, if a large bank can justify why the deposits figure used in calculating the metric does not adequately capture the bank’s capacity to make investments and loans in its facility-based assessment areas, the bank could propose to use a metric that is calculated using the bank’s assets. Lastly, as the small bank performance evaluation does not include any criteria related to a community development financing requirement, final § __.27(g)(2)(iii)(D) clarifies that small banks may include a community development loan or community development investment component and accompanying measurable goals in their plans.

With respect to community development services, final § __.27(g)(2)(iv)(A) allows a bank to specify annual measurable goals for these activities. While any reasonable measure can be used if justified, this section provides examples of goals that could include the number of activities or the number of activity hours against some measure of bank capacity, such as full-time equivalent employees. Also, since only large banks are subject to the Community Development Services

¹³⁸² See final § __.27(g)(2)(iii)(A).

¹³⁸³ See final § __.27(g)(2)(iii)(B).

¹³⁸⁴ See final § __.27(g)(2)(iii)(C).

Test, final § __.27(g)(2)(iv)(B) clarifies that banks other than large banks may, at their option, include a community development services component and accompanying goals in their plan.

As many of the performance tests assign weights to various components of the tests (including the geographical areas, products, and criteria), the final rule contains language to outline the circumstances under which adjustments to weighting are allowed with justification under final § __.27(d). As discussed previously, weighting of products and borrower and geographic analyses under to the Retail Lending Test are addressed in final § __.27(g)(2)(i)(B)(2) and (3), respectively.

With respect to geographical weighting, final § __.27(g)(2)(v) allows a bank to specify alternative weights for averaging test performance across assessment areas or other geographical areas with justification based on the bank's level of activity and capacity in specific geographic areas. For example, while facility-based assessment area weighting is typically calculated as an average of loans and deposits, an intermediate bank may propose an alternative weighting for its facility-based assessment areas if there are anomalies in the geographical distribution of its deposits (as calculated by Summary of Deposits data). For instance, a bank with a large warehouse lending operation may maintain all of its associated escrow deposits, which represent the majority of its deposits, in one branch. If, as a result, the assessment area that corresponds to this branch receives disproportionate weight in assessing the bank's lending performance, the bank may be able to justify an alternative weighting methodology in its plan.

With respect to combining the various applicable performance tests to develop ratings in States and multistate MSAs, as applicable, and for the institution under the plan, final § __.27(g)(2)(vi)(A) allows a bank to request an alternative weighting method. This alternative weighting provision would also apply to combined assessment area conclusions developed for the purposes of determining whether a large bank met the 60 percent standard specified in final § __.28(b)(4)(ii)(B). In making these clarifications, the agencies have considered commenter feedback advocating for flexibility under the strategic plan option. Similar to the current rule,¹³⁸⁵ the alternative test weighting method must emphasize retail lending, community development financing, or both, as well as be responsive to the characteristics and credit needs of a bank's assessment area(s), public comments, and the bank's capacity and constraints, product offerings, and business strategy. Under the final rule, however, if an alternative test weighting methodology is requested, a bank must compensate for decreasing the weight under one performance test by committing to enhance its efforts to help meet the credit needs of its community under another performance test.¹³⁸⁶ For example, if a large bank that conducted limited retail lending activity submitted a draft plan that reduced the weight of the Retail Lending Test from 40 percent to 20 percent with a corresponding increase in the weight of the Community Development Financing Test to 60 percent, the agencies would expect the plan to include enhancements for its performance under the Community Development Financing Test taking this increased performance test weight into consideration. The bank should explain its rationale for why its performance under a test with an increased weight meets the required standard. In an example involving increased weight for the Community Development Financing Test, as noted above, the bank could describe its performance relative to relevant benchmarks

¹³⁸⁵ See current 12 CFR __.27(f)(1)(ii).

¹³⁸⁶ See final § __.27(g)(2)(vi)(B).

provided under that performance test (such as by setting “Satisfactory” goals for the community development financing metric that exceeded the benchmark by a specific percentage).

The agencies received differing views on the geographic coverage of plans in proposed § __.27(f)(2), feedback which was also discussed in regard to final § __.27(c)(3)(ii). As discussed previously, all of these comments related to the proposal for banks to include retail lending assessment areas in their plan if these areas would otherwise be required in the absence of an approved plan. While a few commenters favored allowing banks to justify or negotiate away the requirement to include retail lending assessment areas, the other commenters that addressed this issue supported the inclusion of these areas. After considering these comments, the agencies are finalizing proposed § __.27(f)(2), renumbered as § __.27(g)(3), pertaining to the requirement that a bank may not eliminate the evaluation of its performance in any geographic area that would be included in its performance evaluation in the absence of an approved plan (including retail lending assessment areas and the outside retail lending area). In addition, several technical changes and expanded language are included to explain that performance evaluation components and goals may be added to the plan for additional geographic areas and to address how retail lending assessment area designations that change subsequent to the approval of the plan will be handled. As the requirement for designating a retail lending assessment area is limited to a subset of large banks that are not exempted under final § __.17(a)(2), which addresses whether a bank has more than 80 percent of its lending inside of its facility-based assessment areas, and that also meets the specified lending thresholds for closed-end home mortgage loans or small business loans,¹³⁸⁷ the agencies believe that it is appropriate for these banks to be evaluated in these areas in their plans. This also maintains parity among large banks, whether they are evaluated under a strategic plan or not. As discussed previously, final § __.27(c)(3)(i) requires that a bank’s plan incorporate each assessment area (including both facility-based and retail lending) and other geographic areas (such as an outside retail lending area, States, multistate MSAs, or nationwide) that would otherwise be evaluated in the absence of an approved plan. This language was modified from proposed § __.27(f)(2) in that it removes the reference to requiring measurable goals, consistent with the fact that a bank’s performance under a plan may be evaluated exclusively on a performance component that is not guided by a goal.

In the proposal, the agencies sought feedback on whether intermediate banks electing to be evaluated under a plan should be allowed to delineate retail lending assessment areas, whether small banks electing to be evaluated under a plan should be allowed to delineate retail lending assessment areas and outside retail lending areas, and what criteria should apply to small and intermediate banks delineating such assessment areas under a plan. The agencies did not receive any comments in response; however, the agencies believe this issue should be addressed in the final rule. The final rule adopts new § __.27(g)(3)(i), which clarifies that evaluation components and accompanying goals may be added to a plan at the bank’s option. For example, a small bank may opt to incorporate retail lending goals for areas outside of its facility-based assessment areas. If additional performance evaluation components with accompanying goals are included

¹³⁸⁷ See final § __.17.

with the plan, a bank must specify the geographic areas where those components and goals apply.¹³⁸⁸

With respect to retail lending assessment areas that are identified in a plan but are no longer required due to the large bank not meeting the associated lending thresholds under final § __.17, the agencies will not review performance in that area for any applicable year in which the threshold is not met.¹³⁸⁹ Conversely, if a retail lending assessment area is not required at the time of plan approval, but would otherwise be established during the term of an approved plan due to a bank's increased lending meeting the thresholds, the bank would not be required to amend an existing plan to establish those geographies as a new retail lending assessment area.

The agencies have also considered commenter feedback recommending that the agencies clarify whether banks may continue to use self-executing provisions that allow certain changes to take effect upon the occurrence of a particular event. While it is noted that the concept of a "self-executing provision" is not discussed in the current, proposed, or final rule, the agencies do not believe that a specific clarification with respect to such provisions would be necessary because the standards in § __.27 are sufficiently flexible to permit them assuming the other requirements are met (including that an adequate justification is supported and the self-executing provision is consistent with the eligible modifications and additions). As an example, a bank may establish in its plan that any new facility-based assessment areas delineated during the plan term would be subject to performance tests that would otherwise apply in the absence of a plan.

The agencies did not receive comments regarding the submission of confidential information with the draft plan and are adopting proposed § __.27(f)(4), renumbered in the final rule as § __.27(g)(4), as proposed. Additionally, no comments were received regarding proposed § __.27(f)(5), renumbered in the final rule as § __.27(g)(5), related to the requirement that a bank specify measurable goals that constitute "Satisfactory" performance with the option to specify goals that constitute "Outstanding" performance (if the bank wants to be eligible for an "Outstanding" rating). The agencies are finalizing this section as proposed, with a technical change to reflect that this only applies to modified or additional performance evaluation components with accompanying goals, as not all performance test components will have goals associated with them.

The agencies are not finalizing proposed § __.27(f)(6), which would have allowed a bank to elect in its draft plan evaluation of the bank's performance under the performance tests that would otherwise apply in the absence of an approved plan if the bank failed to meet substantially its plan goals for a "Satisfactory" rating. While no comments were received on this provision, given that the final rule requires the inclusion of any applicable performance tests under the strategic plan option (provided a bank cannot provide a justification for not including one of the test as provided in final § __.27(g)(1)), the agencies do not believe there is a need for this provision, as the bank's poor performance under the plan would likely mirror its performance under the performance tests that would apply in the absence of a plan. A plan is approved by the agency under the premise that the plan represents a more meaningful reflection of a bank's record of helping to meet the credit needs of its community than if it were evaluated in the

¹³⁸⁸ See final § __.27(g)(3)(iii).

¹³⁸⁹ See final § __.27(g)(3)(ii).

absence of an approved plan. If a bank no longer considers the plan to be a more meaningful reflection of the bank's record, the agencies believe the bank should terminate its plan and revert to an evaluation under the performance tests that would apply in the absence of a plan.

Lastly, although not included in the proposed plan content section, the agencies are adopting new final § __.27(g)(6) to clarify that the bank must specify a conclusions and ratings methodology in its plan. This addition is necessary given the agencies' shift from a purely goals-based performance evaluation to one that is flexible and recognizes that plans accommodate the performance tests under final § __.21. As plans must include the performance tests required under § __.27(g)(1) (which may not have goals associated with the evaluation components) in combination with eligible modifications and additions to those tests with accompanying goals, the plans need to specify how the appropriate Federal financial supervisory agency will combine these components to arrive at conclusions at each applicable geographic area level and ratings in each State or multistate MSA, as applicable, and at the institution level.

Pursuant to final § __.27(g)(6), a bank must specify in its plan how all of the plan elements covered in § __.27(g)(1) through (g)(5) will be considered in conjunction with any other applicable performance tests not included in the approved plan. For example, if an intermediate bank that opted into the strategic plan option were to add evaluation components that relate to the opening of Bank On deposit accounts for low- and moderate-income individuals and the maintenance of delivery systems in targeted census tracts, the plan would need to establish annual measurable goals related to each component consistent with § __.27(g)(5), and could also provide adjusted performance test weighting that accounts for the retail banking services and retail banking products components. For instance, if justified under final § __.27(d), the plan could establish a 45 percent weight under the Retail Lending Test, a 45 percent weight under the Intermediate Bank Community Development Test (or, alternatively, the Community Development Financing Test as provided in § __.24), and 10 percent weight on the retail banking services and retail banking products components.

Final § __.27(g)(6) clarifies that conclusions and ratings are assigned pursuant to the general conclusions and ratings requirements in § __.28 and that more specific guidance regarding assigning conclusions and ratings is detailed, respectively, in paragraph g of final appendix C¹³⁹⁰ and in paragraphs f and g of final appendix D.¹³⁹¹ Final § __.27(g)(6)(i) further clarifies that performance context information as provided in § __.21(d) may also be considered in assigning conclusions under the plan.

A new paragraph g was added to final appendix C to clarify that the appropriate agency will assign conclusions in each of these applicable geographical areas. This became necessary as the proposal contemplated a strictly goal-based structure to formulating ratings for banks under the strategic plan option and did not include a discussion of this performance evaluation method in appendix C, which addresses performance test conclusions. However, as plans must include the performance tests that would apply in the absence of an approved plan pursuant to final § __.27(c)(2)(i), conclusions for each facility-based assessment area, retail lending assessment area, outside retail lending area, State, and multistate MSA, as applicable, and the institution will

¹³⁹⁰ See final § __.27(g)(6)(i).

¹³⁹¹ See final § __.27(g)(6)(ii).

be formulated under the respective performance tests. In assigning the conclusions under the performance tests and any optional evaluation components, the appropriate agency will consider the annual measurable goals (for “Satisfactory” performance and, if identified in the plan, for “Outstanding” performance) and the conclusion methodology required under final § __.27(g)(6).¹³⁹²

Paragraph g of final appendix C explains further that, for elements of the plan that correspond to the otherwise applicable performance tests, the plan should include a conclusions methodology that is generally consistent with paragraphs b through f of appendix C. For example, if a large bank included the Community Development Financing Test in its plan without any modifications or additions, the conclusions for that performance test must be formulated using the same methodology detailed in paragraph d of final appendix C. However, if that same bank’s plan included an eligible modification under the Community Development Services Test (*e.g.*, establishing annual measurable goals for community development service hours relative to the number of full-time employees), the plan must include a conclusions methodology that accounts for those goals and generally aligns with the methodology detailed in paragraph e of final appendix C. For instance, a bank could establish a range of goals that align with the five conclusion categories (and corresponding performance scores) for each facility-based assessment area that would be used to assign the conclusion in lieu of the qualitative evaluation that is performed in each of these areas under the Community Development Services Test. Under this methodology, the goal thresholds could inform conclusions under the performance test corresponding with the conclusion category nearest to the performance score as follows: “Outstanding” (10 points); “High Satisfactory” (7 points); “Low Satisfactory” (6 points); “Needs to Improve” (3 points); or “Substantial Noncompliance” (0 points).

With respect to the formulation of ratings, the agencies proposed to approve “Satisfactory” goals and, if identified in the plan, “Outstanding” goals, and would determine if the bank met these goals to assess a bank’s performance under the plan.¹³⁹³ Consistent with the removal of a strictly goals-based plan evaluation structure, paragraph f of appendix D was revised significantly and finalized to state that the agency evaluates the bank’s performance under an approved plan consistent with the ratings methodology specified in the plan pursuant to final § __.27(g)(6). Similar to the banks rated under any of the other evaluation methods, ratings are a product of performance test conclusions discussed under final appendix C with an adjustment for any optional evaluation components that a bank chooses to add to an approved plan.

Lastly, paragraph f of final appendix D clarifies that the appropriate agency assigns a rating under the plan rating methodology using one of the following categories: “Outstanding,” “Satisfactory,” “Needs to Improve,” or “Substantial Noncompliance.”

§ __.27(h) Draft plan evaluation

Current Approach

Current § __.27(g) require the agencies to act upon a plan within 60 calendar days after receipt of a complete plan and the following materials required under current § __.27(e): a description of the bank’s informal efforts to seek suggestions from the public; any written public

¹³⁹² See final appendix C.g.

¹³⁹³ See proposed appendix D.f.

comments received; and, if the plan was revised in light of these comments, the initial plan as released for public comment.¹³⁹⁴ If the appropriate Federal financial supervisory agency fails to act within this time period and does not extend it for good cause, the plan is deemed approved. The appropriate agency evaluates the plan goals in consideration of the results of the public participation process.¹³⁹⁵

The agency evaluates a plan's measurable goals based on: the extent and breadth of lending or lending-related activities; the amount and innovativeness, complexity, and responsiveness of the bank's qualified investments; and the availability and effectiveness of the bank's systems for delivering retail banking services and the extent and innovativeness of the bank's community development services.¹³⁹⁶

The Agencies' Proposal

The agencies proposed in § __.27(g)(1) to extend the time period for acting on a complete plan and the accompanying material required under current § __.27(e) to 90 calendar days, and preserved the automatic approval of plans that are not acted upon within that time frame unless extended by the agencies for good cause. In proposed § __.27(g)(2), the agencies clarified that they would consider the following when evaluating the bank's draft plan's goals: public involvement in formulating the plan (including specific information regarding the members of the public and organizations the bank contacted; how the bank collected information relevant to the draft plan; the nature of the public input, and whether the bank revised the draft plan in light of public input); written public comments; and any bank responses to these comments.

Proposed § __.27(g)(3) outlined the criteria that the agencies would use to evaluate the draft plan's measurable goals. The agencies clarified the evaluation would include the appropriateness of these goals and information provided in proposed § __.27(e) and (f) and would be based on the bank's capacity, product offerings, and business strategy. Similar to the current regulation, the criteria included the following, as appropriate: the extent and breadth of retail lending or retail lending-related activities to address credit needs; the dollar amount and qualitative aspects of the bank's community development loans and community development investments in light of the corresponding needs; the availability of bank retail products and the effectiveness of the bank's systems for delivering retail banking services; and the number, hours, and type of community development services performed by the bank and the extent to which these services are impactful.

Lastly, while the proposal required the posting of draft plans on the appropriate Federal financial banking agency's and bank's websites, the agencies asked for feedback on whether the approved plans should also be posted on those websites.

Comments Received and Final Rule

The only comment on this section related to a commenter that requested banks be permitted to post approved plans on the bank's website at the bank's option. The agencies are finalizing proposed § __.27(g), renumbered as § __.27(h), largely as proposed with revisions as explained

¹³⁹⁴ See current 12 CFR __.27(g)(1).

¹³⁹⁵ See current 12 CFR __.27(g)(2).

¹³⁹⁶ See current 12 CFR __.27(g)(3).

in more detail below, including a revision to the paragraph's header from *Plan approval* to *Draft plan evaluation* to more broadly capture the areas covered by final § __.27(h).

The agencies are adopting the timing requirements in proposed § __.27(g)(1), renumbered in the final rule as § __.27(h)(1), for submitting a plan to the agencies with one modification. Consistent with the proposal, the final rule establishes a 90 calendar-day timeframe for the agencies to review a complete draft plan and other required materials once received from the bank. However, rather than establishing an automatic approval for plans that are not acted upon within the 90-day period, the final rule requires the appropriate Federal financial supervisory agency to communicate to the bank the rationale for the delay and an expected timeframe for a decision on the draft plan. This revision in the final rule (removing the automatic approval) acknowledges both the importance of the agencies making an affirmative decision on the plan and that some plans may require more than the 90-day timeframe to evaluate. Under the current and proposed regulation, the agencies maintained the ability to extend the evaluation time period for good cause; however, it has been the agencies' experience that extensions were rarely, if ever, needed once a complete plan was received. The agencies will strive to provide a decision on all plans within the 90-day timeframe; however, removal of the automatic approval will ensure that the agencies will complete the evaluation of each plan, while requiring communication of the rationale and expected timeframe for any delays on plan approval decisioning beyond the typical timeframe.

The agencies did not receive any comments related to the consideration of public participation in the evaluation of the plan and are finalizing § __.27(g)(2), renumbered in the final rule as § __.27(h)(2), as proposed with several technical changes and the addition of a new provision. More specifically, final § __.27(h)(2)(i) removes the language "the nature of the public input" and "whether the bank revised the draft plan in light of public input," as specific examples of public participation information the agencies would consider in evaluating the plan. The agencies considered this language duplicative as these considerations are already addressed more broadly in final § __.27(h)(2)(ii) and (iii). Further, final § __.27(h)(2)(ii) and (iii) reflect the agencies' commitment to public input such that all forms of public input (and the bank's corresponding responses) that are available during the plan development and evaluation process will be considered—not just written comments. Finally, although not proposed, the agencies are adopting new final § __.27(h)(2)(iv) to clarify that the agencies will consider whether to solicit additional public input or require the bank to provide any additional response to public input already received. As stated previously, the agencies believe that the public participation process is a critical element of the plan evaluation process; therefore, they believe it is appropriate to solicit additional public comment or bank responses if they find the public participation obligation has not been fully satisfied prior to the submission of the draft plan.

The agencies did not receive any comments related to the specific criteria for evaluating the plan and are finalizing proposed § __.27(g)(3), renumbered as § __.27(h)(3), with several technical changes and additions to conform to previously discussed revisions to the structure of the strategic plan option. First, the language in the proposal related to evaluating a draft plan's measurable goals and the appropriateness of those goals has been removed to acknowledge the fact that a plan, while it may include goals related to its eligible modifications and additions, must also generally include the performance tests that would apply in the absence of a plan, which are not all goals-based. In lieu of the references to goals, the agencies revised the final rule to add two additional criteria that the agencies must consider in the evaluation of a plan: the

extent to which the plan meets the standards in § __.27¹³⁹⁷ and the extent to which the plan has provided a justification under § __.27(d).¹³⁹⁸ Rather than restating all of the plan criteria that are established in the various provisions of § __.27, the agencies believe it is more effective and efficient to make a reference to the entire section to make it clear that all of the standards introduced in the section are considered under the approval criteria. Also, consistent with the agencies' desire to limit the strategic plan option only to those banks where the applicable performance tests would not provide a meaningful evaluation of the bank and to create parity with other banks that do not avail themselves of the option, the agencies have clarified in the final rule that the justification under § __.27(d) will be an evaluation criterion.

The remaining four plan evaluation criteria¹³⁹⁹ proposed in § __.27(g)(3)(i) through (iv), renumbered in the final rule as § __.27(h)(3)(ii), are finalized with clarifying edits. These criteria are differentiated from the criteria outlined in final § __.27(h)(3)(i) in that they are evaluated, as applicable, depending on the performance tests that would apply in the absence of a plan and whether the bank has added an optional evaluation component. Each of these criteria are considered in conjunction with relevant performance context information pursuant to § __.21(d) and relate to the performance test areas: retail lending; retail banking services and retail banking products; community development loans and community development investments; and community development services. In the final rule, the agencies added an updated reference to the applicable performance tests at the conclusion of each of the corresponding provisions. For example, the retail lending criterion¹⁴⁰⁰ provides a reference to the two sections, §§ __.22 and __.29, that detail the evaluation standards for retail lending for small, intermediate, and large banks.

While the proposal did not include a provision that specifically addressed the plan decision-making process, the agencies are adopting new § __.27(h)(4) to better clarify the circumstances under which the agencies will approve or deny a draft plan that has been submitted by a bank. Simply, final § __.27(h)(4)(i) confirms that the appropriate Federal financial supervisory agency may approve a plan after considering the criteria in final § __.27(h)(3) and if it determines that an adequate justification for the plan and each aspect of the plan in § __.27(d) has been provided. The paragraph also details the circumstances under which the appropriate agency may deny a request for a plan or part of a plan.¹⁴⁰¹ These circumstances include: the agency making a determination that there is a lack of an adequate justification pursuant to § __.27(d); the evaluation under the plan would not provide a more meaningful reflection of the bank's record of helping to meet the credit needs of its community; the plan does not demonstrate responsiveness to public comment or otherwise fails to meet the requirements of § __.27; or the bank does not provide information requested by the agency that is necessary to make an informed decision on the draft plan.

¹³⁹⁷ See final § __.27(h)(3)(i)(A).

¹³⁹⁸ See final § __.27(h)(3)(i)(B).

¹³⁹⁹ See final § __.27(h)(3)(ii)(A)-(D).

¹⁴⁰⁰ See final § __.27(h)(3)(ii)(A).

¹⁴⁰¹ See final § __.27(h)(4)(ii)(A)-(E).

The agencies received limited feedback on whether an approved plan should be published on a bank's and the appropriate agency's websites; however, the agencies are adopting new final § __.27(h)(5) which requires the appropriate agency to publish approved plans on its website. The agencies believe that most stakeholders find it more convenient to access information online and further believe posting this information on the appropriate agency's websites will further the agencies' goal of increasing public participation in, and awareness of, the strategic plan process. While the only commenter suggested that publishing the approved plan on the bank's website should be optional, pursuant to § __.43(b)(4) of the final rule, the approved plan must be included in the bank's public file. As explained in more detail in the section-by-section analysis of § __.43 (content and availability of the public file), the agencies are finalizing revisions that require banks that maintain a website to include all information in the public file on the bank's website.¹⁴⁰² Therefore, as part of a bank's requirement to maintain its public file on the bank's website, if the bank maintains one, a bank will be required to post an approved strategic plan on the bank's website if the bank maintains one.

§ __.27(i) Plan amendment

Current Approach

Current § __.27(h) provides that during the term of a plan, a bank may request the appropriate Federal financial supervisory agency to approve an amendment to the plan on the grounds that there has been a material change in circumstance since the plan was previously approved. Any amendment to a plan must be developed in accordance with the public participation requirements in current § __.27.

The Agencies' Proposal

The agencies proposed to revise the CRA regulations to be more transparent about when plan amendments would be required. In proposed § __.27(h), the agencies provided that during the term of a plan, a bank must amend its plan goals if a material change in circumstances:

- impedes its ability to substantially meet approved plan goals, such as financial constraints caused by significant events that impact the local or national economy; or
- significantly increases its financial capacity and ability, such as through a merger or consolidation, to engage in retail lending, retail services and products, community development financing, or community development services.¹⁴⁰³

The agencies also proposed that a bank that requests an amendment to a plan in the absence of a material change in circumstances must provide an explanation regarding why it is necessary and appropriate to amend its plan goals.¹⁴⁰⁴ Lastly, the agencies proposed that any amendment to a plan must be developed in accordance with the public participation requirements in § __.27(e).¹⁴⁰⁵

¹⁴⁰² See final § __.43(c)(1).

¹⁴⁰³ See proposed § __.27(h)(1).

¹⁴⁰⁴ See proposed § __.27(h)(2).

¹⁴⁰⁵ See proposed § __.27(h)(3).

Comments Received and Final Rule

No comments were received with respect to the circumstances under which plan amendments are required, although a commenter requested that the agencies clarify whether banks would be required to delineate retail lending assessment areas before a pre-existing plan's expiration.

The agencies are finalizing proposed § __.27(h)(1), renumbered as § __.27(i)(1), with retitling of this provision and one technical change. More specifically, this provision was retitled *Mandatory plan amendment* to clarify that these are the circumstances under which an amendment is required and to differentiate it from the bank's discretion to optionally amend its plan pursuant to final § __.27(i)(2). Also, the proposal required a plan amendment if a material change in circumstance impeded the bank's ability to substantially meet approved goals;¹⁴⁰⁶ however, as goals are not a required element of each component of the plan in the final rule, the language was changed to reflect circumstances that impede the bank's ability to perform at a satisfactory level under the plan. This change acknowledges that a plan may need to be amended for circumstances that not only adversely impact a bank's ability to meet any goals associated with an approved plan, but also could impede its ability to perform satisfactorily under the performance tests, which are not always goals based. The agencies believe plan amendments are necessary if either of the conditions in final § __.27(i)(1)(i) or § __.27(i)(1)(ii) exist.

The only commenter regarding this provision inquired as to whether a bank would be required to delineate a retail lending assessment area under the strategic plan option created during the term of a pre-existing approved plan. While not contemplated in the proposal or specifically addressed in the final rule, an amendment may be necessary when a facility-based assessment area changes (for example, when a bank adds a new assessment area that encompasses a branch it opens in a new MSA in which it previously did not have a presence). When facility-based assessment areas are added or changed significantly during the term of an approved plan, an amendment would be necessary unless the existing plan already appropriately addresses how new facility-based assessment areas are to be evaluated during the term of the plan. With respect to the commenter's question regarding the addition of new retail lending assessment areas that are established after plan approval, but during the term of the plan, final § __.27(i) does not require the bank to amend its plan to evaluate any new retail lending assessment areas, as discussed previously in the section-by-section analysis of § __.27(g)(3). Therefore, in the absence of a discussion of the treatment of new retail lending assessment areas in the approved plan, the agencies would not evaluate a large bank's performance in these areas pursuant to § __.22(a). This approach allows for certainty in the evaluation of the plan and would be less burdensome, as it would not necessitate amendments to the plan if the retail lending assessment areas were to fluctuate on an annual basis. An approved plan would already include the overall evaluation framework for examiners to consider at the time of the evaluation—including the applicable performance tests, optional evaluation components, and any eligible modifications and additions. Lastly, any of the bank's lending outside of facility-based assessment areas or active retail lending assessment areas that are included in the approved plan could still be captured in the bank's outside retail lending area, as applicable.

The agencies did not receive any comments regarding the elective revision of a plan in proposed § __.27(h)(2) and are adopting it as proposed, renumbered as § __.27(i)(2), with

¹⁴⁰⁶ See proposed § __.27(h)(1)(i).

retitling and a technical change. Consistent with the language used throughout the paragraph, the title of this provision was changed from *Elective revision of plan* to *Elective plan amendment*. Additionally, proposed § __.27(h)(2)(ii), which required a bank to provide an explanation for any elective plan amendment, was moved to a newly created § __.27(i)(3) to more broadly establish the requirements for all amendments—whether mandatory or elective. The agencies believe that this new provision will provide greater clarity regarding bank requirements with respect to all plan amendments. In addition to providing an explanation for why an elective plan amendment is necessary and appropriate, the final rule also requires a bank to explain any material circumstances that necessitated an amendment pursuant to final § __.27(i)(1)(i) or § __.27(i)(1)(ii). The final rule also adopts new § __.27(i)(3)(ii) to clarify that any amendment, whether mandatory or elective, must comply with all relevant requirements of the section.

Lastly, the agencies are not finalizing § __.27(h)(3), pertaining to the public participation considerations with respect to a plan revision because this provision was unnecessary given the inclusion of new final § __.27(i)(3)(ii). Because plan amendments must comply with all relevant requirements of this section, this would include the public participation provisions. Therefore, proposed § __.27(h)(3) is not needed under the final rule. The agencies acknowledge that some plan amendments are very limited and do not benefit materially from a full public participation process as required by final § __.27(e). Also, consistent with stakeholder feedback in the proposal, some stakeholders suggested minor changes through an amendment should only require approval by the appropriate agency, while a major change would require public comment in addition to approval. To address these comments, new § __.27(i)(3)(ii) allows the agencies to use their discretion to waive a requirement of the strategic plan provisions, such as the public participation requirements under final § __.27(e). As a result, prior to submitting a plan amendment for approval, banks should contact their appropriate Federal financial supervisory agency to seek guidance on whether the bank must complete the public participation requirements of the final rule in advance of the submission.

§ __.27(j) Performance evaluation under a plan

Current Approach

Under the current CRA regulation, the agencies approve a bank's measurable goals and assess a bank's performance under paragraph (e) of current appendix A,¹⁴⁰⁷ which prescribes that the agencies approve "satisfactory" measurable goals that adequately help meet the credit needs of the bank's assessment area(s). If the plan identifies separate measurable goals that substantially exceed the levels approved as "satisfactory," the agencies will approve those goals as "outstanding." The agencies assess the bank's performance based on whether it substantially achieves these goals. Alternatively, if the bank fails to substantially meet the goals for a satisfactory rating, the appropriate agency will rate the bank as either "needs to improve" or "substantial noncompliance," depending on the extent to which it falls short of its plan goals, unless the bank has elected to be evaluated otherwise as provided in § __.27(f)(4).

The Agencies' Proposal

¹⁴⁰⁷ See current 12 CFR __.27(i).

The agencies proposed to approve the goals and assess performance under a plan as provided in proposed appendix D.¹⁴⁰⁸ Further, in determining whether a bank has substantially met its plan goals, the agencies proposed to consider the number of unmet goals; the degree to which the goals were not met; the importance of those unmet goals to the plan as a whole; and any circumstances beyond the control of the bank.¹⁴⁰⁹ Paragraph (f) of proposed appendix D provided guidance substantially similar to that identified in paragraph (e) of appendix A in the current regulation, as detailed above.

The agencies also requested comment on whether they should continue to evaluate strategic plan banks based on whether they have “substantially met” their plan goals and, if so, what criteria should be applied.

Comments Received

A few commenters addressed the agencies’ request for feedback regarding whether the “substantially met” standard used to assess performance under a plan should be maintained and, if so, how it should be defined. A commenter stated that the standard for measuring plan goals should be rigorous and applied to each goal with a 95 percent attainment standard. Furthermore, if attainment is not achieved on 67 percent of its goals, the commenter stated that the bank should fail its exam and be required to submit an improvement plan. Another commenter recommended incorporating a rating system that emulates the default CRA ratings framework. Both of these commenters suggested that an improvement plan should be required if the bank did not substantially meet its stated goals. A few commenters indicated the standard was adequate and that there should be no prescribed evaluation weights for strategic plans.

Final Rule

Under the final rule, the header for proposed § __.27(i), renumbered as § __.27(j), was revised from *Plan assessment* to *Performance evaluation under a plan* to better clarify that this paragraph covers the evaluation of the bank under an approved plan rather than an assessment of the plan itself.

Based on the comments received and the aforementioned changes in plan requirements, particularly a departure from required goals for all components of the plan, the agencies are finalizing proposed § __.27(i)(1), renumbered as § __.27(j)(1), with revisions to correspond with the general restructuring of this section. First, the language in final § __.27(j)(1) is changed to reflect that a bank’s performance is no longer based exclusively on approved goals and is now based on the applicable performance tests, any optional evaluation components, and the eligible modifications and additions to the applicable performance tests set forth in the bank’s plan. As discussed previously, goals may still be a component of a plan but will now be considered in conjunction with performance tests.

The agencies are also finalizing proposed § __.27(i)(2), renumbered in the final rule as § __.27(j)(2), with several modifications. First, the agencies removed the reference to the “substantially met” language when referring to the evaluation of plan goals. Since the strategic plan option under the final rule is no longer exclusively based on measurable goals, a

¹⁴⁰⁸ See proposed § __.27(k)(1).

¹⁴⁰⁹ See proposed § __.27(h)(2).

determination on whether a bank “substantially met” its plan goals is not necessarily the primary consideration when a bank’s performance is assessed under an approved plan. Further, since goals are not required for each plan evaluation component and each plan will rely on the achievement of goals to a different degree (including the potential that no goals are added to a plan), the establishment of a required attainment standard (such as 95 percent of plan goals), as suggested by a few commenters, would not be appropriate. As a result, final § __.27(j)(2) was revised to indicate that the agencies will consider the factors listed in this provision to the extent that the bank has established goals and does not meet its satisfactory goals in one or more of them. The agencies finalized three of the four consideration factors that were proposed in § __.27(i)(2). More specifically, when determining the effect of unmet goals on a bank’s CRA performance, the final rule includes consideration of the degree to which the goals were not met; the importance of those unmet goals to the plan as a whole; and any circumstances beyond the control of the bank.¹⁴¹⁰ The proposal to include “number of unmet goals” was removed as a consideration factor, consistent with the previously discussed restructuring of the strategic plan option away from the exclusive use of goals to evaluate a bank’s performance under the plan.

The agencies decline to adopt the commenters’ suggestion that an improvement plan be required if the bank did not substantially meet its stated goals. Since final § __.43(b)(5) (content and availability of the public file) requires that a bank that received a less than “Satisfactory” rating during its most recent examination must include in its public file a description of its current efforts to improve its performance in helping to meet the credit needs of its entire community, the agencies believe this provision covers the suggested “improvement plan” made by commenters.

Similar to the proposal,¹⁴¹¹ final § __.27(j)(3) provides guidance for assessing and rating the performance of a bank evaluated under a plan in appendix D. In addition to the general rating information in paragraph a of final appendix D that applies to all banks (including those evaluated under an approved plan), the information for assessing ratings specific to the strategic plan option is maintained in paragraph f of final appendix D. As discussed previously, the paragraph provides that the appropriate Federal financial supervisory agency evaluates a bank’s performance under a plan consistent with the rating methodology specified in the plan pursuant to final § __.27(g)(6). Finally, to the extent it meets the size requirements therein, a bank evaluated under the strategic plan option is subject to the minimum performance test conclusion requirements in paragraph g of final appendix D that would apply to the bank in the absence of an approved plan.

§ __.28 Assigned Conclusions and Ratings

Consistent with the CRA statute, the current CRA regulations provide that the agencies assign a bank an institution rating of “Outstanding,” “Satisfactory,” “Needs to Improve,” or “Substantial Noncompliance” in connection with a CRA examination.¹⁴¹² The agencies also

¹⁴¹⁰ See final § __.27(j)(2)(i)-(iii).

¹⁴¹¹ See proposed § __.27(i)(1).

¹⁴¹² 12 U.S.C. 2906(b)(2), implemented by current 12 CFR __.28(a). The narrative descriptions of the ratings for performance under each evaluation method are in appendix A to the current CRA regulations. See also Q&A appendix A to part __—Ratings.

assign ratings for a bank's performance in each State in which the bank maintains one or more branches or other facilities that accept deposits and in each multistate MSA in which the bank maintains branches or other facilities that accept deposits in two or more states within the multistate MSA.¹⁴¹³ Prior to reaching these overall ratings, the agencies assign performance test ratings at the State, multistate MSA, and institution level for each applicable performance test (*i.e.*, lending, investment, and service tests; community development test; small bank performance standards). With one exception, the current rating scale used for performance test ratings mirrors that of the four statutory institution-level ratings. For large banks, however, the agencies bifurcate the "Satisfactory" rating for each of the three performance tests into "High Satisfactory" and "Low Satisfactory."¹⁴¹⁴ In addition, the agencies separately summarize conclusions regarding the institution's performance in each MSA and the nonmetropolitan portion of each State.¹⁴¹⁵

Current examination procedures allow for assessment areas to be reviewed pursuant to either a full-scope or a limited-scope review. Full-scope reviews employ both quantitative and qualitative factors, while limited-scope reviews are primarily quantitative and generally carry less weight in determining the overall State, multistate MSA, or institution rating.¹⁴¹⁶ The agencies primarily base a bank's component ratings on the bank's performance in each assessment area examined using full-scope examination procedures. For large banks, performance conclusions in assessment areas not examined using the full-scope procedures are expressed as "exceeds," "is consistent with," or "is below" the institution's performance in the relevant MSA or nonmetropolitan portion of the State, in the State, or overall, as applicable.¹⁴¹⁷ For small banks and intermediate small banks, examiners consider facts and data related to the institution's activities to ensure that performance conclusions in assessment areas not examined using the full-scope procedures are "not inconsistent with" the conclusions based on the assessment areas that received full-scope reviews.¹⁴¹⁸

Under the current approach, the agencies use a fact-specific review to determine whether an overall institution CRA rating should be downgraded due to evidence of discriminatory or other illegal credit practices including, but not limited to, evidence of violations of laws listed in current § __.28(c)(1).¹⁴¹⁹

¹⁴¹³ 12 U.S.C. 2906(d). If the agencies assign a bank a rating for a multistate MSA, any rating assigned for a State does not take into account the bank's performance in the multistate MSA.

¹⁴¹⁴ See Q&A § __.28(a)—3; current appendix A(b); Interagency Large Institution CRA Examination Procedures.

¹⁴¹⁵ See Interagency Large Institution CRA Examination Procedures; Interagency Intermediate Small Institution CRA Examination Procedures; Interagency Small Institution CRA Examination Procedures.

¹⁴¹⁶ See *id.*

¹⁴¹⁷ Interagency Large Institution CRA Examination Procedures.

¹⁴¹⁸ Interagency Small Institution CRA Examination Procedures; Interagency Intermediate Small Institution CRA Examination Procedures.

¹⁴¹⁹ See current 12 CFR __.28(c).

Proposed § __.28 described how conclusions and ratings would be assigned under the proposed CRA framework using a consistent, quantifiable approach. The proposal distinguished between “conclusions”—which generally referred to the bank’s performance on a particular performance test for each assessment area; each State and multistate MSA, as applicable; and the institution—and “ratings”—which generally referred to a bank’s overall CRA performance across performance tests for each State and multistate MSA, as applicable, and the institution. Generally, under the proposed framework, the agencies would develop conclusions for a bank’s performance on each applicable performance test for: each assessment area; each State and multistate MSA, as applicable; and the institution. Subject to test-specific variations as described in the section-by-section analysis of §§ __.22 through __.26, § __.29, and § __.30, the agencies generally proposed to assign both a conclusion (*e.g.*, “Low Satisfactory”) and a performance score (*e.g.*, 5.7) based on a bank’s performance under a particular performance test. To determine an intermediate bank or large bank rating for the State, multistate MSA, or the institution, the agencies proposed to aggregate a bank’s performance scores for each applicable performance test, with specific weights assigned to the performance score of each performance test. Unlike under the current approach, the proposed CRA framework did not provide for limited-scope reviews.

Numerous commenters weighed in on the provisions related to assigned conclusions and ratings in proposed § __.28.

Final § __.28 generally adopts the proposed framework for assigned conclusions and ratings discussed above, with revisions discussed in the more detailed section-by-section analysis below.

§ __.28(a) Conclusions

Under the current CRA regulations, the agencies assign performance test ratings for the performance tests that apply to the bank at the institution level. The agencies also assign performance test ratings at the State and multistate MSA level and summarize conclusions regarding a bank’s performance in each MSA and the nonmetropolitan portion of each State with an assessment area.¹⁴²⁰

Under final § __.28(a), “conclusions” generally refer to bank performance on a particular performance test for a specific geographic area (*e.g.*, assessment areas, States, and multistate MSAs, as applicable) and the institution overall. The agencies assign conclusions and associated test performance scores for the performance of a bank in each State and multistate MSA, as applicable, and for the institution based on a weighted average of assessment area conclusions, as well as consideration of additional performance test-specific factors at each level.¹⁴²¹ These performance scores are mapped to conclusion categories to provide performance test conclusions for specific geographic areas and the institution overall. As explained below, the agencies are finalizing § __.28(a) with edits to specify how the agencies will assign conclusions for banks

¹⁴²⁰ See 12 U.S.C. 2906(b), (d).

¹⁴²¹ See the section-by-section analyses of §§ __.22 through __.26, __.29, and __.30 for detailed discussion of how the agencies develop conclusions and performance scores for each performance test. The section-by-section analyses of §§ __.15 and __.21, respectively, also discuss the impact and responsive review for community development loans, investments, and services and the agencies’ consideration of performance context.

operating under a strategic plan, the geographic areas where the agencies will assign conclusions, consistent with the statute, and other clarifying edits.

The Agencies' Proposal

Proposed § __.28(a)(1) provided that, other than for a small bank evaluated under the small bank performance standards in proposed § __.29(a), the agencies would assign one of five conclusions for a bank's performance under the respective performance tests that apply to the bank: "Outstanding"; "High Satisfactory"; "Low Satisfactory"; "Needs to Improve"; or "Substantial Noncompliance." Under proposed § __.28(a)(2), for small banks evaluated under the small bank performance standards in proposed § __.29(a), the agencies would assign lending evaluation conclusions of "Outstanding," "Satisfactory," "Needs to Improve," or "Substantial Noncompliance" based on the bank's lending performance in each facility-based assessment area. Proposed appendix C, as well as proposed appendix E for small banks and intermediate banks, specified how the agencies would develop conclusions for each performance test that applies to a bank, as discussed in the section-by-section analysis of § __.22 through § __.26 above, and § __.29 and § __.30 below.

Comments Received

The agencies received a few comments regarding proposed § __.28(a), all of which related to the proposed bifurcation of the "Satisfactory" conclusion category into "High Satisfactory" and "Low Satisfactory" conclusions. A few commenters expressly supported the proposal to assign conclusions of "High Satisfactory" and "Low Satisfactory." In contrast, another commenter stated that the agencies did not articulate a sufficient justification for bifurcating the "Satisfactory" conclusion category into "High Satisfactory" and "Low Satisfactory." This commenter stated that a single "Satisfactory" category is sufficient for community bank examinations and reporting purposes; therefore, if "High Satisfactory" and "Low Satisfactory" conclusions are retained, they should only apply to the very largest banks. Alternatively, a few commenters suggested assigning conclusions of "High Satisfactory" or "Satisfactory" within the "Satisfactory" range because "Low Satisfactory" has a negative connotation and will unnecessarily subject banks with "Low Satisfactory" conclusions to criticism and a misperception about their satisfactory performance in serving the needs of their customers and communities.

Final Rule

In final § __.28(a), the agencies are adopting the proposal with clarifying revisions, including to the structure of proposed § __.28(a). Specifically, final § __.28(a)(1) addresses State, multistate MSA, and institution test conclusions and performance scores. The agencies are adopting final § __.28(a)(1)(i), renumbered from proposed § __.28(a)(1), with clarifying revisions. Specifically, final § __.28(a)(1)(i) provides that, in general, for each of the applicable performance tests pursuant to final §§ __.22 through __.26 and § __.30, the agencies assign conclusions and associated test performance scores of "Outstanding," "High Satisfactory," "Low Satisfactory," "Needs to Improve," or "Substantial Noncompliance" for the performance of a bank in each State and multistate MSA, as applicable pursuant to § __.28(c), and for the

institution.¹⁴²² As reflected in paragraph b of final appendix C, this includes a small bank that opts to be evaluated under the Retail Lending Test in § __.22. Final § __.28(a)(1)(ii), consistent with proposed § __.28(a)(2), provides that the agencies assign conclusions of “Outstanding,” “Satisfactory,” “Needs to Improve,” or “Substantial Noncompliance” for the performance of a small bank evaluated under the Small Bank Lending Test in final § __.29(a)(2) in each State and multistate MSA, as applicable pursuant to § __.28(c), and for the institution. The agencies are also adopting new § __.28(a)(1)(iii) in the final rule, which provides that the agencies assign conclusions for the performance of a bank operating under a strategic plan pursuant to § __.27 in each State and multistate MSA, as applicable pursuant to § __.28(c), and for the institution in accordance with the methodology of the bank’s strategic plan and final appendix C. *See* the section-by-section analysis of § __.27 for additional information.

After consideration of the comments, the agencies are finalizing the proposed bifurcation of the “Satisfactory” conclusion category into “High Satisfactory” and “Low Satisfactory” conclusions for all banks except small banks evaluated under the Small Bank Lending Test in final § __.29(a)(2). The proposed “High Satisfactory” and “Low Satisfactory” conclusions will allow the agencies to better differentiate between performance on the higher end or on the lower end of the “Satisfactory” range, as compared to developing conclusions with only four categories, including a single “Satisfactory” category. Further, applying the same conclusion categories to all banks, except small banks evaluated under final § __.29(a)(2), will allow the agencies to apply a quantifiable method of assigning conclusions and ratings consistently and uniformly (*i.e.*, assigning a “High Satisfactory” conclusion a performance score of “7” and a “Low Satisfactory” conclusion of performance score of “6” and weighting conclusions as prescribed) to these banks.

The agencies did not adopt commenter suggestions to rename the “Low Satisfactory” conclusion category as “Satisfactory” because the agencies believe that the bifurcated “Satisfactory” conclusion category is well understood to reflect performance within a satisfactory range, and because changing this long-standing terminology could cause confusion.

The agencies are also adopting final § __.28(a)(2), a new provision, to clarify that, pursuant to 12 U.S.C. 2906, the agencies will provide conclusions separately for metropolitan areas in which a bank maintains one or more domestic branch offices (defined in the statute to mean any branch office or other facility of a regulated financial institution that accepts deposits, located in any State¹⁴²³) and for the nonmetropolitan area of a State if a bank maintains one or more domestic branch offices in such nonmetropolitan area. The agencies added this provision to provide a cross-reference to this statutory requirement in the final rule.

§ __.28(b) Ratings

Similar to the current CRA regulations, final § __.28(b) describes how the agencies will assign ratings for each State and multistate MSA, as applicable, and for the institution using the four rating categories established by statute. As proposed, however, the agencies have updated the ratings framework to assign performance scores to each applicable performance test that are

¹⁴²² Refer to the section-by-section analysis of § __.21 for additional discussion of the performance score scale.

¹⁴²³ *See* 12 U.S.C. 2906(e)(1).

combined using a prescribed weighting methodology to assign ratings, and that are subject to adjustment based on additional considerations, discriminatory or other illegal credit practices, and past performance, as applicable.

Many commenters provided comments on the current rating framework and identified issues they perceived with the current approach. Specifically, many commenters stated that there is ratings inflation under the current CRA framework, noting that 98 percent of banks receive at least a “Satisfactory” rating, with 90 percent of banks receiving a “Satisfactory” rating, specifically. A few of these commenters noted that it was implausible that such a large number of banks were performing in the same manner, with a commenter stating that this was impossible given that racism and discriminatory lending persist. A few commenters suggested that the agencies should address these concerns by incorporating additional quantitative tools into the performance tests, improving examination rigor, or increasing objectivity in performance measures. In contrast, a commenter disagreed with the idea that CRA is flawed because of the high percentage of banks that receive at least a “Satisfactory” rating, emphasizing that the ratings reflect that most banks are community banks that treat their customers and communities fairly and do not discriminate.

Many commenters also conveyed that the rating system under the current regulations does not effectively capture distinctions in performance. These commenters appeared to believe that more distinction would result in more banks being identified as significantly lagging behind their peers, which would motivate them to increase their reinvestment activity and improve their ratings.

As described below, the agencies are finalizing § __.28(b) as proposed with revisions, including adjusting the weights assigned to the performance tests for large banks and more fully explaining the ratings framework in § __.28(b).

§ __.28(b)(1) and (2) In General, State, Multistate MSA, and Institution Ratings and Overall Performance Scores

Consistent with the CRA statute, the agencies currently assign ratings for each State and multistate MSA, as applicable, and for the institution. As described below, the agencies proposed in § __.28(b)(1) and (2) that they generally will assign ratings based on an overall performance score for the State, multistate MSA, and institution derived by combining the bank’s performance scores on applicable performance tests. The agencies are generally finalizing the general ratings framework in § __.28(b)(1) and (2) as proposed, with revisions discussed below.

The Agencies’ Proposal

Proposed § __.28(b)(1) provided that the agencies would assign ratings for a bank’s overall performance at the State, multistate MSA, and institution level of “Outstanding,” “Satisfactory,” “Needs to Improve,” or “Substantial Noncompliance.” Other than for a small bank evaluated under the small bank performance standards in § __.29(a), a wholesale or limited purpose bank evaluated under the Community Development Financing Test for Wholesale or Limited Purpose Banks in § __.26, and a bank evaluated based on a strategic plan under § __.27, the agencies proposed in § __.28(b)(2) to assign a rating based on the bank’s overall performance at the State, multistate MSA, and institution levels, respectively, and a related performance score, derived as provided in proposed appendix D. As provided in appendix D, the agencies proposed to

aggregate a bank's performance scores for each applicable performance test, with specific weights assigned to the performance score of each performance test, to derive the bank's rating. The same weighting approach would be used to develop ratings for each State and multistate MSA and for the institution. As described in proposed appendix D, the agencies would assign a rating corresponding with the rating category that is nearest to the aggregated performance score, as follows: a performance score of less than 1.5 would result in a rating of "Substantial Noncompliance"; a performance score of 1.5 or more but less than 4.5 would result in a rating of "Needs to Improve"; a performance score of 4.5 or more but less than 8.5 would result in a rating of "Satisfactory"; and a performance score of 8.5 or more would result in a rating of "Outstanding." The agencies also specified in proposed § __.28(b)(2) that the bank's rating could be adjusted based on evidence of discriminatory or other illegal practices in accordance with § __.28(d).

Comments Received

A few commenters remarked at a high level on the clarity, complexity, and challenges of the proposed rating system. Specifically, a commenter expressed that the proposal provided a more transparent and consistent approach to determining a bank's overall CRA rating. Another commenter stated, however, that the proposed rating system appeared to be overly complicated, and a "Satisfactory" rating may be unachievable for some banks. This commenter recommended further testing of the proposal prior to implementation due to the number of unknowns.

A commenter requested that the agencies improve the proposal by enabling banks to calculate and determine a presumptive rating prior to an examination for all bank sizes and models. In contrast, another commenter asked the agencies to carefully consider the overall structure of the scoring and weighting of various activities under CRA before finalizing a dramatic change, expressing concern that the transparency and predictability that both community groups and banks have requested might have the unintended consequence of starting a race to the bottom.

A few commenters asserted that the CRA ratings framework should better reflect distinctions in performance. One commenter asserted that the proposal did not describe the proposal's impact on CRA ratings except to hint that banks may continue to receive the same ratings. Another commenter conveyed that allowing the vast majority of banks to continue to pass their CRA examinations will not result in banks engaging in serious efforts to positively impact communities of color and low- and moderate-income neighborhoods. A few commenters suggested a five-tier overall rating system, for example, by differentiating between "Low Satisfactory" and "High Satisfactory" overall ratings, to better distinguish performance. These commenters suggested that doing so would distinguish between merely adequate activity, reasonably good activity, and truly superior banking efforts, and would motivate banks to be more responsive to COVID-19 recovery needs. Another commenter recommended a point system that would show more distinctions. A few commenters recommended that the agencies assign a conclusion and performance score for each performance test at the assessment area level and provide performance scores at the overall rating level to accurately depict distinctions in performance.

A few commenters also suggested that the CRA ratings framework should better incentivize high ratings. One commenter stated that the agencies have made it more difficult to achieve "Satisfactory" and "Outstanding" ratings, which could lead to reduced incentives to strive for

such ratings and, consequently, undermine the goals of CRA. Another commenter expressed that the overly simplistic formula proposed for rating banks means that more complicated affordable housing deals—those that help seniors, disabled persons, and rural communities—will not happen. A commenter stated that, under the proposal, more incentives are needed to motivate banks to achieve an “Outstanding” rating, which would help distinguish their performance against peers. Another commenter remarked that when all banks essentially receive the same rating, the motivation to improve dissipates. Another commenter specified that the proposal should provide some financial motivation for an “Outstanding” rating (*e.g.*, reduced taxes, reduced deposit insurance assessments, reduced borrowing rates from the Federal Reserve discount window) because being downgraded from an “Outstanding” to a “Satisfactory” is not much of a disincentive as 90 percent of banks receive “Satisfactory” ratings.

Many commenters offered ideas on how findings regarding race and ethnicity should appropriately be factored into a bank’s rating. One commenter generally indicated that, regarding racial and ethnic equality, the CRA examination process should incorporate both incentives for positive activities and deterrents and penalties for harmful practices. More specifically, another commenter stated that material decreases in performance by race argue for a “Needs to Improve” rating and material increases in performance should be a factor in earning an “Outstanding” rating.

Another commenter suggested providing for a presumptive “Satisfactory” rating for U.S. Department of the Treasury-certified CDFIs, given the existing annual certification requirements in place for these institutions.

Final Rule

The agencies are adopting final § __.28(b)(1) and (2) largely as proposed, but with some revisions for clarity discussed below. Final § __.28(b)(1) provides that the agencies assign a rating for a bank’s overall CRA performance of “Outstanding,” “Satisfactory,” “Needs to Improve,” or “Substantial Noncompliance” in each State and multistate MSA, as applicable pursuant to § __.28(c), and for the institution. These ratings reflect the bank’s record of helping to meet the credit needs of its entire community, including low- and moderate-income neighborhoods, consistent with the safe and sound operation of the bank.

The agencies carefully considered comments that both suggested the proposed CRA rating framework was overly complicated and overly simplistic and, ultimately, believe that the proposed rating system appropriately balances the need for a clear and objective rating system with the need to effectively capture and distinguish between bank performances. Further, the agencies believe that the final rule provides for a quantifiable, consistent approach to assigning conclusions and ratings. The agencies also considered comments that suggested that the CRA ratings framework should be transparent and objective and should recognize distinctions in performance.

Final § __.28(b)(2) addresses ratings and overall performance scores. Under the finalized ratings approach, the agencies will generally assign ratings for each State and multistate MSA, as applicable pursuant to § __.28(c), and for the institution using performance scores associated with a bank’s assigned conclusions. For large banks and intermediate banks, the agencies will use established weights, as discussed further in the section-by-section analysis of § __.28(b)(3), to aggregate performance scores associated with the assigned conclusions for each performance test and, in turn, calculate a performance score associated with the bank’s assigned rating. For

large banks, intermediate banks, small banks that opt into the Retail Lending Test, and limited purpose banks, final § __.28(b)(2)(i) specifies that the agencies will calculate and disclose the bank's overall performance score for each State and multistate MSA, as applicable, and the institution overall. Final § __.28(b)(2)(i) further provides that the agencies will use the overall performance score to assign a rating for the bank's overall performance in each State and multistate MSA, as applicable, and for the institution, subject to adjustments based on evidence of discriminatory or other illegal credit practices pursuant to final § __.28(d) and consideration of past performance pursuant to § __.28(e). The agencies added final § __.28(b)(2)(ii) to clarify that a bank's overall performance scores are based on the bank's performance score for each applicable performance test and derived as provided in § __.28(b)(3), as applicable and as discussed below, and in final appendix D. The agencies also anticipate disclosing the performance scores associated with the bank's assigned conclusions for each performance test. The agencies expect that this will provide banks and the public with meaningful information about each bank's CRA performance. The agencies believe this approach is responsive to several comments that suggested the agencies assign and provide performance scores or develop a points system to depict distinctions in performance. The agencies acknowledge that banks will not be able to calculate and determine a presumptive rating prior to a CRA examination. The agencies decline to adopt this suggestion because such an approach would hamper the agencies' ability to evaluate qualitative components of a bank's CRA performance.

In response to commenter suggestions to build more distinctions in performance into the CRA rating framework, the agencies note that 12 U.S.C. 2906(b)(2) prescribes the four-tier ratings framework under the current approach and the final rule. The agencies believe, however, that publishing performance scores associated with the bank's assigned conclusions and ratings will provide meaningful information about distinctions in bank performance because performance scores may be more nuanced than assigned conclusions and ratings. For example, if a large bank's overall performance score for the institution, derived based on the bank's performance score for each applicable test, is an 8.1, the agencies would assign the bank an institution rating of "Satisfactory," subject to § __.28(d), but the performance score would indicate that that the bank's performance is on the higher end of the "Satisfactory" range.

The agencies also believe that the final CRA framework adequately incentivizes banks to strive to achieve an "Outstanding" rating by disclosing performance scores, conclusions, ratings, and other information about a bank's CRA performance to the public. For example, a bank may indicate to its community that the agencies have evaluated its CRA performance as "Outstanding," as applicable. The agencies note that providing financial incentives under other statutes and regulations for banks that achieve "Outstanding" CRA ratings (*e.g.*, reduced taxes, reduced deposit insurance assessments, reduced borrowing rates from the Federal Reserve discount window), as suggested by one commenter, is outside the scope of this rulemaking and, at least in some cases, would not be within the agencies' statutory authority.

The agencies decline to make additional revisions to the CRA ratings framework to address how findings regarding race and ethnicity should be factored into a bank's rating. For more information and discussion regarding the agencies' consideration of comments recommending adoption of additional race- and ethnicity-related provisions in this final rule, see Section III.C of this **SUPPLEMENTARY INFORMATION**.

Although the agencies recognize that CDFIs play an important role in promoting community development and helping to meet the credit needs of low- or moderate-income individuals and

communities, the agencies do not think it would be appropriate to create a presumption that a U.S. Department of the Treasury-certified CDFI subject to CRA would receive a “Satisfactory” rating. The CRA and the U.S. Treasury Department’s CDFI Fund advance similar objectives but have distinct requirements. Moreover, the agencies are required by statute to assess a bank’s record of meeting the credit needs of its entire community,¹⁴²⁴ including low- and moderate-income neighborhoods, and the agencies believe it would not be appropriate for the agencies to rely on the Treasury Department’s certification to fulfill their statutory obligation.

For these reasons, the agencies are adopting final § __.28(b)(1) and (2) with clarifying revisions from the proposal. The agencies added a sentence in final § __.28(b)(1) that states that the ratings assigned reflect the bank’s record of helping to meet the credit needs of its entire community, including low- and moderate-income neighborhoods, consistent with the safe and sound operation of the bank, which reflects statutory requirements. The agencies proposed a similar statement in § __.21 and believe it is appropriate to include this statement in § __.28 as well, to reinforce the statutory foundation for bank ratings. The agencies also reworded § __.28(b)(1) for clarity. As discussed above, the agencies also made revisions to proposed § __.28(b)(2) in the final rule, including restructuring § __.28(b)(2) to include subparagraph (i) and (ii) to clarify that the agencies will disclose a bank’s overall performance score in each State and multistate MSA, as applicable, and for the institution, and will use the overall performance scores as the basis for the bank’s ratings, subject to § __.28(d) and (e). Final § __.28(b)(2)(i) also clarifies the banks for which the agencies will calculate and disclose performance scores, with one change from the proposal. The agencies believe it is appropriate to calculate and disclose a limited purpose bank’s overall performance score for each State and multistate MSA, as applicable, and the institution, which will be based on the bank’s performance score on the Community Development Financing Test for Limited Purpose Banks.

§ __.28(b)(3) Weighting of Performance Scores

Under current large bank CRA examination procedures, examiners use a rating scale in the Interagency Questions and Answers to convert ratings assigned for each performance test into point values; examiners then add those point values together to determine the overall institution rating.¹⁴²⁵ The agencies do not publish, however, the points assigned to each performance test and the overall points that correspond to the bank’s overall rating in its performance evaluation. With the exception of this rating scale for large banks, the process of combining performance test ratings to determine the State, multistate MSA, or institution ratings relies primarily on examiner judgment, guided by quantitative and qualitative factors outlined in the current regulations. For example, exceptionally strong performance in some aspects of a particular rating profile may compensate for weak performance in others.¹⁴²⁶

For large banks, paragraph b of proposed appendix D provided that the agencies would determine a large bank’s State, multistate MSA, and institution ratings by combining the bank’s performance scores across all four performance tests applicable to large banks. Similarly, for

¹⁴²⁴ See 12 U.S.C. 2903(a).

¹⁴²⁵ See Q&A § __.28(a)—3; current appendix A(b); see also Interagency Large Institution CRA Examination Procedures.

¹⁴²⁶ See Q&A Appendix A to part __—1.

intermediate banks, paragraph c of proposed appendix D provided that to determine an intermediate bank's State, multistate MSA, and institution ratings, the agencies would combine an intermediate bank's performance scores for its State, multistate MSA, and institution performance under the Retail Lending Test and the intermediate bank community development evaluation or, if the bank opts in, the Community Development Financing Test. For both large banks and intermediate banks, the agencies proposed to consistently weight the respective performance tests applicable to each bank when assigning ratings for each State and multistate MSA, as applicable, and the institution.

§ __.28(b)(3)(i) Large bank performance test weights

Under the current rating scale for large banks, although there is some variation based on the points assigned for each performance test rating, the lending test generally accounts for 50 percent and the investment test and service test each generally account for 25 percent of a large bank's rating.¹⁴²⁷ In paragraph b of proposed appendix D, the agencies proposed to weight the performance score for each performance test applicable to a large bank by multiplying it by a percentage established for the performance test. The agencies have generally retained this approach in final § __.28(b)(3)(i) and have described the approach in more detail in paragraph b of final appendix D. As described below, the agencies are adopting in the final rule weights, with revisions relative to the proposal, for the Retail Lending Test, the Retail Services and Products Test, and the Community Development Financing Test, as well as revisions to streamline paragraph b of appendix D. The agencies are finalizing the proposed weight for the Community Development Services Test.

The Agencies' Proposal and Comments Received

For large banks, the agencies proposed to weight performance scores for each test as follows: Retail Lending Test at 45 percent; Community Development Financing Test at 30 percent; Retail Services and Products Test at 15 percent; and Community Development Services Test at 10 percent.¹⁴²⁸

The agencies received many comments on the proposed weighting of the large bank performance tests from a broad range of commenter types. Most of these commenters discussed the proposed weighting of retail activities, reflected in the Retail Lending Test and Retail Services and Products Test conclusions, compared to the weighting of community development activities, reflected in the Community Development Financing Test and Community Development Services Test conclusions. Generally, these commenters expressed concerns that community development activities were weighted too lightly and that the proposed weighting would disincentivize community development activities. Many commenters suggested that retail activities and community development activities be weighted equally, while some commenters provided specific suggestions for the weighting of the large bank performance tests. Finally, a few commenters suggested that the agencies incorporate flexibility into the weighting framework.

¹⁴²⁷ *See id.*

¹⁴²⁸ *See proposed appendix D.b.*

A commenter expressed support for the proposed weighting for large banks, stating that the proposed weighting places appropriate emphasis on the most important aspects of a bank's CRA activities.

Weighting of community development activities compared to retail activities. Most commenters who commented on the proposed weighting of the performance tests conveyed concerns that the proposed weighting of the large bank performance tests overweighted a bank's retail activities compared to its community development activities. These commenters asserted that the proposed weighting would disincentivize and could lessen impactful community development activities. A commenter expressed that the proposed unequal weighting could lead banks to focus more on their retail activities, which also tend to be less expensive and a larger part of their business models. A few commenters stated that the proposed weights would not provide an adequate incentive for banks to meet the community development needs of rural and high-need areas. Moreover, one commenter asserted that there was a lack of an empirical basis for assigning community development activities a lower weight.

Most commenters on the proposed weighting of the large bank performance tests remarked that, due to the heavy weighting of retail activities, it would be extremely difficult or impossible to attain an "Outstanding" rating without an "Outstanding" performance conclusion on the Retail Lending Test. The majority of these commenters stated that, due to such weighting, the difficulty of achieving an "Outstanding" rating would disincentivize banks to pursue this standard. For example, a commenter explained that the proposed weighting for the Retail Lending Test was too high because, for CRA to be effective in providing incentives for institutions to stretch, all banks should have a reasonable opportunity to achieve an "Outstanding" rating.

Some commenters expressed concerns that the proposed weighting would disincentivize banks from seeking an "Outstanding" conclusion for their community development performance, which a commenter stated would be counter to the intent of the original legislation and decades of established practice and investment. One of these commenters expressed concern that the proposed approach may render the Community Development Financing Test immaterial to a bank's ultimate rating and create a race to the bottom when coupled with peer-based performance evaluations.

Many commenters noted that, under the proposal, banks could receive a "Satisfactory" rating even if they performed poorly on the Community Development Financing Test, including receiving a "Needs to Improve" conclusion. A few commenters stated that this aspect of the proposal places low value on community development activities and risks banks deprioritizing community development, running counter to the intent of the CRA statute. Lastly, a commenter believed that the proposed weighting, which would allow a bank to receive an overall "Satisfactory" rating even if it received a "Needs to Improve" conclusion on the Community Development Financing Test as long as it received "Low Satisfactory" conclusion on the Retail Lending Test, sets an incredibly low bar that most banks would clear and could disincentivize banks from pursuing community development activities.

Some commenters expressed concerns about the impact the proposed weighting would have on certain community development activities, particularly that the proposed weighting would reduce community development equity financing, including participation in the LIHTC and NMTC programs, and would negatively impact affordable housing. Additionally, one

commenter suggested that the proposed weighting would significantly diminish the community finance ecosystem and the CDFI industry. Another commenter expressed concern that the proposed weighting of the Community Development Financing Test would risk reducing the amount of long-term, patient capital flowing to essential projects in the form of community development investments.

Some commenters remarked on the potential negative effect of the proposed weighting on bank risk profiles and certain business models. A few commenters stated that the high weight placed on the Retail Lending Test would disadvantage business models that do not focus on retail lending in particular geographies or overall. Other commenters noted that the high weight for the Retail Lending Test would encourage excessive risk-taking to meet CRA standards and adversely impact safety and soundness. One commenter suggested that a commercial bank could feel pressured by the weighting to compete with credit unions for certain personal products, creating more risk in its portfolio. Another commenter stated that the proposal failed to adequately consider that many banks are not structured to offer large retail loans due to the specific needs of their markets. This commenter asserted that a bank with a business model of small-dollar retail lending with an innovative, complex, and responsible community development lending and investment strategy would not be positioned to earn an “Outstanding” rating. Another commenter stated that proposed weight of the Retail Lending Test would be detrimental to its overall CRA rating and would essentially take staff away from helping low- and moderate-income individuals in its community.

Suggestions to adjust the proposed weighting of the performance tests for large banks. Many commenters suggested weighting retail and community development activities equally, with one commenter explaining that this would ensure that resources are more effectively directed to underserved communities. A community development organization stated that the Community Development Financing Test should carry the same, if not more, weight relative to any other performance test, including the Retail Lending Test. Another community development organization likewise supported a stronger role for community development lending and investment over retail lending.

A number of commenters proposed specific alternatives to achieve the equal weighting of retail and community development activities. To achieve equal weight, a few commenters suggested weighting the Retail Lending Test and the Community Development Financing Test each at 40 percent and the Retail Services and Products Test and the Community Development Services Test each at 10 percent. A few other commenters suggested weighting the Retail Lending Test and the Community Development Financing Test each at 35 percent and the Retail Services and Products Test and the Community Development Services Test each at 15 percent. Another commenter suggested that the Community Development Financing Test should be increased to 45 percent, with 25 percent for community development lending and 20 percent for community development investments, and the weight assigned to the Community Development Services Test should be reduced to five percent as many community development services are eligible to be considered under the Retail Services and Products Test. Another commenter suggested that the agencies weight the Retail Lending Test at 35 percent, the Retail Services and Products Test at 15 percent, the Community Development Financing Test at either 40 percent or 45 percent, and the Community Development Services Test at either 10 percent or 5 percent, with the Community Development Services Test receiving the higher weight if grants are included in that performance test.

A few commenters recommended weighting alternatives that did not provide retail and community development activities equal weight, but which generally increased the weight afforded to community development activities. Specifically, one commenter suggested weighting the Retail Lending Test and the Community Development Financing Test each at 40 percent, the Retail Services and Products Test at 15 percent, and the Community Development Services Test at five percent. A commenter recommended weighting community development activities at 60 percent for all banks. Another commenter suggested that the agencies give community development activities a 75 percent weight and retail activities a 25 percent weight, as CRA community development activities have been attributed to reducing the depth of the nation's poverty levels.

A few commenters had additional comments regarding the weighting of community development services. Several commenters stated that the Community Development Services Test is weighted too heavily at 10 percent. One commenter suggested that the Community Development Services Test should be weighted at 5 percent. In contrast, a few commenters suggested that the proposed weight for the Community Development Services Test should be raised as it is too light to encourage effective development of community development services. These commenters suggested weights between 15 percent and 30 percent, although one commenter noted that increasing the weighting of community development services could result in less importance associated with community development lending and investments. A commenter remarked that the weighting of the Community Development Services Test at 10 percent provided large banks with little incentive to strive for an "Outstanding" over a "Satisfactory" performance conclusion.

A few commenters expressed concern regarding the weighting of retail services and products relative to their importance in assisting communities. A commenter expressed concern that combining all of these critical components of CRA—meaningful access to branches, accounts, and responsive credit products—would give them insufficient consideration in a performance test representing only 15 percent of a bank's CRA rating. One commenter recommended that the rating system emphasize lending, branches, fair lending performance, and responsible loan products for working class families. Another commenter believed that the proposed rating system would devalue the importance of maintaining branches in low- and moderate-income neighborhoods.

Weighting suggestions based on different performance test frameworks. Commenters also suggested weighting based on changes to the four-test framework. For example, a commenter suggested combining the retail performance tests into one performance test and the community development performance tests into one performance test and then giving these combined tests equal weight. A few commenters suggested combining the community development performance tests into one performance test and weighting the combined performance test at 45 percent or 50 percent. Another commenter suggested eliminating the Community Development Services Test and weighting the Community Development Financing Test at 50 percent. Alternatively, a CDFI proposed a five-test weighting scheme with the Retail Lending Test weighted at 35 percent, the Retail Services and Products Test at 15 percent, a Community Development Lending Test at 20 percent, a Community Development Investment Test at 20 percent, and the Community Development Services Test at 10 percent (with grants included under the Community Development Services Test). A few other commenters suggested

establishing a Community Development Test weighted at 50 percent, with weighted subtests within the Community Development Test for investments, lending, and services.

Comments regarding weighting flexibility. A few commenters recommended incorporating flexibility in the weighting framework for large banks. A commenter suggested that applying the same weighting to the four large bank tests regardless of how important retail banking is to the bank being evaluated could lead to a disproportionate emphasis on retail loans for banks that focus on other business lines and primarily serve low- and moderate-income people through their community development activities, so the agencies should allow flexibility to accommodate banks with different business models. This commenter suggested, at a minimum, permitting weighting flexibility in strategic plans. Other commenters supported weighting flexibility to allow for other factors such as the availability of funding and variations in market demand and opportunities. A commenter suggested that examiners should have leeway to consider performance context in weighting.

Final Rule

The agencies have considered the many comments that expressed concerns about the proposed weighting of the large bank performance tests and made suggestions to revise the weighting to ensure that community development activities receive appropriate weight. After careful consideration of these comments and further reflection on the proposal, the agencies are adopting modified weighting for the performance tests for large banks in final § __.28(b)(3)(i) and paragraph b of final appendix D, which will result in equal weighting for community development activities and retail activities.

Specifically, in calculating ratings for large banks at the State, multistate MSA, and institution level, the agencies will weigh the performance scores for the applicable performance tests for large banks as follows:¹⁴²⁹ the Retail Lending Test at 40 percent; the Community Development Financing Test at 40 percent; the Retail Services and Products Test at 10 percent; and the Community Development Services Test at 10 percent. In order to increase the weight of the Community Development Financing Test by 10 percent (from 30 percent to 40 percent), the agencies will reduce by 5 percent the weights for both the Retail Lending Test (from 45 percent to 40 percent) and the Retail Service and Products Test (from 15 percent to 10 percent). The agencies considered a number of weighting alternatives, including those suggested by commenters, and determined that the weighting for large bank performance test scores adopted in the final rule most appropriately balances the many considerations involved in establishing these weights. As discussed below, this change will also mean that retail activities and community development activities will be equally weighted for both intermediate banks and large banks under the respective weighting for applicable performance tests.

The agencies expect that increasing the weights of the community development tests so that the combined weight of the Community Development Financing Test and the Community

¹⁴²⁹ Refer to the section-by-section analysis of §§ __.22 through __.25 for discussion of how the agencies derive the performance score for each performance test applicable to a large bank. Generally, performance scores are presented as unrounded or rounded numbers, depending on the applicable performance test, on the 10-point scale described in the section-by-section analysis of § __.21.

Development Services Test accounts for half of a large bank's ratings, and the Community Development Financing Test, in particular, accounts for 40 percent of a large bank's ratings, will address many concerns expressed by commenters. Specifically, the increased weight will more strongly incentivize community development loans and investments, including certain community development activities that commenters identified as particularly impactful. The agencies also believe that the weighting under the final rule will encourage banks to pursue "Outstanding" ratings based on "Outstanding" performance on either the Community Development Financing Test or the Retail Lending Test, or both, as appropriate based on the bank's capacity and business model. Similarly, the finalized weighting will make it more difficult for a bank to obtain an "Outstanding" or "Satisfactory" rating with a "Needs to Improve" conclusion on the Community Development Financing Test. Further, the increased weight placed on community development lending and investment recognizes that not all community credit needs can be met through retail lending. For example, affordable housing is a widespread community need that banks generally may not be able to address through retail lending.

After extensive consideration of the comments, the agencies also believe that the corresponding reduction in the assigned weight for the Retail Lending Test from 45 percent to 40 percent is appropriate. The agencies note that, although the lending test generally receives 50 percent weight under the current CRA rating framework, the final Retail Lending Test does not have the same scope as the current lending test. For example, community development lending, which is currently considered under the large bank lending test, will be considered with community development investments under the Community Development Financing Test. Under the final rule, multifamily lending also will be exclusively evaluated under the Community Development Financing Test. Further, as discussed in the section-by-section analysis of § __.28(b)(4) below, the final rule retains the requirement that a bank receive a minimum performance test conclusion of a "Low Satisfactory" on the Retail Lending Test for a State, multistate MSA, or institution, to receive a "Satisfactory" rating for, respectively, the State, multistate MSA, or the institution. Between the final weighting and this requirement, the agencies believe the final rule contains appropriate safeguards to ensure that a bank must meet the retail credit needs of its community to receive an "Outstanding" or "Satisfactory" rating.

As noted above, the final rule reduces the weight assigned to the Retail Services and Products Test from 15 percent to 10 percent. After considering all comments on the weighting of the large bank performance tests, including those regarding the weighting of retail services and products, the agencies believe this change best facilitates an increase in the weight of the Community Development Financing Test, as discussed above. Further, the final rule adopts the proposal to weight the Community Development Services Test at 10 percent. Therefore, the final rule will weight a bank's retail and community development activities equally with respect to retail and community development lending and investment and retail and community development services. The agencies believe this balance in the weighting will appropriately encourage CRA activities of all kinds and will provide flexibility for banks. The combined 20 percent weighting of the Retail Services and Products Test and the Community Development Services Test will remain similar to the effect of the current service test on a large bank's rating under the current rating scale, which is generally 25 percent of a large bank's rating.

The agencies believe that equally weighting both the Retail Lending Test and the Community Development Financing Test at 40 percent and both the Retail Services and Products Test and

the Community Development Services Test at 10 percent recognizes the historical focus of CRA on retail and community development lending and investment and is consistent with the statutory purpose of CRA to encourage banks to help meet the credit needs of their local communities.¹⁴³⁰ The agencies also believe the 10 percent weight assigned to both the Retail Services and Products Test and Community Development Services Test will ensure these performance tests have sufficient weight in the calculation of the bank’s overall rating to be meaningful.

For the reasons described in the section-by-section analysis of final § __.21, the agencies have determined to finalize the general framework of four performance tests for large banks as proposed. Thus, suggested weighting schemes based on a different performance test framework, such as those involving the combination, elimination, or addition of performance tests, would not align with the final rule.

The agencies have determined to assign a fixed weight for each of the performance tests applicable to a large bank. For large banks, the agencies believe the benefits of weighting flexibility for banks with different communities, business models, and capacity are outweighed by an interest in ensuring an objective, quantifiable, and consistent method to assign large bank ratings. The agencies note that the performance tests for large banks have elements tailored to a bank’s size and business model and allow for flexibility in considering and weighting components, as appropriate. As discussed in the section-by-section analysis of final § __.21, the agencies will also consider performance context under final § __.21(d) in assigning the conclusions and associated performance scores that factor into a bank’s assigned ratings. Finally, as discussed in the section-by-section analysis of final § __.27, the final rule permits weighting flexibility for banks evaluated under an approved strategic plan pursuant to final § __.27.

In addition to the revisions discussed above, the agencies added final § __.28(b)(3)(i) to address the weighting of performance scores for large bank ratings in final § __.28. The agencies also made revisions to streamline paragraph b of final appendix D compared to the proposal.

§ __.28(b)(3)(ii) Intermediate bank performance test weights

Under the current ratings approach for intermediate small banks, the agencies have not established a rating scale to aggregate an intermediate small bank’s performance under the lending test and the community development test. Current practice with respect to intermediate small banks, however, typically gives equal weight to retail lending and community development activities.¹⁴³¹

¹⁴³⁰ See 12 U.S.C. 2901(b).

¹⁴³¹ Under the current approach, an intermediate small bank’s performance on the lending test and the community development test are generally treated equally. For example, an intermediate small bank may not receive an assigned overall rating of “Satisfactory” unless it receives a rating of at least “Satisfactory” on both the lending test and the community development test. An intermediate small bank that receives an “Outstanding” rating on one test and at least “Satisfactory” on the other test may receive an assigned overall rating of “Outstanding.” See current appendix A(d)(3); Interagency Intermediate Small Institution CRA Examination Procedures.

In paragraph c of proposed appendix D, similar to the proposal with respect to large banks, the agencies proposed to weight the performance score, presented on a 10-point scale as described in the section-by-section analysis of § __.21, for each performance test applicable to an intermediate bank by multiplying it by a percentage established for the performance test. As described below, the agencies generally adopted this approach in final § __.28(b)(3)(ii) and as described in more detail in paragraph c of final appendix D. The agencies also made revisions to streamline paragraph c of final appendix D compared to the proposal.

The Agencies' Proposal and Comments Received

For intermediate banks, the agencies proposed to weight the Retail Lending Test at 50 percent and the intermediate bank community development evaluation, or, for intermediate banks that opt in, the Community Development Financing Test, at 50 percent.¹⁴³² The agencies sought feedback on whether it would be more appropriate to weight retail lending activity at 60 percent and community development activity at 40 percent in developing the overall rating for an intermediate bank to maintain the CRA's focus on meeting community credit needs through home mortgage loans, small business loans, and small farm loans.

As discussed above in the section-by-section analysis of § __.28(b)(3)(i), many commenters addressed the appropriate weighting of a bank's community development activities relative to its retail activities. Many commenters specifically recommended that a bank's community development activities and retail activities should be equally weighted. Although many of these comments were specific to the agencies' proposed weighting for the large bank performance tests, other commenters did not specify whether their comments applied to large banks or intermediate banks.

A few commenters specifically addressed the proposed weighting for intermediate banks. The commenters supported equal weighting for the Retail Lending Test and the intermediate bank community development evaluation based on the idea that community development services are assessed in the intermediate bank community development evaluation. One of the commenters stated that if community development services are optional for intermediate banks, however, the Retail Lending Test weight should be increased to 55 or 60 percent to encourage more lending.

Final Rule

In final § __.28(b)(3)(ii) and paragraph c of final appendix D, after considering the comments and alternatives to the proposed weighting for intermediate bank performance scores, the agencies are finalizing as proposed the weights for both the Retail Lending Test and the renamed Intermediate Bank Community Development Test (*i.e.*, referred to as the "intermediate bank community development evaluation" in the proposal) or, for intermediate banks that opt in, the Community Development Financing Test.

As discussed above with respect to large banks, the agencies believe that equally weighting a bank's retail lending and community development lending appropriately emphasizes retail lending and community development lending and investments as key parts of a bank's CRA activities. As discussed above, equal weighting is generally consistent with the agencies' current approach to intermediate small banks. Because the final rule also generally adopts equal

¹⁴³² See proposed appendix D.c.

weighting for the retail and community development activities of large banks, adopting equal weighting for an intermediate bank's retail and community development activities will establish a consistent standard for banks evaluated under multiple performance tests and subject to weighting of performance scores.

The agencies also considered the impact of the additional consideration for other activities, including community development services, on the weighting of the performance tests applicable to intermediate banks. As discussed further in the section-by-section analysis of final § __.30, however, the agencies believe that the flexibility intermediate banks have to decide which community development approach better fits their bank will allow banks that currently participate heavily in community development services to continue to be evaluated for these services under the Intermediate Bank Community Development Test, or to have these community development services given additional consideration if they opt into the Community Development Financing Test. As such, the agencies did not increase the Retail Lending Test weight based on commenter input.

In addition to the revisions discussed above, the agencies added final § __.28(b)(3)(ii) to address the weighting of performance scores for intermediate banks ratings in final § __.28. The agencies also made revisions to streamline paragraph c of final appendix D.

§ __.28(b)(4) Minimum conclusion requirements

In addition to the weighting approach above, final § __.28(b)(4) establishes requirements, as proposed in paragraph g of appendix D, for minimum performance test conclusions for a large bank or an intermediate bank to be eligible for an "Outstanding" or "Satisfactory" rating. The agencies intended these requirements to be additional safeguards, in addition to the rating developed by aggregating and weighting a bank's performance test scores, to ensure that a bank receiving an "Outstanding" or "Satisfactory" rating is meeting the credit needs of its community.

Under the current approach, the agencies assign ratings for large banks assessed under the lending, investment, and service tests in accordance with several principles. First, a large bank that receives an "Outstanding" rating on the lending test receives an assigned rating of at least "Satisfactory."¹⁴³³ Second, a large bank that receives an "Outstanding" rating on both the service test and the investment test and at least a "High Satisfactory" rating on the lending test receives an assigned rating of "Outstanding."¹⁴³⁴ Finally, a large bank cannot receive an assigned rating of "Satisfactory" or higher unless it receives at least a "Low Satisfactory" rating on the lending test.¹⁴³⁵ The current rating scale for large banks reflects these principles.

In addition, under the current approach, an intermediate small bank may not receive an overall "Satisfactory" rating unless it receives at least a "Satisfactory" on both the lending test and the community development test.¹⁴³⁶ An intermediate small bank that receives an

¹⁴³³ Current 12 CFR __.28(b)(1).

¹⁴³⁴ Current 12 CFR __.28(b)(2).

¹⁴³⁵ Current 12 CFR __.28(b)(3).

¹⁴³⁶ See current appendix A(d)(3)(i).

“Outstanding” on one test and at least “Satisfactory” on the other test may receive an overall rating of “Outstanding.”¹⁴³⁷

§ __.28(b)(4)(i) Retail Lending Test minimum conclusion

Consistent with a current approach, final § __.28(b)(4)(i) adopts the requirement, proposed in paragraph g.1 of appendix D, that an intermediate bank or a large bank must receive at least a “Low Satisfactory” Retail Lending Test conclusion to be eligible for an “Outstanding” or “Satisfactory” rating for a State, multistate MSA, or the institution overall.

The Agencies’ Proposal and Comments Received

The agencies proposed in paragraph g.1 of appendix D to retain the current requirement that an intermediate bank or a large bank must receive at least a “Low Satisfactory” Retail Lending Test conclusion at, respectively, the State, multistate MSA, or institution level to receive an overall State, multistate MSA, or institution rating of “Outstanding” or “Satisfactory.”¹⁴³⁸ A commenter specifically supported this part of the proposal with respect to intermediate banks.

The agencies did not propose minimum conclusion requirements for other performance tests, such as the current requirement that an intermediate small bank must receive a “Satisfactory” on both the current lending test and the current community development test to receive an overall “Satisfactory” rating. The agencies also did not propose specific minimum conclusion requirements for a bank to receive an “Outstanding” rating. Some commenters suggested, however, that the agencies impose minimum conclusion requirements for other performance tests for a bank to receive an “Outstanding” rating.

Community development test minimum conclusions. Some commenters recommended that the agencies should also require at least a “Low Satisfactory” on the community development performance tests in order to receive an overall “Satisfactory” rating. Further, a few commenters suggested that a bank should not receive a higher overall rating than the conclusion it receives on the community development tests. Some commenters specifically recommended that no bank should receive a “Satisfactory” rating unless it receives at least a “Low Satisfactory” conclusion on the Community Development Financing Test. A commenter specifically opposed eliminating, for intermediate banks, the current requirement that intermediate small banks receive a “Satisfactory” on the community development performance test to earn a “Satisfactory” rating, stating this would have the perverse outcome of reducing overall levels of community developing financing.

Other requirements for a “Satisfactory” rating. Some commenters suggested that the agencies consider failing a bank overall if the bank receives a “Needs to Improve” on any of the performance tests. A group of commenters suggested that a passing score for a bank should be based on high scores for each component of its CRA examinations. Another commenter believed that all of a bank’s CRA “activity areas” and sub-activity areas should be evaluated

¹⁴³⁷ See current appendix A(d)(3)(ii)(A).

¹⁴³⁸ See proposed appendix D.g.1. The agencies did not, however, propose to retain, for intermediate banks, the current requirement that intermediate small banks must receive a “Satisfactory” rating on both the Retail Lending Test and intermediate bank community development evaluation.

separately, with a high minimum threshold of activity, calculated as a percentage of deposits, in each area, and that no CRA activity area should be abandoned or allowed to underperform.

More generally, a commenter proposed that no bank should pass its CRA examination if it fails to serve communities with branches, and affordable and accessible products. Additionally, a few commenters expressed that banks should not pass their CRA examinations if they are not lending to minorities or if HMDA data show that they have otherwise failed to serve the entire community.

Requirements related to an “Outstanding” rating. A few commenters suggested allowing a bank to achieve an overall rating of “Outstanding” by receiving an “Outstanding” conclusion for its community development activities and at least a “High Satisfactory” conclusion for its retail activities. A commenter recommended not precluding banks with a “High Satisfactory” conclusion on either the Retail Lending Test or the Community Development Financing Test from an overall “Outstanding” rating. Another commenter suggested that a large bank that receives a “High Satisfactory” conclusion on the Retail Lending Test and “Outstanding” conclusions for the other three performance tests should receive an “Outstanding” rating overall. Another commenter suggested that a large bank that receives an “Outstanding” conclusion on the Community Development Financing Test or on the Retail Lending Test should receive an overall “Outstanding” rating if it received at least a “High Satisfactory” conclusion on the other performance tests. A few other commenters stated that no bank should receive an “Outstanding” rating without demonstrating improved measures of direct responses to the needs of low- and moderate-income populations with disabilities within and across assessment areas.

Final Rule

The agencies are adopting paragraph g.1 of final appendix D as proposed. Consistent with the agencies’ determination to include more detail about how bank ratings will be assigned in § __.28, as discussed above, the final rule also adopts in § __.28(b)(4)(i) the requirement that an intermediate bank or a large bank must receive at least a “Low Satisfactory” Retail Lending Test conclusion for the State, multistate MSA, or institution to be eligible for an “Outstanding” or “Satisfactory” rating for, respectively, that State, multistate MSA, or institution.

The commenter that specifically addressed the minimum performance conclusion requirement for the Retail Lending Test expressed support for the agencies’ proposal. The agencies also continue to believe this minimum performance conclusion requirement emphasizes the importance of retail loans to low- and moderate-income communities. Finalizing this requirement will ensure that banks are required to meet the retail lending credit needs of their communities to receive an “Outstanding” or “Satisfactory” rating for each State, multistate MSA, or the institution.

As proposed, the final rule does not establish minimum performance conclusion requirements for performance tests other than the Retail Lending Test. Generally, the agencies believe that the final rule’s consistent and objective weighting for the performance tests under § __.28(b)(3) will result in banks being assigned the appropriate rating category. For example, the agencies expect more nuanced performance scores for each performance test and the overall CRA ratings as a result of the methodology for weighting bank performance across applicable geographic areas.

With respect to commenter suggestions that the agencies impose a similar minimum performance conclusion requirement for the Community Development Financing Test as that

established for the Retail Lending Test, the agencies considered and decided not to adopt this suggestion. In the final rule, as discussed above in the section-by-section analysis of final § __.28(b)(3), the agencies revised the proposed weighting of the performance tests for large banks to equally weight the Community Development Financing Test and the Retail Lending Test. The agencies believe this change sufficiently addresses commenter concerns that the proposal did not sufficiently emphasize community development loans and investments, and do not believe that adding an additional requirement outside of the weighting framework is necessary.

Also as proposed, the final rule does not adopt the current requirement that an intermediate bank must receive a “Satisfactory” rating on both the Retail Lending Test and either the Intermediate Bank Community Development Test or, if the bank opts in, the Community Development Financing Test, to receive an “Outstanding” or “Satisfactory” rating. The agencies continue to believe eliminating this requirement for intermediate banks allows intermediate banks to meet community development credit needs consistent with their more limited capacity.

The agencies decline to adopt revisions based on commenter suggestions that the agencies should consider failing a bank overall if the bank receives a “Needs to Improve” on any of the performance tests. The agencies generally want to encourage banks to compensate for weaker performance in one area with stronger performance in another, and the commenter’s approach may discourage a bank that receives a “Needs to Improve” conclusion on one performance test from striving for higher conclusions on other performance tests. The agencies believe this is consistent with the statutory purpose of CRA to encourage banks to help meet the credit needs of their communities.¹⁴³⁹ The agencies intend that the weighting of performance scores for applicable performance tests for large banks and intermediate banks, subject to the minimum performance requirement for the Retail Lending Test reflects a bank’s overall performance in a State or multistate MSA or for the institution.

With respect to comments suggesting requirements for “Outstanding” ratings, the agencies believe that the established weighting for performance test scores will appropriately identify when a bank demonstrates “Outstanding” performance. The agencies also believe that the weighting for ratings under the final rule, which will, in general, equally weight a bank’s retail activities and community development activities, addresses the commenter concerns that led to some of these suggestions. For example, a large bank will generally need to receive an “Outstanding” performance conclusion on one or more performance tests, including either or both of the “Retail Lending Test” or Community Development Financing Test, to receive an “Outstanding” rating.

§ __.28(b)(4)(ii) Minimum of “Low Satisfactory” overall facility-based assessment area and retail lending assessment area conclusion

Final § __.28(b)(4)(ii) adopts the requirement, modified from that proposed in paragraph g.2. of appendix D, that a large bank with a combined total of 10 or more facility-based assessment areas and retail lending assessment areas in any State or multistate MSA, as applicable, or for the institution, as applicable, may not receive a rating of “Satisfactory” or “Outstanding” in that State or multistate MSA, as applicable, or for the institution, unless the bank receives an overall

¹⁴³⁹ See 12 U.S.C. 2901(b).

conclusion of at least “Low Satisfactory” in 60 percent or more of the total number of its facility-based assessment areas and retail lending assessment areas in that State or multistate MSA, as applicable, or for the institution. The current regulations do not include a similar requirement. The final rule adopts paragraph g.2. of proposed appendix D, with clarifying revisions and one modification to phase in this requirement as described below, and also includes this requirement in new final § __.28(b)(4)(ii).

The Agencies’ Proposal

In paragraph g.2 of proposed appendix D, the agencies provided that a large bank with 10 or more facility-based assessment areas and retail lending assessment areas combined in a State, in a multistate MSA, or nationwide would not be eligible to receive a “Satisfactory” or higher rating for, respectively, the State, multistate MSA, or institution unless the bank achieved at least an overall “Low Satisfactory” conclusion in at least 60 percent of its facility-based assessment areas and retail lending assessment areas.¹⁴⁴⁰ For purposes of this requirement, the overall conclusion in a facility-based assessment area would be based on the performance scores for the conclusions that the large bank received on each performance test in that assessment area.¹⁴⁴¹ For each facility-based assessment area, the agencies proposed to develop a facility-based assessment area performance score, for purposes of this requirement only, by calculating a weighted average of the performance scores for each performance test using the same test-specific weights as the agencies would use to calculate ratings.¹⁴⁴² If the weighted average of the performance scores for each test was 4.5 or greater, the large bank would be considered to have an overall conclusion of at least “Low Satisfactory” in the facility-based assessment area.¹⁴⁴³ For each retail lending assessment area, for purposes of this requirement only, the bank’s overall conclusion would be equivalent to its Retail Lending Test conclusion.¹⁴⁴⁴

The agencies requested feedback on whether the proposed requirement that a large bank with 10 or more facility-based assessment areas and retail lending assessment areas would receive at most a “Needs to Improve” rating unless the bank achieved at least an overall “Low Satisfactory” conclusion in at least 60 percent of its facility-based assessment areas and retail lending assessment areas should apply to facility-based assessment areas and retail lending assessment areas or only to facility-based assessment areas. Additionally, the agencies sought feedback about: whether 10 facility-based assessment areas and retail lending assessment areas was the right threshold to trigger this requirement; and whether 60 percent of facility-based assessment areas and retail lending assessment areas was the right threshold to satisfy this requirement. Finally, the agencies requested feedback on the impact that this requirement would have on branch closures.

Comments Received

¹⁴⁴⁰ See proposed appendix D.g.2.i.

¹⁴⁴¹ See proposed appendix D.g.2.ii.B.

¹⁴⁴² See proposed appendix D.g.2.ii.C.

¹⁴⁴³ See proposed appendix D.g.2.ii.D.

¹⁴⁴⁴ See proposed appendix D.g.2.ii.A.

Most commenters expressed concern about the proposed 60 percent threshold. Many commenters suggested that the 60 percent threshold would not effectively incentivize CRA activities in rural areas or smaller urban areas, noting that because smaller areas could represent a minority of assessment areas a bank could pass the 60 percent threshold by focusing on the larger areas.

Some commenters stated that no bank should be allowed to pass its CRA examination if it fails nearly 40 percent of its assessment areas or to pass in an assessment area where it fails one of the performance tests, especially in cases where there is displacement financing or branch closures in already underserved low- and moderate-income and minority communities. Similarly, some commenters expressed that banks should be required to serve all areas, and not just 60 percent of areas, where they take deposits and lend. Moreover, a commenter did not support assigning a percentage threshold to the number of assessment areas required for passing and, along with another commenter, suggested that if a bank failed in any assessment area, it should be deemed not to be serving the needs of its community in a satisfactory manner.

A few commenters proposed increasing the 60-percent threshold, with at least one commenter suggesting each of 67 percent, 70 percent, 75 percent, and 90 percent as an appropriate threshold. One commenter explained that a higher threshold would encourage banks to meet the credit needs of a larger share of their customers and communities.

Commenters also proposed alternative ways to implement the 60-percent threshold. Many commenters suggested requiring the threshold be met for different types of assessment areas (*e.g.*, large metropolitan, small metropolitan, and rural assessment areas; or metropolitan and nonmetropolitan assessment areas). One of these commenters indicated that this should be in addition to increasing the threshold to 70 percent for all assessment areas. A few commenters recommended that a lender with 10 or more rural assessment areas should be required to earn a “Satisfactory” conclusion in the majority of its rural assessment areas in order to achieve an overall rating of “Outstanding” or “Satisfactory.”

A few commenters encouraged having a “Satisfactory” rating threshold that is weighted across different types of assessment areas to help all communities experience the intended effect of the CRA, with one commenter suggesting that the weights assigned to each assessment area be reversed according to the assessment area size. The latter commenter also suggested a combination of requiring that the threshold be met for different types of assessment areas and incorporating weighting. This commenter suggested that the proposed unweighted 60 percent threshold would impose a “cliff” that could encourage banks to stop activities in certain areas or avoid expansion to new areas to be eligible for a “Satisfactory” rating, which may affect competition. The commenter also suggested that according to its analysis, a simplified version of the Retail Lending Test without the 60 percent requirement could produce the same aggregate outcome with less potentially adverse incentives.

Regarding the agencies’ request for feedback on the 10 facility-based assessment area and retail lending assessment area threshold, one commenter suggested lowering the threshold from 10 to five assessment areas, because the proposed threshold implies that a bank can fail in four assessment areas before receiving a “Needs to Improve” rating. A few commenters stated that this threshold should be fewer than 10 assessment areas without suggesting a specific number.

A few other commenters suggested a broader implementation of this requirement. Specifically, a commenter suggested expanding the group of banks subject to this requirement

from large banks to all banks. Another commenter suggested that the requirement should also apply to be eligible for an “Outstanding” rating, such that a bank with 10 or more assessment areas would need a conclusion of Outstanding in at least 60 percent of its assessment areas to achieve an overall conclusion of Outstanding.

Some other commenters supported the 60 percent threshold only for facility-based assessment areas. For example, one commenter suggested not including retail lending assessment areas because it is much harder for banks to meet low- and moderate-income credit needs where they do not have a local branch presence and to compete with banks that have branches.

A few commenters opposed the requirement generally. A commenter explained that banks should strive to serve all of their markets, but that there is variation in a bank’s ability to serve any given assessment area. This commenter explained that branch presence, tenure in the community, and economic conditions all impact CRA performance and cautioned that the 60 percent requirement could cause banks to close branches in their weaker markets, causing the loss of competitive financial services in areas where they are needed but are in decline. Another commenter suggested that the prospect of negative publicity from poor performance in a significant number of assessment areas would already provide banks sufficient incentive to perform satisfactorily in as many of their assessment areas as possible.

Final Rule

The final rule adopts the 60 percent requirement proposed in paragraph g.2 of appendix D with one modification, a phased implementation of the requirement, as well as clarifying revisions. Specifically, under final § __.51(e) and as discussed in the section-by-section analysis of § __.51(e), in a large bank’s first examination under the final rule, the requirement will only apply where a bank has 10 or more facility-based assessment areas in any State or multistate MSA, or for the institution, as applicable. Therefore, final § __.28(b)(4)(ii)(B) and paragraph g.2.i of final appendix D, provide that the requirement applies except as provided in final § __.51(e).

After careful consideration of commenters’ suggestions, the agencies are finalizing the 60 percent threshold. The agencies proposed this requirement to ensure that large banks receiving a “Satisfactory” rating meet the credit needs of their entire community and not just densely populated markets with high levels of lending and deposits that will factor heavily into the calculation of a bank’s ratings based on how assessment area conclusions will be weighted to develop a bank’s performance test conclusions, which, in turn, will be used to develop a bank’s ratings. The agencies note that the requirement that a large bank receive at least a “Low Satisfactory” in 60 percent of facility-based assessment areas and retail lending assessment areas will apply in addition to calculating the bank’s rating as described in final § __.28(b)(2) and (3). Therefore, to receive an “Outstanding” or “Satisfactory” rating, a bank will need to satisfy the 60 percent threshold in addition to earning an “Outstanding” or “Satisfactory” rating based on the weighting of performance test conclusions.

The agencies believe that the 60 percent threshold ensures that large banks receiving an “Outstanding” or “Satisfactory” rating are meeting the credit needs of their entire community while acknowledging limitations that may impact bank performance, such as business model, capacity, opportunities to lend, and changes in a bank’s assessment areas. The agencies note that, under the final rule, the agencies will examine a bank’s performance under the applicable

performance tests in the same manner in all facility-based assessment areas and retail lending assessment areas, which is a change from the current approach that permits limited-scope reviews. The agencies believe that a higher threshold—such as 67 percent, 70 percent, 75 percent, 90 percent, or all assessment areas, as suggested by commenters—may establish a requirement that would be too onerous for some banks to meet consistent with safety and soundness requirements. Further, the agencies are also sensitive to the concerns expressed by a commenter that a threshold that establishes too onerous of a requirement could lead banks to close branches in certain facility-based assessment areas or reduce lending in certain facility-based assessment areas or retail lending assessment areas.

The agencies have considered commenter suggestions to require banks to meet the 60 percent threshold for different types of assessment areas (such as large metropolitan, small metropolitan, and rural assessment areas, or metropolitan and nonmetropolitan assessment areas) or adopt weights for assessment areas associated with this requirement. The agencies have concerns, however, that these suggestions would be overly complex and difficult to implement. Some suggested types of facility-based assessment areas and retail lending assessment areas—for example, rural assessment areas—do not have clear and consistent definitions. Further, the agencies note that the 60 percent requirement to receive a “Satisfactory” rating is intended to be an additional guardrail supplementing the final rule approach to developing bank conclusions under the applicable performance tests. This approach generally includes consideration of a weighted average of the bank’s facility-based assessment area performance, and calculates a bank’s rating by weighting the bank’s performance scores on applicable performance tests. For these reasons, the agencies are not adopting these suggestions in the final rule.

The agencies believe that analysis provided by one commenter on the impact of the 60 percent threshold omits important aspects of the Retail Lending Test calculations and therefore does not align with the final rule in fundamental respects. For example, the analysis described by the commenter did not consider CRA small business and small farm lending data and was applied to individual counties instead of facility-based assessment areas. In addition, the analysis applied the 60 percent threshold to Retail Lending Test conclusions, in contrast to the proposed and final rule approach, which applies this threshold to overall conclusions of facility-based assessment areas and retail lending assessment areas. Applying the 60 percent threshold to Retail Lending Test conclusions represents a significant departure from the proposed and final rule approach, because for facility-based assessment areas, overall conclusions reflect a bank’s conclusions on all four performance tests, not only the Retail Lending Test.

Finally, the agencies acknowledge comments that described variations in a bank’s ability to serve any given facility-based assessment area or retail lending assessment area. The agencies determined, however, that the 60 percent threshold provides sufficient flexibility to account for challenges regarding a bank’s performance.

The agencies are also finalizing the proposed threshold for the number of combined facility-based assessment areas and retail lending assessment areas in a State, a multistate MSA, or nationwide at 10 facility-based assessment areas and retail lending assessment areas. Based on the agencies’ supervisory experience, the agencies believe this threshold balances the need for a guardrail for banks with a larger footprint with the agencies’ intent to provide flexibility to smaller institutions. The agencies are finalizing the same threshold for States, multistate MSAs, and nationwide to reduce complexity and so that this requirement will apply at more levels as a

bank's footprint increases. For example, in its second examination under the final rule, a bank with 10 combined facility-based assessment areas and retail lending assessment areas nationwide in two or more states or multistate MSAs will only be subject to this requirement for its institution rating. A bank with 10 combined facility-based and retail lending assessment areas in each of several States or multistate MSAs will be subject to this requirement for each applicable State rating, multistate MSA rating and for its institution rating. The agencies also have opted not to apply this requirement to intermediate banks or small banks. In the agencies' experience, it is unlikely that many intermediate banks or small banks would have 10 or more facility-based assessment areas and retail lending assessment areas in any State, multistate MSA, or nationwide. The agencies also decline to adopt a requirement that a bank obtain an "Outstanding" conclusion in 60 percent of its facility-based assessment areas and retail lending assessment areas to receive an "Outstanding" rating. The agencies believe this would add complexity, and the weighting of performance test conclusions will provide sufficient guardrails related to eligibility for "Outstanding" ratings.

§ __.28(c) Conclusions and ratings for States and multistate MSAs

Section __.28(c) addresses when, consistent with statutory requirements, the agencies will evaluate and assign conclusions and ratings for a bank's CRA performance in a State or multistate MSA. The CRA statute requires that the agencies separately evaluate a bank's CRA performance for each State where the bank maintains a branch office or other facility that accepts deposits.¹⁴⁴⁵ If a bank maintains a branch office or other facility that accepts deposits in two or more States of a multistate metropolitan area (*i.e.*, a multistate MSA), the agencies must instead evaluate a bank's CRA performance for the multistate MSA.¹⁴⁴⁶ If the agencies evaluate a bank's CRA performance for a multistate MSA, the statute also requires that the agencies adjust their evaluation of a bank's CRA performance in any State accordingly.¹⁴⁴⁷ The agencies' current approach to conclusions and ratings reflects these statutory requirements.

The Agencies' Proposal

Proposed § __.28(c) provided that the agencies would evaluate a bank's performance in any State in which the bank maintains one or more facility-based assessment areas and in any multistate MSA in which the bank maintains a branch in two or more States within the multistate MSA. In assigning conclusions and ratings for a State, the agencies would not consider a bank's activities in that State that are evaluated for a multistate MSA.

Final Rule

The agencies did not receive any comments on proposed § __.28(c). The agencies are adopting final § __.28(c) with modifications from the proposal, however, to clarify how the agencies will assign conclusions and ratings for geographic areas consistent with statutory requirements. In final § __.28(c)(1)(i) and (c)(2), the agencies revised the proposed provision to clarify that the agencies will evaluate a bank and assign both conclusions and ratings for each State and multistate MSA, as applicable.

¹⁴⁴⁵ See 12 U.S.C. 2906(d)(1).

¹⁴⁴⁶ See 12 U.S.C. 2906(d)(2).

¹⁴⁴⁷ *Id.*

The agencies made several additional revisions to proposed § __.28(c)(1) related to State conclusions and ratings in the final rule. First, the agencies are adopting final § __.28(c)(1)(i) with revisions to the proposal to provide that, except as provided in § __.28(c)(1)(ii) regarding States with multistate MSAs for which the agencies assign conclusions and ratings to the multistate MSA (*i.e.*, rated multistate MSA), the agencies assign conclusions and ratings for any State in which the bank maintains a main office, branch, or deposit-taking remote service facility. The agencies believe this language better reflects the statute—which refers to each State in which a bank maintains one or more domestic branches, defined to include any branch or other facility of a bank that accepts deposits¹⁴⁴⁸—than referring to a facility-based assessment area, as proposed. Final § __.28(c)(1)(i) also aligns with final § __.16, regarding facility-based assessment areas.

Second, the agencies are adopting final § __.28(c)(1)(ii) with revisions to the proposal to clarify that the agencies will evaluate and assign conclusions or ratings for a State only if a bank maintains a main office, branch, or deposit-taking remote service facility outside the portion of the State comprising any rated multistate MSA. Similar to the proposal, final § __.28(c)(1)(ii) further states that the agencies will not consider activities to be in the State if those activities take place in the portion of the State comprising any multistate MSA. This reflects statutory requirements.¹⁴⁴⁹ The agencies note that in calculating metrics, benchmarks, and weighting performance scores in a State for any bank, the agencies will only include activities considered to be in that State pursuant to § __.28(c)(1) for purposes of the agencies' evaluation of that bank.

Third, the agencies are adopting final § __.28(c)(1)(iii), a new provision, to clarify the agencies' consideration of a bank's performance for States with multistate MSAs for which the agencies do not assign conclusions and ratings to the multistate MSA (*i.e.*, non-rated multistate MSA).¹⁴⁵⁰ Specifically, final § __.28(c)(1)(iii) provides that, if a bank's facility-based assessment area comprises a geographic area spanning two or more States within a non-rated multistate MSA, the agencies will consider activities in the entire facility-based assessment area to be in the State in which the bank maintains—within the multistate MSA—a main office, branch, or deposit-taking remote service facility. Consider, for example, a particular bank with a branch located in a multistate MSA. In this example, although the bank's branch is located in a county in one State within the multistate MSA, the bank delineates a facility-based assessment area in the multistate MSA that includes, consistent with final § __.16(b)(2), a county in a second State within the multistate MSA where the bank originated or purchased a substantial portion of its loans but does not have a branch or other facility that accepts deposits. Under this example, for purposes of evaluating the bank and assigning conclusions and ratings—including calculating metrics, benchmarks, and weighting performance scores—the agencies would consider activities

¹⁴⁴⁸ See 12 U.S.C. 2906(d)(1)(B), (e)(1).

¹⁴⁴⁹ See 12 U.S.C. 2906(d)(2) (requiring that, if an agency evaluates a bank's performance in a multistate metropolitan area, the agency must adjust the scope of its evaluation of a bank's performance in a State accordingly).

¹⁴⁵⁰ Consistent with 12 U.S.C. 2906(d)(2) and pursuant to final § __.28(c)(2), discussed below, the agencies evaluate a bank's performance in a multistate MSA if the bank maintains a main office, a branch, or a deposit-taking remote service facility in two or more States within that multistate MSA.

in the bank's entire facility-based assessment area within the multistate MSA to be in the one State where the bank has a branch. Final § __.28(c)(1)(iii) also clarifies that, in evaluating a bank and assigning conclusions and ratings for a State, the agencies will not consider activities to be in a State if those activities take place in any facility-based assessment area considered to be in another State.

Fourth, the agencies are adopting final § __.28(c)(1)(iv), a new provision, to clarify the agencies' consideration of a bank's performance in retail lending assessment areas that span multiple States in a multistate MSA (*i.e.*, multistate retail lending assessment areas). Specifically, pursuant to final § __.28(c)(1)(iv), the agencies will not consider activities that take place in a multistate retail lending assessment area to be in any State for purposes of assigning Retail Lending Test conclusions to a bank pursuant to final § __.22 and final appendix A. The agencies note that, if a multistate retail lending assessment area is in a rated multistate MSA, the agencies will consider activities in the multistate retail lending assessment area for purposes of assigning a bank's Retail Lending Test conclusions and ratings for the multistate MSA. To the extent a multistate retail lending assessment area is not in a rated multistate MSA, however, activities in that multistate retail lending assessment area would be considered only in the bank's conclusions and ratings for the institution.

The agencies also made revisions to proposed § __.28(c)(2) related to multistate MSA conclusions and ratings in the final rule. Final § __.28(c)(2) specifies that the agencies will evaluate a bank and assign conclusions and ratings in any multistate MSA in which the bank maintains a main office, a branch, or a deposit-taking remote service facility in two or more States within that multistate MSA. The agencies believe this language better reflects the statutory requirement—which refers to each State in which a bank maintains one or more domestic branches, defined to include any branch or other facility of a bank that accepts deposits¹⁴⁵¹—than referring to a facility-based assessment area, as proposed. Final § __.28(c)(2) also aligns with final § __.16, regarding facility-based assessment areas.

§ __.28(d) *Effect of evidence of discriminatory or other illegal credit practices*

Current Approach

Current § __.28(c) generally provides that the agencies' evaluation of a bank's CRA performance is adversely affected by evidence of discriminatory or other illegal credit practices in any geography by the bank or in any assessment area by any affiliate whose loans have been considered as part of the bank's lending performance. In connection with any type of lending activity evaluated under the current lending test, evidence of discriminatory or other credit practices that violate an applicable law, rule, or regulation includes, but is not limited to, violations of certain enumerated laws.¹⁴⁵² Current § __.28(c)(2) provides certain factors the agencies consider in determining the effect of discriminatory or other illegal credit practices on a bank's assigned rating, including: the nature, extent, and strength of the evidence of the

¹⁴⁵¹ See 12 U.S.C. 2906(d)(1)(B), (e)(1).

¹⁴⁵² In guidance, the agencies have stated that violations of other provisions of the consumer protection laws generally will not adversely affect an institution's CRA rating but may warrant the inclusion of comments in an institution's performance evaluation. See Q&A § __.28(c)—1.

practices; policies and procedures the bank has in place to prevent the practices; corrective action; and any other relevant information.

The Agencies' Proposal and Final Rule

Similar to the approach under the current regulations, the agencies proposed in § __.28(d)—and are now finalizing with certain modifications from the proposal described below—that a bank's CRA performance would be adversely affected by evidence of discriminatory or other illegal practices. Although, under the proposal, evidence of any discriminatory or other illegal practices would have adversely affected a bank's CRA performance, the final rule, like the current regulations, limits consideration to credit practices. Similar to the current approach and the proposal, the agencies will consider certain factors under the final rule in determining the effect of evidence of discriminatory or other illegal credit practices on a bank's assigned rating. The section-by-section analysis below describes the agencies' proposal, including proposed changes from the current approach, and final § __.28(d) in detail.

§ __.28(d)(1) Scope

The Agencies' Proposal

Proposed § __.28(d)(1) expanded consideration of evidence of discriminatory or other illegal practices to include practices beyond credit practices. Specifically, proposed § __.28(d)(1) provided that the agencies' evaluation of a bank's CRA performance would be adversely affected by evidence of any discriminatory or other illegal practices. As proposed, evidence of discriminatory or other illegal practices could be related to deposit products or other bank products and services. Unlike current § __.28(c)(1), which limits the agencies consideration of discriminatory or other illegal practices to those in connection with any type of lending activity evaluated under the current lending test, consideration of discriminatory or other illegal practices under proposed § __.28(d)(1) would no longer be limited to certain credit products. Proposed § __.28(d)(1) also provided for downgrades of a bank's State or multistate MSA rating, in addition to downgrades of the institution rating, based on discriminatory or other illegal practices.

Proposed § __.28(d)(1)(i) provided that evidence of discriminatory or other illegal practices in any geographic area by a bank, including its operations subsidiaries or operating subsidiaries, could result in a downgrade to the bank's CRA rating. Proposed § __.28(d)(1)(ii) further provided that evidence of discriminatory or other illegal practices in any facility-based assessment area, retail lending assessment area, or outside retail lending area by any affiliate whose retail loans are considered as part of the bank's lending performance could result in a downgrade to the bank's CRA rating.

Comments Received

Many commenters expressed strong support for downgrading banks that engage in discriminatory or other illegal practices. Some of these commenters suggested that the agencies severely punish banks under CRA if they are found to have violated civil rights, fair lending, or fair housing laws. Relatedly, one commenter stated that "Outstanding" or "Satisfactory" ratings should meaningfully demonstrate a bank's commitment to treating its customers fairly in a manner consistent with the law.

Some commenters expressly supported expanded consideration of evidence of discriminatory or other illegal practices to include practices beyond credit practices. For example, a commenter

stated that the agencies' proposal represented an effective way to hold banks accountable for discrimination and other illegal practices. Another commenter noted that this expansion could help ensure there is no unintended discrimination in loan servicing. Commenters cautioned, however, that this expansion would only be as helpful as the agencies' willingness and capacity to diligently identify discrimination and then downgrade banks.

In contrast, some commenters raised concerns regarding the expanded consideration of evidence of discriminatory or other illegal practices to include practices beyond credit practices and supported limits on the type of practices that could lead to CRA rating downgrades. A few commenters asserted that broadening discriminatory or other illegal practices to include more than just illegal credit practices was inconsistent with the CRA statute. A few commenters also expressed concern that expanding discriminatory or other illegal practices could include issues unrelated to Congress's intent in enacting CRA, such as anti-money laundering and safety and soundness issues. One commenter stated that because discriminatory and other illegal practices are comprehensively addressed by other examinations (*e.g.*, safety and soundness, fair lending, consumer reporting, and consumer debt collection), CRA downgrades are not necessary to remediate prior violations or prevent future discriminatory or other illegal practices. A commenter suggested that expanding the types of violations that could lead to a downgrade could disincentivize banks from seeking an "Outstanding" rating by expanding CRA activities out of fear of adverse rating impacts from tangential or technical issues. A few commenters also suggested that expansion of practices considered could lead to an increase in adverse ratings and harm consumers and communities, noting that projects to provide new products or services that respond to customer needs, LIHTC or NMTC projects, and opening branches could be negatively impacted if a bank receives a rating below "Satisfactory."

Some commenters supported retaining the current standard or adopting other limitations on when discriminatory or other illegal practices could be considered. Some commenters recommended restricting downgrades to products and services considered in CRA evaluations, with a few commenters also suggesting that only violations directly related to the treatment of consumers should be considered. Another commenter proposed limiting downgrades to illegal practices that have a nexus to the provision of financial products and services. A few commenters stated that the proposal would create uncertainty as to what types of practices would result in a rating downgrade and requested that the agencies provide more clarity and guidance on the types of practices that could lead to a downgrade.

A few commenters suggested that the agencies apply all downgrades to a bank's institution rating, rather than to State or multistate MSA ratings. Relatedly, a commenter stated that a bank that has been found to engage in discriminatory practices in one geographic area is likely to have engaged in similar practices elsewhere and has exposed that it lacks the internal controls to prevent illegal activity. Another commenter suggested that the agencies could instead increase transparency by providing greater detail on the geographic scope of any violation in a bank's performance evaluation and by providing guidance on the specific impact of downgrades applied to State or multistate MSA rating on the institution rating.

One commenter stated that the agencies should automatically include any discriminatory or other illegal practices by an operations subsidiary or operating subsidiary, or affiliate.

Final Rule

In final § __.28(d)(1), the agencies are adopting the proposed provision regarding consideration of evidence of discriminatory or other illegal practices without the proposed expansion from the current approach to include practices beyond credit practices. Specifically, under final § __.28(d)(1), for each State and multistate MSA, as applicable, and the institution, the evaluation of a bank's CRA performance is adversely affected by evidence of discriminatory or other illegal credit practices, as provided in final § __.28(d)(2). As discussed further below, final § __.28(d)(2) provides that discriminatory or other illegal credit practices consist of violations of specified laws, including any other violation of a law, rule, or regulation consistent with the types of violations listed, as determined by the agencies. Final § __.28(d)(1) further provides that the agencies will consider evidence of discriminatory or other illegal credit practices by: (1) the bank, including by an operations subsidiary or operating subsidiary of the bank, without limitation; and (2) any other affiliate related to any activities considered in the evaluation of the bank.

After considering many comments that supported proposed § __.28(d)(1) and many that raised concerns, the agencies believe that final § __.28(d)(1) appropriately modifies the proposed regulatory text regarding discriminatory or other illegal practices that may lead to a CRA rating downgrade. As reflected in the agencies' CRA regulations and supervisory practices, the agencies have long considered that a bank's CRA rating should reflect whether it has engaged in discrimination or otherwise treated consumers in a manner inconsistent with laws, rules, or regulations. The agencies carefully considered, however, comments that raised concerns that discriminatory or other illegal practices, without further qualification, would be too broad and would potentially allow consideration of violations of laws, rules, regulations generally unrelated to CRA, such as anti-money laundering and safety and soundness issues. In response to these comments and after further consideration, the agencies revised § __.28(d)(1) to state that the evaluation of a bank's performance under the rule is adversely affected by evidence of discriminatory or other illegal credit practices as provided in § __.28(d)(2). The agencies believe that maintaining a limitation, also reflected in the current regulations, to consider only discriminatory or other illegal practices related to credit practices is responsive to commenters' concerns.

The final rule also reflects a modification in the scope of evidence of discriminatory or other illegal credit practices the agencies will consider in a bank's CRA evaluation, compared to the proposal, to specify that the evidence of discriminatory or illegal credit practices the agencies will consider are those practices provided in final § __.28(d)(2) (discussed further in the section-by-section analysis of final § __.28(d)(2)). Unlike the current approach, which provides that evidence of discriminatory or other credit practices are those in connection with any type of lending activity described the current lending test,¹⁴⁵³ final § __.28(d)(1) does not limit the types of credit practices that may be considered as evidence of discriminatory or illegal credit practices.

Some commenters suggested alternative limitations on the discriminatory or other illegal practices that could be considered in a bank's CRA evaluation. The agencies carefully considered these alternatives and believe that the revisions in the final rule will generally serve the same objectives as many of the commenters' suggestions.

¹⁴⁵³ See current 12 CFR __.28(c)(1).

Regarding commenter sentiment that rating downgrades should only be applied to a bank's institution rating, the agencies determined to finalize this part of § __.28(d)(1) as proposed. Although the agencies agree that issues may be widespread and that the agencies can improve transparency by providing additional information about the geographic area where discriminatory or other illegal practices occurred, the agencies believe that allowing for downgrades to a bank's State, multistate MSA, or institution rating will provide greater clarity and transparency about the geographic area in which relevant violations occurred and flexibility for the agencies to consider the geographic scope of those violations. With respect to whether evidence of discriminatory or other illegal credit practices will impact a bank's State, multistate MSA, or institution rating, the agencies intend to consider the adverse effect of evidence of discriminatory or other illegal credit practices at each rating level based on the geographic scope of relevant violations and the factors in final § __.28(d)(3), as discussed below.

The agencies are also adopting final § __.28(d)(1) with modifications from the proposal related to the circumstances in which the agencies will consider evidence of discriminatory or other illegal credit practices by a bank, including by an operations subsidiary or operating subsidiary of the bank, or any other affiliate. Specifically, the agencies removed language that would have provided that the agencies would consider evidence of discriminatory or other illegal credit practices by the bank, including by an operations subsidiary or operating subsidiary of the bank, "in any census tract" as unnecessary. For other affiliates—although under the proposal the agencies would have considered evidence of discriminatory or other illegal activities in any facility-based assessment area, retail lending assessment area, or outside retail lending area by any affiliate whose retail loans are considered as part of the bank's lending performance—the agencies believe it is appropriate to remove references to the geographic areas where an affiliate's discriminatory or other illegal credit practices may be considered and not to limit such consideration to an affiliate whose retail loans are considered as part of the bank's lending performance. Under the final rule, and as provided in § __.21(b)(3), the agencies may consider an affiliate's activities in any geographic area at the bank's option, pursuant to the applicable performance test. In addition, the agencies believe, given the scope of the agencies' consideration of evidence of discriminatory or other illegal credit practices and the affiliate activities that may be included in a bank's CRA evaluation, it is appropriate to consider evidence of discriminatory or other illegal credit practices by any affiliate related to any activities considered in the evaluation of the bank. Finally, the agencies do not think it would be appropriate to consider evidence of discriminatory or other illegal credit practices by a bank affiliate that are wholly unrelated to activities considered in the bank's performance evaluation, and thus did not make revisions in the final rule based on this commenter's suggestion.

Therefore, the agencies are finalizing § __.28(d)(1) with the modifications from the proposal addressed above.

§ __.28(d)(2) Discriminatory or other illegal credit practices

The Agencies' Proposal

Proposed § __.28(d)(2) provided a non-exhaustive list of examples of evidence of discriminatory or other illegal practices that violate an applicable law, rule, or regulation. Similar to the current approach, proposed § __.28(d)(2) included the following among the list of examples: discrimination against applicants on a prohibited basis in violation, for example, of ECOA or the Fair Housing Act; violations of the Home Ownership and Equity Protection Act;

violations of section 5 of the Federal Trade Commission Act; violations of section 8 of the Real Estate Settlement Procedures Act; and violations of the Truth in Lending Act (TILA) provisions regarding a consumer's right of rescission. For added clarity, the agencies also proposed to add the following to the list of examples: violations of the prohibition against unfair, deceptive, or abusive acts or practices in 15 U.S.C. 5531; violations of the Military Lending Act; and violations of the Servicemembers Civil Relief Act.¹⁴⁵⁴

Comments Received

Some commenters addressed violations of specific laws, rules, or regulations listed in proposed § __.28(d)(2), generally to express support for their inclusion on the list. A few commenters specifically supported the proposal to continue to allow rating downgrades for fair lending violations. Some commenters supported the proposed addition of violations of the prohibition against unfair, deceptive, or abusive acts or practices in 15 U.S.C. 5531, with one of these commenters stating that this would be a check against unfair and abusive practices like predatory lending, unfair loan fees, and mark-ups that often harm low- and moderate-income individuals and communities. A few commenters supported the proposed addition of the Military Lending Act to the list.

Some commenters also recommended that the agencies add violations of other laws, rules, or regulations to the list of discriminatory or other illegal practices. Specifically, some commenters recommended that the agencies add the Americans with Disabilities Act (ADA)¹⁴⁵⁵ to the list. Another commenter also provided other examples of illegal practices, such as violations of consumer and civil rights laws governing deposit products and HMDA. Some commenters asserted that the agencies should consider evidence of discrimination obtained by State and local agencies. Another commenter conveyed that the agencies should factor successful discrimination lawsuits and other punitive legal measures into a bank's CRA rating.

Suggestions regarding specific bank practices. Some commenters discussed specific bank practices that they thought should be considered discriminatory or other illegal practices. For example, some commenters expressed support for downgrading banks for conduct harmful to consumers, including fee gouging; charging high fees; offering high-cost or predatory products, investments, or services; or having unreasonably high delinquency rates. Some of these commenters stated that the agencies should consider products that banks offer in partnership with nonbanks and whether loans exceeded State usury caps and borrowers' abilities to repay. One commenter encouraged expanding the discriminatory practices that result in a rating downgrade to include bank activities that have high rates of defaults and delinquencies. Similarly, another commenter suggested that evidence of illegal practices should include banks offering unsuitable credit to consumers or banks earning a disproportionately high share of their revenues from overdraft and insufficient funds fees. Another commenter recommended that an agency's finding that a bank's consumer credit card lending is not fair, affordable, and sustainable should result in a ratings downgrade, depending on the extent of the harm to consumers. A few commenters emphasized that the agencies should scrutinize banks' multifamily lending programs, including those conducted in partnership with third-party nonbank institutions, for

¹⁴⁵⁴ See proposed § __.28(d)(2)(iv) and (vii) through (viii).

¹⁴⁵⁵ 42 USC 12101 *et seq.*

illegal practices. A commenter recommended downgrading ratings where there is demonstrable evidence that lenders have invested or renewed investments in which property owners were engaging in tenant harassment of which lenders have notice. One commenter urged the agencies to assign a “Substantial Noncompliance” rating to any bank that lends its charter to fintech companies to enable them to circumvent State usury laws. Another commenter stated that given the rise in mobile and online banking, specific standards should be developed to regulate digital banking to avoid discriminatory or predatory practices.

A few commenters also provided examples of the type of conduct they believed should be considered discriminatory or other illegal practices, such as: a pattern or practice of discriminating and failing to serve communities equitably, regardless of whether these disparate negative impacts are the result of intentional or unintentional bias; misleading customers in order to sell products; discriminating against certain categories of borrowers in the price or availability of home mortgage lending; or illegally foreclosing on homeowners. Relatedly, another commenter proposed that the agencies consider ways to address discriminatory practices against low- and moderate-income and LGBTQ+ communities.

Final Rule

In final § __.28(d)(2), the agencies are adopting the proposal with several revisions, as described below, in addition to making conforming changes to refer to “discriminatory or other illegal credit practices,” as discussed above. First, the final rule provides that discriminatory or other illegal credit practices consist of the listed violations of laws, rules, or regulations. This is a change from the proposal, which would have provided a non-exhaustive list of examples of discriminatory or other illegal practices. Second, the final rule adopts new § __.28(d)(2)(ix), which adds to the list of discriminatory or other illegal credit practices “[a]ny other violation of a law, rule, or regulation consistent with the types of violations in § __.28(d)(2)(i) through (d)(2)(viii) of this section, as determined by the [Agency].” Finally, the final rule adopts revisions to the discriminatory or other illegal credit practices included in the current list to cover any discrimination on a prohibited basis in violation, for example, of ECOA or the Fair Housing Act and any violation of TILA.

The agencies believe that the first and second revisions, taken together, clarify the agencies’ intent regarding the types of evidence of violations of laws, rules, or regulations, that they consider evidence of discriminatory or other illegal credit practices. As discussed above, although the list of violations of laws, rules, and regulations in current § __.28(d)(1) is a non-exhaustive list, the agencies have generally stated that, under the current rule, evidence of violations of other provisions generally will not adversely affect an institution’s CRA rating.¹⁴⁵⁶ From time to time, the agencies have considered evidence of discriminatory or other illegal credit practices beyond the listed violations of laws, rules, or regulations where those practices are sufficiently similar in nature to items on the list. The agencies intend that revisions to the list in final § __.28(d)(2) will codify this practice, so that the agencies will consider evidence of the listed violations of laws, including their implementing rules or regulations, and other violations of laws, rules, or regulations consistent with the types of violations listed.

¹⁴⁵⁶ See Q&A § __.28(c)—1.

The final rule also adopts the proposal to add the following to the listed discriminatory or other illegal practices: violations of the prohibition against unfair, deceptive, or abusive acts or practices in 15 U.S.C. 5531; violations of the Military Lending Act (10 U.S.C. 987); and violations of the Servicemembers Civil Relief Act (50 U.S.C. 3901 *et seq.*). The final rule adopts two other minor revisions to the proposed list of discriminatory or other illegal practices. First, final § __.28(d)(2)(i) would apply to any discrimination on a prohibited basis in violation, for example, of ECOA or the Fair Housing Act. This is a clarifying change. Second, final § __.28(d)(2)(vi) would include any violations of TILA. This change, to include violations of TILA beyond those involving consumer’s right of rescission, is appropriate so as to incorporate TILA amendments to include additional substantive provisions since the agencies adopted current § __.28(c)(1)(v). The agencies also made technical revisions to the listed laws to add citations to the United States Code, as applicable.

The agencies note that their consideration of discriminatory or other illegal credit practices listed in § __.28(d)(2) will include consideration of information received from other Federal agencies and, as applicable, State agencies, with responsibility for enforcing compliance with relevant laws and regulations, including the U.S. Department of Justice, HUD, and the CFPB. The final rule does not limit the sources for evidence of discriminatory or other illegal credit practices that can be considered by examiners in a CRA evaluation. Moreover, the agencies note that, pursuant to § __.28(d)(1), a bank’s CRA performance is adversely affected by “evidence of” discriminatory or other illegal credit practices, which consist of the practices listed in § __.28(d)(2). The agencies believe that “evidence of” discriminatory or other illegal credit practices, consistent with the current approach, provides flexibility and acknowledges that other agencies may use different terms or act on information in different ways. The agencies may consider, for example, information that leads to a settlement of claims and a consent order under ECOA or the Fair Housing Act as evidence of discriminatory or other illegal credit practices.

The agencies have decided not to add violations of certain laws, rules, or regulations suggested by commenters, specifically violations of ADA or HMDA, to the list in § __.28(d)(2). With regard to the ADA, the agencies believe that although some violations of ADA could involve credit practices that affect consumers, small businesses, and small farms and be considered by the agencies, the explicit inclusion in the list may have the effect of including practices unrelated to a bank’s CRA performance, such as conduct related to a bank’s role as an employer. HMDA includes many technical requirements, and the agencies believe there are other ways of addressing HMDA violations, such as not considering inaccurate HMDA data submitted by a bank in its CRA examination.

Finally, regarding commenter suggestions that various specific types of acts or practices be considered discriminatory or other illegal practices that would adversely affect a bank’s CRA performance evaluation, the agencies note that whether specific acts or practices violate applicable laws, rules or regulations requires analysis based on the individual facts and circumstances and the requirements of each law, rule, or regulation. Therefore, the agencies decline to state whether specific acts or practices would violate listed laws, rules, or regulations.

§ __.28(d)(3) Agency considerations

The Agency’s Proposal

The agencies proposed in § __.28(d)(3) updated considerations in determining the effect of evidence of discriminatory and other illegal practices on a bank’s assigned CRA ratings: the root

cause of any violations of law; the severity of any consumer harm resulting from the violations; the duration of time over which the violations occurred; and the pervasiveness of the violations. In addition, the agencies proposed in § __.28(d)(3) that examiners would also consider the degree to which the bank, a subsidiary, or an affiliate, as applicable, has established an effective compliance management system across the institution to self-identify risks and to take the necessary actions to reduce the risk of non-compliance and consumer harm. Accordingly, a range of consumer compliance violations would be considered during a CRA examination, although some might not lead to a CRA rating downgrade.

Comments Received

A few commenters expressly suggested requiring downgrades if consumer financial protection violations are cited. For example, a commenter stated that any evidence of illegal and abusive lending found during fair lending examinations must be penalized via lower ratings. Some commenters suggested that the proposal provides too much discretion to examiners, and the agencies should automatically issue a failing rating when a bank is found to have engaged in discriminatory practices. For example, commenters suggested that a bank be automatically downgraded to “Needs to Improve” if it is found to have violated any civil rights, equal protection, or consumer protection laws—even if it settles without admitting guilt or if the violations are dated—or if the agencies determine that there is reason to believe that the bank engaged in a pattern or practice of discrimination, regardless of the bank’s asset size or amount of restitution. A commenter asserted that the agencies’ proposal to consider the severity of consumer harm resulting from relevant violations and the duration of time over which the violations occurred would serve to reduce the adverse impact of a bank’s illicit behavior on its CRA rating.

A few commenters requested that the agencies provide more clarity and guidance regarding the scope and severity of a violation that would warrant a downgrade and the discretion that examiners would have to determine whether a violation has occurred. Further, a few commenters suggested the agencies codify OCC PPM 5000-43, as amended by OCC Bulletin 2018-23, which requires, as a prerequisite to any downgrade predicated on evidence of discriminatory or other illegal credit practices by a bank: (1) a logical nexus between the bank’s assigned rating and the practices; and (2) full consideration of remedial actions taken by the bank.

Final Rule

The agencies are adopting proposed § __.28(d)(3) with revisions to expand the agencies’ consideration of the severity and risk of harm to consumers to include harm to “communities, individuals, small businesses, and small farms.” The agencies believe that this change better aligns the agencies’ considerations in final § __.28(d)(3) with bank activities considered under CRA. As discussed above, the agencies are also adopting § __.28(d)(3) with a conforming change, compared to the proposal, to refer to “discriminatory or other illegal credit practices.”

The agencies have considered commenter sentiment that the agencies should automatically downgrade a rating or assign a rating of “Needs to Improve” for evidence of discriminatory or other illegal practices. As provided in final § __.28(d)(1), evidence of discriminatory or other illegal credit practices will adversely impact the agencies’ evaluation of a bank’s CRA performance, but evidence of discriminatory or other illegal credit practices will not always lead to a ratings downgrade. The agencies believe that automatically downgrading a bank’s rating

would be inappropriate based on the range of potential discriminatory or other illegal credit practices listed in final § __.28(d)(2). Instead, consistent with the current approach, the agencies believe that it is important to consider the factors listed in final § __.28(d)(3) in determining how evidence of discriminatory or other illegal credit practices may impact a bank's CRA performance.

The agencies believe that final § __.28(d)(3) sufficiently describes the factors to be considered in assessing the effect of discriminatory or other illegal credit practices. The agencies may consider providing additional guidance in the future, as needed and appropriate. In the final rule, the agencies are also reformatting final § __.28(d)(3) to number the factors the agencies will consider as § __.28(d)(3)(i) through (vi).

Ratings downgrades for other harms

Comments Received

Many commenters suggested that the final rule should provide for the possibility of downgrades based on harms other than discriminatory or other illegal practices described in § __.28(d), such as financing displacement, activities that harm the environment, or harm that disproportionately impacts minority communities. Some of these commenters also suggested that the agencies should consider additional conduct as discrimination because of the impact on low- and moderate-income and minority communities. Some commenters also asserted that findings of discrimination, including disparate impact related to displacement financing, fee gouging, or climate degradation, should always result in automatic CRA rating downgrades.

Displacement. Several commenters suggested downgrading banks for financing that causes displacement. Some commenters suggested that displacement financing should be considered discrimination because it often has a disparate impact on minority communities and that such action should trigger rating downgrades and subject banks to potential enforcement actions.

Environmental harm. Some commenters suggested that disproportionate impacts that contribute to climate change and impair access to credit for communities should be considered in CRA examinations. Further, some commenters suggested that the agencies should consider downgrades for financing that funds activities or industries that are harmful to the climate. One commenter suggested the agencies should consider lower performance conclusions or ratings if a bank is financing fossil fuel facilities in low- and moderate-income or minority communities while not financing renewable or clean energy projects. Some commenters suggested that banks be downgraded for the financing of pollution-causing activities (*e.g.*, the building of gas pipelines) that can threaten tribal rights when these activities occur without informed consent. Some commenters proposed that climate harm be considered discrimination because it disproportionately impacts minority communities and that such action should subject banks to CRA rating downgrades. A few commenters suggested that financing of harmful projects like landfills and fossil fuel facilities in low- and moderate-income and minority communities must be penalized by lowering Community Development Financing Test performance conclusions.

Conduct that disproportionately impacts minority communities. Several commenters recommended downgrades for harm that disproportionately impacts minority communities, such as branch closures, harmful landlord practices, and higher-cost products. One of these commenters suggested that the agencies should require action plans to correct and mitigate such harms. Another commenter conveyed that banks that prioritize larger businesses, bypass

minority or immigrant communities, or rely only on credit card loans should be downgraded. A commenter asserted that the agencies should include an affirmative statement in their CRA regulations regarding banks' obligations to fairly serve all races and ethnicities. One commenter indicated that the agencies should assess whether banks make loans to minority individuals and that this assessment should impact CRA ratings, while another commenter suggested that home mortgage lending and small business lending data disaggregated by race, ethnicity, gender, and community should impact CRA ratings.

Final Rule

The agencies have considered these commenters and are not adopting additional provisions to provide for ratings downgrades. The agencies believe that § __.28(d) provides an appropriate mechanism to consider the types of harm raised by commenters when they involve evidence of discriminatory or other illegal credit practices. For example, the agencies believe that some conduct that commenters have identified that may disproportionately impact minority or low- or moderate-income communities is addressed by other legal frameworks applicable to banks and included in the listed laws, rules, and regulations in § __.28(d)(2), such as fair lending laws and consumer protection laws.

The agencies also believe that the final rule addresses some of the concerns raised by commenters through other means. As discussed in the section-by-section analysis of § __.13(e) through (j) (regarding place-based community development categories), the final rule includes protections to ensure that banks do not receive consideration for place-based community development activities that involve forced or involuntary relocation of low- or moderate-income individuals. Further, as discussed in the section-by-section analysis of § __.13(i) (regarding disaster preparedness and weather resiliency), the final rule provides community development consideration for disaster preparedness and weather resiliency activities that assist individuals and communities to prepare for, adapt to, and withstand natural disasters or weather-related risks or disasters. The agencies also believe that some of the conduct that commenters have identified as conduct that may disproportionately impact minority communities may be considered under other provisions of the final rule. For example, the agencies will consider a bank's record of opening and closing branches under the Retail Services and Products Test, as applicable. For more information and discussion regarding the agencies' consideration of comments recommending adoption of additional race- and ethnicity-related provisions in this final rule, see Section III.C of this **SUPPLEMENTARY INFORMATION**.

§ __.28(e) Consideration of past performance

The Agencies' Proposal

Proposed § __.28(e) provided that the agencies would consider past performance when assigning ratings. Specifically, if a bank's prior rating was "Needs to Improve," the agencies may determine that a "Substantial Noncompliance" rating is appropriate where the bank failed to improve its performance since the previous evaluation period, with no acceptable basis for such failure.

Comments Received

The agencies received one comment on proposed § __.28(e). The commenter stated that a downgrade from "Needs to Improve" to "Substantial Noncompliance" should be made by examiners only with full consideration of performance context and should not be automatic.

Final Rule

A downgrade from “Needs to Improve” to “Substantial Noncompliance” pursuant to § __.28(e) would not be automatic. Of note, proposed § __.28(e) specifies that the agencies would consider whether the bank has an acceptable basis for its failure to improve its performance. Therefore, the agencies believe that proposed § __.28(e) adequately addresses the commenter’s suggestion. Accordingly, the agencies are finalizing § __.28(e) as proposed.

§ __.29 Small Bank Performance Evaluation

§ __.29(a) *Small bank performance evaluation*

Current Approach

The current category of small banks that are not intermediate banks includes those banks with assets of less than \$376 million as of December 31 of the prior two calendar years.¹⁴⁵⁷ Pursuant to the current CRA regulations, a small bank that is not an intermediate small bank is evaluated under the lending test of the small bank performance standards, unless the bank elects to be assessed under the lending, investment, and service tests and collects and reports the data required for large and other banks.¹⁴⁵⁸ Specifically, the agencies evaluate a small bank’s lending performance pursuant to the following criteria: (1) the bank's loan-to-deposit ratio, adjusted for seasonal variation, and, as appropriate, other lending-related activities, such as loan originations for sale to the secondary markets, community development loans, or qualified investments; (2) the percentage of loans and, as appropriate, other lending-related activities located in the bank’s assessment areas; (3) the bank’s record of lending to and, as appropriate, engaging in other lending-related activities for borrowers of different income levels and businesses and farms of different sizes; (4) the geographic distribution of the bank's loans; and (5) the bank's record of taking action, if warranted, in response to written complaints about its performance in helping to meet credit needs in its assessment areas.¹⁴⁵⁹

The Agencies’ Proposal

The agencies proposed to revise current § __.26(b), renumbered in the proposal as § __.29(a), to maintain the criteria required to evaluate a small bank’s lending performance. Specifically, in § __.29(a), the agencies proposed to continue evaluating small banks under the current small bank lending test. As discussed further in the section-by-section analysis of § __.12, the agencies defined “small bank” in proposed § __.12 as a bank with average assets of less than \$600 million in either of the prior two calendar years. The proposal also provided that a small

¹⁴⁵⁷ The agencies publish annual adjustments to these dollar figures based on the year to-year change in the average of the CPI–W, not seasonally adjusted, for each 12- month period ending in November, with rounding to the nearest million. *See* current 12 CFR 228.12(u)(2) and 345.12(u)(2); 70 FR 44256 (Aug. 2, 2005). The agencies update this threshold annually based on the year-to-year change in the average of the Consumer Price Index for Urban Wage Earners and Clerical Workers, not seasonally adjusted. *See* current 12 CFR __.12(u).

¹⁴⁵⁸ *See* current 12 CFR __.21(a)(3). The small bank may also make an alternative election to be evaluated under the community development test for wholesale or limited purpose banks or operate under an approved strategic plan. *See id.*

¹⁴⁵⁹ *See* current 12 CFR __.26(b)(1) through (b)(5).

bank could opt into the proposed Retail Lending Test described above in the section-by-section analysis of final § __.22.¹⁴⁶⁰ In proposed § __.29(a)(2), the agencies described how small banks could request consideration for additional CRA activities to elevate a small bank rating from “Satisfactory” to “Outstanding.” In § __.29(a)(3), the agencies outlined their proposed approach to small bank performance ratings. The agencies also requested feedback on other ways to tailor the evaluation for small banks and, when determining a small bank’s institution rating, whether additional consideration should be provided to small banks that conduct activities that would be considered under the Retail Services and Products Test, Community Development Financing Test, or Community Development Services Test.

Comments Received

The agencies received a range of comments addressing the proposed performance standards for small banks. Several of these commenters supported the agencies’ proposal to evaluate small banks under the current small bank lending test, with an option for the bank to choose an evaluation under the proposed Retail Lending Test. A commenter applauded the agencies’ decision not to require any new data collection and reporting requirements. Another commenter stated that the ability to opt into certain performance tests is critical for small banks and urged the agencies to retain this provision. In this regard, a commenter stated that many community banks and their communities may benefit most from being allowed to opt into the proposed Retail Lending Test rather than being evaluated under the small bank lending evaluation; however, this commenter viewed the agencies’ proposal as complex and questioned whether these banks would have enough resources and time to adequately consider the benefits of being evaluated under the new performance test. This commenter also expressed concern that the proposal may effectively encourage banks to maintain their status quo examination approach, which the commenter believed would be a suboptimal outcome if the community would have benefitted most from a bank being evaluated under the new performance test.

The agencies received a few comments in response to the agencies’ request for feedback on other ways to tailor the evaluation for small banks. These commenters provided several recommendations, including, among other things, that the agencies: use community affairs departments to coach small banks; make the Retail Services and Products Test and the Retail Lending Test, with certain adjustments, such as implementation after a two-to-three year transition period among others, mandatory for small banks; ensure in the regulations that supervisory constraints imposed on small banks, including CDFIs and MDIs, do not adversely affect their ability to meet community credit needs in difficult times; outline a transition plan with a specified future date or exam cycle in which to require small banks to be evaluated under the Community Development Financing Test and the Retail Lending Test; and apply the more rigorous Retail Lending Test when community needs indicate it is warranted while considering, as part of performance context, how the bank’s business model might affect performance under the performance test.

Final Rule

The agencies are adopting proposed § __.29(a) and (a)(1) with one technical change. Unlike the proposal, which referred to the “small bank performance standards” to differentiate from the

¹⁴⁶⁰ See the section-by-section analysis of § __.22.

current CRA regulation's "small bank lending test," the final rule refers to the default standards for small banks as the "Small Bank Lending Test." The agencies determined that, because the test in the current CRA regulations and in the final rule are so similar, it is appropriate to refer to them by the same name.

The agencies carefully considered all comments received and appreciate the recommendations made. The agencies believe that, while requiring the metrics-based approach in the Retail Lending Test for small banks may provide additional transparency regarding performance standards, it is appropriate to continue to evaluate small banks under the current framework to provide regulatory flexibility given their more limited capacity and resources. Consistent with the current rule, the agencies will use data that small banks maintain in their own format or report under other regulations. In addition, the agencies anticipate that, for small banks that do not opt into the Retail Lending Test, the final rule includes minimal, if any, regulatory changes to small banks' current CRA evaluations.

The agencies are sensitive to commenters' concerns about small banks' limited resources and time to adequately consider the benefits of being evaluated under the new Retail Lending Test. However, given that small banks have the option to be evaluated under the approach that best suits the bank's needs, whether it be an evaluation under the Small Bank Lending Test (formerly, the "small bank lending test") or, if the bank chooses, an evaluation under the Retail Lending Test, the agencies believe a small bank will have sufficient time to consider the benefits of being evaluated under the Retail Lending Test and can choose to be evaluated under this performance test if the bank determines that it is in its interest to do so. Permitting this option will ensure that small banks have available a metrics-based approach to increase the clarity, consistency, and transparency regarding how their retail lending is evaluated. The agencies believe this is consistent with the objective to tailor the evaluation approach according to a bank's size and business model.

Regarding other ways in which to tailor small bank evaluations, given the limited resources and capacity of small banks the agencies believe that, as finalized, the evaluation approach for small banks strikes the appropriate balance between effectively evaluating CRA activity for small banks and the agencies' intention to minimize the impact of changing regulatory requirements. For this reason, the agencies do not believe that requiring an evaluation under the Retail Services and Products Test, or the Retail Lending Test, even with certain adjustments, is necessary for small banks. Continuing to evaluate small banks under the current framework maintains a strong emphasis on retail lending performance while minimizing changes for these smaller banks. The agencies believe the decision on whether to request additional consideration for activities that qualify under the Retail Services and Products Test in § __.23, or be evaluated under the Retail Lending Test in § __.22, is better determined by the individual bank.

The agencies agree with commenters that additional consideration for activities that qualify under the Retail Services and Products Test may be appropriate for a small bank rating adjustment from "Satisfactory" to "Outstanding." As explained in the section-by-section analysis of § __.29(b), the agencies have made revisions to proposed § __.29(a)(2), renumbered in the final rule as § __.29(b), to allow banks to seek additional consideration for certain activities regardless of whether the small bank is evaluated under the Small Bank Lending Test or the bank opts into the Retail Lending Test.

Regarding commenters' suggestion that the agencies use their community affairs departments to coach or train small banks, the agencies note that they already provide significant outreach to banks and the communities they serve and will continue to do so, regardless of the bank's size. The agencies' community affairs programs provide, among other things, information and technical assistance to banks to assist them in responding to the credit and banking needs of the communities they serve, including low- and moderate-income individuals and communities. The agencies continue to encourage all banks to reach out to the community affairs department of the bank's regulator as well as supervisory staff for CRA guidance and other assistance to support efforts to develop strategies that are responsive to the credit, service, and investment needs of the banks' communities.

The agencies also note that because they are making no substantive changes to the Small Bank Lending Test criteria, the agencies do not believe that the evaluation framework for small banks will impose any additional supervisory constraints on small banks, including but not limited to those that are also CDFIs or MDIs, that will affect these banks' ability to meet the credit needs of their communities during difficult times, such as market downturns or changes in the business cycle.

§ __.29(b) Additional consideration

Current Approach and the Agencies' Proposal

As provided in current appendix A, small banks, that are not intermediate small banks, evaluated under the existing small bank performance standards and that meet the standards for a "Satisfactory" rating may warrant consideration for an overall rating of "Outstanding."¹⁴⁶¹ In assessing whether a bank's performance is "Outstanding," the agencies consider the extent to which the bank exceeds each of the performance standards for a "Satisfactory" rating and its performance in making qualified investments and in providing branches and other services and delivery systems that enhance credit availability in its assessment areas.¹⁴⁶²

In proposed § __.29(a)(2), the agencies proposed to revise the ratings approach to memorialize current interagency guidance that the agencies may adjust a small bank's rating from "Satisfactory" to "Outstanding" at the institution level, where a small bank requests and receives consideration for its performance in making community development investments and services and in providing branches and other services and delivery systems that enhance credit availability in the bank's assessment areas. The agencies requested feedback on whether additional consideration should be provided to small banks that conduct activities that would be considered under the Retail Services and Products Test, Community Development Financing Test, or Community Development Services Test when determining the bank's overall institution rating.

Comments Received

The majority of commenters that addressed the agencies' request for feedback regarding whether additional consideration should be provided for activities that could be considered under the proposal's Retail Services and Products Test, the Community Development Financing Test,

¹⁴⁶¹ See current 12 CFR __.29(d), and current appendix A.

¹⁴⁶² See current appendix A(d)(3)(ii)(B).

or the Community Development Services Test when determining a small bank's overall institution rating were generally supportive. For example, a commenter believed that providing such additional consideration could encourage additional activities that serve low- and moderate-income individuals and communities. Some commenters supported such additional consideration as a way to increase a small bank's CRA rating from a "Satisfactory" to an "Outstanding." A commenter suggested that the agencies should encourage small banks to increase their community impacts as practice before becoming a larger bank. Another commenter stated that, if the agencies provide additional consideration for small banks, they should initially collect any data on activities conducted that fall under any of the relevant performance tests in a format provided by the bank to limit burden.

Final Rule

After consideration of these comments, the agencies are finalizing the revisions in proposed § __.29(a)(2), with certain modifications related to the consideration of additional activities. Specifically, the agencies are renumbering proposed § __.29(a)(2) as § __.29(b)(1) and are adopting an additional provision in § __.29(b)(2). In § __.29(b)(1), for small banks evaluated under the Small Bank Lending Test, the final rule provides that in addition to requesting and receiving additional consideration for the activities described in proposed § __.29(a)(2), a small bank may also request additional consideration for the following activities without regard to whether these activities are in one or more of the bank's facility-based assessment areas: making community development investments; providing community development services; and providing branches and other services, digital delivery systems and other delivery systems, and deposit products responsive to the needs of low- or moderate-income individuals, families, or households, small businesses, and small farms. The agencies note that credit products responsive to the needs of low- and moderate-income individuals, families, or households, small businesses, and small farms are considered under the Small Bank Lending Test, and not separately as an additional consideration activity. The agencies believe that these changes provide additional clarity and specificity for small banks on the types and location of activities that may qualify for additional consideration. The final rule maintains the proposal's requirements that the bank's rating may be adjusted from "Satisfactory" to "Outstanding" at the institution level.

The final rule also adopts an additional provision in § __.29(b)(2) to provide that, for small banks that opt to be evaluated under the Retail Lending Test, where a small bank requests and receives additional consideration for activities that qualify under the Retail Services and Products Test in § __.23, the Community Development Financing Test in § __.24, or the Community Development Services Test in § __.25, the bank's rating may be adjusted from "Satisfactory" to "Outstanding" at the institution level. The agencies believe that, in comparison to the proposal, the specific references to the remaining three large bank performance tests provides additional certainty and clarity for small banks that opt into the Retail Lending Test.

As in the proposal, and consistent with the current regulations, the agencies will not consider these additional activities to adjust a "Needs to Improve" rating to a "Satisfactory" or to an "Outstanding" rating so as to maintain a strong emphasis on retail lending performance. The agencies continue to believe that additional activities should not compensate for, or otherwise minimize poor retail lending performance. The agencies note that in the final rule, as in the current regulations, a small bank can continue to achieve any rating, including "Outstanding," based on its retail lending performance alone and would not be required to be evaluated on other activities.

The agencies have also added new final § __.29(b)(3) to clarify that notwithstanding the requirement that a small bank have a “Satisfactory” or “Outstanding” rating for the consideration of additional activities under paragraphs (b)(1) and (b)(2) of this section, small banks may receive consideration for activities with MDIs, WDIs, and LICUs, and for low-cost education loans without regard to the small bank’s rating. The agencies added this additional consideration to provide clarity about how these activities and loans may be considered in compliance with the requirements of the CRA.

The agencies considered comments suggesting that the agencies should collect data on activities eligible for additional consideration. On balance, the agencies believe that additional consideration for such activities without a requirement to collect any additional data or opt into any additional performance test beyond the current small bank lending test may encourage additional activities for low- and moderate-income individuals and communities and may encourage small banks to increase their community impacts without increasing regulatory burden. The agencies will, however, review appropriate information related to the activities for which a small bank is requesting additional consideration in a format of the bank’s choosing.

§ __.29(c)(1) *Small bank performance conclusions*

§ __.29(c)(2) *Small bank performance ratings*

Current Approach

Current § __.26(d) and current appendix A provide that the agencies assign one of four ratings based on the performance of a bank evaluated under the small bank performance standards: “Outstanding,” “Satisfactory,” “Needs to Improve,” or “Substantial Noncompliance.”¹⁴⁶³ The agencies rate a small bank’s lending performance as “Satisfactory” if, in general, the bank demonstrates a reasonable loan-to-deposit ratio; a majority of loans are in its assessment area; a distribution of loans to, and for, individuals of different income levels and businesses and farms of different sizes that is reasonable given the demographics of the bank’s assessment areas; a record of taking appropriate action in response to written complaints, if any, about the bank’s performance in helping to meet the credit needs of its assessment areas; and a reasonable geographic distribution of loans given the bank’s assessment areas.¹⁴⁶⁴ Small banks may be eligible for an “Outstanding” lending test rating if the bank meets each of the standards for a “Satisfactory” rating described above, and exceeds some or all of those standards.¹⁴⁶⁵ A small bank may also receive a lending test rating of “Needs to Improve” or “Substantial Noncompliance” depending on the degree to which its performance has failed to meet the standard for a “Satisfactory” rating.¹⁴⁶⁶

The Agencies’ Proposal

The agencies proposed to revise § __.26(d), renumbered in the proposal as § __.29(a)(3), and to replace current appendix A with proposed appendix E. Although current appendix A

¹⁴⁶³ See current appendix A(d)(1).

¹⁴⁶⁴ See *id.* at (d)(1)(i)(A)-(E).

¹⁴⁶⁵ See *id.* at (d)(1)(ii).

¹⁴⁶⁶ See *id.* at (d)(1)(iii).

addresses performance ratings for all banks, appendix E proposed to address small bank conclusions and ratings as well as intermediate bank community development evaluation conclusions to provide consistency with other performance tests. Proposed appendix E provided that, unless a small bank opts to be evaluated under the Retail Lending Test, the agencies assign conclusions of “Outstanding,” “Satisfactory,” “Needs to Improve,” or “Substantial Noncompliance” based on the small bank’s performance under § __.29 in each facility-based assessment area to arrive at the bank’s overall rating assigned by the agencies. Proposed appendix E also provided that, unless a small bank opts to be evaluated under the Retail Lending Test, consistent with current appendix A, the agencies would evaluate a small bank’s performance under the applicable performance criteria in the regulations and assign a rating of “Outstanding,” “Satisfactory,” “Needs to Improve,” or “Substantial Noncompliance” for the bank’s performance. Under the proposal, a small bank that meets each of the standards for a “Satisfactory” rating under the lending evaluation and exceeds some or all of those standards would warrant consideration for an overall rating of “Outstanding.” In assessing whether a bank’s performance is “Outstanding,” the agencies proposed that they would consider the extent to which the bank exceeds each of the performance standards for a “Satisfactory” rating and its performance in making community development investments and services and its performance in providing branches and other services and delivery systems that enhance credit availability in its facility-based assessment areas. A small bank would also have received an overall bank rating of “Needs to Improve” or “Substantial Noncompliance” depending on the degree to which its performance failed to meet the standards for a “Satisfactory” rating.

With respect to a small bank that opted to be evaluated under the Retail Lending Test, the agencies proposed to evaluate the small bank as provided for intermediate banks in proposed appendix D, with the exception that no small bank would be evaluated on its retail lending outside of its assessment areas, regardless of the amount of such lending.

In appendix D, the agencies also proposed that a small bank evaluated under the Retail Lending Test may request additional consideration for its community development investments and services and its performance in providing branches and other services and delivery systems that enhance credit availability in its facility-based assessment areas.

Final Rule

The agencies received no comments specifically related to the revisions in proposed § __.29(a)(3), renumbered in the final rule as § __.29(c)(1) and (c)(2), pertaining to a small bank’s conclusions and ratings. Accordingly, the agencies are finalizing these provisions as proposed. The agencies are also making certain revisions for clarity and to conform to other changes made in § __.29. Specifically, final § __.29(c)(1) clarifies that, except for a small bank that opts to be evaluated under the Retail Lending Test, the agencies assign conclusions in connection with a small bank evaluated pursuant to § __.29 as provided in appendix E. Final appendix E provides that the agencies assign conclusions of “Outstanding,” “Satisfactory,” “Needs to Improve,” or “Substantial Noncompliance” for a small bank’s test performance in each facility-based assessment area, in each State or multistate MSA, as applicable, and for the institution as provided in § __.29. For a small bank that opts to be evaluated under the Retail Lending Test, the agencies will assign conclusions regarding the small bank’s Retail Lending Test performance as provided in final appendix C.

Final § __.29(c)(2) provides that the agencies rate the performance of a small bank evaluated under the Small Bank Lending Test, as provided in appendix E. If the small bank opts to be evaluated under the Retail Lending Test, the agencies rate the performance of the small bank as provided by appendix D. In turn, final appendix D provides that the agencies determine a small bank's rating for each State or multistate MSA pursuant to § __.28(c), and for the institution based on the performance score for the bank's Retail Lending Test conclusions for the State, multistate MSA, or institution, respectively. In addition, the final rule removes the proposal's exception that no small bank would be evaluated on its retail lending outside of its assessment areas. As described in more detail in the section-by-section analysis of § __.22, to be consistent with intermediate banks, the agencies will treat the outside retail lending of a small bank the same as intermediate banks.

§ __.30 Intermediate Bank Performance Evaluation

§ __.30(a)(1) Intermediate bank performance evaluation

§ __.30(a)(2) Intermediate bank community development test

Current Approach

Currently, the agencies define intermediate small banks as having assets of at least \$376 million as of December 31 of both of the prior two calendar years and less than \$1.503 billion as of December 31 of either of the prior two calendar years.¹⁴⁶⁷ The agencies evaluate intermediate small banks under the small bank performance standards as provided in current § __.26(a)(2). Specifically, intermediate small banks are currently evaluated under two performance tests: (1) the small bank lending test in current § __.26(b),¹⁴⁶⁸ described above in the section-by-section analysis of § __.29(a); and (2) the community development test in current § __.26(c) that applies exclusively to intermediate small banks. The test evaluates the intermediate small bank's community development performance pursuant to the following criteria: (1) the number and amount of a bank's community development loans; (2) the number and amount of qualified investments; (3) the extent to which the bank provides community development services; and (4) the bank's responsiveness through such activities to community development lending, investment, and services needs.¹⁴⁶⁹ An intermediate small bank may allocate its resources among community development lending, investment, and services in amounts that the bank reasonably determines are the most responsive to community development needs and opportunities.¹⁴⁷⁰ However, an intermediate small bank may not simply ignore one or more of these categories of community development.¹⁴⁷¹ Neither the current regulations nor the guidance prescribe a required threshold for each category; instead, appropriate levels of each community development category depend on the capacity and business strategy of the bank, community

¹⁴⁶⁷ See current 12 CFR __.12(u). As noted above, the agencies update this threshold annually based on the year-to-year change in the average of the Consumer Price Index for Urban Wage Earners and Clerical Workers, not seasonally adjusted.

¹⁴⁶⁸ See also current 12 CFR __.21(a)(3).

¹⁴⁶⁹ See current 12 CFR __.26(c)(1) through (c)(4).

¹⁴⁷⁰ See Q&A § __.26(c)—1.

¹⁴⁷¹ See *id.*

needs, and the number and types of opportunities available for community development within the bank's assessment areas.¹⁴⁷²

The Agencies' Proposal

The agencies proposed to revise current § __.26(a)(2), renumbered in the proposal as § __.29(b), with respect to evaluating intermediate small banks. First, the agencies proposed to create a new "intermediate bank" category to replace the "intermediate small bank" category. The agencies proposed to define intermediate banks in proposed § __.12 to include banks with average assets of at least \$600 million as of December 31 of both of the prior two calendar years and less than \$2 billion as of December 31 of either of the prior two calendar years.¹⁴⁷³ Second, in § __.29(b)(1), the agencies proposed to continue evaluating an intermediate bank under two performance tests. Specifically, the agencies proposed to evaluate intermediate banks under: (1) the proposed Retail Lending Test; and (2) the current community development test, unless the bank opts to be evaluated under the proposed Community Development Financing Test in proposed § __.24.¹⁴⁷⁴

In proposed § __.29(b)(1), the agencies indicated that intermediate banks would be evaluated under the Retail Lending Test, in a manner tailored to intermediate banks (as further described in the section-by-section analysis of § __.22). The agencies did not propose any new data collection, maintenance, or reporting requirements for intermediate banks under the Retail Lending Test.¹⁴⁷⁵ Consistent with the current regulations, the agencies proposed to use data that intermediate banks maintain in a format of their choosing or report under other regulatory requirements.

In proposed § __.29(b)(1), the agencies also provided that the community development activities of intermediate banks be evaluated using the intermediate bank community development evaluation, unless the intermediate bank chose to be evaluated under the Community Development Financing Test in proposed § __.24.¹⁴⁷⁶ As discussed in more detail in the section-by-section analysis of § __.42(a)(5), the agencies proposed that an intermediate bank that opts to be evaluated under the Community Development Financing Test must collect and maintain the same data required of large banks, but in the format used by the bank in the normal course of business.

The agencies requested feedback on ways to further tailor the Retail Lending Test for intermediate banks. The agencies also requested comment on whether all banks, including intermediate banks, should have the option to have their community development activities outside of facility-based assessment areas considered. In addition, the agencies requested feedback on whether intermediate banks should continue to have the flexibility to have small

¹⁴⁷² *See id.*

¹⁴⁷³ *See* the section-by-section analysis of § __.12 for a discussion of the "intermediate bank" definition.

¹⁴⁷⁴ *See* the section-by-section analysis of § __.24.

¹⁴⁷⁵ For a discussion of proposed retail lending data requirements, see the section-by-section analysis of § __.42.

¹⁴⁷⁶ *See* the section-by-section analysis of § __.24.

business, small farm, and home mortgage loans considered as community development loans, provided that those loans have a primary purpose of community development pursuant to proposed § __.13 and the bank is not required to report those loans. Relatedly, the agencies also requested feedback on whether an intermediate bank should have the ability to have its small business or small farm loans considered under the Retail Lending Test or, if they have a primary purpose of community development pursuant to proposed § __.13, under the applicable community development evaluation, regardless of the reporting status of these loans.

Comments Received

The agencies received a range of comments addressing the proposed performance standards for intermediate banks from a wide variety of commenters. Of the commenters that addressed the agencies' proposal to evaluate intermediate banks under the Retail Lending Test, a few supported this approach, while a majority recommended that the agencies apply the Retail Lending Test to large banks only and continue to evaluate intermediate banks, or give these banks the option to be evaluated, under the lending test applicable to intermediate small banks under the current CRA regulations. Some of these commenters explained that significant implementation costs for intermediate banks justified making the Retail Lending Test optional. A commenter stated that the ability to opt into certain performance tests is critical for intermediate banks (as well as small banks) and urged the agencies to retain this provision. Another commenter stated that many community banks and their communities may benefit most from being allowed to opt into the proposed Retail Lending Test; however, this commenter viewed the agencies' proposal as complex and questioned whether these banks would have enough resources and time to adequately consider the benefits of being evaluated under the new performance test. This commenter also expressed concern that the proposal may effectively encourage intermediate banks (and small banks) to maintain their status quo examination approach, which the commenter believed would be a suboptimal outcome if the community would have benefitted most from a bank being evaluated under the new performance test.

Most commenters addressing the agencies' proposals for intermediate banks commented on the proposed requirement to evaluate these banks under the intermediate bank community development test. These commenters expressed a range of views. For example, several of these commenters suggested that the Community Development Financing Test should not be optional but, instead, be required for intermediate banks to create consistency among banks and examiners and to provide other interested parties with a common understanding with respect to CRA community development requirements. Other commenters, however, supported providing intermediate banks with the flexibility to opt into the Community Development Financing Test. As the Community Development Financing Test does not include a review of community development services, a few commenters expressed corresponding concerns, with one commenter indicating that the overall level of intermediate banks' community development services would decrease and another commenter stating that intermediate banks should all be evaluated regarding community development services activities even if they opt into being evaluated under the Community Development Financing Test. Another commenter suggested that the agencies should provide intermediate banks with a formal option for electing to be evaluated under the Retail Services and Products Test.

Regarding the agencies' request for feedback on ways to further tailor the Retail Lending Test for intermediate banks, several commenters provided recommendations. A commenter stated that performance context should weigh more than positioning amongst peers in an

intermediate bank's evaluation. Several other commenters supported tailoring that reduces Retail Lending Test data reporting requirements. For example, one commenter applauded the agencies' decision to not require any new data collection and reporting requirements. Other commenters also recommended that, to the extent data reporting is required, the agencies ought to use data already submitted by these banks. A few other commenters expressed a contrary view, stating that tailoring the Retail Lending Test with respect to data reporting requirements would lead to data gaps and inconsistencies in assessing activities and difficulties in comparing data across the agencies' supervised banks. One of these commenters asserted that all intermediate banks should be mandatory Retail Lending Test data reporters, citing minimal burden and public benefit. Another commenter recommended an alternative approach requiring that intermediate banks provide Retail Lending Test data that they already collect on activities across all assessment areas and for the agencies to, in turn, conduct qualitative assessments in accordance with each relevant performance test. According to this commenter, this approach would also provide the agencies with data that could be used to assess what systems and procedures would be needed to allow intermediate banks to report data in accordance with the corresponding proposed large bank requirements. Another commenter recommended that all Retail Lending Test requirements applicable to large banks be applied to intermediate banks, and noted that, although this would be more rigorous for intermediate banks it would also be more predictable and add transparency. A few commenters indicated that only large banks should be subject to the Retail Lending Test.

Several commenters responded to the agencies' request for feedback on questions about counting retail loans under the applicable community development test for intermediate banks. Most of these commenters expressed support for intermediate banks having flexibility to have small business, small farm, and home mortgage loans considered as community development loans regardless of a loan's reporting status. A few of these commenters also suggested that intermediate banks needed to be provided with targeted performance standards to help decide whether a loan should be evaluated under the Retail Lending Test or under either the intermediate bank community development test or, at the bank's option, the Community Development Financing Test. However, another commenter did not support providing community development consideration for retail loans on the basis that retail lending and community development lending serve different purposes, and recommended that if an intermediate bank wants credit for retail lending it should voluntarily report that lending for consideration under the Retail Lending Test.

As noted above, the agencies requested comment on whether all banks, including intermediate banks, should have the option to have their community development activities outside of facility-based assessment areas considered. A few commenters addressing this question supported giving all banks the option to receive such consideration, regardless of their size or whether they elect to be evaluated under a strategic plan. A commenter indicated that small lenders are often in the best position to engage in community development activities in underserved areas, but are not required to do so; accordingly, it would be beneficial to give them the option to engage in such activities outside of their facility-based assessment areas, including through the incentive of possibly receiving an "Outstanding" rating.

Final Rule

For the reasons stated below, the agencies are finalizing proposed § __.29(b)(1), renumbered as § __.30(a)(1) in the final rule, pertaining to the evaluation of an intermediate bank's retail

lending performance under the Retail Lending Test, and its community development activities under the intermediate bank community development evaluation (in proposed § __.29(b)(2), renumbered as § __.30(a)(2)(i)) – renamed in the final rule as Intermediate Bank Community Development Test – unless an intermediate bank opts to be evaluated under the Community Development Financing Test. The agencies are also making technical changes to improve the clarity and organization of this paragraph. Specifically, the agencies are clarifying the criterion in proposed § __.29(b)(2)(iv), renumbered as § __.30(a)(2)(i)(D), that the agencies’ evaluation of the responsiveness of the bank’s activities is informed by information provided by the bank and may be informed by the impact and responsiveness review factors described in § __.15(b). The agencies believe that providing some of the specific factors they will consider when evaluating the degree of responsiveness of intermediate bank’s community development loans, investments, and services improves the ability of stakeholders to assess the qualitative impact of the activities. The agencies also note that renumbering of this section serves to separate the performance standards for small banks in § __.29 from the performance standards for intermediate banks in new § __.30. The agencies believe that this revision improves organizational clarity and readability.

With respect to the Retail Lending Test, the agencies believe applying this performance test to intermediate banks is appropriate because evaluating an intermediate bank under the Retail Lending Test, rather than the Small Bank Lending Test in § __.29, provides intermediate banks (and the public) with increased clarity, consistency, and transparency on applicable supervisory expectations, and standards for evaluating their retail lending performance. In addition, as the asset size of intermediate banks increased to between \$600 million and less than \$2 billion in assets,¹⁴⁷⁷ the agencies believe that banks in this asset-size category should have sufficient resources and capacity to adjust to the Retail Lending Test, particularly as no new data reporting and no delineation of retail lending assessment areas are required. In addition, as described further in the section-by-section analysis of § __.22, intermediate banks are treated differently related to the retail lending volume screen and the outside retail lending assessment area. This approach also supports an easier potential transition to the large bank category later, as these intermediate banks will be familiar with certain Retail Lending Test requirements applicable to large banks and would need to adjust to a smaller set of additional requirements.

The agencies considered comments that a tailored approach to the Retail Lending Test for intermediate banks might lead to corresponding data gaps, inconsistencies in assessing activities, and difficulties in comparing data across banks. Under the final rule, the agencies have sought to achieve a balance between ensuring a standardized evaluation approach that is informed by metrics, and limiting additional complexity and burden, in particular for small and intermediate banks, as discussed in the section-by-section analysis of § __.42. In light of these objectives, the agencies believe it is appropriate to tailor data collection and reporting requirements for intermediate banks, recognizing that any data requirements for these banks would create additional burden. Additionally, for those banks that do not have data collection and maintenance requirements, the agencies may use bank data collected in the ordinary course of business, or may use sampling techniques to compute metrics for the bank.

¹⁴⁷⁷ See the section-by-section analysis of § __.12.

With respect to an intermediate bank's community development evaluation, the agencies believe that retaining the flexibility for these banks to be evaluated under the Intermediate Bank Community Development Test or, at the bank's option, to be evaluated under the Community Development Financing Test, recognizes these banks' more limited capacity compared to larger banks. The agencies believe tailoring the evaluation for intermediate banks is necessary to appropriately reflect their resources and capacity relative to large banks, and the focus of their business models, which is generally on their facility-based assessment areas. Moreover, although the agencies recognize commenter concerns that requiring intermediate banks to be evaluated under the Community Development Financing Test may promote greater consistency among banks and examiners, the agencies are not persuaded that the additional Community Development Financing Test data collection, maintenance, and reporting burden would in all cases outweigh the additional benefits. In addition, the agencies believe that providing intermediate banks with flexibility to opt into the Community Development Financing Test best supports the agencies' objective of tailoring the evaluation to best fit an intermediate bank's size, business model, and business strategy. Of note, both the Intermediate Bank Community Development Test and the Community Development Financing Test are intended to consider and evaluate intermediate bank community development loans and community development investments. In addition, the agencies note that the Intermediate Bank Community Development Test includes community development services, while community development services are considered at the bank's option for intermediate banks evaluated under the Community Development Financing Test. So, too, the results of the agencies' evaluation of an intermediate bank's community development activities, evaluated under in either performance test, will be presented in the public portion of the bank's CRA performance evaluation. This, in turn, will assist stakeholders to understand how these community development activities are assessed and regulated.

The agencies also believe that the flexibility of permitting intermediate banks to opt to have their retail services and products considered in order to potentially elevate an overall rating from a "Satisfactory" to an "Outstanding" makes it unnecessary to incorporate a formal intermediate bank opt-in to the Retail Services and Products Test.

The agencies acknowledge the importance of performance context in the CRA evaluation of any bank. However, the agencies do not believe that it is appropriate to weight an intermediate bank's performance context considerations more than its actual retail lending and community development activities given the CRA's strong emphasis on retail lending and community development performance in order to meet community needs. Examiners will continue to consider a bank's capacity, business model, business strategy, and other performance context factors when evaluating the overall performance of intermediate and other banks, as discussed in the section-by-section analysis of § __.21.

Upon consideration of the comments, the agencies have decided to permit an intermediate bank to receive consideration for retail loans that have a community development purpose under both the Retail Lending Test (under which the number of such loans will be considered) and under either the Intermediate Bank Community Development Test or, at the bank's option, the Community Development Financing Test (under which the dollar amount of such loans will be considered). To accomplish this, the agencies are removing the provision in proposed § __.22(a)(5) that made the consideration of retail loans for intermediate banks exclusive to the Retail Lending Test. The agencies believe that it is appropriate to consider a retail loan as a

community development loan if the retail loan meets the definition of a community development loan pursuant to final §§ __.12 and __.13, given the different considerations applicable to these loans pursuant to the relevant performance tests. For example, closed-end home mortgage loans considered under the Retail Lending Test are excluded from community development consideration unless these loans are one-to-four family home mortgage loans for rental housing with affordable rents in nonmetropolitan census tracts. The agencies also believe that the decision regarding which retail loans to request consideration for as a community development loan should be left to the bank using the criteria provided in § __.13 to determine whether a retail loan has a community development purpose as described in that section.

§ __.30(a)(2)(ii) Consideration of community development activities outside facility-based assessment areas

The agencies are persuaded by commenters' recommendations that all banks' community development activities, including those of an intermediate bank, be considered without regard to whether the activity is conducted in the bank's facility-based assessment areas. Accordingly, the agencies are revising final § __.19 to provide that all banks, including intermediate banks, may receive consideration for community development loans, investments, or services provided outside of their facility-based assessment areas. The agencies believe providing consideration for community development activities outside a bank's facility-based assessment areas adds certainty and will contribute to higher levels of community development activities. The agencies also believe consideration for these outside activities will encourage activities in areas with high community development needs, such as underserved areas, while not increasing burden since banks would not be required to serve these areas if not otherwise required to do so. This provision includes intermediate banks that opt to be evaluated under the Community Development Financing Test in final § __.24.

The agencies are also adopting an additional provision in § __.30(a)(2)(ii) to provide that community development activities of an intermediate bank evaluated under either the Intermediate Bank Community Development Test or, at the bank's option, the Community Development Financing Test, are considered regardless of whether the activity is conducted in one or more of the bank's facility-based assessment areas. The extent of the consideration given to community development activities outside of an intermediate bank's facility-based assessment areas will depend on the adequacy of the bank's responsiveness to the needs and opportunities for community development activities within the bank's facility-based assessment areas and applicable performance context information. The agencies believe that providing consideration for community development activities outside of a bank's facility-based assessment areas introduces additional certainty that will incentivize higher levels of community development activities. The agencies also believe that consideration for these outside activities will encourage activities in areas with high community development needs, such as underserved areas, while not increasing regulatory burden as banks would not be required to serve these areas. Further, the agencies believe that these activities would not supplant facility-based assessment area community development activities but could instead provide banks with the flexibility to engage in outside activities, particularly when there are limited opportunities for such community development activities in a bank's facility-based assessment area.

§ __.30(b) Additional consideration

Current Approach and the Agencies' Proposal

As explained in the section-by-section analysis of § __.30(a)(1) and __.30(a)(2), an intermediate small bank is currently subject to the small bank lending test and a community development test, which includes consideration of community development lending, investments, and services. The agencies proposed in § __.29(b)(3) that if an intermediate bank opts to be evaluated under the Community Development Financing Test the bank would have the option to request additional consideration for activities that qualify under the Retail Services and Products Test and the Community Development Services Test for possible adjustment of an overall rating of “Satisfactory” to “Outstanding.” The agencies did not propose to provide additional consideration for retail services and products and community development services for intermediate banks evaluated under the intermediate bank community development evaluation in proposed § __.29(b)(2), because, as explained in the proposal, the agencies believed this section already incorporated those activities in the status quo intermediate bank community development evaluation.

Final Rule

The agencies received no specific comments related to the provision for additional consideration of an intermediate bank’s activities that qualify under other performance tests. Accordingly, the agencies are finalizing proposed § __.29(b)(3), renumbered as § __.30(b), with a few revisions for clarity. Specifically, the agencies are clarifying their intent that, if an intermediate bank requests and receives consideration for additional activities, the agencies may adjust the bank’s rating from a “Satisfactory” to an “Outstanding,” regardless of whether the bank is evaluated under the Intermediate Bank Community Development Test or the Community Development Financing Test.

In the preamble to the proposed rule, the agencies explained that additional consideration for retail services and products and community development services would not be appropriate for an intermediate bank that is evaluated under the intermediate bank community development evaluation because proposed § __.29(b)(2) already incorporated those activities. However, the agencies note that proposed § __.29(b)(2) did not address additional consideration for certain retail services and products included under the Retail Services and Products Test, even though the agencies intended to provide such consideration. Accordingly, the agencies are finalizing § __.30(b)(1) to make clear that an intermediate bank evaluated under the Intermediate Bank Community Development Test may also request and receive additional consideration for activities that qualify under the Retail Services and Products Test, provided the bank achieves an overall institution rating of at least “Satisfactory.” It is not necessary to provide these intermediate banks with additional consideration for community development services because the Intermediate Bank Community Development Test already incorporates an evaluation of community development services.

The final rule also revises proposed § __.29(b)(3), renumbered as § __.30(b)(2), to clarify that an intermediate bank that opts to be evaluated under the Community Development Financing Test must achieve an overall institution level rating of at least “Satisfactory” to request and receive additional consideration for activities that qualify under the Retail Services and Products Test, the Community Development Services Test, or both.

Similar to the requirements for small banks, the agencies will consider these activities to potentially elevate a bank’s overall institution rating from “Satisfactory” to “Outstanding,” but would not elevate a “Needs to Improve” rating to a “Satisfactory” or an “Outstanding” rating.

Additionally, an intermediate bank could likewise continue to achieve any rating, including an “Outstanding” rating, based on its retail lending and community development performance alone, and would not be required to be evaluated on other activities eligible for additional consideration.

The agencies have also added new final § __.30(b)(3) to clarify that notwithstanding the requirement that an intermediate bank must achieve a “Satisfactory” or “Outstanding” rating for the consideration of additional activities under paragraphs (b)(1) and (b)(2) of this section, intermediate banks may receive additional consideration for low-cost education loans without regard to the intermediate bank’s overall institution rating. The agencies added this additional consideration to provide clarity about how low-cost education loans may be considered in compliance with the requirements of the CRA.¹⁴⁷⁸

§ __.30(c) Intermediate bank performance conclusions and ratings

Current Approach

Current § __.26(d) provides that the agencies assign the performance of a bank evaluated under the small bank performance standards one of four ratings, as set forth in current appendix A: “Outstanding,” “Satisfactory,” “Needs to Improve,” or “Substantial Noncompliance.”¹⁴⁷⁹

Under current appendix A, the agencies assign intermediate small banks evaluated under the small bank lending test conclusions of “Outstanding,” “Satisfactory,” “Needs to Improve,” or “Substantial Noncompliance” based on the bank’s lending performance. The agencies rate an intermediate small bank’s lending performance as “Satisfactory” if, in general, the bank demonstrates a reasonable loan-to-deposit ratio; a majority of loans are in its assessment areas; a distribution of loans to, and for individuals of, different income levels and businesses and farms of different sizes that is reasonable given the demographics of the bank’s assessment areas; a record of taking appropriate action, in response to written complaints, if any, about the bank’s performance in helping to meet the credit needs of its assessment areas; and a reasonable geographic distribution of loans given the bank’s assessment areas. An intermediate small bank that meets each of the standards for a “Satisfactory” rating under the lending test and exceeds some or all of those standards may warrant consideration for a lending test rating of “Outstanding.”

Under the current intermediate small bank community development test, the agencies rate the bank’s community development performance “Satisfactory” if the bank demonstrates adequate responsiveness to the community development needs of its assessment areas through community development loans, qualified investments, and community development services. The adequacy of the bank’s response will depend on its capacity for such community development activities, its assessment areas’ need for such community development activities, and the availability of such opportunities for community development in the bank’s assessment areas. The agencies rate an intermediate small bank’s community development performance “Outstanding” if the bank demonstrates excellent responsiveness to community development needs in its assessment areas through community development loans, qualified investments, and community development

¹⁴⁷⁸ See 12 U.S.C. 2903(d).

¹⁴⁷⁹ Current appendix A(d)(1).

services, as appropriate, considering the bank’s capacity and the need and availability of such opportunities for community development in the bank’s assessment areas.

The agencies may assign an intermediate small bank a community development test rating of “Needs to Improve” or “Substantial Noncompliance” depending on the degree to which its performance has failed to meet the standards for a “Satisfactory” rating.

Pursuant to current appendix A, an intermediate small bank may not receive an assigned overall rating of “Satisfactory” unless it receives a rating of at least “Satisfactory” on both the lending test and the community development test.¹⁴⁸⁰ An intermediate small bank that receives an “Outstanding” rating on one test and at least “Satisfactory” on the other test may receive an assigned overall rating of “Outstanding.”¹⁴⁸¹

The Agencies’ Proposal

For intermediate banks, the agencies proposed to revise current 12 CFR __.26(d) (Small bank performance rating), renumbered in the proposal as proposed § __.29(b)(4) (Intermediate bank performance ratings), to provide that the agencies would rate the performance of an intermediate bank as provided in proposed appendices D (Ratings) and E (Small Bank Conclusions and Ratings and Intermediate Bank Community Development Evaluation Conclusions). In proposed appendix E, the agencies proposed to rate an intermediate bank’s performance as described in appendix D.¹⁴⁸² Pursuant to proposed appendix D, for intermediate banks evaluated under the Retail Lending Test and the Community Development Financing Test, the agencies proposed to combine an intermediate bank’s raw performance scores for its State or multistate MSA performance under the Retail Lending Test and the Community Development Financing Test to determine the bank’s rating at the State or multistate MSA level and for the institution.¹⁴⁸³ The agencies proposed to weight the performance scores equally: Retail Lending Test (50 percent) and Community Development Financing Test (50 percent). The agencies proposed to multiply each of these weights by the bank’s corresponding performance score on the respective performance test, and then add the resulting values together to develop a State, multistate MSA, or institution performance score. For this calculation, the performance score for the Retail Lending Test and the Community Development Test alike corresponds to the conclusion assigned, as follows: “Outstanding” (10 points); “High Satisfactory” (7 points); “Low Satisfactory” (6 points); “Needs to Improve” (3 points); “Substantial Noncompliance” (0 points). The agencies would then assign a rating corresponding to the rating category that is nearest to the State, multistate MSA, or institution performance score, as provided in proposed appendix D.

Proposed appendix D further provided that the agencies may adjust an intermediate bank’s institution rating from “Satisfactory” to “Outstanding” where the bank requests and receives sufficient additional consideration for activities that qualify under the Retail Services and Products Test, the Community Development Services Test, or both.

¹⁴⁸⁰ *Id.*

¹⁴⁸¹ *See* current appendix A(d)(3)(ii)(A).

¹⁴⁸² *See* proposed appendix E.b.2.

¹⁴⁸³ *See* proposed appendix D.c.

Pursuant to proposed appendix E, for intermediate banks evaluated under the Retail Lending Test and the intermediate bank community development performance evaluation, the agencies proposed to assign conclusions for an intermediate bank's community development performance of "Outstanding," "High Satisfactory," "Low Satisfactory," "Needs to Improve," or "Substantial Noncompliance." The agencies proposed to assign an intermediate bank's community development performance a "Low Satisfactory" conclusion if the bank demonstrated adequate responsiveness, and a "High Satisfactory" conclusion if the bank demonstrated good responsiveness, to the community development needs of its facility-based assessment areas through community development loans, community development investments, and community development services. The agencies proposed that their determination of the adequacy of the bank's response would depend on the bank's capacity for such community development activities, its facility-based assessment areas' need for such community development activities, and the availability of such opportunities for community development in the bank's facility-based assessment areas. The agencies proposed to consider an intermediate bank's retail banking services and products activities as community development services if they provide benefit to low- and moderate-income individuals.

Additionally, the agencies proposed to assign an intermediate bank's community development performance an "Outstanding" conclusion if the bank demonstrated excellent responsiveness to community development needs in its facility-based assessment areas through community development loans, community development investments, and community development services, as appropriate, considering the bank's capacity and the need and availability of such opportunities for community development in the bank's facility-based assessment areas. The agencies proposed to assign an intermediate bank's community development performance a "Needs to Improve" or "Substantial Noncompliance" conclusion depending on the degree to which the bank's performance had failed to meet the standards for a "Satisfactory" conclusion.

Comments Received

The agencies received a few comments specifically related to an intermediate bank's conclusions and ratings. Related to the equal 50 percent weighting between the Retail Lending Test and the intermediate bank community development evaluation, these commenters supported equal weighting under the assumption that community development services are part of the intermediate bank community development evaluation. One of the commenters stated that if community development services are optional, the Retail Lending Test weight should be increased to 55 or 60 percent to leverage more lending.

The agencies also received comments on what should constitute an overall passing score (*i.e.*, an overall "Satisfactory") for a bank's CRA performance. A commenter agreed with the proposal that intermediate banks must have at least a "Low Satisfactory" on the Retail Lending Test to pass overall, but opposed eliminating the requirement that banks have a "Satisfactory" rating on the community development test to have "Satisfactory" rating overall, stating that there is no justification for removing this requirement.

Final Rule

The agencies are finalizing proposed § __.29(b)(4), renumbered in the final rule as § __.30(c)(1) and (c)(2), pertaining to an intermediate bank's performance conclusions and ratings, with revisions to provide separate provisions for conclusions and ratings. Specifically,

the agencies are finalizing § __.30(c)(1), which provides that the agencies assign a conclusion for the performance of an intermediate bank evaluated pursuant to final § __.30 as provided in final appendices C and E. The agencies are also finalizing § __.30(c)(2), which provides that the agencies rate the performance of an intermediate bank evaluated pursuant to final § __.30 as provided in final appendix D.

The agencies are also finalizing as proposed the respective weights of the Retail Lending Test at 50 percent and either the Intermediate Bank Community Development Test or, at the bank's option, the Community Development Financing Test, also at 50 percent. The agencies note that they considered various weighting combinations to apply to a two performance-test analysis; however, the agencies have ultimately determined that the weights as finalized are appropriate, and did not increase the Retail Lending Test weight. The agencies continue to believe that the weight for each test, as finalized, reflects the CRA's emphasis on retail lending and the importance of community development activities in meeting community credit needs. In comparison to alternatives where a greater emphasis is placed on one of the two applicable performance tests, the agencies determined that an equal weighting on both tests best recognizes bank performance for both retail lending and community development and avoids diminution of one type of performance in favor of the other. The agencies also note that the weighting of the performance tests in the final rule is consistent with the current practice for intermediate small banks, which gives equal weight to retail lending and community development activities.

For the final rule, the agencies also considered the impact of the additional consideration of other activities, including community development services, on the weight of the performance tests. The agencies continue to believe that the flexibility intermediate banks have to decide which community development performance test better fits their bank will allow banks that currently participate heavily in community development services to continue to have these services evaluated under the Intermediate Bank Community Development Test or to have these community development services given additional consideration under the Community Development Financing Test. In addition, the agencies also believe that maintaining consistency in the evaluation framework outweighs additional adjustments based on which community development performance test applies to the intermediate bank.

The agencies are also finalizing as proposed the requirement that an intermediate bank receive at least a "Low Satisfactory" on the Retail Lending Test for the bank to receive an overall "Satisfactory" rating. As the agencies explained in the proposal, this requirement serves to prevent a bank from receiving a "Satisfactory" or higher rating at the State or multistate MSA level or for the institution if it fails to meet its community's credit needs for retail loans. Consistent with current practice, the agencies are finalizing this requirement to emphasize the importance of retail loans to low- and moderate-income individuals, and in low- and moderate-income communities.

Finally, the agencies believe that removal of the requirement that an intermediate bank receive a "Satisfactory" on both applicable performance tests in order to receive an overall "Satisfactory" CRA rating will allow intermediate banks to best determine how to meet community credit needs consistent with their more limited capacities. Moreover, the agencies believe this aspect of the final rule provides parity between intermediate and large banks, as this requirement is only applicable to intermediate small banks in the current rule, which holds these banks to a higher standard of performance than their larger counterparts.

§ __.31 Effect of CRA Performance on Applications

Current Approach

Under the current CRA regulations, the agencies take into account a bank's CRA performance when considering certain applications, including but not limited to: the establishment of a domestic branch; a merger, consolidation, acquisition of assets, or assumption of liabilities; the relocation of a main office or branch; a deposit insurance request; and transactions subject to the Bank Merger Act, the Bank Holding Company Act, or the Home Owners' Loan Act.¹⁴⁸⁴ In considering these applications, the agencies also take into account any views expressed by interested parties that are submitted in accordance with the applicable comment procedures.¹⁴⁸⁵

A bank's record of CRA performance may be the basis for denying or conditioning approval of an application.¹⁴⁸⁶ In reviewing applications in which CRA performance is a relevant factor, information from a bank's CRA examination is a particularly important, and often controlling, factor in the consideration of a bank's record.¹⁴⁸⁷ The agencies' consideration of CRA performance on applications implements the statutory requirement that the agencies take into account a bank's record of meeting the credit needs of its entire community, including low- and moderate-income neighborhoods, consistent with the safe and sound operation of such bank, in evaluating applications for a deposit facility by such bank.¹⁴⁸⁸

The Agencies' Proposal

The agencies proposed to renumber current § __.29 to proposed § __.31 but did not propose any substantive changes to current § __.29.¹⁴⁸⁹ The agencies sought feedback on the sufficiency of the agencies' current policies for considering CRA performance in connection with applications and whether any changes could make the process more effective.

Comments Received

The agencies received comments related to proposed § __.31 from a variety of stakeholders. Some commenters provided input specifically on the effect of a bank's CRA rating on an application. One commenter stated that current policies related to the effect of CRA performance on applications are sufficient, with other commenters suggesting changes. Some of

¹⁴⁸⁴ See current 12 CFR 25.29(a) (OCC), current 12 CFR 228.29(a) (Board), and current 12 CFR 345.29(a) (FDIC). The agencies' respective CRA regulations include provisions that relate directly to each of their specific authorities with regard to banking applications.

¹⁴⁸⁵ See current 12 CFR 25.29(c) (OCC), current 12 CFR 228.29(b) (Board), and current 12 CFR 345.29(c) (FDIC).

¹⁴⁸⁶ See current 12 CFR 25.29(d) (OCC), current 12 CFR 228.29(c) (Board), and current 12 CFR 345.29(d) (FDIC).

¹⁴⁸⁷ See Q&A § __.29(a)—(1).

¹⁴⁸⁸ See 12 U.S.C. 2903(a); see also 12 U.S.C. 2902(3).

¹⁴⁸⁹ Each agency proposed, and is finalizing, final § __.31 as part of its agency-specific amendments.

these commenters stated that an “Outstanding” CRA rating must not be considered evidence that a merging bank has satisfied the public benefits legal requirement¹⁴⁹⁰ because the CRA rating is retrospective and does not consider the resulting bank, whereas another commenter suggested that the agencies deem a bank with an “Outstanding” CRA rating to have satisfied the convenience and needs standard for purposes of the application’s processing to incentivize banks to achieve an “Outstanding” rating. Further, a commenter stated that banks with a poor CRA rating should be prevented from merging and another commenter suggested banks rated “Outstanding” should be reviewed more closely when purchasing banks rated less than “Outstanding.” In a similar vein, a commenter supported efforts to hold banks accountable if they fail CRA examinations or wish to acquire a bank with a better CRA rating. Other commenters specifically called for greater public and regulatory scrutiny of applications by banks with a “Low Satisfactory” CRA rating and for a requirement that these banks submit a plan to improve their CRA rating. One commenter urged the agencies to state how a “Needs to Improve” CRA rating would affect applications.

Many commenters that provided input on proposed § __.31 also discussed the agencies’ processes and standards for reviewing merger applications. Many of these commenters stated that the agencies must scrutinize mergers more closely to ensure that community credit needs, convenience and needs, and public benefits standards are met. Specifically, many of these commenters supported holding more frequent public meetings or soliciting more public comments when considering merger applications or suggested that public meetings should be held as a matter of course for all mergers; for all large bank merger applications; or whenever there are public comments, a request for a public meeting, or for any applicants with less than an “Outstanding” CRA rating. Some commenters stated there should be at least 90 days in which to comment on a merger. In addition, some commenters stated that the agencies’ review of mergers should include review of consumer complaints, community comments, and CFPB and other agency investigations. Many commenters suggested that the agencies should deny mergers unless an applicant demonstrates how a merger will benefit the community. Other commenters raised specific concerns about application delays associated with public comments, which they stated can result in significant increased costs and talent retention concerns.

The agencies also received several comments relating to CBAs and community benefit plans (CBPs). Most commenters supported considering or otherwise encouraging CBAs or CBPs to be part of merger application reviews or endorsed requiring applicants to submit a CBA or CBP as part of the merger application process. Some commenters requested that the agencies monitor and enforce compliance with CBAs and CBPs.

Final Rule

The agencies are adopting final § __.31 as proposed with one technical edit. Consistent with *Federal Register* drafting guidelines, the Agencies have replaced the word “shall” with the word “must.”¹⁴⁹¹

¹⁴⁹⁰ The agencies believe that the commenter is likely referring to the convenience and needs standard under the Bank Merger Act. *See* 12 U.S.C 1828(c)(5); *see also* 12 CFR 5.33(e)(1)(ii)(C).

¹⁴⁹¹ *See* National Archives, Office of the Federal Register, “Principals of Clear Writing,” <https://www.archives.gov/federal-register/write/legal-docs/clear-writing.html>.

The agencies believe that the current rule as well as final § __.31 appropriately implement the statutory requirement that the agencies take a bank’s CRA record into account in evaluating applications. As noted above, the current rule as well as final § __.31 provide that a bank’s record of performance under the CRA examination may be the basis for denying or conditioning approval of an application. Further, a bank’s CRA performance is often a controlling factor in the consideration of a bank’s record when reviewing applications in which CRA performance is a relevant factor.¹⁴⁹² The agencies also note that current regulations generally provide expedited application review for banks rated at least “Satisfactory.”¹⁴⁹³

The agencies note that CRA examinations are a retrospective evaluation of a bank’s record of meeting the credit needs of its community, while a convenience and needs assessment under the Bank Merger Act is prospective and, as such, considers how the combined institution will serve the needs of its communities following consummation of the proposed transaction. Further, the agencies review a bank’s CRA record comprehensively and believe that each application should be reviewed according to its specific facts and circumstances. In some cases, the CRA examination might not be recent, or a specific issue raised in the application process might not be reflected in the CRA rating (although it might be generally relevant to a CRA evaluation), such as a bank’s progress in addressing weaknesses noted by examiners or implementing commitments previously made to the reviewing agency. In addition, pursuant to final § __.31(c), the agencies review public comments received on the application. Therefore, agency discretion is necessary during the application process with respect to taking into account a bank’s CRA performance.

The agencies appreciate the feedback on the Bank Merger Act application process and CBAs and CBPs, but note that these comments are outside the scope of this rulemaking.¹⁴⁹⁴

§ __.42 Data Collection, Reporting, and Disclosure

Current Approach – Generally

Current Data Collection and Reporting Requirements

Current Data Used for Deposits. The current CRA regulations do not require banks to collect or report deposits data. Instead, for small banks, total deposits and total loans data from the Call Report are used to calculate the loan-to-deposit ratio for the entire bank. Total deposits allocated to each branch from the FDIC’s Summary of Deposits are used for performance context for banks of any size. Deposits data by depositor location are not currently collected or reported.

Current Small Bank and Intermediate Small Bank Data Standards for Retail Lending. The current CRA regulations do not require small banks and intermediate small banks to collect, maintain, or report loan data, unless they opt to be evaluated under the lending, investment, and

¹⁴⁹³ *See* 12 CFR part 5 (OCC), 12 CFR parts 208 and 225 (Board), and 12 CFR part 303 (FDIC).

¹⁴⁹⁴ *Id.* The comments on bank mergers are more applicable to the agencies’ merger regulations and related processes. *See* 12 CFR part 5 (OCC); 12 CFR parts 208 and 225 (Board), and 12 CFR part 303 (FDIC).

service tests that apply to large banks.¹⁴⁹⁵ Examiners generally use information for a bank’s major loan products gathered from individual loan files or maintained on the bank’s internal operating systems, including data reported pursuant to HMDA, if applicable.

Current Large Bank Data Standards for Retail Lending and Community Development Financing. Under the current CRA regulations, large banks collect and report certain lending data for home mortgages, small business loans, small farm loans, and community development loans, pursuant to either HMDA or the CRA regulation.¹⁴⁹⁶ CRA data reporting requirements are based on bank size, not type of exam.¹⁴⁹⁷ If a bank, such as a wholesale or limited purpose bank, does not engage in lending of a particular type, current regulations do not require reporting such data. Examiners use this lending data and other supplemental data to evaluate CRA performance. A bank may use the software provided by the FFIEC for data collection and reporting or develop its own programs. Retail lending data collection and reporting requirements differ based on the product line.

For large banks that do not report HMDA data, examiners use home mortgage information maintained on the bank’s internal operating systems or from individual loan files. The data elements for home mortgage loans used for CRA evaluations include loan amount at origination, location, and borrower income. For small business loans and small farm loans, the CRA regulations require large banks to collect and maintain the loan amount at origination, loan location, and an indicator of whether a loan was to a business or farm with gross annual revenues of \$1 million or less.¹⁴⁹⁸ Large banks report aggregate small business and small farm data at the census tract level.¹⁴⁹⁹

Large banks are not required to collect or report data on consumer loans. However, if a large bank opts to have consumer loans considered as part of its CRA evaluation, it must collect and maintain this information based on the category of consumer loan and include it in its public file.¹⁵⁰⁰

The current CRA regulations also require large banks to report the aggregate number and dollar amount of their community development loans originated or purchased during the evaluation period, but not information for individual community development loans.¹⁵⁰¹ A bank must, however, provide examiners with sufficient information to demonstrate its community development performance.¹⁵⁰² The CRA regulations do not currently require the reporting or

¹⁴⁹⁵ See current 12 CFR __.42(f).

¹⁴⁹⁶ See current 12 CFR __.42.

¹⁴⁹⁷ See Q&A § __.42—1.

¹⁴⁹⁸ See current 12 CFR __.42(a).

¹⁴⁹⁹ See current 12 CFR __.42(b)(1).

¹⁵⁰⁰ See current 12 CFR __.42(c)(1).

¹⁵⁰¹ See current 12 CFR __.42(b)(2).

¹⁵⁰² See Q&A § __.12(h)—8, which states, in relevant part, “Financial institutions that want examiners to consider certain activities should be prepared to demonstrate the activities’ qualifications.”

collection of community development loans that remain on the bank's books or the collection and reporting of any information about qualified community development investments. As a result, the total amount (originated and on-balance sheet) of community development loans and investments nationally, or within specific geographies, is not available through reported data. Consequently, examiners supplement reported community development loan data with additional information provided by a bank at the time of an examination, including the amount of investments, the location or areas benefited by these activities and information describing the community development purpose.

Data Currently Used for CRA Retail Services and Community Development Services Analyses. There are no specific data collection or reporting requirements in the current CRA regulations for retail services or community development services. A bank must, however, provide examiners with sufficient information to demonstrate its performance in these areas, as applicable. A bank's CRA public file is required to include a list of bank branches, with addresses and census tracts;¹⁵⁰³ a list of branches opened or closed;¹⁵⁰⁴ and a list of services, including hours of operation, available loan and deposit products, transaction fees, and descriptions of material differences in the availability or cost of services at particular branches, if any.¹⁵⁰⁵

Banks have the option of including information regarding the availability of alternative systems for delivering services.¹⁵⁰⁶ Banks may also provide information on community development services, such as the number of activities, bank staff hours dedicated, or the number of financial education sessions offered.

The Agencies' Proposal – Generally

As discussed in more detail in the section-by-section analysis of § __.42, the agencies proposed data collection and reporting requirements to increase the clarity, consistency, and transparency of the evaluation process through the use of standard metrics and benchmarks. The agencies also recognized the importance of using existing data sources where possible and tailoring data requirements based on bank size where appropriate. The agencies proposed that all large banks, defined in proposed § __.12 as banks with assets of at least \$2 billion in both of the prior two calendar years, would be subject to certain data requirements. Specifically, the agencies largely retained the existing large bank data collection and reporting requirements for small business and small farm lending in proposed § __.42(a)(1) and (b)(1), although the agencies proposed replacing these data with CFPB's Section 1071 data once those data became available. The agencies also proposed that large banks collect and maintain data for branches and remote service facilities under proposed § __.42(a)(4)(i) and collect and report community development financing data under proposed § __.42(a)(5) and (b)(3). The proposal also provided updated standards for all large banks to report the delineation of their assessment areas under proposed § __.42(f).

¹⁵⁰³ See current 12 CFR __.43(a)(3).

¹⁵⁰⁴ See current 12 CFR __.43(a)(4).

¹⁵⁰⁵ See current 12 CFR __.43(a)(5).

¹⁵⁰⁶ See *id.*

The agencies also proposed new data requirements that would only apply to large banks with assets of over \$10 billion. Specifically, the proposed rule required additional data collection and reporting for these large banks for automobile lending under proposed § __.42(a)(2) and (b)(2); data collection for retail services and products under proposed § __.42(a)(4)(ii) (digital and other delivery systems) and under proposed § __.42(a)(4)(iii) (responsive deposit products); data collection and reporting for community development services under proposed § __.42(a)(6) and (b)(4); and data collection and reporting of deposits data under proposed § __.42(a)(7) and (b)(5).

Under the proposal, banks operating under an approved wholesale or limited purpose bank designation would not be required to collect or report deposits data or report retail services or community development services information. Intermediate banks, as defined in proposed § __.12, would not be required to collect or report any additional data compared to current requirements, unless they opt into the proposed Community Development Financing Test. In addition, small banks, as defined in proposed § __.12, would not be required to collect or report any data beyond current requirements.

Comments Received

The agencies received numerous comments that generally addressed the agencies' proposed data collection, reporting, and disclosure requirements. Many of these commenters expressed concern regarding the expected burden and utility of the data proposed to be collected and reported, but many also noted that the proposed rule's data requirements would improve the agencies' and the public's understanding of how banks serve their communities.

Several commenters suggested that banks should be able to use data that they currently submit to government agencies in lieu of data that the agencies would require them to collect, maintain, and report for CRA purposes. These comments included the request that CDFI banks be permitted to submit CDFI Fund Annual Certification and Data Collection Report Forms in lieu of their CRA data requirements.

A few commenters addressed the agencies' request for feedback on what data collection and reporting challenges, if any, exist for credit cards that could adversely affect the accuracy of metrics and benchmarks for credit card lending. For example, a few commenters disputed the proposal's suggestion that banks may not currently retain or have the capability to capture credit card borrower income at origination or subsequently. These commenters asserted that banks generally collect borrower income information on consumer credit card applications or at the time a credit card is issued, and suggested that the benefits of a metrics-based approach to evaluating consumer credit card lending (including more competition and better rates for low- and moderate-income consumers) would outweigh the modest cost of requiring banks to report this data. However, another commenter stated that the operational nature of credit card lending would not easily support the need for data collection and reporting; this commenter agreed that borrower income information is typically collected as part of the underwriting process, but noted that banks make underwriting decisions primarily based on an applicant's creditworthiness as revealed through credit bureaus, and borrower income information is not usually validated by banks. Another commenter identified difficulties in obtaining information that the commenter views as necessary for evaluating the responsiveness of a consumer credit card loan, such as how and why a consumer is using a credit card loan (as opposed to another loan product), whether the

credit card loan terms are responsive to the consumer's needs, and how equitable the terms are for low- and moderate-income and BIPOC consumers compared to other consumers.

Final Rule

The agencies are finalizing the data collection and reporting requirements for large banks with several modifications to the data collection requirements. The data collection and reporting requirements in the final rule are necessary for the construction of the various metrics and benchmarks used in the Retail Lending Test, the Retail Services and Products Test, the Community Development Financing Test, and the Community Development Services Test, as well as various weighting calculations, all of which are at the core of the effort to modernize the CRA regulations. Additionally, the specific data collection and reporting requirements are an important component of the effort to increase consistency and transparency in the new rule—having consistently defined data for bank activities enables more consistent treatment of those activities in the examination process. The agencies are tailoring data collection and reporting requirements with regard to bank size and other characteristics with the intention of creating minimal additional burden.

Regarding commenter suggestions that data already reported to government agencies be used in lieu of data required for CRA purposes, the agencies believe that the data requirements specified in the final rule are critical components to developing metrics and benchmarks. As such, the agencies believe that having different data requirements for a subset of institutions could create confusion and could impact the consistency of metrics and completeness of benchmarks.

The agencies have considered the comments related to credit card lending. However, the agencies have determined to not evaluate consumer credit card lending in the Retail Lending Test, which is addressed in the section-by-section analysis of § __.22. Therefore, collection and maintenance of consumer credit card lending data will not be required.

§ __.42(a)(1) Information required to be collected and maintained – Small business and small farm loan data

§ __.42(b)(1) Information required to be reported – Small business and small farm loan data

Current Approach

The CRA regulations in current § __.42(a) require a bank, except a small bank, to collect, and maintain in prescribed machine readable form until the completion of the bank's next CRA examination, the following data for each small business or small farm loan originated or purchased by the bank: (1) a unique number or alpha-numeric symbol that can be used to identify the relevant loan file; (2) the loan amount at origination; (3) the loan location; and (4) an indicator whether the loan was to a business or farm with gross annual revenues of \$1 million or less.¹⁵⁰⁷

The regulations in current § __.42(b) also require that a bank, except a small bank or a bank that was a small bank during the prior calendar year, report annually by March 1 in machine readable form, to the appropriate agency, small business and small farm loan data. The current regulations require the bank to report for each geography in which the bank originated or

¹⁵⁰⁷ See current 12 CFR __.42(a)(1)-(4).

purchased a small business or small farm loan, the aggregate number and amount of loans: (1) with an amount at origination of \$100,000 or less; (2) with an amount at origination of more than \$100,000 but less than or equal to \$250,000; (3) with an amount at origination of more than \$250,000; and (4) to businesses and farms with gross annual revenues of \$1 million or less (using the revenues that the bank considered in making its credit decision);

The Agencies' Proposal

The agencies proposed to expand the data requirements in current § __.42(a)(1) by expanding the collection and maintenance of the following data related to small business loan and small farm loan originations and purchases by the bank: (1) a unique number or alpha-numeric symbol that can be used to identify the relevant loan file; (2) an indicator for the loan type as reported on the bank's Call Report; (3) the date of the loan origination or purchase; (4) loan amount at origination or purchase; (5) the loan location (State, county, census tract); (6) an indicator for whether the loan was originated or purchased; and (7) an indicator for whether the loan was to a business or farm with gross annual revenues of \$1 million or less.

The agencies also proposed to revise current § __.42(b)(1) to require that all large banks report by April 1 on an annual basis the aggregate number and amount of small business loans and small farm loans for the prior calendar year for each census tract in which the bank originated or purchased a small business or small farm loan by loan amounts in the categories of \$100,000 or less, more than \$100,000 but less than or equal to \$250,000, and more than \$250,000. This proposed provision also required large banks to report the aggregate number and amount of small business and small farm loans to businesses and farms with gross annual revenues of \$1 million or less (using the revenues that the bank considered in making its credit decision). The proposed gross annual revenue data would allow the agencies to conduct a borrower distribution analysis that shows the level of lending to small businesses of different revenue sizes.

The agencies also requested feedback on whether banks should be required to collect and report an indicator on loans made to businesses or farms with gross annual revenues of \$250,000 or less or whether another gross annual revenue threshold should be collected that better represents lending to the smallest businesses or farms during the interim period before the CFPB Section 1071 Final Rule comes into effect.

Comments Received

Several commenters addressed the agencies' proposed alignment of the CRA definitions of "small business" and "small farm" to the CFPB's Section 1071 definition of "small business." A few of these commenters addressed the impact this alignment would have on purchases of small business and small farm loans. More specifically, a commenter sought clarification about how banks could count purchases of small business and small farm loans in the CRA evaluation when the CFPB's definition would only include originations. This commenter requested that the agencies consider including purchased loans even if not accounted for in a bank's CFPB's Section 1071 data reporting requirements. Another commenter expressed concern that such alignment would penalize banks that rely heavily on purchases of indirect small business loans from dealers, such as commercial automobile loans. This commenter urged the agencies to wait until the CFPB's Section 1071 Proposed Rule is finalized to determine its implications on a bank's CRA performance before implementing portions of the final rule that would require such data. A few other commenters addressed the alignment of the CRA definitions of "small

business” and “small farm” to the CFPB’s Section 1071 definition of “small business,” with mixed views. A commenter supported the agencies’ proposed alignment of the definitions and the resulting increase in reported business loans stating it would be beneficial by providing a more comprehensive picture of credit supply in communities. This commenter also recommended including in the CRA evaluation small business loans that are supported by personal guarantees secured by liens on residential property. This commenter noted that currently these loans are not reported under either HMDA or CRA, resulting in a significant underreporting of small business loan volume. By contrast, multiple other commenters did not support the agencies’ proposal because it would mean that every loan made by a community bank would be a small business loan or small farm loan, subject to reporting. These commenters argued that doing so would impose significant new data collection and reporting requirements on community banks that opt-in to the Retail Lending Test. Several commenters further emphasized the importance of reconciling the differences between the CRA definitions and the CFPB’s Section 1071 definition, with one commenter noting that aligning the CRA definitions of “small business” and “small farm” to the CFPB’s Section 1071 Final Rule would be confusing for banks that would still be required to report small business loans for purposes of the Call Report. This commenter recommended that the agencies retain the current definition so that it aligns with the Call Report definition. Another commenter stated that because businesses may be serving multiple locations, identifying a single location for purposes of geocoding small business loans may not be feasible (same as with community development loans).

Commenters that addressed the agencies request for feedback on whether banks should collect and report an indicator on loans made to businesses or farms with gross annual revenues of \$250,000 or less or whether another gross annual revenue threshold should be collected that better represents lending to the smallest businesses or farms during the interim period before the CFPB’s Section 1071 Final Rule comes into effect, expressed mixed views. A few of the commenters supported no additional indicators during the transition, while a few other commenters supported the indicator in the interim. The commenters that supported establishing the gross annual revenue amount at \$250,000 or less also supported adding a second indicator for businesses with revenues of \$100,000 and less. A few other commenters made other recommendations. For example, a commenter suggested that banks should collect an indicator for loans made to a business or farm that identifies the size of the business or farm using the “small business” definition from section 8(d) of the Small Business Act or section 3(p) of the Small Business Act (“qualified HUBZone small business concern”) rather than gross annual revenues of \$250,000. Another commenter recommended that banks should report indicators for the smallest of businesses with gross annual revenues of \$500,000 and that providing indicators for businesses of various sizes should be encouraged if that is similar or the same as to how the CFPB’s Section 1071 Final Rule is structured. Finally, a commenter asked the agencies to clarify that in the case of a small business loan, a bank could rely on gross annual revenue information provided by third-party sources if the banks does not (and is not otherwise required to) collect that information directly from the borrower.

Final Rule

The agencies are adopting § __.42(a)(1) (collection and maintenance) and § __.42(b)(1) (reporting) largely as proposed, with some revisions upon consideration to comments.

Specifically, the agencies are revising the data collection and maintenance requirements for small business and small farm loans by revising proposed § __.42(a)(1)(vii) to indicate whether a

loan was to a business or farm with gross annual revenues of \$250,000 or less, rather than \$1 million or less as proposed. The agencies are also adopting new § __.42(a)(1)(viii)-(x) to indicate, respectively, whether a loan was to a business or farm with gross annual revenues greater than \$250,000 but less than or equal to \$1 million; whether the loan was to a business or farm with gross annual revenues greater than \$1 million; and whether the loan was to a business or farm for which gross annual revenues are not known by the bank. As a result of the changes made to the small business and small farm loan data collection and maintenance, the agencies are also making conforming changes to the information required to be reported for these data by adopting new § __.42(b)(1)(v)-(vii). Finally, the agencies are requiring that a large bank must collect and maintain these data until the completion of the bank's next CRA examination in which the data are evaluated.

The agencies believe incorporating the new indicators to the data collection and reporting of small business and small farm lending will facilitate and add efficiency to the distribution analysis under the Retail Lending Test. Specifically, the new indicators will allow the agencies to calculate metrics and market benchmarks used to evaluate a bank's distribution of lending to small businesses and small farms in different gross annual revenues categories (\$250,000 or less, and between \$250,000 and \$1 million) prior to the agencies' use of Section 1071 data. As discussed in the section-by-section analysis of final § __.22(e), the agencies believe that evaluating a bank's distribution of lending to small businesses and small farms of different sizes, based on gross annual revenues, will support a more comprehensive evaluation. The agencies determined that the additional indicators in the final rule would not be especially burdensome, because large banks already collect and maintain small business and small farm data that includes similar data points, such as indicating whether a loan is made to a business or farm with gross annual revenues of \$1 million or less. Furthermore, once banks must comply with reporting small business loan data under the Section 1071, they will be required to collect and maintain gross annual revenues information for small business and small farm borrowers, which is consistent with the new indicators in the final rule approach. In light of these considerations, the agencies determined that these new required indicators for large banks are appropriate and will result in more comprehensive evaluations of retail lending performance.

Regarding required data fields for the loan amount at origination or purchase, loan location, and whether the loan was either originated or purchased by the bank, the agencies determined that these data points are substantively consistent with current data collection procedures for large banks, and will allow the agencies to calculate the various metrics, benchmarks, and other quantitative components of the Retail Lending Test evaluation.

For small and intermediate banks, consistent with the current evaluation approach and the agencies' proposal, the final rule does not require data collection, maintenance, or reporting of small business loan or small farm loan data. For banks that do not collect and maintain these data in electronic form, the agencies may evaluate the banks' distribution of lending to low- and moderate-income census tracts, small businesses, and small farms, using the bank's own data, or using sampling of a bank's own records, as under current examination procedures. The agencies believe it is appropriate to maintain the current approach for small and intermediate bank data requirements in order to limit additional burden and complexity for these banks, in recognition that they may have lower capacity to adjust to regulatory changes.

The agencies have determined not to add an indicator for loans made to small businesses or small farms with revenues of \$100,000 or less. The agencies determined that an indicator for

\$250,000 gross annual revenue threshold rather than the \$100,000 gross annual revenue threshold was appropriate primarily to achieve consistency between the categories of small businesses and small farms in the Retail Lending Test and the impact and responsiveness review factors used in evaluating community development activities, which considers activities supporting small businesses or small farms with gross annual revenues of \$250,000 or less.

Similarly, the agencies have determined not to add an indicator for loans made to a business or farm using the Small Business Act's definition of "small business." The multiple approaches that the Small Business Act uses to define small businesses would add unnecessary complexity and would add burden to banks by requiring them to collect additional data to that required under the CFPB's Section 1071 process, in order to determine whether businesses or farms qualify as small businesses. Rather, the agencies have determined that using the gross annual revenue criteria defined in the CFPB's Section 1071 Final Rule as the basis for identifying small businesses and small farms for purposes of CRA is appropriate. This approach supports the CRA final rule's goals of consistency and transparency.

In response to comments regarding the alignment of the agencies' CRA definitions of "small business" and "small farm" to the Section 1071 definition of "small business" and the impact on purchases of small business and small farm loans, the final rule would allow banks to include purchases of small business and small farm loans in the numerator of their relevant retail lending metrics, at the bank's option, once the transition to Section 1071 data occurs.¹⁵⁰⁸ However, because purchases would not be included in the CFPB's Section 1071 data, banks electing to include such loans in their relevant retail lending metrics would need to collect and maintain these data. The bank would provide the collected data to the examiner to incorporate into the metric and the subsequent distribution analysis. These data would not be reported and would not be included in any aggregate data used for the creation of benchmarks. Allowing banks, at their option, to include these purchases of small business and small farm loans would maintain consistency in the Retail Lending Test regarding treatment of closed-end mortgage loans and small business and small farm loans.

The agencies are sensitive to commenters' concerns regarding the potential burden imposed on community banks created by the agencies' alignment of the definitions of "small business" and "small farms" to the CFPB's definition of "small business" and the potential confusion created for banks that will be required to report small business loans for purposes of CRA using the Call Report definition during the transition period. While some banks may have to collect and report data for both regulations for a limited amount of time, the agencies note that once the agencies transition to using Section 1071 data, under the CRA final rule, small business and small farm loans will only be reported in accordance with the definition and reporting requirement of the CFPB's Section 1071 Final Rule. After the transition to the Section 1071

¹⁵⁰⁸ The transition amendments included in this final rule will permit the agencies to transition the CRA data collection, maintenance, and reporting requirements for small business loans and small farm loans to Section 1071 data. This is consistent with the agencies' intent articulated in the preamble to the proposal and elsewhere in this final rule to transition to 1071 data for small business loan and small loan data under the CRA regulations. The agencies will provide notice of the effective date of this amendment in the *Federal Register* once Section 1071 data are available.

data takes effect, there is no additional data reporting burden created by the CRA final rule with regard to small business and small farm lending data. In addition, the agencies acknowledge commenter sentiment that aligning the CRA definitions of “small business” and “small farm” to the CFPB’s Section 1071 rule would be confusing for banks. The agencies note that banks will be required to report data using both the CFPB’s Section 1071 definition and Call Report definition regardless of whether the CRA regulation aligns to either of them. The agencies believe that the CFPB’s Section 1071 definition is a more appropriate definition of small businesses and small farms for the purposes of identifying small business lending and small farm lending. The Call Report and current CRA definitions define these loans on the basis of the size of the loan, rather than on the basis of characteristics of the borrower (such as the gross annual revenue of the business). As such, “small business loans” included in the Call Reports and in CRA evaluations may be made to companies and farms that could reasonably be considered large businesses and large farms (which sought loans small enough to be reported on the Call Report and the CRA evaluations). Given that the CFPB’s Section 1071 definition and reporting requirement exists as a result of the CFPB’s Section 1071 Final Rule, and the Call Report definition exists as a result of the existing Call Report reporting requirements, the CRA final rule does not create any additional burden as a result of which definition it uses between those two.

The agencies have determined not to adopt the commenter’s recommendation that the agencies retain the current definition so that it aligns with the Call Report definition. The definition used by the CFPB’s Section 1071 process is preferable because it is better targeted towards loans to small businesses and small farms and provides data regarding a broader set of small business and small farm lenders.

The agencies are also clarifying that the data reported through the CFPB’s Section 1071 process will be used as the foundation of small business and small farm data collection. The CFPB’s Section 1071 Final Rule requires that if a financial institution is unable to collect or determine the gross annual revenue of the applicant through applicant-provided data, the financial institution is required to report that the gross annual revenue is “not provided by applicant and otherwise undetermined.”¹⁵⁰⁹

Finally, the agencies acknowledge commenter sentiments that there are situations in which identifying a single location for the purposes of geocoding small business loans can be difficult, such as when a small business has multiple locations. The agencies have addressed this situation in the current data reporting guide.¹⁵¹⁰ A small business or small farm loan is located in the geography where the main business facility or farm is located or where the loan proceeds otherwise will be applied, as indicated by the borrower.¹⁵¹¹

**§ __.42(a)(2) Information required to be collected and maintained – Consumer loans data—
automobile loans**

Under the CRA current regulations, banks are not required to collect, maintain, or report data for consumer loans under current § __.42(c)(1). Current § __.42(c)(1) provides that a bank may collect and maintain data for consumer loans originated or purchased by the bank for

¹⁵⁰⁹ 88 FR 35150, 35553 (May 31, 2023).

¹⁵¹⁰ See FFIEC, *A Guide to CRA Data Collection and Reporting* (2015).

¹⁵¹¹ See *id.*

consideration under the lending test. A bank may maintain data for one or more of the following categories of consumer loans: motor vehicle, credit card, other secured, and other unsecured. If the bank maintains data for loans in a certain category, it must maintain the data for all loans originated or purchased within that category, and must collect and maintain the data in machine readable form as prescribed by the appropriate agency. The data must be maintained separately for each category of loans including for each loan: (1) a unique number or alpha-numeric symbol that can be used to identify the relevant loan file; (2) the loan amount at origination or purchase; (3) the loan location; and (4) the gross annual income of the borrower that the bank considered in making its credit decision. The data collected and maintained are not reported but provided to examiners at the time of the bank's CRA examination.

The Agencies' Proposal

The agencies proposed in § __.42(a)(2) that automobile loans would be the only consumer loan category with data collection and reporting requirements. Specifically, the agencies proposed that banks with assets of over \$10 billion in both of the prior two calendar years would be required to collect and maintain, until the completion of the bank's next CRA examination, the following data for automobile loans originated or purchased by the bank during the evaluation period: (1) a unique number or alpha-numeric symbol that can be used to identify the relevant loan file; (2) the date of loan origination or purchase; (3) the loan amount at origination or purchase; (4) the loan location (State, county, census tract); (5) an indicator for whether the loan was originated or purchased by the bank; and (6) the borrower's annual income the bank relied on when making its credit decision.

Proposed § __.42(b)(2) required a bank with average assets of over \$10 billion in both of the prior two calendar years to report annually by April 1 to the appropriate agency, the aggregate number and amount of automobile loans for each census tract in which the bank originated or purchased an automobile loan and the number and amount of those loans made to low- and moderate-income borrowers. The proposal required that these banks report the data in machine readable form, as prescribed by the agencies. The agencies did not propose to make reported automobile lending data publicly available.

Comments Received

A few commenters addressed the agencies' proposal to require automobile lending data, generally. A commenter asked for clarification on whether the data would be submitted in aggregate form as it would be required for community development loans, or whether it would be required in CRA Loan Application Register format. Other commenters recommended that the agencies reconsider the requirement to collect automobile lending data. A commenter stated that if consumer data is wanted, then general information should be required to be reported, but drilling down to a particular consumer product is too extensive and burdensome. Another commenter supported the agencies' proposal to require new automobile lending data collection and reporting by banks with assets of over \$10 billion; the commenter further suggested that the data would allow for better analysis of automobile lending patterns compared to existing data sources, such as credit reporting agency data. This commenter also supported optional data collection for small banks and intermediate banks that elect evaluation under the Retail Lending Test given suggested data collection and reporting burden banks might face with respect to automobile lending data requirements. Another commenter argued that the statutory authority

for this data collection was thin, and that dropping automobile lending from the Retail Lending Test would eliminate the need for this data collection.

The agencies solicited specific feedback on whether the final rule should also include automobile loan data requirements for large banks with assets of \$10 billion or less. Most commenters were in favor of expanding this requirement to all large banks, rather than only make this a requirement for banks with assets of over \$10 billion. One of these commenters stated that expanding the requirement to banks with \$10 billion or less in assets would better support a fair lending analysis and ensure that banks are providing consumers with fair and affordable automobile loans. Another commenter recommended expanding the automobile lending data requirements to all large banks and all wholesale and limited purpose banks with assets over \$10 billion. Many commenters noted that including automobile loan data only from banks with assets above \$10 billion would create an incomplete and misleading impression of the automobile lending market.

Several commenters recommended an expansion in the data collected to include consumer lending more broadly, with a commenter suggesting that banks with assets of \$10 billion or less should have the option to collect, maintain, and report these data. A few commenters did not support expansion of automobile loan data collection to large banks with assets of \$10 billion or less, with one commenter noting the associated burden and cost. The other commenter did not support additional reporting of automobile lending for any large bank.

The agencies also sought specific feedback on whether they should streamline any of the proposed data fields for collecting and reporting automobile data. A few of the commenters addressing this question felt that the proposed data fields were minimal, and they could not identify how it could be further streamlined, while a few suggested further streamlining or using as few fields as possible. Another commenter asked the agencies to investigate the use of market sources for automobile lending data and that data collected should include the full cost of the loan to the consumer.

The agencies did not propose to publish automobile lending data for individual banks in the form of a data set because the agencies were mindful of having appropriate limits on the use of collected and reported automobile lending data. However, the agencies sought feedback on whether it would be useful to consider publishing county-level automobile lending data in the form of a data set. Most of the commenters addressing this question urged the agencies to make all the data publicly available. Some commenters expressed the view that the availability of these data would hold banks accountable for their lending to underserved communities and minorities. In addition, two commenters wanted the county-level data to include information on whether the borrower lived in low- or moderate-income census tracts or was a low- or moderate-income individual. A commenter wanted the data to be provided at the lowest geographic level (ideally, census tracts). Another commenter favored the release of the county-level data because it would be helpful in self-evaluation of CRA performance.

Final Rule

The agencies have considered the comments received and are adopting § __.42(a)(2) pertaining to the collection and maintenance of automobile lending data, with significant modifications narrowing the number of banks that would be subject to this requirement. Specifically, the agencies are revising proposed § __.42(a)(2), renumbered in the final rule as § __.42(a)(2)(i) to require the collection and maintenance of automobile loan data, as detailed

below, for a large bank for which automobile loans are a product line (*i.e.*, if the bank is a majority automobile lender or opts to have its automobile loans evaluated pursuant to § __.22). The agencies are also adopting new § __.42(a)(2)(ii) which provides that a bank, other than a large bank, for which automobile loans are a product line may collect and maintain the automobile loan data required of large banks as detailed below.

The data collection and maintenance requirement is a change from the proposal, which would have required automobile lending data for all large banks with assets of over \$10 billion. This change limits the required collection of automobile loan data to only those large banks for which automobile lending is the majority of their retail lending or which opt to have their automobile loans evaluated pursuant to § __.22. Not adding a data collection requirement for smaller banks is consistent with the agencies' goal of requiring no new data collection and reporting for small and intermediate banks. The agencies continue to believe it is important for large banks for which automobile lending is a product line to collect and maintain data for automobile loans because these data will help enable the agencies to calculate the bank's distribution metrics under the Retail Lending Test. For example, the agencies would use loan location and borrower income information to calculate borrower distribution metrics, and would use loan amount information to calculate the Bank Volume Metric and various weights used to develop Retail Lending Test conclusions. The agencies would use information regarding whether a loan was purchased or originated in conjunction with the final § __.22(g)(1) additional factor. The agencies would also use loan location and loan count data as the basis for weighting component geographic areas for the construction of weighted average benchmarks for a bank's outside retail lending area.

The agencies note that they considered various options regarding whether and how to collect automobile lending data. This included using third-party sources for automobile lending data. In order to evaluate automobile lending, the agencies believe it is appropriate to require the collection of automobile lending data from large banks for which automobile loans are a product line, due to the unavailability of these data from any source other than the banks themselves.

The agencies are finalizing the data to be collected and maintained in proposed § __.42(a)(2)(i) through (a)(2)(vi), renumbered in final as § __.42(a)(2)(iii)(A) through (a)(2)(iii)(F) for each automobile loan originated or purchased by the bank until the completion of the bank's next CRA examination in which the data are evaluated. The agencies believe the data fields, as finalized, are sufficient for purposes of the evaluation of automobile lending in the Retail Lending Test.

The agencies have considered commenter feedback that suggests requiring additional data, such as the full cost of the loan to the consumer. The agencies have determined to not add this data point among the set of data collected for the Retail Lending Test. The agencies note that under current CRA and the final rule, the retail lending evaluation focuses on distributional analyses of lending to low- and moderate-income census tracts and low- and moderate-income borrowers (and small businesses and small farms).

In response to comments, the agencies believe that focusing the collection and maintenance of automobile lending data on large banks for which the majority of their retail lending is automobile lending, or which opt to have their automobile loans evaluated pursuant to § __.22, strikes an appropriate balance between minimizing burden, tailoring requirements for banks of different sizes and business models, and enabling an appropriate evaluation of banks' retail

lending. In the final rule, data collection and maintenance of automobile lending remains optional for intermediate banks, and small banks that opt to be evaluated under the Retail Lending Test, for which automobile loans are a product line.

The agencies considered the comments regarding requiring automobile loan data for large banks with assets of \$10 billion or less. After weighing the costs and benefits from requiring data from a broader range of banks, as explained above, the agencies decided to tailor the data collection requirement according to bank size and whether automobile lending constituted the majority of a bank's lending. The agencies will evaluate automobile lending for all banks evaluated under the Retail Lending Test for which automobile lending is the majority of their lending or which opt to have their automobile loans evaluated pursuant to § __.22. Large banks (not just large banks with assets above \$10 billion) meeting these criteria will be required to collect and maintain these data. This will provide a more complete evaluation of automobile lending by banks, while still limiting the data burden for smaller banks and for banks for which automobile lending is not the majority of their lending. In response to the commenter that suggested expanding this data requirement to banks with assets of \$10 billion or less to better support a fair lending analysis, the agencies note that fair lending analyses are not part of the CRA evaluation process.

In response to commenters suggesting an expansion of data collection to include all consumer lending products, the agencies have determined not to add this recommendation to the regulation. While consumer lending products are important in fulfilling credit needs of low- and moderate-income borrowers, the agencies continue to believe that consumer loans span multiple product categories that are heterogeneous in meeting low- and moderate-income credit needs and are difficult to evaluate on a consistent quantitative basis. Therefore, in the final rule, the agencies will consider the qualitative aspects of all other consumer loans, apart from automobile loans, under the Retail Services and Products Test without data collection and maintenance requirements specified in § __.42, as explained in more detail in the section-by-section analysis of § __.23.

Regarding the agencies' statutory authority to collect automobile lending data, the agencies believe that the CRA's provision, which requires the agencies to "assess the institution's record of meeting the credit needs of its entire community, including low- and moderate-income neighborhoods, consistent with the safe and sound operation of such institution"¹⁵¹² is sufficiently broad to cover the evaluation of a bank's automobile lending in the Retail Lending Test and, therefore, believe collection of these data will serve the purposes of the CRA.

Finally, the final rule does not adopt the reporting requirement for automobile lending in proposed § __.42(b)(2). The agencies also explored the availability of market sources for data on banks' automobile lending to use, as suggested by a commenter, and were unable to find any reliable source appropriate for the applications needed for the Retail Lending Test. In response to comments received, inadequacy of available data, and the agencies' further analysis, the agencies have determined not to establish market benchmarks for automobile lending, as discussed further in the section-by-section analysis of § __.22.

¹⁵¹² 12 U.S.C. 2903(a)(1).

The agencies have also considered comments received regarding the publication of automobile loan data. As explained above, the final rule does not adopt a reporting requirement for automobile lending data. As such, any consideration of public disclosure of these data has effectively been removed.

§ __.42(a)(3) Information required to be collected and maintained – Home mortgage loan data

Current Approach

The CRA regulations in current § __.42(b)(3) require a bank, except for a small bank or a bank that was a small bank during the prior calendar year, to report annually by March 1 to the Board, FDIC, or OCC, as applicable, and in machine readable form as prescribed by that agency, the location of each home mortgage loan application, origination, or purchase outside the MSAs in which the bank has a home or branch office (or outside any MSA) in accordance with the requirements of 12 CFR part 1003. Interagency guidance explains that institutions that are not required to collect home mortgage loan data by HMDA need not collect home mortgage loan data under this provision of CRA.¹⁵¹³ If a bank wants to ensure that examiners consider all of its home mortgage loans, the institution may collect and maintain the data on these loans.

The Agencies' Proposal

The agencies proposed to revise current § __.42(b)(3), renumbered in the proposal as § __.42(a)(3), to require certain banks to collect and maintain certain home mortgage loan data, similar to current practice. Specifically, if a bank is a HMDA reporter, the agencies proposed to require a bank (other than a small bank or intermediate bank) to collect and maintain, in machine readable form as prescribed by the Board, FDIC, or OCC, as applicable, until the completion of its next CRA examination, the location of each home mortgage loan application, origination, or purchase outside of the MSAs in which the bank has a home or branch office (or outside any MSA) in accordance with the requirements of 12 CFR part 1003.

The agencies sought feedback on whether certain banks that are not mandatory reporters under HMDA should be required to collect and maintain, or report, mortgage loan data if they engage in a minimum volume of home mortgage lending. The agencies described an option that would require any large bank that is not a mandatory HMDA reporter due to the locations of its branches, but that otherwise meets the HMDA size and lending activity requirements, to collect, maintain, and report the mortgage loan data necessary to calculate the retail lending volume screen and distribution metrics in the proposed Retail Lending Test in § __.22.

The agencies also solicited specific feedback on whether the benefits of requiring home mortgage loan data collection and reporting by non-HMDA reporter large banks that engage in a minimum volume of mortgage lending outweigh the burden associated with the data collection, and whether the further benefit of requiring these data to be reported outweighs the additional burden of reporting.

Comments Received

The agencies received comments on several aspects of data collection and maintenance for home mortgage lending data. A majority of commenters supported expanding home mortgage loan data collection, maintenance, and reporting to non-HMDA reporter large banks that engage

¹⁵¹³ See Q&A § __.42(b)(3)—1.

in a minimum volume of mortgage lending. These commenters generally believed the benefits would outweigh the burden associated with such a requirement. In support of this view, one of these commenters stated that even with limited volume mortgage lending there could be high denial rates and disparities in loan terms that the agencies need to review. A few commenters also noted that in addition to expanding the data, the data should be available by race and ethnicity, while another commenter noted that the benefit of added transparency for rural areas of collecting and publishing these data would outweigh the burden placed on these large banks.

By contrast, a commenter argued against expanding HMDA data collection to non-HMDA reporting banks because this would exacerbate an existing regulatory imbalance between banks' and non-bank mortgage lenders' level of regulatory scrutiny. Finally, several of the commenters addressing this issue of requiring HMDA data collection to non-HMDA reporting banks also stated that the previous reporting threshold of 25 closed-end loans should be implemented.

Final Rule

The agencies are finalizing proposed § __.42(a)(3), renumbered in the final rule as § __.42(a)(3)(i) with a few wording changes. Similar to the current rule, the final rule requires large banks that are HMDA reporters to collect and maintain the location of each home mortgage loan application, origination, or purchase outside the MSAs in which the bank has a home or branch office, or outside any MSAs. The agencies believe this requirement is appropriate and consistent with current practice. In addition, the agencies are adopting new § __.42(a)(3)(ii) to implement certain data requirements for certain non-HMDA reporters. Specifically, final § __.42(a)(3)(ii) requires a large bank that is not a mandatory HMDA reporter due to the location of its branches but that otherwise meets the HMDA size and lending activity requirements, to collect and maintain the mortgage loan data necessary to calculate the retail lending volume screen and distribution metrics. Such large banks will be required to collect and maintain in electronic form, as prescribed by the Board, FDIC, or OCC, as applicable, until the completion of the bank's next CRA examination in which the data are evaluated, the following data for each closed-end mortgage loan, excluding multifamily loans, originated or purchased during the evaluation period: (1) A unique number or alpha-numeric symbol that can be used to identify the relevant loan file; (2) the date of the loan origination or purchase; (3) the loan amount at origination or purchase; (4) the location of each home mortgage origination or purchase, including county, State and census tract; (5) the gross annual income the bank relied on in making the credit decision; and (6) an indicator for whether the loan was originated or purchased by the bank. The agencies believe these data fields sufficiently allow for the calculation of all the bank's retail lending metrics for mortgage lending, clarify expectations for banks, and facilitate a more complete and accurate analysis by including this information in the bank metrics.

In recognition of their more limited capacities and to avoid unduly burdening small banks and intermediate banks, the new requirements in § __.42(a)(3)(ii) only apply to certain large banks. In this regard, the agencies are requiring HMDA-equivalent data collection only for a very limited set of large banks, including only those banks that would otherwise be required to report HMDA data but for a bank having no branches within metropolitan areas. The agencies believe this strikes an appropriate balance by evaluating mortgage lending data for all large banks with sufficient mortgage lending activity to trigger HMDA reporting requirements.

In reaching this determination, the agencies have considered commenter feedback on the issue of whether to expand the collection and maintenance of certain mortgage loan data for non-HMDA reporters. The agencies believe this decision strikes an appropriate balance between the need to collect and evaluate data from banks with substantial mortgage lending in an area and the importance of tailoring data collection burden to bank size. In response to the comments regarding the impact this change would have on the existing imbalance between banks' and non-bank mortgage lenders' level of regulatory scrutiny, the agencies note that non-bank mortgage lenders are not subject to evaluation under CRA. Additionally, to minimize data burden and restrict data collection to relevant areas, the agencies have determined not to collect appraisals data as suggested by one commenter. Although an important part of the mortgage lending process, appraisals are not conducted by banks; appraisal companies are not covered by the CRA and thus any collection or evaluation of appraisal data would be beyond the scope of this regulation.

In reaching the determination to add the new requirements for certain large banks in § __.42(a)(3)(ii), the agencies considered that this is a targeted data collection and maintenance requirement for closed-end mortgages that only includes data necessary for the evaluation of mortgage lending under the Retail Lending Test.

In addition, the agencies note that the final rule provision does not include requirements for home mortgage lending data related to borrower race and ethnicity. Therefore, because the agencies will not have information on race and ethnicity related to these expanded data, the agencies cannot publish said information as suggested by commenters. The agencies note, however, that the final rule will include publication of HMDA data by income level, race, and ethnicity in final § __.42(j). As explained in more detail in the section-by-section analysis of § __.42(j), the relevant agency will publish on its website on an annual basis, certain HMDA data reported by large banks under 12 CFR part 1003 by income level, race, and ethnicity.

The agencies also note, in response to commenters suggesting that the agencies implement the reporting threshold of 25 closed-end loans under HMDA, that as of the date of this final rule, the reporting threshold under 12 CFR part 1003 is 25 closed-end loans.¹⁵¹⁴

§ __.42(a)(4) Information required to be collected and maintained – Retail services and products data

Current Approach

Under the current CRA regulations, there are no specific data collection or reporting requirements for retail services and products. Examiners, however, review information provided by a bank at the time of the examination and the bank's CRA public file that demonstrates its performance in these areas, as applicable.¹⁵¹⁵ A bank's CRA public file is required to include, among other things, a list of bank branches with addresses and census tracts;¹⁵¹⁶ a list of

¹⁵¹⁴ The CFPB issued a technical amendment, effective December 21, 2022, to reflect the closed-end mortgage loan reporting threshold of 25 mortgage loans in each of the two preceding calendar years. See 87 FR 7790 (Dec. 21, 2022).

¹⁵¹⁵ See Q&A § __.24(d)(4)–1.

¹⁵¹⁶ See current 12 CFR __.43(a)(3).

branches opened or closed;¹⁵¹⁷ and a list of services, including hours of operation, available loan and deposit products, transaction fees, and descriptions of material differences in the availability or cost of services at particular branches, if any.¹⁵¹⁸ Banks have the option of including information in the public file regarding the availability of alternative systems for delivering services.¹⁵¹⁹

§ __.42(a)(4) Overview

The Agencies' Proposal

In § __.42(a)(4), the agencies proposed that large banks collect and maintain information to support the analysis of a bank's delivery systems and deposit products under the proposed Retail Services and Products Test in § __.23 based on the large bank's asset size. The agencies proposed to require that large banks with assets of over \$10 billion collect and maintain the data for both branches and remote service facilities under § __.42(a)(4)(i), data for digital and other delivery systems under § __.42(a)(4)(ii), and responsive deposit products under § __.42(a)(4)(iii).

To reduce the data burden of new data collection requirements for large banks with assets of \$10 billion or less, the agencies proposed collecting and maintaining only the data for branches and remote service facilities under § __.42(a)(4)(i). The agencies invited feedback on this approach, as described below.

The agencies also proposed that banks with assets of \$10 billion or less that request additional consideration for digital and other delivery systems under § __.23(b)(3) collect and maintain data for digital and other delivery systems under § __.42(a)(4)(ii). The agencies further proposed that small banks and intermediate banks seeking additional consideration for retail services and products activities provide the data in the format used in the bank's normal course of business.

Comments Received

Several commenters responded to the agencies' request for feedback on tailoring data collection and maintenance requirements related to digital and other delivery systems and to responsive deposit products for large banks with assets of \$10 billion or less. A few of these commenters supported a requirement for all large banks to collect and maintain these data, with one of the commenters suggesting also that these requirements also apply to intermediate banks. One of the commenters stated that large banks with assets of \$10 billion or less should be permitted to report these data at their option. Another commenter indicated that the agencies should review the responsiveness of deposit products for large banks with assets of \$10 billion or less and that any bank that cannot collect and maintain these data within the 12-month period should describe in its capacity building plan how it will comply with the data collection requirements within a 24-month period. This commenter also noted that communities should be involved with product responsiveness reviews by being invited to provide ratings to the agencies of product responsiveness, and that there may be other stakeholders that would benefit from

¹⁵¹⁷ See current 12 CFR __.43(a)(4).

¹⁵¹⁸ See current 12 CFR __.43(a)(5).

¹⁵¹⁹ See *id.*

greater transparency of the data reported by banks and of the ratings provided by consumers (if this occurs).

Final Rule

After consideration of the comments received and further internal analysis, the agencies have determined not to extend the data collection and maintenance of digital delivery systems and other delivery systems and deposit products to large banks with assets of \$10 billion or less and that operate one or more branches, to reduce burden on the industry. However, as discussed in greater detail below, the agencies have determined to extend data requirements for digital delivery systems and other delivery systems to banks with \$10 billion or less that do not maintain branches. The agencies believe this approach appropriately tailors the data requirements to large banks based on their business model. Moreover, and in recognition of their more limited capacity, the agencies have determined not to extend any data requirements to small and intermediate banks.

§ __.42(a)(4)(i) Branch and remote service facility availability data

The Agencies' Proposal

The agencies proposed in § __.42(a)(4)(i) to require large banks to collect and maintain, until the completion of the bank's next CRA examination, the following information: (1) number and location of branches and remote service facilities; (2) whether branches are full-service facilities (by offering both credit and deposit services) or limited-service facilities, and for each remote service facility whether it is deposit-taking, cash-advancing, or both; (3) locations and dates of branch and remote service facility openings and closings, as applicable; (4) hours of operation of each branch and remote service facility, as applicable; and (5) services offered at each branch that are responsive to low- and moderate-income individuals and low- and moderate-income census tracts. While this branch information is consistent with the information currently provided in a bank's public file,¹⁵²⁰ the proposed requirement to collect remote service facilities data would be a change from the current practice, under which banks are not required, but have the option, to provide ATM location data in a bank's public file.¹⁵²¹

The agencies sought specific feedback on whether to require collection and maintenance of branch and remote service facility availability data as proposed or, alternatively, whether to continue with the current practice of reviewing the data from the bank's public file (*i.e.*, requiring branch data but keeping remote service facility availability data optional).

Comments Received

The agencies received several comments in response to their request for feedback on whether, instead of requiring branch and remote service facility availability data, the agencies should continue the current practice of reviewing the data from the bank's public file. A few commenters supported the agencies' proposal to require banks to report data on branch and remote service facility availability under a standardized process. Commenter sentiment in support of the proposal included noting that banks should collect and report these data publicly to permit evaluation of usefulness to underserved communities. Additionally, commenter

¹⁵²⁰ See current 12 CFR __.43(a).

¹⁵²¹ See current 12 CFR __.43(a)(5).

sentiment included that the agencies should use these data towards the creation of industry and market benchmarks.

By contrast, a few commenters indicated that the current practice of reviewing these data from the bank's public file should continue rather than separately requiring banks to collect and maintain these data pursuant to § __.42. Another commenter noted that branch and remote service facility data are "widely and publicly" available through most banks' websites, so current practices should continue. This commenter also noted that the FDIC's Summary of Deposits data should be sufficient for identifying most banks' branch locations and that separately collecting and reporting data on branch distribution within the proposed rule seems redundant and burdensome for banks due to the FDIC's current comprehensive process. Another commenter recommended that the agencies determine whether they could perform an evaluation with data from the bank's public file and other reliable sources before requiring a new data collection; otherwise, the agencies should require collection and maintenance of the data as proposed.

Final Rule

For the reasons discussed below, the agencies are finalizing § __.42(a)(4)(i) substantially as proposed, with technical edits to revise the heading of this paragraph and to update the reference of "machine readable" to "electronic." No substantive change is intended. In addition, as explained below, the agencies are revising § __.42(a)(4)(i) to conform to changes made in the final rule with respect to the inclusion of "main office" and the availability of branches and remote service facilities in § __.23(b)(2) and § __.23(b)(3), respectively, in the Retail Services and Products Test.

The agencies are finalizing the requirement that all large banks collect and maintain, as prescribed by the appropriate Federal banking agency, until the completion of the bank's next CRA examination in which the data are evaluated, retail banking services and retail banking products data, which includes the branches and remote service facilities data as proposed in § __.42(a)(4)(i). The agencies are also including the same data collection requirements for the bank's main office if it meets the requirements of final § __.23(a)(2). After careful consideration of the comments, the agencies believe that requiring the collection and maintenance of this information appropriately supports the analysis of a bank's branch, applicable main office, and remote service facility availability and the establishment of benchmarks required for the Retail Services and Products Test. A data collection and maintenance requirement will ensure that the agencies have the information they need to evaluate the availability of branches and remote service facilities, and also provides examiners with consistent data across all agencies. For banks, the agencies believe that a data collection requirement minimizes ambiguity as to what data the agencies will use in their evaluations. The agencies note that the final rule largely codifies in final § __.42(a)(4) certain information that banks are currently required to provide in their public file, including, among other things, the locations of current branches and their street address, and branches opened or closed by the bank during the calendar year. In response to comments that the agencies should continue the current practice of reviewing the data from the bank's public file, the agencies believe that the data requirements are justified as the best means to obtain accurate and uniform data to evaluate a bank's retail banking services. In addition, the final § __.42(a)(4)(i) also requires banks to collect and maintain remote service facility information, which is currently included in the bank's public file on an optional basis. However, the data will be standardized in a template to be developed by the agencies, as described below.

As a result, the agencies believe that requiring collection of these data would not add significant burden to banks. In addition, final § __.42(a)(4)(i) requires large banks to collect and maintain an indicator of whether each branch is full-service or limited-service, and whether each remote service facility is deposit-taking, cash-advancing, or both.

The agencies have considered commenter feedback that the agencies should rely on the FDIC's Summary of Deposits data, rather than require the data collection under § __.42(a)(4)(i) as proposed. The agencies do not believe the evaluation of branches and remote service facilities under the Retail Services and Products Test can be accomplished using the FDIC's Summary of Deposits. First, the data required in § __.42(a)(4)(i) provides additional detailed information required to conduct the analysis under the Retail Services and Products Test, including hours of operation and services offered at each branch that are responsive to low- and moderate-income individuals and census tracts. Second, the FDIC's Summary of Deposits¹⁵²² does not include remote service facilities and is not timely in that it is reported at the conclusion of each calendar year¹⁵²³ consistent with most other CRA data. In response to the comment suggesting that the collected data be used towards the creation of industry and market benchmarks, the agencies note that relevant community and market benchmarks for the evaluation of branch and remote service facility will be drawn from the American Community Survey and industry data, as proposed.

§ __.42(a)(4)(ii) Digital delivery systems and other delivery systems data

The Agencies' Proposal

The agencies proposed data collection and maintenance requirements that would facilitate a review of whether digital and other delivery systems are responsive to the needs of low- and moderate-income individuals. Specifically, proposed § __.42(a)(4)(ii) would require a large bank with assets of over \$10 billion in both of the prior two calendar years and a large bank that had assets of \$10 billion or less in either of the prior two calendar years that requests additional consideration for digital and other delivery systems, to collect and maintain the information required in proposed § __.42(a)(4)(ii)(A) and (B) as follows: (1) the range of services and products offered through digital and other delivery systems and (2) digital activity by individuals in low-, moderate-, middle-, and upper-income census tracts, respectively, such as the number of savings and checking accounts opened through digital and other delivery systems and account holder usage of digital and other delivery systems. The agencies also proposed § __.42(a)(4)(ii)(C), a general provision that would permit banks to optionally provide any information that demonstrated that digital and other delivery systems serve low- and moderate-income individuals and low- and moderate-income census tracts. The agencies sought feedback on whether the agencies should determine which data points a bank should collect and maintain to demonstrate responsiveness to low- and moderate-income individuals via the bank's digital and other delivery systems, or whether to allow banks the flexibility to determine which data points to collect, maintain, and provide for evaluation.

Comments Received

Most commenters addressing the agencies' request for comments on whether or not to prescribe the data a bank should collect and maintain to demonstrate responsiveness to low- and

¹⁵²³ FDIC Summary of Deposits data is reported as of June 30th of each year.

moderate-income individuals through digital and other delivery systems, were generally supportive of the agencies determining the required data points. A few commenters recommended that the data the agencies collect and maintain should align with the Bank On program.¹⁵²⁴ A commenter also noted that standardized fields would be needed if the agencies were to create benchmarks and compare an institution's performance against those benchmarks. Another commenter recommended that, to maintain consistency, no flexibility should be given to banks in determining which data points to collect and maintain.

By contrast, a few commenters indicated that banks should have flexibility to demonstrate responsiveness, with guidance provided in the form of examples. One of these commenters suggested that for CDFI banks the agencies defer to the process banks use to demonstrate the effectiveness of their delivery systems for the purposes of CDFI certification, and for non-CDFI banks, the agencies could provide a schedule of baseline data to ensure consistency between exams, and grant banks flexibility with regard to any additional data points they might collect and maintain for evaluation. Some commenters suggested that the agencies make any information that the agencies collect on digital and other delivery systems publicly available.

Final Rule

As discussed below, the agencies are finalizing proposed § __.42(a)(4)(ii), renumbered in the final rule as § __.42(a)(4)(ii)(A), with substantive, conforming, and technical edits. The agencies are finalizing as proposed the data collection and maintenance requirements pertaining to digital delivery systems and other delivery systems¹⁵²⁵ for large banks with assets greater than \$10 billion and for large banks with assets of \$10 billion or less that request additional consideration pursuant to § __.23(b)(4).

Additionally, the agencies are revising § __.42(a)(4)(ii)(A) to require that a subset of large banks with assets of \$10 billion or less as of December 31 in either of the prior two calendar years that do not operate any branches collect and maintain digital delivery systems and other delivery systems data. The agencies are revising this paragraph to conform to changes made in the final rule with respect to the evaluation of a bank's digital delivery systems and other delivery systems in the Retail Services and Products Test, which will only evaluate these banks for their digital delivery systems and other delivery systems under § __.23(b)(4) due to their lack of branches.¹⁵²⁶ As a result, these banks will only be required to collect and maintain delivery system data for their digital delivery systems and other delivery systems under § __.42(a)(4)(ii).

The agencies are also making edits to conform to changes made to the definition of a "large bank" and making technical edits to better distinguish the data points that are required from those that are optional, including technical edits to renumber the paragraphs pertaining to the data

¹⁵²⁴ See Bank On, "Open a no-overdraft Bank On certified account now!," https://bankonline.org/?gclid=EAIaIQobChMI_5yNlPiogQMVSsvlCh3n9Qu7EAYASAAEgJ3FfD_BwE/.

¹⁵²⁵ See final § __.12 for the definitions of "digital delivery systems" and "other delivery systems."

¹⁵²⁶ See the section-by-section analysis in § __.23(b)(4).

banks will collect and maintain under the final rule. With respect to the conforming and technical edits, the agencies do not intend substantive changes.

The agencies are finalizing the data banks are required to collect and maintain in proposed § __.42(a)(4)(ii)(A) and (a)(4)(ii)(B), renumbered in the final rule as § __.42(a)(4)(ii)(B)(1) (range of retail banking services and retail banking products) and (a)(4)(ii)(B)(2) (digital delivery systems and other delivery systems activity by individuals), substantially as proposed, with clarifying edits. Specifically, the agencies are finalizing as proposed the data banks are required to collect and maintain for a bank's range of retail banking services and retail banking products in § __.42(a)(4)(ii)(B)(1), but are modifying the requirement in § __.42(a)(4)(ii)(B)(2), the digital delivery systems and other delivery systems activity by individuals, families, or households in low-, moderate-, middle-, and upper-income census tracts. In particular, the agencies are clarifying that banks evidence digital delivery systems and other delivery systems activity under § __.42(a)(4)(ii)(B)(2) by providing data on the number of checking and savings accounts opened through digital delivery systems and other delivery systems by census tract income level for each calendar year and the number of checking and savings accounts opened digitally and through other delivery systems that are *active* at the end of each calendar year by census tract income level for each calendar year (rather than by accountholder usage as initially proposed). By requiring the number of active accounts rather than account usage as proposed, the agencies believe that the final rule reduces the burden for banks, as the number of accounts is generally less complex to monitor in bank data systems relative to account usage, and because account usage could be defined in numerous ways. The use of number of active accounts also builds on other data elements in the final rule. The agencies are also finalizing proposed § __.42(a)(4)(ii)(C), which provides that banks required to collect and maintain digital delivery systems and other delivery systems data *may* collect and maintain additional information that demonstrates that the bank's digital delivery systems and other delivery systems serve low- and moderate-income individuals, families, or households and low- and moderate-income census tracts.

The agencies believe that requiring large banks with assets greater than \$10 billion and those with assets of \$10 billion and less with no branches to collect and maintain digital delivery systems and other delivery systems data is appropriate given that these data are required in the analysis of the evaluation of digital delivery systems and other delivery systems for these banks under the Retail Services and Products Test.¹⁵²⁷ Collecting and maintaining these data will assist the agencies in standardizing the evaluation criteria. Additionally, given the widespread use of online and mobile banking delivery systems and the expected continued growth of these systems, collection of these data supports the agencies' evaluation of digital delivery systems and other delivery systems and, accordingly, updates the agencies' evaluation of a bank's delivery systems performance. The agencies also believe that requiring the collection of these data for only these banks strikes the appropriate balance of: (1) facilitating a useful and effective review of whether digital delivery systems and other delivery systems are responsive to the needs of low- and moderate-income individuals, families, or households; (2) evaluating the delivery systems of banks with different business models, including those with national digital footprints; and (3) minimizing burden.

¹⁵²⁷ See the section-by-section analysis of § __.23(b)(4).

The agencies considered commenters' recommendations regarding which data the agencies should require banks to collect and maintain for digital delivery systems and other delivery services. The agencies believe that, as finalized, the data required by the agencies will provide consistency with respect to the evaluation of the responsiveness of digital delivery systems and other delivery systems to low- and moderate-income individuals, families, or households and communities. The data collected will also help the agencies better understand how banks continue to serve their communities as technology and bank business models evolve.

Recognizing that banks have different methods and means for assessing the effectiveness of their digital delivery systems and other delivery systems to low- and moderate-income individuals, families, or households as noted above, the final rule also permits banks the ability to provide additional information that demonstrates that digital and other delivery systems serve low- and moderate-income individuals, families, or households, thus providing certain flexibility to banks.

Banks will not report the data on digital delivery systems and other delivery systems; therefore, the agencies will make this information publicly available only to the extent it is discussed in the bank's CRA performance evaluation.

Finally, in response to comments and the agencies' own determination, the agencies intend to explore options to provide banks with interagency guidance on the submission of these data to promote clarity, consistency, and transparency, which is discussed further below.

§ __.42(a)(4)(iii) Data for deposit products responsive to the needs of low- and moderate-income individuals

The Agencies' Proposal

For deposit products responsive to the needs of low- and moderate-income individuals, proposed § __.42(a)(4)(iii) required large banks with assets of over \$10 billion to collect and maintain data concerning: (1) the number of responsive deposit accounts that were opened and closed for each calendar year in low-, moderate-, middle-, and upper income census tracts, respectively; (2) the percentage of responsive deposit accounts compared to total deposit accounts for each year of the evaluation period; and (3) optionally, any additional information regarding the responsiveness of deposit products to the needs of low- and moderate-income individuals and low- and moderate-income census tracts. Further, the agencies also proposed in § __.42(a)(4)(iii) that this data would also be required for large banks with assets of \$10 billion or less that request additional consideration for deposit products responsive to the needs of low- and moderate-income individuals. The agencies sought feedback on the appropriateness of the proposed data collection requirements, including whether to grant banks the flexibility to determine which data points to collect and maintain for evaluation.

Comments Received

With regard to the appropriateness of the agencies' proposed data collection elements for the evaluation of the responsiveness of deposit products, a few commenters indicated that the proposed elements were appropriate, with two of these commenters also suggesting that the agencies must standardized these elements. A commenter also opined that the proposed elements closely track what many banks already report to the National Data Hub at the St. Louis

Federal Reserve for Bank On products.¹⁵²⁸ Two other commenters indicated that the agencies could group deposit accounts by account terms and direct deposit requirements. One commenter proposed that direct deposit affordability should be determined by the FFIEC median family income data for the assessment area (MSA, etc.) and the favorability of the account terms. This commenter further recommended that, if the monthly direct deposit threshold for the accounts with the most favorable terms is more than 80 percent of the area median family income, then the deposit account would not be considered affordable. The other commenter suggested that direct deposit affordability should be determined by the FFIEC MSA income threshold for the branch location. This commenter further suggested that if the monthly direct deposit threshold is more than 80 percent of the area median family income and more than 30 percent of the customer's income on a monthly basis, the deposit product should not be considered affordable.

Final Rule

The agencies are finalizing § __.42(a)(4)(iii) largely as proposed pertaining to the collection and maintenance of data on responsive deposit products required for banks with assets greater than \$10 billion and large banks with assets of \$10 billion or less that request additional consideration for their responsive deposit products under the Retail Services and Products in § __.23(c)(3). The agencies are also making technical edits, format changes, and other minor word changes, with no substantive change in meaning intended. For instance, the final rule changes the format of the data that is required to be collected and maintained from “machine readable” to “electronic” form.

The agencies carefully balanced considerations of regulatory burden against the benefit of more clarity, consistency, and transparency with respect to CRA evaluations, while still providing banks flexibility. In particular, banks must collect and maintain the data described above, and are permitted to provide any other information that demonstrates the availability and usage of the bank's deposit products responsive to the needs of low- and moderate-income individuals and low- and moderate-income census tracts. In the final rule, the agencies clarified that “a bank may opt to collect and maintain additional data pursuant to paragraph (a)(4)(iii)(C) of this section in a format of the bank's choosing.” In addition, the agencies added clarifying language that optional data collected and maintained must “demonstrate the availability and usage” of the bank's responsive deposit products.

As discussed below, the agencies also plan to provide guidance for banks on the submission of these data to promote the clarity, consistency, and transparency of this information.

After considering the commenters' recommendations, the agencies have decided to finalize the data elements as proposed. The agencies decline to incorporate commenters' recommendations regarding grouping deposit accounts together by account terms and including direct deposit affordability as one of the elements to consider for responsive deposit accounts. With regard to commenters that suggested the agencies group deposit accounts by account terms and direct deposit requirements, the agencies believe deposit accounts are relatively

¹⁵²⁸ See BankOn, “Open a no-overdraft Bank On certified account now!,” https://bankonline.org/?gclid=EAIaIQobChMI_5yNIPiogQMVSsvlCh3n9Qu7EAAYASAAEgJ3FfD_BwE/; see also Federal Reserve Bank of St. Louis, Bank On National Data Hub, <https://www.stlouisfed.org/community-development/bank-on-national-data-hub>.

heterogeneous and different banks may take different approaches in how they organize their deposit accounts with regard to affordability. With regard to commenters that suggested the agencies should use direct deposit threshold as a proxy for the depositors' median income to determine product affordability, the agencies note that banks take different approaches with regard to how their direct deposit features are structured, and depositors take different approaches with regard to how they deposit their funds, whether using direct deposit for all, part, or none of their deposits across one or more accounts. The agencies believe that banks are best positioned to determine how to present the affordability of the direct deposit features of their deposit accounts, as relevant for their distinct customer bases. Nevertheless, the agencies will take commenters' recommendations under advisement to determine if they could be used as examples examiners can consider in the evaluation.

Additional Issues

The Agencies' Proposal

The agencies invited comment on whether the proposed retail services data exist in a format that is transferrable to data collection or whether the agencies should require a standardized template to facilitate the collection and maintenance of data for the Retail Services and Products Test. The agencies considered that a template would potentially offer flexibility for providing quantitative and qualitative information, which may be particularly relevant for aspects of retail services that banks have not consistently provided to the agencies previously, or that may change over time. The agencies also invited public feedback on steps that could be taken to minimize burden of the proposed information collection requirements while still ensuring adequate information to inform the evaluation of services.

Comments Received

Comments regarding the format for information collection. In response to the agencies' request for comment on whether the proposed retail services data exist in a format that is transferable to data collection or whether a required template provided by the agencies would be sufficient in the collection of retail services and products information, several commenters provided feedback. All commenters indicated that the agencies should develop and provide a template to ensure that the data are standardized, with two of these commenters also suggesting that, prior to implementation, the agencies should release the template for public input. Another commenter indicated that the response could vary by bank, which is why the commenter supports making a template available if it is not feasible to transfer the data collection.

Comments related to burden reduction. In response to the agencies' request for feedback on what steps could be taken to reduce burden of the proposed information collection requirements, the agencies received recommendations from several commenters. Commenters' suggestions included that the agencies create templates for data requirements and to provide technical assistance and training, particularly for MDIs, and small and intermediate banks. Other recommendations included providing guides, manuals, and training programs; standardizing and automating data collection, with as much data as possible drawn from "authoritative sources of bank profiles and community development data;" providing strong resources to help navigate differences in definitions of various regulations, and creating a portal or listing of qualifying activities; distributing a questionnaire to banks to collect feedback on how data burden might be reduced; and requesting consistent data that provides insights about income, race, ethnicity, and location.

A few commenters generally addressed the burden related to the data requirements for retail services and products. Commenter views included that this requirement would be costly and disproportionately burdensome relative to the small impact this test would have on a bank's overall CRA rating. A commenter stated that the incremental burdens associated with maintaining data needed for the proposed test will be significant because much of these data are not currently being captured or maintained by banks. Another commenter listed reasons data will be challenging and burdensome (*e.g.*, hard to determine accurate location of customer of a particular product) and stated that the burden is not worth it. This commenter also stated that digital banking data at census tract level is inconsistent with the deposits data proposal, which aggregates data at the county level.

Final Rule

Regarding the commenter that expressed concerns that reporting data at the census tract level would be burdensome because of the difficulty in determining the accurate location of customers of a particular product, the agencies' supervisory expectations are that banks maintain current addresses for their accountholders. Geocoding technology for associating addresses with census tracts is widely available and used in the banking industry. As a result, the agencies do not expect that the requirement for large banks to collect and maintain data for their digital and other delivery systems at the census tract level will create a significant increase in burden.

Regarding the inconsistency between the deposits data collected and maintained at the county level, which the agencies will use for the purpose of calculating metrics for the Retail Lending Test and the Community Development Financing Test, and the digital delivery systems or other delivery systems data collected and maintained at the census tract level, which the agencies will use to evaluate the degree to which these products are serving low- and moderate-income individuals and low- and moderate-income census tracts, the agencies note that these data are used for different purposes. The deposits volume data at the county level are used for constructing weights and metrics; they are not evaluated with regard to the income characteristics of underlying census tracts. On the other hand, the agencies will evaluate data on accounts opened by digital delivery systems and other delivery systems with regard to the income level of the census tracts where consumers reside, as well as other data that banks may provide indicating the income levels of consumers of these products. It is appropriate that banks collect these data at different geographic levels.

Upon consideration of the comments received, the agencies intend to develop various materials for banks including data reporting guides and other technical assistance to assist banks in understanding supervisory expectations with respect to the data requirements for retail banking services and retail banking products, navigating through various definitions, and the types of responsive deposit products that could qualify for CRA consideration. In addition, the agencies intend to develop a template for the submission of data for digital delivery systems and other delivery systems as well as responsive deposit products to increase consistency for the collection and maintenance of the data and will continue to explore other tools to reduce burden. The agencies decline to publish a complete listing of retail banking services or retail banking products that could qualify for consideration, as the agencies are concerned that doing so may narrow the potential for innovative deposit products a bank could develop or offer to their customer base. However, the agencies will consider including illustrative examples of retail banking services and retail banking products in any future guides and technical assistance the agencies issue outside of the final rule. Importantly, responsive deposit products are dependent

on the needs of the community which can differ. With respect to other recommendations, the agencies will continue to explore the possibility of including them in guidance, outside of this final rule.

§ __.42(a)(5) Information required to be collected and maintained – Community development loans and community development investments data

§ __.42(b)(2) Information required to be reported – Community development loans and community development investments data

Current Approach

Current § __.42(b)(2) requires that a bank, except a small bank (including an intermediate small bank) or a bank that was a small bank during the prior calendar year, report annually by March 1 to the Board, FDIC, or OCC, as applicable, the aggregate number and dollar amount of community development loans originated or purchased by the bank during the prior calendar year. Current agency guidance provides that a large bank or intermediate small bank that seeks consideration for community development activities must be prepared to demonstrate the activities' qualifications but this can be provided in a format of the bank's choosing.¹⁵²⁹

Regarding data about a bank's individual community development loans and community development investments, as well as prior period information about a bank's community development investments, examiners currently rely on loan level and investment level information provided by a bank at the time of an examination, including the number and dollar amount of loans and investments, the location of or areas benefited by these activities, and information describing the community development purpose for each community development loan and investment.¹⁵³⁰ Data collection, maintenance, and reporting requirements for this information is currently not included in the CRA regulations. In addition, the CRA regulations do not currently consider community development loans from prior periods that remain on the bank's books; therefore, there is no requirement for the collection and reporting of these data. As a result of the lack of data collection and reporting of individual community development loans and community development investments, the total number and dollar amount (originated and on-balance sheet) of such loans and investments nationally, or within specific geographies, is not available through reported data.

The Agencies' Proposal

Proposed § __.42(a)(5)(i)(A) required a bank, except a small or an intermediate bank, to collect and maintain the data on individual community development loans and investments in proposed § __.42(a)(5)(ii), in machine readable form, as prescribed by the agencies. Data to be collected and maintained about each individual community development loan or investment included: (1) general information on the loan or investment;¹⁵³¹ (2) specific information on the loan or investment, such as the name of organization or entity, type (loan or investment), community development purpose, and community development loan or investment detail, which could include, for example, whether the loan or investment was a low-income housing tax credit

¹⁵²⁹ See Q&A § __.12(h)—8; see also current 12 CFR __.21 and __.26.

¹⁵³⁰ See Q&A § __.22(b)(4)—1.

¹⁵³¹ Proposed § __.42(a)(5)(ii)(A).

investment or a multifamily mortgage loan;¹⁵³² (3) indicators of the impact of the community development loan or investment;¹⁵³³ (4) location information;¹⁵³⁴ (5) other details relevant to the determination that the loan or investment meets the standards in proposed § __.13, including indicators of whether the bank has retained certain types of documentation, such as rent rolls, to assist with verifying the eligibility of the loan or investment;¹⁵³⁵ and (6) the allocation of the dollar value of the community development loan or investment to specific geographic areas, if available.¹⁵³⁶

Proposed § __.42(a)(5)(i)(B) required an intermediate bank that opted to be evaluated under the Community Development Financing Test in § __.24 to collect and maintain the data in § __.42(a)(5)(ii), but could do so in the format used by the bank during the normal course of business.¹⁵³⁷ The agencies did not propose to require small banks to collect, maintain, or report any data on community development loans and investments, even if the small bank requested consideration for such activities.

The agencies also proposed to revise current § __.42(b)(2), renumbered in the proposal as § __.42(b)(5), to require a bank, except a small or an intermediate bank, to report annually by April 1 all the individual loan and investment data collected and maintained discussed above under § __.42(a)(5)(ii), with the exception of the name of the organization or entity supported.

The agencies requested comment regarding several aspects of the agencies' proposal to collect, maintain, and report community development lending and investment data. With respect to collection of the data, the agencies sought feedback on other steps they could take, or what procedures they could develop, to reduce the burden of the collection of additional community development lending and investment data fields while still ensuring adequate data to inform the evaluation of the bank's community development loans and investments. The agencies also sought feedback on how a data template could be designed to promote consistency and reduce burden. With respect to reporting of the data, the agencies sought feedback on how the format and level of data reporting requirements might affect those banks required to report community development lending and investment data, as well as the usefulness of the data. For example, the agencies sought feedback on whether it would be appropriate and less burdensome to require reporting of community development lending and investment data aggregated at the county-level as opposed to the individual loan- or investment-level.

Comments Received

¹⁵³² Proposed § __.42(a)(5)(ii)(B).

¹⁵³³ Proposed § __.42(a)(5)(ii)(C).

¹⁵³⁴ Proposed § __.42(a)(5)(ii)(D).

¹⁵³⁵ Proposed § __.42(a)(5)(ii)(E).

¹⁵³⁶ Proposed § __.42(a)(5)(ii)(F).

¹⁵³⁷ The agencies also noted in the proposal that intermediate banks evaluated under the status quo intermediate bank community development evaluation would not be required to collect and maintain data.

Comments related to collection and maintenance of community development loans and investments data. Several commenters provided general comments on the agencies' proposed community development lending and investment data requirements. These commenters were generally supportive of the agencies' proposed strategy, with one commenter noting that the proposed community development lending and investment data would make the Community Development Financing Test in § __.24 more rigorous by allowing examiners to compare a bank against its peers to determine whether the bank is especially responsive to local needs. This commenter further noted that the community development lending and investment data would help stakeholders more accurately determine areas that are receiving considerable amounts of community development lending and investment financing and which areas are not. One commenter noted that the new data requirements would highlight gaps in financial services in underserved communities and was hopeful it would spur economic activity.

A few other commenters offered additional suggestions on how to improve data collection for community development lending and investments. For instance, a few commenters suggested that the agencies could improve data collection for the impact review section of the Community Development Financing Test in § __.24, noting for example, that capturing contextual data on the factors, such as the number of beds in health facilities or the number of housing units that had lead paint abatement, might better capture the importance of funding health initiatives and better motivate banks to invest in those initiatives. A commenter suggested that the final rule might implement data collection and reporting requirements on the race and ethnicity of the beneficiaries of community development loans, investments, and services. Another commenter asked that the agencies make all the data publicly available.

Commenters also provided feedback on what steps the agencies might take to reduce the burden of collecting additional community development lending and investment data, including the design of a template to promote consistency and reduce burden. Most commenters who opined on this question agreed that providing a template would be useful. These commenters also provided other suggestions on how to reduce the burden of collecting community development lending and investment data. For example, one commenter suggested that the agencies should automate the template and provide it to CRA software vendors. A few commenters noted the importance of standardizing and automating data collection to minimize duplication of effort and more efficiently implement data collection using existing sources, with one of these commenters also noting that data sharing tools including standard visualizations for the bank's community and Application Programming Interface (API) for researchers would also be beneficial. A few other commenters noted that, in addition to developing the template, the agencies should develop training materials and programs for banks and the public and provide sufficient time for the industry to implement the reporting process. One other commenter suggested that a template for collecting community development lending and investment data should include data fields to record geographical targeting, partnerships, and other features that might help the qualitative evaluation become more quantitative and objective.

A few other commenters provided other recommendations to streamline data collection. For example, a commenter suggested that banks should have the flexibility to classify small business loans with a primary purpose of community development as community development loans and investments. This commenter noted that documentation for these activities could then be drawn from data to be required as part of the CFPB's Section 1071 process. Similarly, another commenter noted that SBA documentation through various forms includes fields on job creation

and retention, similar to those likely to be needed for CRA purposes. The agencies aim to use readily available data whenever possible.

Comments related to reporting of community lending and investment data. Several commenters responded to the agencies' request for feedback on whether the format and level of data required to be reported might affect the burden on banks required to report community development lending and investment data as well as the usefulness of the data. A majority of these commenters supported the proposed rule's requirement that banks report community development lending and investment data at the individual loan or investment level. Rationale provided by these commenters varied. A few of these commenters asserted that loan or investment level data would allow for more precise tracking of community development loan or investment data, including the number and percentages of activities that met one or more of the impact review factors or specific community development categories, such as affordable housing activities. Another one of these commenters observed that large banks would have to collect individual loan- or investment-level data whether or not the data are reported at the activity level. This commenter noted that reporting at the loan- or investment-level would give the agencies and the public more granular data with which to compare banks with other banks. One commenter, while agreeing that large banks should collect and report loan- or investment-level community development data, also, suggested that banks should have the option to report data annually, with the perspective that quarterly reporting would be overly burdensome. This commenter misunderstood the proposal, as the proposal included the option to report data annually.

A few commenters provided other recommendations including that the agencies: require reporting of community development lending and investment data at an aggregated level, without reporting individual loans and investments; review the format and level of data reported by CDFIs to the Treasury data system called Awards Management Information System (AMIS), in the hopes that there might be an opportunity to capture the full profile of a bank's community development lending and investments in one system leveraging this existing reporting system to facilitate data standardization, exchange, and consolidation; include an indicator of whether a product is targeted or offered in a low- or moderate-income location or targeted to a broader low- or moderate-income community; and require banks to collect and report community development lending and investment data for activities in Native Land Areas and with entities such as Native CDFIs and tribal governments.

Publication of community development lending and investment data. A number of commenters suggested that the agencies publish community development lending and investment data. For example, one commenter encouraged the agencies to disclose data on the community development purpose of activities, even if such data are published at the aggregate level, as publication would allow the public to have greater insight into how community development lending and investment dollars are allocated and to compare trends over time. This commenter, along with a few others, also requested that community development lending and investment data be made available on a census tract level so that members of the public can determine which neighborhoods are receiving an adequate amount of community development lending and investment and which neighborhoods need more.

Final Rule

The agencies are adopting § __.42(a)(5)(i)(A) largely as proposed with technical and clarifying edits. Specifically, the agencies are revising this paragraph to update the reference

from “machine readable” to “electronic.” No substantive change is intended. In addition, to conform to changes made in § __.24, the agencies are clarifying that the data to be collected and maintained in § __.42(a)(5)(ii) applies to community development loans and investments originated and purchased, as originally proposed, as well the refinance, renewal, or modification of a loan or investment.

The agencies are not finalizing the requirement in proposed § __.42(a)(5)(i)(C) that banks collect and maintain the outstanding dollar volume of community development loans and investments for previous years that are still held on the balance sheet at the end of each quarter, by March 31, June 30, September 30, and December 30. Instead, to reduce burden, the agencies are finalizing proposed § __.42(a)(5)(i)(C), renumbered as § __.42(a)(5)(ii)(A)(4)(iii), to require the bank to collect and maintain the outstanding balance of community development loan originated, purchased, refinanced, or renewed in previous years that remain on the bank’s balance sheet as of December 31 of the calendar year for each year the loan remains on the bank’s balance sheet; or an existing community development investment made or renewed in a year subsequent to the year of the investment as of December 31 for each year that the investment remains on the bank’s balance sheet. This change requires the bank to collect and maintain these data based on the end of year balance instead of the average of the quarterly balance, which the agencies believe will be easier for banks to comply with. The agencies have also made technical and conforming edits to the remainder of this paragraph.

The agencies are revising proposed § __.42(a)(5)(ii)(A) to conform to the revisions made to proposed § __.42(a)(5)(i)(C), as described above, and § __.24 and for organizational and clarifying purposes. The agencies are also making changes to proposed § __.42(a)(5)(ii)(C) to conform to the changes made to § __.15(b), including adding to the list of indicators of the impact and responsiveness of the activity whether an activity benefits or serves one or more census tracts with a poverty rate of 40 percent or higher or the activity is an investment in a project financed with LIHTCs or NMTCs. In response to commenters and the agencies’ further review, the agencies are revising proposed § __.42(a)(5)(ii)(D) to include the census tract as part of the data a bank is required to collect and maintain for the specific location information of the community development loan or investment. Finally, other technical and organizational changes were made to § __.42(a)(5)(ii) with no change in meaning intended.

The agencies are finalizing proposed § __.42(b)(3), renumbered in the final rule as § __.42(b)(2), largely as proposed pertaining to the reporting of community development lending and investment data collected and maintained in § __.42(a)(5)(ii), with revisions and minor technical and conforming edits. Specifically, in addition to finalizing § __.42(b)(2) to exclude from reporting the name of the organization or entity supported in § __.42(a)(5)(ii)(B)(1), in the final rule the agencies are also excluding the specific location information of the community development loan or investment in § __.42(a)(5)(ii)(D)(1) through (5) to further address potential privacy issues. The agencies are further revising § __.42(b)(2) to require that banks subject to the data reporting requirements in § __.42(b)(2) report the census tract location of the community development loan or investment in new § __.42(a)(5)(ii)(D)(6). This requirement, which was included upon consideration of commenter feedback, is intended to assist the agencies in determining if the loan or investment qualifies as community development.

As explained in the proposal, the agencies believe collecting and reporting community development lending and investment data at the loan- or investment-level is necessary to construct community development lending and investment metrics and benchmarks.

Requirements for data collection and maintenance will also aid the agencies in conducting data integrity evaluations, and the agencies anticipate addressing data integrity procedures as part of interagency guidance. The agencies note that, under the final rule, banks will be required to report annually, by April 1, the data required to be collected and maintained on an annual basis until the completion of the bank's next examination period. The agencies believe some commenters may have misunderstood that the required data were to be reported on a quarterly basis, rather than reported on an annual basis using the quarterly average of the data. To clarify, the agencies are simplifying the data collection and reporting by requiring annual reporting of new money and year-end balances of activities that remain on the bank's balance sheet from prior years as opposed to quarterly averages.

In response to commenters that suggested that banks record a small business loan with a community development purpose as a community development loan or investment to receive consideration, the agencies will allow consideration of small business and small farm loans under the Retail Lending Test, as well as the relevant community development tests applicable to the bank, subject to meeting the necessary criteria (*see* the section-by-section analysis of § __.13 for additional details).

Regarding comments to make community development lending and investments data publicly available, the agencies believe that this information will be disclosed in a number of ways, including through CRA Disclosure Statements, aggregate disclosure statements, and public performance evaluation reports. Public performance evaluations would include the metrics and benchmarks used to determine conclusions on the Community Development Financing Test for each facility-based assessment area, multistate MSA, State, and institution. The agencies believe the information in these statements and reports will provide stakeholders greater insight into how community development lending and investment dollars are allocated and compare trends over time to assist with the identification of areas where capital is most needed.

Upon consideration of the comments, the agencies are not including data on the race and ethnicity of the beneficiaries of community development activities as the agencies believe this would increase burden without providing a corresponding benefit that would assist the agencies in effectuating the rule, as finalized.

To assist banks with the collection and maintenance of community development lending and investment data, the agencies intend to develop a standardized template to gather the data in a consistent manner. Gathering of standardized data will also assist the agencies in understanding the impact and responsiveness of community development loans and investments when applying the impact and responsiveness review. The electronic form will include the impact and responsiveness factors for consistency and to reduce burden. Banks will be permitted to provide examiners additional contextual and qualitative information on community development loans and investments during the CRA examination, consistent with current practices.

The agencies will take into consideration other commenter suggestions for simplifying data collection, including the automation of the template when developing the tools and resources to implement the new rule. Under the final rule, use of the template will be required for large banks and limited purpose banks that would be large based on the asset size described in the definition of large bank. The agencies believe that requiring these banks to use the prescribed template will, in addition to reducing burden, improve the consistency of the data collected. An

intermediate bank that opts to be evaluated under the Community Development Financing Test in § __.24 may provide community development lending and investment data in the format used by the bank in the normal course of business, or may use the standardized template provided by the agencies. In addition, the agencies intend to develop other materials to assist banks with community development data collection. As suggested by commenters, the agencies are considering developing training materials and programs for banks and the public, and a data reporting guide to assist in accurate data reporting.

§ __.42(a)(6) Information required to be collected and maintained – Community development services data

Current Approach

There are no specific data collection or reporting requirements in the current CRA regulations for community development services. However, current interagency guidance explains that a bank should provide examiners with sufficient information to demonstrate its performance in these areas, as applicable,¹⁵³⁸ such as by providing the number of activities, bank staff hours dedicated, or the number of financial education sessions offered.¹⁵³⁹

The Agencies' Proposal

To facilitate the proposed evaluation of a bank's community development services activities and the use of the proposed Bank Assessment Area Community Development Services Hours metric, proposed § __.42(a)(6) required large banks with assets of over \$10 billion to collect and maintain, until the completion of the bank's next CRA examination, the following community development services information, in machine readable form, as prescribed by the agencies: (1) number of full-time equivalent employees at the facility-based assessment area, State, multistate MSA, and institution levels;¹⁵⁴⁰ (2) total number of community development services hours performed by the bank in each facility-based assessment area, State, multistate MSA, and in total;¹⁵⁴¹ (3) date of community development activity;¹⁵⁴² (4) name of organization or entity;¹⁵⁴³ (5) community development purpose;¹⁵⁴⁴ (6) capacity served;¹⁵⁴⁵ (7) whether the activity is related to the provision of financial services;¹⁵⁴⁶ (8) the location of the activity;¹⁵⁴⁷ and (9) whether the bank is seeking consideration at the assessment area, statewide, or nationwide

¹⁵³⁸ See Q&A § __.12(h)—8.

¹⁵³⁹ See Q&A § __.24(e)—2.

¹⁵⁴⁰ Proposed § __.42(a)(6)(i)(A).

¹⁵⁴¹ Proposed § __.42(a)(6)(i)(B).

¹⁵⁴² Proposed § __.42(a)(6)(ii)(A).

¹⁵⁴³ Proposed § __.42(a)(6)(ii)(B).

¹⁵⁴⁴ Proposed § __.42(a)(6)(ii)(C).

¹⁵⁴⁵ Proposed § __.42(a)(6)(ii)(D).

¹⁵⁴⁶ Proposed § __.42(a)(6)(ii)(E).

¹⁵⁴⁷ Proposed § __.42(a)(6)(iii)(A)-(E).

level.¹⁵⁴⁸ Although not expressly stated in proposed § __.42(a)(6), the agencies explained in the proposal that large banks with assets of \$10 billion or less would have the option, but would not be required, to collect and maintain the same community development services data in § __.42(a)(6). However, these banks would have the option to collect and maintain data in their own format, or to use the template prescribed by the agencies.

To compute the Bank Assessment Area Community Development Services Hours Metric proposed in § __.25(b)(2), proposed § __.42(b)(4) would have required large banks with assets of over \$10 billion to report annually by April 1: (1) the number of full-time equivalent employees at the facility-based assessment area, State, multistate MSA, and institution levels; and (2) the total number of community development services hours performed by the bank in each facility-based assessment area, State, multistate MSA, and in total.

In addition, the agencies asked for feedback regarding whether large banks with assets of \$10 billion or less should be required to collect and maintain community development services data in machine readable form, as prescribed by the agencies, equivalent to the data required to be collected and maintained by large banks with assets of over \$10 billion. Under this alternative, the agencies asked whether large banks with assets of \$10 billion or less should have the option of using a standardized template or collecting and maintaining the data in their own format, and whether a longer transition period for these banks to begin to collect and maintain deposits data (such as an additional 12 or 24 months beyond the transition period for large banks with assets of over \$10 billion) would make this alternative more feasible. The agencies further asked whether the added value from being able to use these data in the construction of a metric outweighs the burden involved in requiring data collection by these banks. The agencies also asked for feedback regarding whether large banks with assets of over \$10 billion should be required to collect, maintain, and report data on the number of full-time equivalent employees in order to develop a standardized metric to evaluate community development service performance for these banks.

Comments Received

A few commenters provided general feedback on the agencies' community development services data requirements. One of these commenters noted that requiring large banks to report community development data on an individual activity level would be one of the most impactful changes in the proposed rule. The other commenter suggested that the agencies clarify that there is no need to collect and report community development services data in which a bank does not intend to seek CRA credit.

Several commenters expressed differing views on whether large banks with assets of \$10 billion or less should be required to collect community development services data, and if so, whether banks should have the option of using the standardized template or their own format. Many of these commenters supported requiring that all large banks report these data in the manner prescribed for banks with assets over \$10 billion, with a few of these commenters also supporting a requirement that data be reported in machine-readable form. One commenter thought that intermediate banks should have the flexibility to collect and maintain data either in their own format or in a template provided by the agencies. Another commenter suggested that

¹⁵⁴⁸ Proposed § __.42(a)(6)(iii)(F).

large banks with assets of \$10 billion or less should have the option of using a standardized template or their own format, but in either case, the format should be in a machine-readable form. This commenter further noted that although a longer transition period is always desirable, the added value of using these data in the construction of a metric outweighs the burden involved in requiring data collection by these banks. Another commenter expressed an opposing view with respect to requiring these banks to provide data in a machine-readable form, noting that banks should maintain the data internally but not have to report it externally. One commenter did not support additional reporting of these data points for any large bank because of what the commenter deemed to be excessive cost burden.

Regarding the agencies' request for feedback on whether large banks with assets over \$10 billion should collect, maintain, and report data on the number of full-time equivalent employees at the assessment area, State, multistate MSA, and institution level in order to develop a standardized metric to evaluate community development service performance, a few commenters supported the proposal. One of these commenters also noted that if a standardized metric is developed by the agencies, it would be important that data be sufficient to evaluate community development services performance. This commenter further suggested that requiring banks to report data on the number of full-time equivalent employees would help complete the profile of the bank's investment in community development services. Another commenter expressed the view that the requirement to report data on the number of full-time equivalent employees should apply to all large banks and intermediate banks, and that the performance evaluation should include a copy of the institution's most recent Employment Information Report (EEO-1) Component Data report to evaluate a bank's diversity and inclusion.

One commenter noted that it would be difficult for banks to collect, maintain, and report these data. One commenter objected to the requirement that large banks with assets of over \$10 billion collect, maintain, and report these data while not requiring the same of all other banks. In this commenter's view, there is no logical reason for the different treatment. The commenter urged the agencies not to impose what they described as sweeping, burdensome, and inefficient data collection requirements.

Final Rule

After consideration of the comments, the agencies are adopting § __.42(a)(6) pertaining to the data collection and maintenance of community development services, with changes, including technical and conforming changes. Specifically, because final § __.25 requires all large banks to be evaluated under the Community Development Services Test (*see* the section-by-section analysis of § __.25), the agencies are conforming proposed § __.42(a)(6) to require all large banks to collect and maintain the community development services data in final § __.42(a)(6)(i)-(ii). The agencies believe collection and maintenance of the community development services data for all large banks is necessary to facilitate evaluation under the Community Development Services Test. The agencies further believe that requiring these data of all large banks, rather than just banks with assets over \$10 billion, will provide more consistency and clarity in the evaluation of community development services for all large banks, without significantly increasing burden. The agencies note from prior supervisory experience that many large banks already collect and maintain these data for CRA examination purposes.

However, to reduce burden and provide flexibility while maintaining consistency in the data elements, the final rule permits all large banks to collect and maintain these data in a format of

the bank's choosing or in a standardized format as provided by the Board, FDIC, or OCC, as applicable, until the completion of the bank's next CRA examination. The agencies note that they intend to develop a standardized template for community development services data to improve consistency in evaluations. Large banks will have the choice to use the template or their own format.

Finally, the agencies note that small banks and intermediate banks that request consideration for community development services are not required to collect and maintain these data in a manner equivalent to large banks. However, consistent with current practice, small and intermediate banks should be prepared to provide examiners with sufficient information to demonstrate that the activities qualify as community development services, such as the number of activities, bank staff hours dedicated, or the number of financial education sessions offered.

The agencies are also making changes to the data required to be collected and maintained to conform to changes made in final § __.25. Specifically, the agencies are not adopting the proposed Bank Community Development Services Hours Metric for banks with assets over \$10 billion. As a result, the data regarding the number of full-time equivalent employees at the facility-based assessment area, State, multistate MSA, and institution levels in proposed § __.42(a)(6)(i)(A) are no longer necessary. In addition, the agencies further revised § __.42(a)(6)(i) by removing the total number of community development services hours performed by the bank in each facility-based assessment area, state, multistate MSA, and in total. This was removed because the number of board member or employee service hours was added to the list of community development services information, proposed as § __.42(a)(6)(ii)(A) and renumbered as § __.42(a)(6)(i). The agencies will be able to add the number of total service hours based on the hours provided for each community development service.

The agencies added § __.42(a)(6)(i)(F) to require the collection and maintenance of the indicators of the impact and responsiveness of the activity, as applicable, to be consistent with final § __.15(b). The agencies note that while the impact factors were not specifically included in the data collection, these data are required for the evaluation of the Community Development Services Test pursuant to § __.25(c)(5). Final § __.42(a)(6)(i)(F)(I)-(10) provides the indicators required to be collected and maintained for community development services consistent with § __.15(b).

The agencies have also revised proposed § __.42(a)(6)(ii)(E) by removing the indicator for whether the activity is related to the provision of financial services. As explained in the section-by-section analysis of § __.25, the agencies determined that this requirement is not necessary because the final rule requires all community development services activities to be related to the provision of financial services. Therefore, collection of this indicator in proposed § __.42(a)(6)(ii)(E) is no longer necessary.

The agencies have also renumbered and streamlined the data requirements for the location information of the activity in proposed § __.42(a)(6)(iii)(A) through (F). Specifically, the final rule replaces the requirement to collect and maintain the specific location of the activity, street address, city, county, State, and zip code in proposed § __.42(a)(6)(iii)(A) through (E), with a list of the geographic areas served by the activity, specifying any census tracts, county, counties, State, States, or nationwide area served. This revised list is renumbered in the final rule as § __.42(a)(6)(ii)(A). In addition, the geographic level for which the bank seeks consideration for

the community development services activity in proposed § __.42(a)(6)(iii)(F) has been renumbered in the final rule as § __.42(a)(6)(ii)(B).

The agencies are not finalizing the requirement that banks with asset over \$10 billion must report the number of full-time equivalent employees proposed § __.42(b)(4). As stated above, the agencies are not requiring that banks collect and maintain the number of full-time equivalent employees at the facility-based assessment area, State, multistate MSA, and institution levels collected in proposed § __.42(a)(6)(i)(A). As a result, the requirement to report these data no longer applies.

Because the final rule does not require that data for community development services be reported, the agencies will not publish community development services data as suggested by one commenter. With respect to the data collection requirement, and in response to a comment, while the agencies are not specifying in the final rule that if a bank does not intend to seek CRA credit the bank need not collect community development services data, the agencies note that there are no data requirements if the bank does not engage in a particular product or service that requires data collection, maintenance, or reporting under § __.42.

§ __.42(a)(7) Information Required to be Collected and Maintained – Deposits Data

§ __.42(b)(3) Information Required to be Reported – Deposits Data

Current Approach

The current CRA regulations do not require banks to collect, maintain, or report deposits data.¹⁵⁴⁹ Instead, for small banks, total deposits and total loans data from the bank's Call Report are used to calculate the loan-to-deposit ratio for the entire bank. For banks of any size, the agencies may use total deposits allocated to each branch from the FDIC's Summary of Deposits for performance context. Further, deposits data by depositor location are not currently required to be collected or reported, but may have been used by examiners for performance context at the bank's request, if available.

The Agencies' Proposal

As explained below, the agencies proposed that deposits data would be used for several evaluation metrics, benchmarks, and weights under the applicable performance tests. In § __.42(a)(7) (collection and maintenance) and § __.42(b)(5) (reporting), the agencies proposed an approach for the deposits data requirements tailored to different bank sizes.

Deposits Data Collection and Maintenance Requirements

Large Banks with Assets of Over \$10 Billion. The agencies proposed in § __.42(a)(7) to require large banks that had average assets of over \$10 billion in both of the prior two calendar years, based on the assets reported on its four quarterly Call Reports for each of those calendar years, to collect annually and maintain until the completion of the bank's next CRA examination the dollar amount of the bank's deposits at the county level, based on the addresses associated with accounts and calculated based on the average daily balances as provided in statements, such as monthly or quarterly statements. The proposal also indicated that deposits data must be

¹⁵⁴⁹ See current 12 CFR __.42.

collected and maintained in machine readable form prescribed by the Agency.¹⁵⁵⁰ Further, the proposed deposits data would not be assigned to branches but would instead reflect the county-level dollar amount of the bank's deposit base.¹⁵⁵¹ As a result, county-level deposits data would be based on the county in which the depositor's account address is located, rather than on the location of the bank branch to which the deposits are assigned as is the case with the Summary of Deposits.¹⁵⁵² The agencies explained in the preamble to the proposal that this approach would allow for more precise measurement of a bank's local deposits by county. Furthermore, the agencies noted that banks generally collect and maintain depositor location data to comply with Customer Identification Program requirements and as part of their ordinary course of business.

The agencies also explained in the preamble to the proposal that the current approach of associating deposits with the location of the branch to which they are assigned would raise challenges under the proposed evaluation framework for large banks with assets of over \$10 billion. The agencies explained that the proposed collection and maintenance of deposits data at the county level for large banks with assets of over \$10 billion would permit the agencies to more accurately: (1) construct the bank volume metric and community development financing metric for each bank at the facility-based assessment area, State, multistate MSA, and institution levels, as applicable; (2) construct the market benchmarks used for the retail lending volume screen and the community development financing metric at the facility-based assessment area, State, multistate MSA, and institution levels, as applicable; and, (3) implement a standardized approach for deriving State-, multistate MSA-, and institution-level conclusions and ratings by weighting facility-based assessment area conclusions, retail lending assessment area conclusions, and outside retail lending area conclusions through a combination of deposits and lending volumes.

The agencies did not believe it was practicable to implement their proposal using Summary of Deposits data for all large banks, particularly with respect to banks with more than \$10 billion in assets. For example, the agencies noted that the Summary of Deposits data is not always an accurate measure of a bank's deposit base within an assessment area. Specifically, deposits assigned to a branch in the ¹⁵⁵³Summary of Deposits data may have been deposited by a

¹⁵⁵⁰ See proposed § __.42(a)(7).

¹⁵⁵¹ See *id.*

¹⁵⁵² See *id.*

¹⁵⁵³ See *FDIC Summary of Deposits Reporting Instructions* (June 30, 2022) ("Institutions should assign deposits to each office in a manner consistent with their existing internal record-keeping practices. The following are examples of procedures for assigning deposits to offices: • Deposits assigned to the office in closest proximity to the accountholder's address. • Deposits assigned to the office where the account is most active. • Deposits assigned to the office where the account was opened. • Deposits assigned to offices for branch manager compensation or similar purposes. Other methods that logically reflect the deposit gathering activity of the financial institution's branch offices may also be used. It is recognized that certain classes of deposits and deposits of certain types of customers may be assigned to a single office for reasons

customer located outside of the assessment area where the branch is located, such as in a different assessment area of the bank or outside of any of the bank's assessment areas.¹⁵⁵³ The agencies noted that this limitation could introduce imprecision when using the Summary of Deposits data to weight performance conclusions in retail lending assessment areas, outside retail lending areas, and areas for eligible community development activity. For large banks with assets of over \$10 billion, the agencies believed that the benefits of precision, given the range of important measurements which are dependent on these data, outweighed the burden of requiring the collection and reporting of deposits data.

The agencies sought feedback on whether the proposed approach of requiring only large banks with assets of over \$10 billion to collect, maintain, and report deposits data creates the appropriate balance between tailoring data requirements and ensuring accuracy of the proposed metrics. The agencies also sought feedback on whether large banks with assets of \$10 billion or less that elect to collect and maintain deposits data also should be required to report deposits data. Relatedly, the agencies sought feedback on an alternative approach in which all large banks with assets of \$10 billion or less are required to collect, maintain, and report deposits data, with the standards and requirements for these data as proposed for large banks with assets of over \$10 billion. Additionally, the agencies sought feedback on whether a longer transition period (such as an additional 12 or 24 months beyond the transition period for large banks with assets of over \$10 billion) to begin collecting, maintaining, and reporting deposits data for large banks with assets of \$10 billion or less would make this alternative more feasible. The agencies also sought comment on whether it would be preferable to require deposits data collected as a year- or quarter-end total, rather than an average annual deposit balance calculated based on average daily balances from monthly or quarterly statements.

Under the proposal, for deposit account types for which accountholder location information is not generally available, the aggregate dollar amount of deposits for these accounts would be included at the overall institution level and not at other geographic levels.¹⁵⁵⁴ The agencies explained in the preamble to the proposal that they expected that the aggregate dollar amount of deposits for accounts associated with pre-paid debit cards or Health Savings Accounts would likely be included at the institution level. The agencies sought feedback on additional clarifications regarding what deposit account types may not be appropriate to include at a county level and whether these deposits should be included at the institution level. The agencies also requested feedback on whether brokered deposits should be reported at the institution level.

For large banks with more than \$10 billion in assets that collect, maintain, and report deposits data, agencies proposed in § __.12 a definition of deposits based on two subcategories of the Call Report category of Deposits in Domestic Offices: (1) deposits of individuals, partnerships, and corporations; and (2) commercial banks and other depository institutions in the United States. The agencies proposed these two subcategories of deposits, which constitute the majority of deposit dollars captured overall in the Call Report categories of Deposits in Domestic

of convenience or efficiency. However, deposit allocations that diverge from the financial institution's internal record-keeping systems and grossly misstate or distort the deposit gathering activity of an office should not be utilized.”), <https://www.fdic.gov/resources/bankers/call-reports/summary-of-deposits/summary-of-deposits-reporting-instructions.pdf>.

¹⁵⁵⁴ See proposed § __.42(a)(7) and (b)(5).

Offices, because they best reflect a bank's capacity to lend and invest. The proposed definition excluded domestically held deposits of foreign banks and of foreign governments and institutions because these deposits are not derived from a bank's domestic customer base. The proposed definition also excluded United States, State, and local government deposits because these deposits are sometimes subject to restrictions and may be periodically rotated among different banks, causing fluctuations in the level of deposits over time.

The agencies sought feedback on whether deposits for which the depositor is a commercial bank or other depository institution should be excluded from the definition and whether other categories of deposits should be included in these deposits data. The agencies explained that while these deposits may augment a bank's capacity to lend and invest, they are primarily held in banker's banks and credit banks, many of which are exempt from CRA, or operate under the Community Development Financing Test tailored for limited purpose banks, which does not use deposits data. Further, the agencies sought feedback on the appropriate treatment of non-brokered reciprocal deposits in order to appropriately measure an institution's amount of deposits, avoid double counting of deposits, and ensure that accountholder location information for deposit accounts is available to the bank that would be collecting and maintaining the data. The agencies stated that a non-brokered reciprocal deposit as defined in 12 U.S.C. 1831f(i)(2)(E) for the institution *sending* the non-brokered reciprocal deposit would qualify under the proposed deposits definition in § __.12, but such deposit for the institution *receiving* the non-brokered reciprocal deposit would not qualify under the proposed definition. The agencies also sought feedback on whether bank operational systems needed to be upgraded to permit the collection at the county level based on a depositor's address and, if upgrades were needed, what would be the associated costs.

Small Banks, Intermediate Banks, and Large Banks with Assets of \$10 Billion or Less. Under proposed § __.42(a)(7), small banks, intermediate banks, and large banks with assets of \$10 billion or less would not be required to collect deposits data. Instead, the agencies proposed in § __.22(c)(3) and appendix A that the Summary of Deposits data would be used for calculating the retail lending volume screen, as applicable, for small banks, intermediate banks, and large banks with assets of \$10 billion or less, if they do not elect to collect and maintain deposits data. Under proposed § __.24(b) and appendix B, the Summary of Deposits data also would be used for calculating the community development financing metric for large banks with assets of \$10 billion or less and for intermediate banks that opt into the Community Development Financing Test. Under proposed § __.28 and appendix C, the Summary of Deposits data also would be used for the weights assigned to each facility-based assessment area when calculating performance scores at the State, multistate MSA, and institution levels, as applicable. The agencies believed that this approach would minimize the data collection burden on banks with assets of less than \$10 billion, in recognition that large banks with assets of over \$10 billion have more capacity to collect and report new deposits data.

The agencies explained in the preamble to the proposal that small banks, intermediate banks, and large banks with assets of \$10 billion or less could choose to collect and maintain deposits data on a voluntary basis. Proposed § __.42(a)(7) required large banks with assets of \$10 billion or less that elect to collect deposits data to do so in a machine readable form provided by the agencies. Small banks and intermediate banks would have the option to collect deposits data in the bank's own format. The agencies indicated in the preamble to the proposal that, if a small or intermediate bank opted to collect deposits data, the agencies would use the bank's collected data

instead of the Summary of Deposits data to calculate the bank's metrics and weights for all applicable tests and evaluation areas. The agencies explained that a bank with a significant percentage of deposits drawn from outside of assessment areas may prefer to collect and maintain deposits data to reflect performance more accurately under the retail lending volume screen and the community development financing metrics, and to have weights given to the bank's assessment areas in a way that more accurately reflects the bank's deposit base when assigning ratings.

Wholesale Banks and Limited Purpose Banks. Under proposed § __.42(a)(7), wholesale and limited purpose banks would not be required to collect or maintain deposits data.

Deposits Data Reporting Requirements

Large Banks with Assets of Over \$10 Billion. The agencies proposed in § __.42(b)(5) that large banks with assets of over \$10 billion would be required to report, by April 1 of each year, the aggregate dollar amount of deposits at the county, State, multistate MSA, and institution level based on average annual deposits (calculated based on average daily balances as provided in statements such as monthly or quarterly statements, as applicable) from the respective geography. The agencies intended for this approach to appropriately account for deposits that vary significantly over short time periods or seasonally. The reported deposits data would inform bank metrics, benchmarks, and weighting procedures for the Retail Lending Test and Community Development Financing Test.

The agencies sought feedback on requiring large banks to report the number of depositors at the county level. The agencies explained that such data would be used to support the agencies' analysis of deposits data and could be used to support an alternative approach of using the proportion of a bank's depositors in each county to calculate the bank's deposit dollars for purposes of the community development financing metrics and benchmarks. The agencies also sought comment on whether there are steps the agencies could take or further guidance or reporting tools that the agencies could develop to reduce burden while still ensuring adequate data to inform the metrics approach.

Finally, the agencies proposed not to make deposits data reported under § __.42(b)(5) publicly available in the form of a data set for all reporting lenders; nevertheless, the agencies requested feedback on whether they should consider an alternative approach of publishing a data set containing county-level deposits data in order to provide greater insight into bank performance.

Large Banks with Assets of \$10 Billion or Less, Intermediate Banks, Small Banks, and Wholesale and Limited Purpose Banks. Under proposed § __.42(b)(5), large banks with assets of \$10 billion or less, intermediate banks, small banks, and wholesale and limited purpose banks would not be required to report deposits data. Under proposed §§ __.22(c)(3) and __.24(b) and appendices A and B, Summary of Deposits data would be used for measuring the deposits of large banks with assets of \$10 billion or less for purposes of calculating the proposed market volume benchmark and community development financing benchmarks, even if a bank chose to collect and maintain deposits data for purposes of calculating its metrics and weights. The agencies explained that not requiring these banks to report these data would reduce their new data burden.

Comments Received

Comments were mixed regarding the agencies' proposed deposits data collection and reporting requirements. Some commenters were generally supportive of the agencies' proposal; while others expressed concern that the deposits data collection and reporting requirements would be overly burdensome for large banks.

Many of the commenters that expressed support for the deposits data collection and reporting requirements also suggested that the deposits data collection and reporting requirements should be expanded beyond large banks with assets of over \$10 billion to include all large banks. Multiple commenters described multiple limitations of the Summary of Deposits data and as a result, supported the proposed requirement that banks with assets of over \$10 billion collect and report deposits data based on the counties in which depositors' addresses are located. One commenter noted that, although this would include a relatively small number of banks, it would include the great majority of deposits. This commenter also recommended that the Summary of Deposits data should be comprehensively reformed to better support the CRA as well as for other regulatory purposes. Another commenter was supportive of not only making deposits data collection and reporting a requirement for all large banks, but also for intermediate banks.

Another commenter asserted that deposits data requirements would not further the CRA's objectives regardless of what deposit types are included. Citing economic conditions as an example, the commenter stated that during an economic downturn, an individual's savings increases while spending decreases, which would have an impact in the demand for certain banking products and services. As a result, the commenter expressed that using a deposit-based benchmark would artificially inflate a bank's CRA performance standards during this economic downturn that may not be achievable or sustainable.

By contrast, most industry commenters that addressed the proposed deposits data collection and reporting requirements believed such requirements would be complex to implement, as well as costly and burdensome, and that as a result the deposits data already collected should instead be used. For example, a few of these commenters suggested that the deposits data already reported through the annual Summary of Deposits data collection and reporting process should be sufficient. Another commenter noted that subjecting banks with assets of just over \$10 billion to the same deposits data collection and reporting requirements as their much larger counterparts places these smaller large banks at a significant resource disadvantage, which in turn may reduce their ability to engage in community development activities. The commenter also suggested that the requirements would be a significant burden for even the largest banks because those banks will also need to make significant changes to their systems, programs, and procedures to collect the data and report it accurately. This commenter also noted that many of the data collection and reporting requirements in the proposal would require that the data be provided in a machine-readable form that has yet to be prescribed by the agencies. Another commenter stated that it may need to collect deposit data to pass the Retail Lending Test, even though the data collection and reporting requirements would not apply to the bank, because Summary of Deposits data may not be fully representative of its deposit sourcing for a market. The commenter noted that the burden to collect these data would be significant. A few other commenters expressed support for limiting any new data burden for these banks by maintaining the option as proposed.

One commenter stated that the agencies failed to address why requiring county-level deposits data based on the depositor's address rather than on the location of the bank branch to which the deposits are assigned is relevant to recognizing a bank's support of low- and moderate-income communities. Absent a reliable means of determining which approach is more accurate, the

commenter believes the compliance costs associated with gathering depositor address data are unwarranted. As such, the commenter suggested that the agencies maintain the branch assignment method, make address-based reporting optional, and place more importance on data that provide a better picture of a community's needs.

Some commenters suggested alternatives to the agencies' proposed method of averaging annual deposits based on average daily balances included in monthly or quarterly statements. One commenter expressed that the proposed approach was burdensome, and instead suggested to collect deposits as of the beginning of the examination period and allow banks to provide performance context information to the extent there are significant changes to deposits distribution during the examination period. Another commenter recommended that deposits data should be collected and reported based on end-of-quarter or end-of-year balances. This commenter further suggested that the agencies consider creating an online platform akin to the CFPB's HMDA Loan Application Register formatting tool to provide banks with a direct and efficient manner to submit the required deposits data.

A number of commenters addressed the technical requirements of collecting, maintaining, and reporting deposits data, including the need for banks to geocode depositor addresses so that the data can be summarized at the county level. One commenter asserted that some banks complain that deposits data collection and reporting would create data burden when, in reality, they already geocode their deposits. Two other commenters suggested that deposits data should be collected at the census tract level rather than at the county level, which would provide greater insight into the patterns of reinvestment observed. These commenters further stated that there may be significant data quality issues with deposits data that have not been addressed in the proposed rule, for example when a customer might open a deposit account with an address which does not reflect where the customer lives. These commenters also noted that deposits data will not be subject to the same data integrity standards as HMDA data, and that requiring such accuracy would be overly burdensome to depository institutions.

Several commenters asked that the agencies incorporate exemptions to the deposits data requirements. For example, two commenters suggested that branch-based banks of any size should be exempt from tracking deposits by location or delineating deposits-based assessment areas. Other commenters similarly suggested that the deposits data collection and reporting requirements should not apply to banks with facility-based models, with one of these commenters asserting that banks that are mainly internet-based banks, without a brick-and-mortar presence, should be required to collect and report deposits data. A few of commenters also noted that additional guidance would be needed with regard to deposits data collection and reporting, with one of the commenters noting that there would need to be significant guidance provided for non-standard situations, such as when the physical address on record for a deposit account is very old (and has not been updated), when the recorded address is a P.O. Box, where the customer spends part of the year at one address and part of the year at a different address, or for when mail to the depositor is returned and there is no accurate address on file. Another commenter stated that Summary of Deposits data should be used for all banks except those that generate a substantial portion of their deposits digitally.

Regarding alternative approaches to deposits data collection and reporting requirements the agencies could consider to minimize additional data burden, commenters made several recommendations including: permit banks to use Summary of Deposits data rather than require them to geocode, collect, and report deposits data based on the residence of their depositors;

collect and report deposits data based on an average annual deposit balance based on average daily balances from quarterly statements rather than from monthly statements; and have the option to determine the frequency by which they would collect and report deposits data (and requiring banks to commit to one specific method/frequency for each CRA examination cycle). One commenter suggested that the agencies should “stress test” this issue, to determine whether a quarterly average is almost as accurate as average daily balances computed monthly or quarterly, which might indicate that quarterly averages would be a viable alternative. Another commenter suggested the agencies should work with the financial industry to determine the best balance between accuracy and burden with respect to data collection, reporting, and associated metrics’ calculations. One other commenter suggested that, as an alternative, banks could upload summary records they keep for qualitative analysis in the interim while they work towards building capacity to collect, maintain, and report deposits data at the appropriate interval (quarterly, semi-annually, or annually).

Regarding whether deposits sourced from commercial banks or other depository institutions should be excluded from the proposed deposits data collection and reporting requirements, multiple commenters suggested that all deposits, including those from commercial banks and other depository institutions, should be included in the deposits data. Another commenter suggested that deposits from commercial banks should not be included unless these commercial banks are designated as small, disadvantaged business enterprises or some similar category. However, this commenter also suggested that deposits sourced from minority depository institutions should be included in the deposits data. Another commenter suggested that “mission deposits” or non-brokered reciprocal deposits should be excluded from the deposits data, and noted that it could be problematic to identify these deposits among deposits from commercial banks or other depository institutions. Another commenter suggested that neither commercial bank deposits nor deposits from other depository institutions, such as credit unions, should be excluded. Finally, one commenter indicated that corporate, commercial bank, and other depository institution deposits should be excluded from the deposits data.

Regarding whether brokered deposits and other types of deposit accounts such as prepaid debit card accounts and Health Savings Accounts that may not include depositor location information should be reported at the institution level, commenters generally agreed that deposits without depositor location data should be reported at the institution level. A few commenters suggested that accounts for which Customer Identification Program information is not required are unlikely to have customer location data and might be treated as a category at the institution level. One of these commenters suggested that banks could include depositor information for deposit accounts for which Customer Identification Program information is collected. Another commenter also noted how consideration of prepaid debit card accounts can be complicated because many are one-time use cards; they can be sold in retail establishments with no collection of customer information; and geographic mobility is a feature of these accounts. This commenter suggested that the agencies should consider the purpose of the deposit products, for example if a CDFI bank were to raise prepaid card deposits from across the United States with the intention of using those deposits to fund a national lending program to help low- and moderate-income individuals improve their credit, rather than the geographic location from which deposits are collected or products delivered. Another commenter suggested that these types of accounts should have some locational information, whether location of sale or location of employer, and that the agencies should investigate available data on these types of products to see if a more specific geography can be attributed to these products than at the institution level.

Another commenter suggested that the agencies should conduct research to determine whether deposit location might be identified at the county level, but if not, this commenter stated that these types of deposits should be considered at the institution level.

Regarding the appropriate treatment of non-brokered reciprocal deposits, the few commenters that addressed this issue agreed with the proposed approach. These commenters noted that non-brokered reciprocal deposits should be considered as a deposit for the bank sending the non-brokered reciprocal deposit, but they should not be considered as a deposit for the bank receiving the reciprocal deposit. Two of these commenters indicated that they supported this approach to ensure CDFI banks are not penalized for accepting CRA and impact-motivated deposits. Multiple other commenters stated they supported the approach to prevent double-counting of deposits included in these transactions. A commenter offered a technical suggestion to align terminology used in the CRA regulation with that included in the Federal Deposit Insurance Act (FDI Act) and corresponding FDIC regulations, which do not speak in terms of institutions sending non-brokered (or brokered) reciprocal deposits and instead describe an agent institution sending or placing a “covered deposit” through a deposit placement network and receiving reciprocal deposits in the same aggregate amount. The commenter therefore suggested that the final rule exclude all reciprocal deposits (whether or not brokered) that a bank receives and include all covered deposits that a bank places on a reciprocal basis (whether or not they become non-brokered reciprocal deposits for the receiving institution) to provide a more workable description of “deposits” for purposes of the CRA metrics.

In response to the question regarding whether bank operations systems currently permit the collection of deposit information at the county-level, commenters expressed different views. A commenter indicated that its operations systems would need to be modified to capture this information because they do not currently geocode depositors’ addresses, noting that the cost for such modifications would need to be determined through vendor due diligence. Another commenter suggested that the capacity to collect the information and its associated costs may vary by bank, but it is important for the agencies to get available data that can be used for branch level assessments. One more commenter indicated that CDFI banks report that the cost of modifying and upgrading operations systems would be significant (with one member financial institution indicating a cost between \$30,000 and \$50,000). In contrast, a few commenters indicated that bank systems exist for collecting these sorts of data (such as those used for reporting Bank On account data), that many banks already geocode their deposits data, and that it should not be burdensome or costly for financial institutions that do not already utilize these systems to do so.

Regarding steps the agencies might take to reduce the burden associated with the reporting of deposits data, a few commenters made several recommendations. Two commenters suggested the agencies develop a geocoding platform. Other commenters suggested the agencies provide sufficient transition time for the existing financial services data systems providers that currently collect, geocode, validate, and report data for CRA and fair lending compliance purposes to create deposits data-based applications. This commenter indicated its expectation that as an “add on” function, this solution should not be particularly expensive. One other commenter suggested that CDFIs should be able to rely on information they already submit related to their annual CDFI certification. The commenter also suggested that the agencies provide technical assistance grants to help banks below \$1 billion obtain the technological resources necessary to comply with the proposed data collection, recordkeeping, and reporting requirements with priority, or a

potential set aside, for MDIs or CDFIs. Two commenters suggested the agencies should coordinate with other agencies to standardize data definitions and formats in order to both use data already collected when possible and to otherwise automate reporting through integration of existing software and file types. One other commenter similarly recommended that the agencies automate reporting with integration of current software or develop a certain file type so that the data can be parsed by the agencies' systems uniformly. Another commenter suggested that the agencies should clarify that in the case of an omnibus account (*e.g.*, in a sweep program or prepaid program) a bank can treat the depositor's address as that of the accountholder of record. Similarly, this commenter suggested the agencies clarify that a bank can rely on a depositor's address in its system of records, which is typically collected at account opening, and that the CRA regulations' proposed data collection requirements do not impose a new obligation on banks to periodically request current address information from customers.

Nearly all comments received responding to whether the agencies should consider the alternative approach of publishing a dataset containing county-level deposits data were supportive of the agencies publishing such a dataset. Several commenters indicated that the agencies not proposing to publish these data limits the public's ability to hold banks accountable. Other commenters made various recommendations concerning the manner in which the data should be published, including that, if possible, the data should be published at the lowest available level of aggregation, such as at the census tract or zip code level. One of these commenters also asserted that the agencies should consider publishing data by income category of census tracts or by census tracts with respect to percentages of minority consumers. Another commenter stated that the more granular the data, the more the data can help with identifying performance gaps of a specific branch. This commenter also stated that if an alternative approach can help with this effort, then the agencies should consider it, but that, since these data would be used to support agency analysis of deposits data in devising alternative approaches, the agencies should determine if the data collection is still needed after the analysis has been completed. Another commenter suggested the agencies consider the alternative with publication of Geographic Information Systems maps of the assessment area. One other commenter suggested that the agencies provide deposit market-share data as it is today; use deposits data to develop customer physical location data internally; and decide whether to anonymize depositor data or provide that deposits data collection requirements do not result in privacy violations between banks and their customers.

Final Rule

The agencies are adopting proposed § __.42(a)(7) regarding the collection and maintenance of deposits data substantially as proposed with technical edits for clarification and to conform to other changes made in the final rule. Specifically, the agencies are revising this paragraph to update the reference "machine readable" to "electronic" with no change in meaning intended.

The agencies are also revising this paragraph to clarify that the dollar amount of deposits at the county level is based on "deposit location" as defined in § __.12, and to conform to the definition of deposit location in the final rule, which provides more detailed guidance to banks regarding how to determine the location of deposits associated with deposit accounts. In addition, to clarify how banks are to collect and maintain deposits data for account types for which a deposit location is not available, the agencies are adding language stating that such deposits data must be collected and maintained at the nationwide area. Specifically, recognizing that there is no reasonable method for assigning deposits to a local area in cases where a

depositor address is not available, the agencies determined that it is appropriate to consider these deposits at the nationwide area. These deposits would not be included in calculations for bank-specific metrics or aggregate benchmarks for any local geographic area, but would be included in calculations at the nationwide area or institution level (e.g., for the community development investment metric). An alternative to collecting, maintaining, and reporting these data at the nationwide area is to not consider them at all, which the agencies did not consider appropriate given that these deposits are financial resources available to the bank.

The agencies are revising this paragraph to indicate that a large bank that had assets greater than \$10 billion as of December 31 in both of the prior two calendar years must collect and maintain deposits data. This change was made to conform to changes made in § __.12 regarding how assets data are used in the definitions of large bank, intermediate bank, and small bank.

The agencies are also adding to this paragraph the phrase “in which the data are evaluated,” to clarify how long a bank must collect and maintain the deposits data. More specifically, the final rule clarifies that these data must be maintained “until the completion of the bank’s next CRA examination in which the data are evaluated,” rather than “until the completion of the bank’s next CRA examination,” as provided under the proposal. This clarification is made to ensure that these data are maintained until they are evaluated in a CRA examination, which may not be the bank’s next CRA examination.

Lastly, the agencies are revising this paragraph to indicate that “any other bank” that opts to collect and maintain deposits data must do so in the same form and for the same duration as is required of large banks with assets greater than \$10 billion. This is an expansion of the proposed language, which required these data only for “a large bank that had average assets of \$10 billion or less.” This change was made to improve the efficiency and accuracy of calculations using deposits data, including those for bank metrics and benchmarks used in the Retail Lending Test and Community Development Financing Test, as well as for the weighting calculations used for creating benchmarks and conclusions. Deposits data collection and maintenance requirements remain optional for banks with assets of \$10 billion or less, but if they do opt to collect and maintain these data, as just noted, they must do so in the same form and for the same duration as is required of large banks with assets greater than \$10 billion.

The agencies are also adopting proposed § __.42(b)(5) substantially as proposed, renumbered in the final rule as § __.42(b)(3)(i) and (b)(3)(ii), regarding the reporting of deposits data. The agencies are making one substantive addition, requiring banks with assets of \$10 billion or less that opt to collect and maintain deposits data to also report these data. The agencies are also making technical edits for clarification and removal of superfluous language in the regulatory text. Specifically, the agencies are clarifying in new § __.42(b)(3)(ii) that the data collected and maintained by large banks in § __.42(a)(7) for which deposit location is not available must be reported at the nationwide area. This clarification is necessary to ensure that the full set of deposits are reported for banks included in this paragraph. Specifically, the agencies are revising this paragraph to update the reference “machine readable” to “electronic” with no change in meaning intended.

The agencies are adding a requirement for banks with assets of \$10 billion or less that opt to collect and maintain deposits data that they must also report these data. The agencies made this change to improve the efficiency and accuracy of calculations using deposits data, including those for bank metrics and benchmarks used in the Retail Lending Test and Community

Development Financing Test, as well as for the weighting calculations used for creating benchmarks and conclusions. The data reporting requirement remains optional for banks with assets of \$10 billion or less, but if they do opt to collect and maintain these data, they must also report these data in the same form and for the same duration as is required of large banks with assets greater than \$10 billion.

The agencies are also revising this paragraph to indicate that a large bank that had assets greater than \$10 billion as of December 31 in both of the prior two calendar years must report deposits data. This change was made to conform to changes in § __.12 regarding how assets data are used in the definitions of large banks, intermediate banks, and small banks.

Additionally, the agencies added language to this paragraph indicating that a bank that reports deposits data for which a deposit location is not available must report these deposits at the nationwide area, conforming with the requirement for collecting and maintaining these data in final § __.42(a)(7). These deposits would not be included in calculations for bank-specific metrics or aggregate benchmarks for any local geographic area, but would be included in calculations at the nationwide area or institution level (*e.g.*, for the community development investment metric). An alternative to reporting these data at the nationwide area is not reporting them at all, which the agencies did not consider appropriate given that these deposits are financial resources available to the bank.

The final rule does not include the language in proposed § __.42(b)(5) which stated that the agencies “will not make deposits data reported under this paragraph publicly available in the form of a data set for all reporting banks.” The agencies do not intend this as a substantive change from the proposed approach. Instead, the agencies realize that it is not necessary or appropriate for the final rule to indicate what is not included in the examination and evaluation process, or, in this case, what data will not be published as part of the evaluation process.

Lastly, the agencies revised this paragraph to indicate that “any other bank” that opts to collect and maintain deposits data must report these data in the same form and for the same duration as described in this paragraph for large banks with assets greater than \$10 billion. This is an expansion to the proposed language indicating this data requirement is only for “a large bank that had average assets of \$10 billion or less.” This change was made to improve the efficiency and accuracy of calculations using deposits data, including those for bank metrics and benchmarks used in the Retail Lending Test and the Community Development Financing Test, as well as for the weighting calculations used for creating benchmarks and conclusions. This deposits data collection and reporting requirement remains optional for banks with assets of \$10 billion or less, but if they do opt to collect and maintain these data, they must do so in the same form and for the same duration as is required of large banks with assets greater than \$10 billion.

Deposits data requirements—generally. The final rule maintains the proposed approach to require data collection, maintenance, and reporting only for banks with assets of over \$10 billion. Upon consideration of the comments, the agencies have determined that this approach achieves an appropriate balance between the burden required to collect and report these data and the benefit that will result from using these data in the final rule. The agencies believe that large banks with assets greater than \$10 billion have the capacity to collect, maintain, and report these data.

The agencies believe that including the distribution of these banks’ deposits by depositor location is an important aspect of the effort to modernize CRA. Banking has evolved over the

past several decades, particularly since the advent of the Internet, to the point that physical bank branch locations are no longer a sole proxy for the local communities served by banks, with the exception of banks that remain primarily branch-based in their operations, which are likely to be smaller institutions.

As discussed in the agencies' proposal, the final rule approach leverages these data in a number of ways that Summary of Deposits data do not allow for, including assigning weights to Retail Lending Test and Community Development Financing Test performance in areas outside of facility-based assessment areas. In addition, the agencies believe that the collected, maintained, and reported deposits data will more accurately reflect the location of a bank's depositors than would Summary of Deposits¹⁵⁵⁵ data, which will result in more accurate metrics and benchmarks. The agencies believe that the approach adopted in the final rule will capture a substantial majority of all bank deposits data,¹⁵⁵⁶ thereby significantly improving the accuracy of aggregate benchmarks that use deposits data, such as the Market Volume Benchmark used for the Retail Lending Volume Screen, and the benchmarks used for the Community Development Financing Test.

The agencies considered, but are not adopting, an alternative approach of extending the deposits data collection and reporting requirement to all large banks, including those with assets of \$10 billion or less and intermediate banks. The agencies determined that this approach would place a significant burden on these banks and would only yield the enhanced data for a relatively small additional share of industry deposits.¹⁵⁵⁷ The agencies believe that these banks may have lesser capacity than large banks with assets of over \$10 billion to comply with the requirement, such as the ability to geocode depositor addresses and summarize depositor data at the county level on an ongoing basis.

In the final rule, banks with assets of \$10 billion or less may elect to collect, maintain, and report deposits data as required of larger banks. Under the proposed rule, in contrast, such a bank would have the option to collect and maintain deposits data, but would not have been required to report deposits data that the bank elected to collect and maintain. The agencies believe that requiring banks that elect to collect and maintain deposits data to also report these data will enhance the consistency of reporting requirements and allow these data to be incorporated into aggregate benchmarks. This will result in any bank opting into having collected and maintained deposits data included in their metrics also having their deposits data included in the benchmarks against which they are evaluated. The agencies do not believe that this change increases complexity or burden, because collecting and maintaining deposits data would remain optional for banks with assets of \$10 billion or less, as in the proposed approach.

¹⁵⁵⁶ See FDIC analysis of 2015-2020 FDIC's Summary of Deposits data shows that in each of these years, deposits in banks with assets greater than \$10 billion comprised over 80 percent of deposits in all banks. See Harris et al., *2020 Summary of Deposits Highlights*, Table 3 (2020), <https://www.fdic.gov/analysis/quarterly-banking-profile/fdic-quarterly/2021-vol15-1/article2.pdf>.

¹⁵⁵⁷ See *id.*

The agencies considered, but are not adopting, suggestions to use Summary of Deposits data for large banks with assets of over \$10 billion to reduce complexity, instead of requiring deposits data collection, maintenance, and reporting. The agencies believe that large banks with assets of over \$10 billion are likely to already have systems in place for geocoding deposits or, due to existing requirements to geocode HMDA loans, small business loans, and small farm loans, systems that can be adapted to produce these data. The agencies believe that using Summary of Deposits data for these banks may inflate these banks' deposits in areas where branches are located and dilute deposits in areas where these banks do not have branches but where their depositors are located. Because the great majority of industry deposits are held by these banks, the agencies believe this would have a distorting effect on the creation of benchmarks for all banks as well as on the creation of metrics for these banks. Finally, the agencies considered that Summary of Deposits data include deposits from government and foreign sources, which the agencies believe is preferable to exclude from CRA evaluations, as discussed below.

The agencies have considered commenter feedback that suggested requiring these data of large banks with assets only slightly over \$10 billion places these banks at a disadvantage with regards to their ability to engage in community development activities. However, the agencies believe that most large banks, and particularly most large banks with assets of over \$10 billion, have access to systems capable of identifying the addresses of their depositors and systems capable of geocoding addresses. As mentioned above, banks of this size are typically required to geocode addresses of their small business loans and small farm loans, as well as HMDA loans (for those required to report HMDA data). To the extent there are any such banks that do not already possess the systems needed to handle these data requirements, bank service providers are capable of providing support to banks. Therefore, the agencies do not believe that this requirement would impact a bank's ability to engage in community development activities or any other type of CRA activity. With regard to addressing the limitations of the Summary of Deposits data, these limitations are known to the agencies; the agencies believe that addressing such limitations is outside the scope of this final rule.

The agencies are sensitive to concerns that there may be banks with assets of \$10 billion or less that may be disadvantaged by using Summary of Deposits data, particularly with regard to the Bank Volume Metric used in the Retail Lending Volume Screen as part of the Retail Lending Test, and the metrics used in the Community Development Financing Test. The agencies considered that, as noted by multiple commenters, the Summary of Deposits data may not accurately represent a bank's deposits in a market, which could impact the bank's metrics. In addition, the agencies considered that the inclusion of government deposits and deposits from foreign entities in the Summary of Deposits data could negatively impact a bank's metrics relative to a bank that is collecting and reporting deposits data, since government and foreign entity deposits are excluded from the collected and reported data. For these reasons, the agencies are permitting banks with assets of \$10 billion or less to opt to collect, maintain, and report deposits data. The agencies believe that this option addresses concerns that Summary of Deposits data could negatively impact a bank's metrics, because a bank with assets of \$10 billion or less can determine whether the benefit of collecting and reporting these data is in their best interest. The agencies believe this decision is best left to each individual bank in this size category, based on their own circumstances, rather than imposing a requirement for these banks.

With respect to the alternative approach discussed in the proposal to publish a county-level deposits data set in order to provide greater insight into bank performance, the final rule does not

provide that the agencies publish bank-specific deposit information at the county level in a published data set. While the agencies considered that this alternative could increase the transparency of CRA evaluations, and that such a data set could help to inform other policies and community development efforts beyond CRA, the agencies determined that the potential benefits are outweighed by other considerations. These considerations stem from an overarching intent by the agencies to make data publicly available as necessary for transparency in the examination process, but otherwise to protect privacy and competitive concerns for consumers and banks by not publishing data that is not necessary to support transparency. This concern is particularly important for data that has not been collected and reported previously, such as deposits data. The agencies intend to develop tools to provide information regarding metrics, benchmarks, and weights in different geographic areas using reported lending and deposits data. In addition, the agencies believe that the information included in a bank's public CRA performance evaluation will provide sufficiently detailed information on bank performance. While the final rule does not provide that the agencies would publish a county-level deposits data set, the agencies note that deposits information pertaining to facility-based assessment areas, which may consist of a single county, would be included in performance evaluations and in data tools for the purpose of calculating metrics, benchmarks and weights.

The agencies considered a comment that the agencies failed to address why requiring county-level deposits data based on depositor's address rather than the location of the bank branch to which the deposits are assigned is relevant to recognizing a bank's support of low- and moderate-income communities. The agencies believe that collecting and reporting these deposits data is necessary for large banks with assets over \$10 billion for the construction of metrics, benchmarks, and weights, which inform the conclusions and ratings that reflect a bank's support of low- and moderate-income communities. The agencies believe that deposits data aggregated at the county level, based on depositor addresses, will provide a better measure of the volume of deposits sourced by the bank from depositors in that area, than would deposits aggregated at the location of the bank branch to which they are assigned. The agencies consider deposits in a bank from an area to be representative of a bank's capacity to conduct retail lending and community development financing in that area.

The agencies also considered an approach of summarizing deposits data at an even finer geographic level, such as census tracts. While this would enable better identification of deposits in low- and moderate-income communities, the agencies recognize the need to protect depositor privacy and to limit bank data collection and reporting burden. Additionally, the agencies note that although deposits data are used to calculate metrics, benchmarks, and weights, the rule does not use deposits data collected pursuant to § __.42(a)(7) to evaluate the distribution of deposits themselves, including by the low- or moderate-income characteristics of areas from which deposits are received. This distinction explains why the agencies require some other data for which these distributions are evaluated to be reported at a finer geographic scale (*i.e.*, by census tract income level), but such specificity is not necessary for these deposits data. Finally, pursuant to § __.16 and __.17, under the final rule approach, large bank facility-based assessment areas and retail lending assessment areas must consist of at least an entire county. As a result, census tract-level deposits data are not necessary to calculate metrics, benchmarks, and weights pertaining to large banks.

In response to the commenter that argued against requiring deposits data due to the impact of economic cycles (downturns) on the appropriateness of using deposits in benchmarks, the

agencies note that the data used for an individual bank's metrics and the market benchmarks against which that bank's metrics are compared are always drawn from the same geographic areas and for the same time period. Any impact of economic cycles would impact both individual bank metrics and market benchmarks. The amount of community development financing activity (or retail lending activity) that a bank would need to report in order to perform well in comparison to benchmarks would fluctuate in tandem with economic changes impacting all banks reporting data for the benchmark for the same geographic area. This is an important feature of how these benchmarks function, and is very much a benefit, rather than a liability, of using deposits data in these benchmarks.

Averaging annual deposits based on average daily balances. The agencies are also finalizing deposits data collection as proposed with regard to basing deposit amounts on average annual deposits based on average daily balances included in monthly or quarterly statements. The agencies believe it is important to include the most timely and accurate deposit amounts as reasonably possible in calculations used in the final rule. The final rule approach reflects seasonal changes that may occur over the course of a year, as well as year-to-year changes over the course of an evaluation period. In addition, the final rule approach would ensure that the timing of the deposits data incorporated into a bank's evaluation aligns with the timing of the retail lending and community development financing data. For example, the agencies considered that the Retail Lending Volume Screen should measure a bank's retail lending over the evaluation period relative to its deposits over the evaluation period. Alternatives suggested by commenters to use deposit information at the time of the bank's examination, or from end-of-quarter or end-of-year balances during the evaluation period rather than average daily balances, could result in a mismatch in the timing of the deposits data and timing of other data that are incorporated in the same metrics and benchmarks. Furthermore, the agencies considered that banks typically calculate average daily balances at monthly or quarterly intervals to support issuing banking statements, which reduces the potential burden of the final rule approach.

The agencies considered a comment to create an online platform for banks to submit their deposits data. The agencies expect that the final rule approach of requiring deposits data collection and reporting using an electronic form, as prescribed by the agencies, will achieve many of the same efficiencies that would be achieved by creating an online platform, such as ensuring consistent data formatting and enabling data integrity checks during the submission process. Although the agencies have not finalized the specific mechanism through which banks will submit their reported deposits data, the agencies will take commenter feedback into consideration as they develop this mechanism.

Exemptions to deposits data requirements. As noted above, the agencies are finalizing the deposits data collection and reporting for large banks with assets of over \$10 billion, and are not providing exemptions based on whether a bank is primarily branch-based, as suggested by some commenters. The agencies believe that having deposits data at the county level based on depositor addresses is an important and appropriate aspect of the modernization of the CRA regulations, is responsive to changes in the geographic distribution of bank customers relative to bank branches, and resolves other challenges with the use of Summary of Deposits data discussed above. These changes are relevant to branch-based banks as well as banks with a more digitally-based business model. The agencies also believe that the proposed approach of using depositor addresses included in the Customer Identification Program or another documented

address is an appropriate strategy for identifying depositor locations; banks are expected to maintain timely and accurate information regarding their accountholders.

Data integrity. The agencies are sensitive to commenter concerns that deposits data will not be subject to the same data integrity standards as data reported pursuant to the HMDA requirements. The agencies believe that deposits data based on depositor location will be accurate, because this information is required by the Customer Identification Program regulation, and because banks have important business reasons to maintain accurate addresses beyond compliance with the final rule. The agencies acknowledge that there are situations in which a customer may use an address that does not reflect the location of where they live, such as a place of work, or a P.O. Box, but believe that customer address information is generally accurate.

The agencies note, in response to comments regarding the need for additional guidance for banks required to report deposits data, that they already produce a data guide for CRA, which they intend to update in accordance with the changes in the final rule. The agencies will consider whether additional guidance is necessary outside of the final rule to address non-standard situations such as when the physical address on record for a deposits account has not been updated for a significant amount of time or when the customer spends part of the year at one address and part of the year at a different address.

Other approaches to deposits data collection to reduce burden. The agencies appreciate the recommendations made by commenters on different approaches to reduce burden. However, after further consideration, the agencies believe that the strategies to use depositor addresses included in the CIP, which is a part of a bank's requirements through the Bank Secrecy Act, or other documented address, and to include deposits for which there is no available address at the nationwide area, sufficiently reduce the burden of this approach. The agencies believe that the decision to use deposits data that banks are already maintaining, as well as the decision to extend the applicability of the new deposits data collection and maintenance requirements to January 1, 2026, as discussed in the section-by-section analysis of § __.51, should address commenter concerns that a longer transition time might be necessary for collecting and reporting these deposits data.

In addition, the agencies note that there is an ongoing effort by the FFIEC, which the agencies are a part of, to develop and deliver an improved geocoding system. As noted, the agencies believe that banks that are subject to the requirements to collect, maintain, and report deposits data under the final rule already have access to geocoding systems adaptable to geocode depositor addresses, and thus any residual burden, if any, is relatively incremental. The agencies believe that the transition times are sufficient for any adaptations or development that may be necessary for these systems.

In response to the comments received suggesting that CDFIs should be able to rely on information they already submit related to their annual CDFI certification to meet the deposits data reporting requirement, and that the agencies should coordinate with other agencies to standardize data definitions and formats in order to both use data already collected when possible, the agencies are unaware of any existing data reporting requirements by other agencies, including the CDFI Fund, that are similar to the deposits data collection included in the final rule. To the extent that the CDFI certification process includes information about CDFI bank deposits or depositors, the agencies note that the vast majority of banks are not certified CDFIs,

so there would be little benefit in attempting to use data included in the CDFI certification process.

The agencies do not believe it appropriate to require “stress testing,” as suggested by a commenter, to determine whether reporting quarterly average deposits data might be as accurate as average daily balances computed monthly or quarterly, thereby reducing reporting burden. The agencies considered that banks already calculate and maintain monthly or quarterly account balances based on average daily balances for the purposes of generating account statements, and as a result, the agencies believe that it is reasonable to use these data in CRA evaluations. Also, in response to a comment suggesting an alternative approach of requiring banks to upload summary deposits records they keep for qualitative analysis as an interim approach while they build capacity to collect, maintain, and report deposits data, the agencies believe that summary records of deposits data would not enable the agencies to construct metrics, benchmarks, and weights required under the performance tests, and that it is appropriate to use county-level data as provided in the final rule.

Treatment of deposit accounts which do not have depositor addresses. Consistent with most commenters responding to how to handle deposit accounts that do not have depositor addresses, the agencies believe that these concerns are appropriately addressed by incorporating deposit accounts for which no depositor address is available at the institution level, reported to the nationwide area. The agencies believe that this approach is preferred relative to the alternative of requiring banks to identify locations where accounts were opened (e.g., where prepaid cards were purchased) or to identify specific locations to assign to these deposit accounts. In addition, the agencies note that including these deposit accounts at the nationwide area ensures that these deposits are included in the Bank Nationwide Community Development Financing Metric and Benchmark, as well as the Bank Nationwide Community Development Investment Metric and Benchmark.

Appropriate treatment of non-brokered, reciprocal deposits. Regarding non-brokered, reciprocal deposits, under the final rule, these deposits will be collected and reported by the sending bank, which is the bank that would have collected the deposits from their original depositors and thus would have the associated relationships with the depositors’ communities. Banks receiving these reciprocal deposits do not need to collect and report associated depositor location data for CRA purposes. The rationale for this decision is that the underlying deposits included in the reciprocal deposit transaction are already accounted for by the sending bank; for that reason, these transactions are better considered as transfers between banks than as deposits. In addition, because the sending bank originally collected the deposits from customers, the agencies believe that the sending bank is more able to collect, maintain, and report depositor location information than the receiving bank.

In response to a commenter’s concern with the specific terminology used in the regulation with regard to non-brokered, reciprocal deposits, the agencies note that reciprocal deposits are not mentioned in the final rule; therefore, there is no issue with (or possibility of) using terminology from the FDI Act or other regulations. However, effectively, these deposits will be handled in a manner consistent with what the commenter is suggesting.

Bank operations systems. The agencies understand the concern by some commenters regarding the potential burden created by the need to upgrade bank operations systems. However, the agencies believe that banks with assets of over \$10 billion will generally possess

either internal capabilities or vendor relationships with capabilities to aggregate deposits data at the county level, as required in the final rule. The agencies believe that large banks, especially those with assets of over \$10 billion, typically possess in-house data systems or use vendor data systems with geocoding capabilities. For example, geocoding is routinely used to identify the census tracts in which mortgage loans, small business loans, and small farm loans are located.

In response to commenters that argued banks have systems for reporting deposits data, such as those used for reporting Bank On account data, the agencies note that Bank On data is reported at the zip code level—part of the depositor’s street address—and does not require geocoding. For banks that do not already have access to geocoding systems that are required or opt to collect and report deposits data, such systems are readily available in the marketplace.

Regarding the suggestion from commenters that the agencies provide sufficient time for financial service data systems providers to create deposits data-based applications, the final rule provides for a longer transition period than proposed. As explained in the section-by-section analysis of final § __.51, the agencies believe that providing additional time for transitioning to the provisions balances the concerns raised by commenters for an adequate transition period with the needs of banks’ communities, including low- and moderate-income neighborhoods, to benefit from modernized CRA regulations.

The agencies also considered the comments regarding the use of deposit data collected pursuant to § __.42 as opposed to Summary of Deposits data in the denominator for the Bank Assessment Area Community Development Financing Metric. The split in commenters’ views on this issue reflects the inherent tradeoffs associated with each option. While use of collected deposits data would make the Bank Assessment Area Community Development Financing Metric more accurate, collecting data on deposits would be a new data collection requirement that results in additional burden on banks. In contrast, although using Summary of Deposits data in the denominator eliminates the burden on banks to collect data, it may not accurately reflect the amount of deposits drawn from a particular geographic area.

The agencies are adopting the final rule as proposed because it balances the tradeoff between increased burden associated with collecting, maintaining, and reporting deposits data and the accuracy of the deposits data. Under the final rule, large banks with assets of over \$10 billion as of December 31 in both of the prior two calendar years will be required to collect, maintain, and report deposits data. The agencies believe that it is important to tailor the requirement to require collection, maintenance, and reporting of deposits data in order to limit this requirement for smaller banks with fewer resources. The agencies have determined that, due to the greater resources of banks over \$10 billion, these banks generally have the capacity to collect, maintain, and report more accurate deposits data. Furthermore, the agencies have considered the significant downsides of not having accurate deposits data for banks with assets above \$10 billion. For example, as noted above, deposits in these banks constitute a substantial majority of deposits in all banks; the agencies considered that use of collected deposits data for these banks therefore supports accurate calculation of benchmarks. For banks with \$10 billion or less in assets as of December 31 of either of the prior two calendar years, the final rule uses Summary of Deposits data in the denominator, thereby limiting the burden for these banks.

Nonetheless, because certain banks with \$10 billion or less in assets as of December 31 of either of the prior two calendar years may have dispersed deposits or the assignment of their deposits under the Summary of Deposits may not reflect the actual location of the deposits, the

final rule provides these banks with the option to collect, maintain, and report deposits data. The agencies believe that providing this option mitigates the potential negative consequences of using Summary of Deposits data in the denominator because banks that would not perform well compared to their peers using Summary of Deposits data will have an incentive to collect, maintain, and report deposits data pursuant to § __.42.

§ __.42(c) Data on operations subsidiaries or operating subsidiaries

§ __.42(d) Data on other affiliates

Current Approach

Under the current CRA regulations, a bank is not required to include the activities of any of its affiliates even if the affiliate is an operations subsidiary or operating subsidiary¹⁵⁵⁸ of the bank. Instead, the current CRA regulations require that, if a bank elects to have loans by an affiliate under § __.42(d) considered for purposes of the lending or community development test or an approved strategic plan, the bank must also collect, maintain, and report the data for these loans as if it had originated or purchased these loans directly. For home mortgage loans, the bank must also be prepared to identify the home mortgage loans reported under Regulation C¹⁵⁵⁹ by the affiliate.¹⁵⁶⁰

The Agencies' Proposal

The agencies proposed to require the inclusion of relevant activities of a bank's operations subsidiaries or operating subsidiaries, as applicable, for purposes of evaluating the bank's performance tests. The agencies proposed new § __.42(c) to require that all banks collect, maintain, and report any retail lending, retail services and products, community development loans or investments, and community development services activities of a bank's operations subsidiaries or operating subsidiaries, as applicable, to the extent these subsidiaries engage in these activities. Proposed § __.42(c) also required the bank to identify the home mortgage loans reported by the operations subsidiaries or operating subsidiaries under Regulation C,¹⁵⁶¹ if applicable, or collect and maintain home mortgage loans by these subsidiaries that the bank would have collected and maintained under proposed § __.42(a)(3) had the loans been originated or purchased by the bank.

The agencies further proposed to revise current § __.42(d) pertaining to the collection, maintenance, and reporting of a bank's affiliate activities. Similar to current § __.42(d), the agencies' proposal required banks to collect, maintain, and report the data on loans by an affiliate (other than an operations subsidiary or operating subsidiary) that they elect to have considered for purposes of the CRA regulations if the bank would have collected, maintained, and reported these activities had the bank engaged in them directly. The agencies also proposed to require the bank to identify the home mortgage loans reported by an affiliate (other than an operations

¹⁵⁵⁸ See the section-by-section analysis of § __.21(b).

¹⁵⁵⁹ 12 CFR part 1003.

¹⁵⁶⁰ See current 12 CFR __.42(d).

¹⁵⁶¹ 12 CFR part 1003.

subsidiary or operating subsidiary) under Regulation C,¹⁵⁶² if applicable, or collect and maintain such loans as would be required for the bank under proposed § __.42(a)(3) had the loans been originated or purchased by the bank.

Comments Received

A few commenters addressed this aspect of the agencies' proposal. One of these commenters stated that the agencies should not include lending by a subsidiary in the bank's CRA evaluation. Another commenter noted that the proposed rule was unclear with regard to whether the proposed data collection for operations subsidiaries or operating subsidiaries, as applicable, and other affiliates was intended as an expansion of other data reporting requirements, such as home mortgage loan reporting under Regulation C or small business loan reporting under Regulation B (CFPB's Section 1071), even when those separate regulations would not otherwise require such reporting. Although supportive of the proposed requirement that activities of operations and operating subsidiaries should be evaluated as part of a bank's overall CRA performance, this commenter was opposed to an expansion of reporting requirements housed in other regulations and also asserted that banks should retain the flexibility, when multiple options are available, to elect the performance test under which the agencies evaluate the activities of an operations or operating subsidiary. Another commenter asked the agencies to clarify that an affiliate's activities need to be included in the bank's data collection and reporting only to the extent that the category of retail or community development lending or community development investment is included in the bank's evaluation. This commenter further stated that the agencies should exempt functionally regulated subsidiaries¹⁵⁶³ from a bank's performance evaluation and data collection and reporting requirements. The commenter asserted that mandatory inclusion of these subsidiaries within CRA examinations would exceed the agencies' statutory authority under the Gramm-Leach-Bliley Act (GLBA).

Final Rule

The agencies are finalizing proposed § __.42(c) and § __.42(d) pertaining to a bank's data requirements related to the activities of the bank's operations subsidiaries or operating

¹⁵⁶² *Id.*

¹⁵⁶³ Under 12 U.S.C. 1844(c)(5), the term "functionally regulated subsidiary" means "any company— (A) that is not a bank holding company or a depository institution; and (B) that is— (i) a broker or dealer that is registered under the Securities Exchange Act of 1934 [15 U.S.C. 78a *et seq.*]; (ii) a registered investment adviser, properly registered by or on behalf of either the Securities and Exchange Commission or any State, with respect to the investment advisory activities of such investment adviser and activities incidental to such investment advisory activities; (iii) an investment company that is registered under the Investment Company Act of 1940 [15 U.S.C. 80a–1 *et seq.*]; (iv) an insurance company, with respect to insurance activities of the insurance company and activities incidental to such insurance activities, that is subject to supervision by a State insurance regulator; or (v) an entity that is subject to regulation by, or registration with, the Commodity Futures Trading Commission, with respect to activities conducted as a futures commission merchant, commodity trading adviser, commodity pool, commodity pool operator, swap execution facility, swap data repository, swap dealer, major swap participant, and activities that are incidental to such commodities and swaps activities."

subsidiaries, as applicable, and its other affiliates, respectively, as proposed, with non-substantive revisions intended for clarity.

The agencies have determined that, with respect to operations subsidiaries or operating subsidiaries, as applicable, mandatory data collection, maintenance, and reporting for these entities is appropriate to enable the agencies to capture all of the activities of operations subsidiaries or operating subsidiaries in banks' CRA evaluations, in recognition that banks exercise a high level of ownership, control, and management of their operations subsidiaries or operating subsidiaries. As discussed in the section-by-section analysis of § __.21(b), the agencies do not believe that mandatory inclusion of functionally regulated subsidiaries within a bank's CRA examination would exceed the agencies' statutory authority under GLBA. Therefore, the activities of a bank's operations subsidiary or operating subsidiary will be evaluated in the bank's CRA evaluation and the relevant data requirements will apply, unless the operations subsidiary or operating subsidiary is independently subject to the CRA.

In response to commenters that expressed concern that these data requirements would expand the reporting requirements in other regulations, the agencies are clarifying that the data requirements under § __.42(c) and (d), for operations subsidiaries or operating subsidiaries, as applicable, and other affiliates, respectively, are not intended to, and do not, expand the data reporting requirements for other regulations such as home mortgage loans under Regulation C or small business loans under Regulation B (CFPB's Section 1071 Final Rule) (once Section 1071 data become available). The agencies are also clarifying that the data requirements in § __.42(d) for the bank's other affiliates are triggered only if the bank elects to have certain activities of the bank's affiliate considered for purposes of the bank's CRA evaluation.

§ __.42(e) Data on community development loans and community development investments by a consortium or a third party

Current § __.42(e), provides that a bank that elects to have the agencies consider community development loans by a consortium or third party for purposes of the lending or community development tests or an approved strategic plan, must report for those loans the data that the bank would have reported under current § __.42(b)(2) had the loans been originated or purchased by the bank.

Consistent with the current rule, in proposed § __.42(e), the agencies required banks that elect to have community development loans or investments by a consortium or third party considered for purposes of the CRA regulations, to collect, maintain, and report the community development lending and investments that the bank would have collected, maintained, and reported under proposed § __.42(a)(5) and (b)(3) had the community development loans or investments been originated or purchased by the bank.

The agencies received no comments regarding the proposed data on community development loans and investments by a consortium or a third party in proposed § __.42(e) and are finalizing as proposed, with minor technical and conforming changes.

§ __.42(f) Assessment area data

Current Approach

Under current § __.42(g), a bank, except a small bank or a bank that was small during the prior calendar year, which includes intermediate small banks, must collect and report annually by March 1 a list for each assessment area showing the geographies within the area.¹⁵⁶⁴

The Agencies' Proposal

The agencies proposed to revise current § __.42(g), renumbered as proposed § __.42(f), to change the date in which banks are required to collect and report assessment area data, and to provide a separate provision for data regarding facility-based assessment areas and retail lending assessment areas. Specifically, the agencies proposed to change the date banks are required to collect and report assessment area data from March 1 to April 1. The agencies also proposed to require in § __.42(f)(1), that a bank, except a small bank or an intermediate bank, collect and report to the Board, FDIC, or OCC, as appropriate, annually by April 1 a list for each facility-based assessment area showing the States, MSAs, county or county equivalents, and metropolitan divisions within the facility-based assessment area. Consistent with the current regulations, the proposal required small banks and intermediate banks to maintain assessment area data in their CRA public files, including a map of each facility-based assessment area, but these banks would not be required to report the data under § __.42(f)(1).¹⁵⁶⁵

In proposed § __.42(f)(2), the agencies required large banks to collect and report to the Board, FDIC, or OCC, as appropriate, annually by April 1, a list for each retail lending assessment area showing the MSAs and counties within each retail lending assessment area, as applicable.

The agencies requested feedback regarding whether small banks that opt to be evaluated under the metrics-based Retail Lending Test should be required to collect, maintain, and report related data or whether it is appropriate to use data that a small bank maintains in its own format or by sampling the bank's loan files. The agencies also requested feedback on whether a tool to identify retail lending assessment areas based on reported data would be useful.

Comments Received

Most commenters addressing the agencies' request for feedback on whether a retail lending assessment area tool would be useful expressed support for a number of reasons, including that it could provide helpful information to the general public and banks. Although supportive of a tool, a commenter expressed some concern that collecting and tailoring the data needed for defining its potential retail lending assessment areas each year would be a labor-intensive task.

One commenter responded to the agencies' request for feedback regarding data requirements should a small bank opt to be evaluated under the Retail Lending Test. In this commenter's view, if a small bank opts into the metrics-based test, it would be appropriate for the agencies to provide the bank the option to use data that it maintains in its own format or sample the bank's loan files. The agencies received no other comments regarding the proposed assessment area data.

Final Rule

¹⁵⁶⁴ Current 12 CFR __.42(g).

¹⁵⁶⁵ See proposed § __.43(a)(6).

The agencies received no specific comments regarding the changes in proposed § __.42(f) pertaining to a bank's data requirements for facility-based assessment areas in proposed § __.42(f)(1) and retail lending assessment areas in proposed § __.42(f)(2) or the change in date for annual reporting, and are finalizing those changes as proposed, with a few revisions. Specifically, the agencies are revising the language in proposed § __.42(f)(1) to clarify that the data collected and reported annually by April 1 for the bank's facility-based assessment areas is as of December 31 of the prior calendar year or the last date the facility-based assessment area was in effect, provided the facility-based assessment area was delineated for at least six months of that year. While the delineation of facility-based assessment areas is a continuous process within the bank, this clarification ensures that the timing of the reported data for facility-based assessment areas is consistent across banks: either as of December 31 of the prior calendar year or as of the date that the facility-based assessment area was most recently delineated.

The language in final § __.42(f)(1), "provided the facility-based assessment area was delineated for at least six months of the prior calendar year," was added to ensure that a facility-based assessment area was in existence for a sufficient time period to evaluate the lending around a bank's facility. For example, if a bank closed the sole branch in a county the first part of the year, the facility-based assessment area would not be evaluated as such for that year. Similarly, in a situation where a branch is opened in the latter part of a calendar year which creates a new facility-based assessment area, that new facility-based assessment area would not be reported. If those facility-based assessment areas that are not reported for the year have sufficient lending to trigger a retail lending assessment area, they should be reported as such for that calendar year.

The agencies are also revising the language in proposed § __.42(f)(2) to clarify that data collected and reported by April 1 for the bank's retail lending assessment areas is for the prior calendar year.

The agencies believe that collection and reporting of data for facility-based assessment areas and retail lending assessment areas is appropriate because the agencies measure a bank's performance under the CRA in these areas. Specifically, these data improve the agencies' understanding of areas served by a bank and help assess whether the bank is meeting the credit needs of its communities through an evaluation of various tests. For example, the agencies require these data to assist examiners in the analysis of borrower and geographic distributions under the Retail Lending Test (*see* the section-by-section analysis of § __.22), distributions which are needed to construct the metrics and benchmarks the agencies use to evaluate the bank's performance.

The agencies considered commenter feedback that including a retail lending assessment area tool would be useful to banks and to the general public. The section-by-section analysis of § __.17 includes discussion of data tools that the agencies intend to make available regarding retail lending assessment areas.

The agencies have also considered the comment regarding assessment area data requirements for small banks that opt to be evaluated under the Retail Lending Test. The agencies have determined that additional assessment area data requirements for these banks would be burdensome and would outweigh any potential benefit of requiring the data. Such data are readily available in the bank's CRA public file, which under the final rule must be made available on a bank's website, if the bank maintains one.

Finally, as noted in the proposal, the agencies' proposed change in date from March 1 to April 1 for annual collection and reporting of assessment area data is intended to conform to other changes proposed in § __.42

§ __.42(g) CRA disclosure statement

Under current § __.42(h), the agencies prepare annually a CRA Disclosure Statement for each bank that reports certain data under § __.42. The statement provides information on small business and small farm lending and community development loans with respect to banks that are subject to those reporting requirements.

The agencies proposed to continue the preparation of the CRA Disclosure Statement as required in current § __.42(h), renumbered in the proposal as § __.42(g), with revisions to conform to changes made throughout the proposal. Specifically, consistent with the current regulations, the CRA Disclosure Statement would contain, on a State-by-State basis, specified demographic information about the areas in which the bank operates. The agencies proposed expanding the CRA Disclosure Statement to include not only the number and amount of small business and small farm loans reported by the bank in its facility-based assessment areas, but also those reported by the bank in its retail lending assessment areas and outside retail lending areas. Similarly, the statement would be expanded to not only include the number and amount of community development loans reported as originated or purchased by the bank, but would also include community development investments reported as originated or purchased inside each facility-based assessment area, each State in which the bank has a branch, each multistate MSA in which a bank has a branch in two or more States of the multistate MSA, and nationwide outside of these States and multistate MSAs.

The agencies received no comments on the changes to proposed § __.42(g) and are finalizing those changes as proposed, with a technical change to accurately represent that the responsibilities for preparation of CRA Disclosure Statements correspond to the agencies' or the agencies' "appointed agent." The agencies also made conforming and non-substantive word revisions to this section. The agencies believe it is appropriate to make the changes described above in proposed § __.42(g) to conform to other changes made to the data requirements in § __.42. After the transition to the CFPB's Section 1071 takes effect, there is no additional data disclosure burden created by the CRA final rule with regard to small business and small farm lending data.¹⁵⁶⁶

§ __.42(h) Aggregate disclosure statement

In current § __.42(i), the agencies prepare an aggregate disclosure statement for all banks subject to reporting under § __.42. The aggregate disclosure statements indicate, for each geography, the number and amount of small business and small farm loans originated or

¹⁵⁶⁶ The transition amendments included in this final rule will permit the agencies to transition the CRA data disclosure requirements for small business loans and small farm loans to the CFPB's Section 1071 data. This is consistent with the agencies' intent articulated in the preamble to the proposal and elsewhere in this final rule to transition to the CFPB's Section 1071 data for small business loan and small loan data under the CRA regulations. The agencies will provide notice of the effective date of this amendment in the *Federal Register* once the CFPB Section 1071 data are available.

purchased by all reporting institutions, except that the agencies may adjust the form of the disclosure, if necessary, because of special circumstances, to protect the privacy of a borrower or the competitive position of an institution.¹⁵⁶⁷

The agencies proposed to continue the preparation of aggregate disclosure statements as required in current § __.42(i), renumbered in the proposal as § __.42(h), with revisions to conform to other changes made throughout the proposal. Specifically, in addition to the reporting of small business and small farm loans, as under the current regulations, for each MSA or metropolitan division (including those that cross a State boundary) and the nonmetropolitan portion of each State, the agencies proposed expanding aggregate disclosure statements to include community development loans and community development investments for each MSA or metropolitan division and the nonmetropolitan portion of each State. Similar to the content required under the current CRA regulations, these aggregate disclosure statements indicate, for each census tract, and with respect to community development loans and community development investments for each county, the number and amount of all small business loans, small farm loans, community development loans, and community development investments, originated or purchased by reporting banks. Further, as in the current rule, the agencies proposed that they may adjust the form of the disclosure, if necessary, because of special circumstances, to protect the privacy of a borrower or the competitive position of a bank.

The agencies received no comments on the changes to proposed § __.42(h) and are finalizing those changes as proposed, with a technical revision to accurately represent that the responsibilities regarding the preparation of aggregate disclosure statements correspond to the agencies' or the agencies' "appointed agent." The agencies also made conforming and non-substantive revisions to this section to accurately describe at what level the aggregate data would be reported. The agencies believe it is appropriate to make the changes described above in proposed § __.42(h) to conform to other changes made to the data requirements in § __.42.¹⁵⁶⁸

§ __.42(i) Availability of disclosure statements

Under current § __.42(j), the agencies make the individual bank CRA Disclosure Statements and aggregate disclosure statements "available to the public at central data depositories" and "publish a list of the depositories at which the statements are available." The agencies proposed to revise current § __.42(j), renumbered as proposed § __.42(i), to make the CRA Disclosure Statements in proposed § __.42(g) and aggregate disclosure statements in proposed § __.42(h) "available on the FFIEC's website," codifying the current interagency process.

The agencies received no comments on proposed § __.42(i) and are finalizing as proposed, with a technical change to rename the heading of this section to "Availability of disclosure statements" from "Central data depositories." Because proposed § __.42(i) replaced "central data depositories" in the regulatory text of the current rule with the FFIEC's website in the regulatory text of the proposal, the agencies believe the heading in final § __.42(i) more accurately reflect the new regulatory text.

§ __.42(j) HMDA data disclosure

¹⁵⁶⁷ See current 12 CFR __.42(i).

¹⁵⁶⁸ See also *supra* note 145.

Current Approach and the Agencies' Proposal

CRA performance evaluations do not currently report data on lending by borrower race or ethnicity. However, for mortgage lending, race and ethnicity data are collected and reported by most banks subject to the large bank CRA lending test through HMDA. Tabulations of the HMDA data by race or ethnicity for each of the reporting banks within their assessment areas are not easily accessible online, nor are they currently included in CRA performance evaluations.

In furtherance of the agencies' objective to promote transparency, the agencies proposed in § __.42(j) a new requirement to disclose in the CRA performance evaluation of a large bank the distribution of borrower race and ethnicity of the bank's home mortgage loan originations and applications in each of the bank's facility-based assessment areas, and as applicable, in its retail lending assessment areas. The agencies proposed to disclose this information for each year of the evaluation period using data currently reported under HMDA.¹⁵⁶⁹ Furthermore, the agencies proposed to disclose the number and percentage of the bank's home mortgage loan originations and applications by race and ethnicity and compare that data to the aggregate mortgage lending of all lenders in the assessment area and the demographic data in that assessment area.¹⁵⁷⁰ Proposed § __.42(j)(3) provided that the disclosure of race and ethnicity of the bank's home mortgage loan originations and applications in the bank's CRA performance evaluation would not impact the conclusions or ratings of the bank.

Comments Received

Most commenters generally supported the agencies' effort to increase transparency of a bank's mortgage lending operations through the disclosure of HMDA data by race and ethnicity in CRA exams. Commenters in support of the agencies' proposal noted that this disclosure would be an important step towards increasing transparency.

However, several commenters expressed their disappointment in the agencies' clarification that this disclosure would not impact an institution's CRA ratings. In these commenters' view, this is a factor they believe is essential to help combat racial inequities in bank lending and other banking products and services and suggested that HMDA data should play a larger role in the CRA examination process and CRA ratings. Some of these commenters and a few others, noted that simply disclosing HMDA data that is already public would not provide meaningful transparency and recommended that the agencies require banks to publish home lending data tables and maps that show disaggregated HMDA data by race and ethnicity in a prominent place on their websites. Several commenters suggested that HMDA data by race and ethnicity should be presented in all bank CRA exams, not simply those of large banks, to enable the public to readily compare a bank's performance to its peers and demographic benchmarks. A few other commenters described various places where HMDA data could be used in the CRA examination process, including for example, as an explicit lending benchmark or metric when creating assessment areas, as an impact review factor, and as a justification for discrimination downgrades. One commenter suggested that the agencies publicly share HMDA data by race and ethnicity—specifically American Indians, Alaska Natives, and Native Hawaiians—with interested stakeholders on an annual basis, and annually provide to these groups an updated

¹⁵⁶⁹ See proposed § __.42(j)(1).

¹⁵⁷⁰ See proposed § __.42(j)(2).

longitudinal analysis of HMDA data trends involving particular racial and ethnic groups and a discussion of which large banks are improving and which are not. A few commenters also suggested disclosing data on non-mortgage loan types based on race and ethnicity such as CFPB's Section 1071 data, once available.

Some commenters opposed the agencies' proposal. Commenters opposed to the agencies' proposal to disclose HMDA data by race and ethnicity in CRA performance evaluations stated various reasons for their opposition. One commenter asserted that the HMDA and the CRA statutory purposes are different, and that HMDA data should not be commingled with the CRA. Another commenter stated that HMDA data are used extensively in fair lending reviews, while the CRA has always focused on income. A few commenters stated that disclosing demographic data without appropriate context could be confusing or misleading to the public. One of these commenters noted that these data could suggest to the public that the bank is engaging in discrimination while the CFPB and the FFIEC have stated many times that HMDA data are a screening tool and cannot alone establish discrimination. Two commenters stated that, because this information would not be part of the data used for CRA examinations and thus not part of the written evaluation, requiring publication of HMDA data would be outside the scope of CRA. One of these commenters specifically stated that this HMDA provision seeks to strengthen the purpose of a regulation that falls outside the agencies' rulemaking authority, is unrelated to a bank's CRA performance and the agencies' fair lending oversight, and lacks sufficient context by itself to convey an accurate and comprehensive picture of bank marketing and advertising practices. One other commenter suggested that, instead of including HMDA data in the performance evaluation, examiners should provide a summary of their findings and any disparities that correlate to, or are offset by, a bank's other performance metrics. Finally, a few other commenters opposed the disclosure of HMDA data for other reasons, including that it would be an unjustified duplication of reporting and would not increase transparency because HMDA data are already available to the public; there are already sufficient existing data metrics to measure a bank's mortgage lending without HMDA data; it could improperly incentivize banks to allow racial and ethnic characteristics of applicants to influence credit decisions; and if the data will not be included in CRA conclusions, it is a burden that is not justified by the regulation.

Final Rule

The final rule adopts proposed § __.42(j), with modifications as described below. The agencies are not finalizing in proposed § __.42(j)(1), disclosure of the HMDA data by race and ethnicity required in final § __.42(j)(2) in the bank's CRA performance evaluation. Instead, based on the comments received and upon additional agency consideration, final § __.42(j)(1) provides that the relevant agency will publish annually, based on the data reported by large banks under 12 CFR part 1003, the data in § __.42(j)(2) by borrower income level, race, and ethnicity. In final § __.42(j)(2), the Board, FDIC, or OCC, as applicable, will publish on their respective websites, for each large bank's facility-based assessment areas, and as applicable, its retail lending assessment areas: (1) the number and percentage of originations and applications of a large bank's home mortgage loans by borrower or applicant income level, race, and ethnicity; (2) the number and percentage of originations and applications of aggregate mortgage lending of all lenders reporting HMDA data in the facility-based assessment area and as applicable, the retail lending assessment area; and (3) demographic data of the geographic area. By publishing this information on their websites, the agencies are making the existing public data available in a

more user-friendly format. The agencies also continue to believe that public disclosure of these data in each assessment area will increase the transparency of a bank's mortgage lending operations.

To increase public awareness that the HMDA data by income level, race, and ethnicity in § __.42(j)(2) is available, the final rule adopts two new provisions. First, under § __.42(j)(3) of the final rule, upon publishing the data required in § __.42(j)(2), the agencies will “publicly announce” that the data has been published on the agency's website. Second, as explained in the section-by-section analysis of § __.43(b)(2), the final rule also requires a large bank to include a written notice in their public file that the HMDA data published by the agency is available on the agency's website.

Finally, consistent with the agencies' proposed § __.42(j)(3), renumbered in the final rule as § __.42(j)(4), the final rule provides that the information published by the agencies with respect to race and ethnicity will not independently impact the CRA conclusions and ratings of a large bank. As explained by the agencies in the proposal, the disclosure in the final rule also would not constitute a lending analysis for the purpose of evaluating redlining risk factors as part of a fair lending examination. The agencies will publish the HMDA data by borrower income level, race, and ethnicity on their own websites, not in the CRA performance evaluation as initially proposed. The agencies have determined that this approach appropriately provides the intended transparency of publishing these data, without adding to the length and complexity of CRA performance evaluations. Including these data on the agencies' websites will provide a more user-friendly way to access the HMDA data—whether by income, race, and ethnicity—in a single place. In this manner, the data will be readily available to all stakeholders to analyze trends involving lending to various groups in the communities served by the bank. HMDA data by income level will continue to be included in the CRA performance evaluation.

With respect to commenters suggestions that HMDA data by borrower race and ethnicity should play a larger role in the CRA examination process and should independently impact a bank's CRA ratings, the agencies reiterate that the HMDA data is not the only information used to determine whether a fair lending violation occurred, and would typically not be sufficient, by itself, to demonstrate that redlining exists. However, to the extent the HMDA data supports a conclusion that a violation occurred in the context of a fair lending examination, the final rule also provides in § __.28 that the agency's evaluation of a bank's CRA performance rating is adversely affected if the relevant agency's fair lending examination concludes that discrimination occurred based on its analysis of the HMDA data.

The agencies have considered comments opposing the publication of tabulations of the HMDA data by borrower race and ethnicity for each bank on the ground that the purposes of the CRA and HMDA are different in that HMDA data on race or ethnicity are used in fair lending examinations while the CRA focuses on income. HMDA data by borrower race and ethnicity are used in fair lending examinations, and the agencies believe that CRA and fair lending obligations are mutually reinforcing. For example, under the existing CRA regulations and under the final rule, the results of the fair lending examination can affect a bank's CRA rating.¹⁵⁷¹ In addition, the agencies note that they are not publishing the HMDA data by race and ethnicity in the CRA performance evaluations as initially proposed, but on their own websites to provide this already-

¹⁵⁷¹ See current 12 CFR __.28(c)(1)(i) and final § __.28(d)(3)(i).

existing public data in a specific and user-friendly format. The agencies have also considered commenters concerns that disclosure of the HMDA data would improperly incentivize banks to use racial characteristics in credit decisions. The agencies note that the commenters did not provide evidence for the assertion that a more accessible presentation of information that is currently available to the public would result in such an outcome. In addition, the agencies examine banks to ensure their lending meets safety and soundness and consumer protection requirements, including fair lending laws and regulations. The agencies believe that these laws and regulations, along with examinations to ensure compliance, provide adequate safeguards against racial characteristics becoming an impermissible basis for credit decisions under the final rule.

In response to some commenters that raised issues about potential burdens related to HMDA data publication, the final rule provides that the agencies take existing HMDA data and publish it on the agency's website. The operative provisions of the final rule do not increase regulatory burden for large banks in a perceptible manner.

The agencies considered commenters suggestion that disclosure of these tabulations would be duplicative since HMDA data are publicly available, or that it would not meaningfully increase transparency. The agencies believe that providing the distribution of the bank's home mortgage loan originations and applications by income level, race, and ethnicity in each of the bank's assessment areas will increase the transparency of a bank's mortgage lending operations. Although the HMDA data are publicly available, the agencies currently do not provide these specific tabulations to the public, as previously noted. In addition, by publishing these tabulations on the relevant agency's website and publicly announcing that they are available, the agencies believe the data will be accessible to more stakeholders to analyze trends involving lending to various groups within the communities served by the bank.

The agencies are sensitive to commenter concerns that disclosing HMDA data without appropriate context could be confusing or misleading. The agencies intend to address this issue in part by providing a statement, along with the release of the tabulations of the HMDA data in § __.42(j)(2), regarding some of the limitations of the data. The agencies also acknowledge that while the information on race and ethnicity within the HMDA data can be used to analyze and identify fair lending risks, they are not the only data used to make a determination of whether a fair lending violation occurred. However, as explained in the proposal, separate from this disclosure, to the extent that analysis of HMDA reportable mortgage lending along with additional data and information evaluated during a fair lending examination leads the relevant agency to conclude that discrimination occurred, a bank's CRA rating may be affected (*see* the section-by-section analysis of § __.28(d)).

Upon consideration of the comments, the agencies decline to extend the tabulations by race and ethnicity of HMDA data to all banks, rather than just large banks. The agencies decided to focus the tabulation of publication of HMDA data on the agencies' websites on just large banks because these institutions are the most significant mortgage lenders among banks.

Finally, regarding commenters' recommendations to disclose data on non-mortgage lending based on race and ethnicity, such as CFPB's Section 1071 data, the agencies decline to expand disclosure of data based on race and ethnicity. The agencies' purpose for disclosing HMDA data by race and ethnicity in the proposal was, and in this final rule is, to increase transparency in a bank's mortgage lending operations. Disclosing data for non-mortgage lending by race and

ethnicity would be outside the scope of the agencies' proposal. In addition, racial and ethnic data on non-mortgage lending, such as the CFPB's Section 1071 data, are not available for disclosure at this time. The agencies do not believe it is a prudent course of action to address the disclosure of the data before preliminary issues such as access to the data itself are resolved.

§ __.43 Content and Availability of Public File

§ __.43(a) Information available to the public

Current Approach

Under the current CRA regulations, a bank is required to maintain a public file that includes specific information related to the bank's branches, services, and performance in helping meet community credit needs.¹⁵⁷² The public file must include all written comments received from the public for the current year and each of the two prior calendar years related to the bank's performance in helping to meet community credit needs, along with any responses by the bank,¹⁵⁷³ and a copy of the public section of the bank's most recent CRA performance evaluation.¹⁵⁷⁴ The public file is also required to include: a list of the bank's current branches, their street addresses, and geographies;¹⁵⁷⁵ a list of branches that have opened or closed during the current year and each of the prior two calendar years;¹⁵⁷⁶ a list of services generally offered at the bank's branches, and if a bank chooses, information regarding alternative delivery systems;¹⁵⁷⁷ and a map of each of the bank's assessment areas.¹⁵⁷⁸ A bank may opt to add any other information to its public file.¹⁵⁷⁹

The Agencies' Proposal

The agencies proposed to maintain the current requirements in § __.43 regarding information that banks must include in their public files, with additional clarification regarding specific aspects of those requirements. Consistent with a technical change throughout the regulatory text, the agencies proposed replacing the term "geographies" with the term "census tracts" to specify the geographic level at which a bank must provide information on its current branches, and branches that have been opened or closed during the current year and each of the prior two calendar years.

In addition, the agencies proposed technical changes to current § __.43(a)(5), regarding the list of services that a bank must include in its public file. Proposed § __.43(a)(5) referred to

¹⁵⁷² See current 12 CFR __.43(a).

¹⁵⁷³ See current 12 CFR __.43(a)(1).

¹⁵⁷⁴ See current 12 CFR __.43(a)(2).

¹⁵⁷⁵ See current 12 CFR __.43(a)(3).

¹⁵⁷⁶ See current 12 CFR __.43(a)(4).

¹⁵⁷⁷ See current 12 CFR __.43(a)(5).

¹⁵⁷⁸ See current 12 CFR __.43(a)(6).

¹⁵⁷⁹ See current 12 CFR __.43(a)(7).

“retail banking services,” as defined in proposed § __.12,¹⁵⁸⁰ rather than “services” as it is described in current § __.43(a)(5).¹⁵⁸¹ Current § __.43(a)(5) also states that, “[a]t its option, a bank may include information regarding the availability of alternative systems for delivering retail banking services (e.g., ATMs, banking by telephone, computer, or mail, loan production offices, and bank-at-work programs).”¹⁵⁸² Proposed § __.43(a)(5) revised the current provision to reflect changes to the types of alternative systems commonly used – specifically, the proposal referred instead to “mobile or online banking, loan production offices, and bank-at-work or mobile branch programs.”

The agencies also proposed changes to the information that large banks would need to include in their public file related to assessment areas. Specifically, the agencies proposed to update current § __.43(a)(6) to replace the reference to “assessment area” with “facility-based assessment area and retail lending assessment area,” thus requiring a bank to include in its public file “[a] map of each facility-based assessment area and retail lending assessment area showing the boundaries of the area and identifying the census tracts contained within the area, either on the map or in a separate list.”¹⁵⁸³

Comments Received and Final Rule

The agencies received no comments regarding the technical changes described above in proposed § __.43(a) and are finalizing those revisions as proposed. In addition, the agencies are clarifying “current year” requirements in the following public file provisions:

- Section __.43(a)(1), which requires a bank to include in the public file all written comments received from the public for the current year and each of the two prior calendar years related to the bank’s performance in helping to meet community credit needs, along with any responses by the bank; and
- Section __.43(a)(4), which requires a list of branches opened or closed by the bank during the current year and each of the prior two calendar years.

Specifically, these provisions are revised to require a bank to update its list of branches opened and closed (§ __.43(a)(1)) and written public comments (§ __.43(a)(4)) for the current year “on a quarterly basis for the prior quarter by March 31, June 30, September 30, and December 31.” This is in addition to each of the two prior calendar years. Based on supervisory experience, the agencies believe that the term “current year” is ambiguous, and therefore, are

¹⁵⁸⁰ “Retail banking services” was defined in the proposal to mean, “retail financial services provided by a bank to consumers, small businesses, and small farms and includes a bank’s systems for delivering retail financial services.” Proposed § __.12.

¹⁵⁸¹ The current regulation describes “services” as including “hours of operation, available loan and deposit products, and transaction fees” that are “generally offered at the bank’s branches.” Current 12 CFR __.43(a)(5).

¹⁵⁸² Under the FDIC’s CRA regulations, current 12 CFR 345.43(a)(5) describes alternative delivery systems as “RSFs, RSFs not owned or operated by or exclusively for the bank, banking by telephone or computer, loan production offices, and bank-at-work or bank-by-mail programs.”

¹⁵⁸³ See proposed § __.43(a)(6).

clarifying that banks are required to update their public files with this information on a designated quarterly basis. The agencies believe that regulatory burden will be reduced by mitigating confusion regarding whether banks must continuously update the public file with the list of branches opened and closed, and with comments received during the current year.

Finally, the agencies received one comment relating to the assessment area map requirement in proposed § __.43(a)(6). Specifically, this commenter recommended that the public file maintain at least five years of assessment area maps that include the majority-minority census tracts and the original date of the acquisition or establishment of a branch. After consideration of this comment, the agencies are finalizing the requirement for assessment areas in § __.43(a)(6) as proposed with a clarification to make clear that a bank is required to include in its public file a map of retail lending assessment areas, “as applicable.”

The agencies believe that more extensive map requirements beyond the agencies’ proposal, especially maintaining five years of maps, would be overly burdensome for banks. In addition, the agencies consider the focus of CRA to be on low- and moderate-income census tracts, rather than majority-minority census tracts. Finally, the agencies believe that requiring banks to include the original date of the acquisition or establishment of a branch is duplicative and unnecessary, since the establishment date for bank branches is already publicly available from the FDIC’s website.

§ __.43(b) Additional information available to the public

Current Approach

Current additional public file requirements vary based on a bank’s size and circumstances. A bank, except a small bank or a bank that was a small bank in the prior calendar year, must include in its public file for each of the prior two calendar years the following information for the bank and, if applicable, its affiliates: a copy of the bank’s CRA Disclosure Statement¹⁵⁸⁴ and, if a bank has elected to have one or more categories of its consumer loans considered, the number and amount of each category of consumer loans made by the bank and its affiliates (1) to low-, moderate-, middle-, and upper-income individuals; (2) located in low-, moderate-, middle-, and upper-income census tracts; and (3) located inside the bank’s assessment areas and outside of the bank’s assessment areas.¹⁵⁸⁵ HMDA reporting institutions must include a statement in the public file that their HMDA data may be obtained on the CFPB’s website, as well as the name of any affiliate whose home mortgage lending the bank elected to have considered in its CRA evaluation and a written notice that the affiliates’ HMDA data may be obtained on the CFPB’s website.¹⁵⁸⁶

Under current requirements, a small bank or a bank that was a small bank during the prior calendar year must include in its public file the bank’s loan-to-deposit ratio for each quarter of the prior calendar year¹⁵⁸⁷ and, if it elects to be evaluated under the lending, investment, and

¹⁵⁸⁴ See current 12 CFR __.43(b)(1)(ii).

¹⁵⁸⁵ See current 12 CFR __.43(b)(1)(i).

¹⁵⁸⁶ See current 12 CFR __.43(b)(2).

¹⁵⁸⁷ See current 12 CFR __.43(b)(3)(i). At its option, a bank may include in its public file additional data on its loan-to-deposit ratio. See *id.*

service tests, it must include the information that other banks subject to these tests must report, as provided above.¹⁵⁸⁸ A bank evaluated according to an approved strategic plan must include a copy of the plan in its public file.¹⁵⁸⁹ Finally, a bank that received less than a “Satisfactory” rating during its most recent examination must include in its public file a description of its current efforts to improve its performance in helping to meet the credit needs of its entire community and update the description quarterly.¹⁵⁹⁰

The Agencies’ Proposal

The agencies proposed to revise current § __.43(b)(1) to reflect the proposed designations of banks as “small,” “intermediate,” and “large,” such that this provision instead would apply to “large” banks. The agencies also proposed to remove current § __.43(b)(1)(i), because consumer loans would not be considered under the proposed Retail Lending Test for banks subject to this provision.

As a result of the proposed removal of current § __.43(b)(1)(i), the agencies proposed to renumber current § __.43(b)(1)(ii), requiring a bank (other than a small bank or an intermediate bank) to include in its public file a copy of the bank’s CRA Disclosure Statement, to § __.43(b)(1). Proposed § __.43(b)(1) required that banks subject to data reporting requirements described in proposed § __.42 include in their public file a written notice that the bank’s CRA Disclosure Statement pertaining to the bank, its operations subsidiaries or operating subsidiaries, and any other affiliates, if applicable, may be obtained on the FFIEC’s website. This would be a change from current § __.43(b)(1)(ii), which requires a bank to include the CRA Disclosure Statement itself in its public file. Proposed § __.43(b)(1) also differed from current § __.43(b)(1)(ii) in adding reference to the CRA Disclosure Statement of a bank’s operations subsidiaries or operating subsidiaries, and any other affiliate of the bank, if applicable.

The agencies also proposed to revise current § __.43(b)(2), pertaining to information that must be available to the public for banks that are required to report home mortgage loan data under HMDA. Proposed § __.43(b)(2) referenced not only affiliates whose home mortgage lending the bank opted to have considered as part of its CRA evaluation, but also operations subsidiaries or operating subsidiaries whose home mortgage lending is required to be considered under the proposal.¹⁵⁹¹

In addition, the agencies proposed to remove current § __.43(b)(3)(ii), which requires small banks that elected to be evaluated under the lending, investment, and services test to include in their public file the information required under current § __.43(b)(1)(i) and (b)(1)(ii) described above.

Further, the agencies proposed technical revisions to current § __.43(b)(5), regarding public file requirements for banks with a less than “Satisfactory” rating, for clarity. Proposed § __.43(b)(5) reflected current § __.43(b)(5), but specified that quarterly updates must occur by March 31, June 30, September 30, and December 31.

¹⁵⁸⁸ See current 12 CFR __.43(b)(3)(ii) (cross-referencing current 12 CFR __.43(b)(1)).

¹⁵⁸⁹ See current 12 CFR __.43(b)(4).

¹⁵⁹⁰ See current 12 CFR __.43(b)(5).

¹⁵⁹¹ See proposed § __.21(c)(1).

Comments Received and Final Rule

The agencies received no comments regarding the changes in proposed § __.43(b)(1) or the removal of the requirements under current § __.43(b)(1)(i) and (b)(3)(ii) and are finalizing these revisions as proposed. Specifically, with respect to § __.43(b)(1), the agencies believe adding the reference to the CRA Disclosure Statement of a bank's operations subsidiaries or operating subsidiaries, and its other affiliates, if applicable, reflects that in some cases the activities of operations subsidiaries or operating subsidiaries, as defined in § __.12 (proposed and final), as well as the activities of other affiliates, will be considered in a bank's CRA evaluation.¹⁵⁹²

The agencies also believe that retaining current § __.43(b)(1)(i) and (b)(3)(ii), is unnecessary. With respect to § __.43(b)(1)(i), in the final rule, consumer loans, with the exception of automobile loans as specified in the section-by-section analysis of § __.22, will no longer be considered under the Retail Lending Test; therefore, a bank is no longer required to include in its public file the information required in § __.43(b)(1)(i). Instead, the agencies will consider the qualitative aspects of consumer loans (except automobile loans) only under the Retail Services and Products Test as explained in the section-by-section analysis of § __.23. Therefore, removing current § __.43(b)(1)(i) is appropriate. With respect to § __.43(b)(3)(ii), with the removal in the final rule of current § __.43(b)(1)(i), as just explained, the only requirement remaining in current § __.43(b)(1) would be the CRA Disclosure Statement in § __.43(b)(1)(ii). Because a small bank is not required to report CRA loan data under § __.42 (proposed and final), a CRA Disclosure Statement would not be prepared for a small bank to place in its public file. Therefore, the requirements in current § __.43(b)(3)(ii) no longer apply to small banks, making the provision unnecessary. The agencies also made technical changes to the inline header of § __.43(b)(1) to make clear that this paragraph applies to any bank subject to the data reporting requirements under § __.42 and to update the FFIEC's website link for where the CRA Disclosure Statement may be obtained.

The agencies are also adopting proposed § __.43(b)(2), with modifications related to the disclosure of the HMDA data on borrower race and ethnicity in final § __.42(j). *See* the section-by-section analysis of § __.42(j). Proposed § __.43(b)(2) pertains to the requirement that HMDA-reporting banks include in their public file a written notice that the bank's HMDA data in § __.42(j) can be obtained at the CFPB's website. Specifically, the agencies are renumbering proposed § __.43(b)(2) as § __.43(b)(2)(i), and are adopting new § __.43(b)(2)(ii), which requires a large bank to include in their public file a written notice that the HMDA data published by the Board, FDIC, or OCC, as applicable, under § __.42(j)(1) is available on the Board's, FDIC's, or OCC's website (*see* the section-by-section analysis of § __.42(j)). The agencies are adopting this new provision to increase transparency and awareness of a bank's mortgage lending operations. After the transition to the CFPB's Section 1071 takes effect, banks required to report HMDA data and small-business lending data will also be required to include in

¹⁵⁹² *See* the section-by-section analysis of § __.21(b).

their public file a written notice that the bank’s small business loan and small farm loan data is available at the CFPB’s website.¹⁵⁹³

The agencies are finalizing proposed § __.43(b)(4) with a technical change to clarify that a bank evaluated under a strategic plan must include a copy of the plan in its public file while the plan is in effect.

With respect to proposed § __.43(b)(5), the agencies received one comment which, as discussed above, pertained to public file requirements for banks with a less than “Satisfactory” rating. The commenter suggested that when a bank receives a “Low Satisfactory” conclusion for an assessment area or a subtest, the bank should be required to submit a public improvement plan with measurable performance goals (the same or similar to metrics on CRA examinations) indicating how a bank will improve its performance. The agencies have considered this comment and are finalizing § __.43(b)(5) as proposed. Since final § __.43(b)(5) requires that a bank that received a less than “Satisfactory” rating during its most recent examination must include in its public file a description of its current efforts to improve its performance in helping to meet the credit needs of its entire community, the agencies believe this provision covers the suggested “improvement plan” made by the commenter.

§ __.43(c) Location of public information

§ __.43(d) Copies

§ __.43(e) Timing requirements

Current Approach

Under current § __.43(c), a bank’s entire public file must be available for public inspection upon request at no cost: (1) at its main office; and (2) if a bank operates in more than one State, at one branch office in each of these States.¹⁵⁹⁴ At each branch, upon request, a bank must make available for inspection the bank’s most recent CRA performance evaluation and a list of services provided by the branch, as well as, within five calendar days of the request, all of the information in the public file relating to the branch’s assessment area.¹⁵⁹⁵

Under current § __.43(d), when requested, a bank must also provide a copy of its CRA public file either on paper or in another form acceptable to the person making the request, and may charge a reasonable fee to cover copying and mailing costs.¹⁵⁹⁶

¹⁵⁹³ The transition amendments included in this final rule will permit the agencies to transition the CRA data collection and reporting requirements for small business loans and small farm loans to the CFPB’s Section 1071 data. This is consistent with the agencies’ intent articulated in the preamble to the proposal and elsewhere in this final rule to transition to the CFPB’s Section 1071 data for small business loan and small loan data under the CRA regulations. The agencies will provide notice of the effective date of this amendment in the *Federal Register* once the CFPB Section 1071 data are available.

¹⁵⁹⁴ See current 12 CFR __.43(c)(1).

¹⁵⁹⁵ See current 12 CFR __.43(c)(2).

¹⁵⁹⁶ See current 12 CFR __.43(d).

Under current § __.43(e), a bank is required to ensure, unless otherwise provided in § __.43, that the information required by § __.43 is current as of April 1 of each year.

The Agencies' Proposal

The agencies proposed to revise current § __.43(c)(1) to require any bank with a public website to include its CRA public file on its website to increase accessibility. If a bank does not maintain a public website, the agencies proposed that a bank would have to maintain public file information consistent with current rules – namely, at the main office and, if an interstate bank, at one branch office in each State.¹⁵⁹⁷

Consistent with current § __.43(c)(2)(i), proposed § __.43(c)(2)(i) required that a bank must make available to the public a copy of the public section of the bank's most recent CRA performance evaluation and a list of services provided by the branch.¹⁵⁹⁸ Proposed § __.43(c)(2)(ii) required that, within five calendar days of the request, a bank make available all of the information in the public file relating to the branch's "facility-based assessment area." The agencies proposed to refer to "facility-based assessment area" rather than "assessment area" to reflect the proposed changes to the CRA evaluation framework regarding assessment areas. *See, e.g.* the section-by-section analysis of §§ __.16 and __.17.

Proposed § __.43(d) required banks to provide, on request, either in paper or in a digital form acceptable to the person making the request, copies of the information in the bank's public file. As allowed currently, banks would be able to charge reasonable copying and mailing costs for the provision of paper copies.

In addition, the agencies proposed to revise current § __.43(e) to require that, except as otherwise provided in proposed § __.43, a bank ensures that its public file contains the information required by proposed § __.43 "for each of the previous three calendar years, with the most recent calendar year included in its file annually by April 1 of the current calendar year."

Comments Received and Final Rule

The agencies are finalizing proposed § __.43(c), pertaining to the location of information that a bank must make available to the public, with technical changes for clarity. The agencies received only a few comments on this section; all commenters supported the agencies' proposed revisions to § __.43(c). As explained in the proposal, the agencies believe that updating this provision to allow any bank with a public website to include its CRA public file on the bank's public website, will make a bank's CRA public file more readily accessible to the public.

The agencies are revising proposed § __.43(c)(1) with a technical change to separate the location requirements for a bank's public file. Under final § __.43(c)(1), all information required for the bank's public file must be maintained on the bank's website, if the bank maintains one. Under final § __.43(c)(2), the agencies are clarifying the requirements for banks that do not maintain a website. As proposed, final § __.43(c)(2)(i) requires that a bank must maintain all the information required for the bank's public file at the main office, and, if an interstate bank, at one

¹⁵⁹⁷ *See* proposed § __.43(c)(1).

¹⁵⁹⁸ Proposed § __.43(c)(2) should have reflected, consistent with current § __.43(c)(2), that a bank must make the information in proposed § __.43(c)(2)(i) and (ii) available to the public at each branch. The final rule is revised to clarify this.

branch office in each State. Final § __.43(c)(2)(ii) clarifies that at each branch, the bank is required to maintain a copy of the public section of the bank’s most recent CRA performance evaluation and a list of services provided by the branch. This clarification is consistent with the requirements that banks must make available at each branch under current CRA regulations, as well as the agencies’ intent under proposed § __.43(c)(2), as described in the proposal.¹⁵⁹⁹

The agencies are adopting § __.43(d) and § __.43(e) as proposed. The agencies did not receive comments on proposed § __.43(d), regarding a bank’s obligation to provide copies of its CRA public file on request, and proposed § __.43(e), requiring a bank to maintain three years of information and ensure that its public file is current as of April 1 of each year, except as otherwise provided in § __.43. With respect to the revisions in § __.43(e) to maintain the information for three years, most banks, with certain exceptions, are evaluated during a three-year examination cycle, and as a result, the agencies believe that the public is best served when a bank maintains the information on its activities and any changes that may have occurred since the bank’s last CRA performance evaluation. The agencies also believe that this expansion will result in minimal, if any, associated burden to banks since under the final rule, banks will be required to maintain their public file in digital form (if the bank maintains a website), as provided in § __.43(c)(1). The agencies note that certain provisions in § __.43 have other timing requirements under which the bank must maintain information in its public file. For example, as explained in the section-by-section analysis of § __.43(a)(1), a bank must maintain all written comments received by the bank and any responses to the comments by the bank, for the current year, updated on a quarterly basis, and the prior two calendar years.

§ __.44 Public Notice by Banks

Current Approach

Under the current CRA regulations, a bank must provide in the public lobby of its main office and each of its branches the appropriate public notice, as set forth in appendix B (CRA Notice), that includes information about the availability of a bank’s public file, the appropriate Federal banking agency’s CRA examination schedule, and how a member of the public may provide public comment.¹⁶⁰⁰ A branch of a bank having more than one assessment area must include certain content in the notice for branch offices.¹⁶⁰¹ Bank affiliates of a holding company must include the second to the last sentence of the notice.¹⁶⁰² Bank affiliates of a holding company that is not prevented by statute from acquiring additional banks must also include

¹⁵⁹⁹ See 87 FR 33884, 34004 (June 3, 2022).

¹⁶⁰⁰ See current 12 CFR __.44 and current appendix B.

¹⁶⁰¹ See *id.* The additional required content is bracketed in appendix B: “[If you would like to review information about our CRA performance in other communities served by us, the public file for our entire bank is available at (name of office located in state), located at (address).]”

¹⁶⁰² See current 12 CFR __.44 and current appendix B (“We are an affiliate of (name of holding company), a bank holding company.”).

contact information of the bank's federal regulatory agency so that the public may request information about applications covered by the CRA filed by the bank's holding company.¹⁶⁰³

The Agencies' Proposal

The agencies did not propose substantive changes to the CRA public notice requirements in current § __.44 and current appendix B, renumbered in the proposal as appendix F.¹⁶⁰⁴ Under proposed § __.44 and proposed appendix F, banks would continue to be required to provide in the public area of their main office and each of their branches the CRA Notice. Consistent with current requirements, only a branch of a bank having more than one facility-based assessment area would be required to include certain content in the notice for branch offices; notices would not be required for proposed retail lending assessment areas.¹⁶⁰⁵ The agencies also proposed retaining the required content for bank affiliates of a bank holding company.¹⁶⁰⁶ To update the notice, the agencies proposed adding instructions for submitting comments on a bank's performance in meeting community credit needs not only by mail, but also electronically.¹⁶⁰⁷

Comments Received and Final Rule

The agencies are adopting § __.44 and appendix F substantively as proposed.¹⁶⁰⁸ The agencies received few comments concerning these proposed CRA public notice provisions. One commenter supported the agencies' proposal regarding the public notice a bank is required to post in the public area of its main office and at each of its branches. Another commenter asked that the agencies consider requiring that banks post the required notice not only as currently required, but also prominently display the bank's CRA ratings in branch entrances and on the bank's public websites to make CRA ratings more transparent and publicly visible.

The agencies have considered comments received on these provisions and believe that disclosing the bank's CRA rating in the bank's CRA performance evaluation, which will be available on the bank's public website, if it maintains one, and on agency websites, is appropriate and consistent with the requirements of the CRA. Posting a bank's CRA rating in branch entrances and on the bank's public website could be misinterpreted without the appropriate context, including, as required under the statute, a "statement describing the basis for the rating."¹⁶⁰⁹

§ __.45 Publication of Planned Examination Schedule

Current Approach and the Agencies' Proposal

¹⁶⁰³ See current 12 CFR __.44 and current appendix B ("You may request . . . an announcement of applications covered by the CRA filed by bank holding companies.").

¹⁶⁰⁴ See proposed § __.44 and proposed appendix F.

¹⁶⁰⁵ See *id.*

¹⁶⁰⁶ See *id.*

¹⁶⁰⁷ See proposed appendix F.

¹⁶⁰⁸ See *supra* note 145.

¹⁶⁰⁹ 12 U.S.C. 2906(b)(1)(A)(iii).

Under current § __.45, the agencies publish at least 30 days in advance of the beginning of each calendar quarter a list of banks scheduled for CRA examinations in that quarter. The agencies proposed to revise current § __.45 to provide greater specificity and to reflect the agencies' actual practice of publishing the examination schedule. Specifically, proposed § __.45 required that the relevant agency "publish on its public website, at least 60 days in advance of the beginning of each calendar quarter, a list of banks scheduled for CRA examinations for the next two quarters." As noted in the proposal, the agencies intended to provide additional advance notice to the public of the examination schedule and codify the agencies' current practice.¹⁶¹⁰

Comments Received

Several commenters supported the proposal stating that it would facilitate public engagement in the CRA process and enable banks to better respond to community needs. Several others asked that the agencies consider providing at least 90 days for the public to comment on CRA examinations. A few other commenters also recommended that the agencies provide a registry where interested groups could sign up for notifications when performance reviews are scheduled so that they can provide timely comments. One commenter suggested that the agencies encourage public comments to be made at any time, including outside the normal CRA schedule. One commenter expressed the view that the current approach was appropriate and believed there was no need for changes regarding publishing the planned examination schedule.

Final Rule

In the final rule, the agencies are revising proposed § __.45 to provide that the agencies will publish, 30 days in advance of each calendar quarter, a list of banks scheduled for CRA examinations for the next two quarters. As explained in the proposal, the agencies intended to codify the current practice. The current practice is to publish a list of banks scheduled for CRA examinations for the next two quarters at least 30 days in advance of the beginning of each calendar quarter, not 60 days. Although the current regulation requires publication of a list of banks scheduled for CRA examinations for the upcoming calendar quarter at least 30 days in advance of that quarter, the agencies' practice for several years has been to publish a list of banks scheduled for CRA examinations for the next two quarters to allow interested parties more time to review and provide meaningful comments on a bank's performance before a CRA examination. By publishing a list of banks scheduled for CRA examinations in the upcoming two calendar quarters, 30 days in advance of each calendar quarter, the agencies effectively provide at least 120 days advance notice for upcoming CRA examinations.

Regarding the recommendation of some commenters that the agencies provide a registry for interested groups to sign up for notifications when performance reviews are scheduled so they can provide timely comments for scheduled examinations, the agencies note that any member of the public can sign up to receive the agencies' notifications, including those communicating the next two quarters of scheduled CRA examinations. As discussed in the section-by-section analysis of § __.46, the agencies recognize that transparency and public engagement are fundamental aspects of the CRA evaluation process and, therefore, encourage communication between members of the public and banks before, during, and after a CRA examination is scheduled.

¹⁶¹⁰ See 87 FR 33884, 34004 (June 3, 2022).

§ __.46 Public engagement

§ __.46(a) General

§ __.46(b) Submission of public comments

§ __.46(c) Timing of public comments

Currently, members of the public may submit comments to the agencies regarding a bank's CRA performance over the relevant evaluation period. Members of the public may also submit comments in connection with banking applications, including in connection with bank mergers and acquisitions.

The Agencies' Proposal

The agencies proposed a new provision in the CRA regulations to clarify and promote community engagement in the CRA examination process. Specifically, proposed § __.46(a) affirmatively stated that the agencies “encourage[] communication between members of the public and banks, including through members of the public submitting written public comments” and also expressly stated that the agencies “take these comments into account in connection with the bank's next scheduled CRA examination.”¹⁶¹¹ This new provision specified that comments encouraged and considered include those that address “community credit needs and opportunities *as well as* regarding a bank's record of helping to meet community credit needs.”¹⁶¹² Proposed § __.46(b) provided that members of the public may submit comments electronically to the relevant agency. Proposed § __.46(c) explained that comments received by the agencies before the close of an examination would be considered in connection with that examination, while comments received after the close date of an examination would be considered in connection with the subsequent CRA examination.

The agencies requested feedback on other ways the agencies could encourage public engagement, and whether the agencies should ask for public comments on community credit needs and opportunities in specific geographic areas.

Comments Received

Additional ways to encourage public engagement. The agencies received many comments from a wide range of commenters. In general, the vast majority of these commenters supported the proposed public engagement provisions in § __.46, expressing the view that public input is an important element in the CRA examination process, which the agencies should routinely solicit. Many of these commenters also argued that the current CRA rules and the proposal do a poor job of encouraging and valuing community input, asserting that community comments on examinations are not solicited and, when provided, are ignored or not taken seriously. These commenters offered numerous recommendations intended to promote public engagement and increase transparency and accountability on the part of examiners to consider the comments as part of the examination process. Recommendations included specific actions the agencies could take, for example: elevating the importance of public comments regarding the extent to which banks meet community needs; providing public commenters the ability to submit comments to

¹⁶¹¹ Proposed § __.46(a).

¹⁶¹² *Id.* (emphasis added).

the appropriate agency's website; developing clear instructions about to whom to send CRA comments and when the due date is for comments on specific CRA examinations; establishing a public registry for stakeholders who opt in to being contacted by examiners when a CRA evaluation is being conducted in their communities and service areas and a calendar of examinations with links for stakeholders to provide comments; and forwarding all public comments to the appropriate bank and requiring that banks post comments and their responses on the bank's website.

Commenters also made several other suggestions for agency action, including the following: publishing a list of organizations that submitted comments, identified by those led by people of color and women to encourage input from a diverse range of organizations; increasing the number of local community interviews and conducting proactive outreach with a variety of stakeholders, including community residents and historically-underserved groups, regarding bank performance and identification of the impact of activities on community needs; evaluating how well banks solicit and incorporate feedback from community stakeholders; providing details on how the agencies factor community input into the CRA evaluation; issuing a guidance document – similar to the illustrative list of activities – that would help banks identify vulnerable communities and build relationships to drive investment to those communities; assembling directors of community organizations by geographic area; using an opt-in system to notify interested parties when performance reviews are scheduled; and including provisions in the regulation that provide for strict actions against any bank that retaliates against community members because of any non-related community action, including comments filed under the proposal.

Commenters also recommended that the agencies impose certain requirements on banks to increase public engagement, for example: providing information to customers on how to comment on CRA performance periodically, including when opening an account; creating community advisory boards to facilitate public engagement; complying with the terms of Community Benefits Agreements; soliciting input from community groups, including climate and environmental organizations on bank practices relating to climate, displacement, discrimination, and other harmful practices, as well as how banks can best leverage their resources to get CRA consideration for community development activities; requiring documentation detailing public outreach to, and engagement with, organizations; and, as noted, requiring that banks post comments and their responses on the bank's website.

By contrast, a few commenters expressed the view that additional public engagement was not necessary and that the agencies already have community contacts that are consulted over the course of a CRA examination.

Comments related to the agencies' request for feedback regarding public comments on community credit needs and opportunities in specific geographic areas. Several commenters addressed the agencies' request for feedback regarding public comments on community credit needs and opportunities in specific geographic areas. All but one of these commenters stated that seeking and encouraging public comment in specific census tracts is necessary to address the particular needs of each community and provided several recommendations. For example, a few commenters noted that asking specific questions about community credit needs and bank performance would be helpful to examiners in probing whether banks have created specific programs responsive to identified needs and would be useful in conducting self-assessments and identifying unmet credit needs and other opportunities. Commenter feedback also included that

any final rule must include requirements to ensure that community participation opportunities are accessible to people with disabilities and people with limited English proficiency, emphasizing the importance of culturally-appropriate communications and accessibility with respect to people with disabilities or limited language skills. Another commenter suggested that the agencies engage people who live in the specific geographic areas of interest and that U.S. Treasury Department-certified CDFIs may be able to help facilitate the process. One commenter noted that providing the public an opportunity to comment on their community credit needs and opportunities in specific census tracts might not be relevant for a small or intermediate bank's assessment areas due to the size and business model of that bank.

Final Rule

The agencies are adopting proposed § __.46(a), (b), and (c), providing for the submission and timing of written public comments on community credit needs and opportunities, as well as the bank's record of helping meet community credit needs, largely as proposed, with one revision in § __.46(b). Specifically, the agencies removed the word "electronically" to make clear that comments may be provided both electronically and by mail. The agencies believe that the public engagement provisions, as finalized, will improve public engagement by establishing a regulatory process whereby the public can provide input on community credit needs and opportunities in connection with a bank's next scheduled CRA examination. This approach would be a compliment to, not a substitute for, examiners seeking feedback on bank performance from members of a bank's community through community contacts as part of the CRA evaluation. The agencies also believe that the final rule will increase transparency by clarifying the agencies' treatment of public comments in connection with CRA examinations.

The agencies have considered the comments received and appreciate the recommendations made. The agencies are sensitive to commenters' concerns regarding the level of importance given by the agencies to CRA public comments. Each agency has developed and maintains comprehensive internal procedures to consider CRA public comments and complaints, and CRA protests related to covered applications. Further, the agencies' interagency examination procedures also include requirements for examiners to review and consider CRA comments received by the bank or the respective agency. As explained in more detail in the section-by-section analysis of § __.45, the agencies changed their practice several years ago, to lengthen the period for advanced notice of scheduled CRA examinations, and in this final rule are codifying this practice to give more time for the public to submit comments to the bank and/or its respective agency.

Regarding commenters' recommendations for increasing public engagement, the agencies have determined that some of the commenter recommendations are currently undertaken by the agencies such as publishing a calendar of examinations with links for stakeholders to provide comments and the due date and instructions for comments to be considered on specific CRA examinations. Examiners also accomplish several of commenters' recommendations related to outreach and consideration of public comments on the extent to which bank performance meets community needs by using community contacts in conjunction with a CRA examination. Examiners conduct interviews with local community contacts to gather information that assists in the development of performance context, to determine opportunities for participation by banks in helping to meet local needs, to understand perceptions on the performance of banks in helping to meet local credit needs, and to provide a context on the community to assist in the evaluation of a bank's CRA performance. While these processes address some of commenters

recommendations related to outreach and the importance of public comments, the agencies will consider other recommendations, including the recommendation to factor community input into CRA examinations when developing training, guidance, and examination procedures for this final rule. Other recommendations will be implemented in other sections of this final rule, as discussed further in the section-by-section analyses of §§ __.43, __.44, and __.45.

The agencies believe that other recommendations are appropriately implemented in § __.46 and other sections of this final rule. For example, the agencies believe that developing separate instructions regarding to whom to send comments and when comments are due is unnecessary. The final rule's provision for public notice by banks in § __.44 and the provision for submission of public comments in § __.46(b), instruct the public to send comments to the relevant agency's via electronically or by mail, as applicable. Thus, commenters may send their comments to the appropriate agency or to their bank, and the bank is required to place all comments and the responses to those comments regarding the bank's CRA performance in its public file as required under § __.43(a).¹⁶¹³ The agencies are sensitive to commenters' recommendation to require a response to all comments received; however, the agencies note that a bank response may not be appropriate in all instances (*e.g.*, complimentary comments, "off-topic" comments).

Similarly, § __.46(c) provides the timing under which comments will be considered for a particular examination. Although the agencies considered establishing a specific window or a due date under which comments would be considered on specific CRA examinations, the agencies determined that this would carry the potential for inaccuracies, as well as challenges updating this information in a timely manner, as examination dates are subject to change depending on a wide variety of factors. As reflected in the final rule, the agencies believe that, if a comment is received during an examination, it is appropriate to consider the comment during that examination as these comments could contain important information that could affect the evaluation.

The agencies also agree with the commenters' suggestion that all comments received by the agencies should be forwarded to the appropriate bank. As explained below in the section-by-section analysis of § __.46(d), the agencies are required under the final rule to forward to the bank all public comments received by the agencies regarding a bank's CRA performance. The agencies note that § __.43(a)(1), as finalized, requires banks to include in their public file all written comments and bank responses, if applicable, for the current year and each of the prior two calendar years that specifically relate to the bank's performance in helping to meet community credit needs. The final rule also requires, under § __.43(c)(1), that the public file must be maintained on the bank's website if the bank maintains one. Therefore, all comments will be on a bank's website to the extent a bank maintains one.¹⁶¹⁴

Regarding suggestions that the agencies establish a separate public registry and a calendar of examinations, the agencies note, as explained above, in the section-by-section analysis of § __.45, that the public will be able to sign up to receive the agencies' notification for which calendar quarter examinations are scheduled so that the public can prepare comments. Also, in

¹⁶¹³ For further discussion of final § __.43, see the corresponding section-by-section analysis above.

¹⁶¹⁴ *See id.*

§ __.45, the final rule provides that the agencies will publish a list of banks scheduled for CRA examinations for the next two quarters, 30 days in advance of each calendar quarter. The agencies believe that these provisions will help ensure that the public has sufficient time for the public to prepare and provide comments on upcoming examinations.

Regarding the suggestion that the agencies publish a list of organizations led by people of color and women, the agencies note that the race, ethnicity, and gender of the individuals that lead these organizations is not necessarily known to the agencies, and that maintaining privacy and confidentiality is essential. For more information and discussion regarding the agencies' consideration of comments related to race- and ethnicity-related provisions for the final rule, see Section III.C of this **SUPPLEMENTARY INFORMATION**.

The agencies believe that other recommendations would be best addressed outside the final rule. For example, although the agencies will not, as part of this final rule, be establishing a separate registry for comments, or developing an illustrative list of vulnerable communities similar to the illustrative list of community development activities in § __.14, the agencies will continue to explore options related to these suggestions outside of the rule. This includes consideration of developing a portal to accept bank-specific comments from the public for agencies that do not already provide this tool, and other ways for the public to provide feedback on community credit needs and opportunities in specific geographic areas as a complement to, but distinct from, feedback on individual bank performance. In addition, each agency has a community affairs department that can be an effective resource to banks for identifying and connecting with vulnerable communities and populations. Community affairs departments also have contacts and conduct outreach with local community organizations throughout the country.

The agencies have also considered commenters' recommendations that the agencies evaluate how well banks solicit and incorporate feedback, and that the agencies impose certain requirements on banks to increase public engagement. The agencies recognize the critical role of public engagement in helping banks meet the credit needs of their communities. In considering these comments and the importance of public engagement, the agencies note that there are a multitude of ways that a bank can obtain valuable feedback from the public and its community, and these mechanisms are not equally effective for all banks and all communities. For this reason, the agencies believe that effective public engagement can be promoted by allowing banks to tailor their public engagement initiatives to their size and the unique characteristics of their communities, rather than for the agencies to prescribe the manner in which they must occur. In this regard, the agencies believe that agency training and outreach with banks can play an important role in encouraging accessibility to the public participation process with respect to, for example, people with disabilities or limited language skills, and will continue to consider ways to encourage inclusive community participation in the CRA process. Importantly, the CRA evaluation itself focuses on the results the bank produces from incorporating public feedback.

Finally, the agencies are appreciative of commenters' suggestions that public comments on community credit needs and opportunities and bank performance are necessary and should be provided through a portal at any time. Each agency will consider whether to establish outside of this final rule a way for the public to provide feedback on community credit needs and opportunities in specific geographic areas.

§ __.46(d) *Distribution of public comments*

Consistent with current practice, proposed § __.46(d) provided that the relevant agency “forward all public comments received regarding a bank’s CRA performance to that bank.” Proposed § __.46(d) also provided that each agency “may also publish the public comments on its public website.” Although the agencies did not receive any comments specifically addressing this provision, the agencies did receive comments requesting that the agencies forward public comments to the appropriate bank as explained above in the section-by-section analysis of § __.46(a) regarding ways to increase public engagement. On consideration of the comments and further deliberation, the agencies are finalizing the portion of proposed § __.46(d) providing that the agencies will forward all public comments received regarding a bank’s CRA performance to the bank, and removing the reference to the agencies publishing public comments on their public websites.

The final rule memorializes the agencies’ current practice of forwarding public comments received by the agencies to the appropriate bank for review and, if appropriate, a response to the issues raised in the public comment. The agencies believe that the process of forwarding the comments to the bank is critical in order to make adjustments and improvements, if needed, to the bank’s efforts to serve its communities. Providing for the forwarding of these comments in the final rule will recognize the value of this practice, and help ensure consistency in its application, which the agencies believe will benefit banks in their efforts to meet the credit needs of their communities, as well as the communities they serve.

The agencies are also revising proposed § __.46(d) by removing language from the regulatory text that states that each agency “may also publish the public comments on its public website.” The agencies have determined that agency-posted comments represent only a subset of comments received regarding banks in relation to the CRA and, therefore, would be incomplete, are redundant to a bank’s public file,¹⁶¹⁵ and further strain agency resources.

In relation to proposed § __.46, the agencies requested feedback on whether the agencies should publish bank-related data, such as retail lending and community development financing metrics in advance of completing an examination to provide additional information to the public. As discussed below, most commenters responding to the agencies’ request for feedback on this question generally believed that public availability of data is an important aspect of helping to determine whether banks are meeting the needs of their communities under the CRA. However, a few commenters did not support publishing certain data, including metrics, ahead of the conclusion of an examination.

As discussed in more detail in the section-by-section analysis of § __.42, many commenters supported expanding the data collection and reporting requirements applicable to banks with assets of over \$10 billion, to all large banks, with some commenters also recommending that the agencies’ proposed deposits, lending, and community development data be made publicly available. Some of these commenters also recommended that the agencies develop a list of economic indicators for metropolitan and rural areas that could be used by the public to develop comments regarding performance context. Such economic indicators could include housing cost burdens, vacancy rates, unemployment rates, and percent of households in poverty, as well as homeownership and small business ownership rates. One commenter suggested that

¹⁶¹⁵ See current 12 CFR __.43(a)(1) and final § __.43(a)(1), discussed in the section-by-section analysis of final § __.43(a).

demographic indicators should include racial and ethnic breakdowns. One commenter recommended that the agencies work with the CFPB to release additional HMDA data, such as the number of units financed by a multifamily loan. Another commenter suggested the agencies make publicly available bank Call Reports, assessment area maps, HMDA data, the CRA public file, and the CFPB's Section 1071 data.

Several commenters recommended various ways in which the data could be published in connection with the examination for added transparency. For example, some commenters recommended that the data be provided in various forms, such as, online with descriptions and definitions, as appropriate, that a lay person could understand; on the bank's website and on other government websites; and in a dashboard showing bank performance and benchmarks. Other commenters recommended that certain metrics in performance evaluations be published, including, for example, activities that meet one or more impact criteria.

In contrast, several commenters opposed making data publicly available in connection with an examination for several reasons, including that: the data is compiled in connection with a CRA evaluation and should be made public only when the final report of examination is delivered; and early release could cause misleading conclusions since the data is not final and adjustments are often made in response to examiner feedback and to ensure data integrity. One commenter warned that without a formal process for feedback and how the specific feedback would impact the final outcome on the bank's CRA rating, the process of examinations could be delayed and administrative burdens could be added to the agencies.

The agencies appreciate commenter suggestions and feedback regarding publication of data and recognize the importance of making information about a bank performance accessible to the public. The agencies considered comments suggesting that it would be helpful to publish metrics in advance of an examination to better inform public comments on bank performance and promote transparency. However, the agencies have determined that publishing metrics in connection with an examination is not feasible with respect to banks that do not report data, and might add delays to the completion of the CRA examination, or at minimum, complicate scheduling depending on who prepares the data, the available systems and tools to calculate the metrics, and how far in advance the metrics would be made public. Furthermore, bank metrics are based on data that are typically subject to validation prior to calculation of metrics and performance analysis. However, the agencies note that the final CRA evaluation includes data, facts, and conclusions for public disclosure and will take into account suggestions on the type of information that could be made available in the final CRA evaluation, such as information on the impact and responsiveness review for the Community Development Financing and Community Development Services Tests.

The agencies also appreciate suggestions regarding publication of data on economic indicators that could help the public develop comments regarding performance context. The agencies will consider these recommendations outside of the rule and will continue exploring the possibility of publishing additional data to inform public comment.

§ __.51 Applicability Dates and Transition Provisions

The Agencies' Proposal

In proposed § __.51, the agencies included provisions regarding the transition from the current CRA regulations to amended CRA regulations. In general, the agencies proposed a final

rule effective date of the first day of the first calendar quarter that begins at least 60 days after publication in the *Federal Register*.¹⁶¹⁶ Additionally, the agencies proposed staggered applicability dates for various provisions of the regulations.¹⁶¹⁷ The agencies also proposed to begin conducting CRA examinations pursuant to the proposed performance tests two years after *Federal Register* publication of the final rule,¹⁶¹⁸ and that in assessing a bank's CRA performance the agencies would consider a loan, investment, or service that was eligible for CRA consideration at the time the bank conducted the activity or at the time the bank entered into a legally binding commitment to make the loan or investment.¹⁶¹⁹ Finally, the agencies proposed timing provisions regarding, respectively, continued applicability and sunset of the current regulations and applicability of the proposed regulations with respect to strategic plans.¹⁶²⁰

As discussed further below, the agencies received numerous comments on these proposed transition provisions from various stakeholders and have increased the transition periods in the final rule by one year and, where appropriate, have made other changes to proposed § __.51 in the final rule.

§ __.51(a)(1) Applicability dates in general

The Agencies' Proposal

In § __.51(a)(1), the agencies proposed that the following provisions would become applicable to banks, and banks must comply with any requirements in these provisions, beginning on the first day of the first calendar quarter that is at least 60 days after publication of the final rule: (1) authority, purposes, and scope (proposed § __.11); (2) facility-based assessment areas (proposed § __.16); (4) performance standards for small banks (proposed § __.29(a)); (4) intermediate bank community development performance standards (proposed § __.29(b)(2)); and intermediate bank performance ratings (proposed § __.29 (b)(4)); (5) effect of CRA performance on applications (proposed § __.31); (6) content and availability of public file (proposed § __.43); (7) public notice by banks (proposed § __.44); (8) publication of planned examination schedule (proposed § __.45); (9) public engagement (proposed § __.46); (10) applicability dates, and transition provisions (proposed § __.51). In the proposal, the agencies explained that they believed that setting an applicability date for these provisions on the final rule's effective date is appropriate and would not present significant implementation burden to banks because the agencies proposed only minor amendments to these provisions relative to the current CRA regulations.

Comments Received

The agencies received numerous comments on the proposed applicability date for these provisions, with most commenters taking the position that the proposed applicability date

¹⁶¹⁶ See proposed § __.51(a)(1).

¹⁶¹⁷ See proposed § __.51(a)(2).

¹⁶¹⁸ See proposed § __.51(b)(1).

¹⁶¹⁹ See proposed § __.51(b)(2).

¹⁶²⁰ See proposed § __.51(c).

provided banks insufficient time for implementation purposes and some commenters offering alternatives. Several commenters also stated that the final rule should be effective at the beginning of a calendar year to avoid subjecting banks to two regulatory frameworks during a single calendar year.

Final Rule

After reviewing the comments, the agencies have determined that establishing the same applicability date for all performance tests would reduce complexity and confusion for both the banking industry and agency examiners. Therefore, the agencies are amending the proposal to provide in final § __.51(a)(2)(i) that the applicability date for the small bank performance evaluation¹⁶²¹ and the intermediate bank performance evaluation¹⁶²² will be January 1, 2026,—the same date as for the final rule’s other performance tests.

The agencies continue to believe, as proposed, that the final rule’s effective date is appropriate for the remaining provisions listed above in light of the nature of the changes and their limited transition burden.

The final rule also makes a clarifying change to replace the language calculating the applicability date with the final rule’s actual effective date. In addition, the agencies are making a technical change in final § __.51(a)(1) by removing the following phrase included in the proposal: “this part is applicable to banks, and banks must comply with any requirements in this part.” The agencies acknowledge that including this phrase would have been inaccurate because some of the relevant provisions apply to the agencies rather than banks.

§ __.51(a)(2) Specific applicability dates

§ __.51(a)(2)(i)

The Agencies’ Proposal

In § __.51(a)(2)(i), the agencies proposed that the following provisions would be applicable to banks, and that banks must comply with any requirements in these provisions, one year after publication of the final rule in the *Federal Register*: (1) definitions (except for the definitions of “small business” and “small farm”) (proposed § __.12); (2) community development definitions (proposed § __.13); (3) qualifying activities confirmation and illustrative list of activities (proposed § __.14); (4) impact review of community development activities (proposed § __.15); (5) retail lending assessment areas (proposed § __.17); (6) areas for eligible community development activity (proposed § __.18); (7) performance tests, standards, and ratings, in general (proposed § __.21); (8) Retail Lending Test (proposed § __.22); (9) Retail Services and Products Test (proposed § __.23); (10) Community Development Financing Test (proposed § __.24); (11) Community Development Services Test (proposed § __.25); (12) wholesale or limited purpose banks (proposed § __.26); (13) strategic plan (§ __.27); (14) assigned conclusions and ratings (proposed § __.28); (15) certain provisions for intermediate banks (proposed § __.29(b)(1) and (b)(3)); (16) certain data collection and data reporting requirements (proposed § __.42(a), (c), (d), (e), and (f)); and (17) appendices A through F. The agencies explained that they believed

¹⁶²¹ See proposed § __.29(a).

¹⁶²² See proposed § __.29(b).

that a one-year transition period would provide banks with the appropriate time to implement these provisions.

Comments Received

The agencies received numerous comments on this provision. The vast majority of commenters stated that the one-year transition period in proposed § __.51(a)(2)(i) was insufficient, with many suggesting alternatives ranging from 18 months to five years. Several commenters further stated that the proposed one-year transition period would undermine efforts to modernize and improve the CRA framework and referenced the scale and complexity of the proposal as the basis for their concern. Other commenters focused on the time needed for stakeholders to implement the new regulations, including to build, test, and operationalize a new CRA program, and to marshal and deploy the requisite financial, technological, compliance, operational, administrative, and personnel resources. Several commenters compared implementing a new CRA framework to the significant undertaking required to implement HMDA amendments.

Commenters stated that a longer transition period was necessary for the agencies themselves to prepare for a new CRA framework. These commenters referenced the need for the agencies to: clarify elements of the new framework; verify that the final ratings framework is properly calibrated; proactively engage with stakeholders; and allow any economic impact from the final rule to normalize. Other commenters suggested that the agencies use the transition period to focus on regulatory infrastructure, interagency coordination, examiner recruitment and training, publication of the list of permissible and non-permissible community development activities, and standardization of their resources (*e.g.*, examination procedures and performance evaluation templates). Another commenter stated that banks should not be required to implement the final rule until the agencies publish the final rule's metrics, benchmarks, multipliers, and thresholds.

Commenters also focused on how the proposed transition period would negatively impact banks of different sizes and stated that all banks needed more time. One of these commenters suggested that the agencies tailor the implementation schedule based on bank size. This commenter stated that if larger banks, which the commenter asserted are the best equipped to adjust to a final CRA framework, were the first banks required to implement the new regulations, the agencies could learn from this experience and address any unintended consequences before smaller banks were required to implement the new framework.

Many commenters focused on the specific effects that the proposed rule would have on bank processes, procedures, programs, systems, and controls and stated that it would take longer than one year to implement these changes. For example, a commenter stated that it will need to rebuild virtually all facets of its bank-wide CRA program. Another commenter stated that the proposal would not provide sufficient time to coordinate the necessary compliance, financial, operational, and technological rollout.

Numerous commenters addressed the staffing needs associated with implementing and administering the new regulations, noting that many banks would need to hire new staff or reassign existing staff and to train all staff on the new regulations and related systems. A few commenters noted that nationwide labor shortages may affect the ability of banks to transition to a new framework.

Many other commenters noted that, as proposed, banks would be required to comply with the current CRA framework while implementing a new CRA framework. Some commenters also referenced dual compliance obligations related to Federal and State CRA laws. Additionally, a commenter stated that providing banks with an extended transition period would ensure that credit unions do not benefit from a comparatively advantageous regulatory environment.

Many commenters addressed the expected concurrent transitioning to both a new CRA framework and the CFPB's Section 1071 framework. Some noted that the dual CRA and Section 1071 transitions could exacerbate staffing challenges, threaten the integrity of relevant data, present technological challenges, and lead to unintended consequences. One commenter noted the budgetary considerations associated with implementing both frameworks. Other commenters encouraged the agencies and the CFPB to coordinate on CRA and Section 1071 implementation. Several commenters stated that regulatory requirements should be designed to avoid dual collection and reporting.

Numerous commenters noted that many stakeholders would need to rely on third-party vendors to implement a new CRA framework. At least one commenter noted that in prior rulemakings, banks' ability to test products and implement the rules was delayed because vendors did not have enough time to develop the requisite products. Commenters also noted that the demands on vendors would be exacerbated by the need to implement both the Section 1071 regulations and new CRA regulations.

Several commenters emphasized the importance of ensuring that the transition period provides sufficient time for training stakeholders on the new rule and how the agencies would apply it, with at least one commenter suggesting interagency training. One commenter suggested that the agencies summarize the final rule's applicability dates to help with the transition. Another commenter suggested that the comment period remain open during the training period. Other commenters stated that the agencies should outline the support they will provide to banks, especially with respect to assessment area and data collection provisions.

The agencies also received specific comments about the transition to implementing the proposed facility-based assessment area and retail lending assessment area provisions, noting that it will take time for banks to establish corresponding administrative oversight and to meet the new benchmarks. Another commenter stated that the agencies should allow banks to have implementation and compliance flexibility.

Some commenters offered the view that the agencies should evaluate the final rule after implementation. For example, a commenter stated the agencies should study what does and does not work with the new regulations and, as needed, update the CRA framework after implementation. Other commenters suggested that the agencies test the final rule on banks of different sizes and then, if necessary, revise or clarify the final rule. A commenter encouraged the agencies to invite public comment on the new rule after the first examinations under the final rule.

Another commenter stated that the Retail Lending Test and the Community Development Financing Test should not be effective until a bank's evaluation period that begins at least three years after the agencies publish the community and market benchmarks necessary to assess compliance with these performance tests.

Many commenters specifically referenced the proposed data collection and maintenance requirements when explaining why a one-year transition period was insufficient. One commenter noted that the proposal would require banks to collect and format data that they currently do not collect, while other commenters focused on the challenges of ensuring the quality and integrity of a bank’s data within the proposed transition period.

Final Rule

After considering the comments received, the agencies are revising proposed § __.51(a)(2)(i) to provide additional time relative to the proposal for transitioning to these provisions and to provide that the applicability date begins at the start of a calendar year. Pursuant to final § __.51(a)(2)(i), banks will have until January 1, 2026, to comply with the following: final §§ __.12 through __.15; final §§ __.17 through __.30; final § __.42(a); the data collection and maintenance requirements in final § __.42(c), (d), (e), and (f); and final appendices A through F. The agencies moved this applicability date to the beginning of the calendar year to align the data collection and maintenance with evaluation periods, which typically consist of whole calendar years.

Additionally, the final rule provides that the definitions of “small business” and “small farm” in final § __.12 take effect on January 1, 2026, instead of one year after the performance tests as proposed, to align with the corresponding performance standards. This change is necessary because the definitions of “small business” and “small farm” are relevant to, among other things, determining which loans, investments, or services meet the community development criteria under final § __.13, evaluating a bank’s small business and small farm lending under the Retail Lending Test, and evaluating a bank’s retail banking services and retail banking products under the Retail Services and Products Test. In the current regulations, “small business” and “small farm” are not explicitly defined, and therefore, if these definitions are not effective until one year after the new performance standards are applicable, banks will be unable to determine with certainty what these terms mean.

The final rule also makes a technical correction to provide that the data collection and maintenance requirements under final § __.42(a), but not the data reporting requirements under final § __.42(b), are applicable on January 1, 2026. As described in the proposal’s preamble, the agencies intended to have the final rule’s reporting requirements take effect one year after the collecting and maintenance requirements, but this intent was not accurately reflected in the proposed regulatory text.¹⁶²³ As discussed below, the reporting requirements under final § __.42(c), (d), (e), and (f) are applicable one year later, on January 1, 2027, with data reporting required by April 1 beginning in 2027.

The agencies also are making the same technical change in final § __.51(a)(2)(i) and (ii) as discussed above regarding final § __.51(a)(1) to remove the proposed bank applicability and compliance language because some of the relevant sections apply to the agencies, and not to banks.

¹⁶²³ See 87 FR 33884, 34005 (June 3, 2022) (“Banks that would be required to collect new data under the proposal starting 12 months after publication of a final rule, would be required to report such data to the agencies by April 1 of the year following the first year of data collection.”).

The agencies believe that providing until January 1, 2026, or January 1, 2027, as applicable, for these provisions balances the concerns raised by commenters for an adequate transition period with the needs of banks' communities, including low- and moderate-income neighborhoods, to benefit from modernized CRA regulations. Further, the agencies believe that, with consideration given to bank size, banks have the resources necessary to adjust to the new regulatory framework during this revised transition period. As commenters suggested, during the transition period the agencies will be focused on interagency coordination and developing templates, tools, and training to help banks implement the new CRA framework. The agencies also note that they provided a shorter transition period for some of the substantive provisions in the 1995 interagency CRA final rule.¹⁶²⁴

The agencies also believe that the transition periods in the final rule are appropriate because of the final rule's approach of tailoring performance standards and data requirements by bank size and business model. Small banks are generally not subject to the new performance standards in the CRA final rule unless they opt into the Retail Lending Test. Intermediate banks and small banks will not be subject to any additional data collection or reporting requirements under the final rule, thereby limiting transition burden. Further, the final rule updates the asset-size thresholds for determining which banks are considered small banks and which are intermediate banks, such that approximately 609 banks that would have been designated as intermediate small banks under the current regulations will now be considered small banks and 135 banks that would have been large banks under the current regulations will now be considered intermediate banks.¹⁶²⁵ Under the final rule, newly designated intermediate banks that were formerly large banks will have reduced reporting requirements.¹⁶²⁶ The agencies believe that large banks that are subject to any additional CRA requirements are large enough to manage the transition in the allotted time. In many cases, such as the requirement to geocode deposits, the banks likely already collect the requisite data, reducing the associated challenges that they might otherwise confront.

Further, the agencies believe that the changes made to the final rule will assist banks in transitioning to the final rule. Specifically, the final rule includes changes to the provisions regarding retail lending assessment areas, resulting in fewer banks having to delineate retail lending assessment areas and, for those that do, generally having to delineate fewer retail lending assessment areas.¹⁶²⁷ Additionally, the final rule revised the proposed Retail Lending Test such that open-end home mortgage loans and multifamily loans will not be evaluated as major product lines under that performance test. The agencies have also reduced burden by revising the final rule such that a bank subject to the Retail Lending Test will only have its automobile loans evaluated if the bank is a majority automobile lender or the bank opts to have its automobile loans evaluated.

¹⁶²⁴ See 60 FR 22156, 22176 (May 4, 1995) (providing a transition period of less than one year for the data collection requirements in the 1995 CRA rule).

¹⁶²⁵ See the section-by-section analysis for final § __.12 for more information.

¹⁶²⁶ Under the current rule, small banks, which include intermediate small banks, do not have any data collection, maintenance, or reporting requirements.

¹⁶²⁷ See the section-by-section analysis for final § __.17.

In response to commenters who suggested a tailored implementation period, as noted above the default performance test applicable to for small banks will be the same as under the current regulations. Small banks will have as much time as necessary to transition to being evaluated under the Retail Lending Test if they eventually opt to do so. Additionally, as explained in greater detail in the section-by-section analysis for final § __.42, the new data collection, maintenance, and reporting requirements in the final rule apply only to large banks or, in some cases, only to large banks with assets of greater than \$10 billion. The final rule is tailored to ensure that only banks with sufficient resources are subject to the data collection and maintenance requirements that are applicable on January 1, 2026, and the data reporting requirements that are applicable on January 1, 2027.

The agencies acknowledge that the final rule will impact bank processes, procedures, programs, systems, and controls. However, as discussed above, the agencies believe that the final rule's revised implementation period is sufficient for banks to implement necessary changes. As noted, the agencies expect to develop tools and training to help banks transition to and implement the new regulatory requirements.

With regard to staffing concerns, the agencies understand that banks may need to hire additional staff or that bank staff may need to be reassigned to work on CRA implementation. However, based on the agencies' supervisory experience, banks have demonstrated the ability to comply with major changes to other regulatory requirements. The agencies believe that implementing the final rule's requirements represents a comparable transition for banks.

Although the agencies understand that banks must comply with current CRA regulations while implementing the new CRA framework, this would be true of any transition period provided in the final rule.¹⁶²⁸ The agencies acknowledge that some States have their own CRA laws and regulations that apply to State-chartered banks and savings associations, but the agencies do not possess authority in connection with these State laws and regulations or any control over when or if these States might update their CRA regulations to conform with the final rule.

The agencies understand that many banks will rely on third-party vendors to assist with implementing the final rule. The agencies acknowledge the suggestion that the transition period should be longer for banks that rely on vendors; however, the agencies believe that providing a longer transition period for these banks would unfairly disadvantage other banks that handle the majority, or all, of their compliance needs internally. The agencies further believe that the increased transition time in the final rule provides sufficient time for banks working with vendors to implement the amended regulations. The agencies also recognize that banks may need to implement both Section 1071 regulations and the amended CRA regulations on overlapping timelines. However, for the reasons discussed above, the agencies believe the transition period provides sufficient time before many final rule provisions are applicable on January 1, 2026.

¹⁶²⁸ During the period between the final rule's effective date and the applicability dates in the final rule for certain provisions, the current CRA regulations will remain applicable for these provisions. See discussion of § __.51(a)(2)(iii), below. (The final rule includes each agency's current CRA regulation in new appendix G and sunsets these appendices as of the final applicability date, at which time all provisions of the final rule will be applicable.)

Moreover, the agencies eventually intend to leverage Section 1071 data, which will minimize data collection, maintenance, and reporting burden on large banks.

The agencies are committed to maintaining an open dialogue with stakeholders during the implementation period. This will allow all parties, including the agencies, to learn from the implementation process and develop best practices. As discussed above, the agencies agree that interagency training will be vital during this period and intend to develop training for banks, examiners, and other key stakeholders to ensure that they understand the regulatory requirements. The agencies expect to issue clarifying guidance to address relevant issues that arise following publication of the final rule.

§ __.51(a)(2)(ii)

The Agencies' Proposal

In proposed § __.51(a)(2)(ii), the agencies provided that the proposed § __.12 definitions of “small business” and “small farm” (which are based on the gross annual revenue size) would be applicable two years after the *Federal Register* publication of a final rule. The agencies explained that the applicability date for these definitions would be on or after the CFPB makes the Section 1071 regulations effective. The agencies sought feedback on whether to tie the applicability date of these definitions to when the CFPB finalized its Section 1071 rulemaking or to provide an additional 12 months after the CFPB finalized its rulemaking. The agencies also asked when they should sunset the “small business loan” and “small farm loan” definitions.

Additionally, the agencies proposed that banks that are required to collect new CRA data under amended CRA regulations starting 12 months after publication of the final rule be required to report data to the appropriate Federal banking agency two years after *Federal Register* publication of a final rule, by April 1 of the year following the first year of data collection and maintenance. The agencies believed that the applicability dates for these provisions would give banks sufficient time to implement the proposed data collection, maintenance, and reporting framework. The agencies also proposed that the data disclosure requirements in proposed § __.42(b), (g), (h), and (i) would become applicable the year following the first year of data collection.

Comments Received

Most commenters that provided input on this aspect of the proposal indicated that they required additional time than proposed to comply with new small business lending and small farm lending definitions. Some stated that the new definitions should not be applicable in the middle of a bank’s evaluation period and, in these cases, banks should be allowed to use the current definitions. With respect to the agencies’ question on the timing of the applicability of the new CRA small business and small farm definitions in light of the Section 1071 rulemaking, commenter views were mixed. Several commenters supported tying the effective dates to the effective date of the Section 1071 rulemaking, but others supported provision of an additional year. A commenter requested that the agencies exhibit flexibility, while another explained that providing banks with time for data validation and analysis using consistent definitions would promote accurate metrics for both the CRA and Section 1071 frameworks. Another commenter stated that it was difficult to evaluate the agencies’ CRA proposal because the Section 1071 rulemaking was not yet final.

With respect to the agencies' question on sunseting the current small business loan and small farm loan definitions, commenters' suggestions included sunseting the current definitions: at the end of the calendar year after the new definitions are effective; within 12 months of publication of a CRA final rule; when banks transition to reporting Section 1071 data; one year after banks implement the Section 1071 regulations; and when the current small business loan and small farm definitions are not applicable to any examination data.

Numerous commenters also addressed the transition period for the data reporting requirements in the rule, stating that the proposed transition period is insufficient. As with the data collection and maintenance requirements, many commenters addressed the issues related to transitioning to both a new CRA framework and the CFPB's Section 1071 regulations. Other commenters said that banks should not be required to report data under two different CRA frameworks in the same calendar year. Another noted that CDFI banks already have an unsupportable amount of data reporting due by March 1. One commenter stated that all banks, particularly large and complex ones, will need to invest significant resources to set up new data collection, maintenance, and reporting mechanisms and recommended a longer transition period for new reporting requirements that is at least 36 months before the beginning of a bank's first evaluation period.

Final Rule

To align the data reporting requirements with the January 1, 2026, applicability date in the final rule for the data collection and maintenance requirements, the final rule provides that all data reporting requirements are applicable on January 1, 2027, instead of two years after publication in the *Federal Register*, as proposed. Because final § __.42(b) provides that banks are required to report data by April 1 of the year following the collection of data, this means that banks will have more than three years following the publication of the final rule before they will need to report data under the final rule. As with the data collection and maintenance requirements and as explained in the section-by-section analysis for final § __.42, the final rule's new data reporting requirements are applicable to large banks.

As noted above, the agencies are finalizing the proposed § __.12 definitions of "small business" and "small farm," and changing the applicability date for these definitions to January 1, 2026, to align with the performance standards. Without this change, there would be ambiguity in the amended regulations in instances where those defined terms are used, including in final §§ __.13, __.22, and __.23.

With respect to the agencies' transition to using Section 1071 data, as indicated in the section-by-section analysis for final § __.12, the agencies have removed proposed references to Section 1071 data in the final rule's regulatory text. Instead, the agencies are including amendments in the final rule that provide for a transition to Section 1071 small business and small farm lending data once these data becomes available. These transition amendments implement the intent of the agencies articulated in the proposal to leverage Section 1071 data while accounting for the current uncertainty surrounding the availability of that data. Specifically, when effective, these transition amendments will add appropriate references to the Section 1071 rulemaking, remove references to Call Report-based small business and small farm data, and make other corresponding changes to the final rule regulatory text.

The agencies are not including an effective date for these Section 1071-related transition amendments in the final rule. Instead, once the availability of Section 1071 data is clarified, the

agencies will take steps to finalize and provide appropriate notice in the *Federal Register* of the effective date of the transition amendments. The agencies expect that the effective date will be on January 1 of the relevant year to align with the final rule's data collection and reporting, benchmark calculations, and performance analysis, which all are based on whole calendar years.

§ __.51(a)(2)(iii)

Because the current CRA regulations will continue to apply until the above applicability dates take effect, the agencies have included in their agency-specific amendments a new Appendix G that contains the current CRA regulations. The agencies have also added a new paragraph (a)(2)(iii) to § __.51 that references this appendix. Specifically, this paragraph provides that, prior to the applicability dates in paragraphs (a)(2)(i) and (ii) of this section, banks must comply with the relevant provisions of the CRA regulations in effect on the day before the final rule's effective date, as set forth in Appendix G. This paragraph further provides that, the relevant provisions set forth in Appendix G continue to be applicable to CRA performance evaluations pursuant to 12 U.S.C. 2903(a)(1) that assess activities that a bank conducted prior to the date the final rule became applicable, except as provided in paragraphs (c), and (d), as discussed below. Appendix G will be effective until January 1, 2031, when the agencies expect the appendix to no longer be necessary.

§ __.51(b) HMDA data disclosures

§ __.51(c) Consideration of bank activities

The Agencies' Proposal

Proposed § __.51(b)(1) provided that the agencies would begin conducting CRA examinations pursuant to the Retail Lending Test, Retail Services and Products Test, Community Development Financing Test, Community Development Services Test, and Community Development Financing Test for Wholesale and Limited Purpose Banks, and for strategic plan banks, beginning two years after *Federal Register* publication of a final rule. The preamble to the proposed rule noted that examinations conducted after this date would evaluate bank activities conducted during the prior year, for which the proposal's requirements related to bank activities would already be effective. The agencies further explained in the preamble to the proposed rule that CRA examinations conducted immediately after this date would use modified procedures until peer data and applicable benchmarks become available.

Proposed § __.51(b)(1) also provided that the agencies would comply with the HMDA data disclosure requirements in § __.42(j) beginning two years after publication of a final rule.

Proposed § __.51(b)(2) provided that in assessing a bank's CRA performance, the agencies would consider any loan, investment, or service that was eligible for CRA consideration at the time that the bank conducted the activity or entered into a legally binding commitment to make the loan or investment.

Comments Received

The agencies received numerous comments on timing and related challenges regarding CRA examinations under a final rule, with several suggesting specific approaches to address these challenges. Some commenters expressed concern that, for many banks, the next examination would be based on two different CRA frameworks and that the first banks to be examined under the new framework would be at a disadvantage. Another commenter urged the agencies to

provide banks with more time to understand how their performance will be measured in order to make any necessary course corrections. Many other commenters suggested alternatives for when examinations under the new framework should begin. For example, commenters suggested that examinations should begin when banks have had sufficient time or a full examination cycle to collect and report data under the amended regulations or in the calendar year following adequate data collection. Other alternatives suggested are when the agencies have collected and shared with banks two or more years of data and 24 months after the data collection requirements are applicable.

Final Rule

After carefully considering the comments, the agencies are removing the start dates for examinations pursuant to the amended regulations' performance tests from final § __.51. This change will allow each agency to set its own policies and procedures for conducting examinations under the amended regulations, including those that cover periods when both CRA frameworks apply. The agencies will carefully consider the comments received when developing these policies and procedures. Not including the start dates for examinations in the final rule also ensures that the new performance standards will not be applied retroactively to banks' performance in calendar years prior to 2026.

The agencies are revising proposed § __.51(b)(1), renumbered in the final rule as § __.51(b), to reflect the increased length of the transition period in the final rule. Final § __.51(b) provides that each agency will publish HMDA data disclosures pursuant to final § __.42(j) on its respective website beginning on January 1, 2027. Final § __.42(j) provides that the Board, FDIC, or OCC, as applicable, will publish HMDA demographic information for large banks on their respective websites. *See* the section-by-section analysis for § __.42(j).

The agencies are finalizing as proposed final § __.51(b)(2), renumbered in the final rule as § __.51(c). Under the final rule, in assessing a bank's CRA performance the agency will consider any loan, investment, or service, or product that was eligible for CRA consideration at the time the bank conducted the activity or at the time that the bank entered into a legally binding commitment to make the loan or investment.

§ __.51(d) Strategic Plans

§ __.51(d)(1) *New and replaced strategic plans*

§ __.51(d)(2) *Existing strategic plans*

The Agencies' Proposal

The agencies proposed in § __.51(a)(2)(i) that the strategic plan provisions in proposed § __.27 would be applicable one year after publication of a final rule. Proposed § __.51(c) provided that the current regulations would apply to any new strategic plan (including a strategic plan that replaces an expired strategic plan) that is submitted to an agency for approval on or after the date of the final rule's publication in the *Federal Register* but before proposed § __.27 would be applicable. Strategic plans approved under this paragraph would generally remain in

effect until the expiration date of the plan.¹⁶²⁹ Proposed § __.51(c) further provided that a strategic plan in effect as of the publication date of the final rule would remain in effect until the expiration date of the strategic plan.

Comments Received

The agencies received only one specific comment on proposed § __.51(c). This commenter recommended that the effective date of amended regulations relating to strategic plans be the later of the following: (1) the day after the bank's current Strategic Plan expires; and (2) when the asset-size category-based performance tests are applicable to banks not subject to a strategic plan. The commenter stated that this will ensure that banks that choose to be evaluated under a strategic plan are given enough time to comply with the new requirements if implementation requirements are delayed.

Final Rule

The agencies are revising proposed § __.51(c), renumbered as final § __.51(d), to provide that the current regulations will apply to any new strategic plan (including a strategic plan that replaces an expired strategic plan) that is submitted to an agency for approval between the date that the final rule is published in the *Federal Register* and November 1, 2025. The agencies have updated the date in this provision to reflect the increased transition period in the final rule for § __.27. Additionally, the agencies are revising final § __.51(d) to provide that the agencies will not accept any strategic plan submitted on or after November 1, 2025, and before January 1, 2026, the applicability date of the final § __.27. The agencies are making these changes to ensure there is sufficient time for each agency to make decisions about submitted strategic plans under the current regulations before the final rule's strategic plan provisions are applicable. Under the current regulations, the agencies have 60 days to act on a complete strategic plan once it is received.¹⁶³⁰ Therefore, implementing a cut-off date of November 1, 2025, for strategic plans allows the agencies time to review a strategic plan under the current regulations before addressing strategic plans received on or after January 1, 2026, and acting on such plans under the amended regulations. As a technical change, the final rule also clarifies that the current regulations will only apply to such a strategic plan submission that the agency has determined is a complete plan consistent with the requirements of current 12 CFR __.27.

The agencies are finalizing the provision that a strategic plan approved under final § __.51(d)(1) remains in effect until expiration of the plan. Similarly, the agencies are finalizing as proposed § __.51(c)(2), renumbered as final § __.51(d)(2), providing that a strategic plan in effect as of the publication date of the final rule in the *Federal Register* remains in effect until the expiration date of the plan.

The agencies believe that the final rule appropriately addresses the commenter's suggestion because a strategic plan approved by the agencies under the current regulations remains in effect

¹⁶²⁹ Specifically, the Board and the FDIC proposed in § __.51(c)(2) that a strategic plan in effect as of the effective date of a final rule would remain in effect until the expiration date of that plan, and the OCC proposed in § 25.51 that a strategic plan in effect as of the publication date of a final rule remains in effect until the expiration date of the plan, except for provisions that were not permissible under its CRA regulations as of January 1, 2022.

¹⁶³⁰ See current 12 CFR __.27(g).

until expiration of the plan, and the new strategic plan provisions are applicable on January 1, 2026, the same time that the performance standards are applicable.

§ __.51(e) First evaluation under amended [part X]

The agencies are revising proposed § __.51 to add a new paragraph (e), which provides that in its first performance evaluation under the final rule a large bank that has 10 or more facility-based assessment areas in any State or multistate MSA, or nationwide, as applicable, and that was subject to evaluation under this the agencies' CRA regulation prior to [INSERT DATE OF PUBLICATION IN THE FEDERAL REGISTER] may not receive a rating of "Satisfactory" or "Outstanding" in that State or multistate MSA, or for the institution unless the bank received an overall facility-based assessment area conclusion, calculated as described in paragraph g.2.ii of appendix D, of at least "Low Satisfactory" in 60 percent or more of the total number of its facility-based assessment areas in that State or multistate MSA, or nationwide, as applicable. In a large bank's second examination under the final rule and thereafter, the requirement in final § __.28(b)(4)(ii) will apply if a large bank has a combined total of 10 or more facility-based assessment areas and retail lending assessment areas in any State, multistate MSA, or nationwide, as applicable.

The agencies believe this phased approach is appropriate because, for a large bank's first examination under the final rule, both this requirement—that a large bank receives an overall assessment area conclusion of at least "Low Satisfactory" in 60 percent or more of its facility-based assessment areas and retail lending assessment areas if it meets a threshold number of facility-based assessment areas and retail lending assessment areas—and the concept of retail lending assessment areas will be new. Therefore, at first, it is appropriate to only apply the minimum "Low Satisfactory" requirement to large banks with the most facility-based assessment areas in States, multistate MSAs, and nationwide, as applicable, as well as to provide banks with additional time to consider their performance under the Retail Lending Test in retail lending assessment areas. *See* the section-by-section analysis for § __.28(b)(4)(ii) for a detailed discussion of this requirement.

V. Regulatory Analysis

Regulatory Flexibility Act

Under the Regulatory Flexibility Act (RFA) (5 U.S.C. 601 *et seq.*), an agency must consider the impact of its rules on small entities. Specifically, section 3 of the RFA requires an agency to provide a final regulatory flexibility analysis (FRFA) with a final rule unless the head of the agency certifies that the rule will not have a significant economic impact on a substantial number of small entities¹⁶³¹ and publishes this certification and a statement of its factual basis in the *Federal Register*.

OCC

The OCC currently supervises 1,060 institutions (commercial banks, trust companies, Federal savings associations, and Federal branches or agencies of foreign banks, collectively

¹⁶³¹ Small Business Administration (SBA) regulations currently define small entities to include banks and savings associations with total assets of \$850 million or less, and trust banks with total assets of \$47.0 million or less.

banks),¹⁶³² of which approximately 661 are small entities under the RFA.¹⁶³³ The OCC estimates that the final rule will impact approximately 617 of these small entities,¹⁶³⁴ of which the OCC anticipates that 560 entities will be small banks, 46 entities will be intermediate banks, and 6 entities will be limited purpose banks, as defined under the final rule, and 5 entities will be evaluated based on an OCC-approved strategic plan.

The OCC estimates the annual cost for small entities to comply with the final rule will be, on average, approximately \$18,304 dollars per bank (143 hours¹⁶³⁵ × \$128 per hour¹⁶³⁶). In general, the OCC classifies the economic impact on a small entity as significant if the total estimated impact in one year is greater than 5 percent of the small entity's total annual salaries and benefits or greater than 2.5 percent of the small entity's total non-interest expense. The OCC defines a substantial number as five percent or more of OCC-supervised small entities, or 31 small entities for purposes of this final rule. Based on these thresholds, the OCC estimates the final rule will have a significant economic impact on approximately 14 small entities, which is not a substantial

¹⁶³² Based on data accessed using FINDRS on August 23, 2023.

¹⁶³³ The OCC bases its estimate of the number of small entities on the SBA's size thresholds for commercial banks and savings institutions (\$850 million) and trust companies (\$47 million). Consistent with the SBA General Principles of Affiliation in 13 CFR 121.103(a) the OCC counts the assets of affiliated financial institutions when determining if the OCC should classify an OCC-supervised institution as a small entity. The OCC uses December 31, 2022, to determine size because a "financial institution's assets are determined by averaging the assets reported on its four quarterly financial statements for the preceding year." 13 CFR 121.201, fn. 8.

¹⁶³⁴ These 617 small entities are those OCC-regulated banks with total assets of \$850 million or less or trust banks with total assets of \$47.0 million or less that are subject to the OCC's CRA regulation.

¹⁶³⁵ In response to two comment letters the agencies received on the OCC's RFA analysis of the proposed rule, the OCC revised its hours per bank estimate in the final rule to 143 hours. The OCC arrived at this estimate by calculating a weighted average based on 120 hours for small entities classified as small or limited purpose pursuant to the final rule, 2,200 hours for small entities classified as strategic plan pursuant to the final rule, and 200 hours for small entities classified as intermediate pursuant to the final rule.

¹⁶³⁶ To estimate the compensation rate, the OCC reviewed May 2022 data for wages (by industry and occupation) from the U.S. Bureau of Labor Statistics (BLS) for credit intermediation and related activities (NAICS 5220A1). To estimate compensation costs associated with the rule, the OCC used \$128.05 per hour, which is based on the average of the 90th percentile for six occupations adjusted for inflation (5.1 percent as of Q1 2023), plus an additional 34.3 percent for benefits (based on the percent of total compensation allocated to benefits as of Q4 2022 for NAICS 522: credit intermediation and related activities).

number.¹⁶³⁷ Therefore, the OCC certifies that the final rule will not have a significant economic impact on a substantial number of small entities.

Board

For the reasons described below, the Board is certifying that the final rule will not have a significant economic impact on a substantial number of small entities. Board-supervised institutions that will be subject to the final rule are state member banks (as defined in section 3(d)(2) of the Federal Deposit Insurance Act of 1991), and uninsured state branches of a foreign bank (other than limited branches) resulting from certain acquisitions under the International Banking Act, unless such bank does not perform commercial or retail banking services by granting credit to the public in the ordinary course of business.

The Board estimates that approximately 464 Board-supervised RFA small entities would be subject to the final rule.¹⁶³⁸ Of these, approximately 427 would be considered small banks under the final rule, and approximately 37 would be considered intermediate banks under the final rule. The final rule defines “small bank” to mean a bank that had average assets of less than \$600 million in either of the prior two calendar years, and would define “intermediate bank” to mean a bank that had average assets of at least \$600 million in both of the prior two calendar years and average assets of less than \$2 billion in either of the prior two calendar years, in each case based on the assets reported on its four quarterly Call Reports for each of those calendar years.

The final rule includes a new evaluation framework for evaluating the CRA performance of banks that is tailored by bank size and business model. For example, the final rule establishes an evaluation framework containing four tests for large retail banks: Retail Lending Test, Retail Services and Products Test, Community Development Financing Test, and Community Development Services Test. In addition to the new CRA evaluation framework, the final rule includes data collection, maintenance, and reporting requirements necessary to facilitate the application of various tests.

Because the final rule maintains the current small bank evaluation process and the small bank performance standards, the final rule does not generally impose any new requirements with significant burden on Board-supervised small entities with less than \$600 million in assets. Under the final rule, banks must collect, maintain, and report data on the activities of their operations subsidiaries or operating subsidiaries (unless the subsidiaries are independently subject to the CRA), as applicable. The Board estimates that this requirement impacts approximately 139 banks with an estimated annual burden of 38 hours per bank. For supervised

¹⁶³⁷ In response to comment letters, the OCC also evaluated the impact of the final rule using a wage rate \$150 per hour. Using this hourly rate, the OCC estimated the annual cost for small entities to comply with the final rule will be on average approximately \$21,450 dollars per bank (143 hours × \$150 per hour), and the final rule will have a significant economic impact on 20 small entities, which is not a substantial number.

¹⁶³⁸ Consistent with the General Principles of Affiliation in 13 CFR 121.103, the assets of all domestic and foreign affiliates are counted toward the \$850 million threshold when determining whether to classify a depository institution as a small entity. The Board’s estimate is based on total assets reported on Forms FR Y-9 (Consolidated Financial Statements for Holding Companies) and FFIEC 041 (Consolidated Reports of Condition and Income) for 2021.

small entities that are defined as intermediate banks under the final rule, *i.e.*, banks with assets between \$600 million and \$850 million, the final rule would add some additional compliance burden because these banks would be subject to the new Retail Lending Test. However, the Board does not believe that these requirements would impose a significant economic impact on banks. Specifically, with respect to the Retail Lending Test, these intermediate banks would not be subject to regulatory data collection and maintenance requirements for retail loans. In addition, these intermediate banks would be subject to community development performance standards that are substantially similar to the criteria for evaluating community development performance today. However, these intermediate banks could choose to be evaluated under the Community Development Financing Test and would then be required to collect and maintain the loan and investment data applicable to that test.

The agencies' current CRA regulations similarly allow small banks and intermediate small banks to voluntarily opt into one or more alternative tests in lieu of the mandatory or default requirements. However, based on the Board's supervisory experience with its current CRA regulation, few small banks or intermediate small banks choose to be evaluated under alternative tests, and the Board expects that this would continue to be the case under the final rule. For the reasons described above, the Board is certifying that the final rule would not have a significant economic impact on a substantial number of small entities.

FDIC

The RFA generally requires an agency, in connection with a final rule, to prepare and make available for public comment a FRFA that describes the impact of the final rule on small entities.¹⁶³⁹ However, a FRFA is not required if the agency certifies that the final rule will not have a significant economic impact on a substantial number of small entities.¹⁶⁴⁰ The Small Business Administration (SBA) has defined "small entities" to include banking organizations with total assets of less than or equal to \$850 million.¹⁶⁴¹

Generally, the FDIC considers a significant economic impact to be a quantified effect in excess of 5 percent of total annual salaries and benefits or 2.5 percent of total noninterest expenses. The FDIC believes that effects in excess of one or more of these thresholds typically represent significant economic impacts for FDIC-supervised institutions. While some of the expected effects of the final rule are difficult to quantify, the FDIC believes that the final rule is unlikely to have a significant impact on a substantial number of small entities. Therefore, the

¹⁶³⁹ 5 U.S.C. 601 *et seq.*

¹⁶⁴⁰ 5 U.S.C. 605.

¹⁶⁴¹ The SBA defines a small banking organization as having \$850 million or less in assets, where an organization's "assets are determined by averaging the assets reported on its four quarterly financial statements for the preceding year." 13 CFR 121.201 (as amended by 87 FR 69118, effective December 19, 2022). In its determination, the "SBA counts the receipts, employees, or other measure of size of the concern whose size is at issue and all of its domestic and foreign affiliates." 13 CFR 121.103. Following these regulations, the FDIC uses an insured depository institution's affiliated and acquired assets, averaged over the preceding four quarters, to determine whether the insured depository institution is "small" for the purposes of RFA.

FDIC certifies that the final rule will not have a significant economic effect on a substantial number of small entities. The FDIC’s rationale for its determination is discussed below.

As of March 31, 2023, the FDIC supervises 3,012 insured depository institutions (IDIs), of which 2,306 are defined as small entities by the SBA (“SBA-small entities”) for purposes of the RFA.¹⁶⁴² The final rule would affect all FDIC-supervised institutions, therefore the FDIC estimates that the final rule would affect all 2,306 small entities. To avoid confusion the small and intermediate size categories of the final rule are referred to as “CRA-small” and “CRA-intermediate” to distinguish them from “SBA-small entities” in certain places below. Also, as the final rule renames the current “intermediate small” category as “intermediate,” for ease of reading the “intermediate small” category is referred to below as “intermediate.”

As discussed in the **SUPPLEMENTARY INFORMATION**, the final rule would make CRA examinations more transparent and objective through the use of quantitative metrics and thresholds, thereby helping ensure that all relevant activities are considered and that the scope of the performance evaluation more accurately reflects the communities served by each institution. The final rule increases the asset size thresholds for the CRA-small and CRA-intermediate categories. This change will have an immediate effect on the examination requirements of some of these banks. Under the final rule, the total asset threshold for CRA-small IDIs changes from less than \$376 million in total assets as of December 31 in either of the prior two calendar years, to less than \$600 million in total assets as of December 31 in either of the prior two calendar years. Further, the final rule raises the minimum asset size for CRA-intermediate IDIs from \$376 million in total assets as of December 31 in both of the prior two calendar years to \$600 million in total assets as of December 31 in both of the prior two calendar years. Also, under the final rule the maximum asset size for CRA-intermediate IDIs increases from \$1.503 billion in total assets as of December 31 in either of the prior two calendar years to \$2 billion in total assets as of December 31 in either of the prior two calendar years. The asset size thresholds would be adjusted annually for inflation under the final rule, as they are under the current framework. Finally, limited purpose SBA-small entities, and SBA-small entities operating under strategic plans, would remain in their respective categories under the final rule.

Under the current framework, 1,759 of the 2,306 SBA-small entities are CRA-small, 527 are CRA-intermediate, 17 operate according to approved strategic plans, and three are designated as wholesale or limited purpose banks. Under the final rule, 2,104 of the 2,306 SBA-small entities are CRA-small, 182 are CRA-intermediate, and the number of institutions operating under strategic plans or that are limited purpose are unchanged. The final rule’s upward adjustment of the asset size threshold for CRA-small banks reclassifies 345 institutions from CRA-intermediate to CRA-small.

CRA-small banks under the final rule have the option of continuing to have their CRA performance evaluated under the current CRA-small bank lending test or of opting into the Retail Lending Test. Similar to the current evaluation framework, under the final rule CRA-small banks rated “Satisfactory” may receive additional consideration for qualifying activities to attempt to achieve an institution-level rating of “Outstanding.”

¹⁶⁴² Call Report data (March 31, 2023).

CRA-intermediate banks under the final rule are evaluated under the new Retail Lending Test and the current framework's community development test for CRA-intermediate banks, or may opt into the final rule's Community Development Financing Test. Similar to the current evaluation framework, under the final rule if rated "Satisfactory" an intermediate bank may receive additional consideration for other qualifying activities to attempt to achieve an institution-level rating of "Outstanding."

Additionally, SBA-small entities are likely to incur costs associated with making changes to their policies, procedures, and internal systems in order to comply with the final rule. However, the FDIC believes that these costs are likely to be low for the vast majority of SBA-small entities because, as mentioned previously, under the final rule CRA-small banks' performance will be evaluated under the current CRA-small bank lending test. As there are 1,759 SBA-small banks—representing 76 percent of all 2,306 SBA-small entities—in the CRA-small category under both the current and final rule's framework, the FDIC expects the vast majority of SBA-small entities to be only modestly affected by the final rule.

The agencies received two public comments on the RFA analysis in the NPR. Both of these commenters asserted that the estimated cost of complying with the NPR would be substantially higher than what the OCC – the only agency to provide estimated cost burdens for SBA-small banks in the NPR – had estimated. While the comments were not directed at the FDIC, the FDIC reviewed the comments and determined that while the commenters' claims may reflect their experiences or their institutions' experiences, the FDIC notes that compliance costs may vary substantially across institutions and the agencies' estimates are meant to be overall averages. As previously discussed, the FDIC incorporated a number of changes into the final rule as a result of public comments received regarding compliance burden. The agencies believe the initial burden estimates remain appropriate and have not made any changes to those estimates for this final rule.

In addition, some commenters addressed the agencies' PRA burden estimates for the information collection requirements of the proposed rule. The commenters generally believed that the agencies' estimates of annual burden were too low. The FDIC notes that PRA burdens, like compliance costs, may vary across institutions, and the agencies' PRA burden estimates are meant to be overall averages. The FDIC calculated the estimated burden associated with the rule, including implementation costs, based on the agencies' extensive experience with CRA compliance and estimating associated burden. The FDIC believes the estimates of burden hours are accurate related to the recordkeeping, reporting, and disclosure requirements of the final rule.

For the reasons described above, the FDIC certifies that the final rule will not have a significant effect on a substantial number of small entities.

Paperwork Reduction Act

Certain provisions of the final rule contain "collections of information" within the meaning of the Paperwork Reduction Act (PRA) of 1995 (44 U.S.C. 3501 through 3521). In accordance with the requirements of the PRA, the agencies may not conduct or sponsor, and the respondent is not required to respond to, an information collection unless it displays a currently valid Office of Management and Budget (OMB) control number.

Comments Received

The agencies received four comments that appear to relate to the PRA addressing the agencies' estimated burden costs on the information collection requirements of the proposed rule. One commenter stated that the proposal would generally require considerable additional resources for implementation and ongoing costs to manage their CRA programs under the proposed rule. The commenter estimated that it could incur implementation costs of \$150,000. This commenter also believed that complying with the proposed rule would require substantially more time than the estimated yearly burden of 80 hours per year. Another commenter stated that the costs associated with implementing the proposal would be significantly greater than the agencies had estimated and could require significant investments at covered institutions, potentially including hiring several additional full-time employees. This commenter requested that the agencies provide a more detailed explanation of their estimations of the proposed rule's costs. Another commenter believed the estimated burden of 80 hours per year was very low, suggesting that another 500 hours, minimum, would be required for compliance. The commenter stated that the proposed rule is complex and would require significant investment by covered institutions to achieve compliance. An additional commenter stated that the agencies provided insufficient support for their burden estimates. This commenter requested that the agencies provide more details on the breakdown of estimated compliance costs and an analysis of how the potential costs might impact economic output.

As previously discussed, the agencies incorporated a number of changes into the final rule as a result of public comments received regarding compliance burden. The agencies have carefully reviewed their burden associated with recordkeeping, reporting, and disclosure for each section of the rule in light of these changes to the final rule and in consideration of the comments received. The agencies note that, consistent with the PRA, the PRA burden estimates reflect only the burden related to recordkeeping, reporting, and disclosure requirements in the final rule. PRA burdens, like compliance costs, may vary across institutions, and the agencies' PRA burden estimates are meant to be overall averages. The agencies do not have detailed data that would permit the agencies to precisely estimate the quantitative effect of the final rule for every type of institution. Accordingly, the burden estimates are shown based on the agencies' extensive experience with CRA compliance and estimating associated burden. The agencies estimated the associated burden by referencing the number of entities supervised by each agency and estimating the frequency of response and the time per response. The agencies believe the estimates of burden hours are reasonable considering the recordkeeping, reporting, and disclosure requirements of the final rule.

Final Rule

Under the final rule, the agencies retained the information collection provisions of the proposed rule, with certain modifications. The agencies have included a reporting burden for the community development illustrative list and confirmation of eligibility process pursuant to § __.14. The agencies have included a recordkeeping burden for Home Mortgage Loans pursuant to § __.42(a)(3). The agencies have also removed reporting requirements for Community development services pursuant to § __.42(b)(4) and Consumer loans data— automobile loans pursuant to § __.42(b)(2) Consumer loans data— automobile loans. However, recordkeeping requirements have been maintained for both provisions. More thorough discussion for both topics can be found in the **SUPPLEMENTARY INFORMATION** associated with § __.42.

The agencies are extending for three years the information collections contained in the final rule, with several revisions. The information collections contained in the final rule have been submitted to OMB for review and approval by the OCC and FDIC under section 3507(d) of the PRA (44 U.S.C. 3507(d)) and section 1320.11 of OMB's implementing regulations (5 CFR part 1320). The Board reviewed the final rule under the authority delegated to the Board by OMB. The Board will submit information collection burden estimates to OMB, and the submission will include burden for only Federal Reserve-supervised institutions.

Title of Information Collection: OCC Community Reinvestment Act Regulation; Board Reporting, Recordkeeping, and Disclosure Requirements Associated with Regulation BB; FDIC, Community Reinvestment Act.

OMB Control Numbers: OCC 1557– 0160; Board 7100–0197; FDIC 3064–0092.

Affected Public: Businesses or other for-profit.

Respondents: *OCC:* National banks, Federal savings associations, Federal branches and agencies; *FDIC:* All insured state nonmember banks, insured state-licensed branches of foreign banks, insured state savings associations, and bank service providers; *Board:* All state member banks (as defined in 12 CFR 208.2(g)), bank holding companies (as defined in 12 U.S.C. 1841), savings and loan holding companies (as defined in 12 U.S.C. 1467a), foreign banking organizations (as defined in 12 CFR 211.21(o)), foreign banks that do not operate an insured branch, state branch or state agency of a foreign bank (as defined in 12 U.S.C. 3101(11) and (12)), Edge or agreement corporations (as defined in 12 CFR 211.1(c)(2) and (3)), and bank service providers.

The new or revised information collection requirements in the final rule are as follows:

Reporting Requirements

§ __.14(b)(1) Request for confirmation of eligibility. A bank may request that the Board, FDIC, or OCC, confirm, in the format prescribed by that agency, that a loan, investment, or service is eligible for community development consideration.

§ __.26 Bank request for designation as a limited purpose bank. Banks requesting a designation as a limited purpose bank must file a request in writing with the appropriate Federal financial supervisory agency at least 90 days prior to the proposed effective date of the designation.

§ __.27 Strategic plan. Any bank may have its record of helping meet the credit needs of its entire community evaluated under a strategic plan, provided the appropriate Federal financial supervisory agency has approved the plan, the plan is in effect, and the bank has been operating under an approved plan for at least one year. Section __.27 of the final rule sets forth the requirements for strategic plans, including the term of a plan; the treatment of multiple assessment areas; the treatment of operations subsidiaries or operating subsidiaries, as applicable, and affiliates that are not operations subsidiaries or operating subsidiaries; justification requirements; public participation; submission; content; and required amendments due to a change in material circumstances. Additionally, during the term of a plan, a bank could request that the appropriate Federal financial supervisory agency approve an amendment to the plan in the absence of a change in material circumstances. A bank that requests such an amendment must provide an explanation regarding why it is necessary and appropriate to amend its plan goals.

§ __.42(b)(1) *Small business loan and small farm loan data.* A large bank must report annually by April 1 in prescribed electronic form, certain aggregate data for the prior calendar year for small business loans or small farm loans for each census tract in which the bank originated or purchased such loans.

§ __.42(b)(2) *Community development loans and community development investments data.* A large bank and a limited purpose bank that would be a large bank based on the asset size described in the definition of a large bank, must report annually by April 1 in prescribed electronic form the following community development loan and community development investment data for the prior calendar year: general information on community development loans and community development investments; specific information on the community development loan or investment; indicators of the impact and responsiveness of the loan or investment; allocation of the dollar volume of the community development loan or community development investment to geographic areas served by the loan or investment; location information; other information relevant to determining that an activity meets the standards under community development; and allocation of dollar value of activity to counties served by the community development activity (if available).

§ __.42(b)(3) *Deposits data.* A large bank with assets greater than \$10 billion must report annually by April 1 in prescribed electronic form deposits data for the previous calendar year including for each county, State, and multistate MSA and for the institution overall. The reporting includes the average annual deposit balances (calculated based on average daily balances as provided in statements such as monthly or quarterly statements, as applicable), in aggregate, of deposit accounts with associated addresses located in such county, State or multistate MSA where available, and for the institution overall. Any other bank that opts to collect and maintain deposits data must report these data in the same form and for the same duration as described in this paragraph. A bank that reports deposits data for which a deposit location is not available must report these deposits at the nationwide area.

§ __.42(c) *Data on operations subsidiaries or operating subsidiaries.* To the extent that its operations subsidiaries, or operating subsidiaries, as applicable, engage in retail banking services, retail banking products, community development lending, community development investments, or community development services, a bank must collect, maintain, and report data for these activities for purposes of evaluating the bank's performance. For home mortgage loans, a bank must be prepared to identify the loans reported by the operations subsidiary, or operating subsidiary, under 12 CFR part 1003, if applicable, or collect and maintain home mortgage loans by the operations subsidiary or operating subsidiary that the bank would have collected and maintained under § __.42(a)(3) had the loans been originated or purchased by the bank.

§ __.42(d) *Data on other affiliates.* A bank that elects to have retail banking services, retail banking products, community development lending, community development investments, or community development services engaged in by an affiliate (that is not an operations subsidiary or operating subsidiary) considered for purposes of this part must collect, maintain, and report the loans and investments, services, or products the bank would have collected, maintained, and reported under § __.42(a) and (b) had the loans, investments, services, or products been engaged in by the bank. For home mortgage loans, the bank must be prepared to identify the home mortgage loans reported by its affiliate under 12 CFR part 1003, if applicable, or collect and maintain home mortgage loans by the affiliate that the bank would have collected and maintained under § __.42(a)(3) had the loans been originated or purchased by the bank.

§ __.42(e) Data on community development loans and community development investments by a consortium or a third party. A bank that elects to have community development loans and community development investments by a consortium or third party be considered for purposes of this part must collect, maintain, and report the lending and investments data they would have collected, maintained, and reported under § __.42(a)(5) and (b)(2) if the loans or investments had been originated, purchased, refinanced, or renewed by the bank.

§ __.42(f)(1) Facility-based assessment areas. A large bank and a limited purpose bank that would be a large bank based on the asset size criteria described in the definition of a large bank must collect and report by April 1 of each year a list of each facility-based assessment area showing the States, MSAs, and counties that make up each facility-based assessment area, as of December 31 of the prior calendar year, or the last date the facility-based assessment area was in effect, provided the facility-based assessment area was delineated for at least six months of the prior calendar year.

§ __.42(f)(2) Retail lending assessment areas. A large bank with one or more retail lending assessment area delineated pursuant to § __.17 must collect and report each year by April 1 a list of retail lending assessment area showing the States, MSAs and counties in the retail lending assessment area for the prior calendar year.

Recordkeeping Requirements

§ __.42(a)(1) Small business loans and small farm loans data. A large bank must collect and maintain in prescribed electronic form, until the completion of its next CRA examination in which the data are evaluated, data on small business loans and small farm loans originated or purchased by the bank during the evaluation period.

§ __.42(a)(2) Consumer loans data— automobile loans. A large bank for which automobiles are a product line must collect and maintain in prescribed electronic form, until the completion of the bank's next CRA examination in which the data are evaluated, data on automobile loans originated or purchased by the bank during the evaluation period. A small or intermediate bank for which automobiles are a product line may collect and maintain the same automobile loan data in a format of the bank's choosing, including in an electronic form prescribed by the appropriate Federal banking agency, until the completion of the bank's next CRA examination in which the data are evaluated.

§ __.42(a)(3) Home mortgage loans. A large bank subject to 12 CFR part 1003 must collect and maintain in prescribed electronic form, until the completion of the bank's next CRA examination in which the data are evaluated, data on home mortgage loan applications, originations, and purchases outside the MSAs in which the bank has a home or branch office (or outside any MSA) pursuant to the requirements in 12 CFR 1003.4(e). A large bank that is not subject to 12 CFR part 1003 due to the location of its branches, but would otherwise meet the HMDA size and lending activity requirements pursuant to 12 CFR part 1003, must collect and maintain in electronic form, until the completion of the bank's next CRA examination in which the data are evaluated, data on closed-end home mortgage loan, excluding multifamily loans, originated or purchased during the evaluation period.

§ __.42(a)(4) Retail banking services and retail banking products data. A large bank must collect and maintain in prescribed electronic form until the completion of its next CRA

examination in which the data are evaluated, data on their retail banking services and retail banking products. These data include data regarding the bank's main offices, branches, and remote service facilities, and information with respect to retail banking services and retail banking products offered and provided by the bank during the evaluation period. Large banks with assets greater than \$10 billion, large banks with assets of less than or equal to \$10 billion that do not operate any branches, and large banks that request additional consideration for digital delivery systems and other delivery systems, must collect and maintain data on the range of services and products offered through those systems and digital and other delivery systems activity by individuals, families, or households in low-, moderate-, middle-, and upper-income census tracts. Large banks may also submit any additional information not required that demonstrates that their digital delivery systems and other delivery systems serve the needs of low- and moderate-income individuals, families, or households and low- and moderate-income census tracts. Large banks with assets greater than \$10 billion or large banks with assets of less than or equal to \$10 billion that request additional consideration for deposit products responsive to the needs of low- and moderate income individuals, families, or households must collect and maintain data including the number of responsive deposit products opened and closed in low-, moderate-, middle-, and upper-income census tracts, as well as the percentage of responsive deposit accounts in comparison to total deposit accounts. Pursuant to § __.42(a)(4), a bank may opt to collect and maintain additional data not required that demonstrates that digital delivery systems and other delivery systems serve low- and moderate-income individuals, families, or households and low- and moderate-income census tracts and any other information that demonstrates the availability and usage of the bank's deposit products responsive to the needs of low- and moderate-income individuals, families, or households and low- and moderate-income census tracts in a format of the bank's own choosing.

§ __.42(a)(5) Community development loans and community development investments data. A large bank, a limited purpose bank that would be a large bank based on the asset size criteria described in the definition of a large bank, and an intermediate bank that opts to be evaluated under the Community Development Financing Test, must collect and maintain until the completion of its next CRA examination in which the data are evaluated, the following data for community development loans and community development investments originated, purchased, refinanced, renewed, or modified by the bank: general information on community development loans and community development investments; specific community development loan or investment information; indicators of the impact and responsiveness of the loan or investment; allocation of the dollar volume of the community development loan or community development investment to geographic areas served by the loan or investment; location information; and other information relevant to determining that an activity meets the standards of a community development loan or community development investment. Large banks must collect and maintain this information in prescribed electronic form while an intermediate bank that opts to be evaluated under the Community Development Financing Test, must collect and maintain this information in the format used by the bank in the normal course of business.

§ __.42(a)(6) Community development services data. A large bank must collect and maintain in a format of the bank's choosing or in a standardized format provided by the agencies until the completion of its next CRA examination in which the data are evaluated, community development services data including community development services information, indicators of the impact and responsiveness of the activity, and location information.

§ __.42(a)(7) Deposits data. A large bank with assets greater than \$10 billion must collect and maintain annually in prescribed electronic form until the completion of its next CRA examination in which the data are evaluated, the dollar amount of its deposits at the county level based on deposit location. The bank allocates the deposits for which a deposit location is not available to the nationwide area. Annual deposits must be calculated based on average daily balances as provided in statements such as monthly or quarterly statements. Any other bank that opts to collect and maintain deposits data must collect and maintain the data in the same form and for the same duration as described in this paragraph in prescribed electronic form, until the completion of the bank’s next CRA examination in which the data are evaluated.

Disclosure Requirements

§§ __.43, __.44. Content and availability of public file and public notice by banks. Banks must maintain a public file, in either paper or digital format, that includes the information prescribed in each part. Banks are required to provide copies on request, either on paper or in another form acceptable to the person making the request, of the information in the bank’s public file. A bank is also required to provide in the public area of its main office and branches the public notice set forth in appendix F.

The totality of the information collection requirements under the final rule are summarized below:

BURDEN ESTIMATES

| Source and Type of Burden | Description | Estimated Number of Respondents | Average Estimated Hours per Response | Frequency of Response | Total Estimated Annual Burden |
|---------------------------|-------------------------------|---------------------------------|--------------------------------------|-----------------------|-------------------------------|
| Reporting | | | | | |
| § __.26 | <i>Limited purpose banks.</i> | | | | |
| | OCC | 1 | 4 | 1 | 4 |

| Total Estimated Annual Burden | | | | | |
| | OCC | | | | 130,891 |
| | Board | | | | 105,455 |
| | FDIC | | | | 234,974 |

Note: The agencies recognize burden for § __.42(a)(3)(i) under their existing information collections regarding the Home Mortgage Disclosure Act; 1557-0345, 7100-0247, and 3064-0046. § __.42(b)(3), § __.42(a)(2),

§ __.42(a)(5), and § __.42(a)(7) have burdens associated with optional or voluntary compliance. The agencies are estimating burden for optional or voluntary compliance with § __.42(b)(3), § __.42(a)(2), § __.42(a)(5), and § __.42(a)(7) by adding one respondent to the Estimated Number of Respondents.

FDIC

The total estimated annual burden for OMB No. 3064-0092 is 234,974 hours, an increase of 3,392 hours from the most recent PRA renewal.¹⁶⁴³

OCC

The total estimated annual burden for OMB No. 1557-0160 is 130,891 hours, an increase of 17,540 hours from the most recent PRA renewal.¹⁶⁴⁴

Board

The total estimated annual burden for OMB No. 7100-0197 is 105,455 hours, an increase of 30,339 hours from the most recent PRA renewal.¹⁶⁴⁵

Unfunded Mandates Reform Act

Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA) (2 U.S.C. 1532) requires an agency to prepare a budgetary impact statement before promulgating a final rule that includes any Federal mandate that may result in the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector, of \$100 million or more (adjusted annually for inflation and currently \$182 million) in any one year. If a budgetary impact statement is required, section 205 of the UMRA (2 U.S.C. 1535) also requires an agency to identify and consider a reasonable number of regulatory alternatives before promulgating a rule.

For the final rule, the OCC estimates that expenditures to comply with mandates during the first 12-month period of the final rule's implementation will be approximately \$91.8 million (approximately \$7.9 million associated with increased data collection, recordkeeping or reporting; \$82 million for large banks to collect, maintain, and report annually geographic data on deposits; and \$1.9 million for banks' strategic plan submissions).¹⁶⁴⁶ Therefore, the OCC concludes that the final rule will not result in an expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector of \$100 million or more annually

¹⁶⁴³ See FDIC Community Reinvestment Act Information Collection Request, OMB No. 3064-0092, https://www.reginfo.gov/public/do/PRAViewICR?ref_nbr=202204-3064-001.

¹⁶⁴⁴ See OCC Community Reinvestment Act Information Collection Request, OMB No. 1557-0160, https://www.reginfo.gov/public/do/PRAViewICR?ref_nbr=202202-1557-003.

¹⁶⁴⁵ See Board Community Reinvestment Act Information Collection Request, OMB No. 7100-0197, https://www.reginfo.gov/public/do/PRAViewICR?ref_nbr=202104-7100-002.

¹⁶⁴⁶ Several commenters addressed the OCC's UMRA analysis of the proposed rule. Some of these commenters stated that the agency underestimated burden of the proposed rule, and others noted that the OCC provided insufficient information about its actual calculations. In drafting the final rule, the OCC considered these comments and made changes from the proposal where appropriate.

(adjusted for inflation and currently \$182 annually) in any one year. Accordingly, the OCC has not prepared the budgetary impact statement.

Riegle Community Development and Regulatory Improvement Act of 1994

Pursuant to section 302(a) of the Riegle Community Development and Regulatory Improvement Act of 1994 (RCDRIA) (12 U.S.C. 4802(a)), in determining the effective date and administrative compliance requirements for new regulations that impose additional reporting, disclosure, or other requirements on insured depository institutions, an agency must consider, consistent with principles of safety and soundness and the public interest: (1) any administrative burdens that the rule will place on depository institutions, including small depository institutions and customers of depository institutions; and (2) the benefits of the rule.

The final rule will impose additional reporting, disclosure, or other requirements on banks, and the agencies determined the final rule's effective date and administrative compliance requirements in accordance with 12 U.S.C. 4802(a). Specifically, the agencies have considered the changes made by this final rule and believe that the rule's effective and applicability dates, described in the section-by-section analysis, will provide banks with adequate time to comply with the rule's requirements. The agencies also have considered the administrative burden of the final rule's administrative compliance by tailoring the final rule's performance standards based on bank size so that the new performance tests only apply to those banks with the greatest capacity to meet the rule's requirements and lend to their communities. For example, under the final rule, the agencies will continue to evaluate small banks under the small bank performance standards in the current CRA framework and to evaluate the community development performance of intermediate banks as under the current rule. Further, the final rule does not impose any new data requirements on small and intermediate banks. Further discussion of the consideration by the agencies of these administrative compliance requirements, and of the public comment received on these requirements as proposed, is found in the section-by-section discussion of the final rule in this **SUPPLEMENTARY INFORMATION**.

Section 302(b) of RCDRIA (12 U.S.C. 4802(b)) provides that new regulations and amendments to regulations prescribed by a Federal banking agency which impose additional reporting, disclosures, or other new requirements on insured depository institutions must generally take effect on the first day of a calendar quarter which begins on or after the date on which the regulations are published in final form. Consistent with this requirement, this final rule will be effective on April 1, 2024, which is the first date of a calendar quarter.

Administrative Procedure Act

Section 553(d) of the Administrative Procedure Act (APA) (5 U.S.C. 553(d)) requires that publication or service of a substantive rule generally be made not less than 30 days before its effective date. Consistent with this requirement, this final rule will be effective on April 1, 2024, which is more than 30 days after the final rule's publication in the *Federal Register*.

Plain Language

Section 722(a) of the Gramm-Leach-Bliley Act (12 U.S.C. 4809(a)) requires each Federal banking agency to use plain language in its proposed and final rulemakings. In the proposed rule the agencies invited but did not receive comments on their use of plain language. In this final rule, the agencies use plain language.

Congressional Review Act

For purposes of the Congressional Review Act (5 U.S.C. 801 *et seq.*), the OMB makes a determination as to whether a final rule constitutes a “major rule.” If a rule is deemed a “major rule” by the OMB, the Congressional Review Act generally provides that the rule may not take effect until at least 60 days following its publication. The Congressional Review Act defines a “major rule” as any rule that the Administrator of the Office of Information and Regulatory Affairs of the OMB finds has resulted in or is likely to result in—(1) an annual effect on the economy of \$100 million or more; (2) a major increase in costs or prices for consumers, individual industries, Federal, State, or local government agencies or geographic regions; or (3) significant adverse effects on competition, employment, investment, productivity, innovation, or on the ability of United States-based enterprises to compete with foreign-based enterprises in domestic and export markets.¹⁶⁴⁷ The agencies have submitted the final rule to the OMB for this major rule determination. As required by the Congressional Review Act, the agencies will also submit the final rule and other appropriate reports to Congress and the Government Accountability Office for review.¹⁶⁴⁸

VI. Text of Common Rule (All Agencies)

The text of the agencies’ common rule text appears below:

PART ____ COMMUNITY REINVESTMENT

Subpart A—General

__.11 Authority, purposes, and scope.

__.12 Definitions.

__.13 Consideration of community development loans, community development investments, and community development services.

__.14 Community development illustrative list; Confirmation of eligibility.

__.15 Impact and responsiveness review of community development loans, community development investments, and community development services.

Subpart B—Geographic Considerations

__.16 Facility-based assessment areas.

__.17 Retail lending assessment areas.

¹⁶⁴⁷ See 5 U.S.C. 804(2).

¹⁶⁴⁸ See 5 U.S.C. 801(a)(1).

- ___.18 Outside retail lending areas.
- ___.19 Areas for eligible community development activity.
- ___.20 [RESERVED]

Subpart C—Standards for Assessing Performance

- ___.21 Evaluation of CRA performance in general.
- ___.22 Retail lending test.
- ___.23 Retail services and products test.
- ___.24 Community development financing test.
- ___.25 Community development services test.
- ___.26 Limited purpose banks.
- ___.27 Strategic plan.
- ___.28 Assigned conclusions and ratings.
- ___.29 Small bank performance evaluation.
- ___.30 Intermediate bank performance evaluation.
- ___.31 [RESERVED].

Subpart D—Records, Reporting, Disclosure, and Public Engagement Requirements

- ___.42 Data collection, reporting, and disclosure.
- ___.43 Content and availability of public file.
- ___.44 Public notice by banks.
- ___.45 Publication of planned examination schedule.
- ___.46 Public engagement.

Subpart E—Transition Rules

- ___.51 Applicability dates, and transition provisions.

Appendix A to Part __—Calculations for the Retail Lending Test

Appendix B to Part __—Calculations for the Community Development Tests

Appendix C to Part __—Performance Test Conclusions

Appendix D to Part __—Ratings

Appendix E to Part __—Small Bank and Intermediate Bank Performance Evaluation
Conclusions and Ratings

Appendix F to Part __ [Reserved]

PART ____ COMMUNITY REINVESTMENT

Subpart A—General

§ __.11 Authority, purposes, and scope.

(a) [Reserved].

(b) *Purposes.* This part implements the requirement in the Community Reinvestment Act (12 U.S.C. 2901 *et seq.*) (CRA) that the [Agency] assess a bank’s record of helping to meet the credit needs of the local communities in which the bank is chartered, consistent with the safe and sound operation of the bank, and to take this record into account in the agency’s evaluation of an application for a deposit facility by the bank. Accordingly, this part:

(1) Establishes the framework and criteria by which the [Agency] assesses a bank’s record of responding to the credit needs of its entire community, including low- and moderate-income neighborhoods, consistent with the safe and sound operation of the bank; and

(2) Provides that the [Agency] takes that record into account in considering certain applications.

(c) [Reserved].

§ __.12 Definitions.

For purposes of this part, the following definitions apply:

Affiliate means any company that controls, is controlled by, or is under common control with another company. The term “control” has the same meaning given to that term in 12 U.S.C. 1841(a)(2), and a company is under common control with another company if both companies are directly or indirectly controlled by the same company.

Affordable housing means activities described in § __.13(b).

Area median income means:

(1) The median family income for the MSA (as defined in this section), if an individual, family, household, or census tract is located in an MSA that has not been subdivided into metropolitan divisions, or for the metropolitan division, if an individual, family, household, or census tract is located in an MSA that has been subdivided into metropolitan divisions; or

(2) The statewide nonmetropolitan median family income, if an individual, family, household, or census tract is located in a nonmetropolitan area.

Assets means a bank’s total assets as reported in Schedule RC of the Consolidated Reports of Condition and Income (Call Report) as filed under 12 U.S.C. 161, 1464, or 1817, as applicable, or Schedule RAL of the Report of Assets and Liabilities of U.S. Branches and Agencies of Foreign Banks as filed under 12 U.S.C. 1817 or 3102(b) or (c)(5), as applicable.

Branch means a staffed banking facility, whether shared or unshared, that the [Agency] approved or authorized as a branch and that is open to, and accepts deposits from, the general public.

Census tract means a census tract delineated by the U.S. Census Bureau.

Closed-end home mortgage loan has the same meaning given to the term “closed-end mortgage loan” in 12 CFR 1003.2, excluding loan transactions set forth in 12 CFR 1003.3(c)(1) through (c)(10) and (c)(13) and multifamily loans as defined in this section.

Combination of loan dollars and loan count means, when applied to a particular ratio, the average of:

- (1) The ratio calculated using loans measured in dollar volume; and
- (2) The ratio calculated using loans measured in number of loans.

Community development means activities described in § __.13(b) through (l).

Community Development Financial Institution (CDFI) means an entity that satisfies the definition in section 103(5)(A) of the Community Development Banking and Financial Institutions Act of 1994 (12 U.S.C. 4702(5)) and is certified by the U.S. Department of the Treasury’s Community Development Financial Institutions Fund as meeting the requirements set forth in 12 CFR 1805.201(b).

Community development investment means a lawful investment, including a legally binding commitment to invest, that is reported on Schedule RC-L of the Call Report or on Schedule L of the Report of Assets and Liabilities of U.S. Branches and Agencies of Foreign Banks, as applicable; deposit; membership share; grant; or monetary or in-kind donation that supports community development, as described in § __.13.

Community development loan means a loan, including a legally binding commitment to extend credit, such as a standby letter of credit, that supports community development, as described in § __.13. A community development loan does not include any home mortgage loan considered under the Retail Lending Test in § __.22, with the exception of one-to-four family

home mortgage loans for rental housing with affordable rents in nonmetropolitan areas under § __.13(b)(3).

Community development services means the performance of volunteer services by a bank's or its affiliate's board members or employees, performed on behalf of the bank, where those services:

(1) Support community development, as described in § __.13; and

(2) Are related to the provision of financial services, which include credit, deposit, and other personal and business financial services, or services that reflect a board member's or employee's expertise at the bank or affiliate, such as human resources, information technology, and legal services.

Consumer loan means a loan to one or more individuals for household, family, or other personal expenditures and that is one of the following types of loans:

(1) *Automobile loan* as defined in Schedule RC-C of the Call Report;

(2) *Credit card loan*, which has the same meaning as "credit card" in Schedule RC-C of the Call Report;

(3) *Other revolving credit plan*, as defined in Schedule RC-C of the Call Report; and

(4) *Other consumer loan*, as defined in Schedule RC-C of the Call Report.

County means any county, county equivalent, or statistically equivalent entity as defined by the U.S. Census Bureau.

Depository institution means any institution subject to the CRA, as described in 12 CFR 25.11, 228.11, and 345.11.

Deposits has the following meanings:

(1) For banks that collect, maintain, and report deposits data as provided in § __.42, *deposits* means deposits in domestic offices of individuals, partnerships, and corporations, and of commercial banks and other depository institutions in the United States as defined in Schedule RC-E of the Call Report; deposits does not include U.S. Government deposits, State and local government deposits, domestically held deposits of foreign governments or official institutions, or domestically held deposits of foreign banks or other foreign financial institutions; and

(2) For banks that do not collect, maintain, and report deposits data as provided in § __.42, *deposits* has the same meaning as in the FDIC's Summary of Deposits Reporting Instructions.

Deposit location means:

(1) For banks that collect, maintain, and report deposits data as provided in § __.42, the address on file with the bank for purposes of the Customer Identification Program required by 31 CFR 1020.220 or another documented address at which the depositor resides or is located.

(2) For banks that do not collect, maintain, and report deposits data as provided in § __.42, the county of the bank facility to which the deposits are assigned in the FDIC's Summary of Deposits.

Digital delivery system means a channel through which banks offer retail banking services electronically, such as online banking or mobile banking.

Distressed or underserved nonmetropolitan middle-income census tract means a census tract publicly designated as such by the Board of Governors of the Federal Reserve System (Board), the Federal Deposit Insurance Corporation (FDIC), and the Office of the Comptroller of the Currency (OCC), based on the criteria in paragraphs (1) and (2) of this definition, compiled in a list, and published annually by the Federal Financial Institutions Examination Council (FFIEC).

(1) A nonmetropolitan middle-income census tract is designated as distressed if it is in a county that meets one or more of the following criteria:

(i) An unemployment rate of at least 1.5 times the national average;

(ii) A poverty rate of 20 percent or more; or

(iii) A population loss of 10 percent or more between the previous and most recent decennial census or a net population loss of five percent or more over the five-year period preceding the most recent census.

(2) A nonmetropolitan middle-income census tract is designated as underserved if it meets the criteria for population size, density, and dispersion that indicate the area's population is sufficiently small, thin, and distant from a population center that the census tract is likely to have difficulty financing the fixed costs of meeting essential community needs. The criteria for these designations are based on the Urban Influence Codes established by the U.S. Department of Agriculture's Economic Research Service numbered "7," "10," "11," or "12."

Evaluation period means the period, generally in calendar years, during which a bank conducted the activities that the [Agency] evaluates in a CRA examination, in accordance with the [Agency]'s guidelines and procedures.

Facility-based assessment area means a geographic area delineated pursuant to § __.16.

High Opportunity Area means an area identified by the Federal Housing Finance Agency for purposes of the Duty to Serve Underserved Markets regulation in 12 CFR 1282, subpart C.

Home mortgage loan means a closed-end home mortgage loan or an open-end home mortgage loan as these terms are defined in this section.

Income level includes:

(1) *Low-income*, which means:

(i) For individuals, families, or households, income that is less than 50 percent of the area median income; or

(ii) For a census tract, a median family income that is less than 50 percent of the area median income.

(2) *Moderate-income*, which means:

(i) For individuals, families, or households, income that is at least 50 percent and less than 80 percent of the area median income; or

(ii) For a census tract, a median family income that is at least 50 percent and less than 80 percent of the area median income.

(3) *Middle-income*, which means:

(i) For individuals, families, or households, income that is at least 80 percent and less than 120 percent of the area median income; or

(ii) For a census tract, a median family income that is at least 80 percent and less than 120 percent of the area median income.

(4) *Upper-income*, which means:

(i) For individuals, families, or households, income that is 120 percent or more of the area median income; or

(ii) For a census tract, a median family income that is 120 percent or more of the area median income.

Intermediate bank means a bank, excluding a bank designated as a limited purpose bank pursuant to § __.26, that had assets of at least \$600 million as of December 31 in both of the prior two calendar years and less than \$2 billion as of December 31 in either of the prior two calendar years. The [Agency] adjusts and publishes the figures in this paragraph annually, based on the year-to-year change in the average of the Consumer Price Index for Urban Wage Earners

and Clerical Workers, not seasonally adjusted, for each 12-month period ending in November, with rounding to the nearest million.

Large bank means a bank, excluding a bank designated as a limited purpose bank pursuant to § __.26, that had assets of at least \$2 billion as of December 31 in both of the prior two calendar years. The [Agency] adjusts and publishes the figure in this paragraph annually, based on the year-to-year change in the average of the Consumer Price Index for Urban Wage Earners and Clerical Workers, not seasonally adjusted, for each 12-month period ending in November, with rounding to the nearest million.

Large Depository Institution means any depository institution, excluding depository institutions designated as limited purpose banks or savings associations pursuant to 12 CFR 25.26(a) and depository institutions designated as limited purpose banks pursuant to 12 CFR 228.26(a) or 345.26(a), that meets the asset size threshold of a large bank.

Limited purpose bank means a bank that is not in the business of extending closed-end home mortgage loans, small business loans, small farm loans, or automobile loans evaluated under § __.22 to retail customers, except on an incidental and accommodation basis, and for which a designation as a limited purpose bank is in effect, pursuant to § __.26.

Loan location. A loan is located as follows:

(1) A consumer loan is located in the census tract where the borrower resides at the time that the borrower submits the loan application;

(2) A home mortgage loan or a multifamily loan is located in the census tract where the property securing the loan is located; and

(3) A small business loan or small farm loan is located in the census tract where the main business facility or farm is located or where the borrower will otherwise apply the loan proceeds, as indicated by the borrower.

Low-cost education loan means any private education loan, as defined in section 140(a)(7) of the Truth in Lending Act (15 U.S.C. 1650(a)(8)) (including a loan under a State or local education loan program), originated by the bank for a student at an “institution of higher education,” as generally defined in sections 101 and 102 of the Higher Education Act of 1965 (20 U.S.C. 1001 and 1002) and the implementing regulations published by the U.S. Department of Education, with interest rates and fees no greater than those of comparable education loans

offered directly by the U.S. Department of Education. Such rates and fees are specified in section 455 of the Higher Education Act of 1965 (20 U.S.C. 1087e).

Low-income credit union (LICU) has the same meaning given to that term in 12 CFR 701.34.

Low-Income Housing Tax Credit (LIHTC) means a Federal tax credit for housing persons of low income pursuant to section 42 of the Internal Revenue Code of 1986 (26 U.S.C. 42).

Major product line means a product line that the [Agency] evaluates in a particular Retail Lending Test Area, pursuant to § __.22(d)(2) and paragraphs II.b.1 and II.b.2 of appendix A of this part.

Majority automobile lender means a bank for which more than 50 percent of its home mortgage loans, multifamily loans, small business loans, small farm loans, and automobile loans were automobile loans, as determined pursuant to paragraph II.b.3 of appendix A of this part.

Metropolitan area means any MSA.

Metropolitan division has the same meaning as that term is defined by the Director of the Office of Management and Budget.

Military bank means a bank whose business predominantly consists of serving the needs of military personnel who serve or have served in the U.S. armed forces (including the U.S. Air Force, U.S. Army, U.S. Coast Guard, U.S. Marine Corps, U.S. Navy, and U.S. Space Force) or their dependents. A bank whose business predominantly consists of serving the needs of military personnel or their dependents means a bank whose most important customer group is military personnel or their dependents.

Minority depository institution (MDI) means:

(1) For purposes of activities conducted pursuant to 12 U.S.C. 2907(a), “minority depository institution” as defined in 12 U.S.C. 2907(b)(1); and

(2) For all other purposes:

(i) “Minority depository institution” as defined in 12 U.S.C. 2907(b)(1);

(ii) “Minority depository institution” as defined in section 308 of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989 (FIRREA) (12 U.S.C. 1463 note); or

(iii) A depository institution considered to be a minority depository institution by the appropriate Federal banking agency. For purposes of this paragraph, “appropriate Federal banking agency” has the meaning given to it in 12 U.S.C. 1813(q).

Mission-driven nonprofit organization means an organization described in section 501(c)(3) of the Internal Revenue Code of 1986 (26 U.S.C. 501(c)(3)) and exempt from taxation under section 501(a) of such Code that benefits or serves primarily low- or moderate-income individuals or communities, small businesses, or small farms.

MSA means a metropolitan statistical area as that term is defined by the Director of the Office of Management and Budget.

Multifamily loan means an extension of credit that is secured by a lien on a “multifamily dwelling” as defined in 12 CFR 1003.2.

Multistate MSA means an MSA that crosses a State boundary.

Nationwide area means the entire United States and its territories.

Native Land Area means:

(1) All land within the limits of any Indian reservation under the jurisdiction of the United States, as described in 18 U.S.C. 1151(a);

(2) All dependent Indian communities within the borders of the United States whether within the original or subsequently acquired territory thereof, and whether within or without the limits of a State, as described in 18 U.S.C. 1151(b);

(3) All Indian allotments, the Indian titles to which have not been extinguished, including rights-of-way running through the same, as defined in 18 U.S.C. 1151(c);

(4) Any land held in trust by the United States for tribes or Native Americans or tribally-held restricted fee land;

(5) Reservations established by a State government for a tribe or tribes recognized by the State;

(6) Any Native village, as defined in 43 U.S.C. 1602(c), in Alaska;

(7) Lands that have the status of Hawaiian Home Lands as defined in section 204 of the Hawaiian Homes Commission Act, 1920 (42 Stat. 108), as amended;

(8) Areas defined by the U.S. Census Bureau as Alaska Native Village Statistical Areas, Oklahoma Tribal Statistical Areas, Tribal-Designated Statistical Areas, or American Indian Joint-Use Areas; and

(9) Land areas of State-recognized Indian tribes and heritage groups that are defined and recognized by individual States and included in the U.S. Census Bureau's annual Boundary and Annexation Survey.

New Markets Tax Credit (NMTC) means a Federal tax credit pursuant to section 45D of the Internal Revenue Code of 1986 (26 U.S.C. 45D).

Nonmetropolitan area means any area that is not located in an MSA.

Open-end home mortgage loan has the same meaning as given to the term "open-end line of credit" in 12 CFR 1003.2, excluding loan transactions set forth in 12 CFR 1003.3(c)(1) through (c)(10) and (c)(13) and multifamily loans as defined in this section.

Other delivery system means a channel, other than branches, remote services facilities, or digital delivery systems, through which banks offer retail banking services.

Outside retail lending area means the geographic area delineated pursuant to § __.18.

Persistent poverty county means a county that has had poverty rates of 20 percent or more for 30 years, as publicly designated by the Board, FDIC, and OCC, compiled in a list, and published annually by the FFIEC.

Product line means a bank's loans in one of the following, separate categories in a particular Retail Lending Test Area:

- (1) Closed-end home mortgage loans;
- (2) Small business loans;
- (3) Small farm loans; and
- (4) Automobile loans, if a bank is a majority automobile lender or opts to have its automobile loans evaluated pursuant to § __.22.

Remote service facility means an automated, virtually staffed, or unstaffed banking facility owned or operated by, or operated exclusively for, a bank, such as an automated teller machine (ATM), interactive teller machine, cash dispensing machine, or other remote electronic facility,

that is open to the general public and at which deposits are accepted, cash dispersed, or money lent.

Reported loan means:

(1) A home mortgage loan or a multifamily loan reported by a bank pursuant to the Home Mortgage Disclosure Act, as implemented by 12 CFR part 1003; or

(2) A small business loan or a small farm loan reported by a bank pursuant to § __.42.

Retail banking products means credit and deposit products or programs that facilitate a lending or depository relationship between the bank and consumers, small businesses, or small farms.

Retail banking services means retail financial services provided by a bank to consumers, small businesses, or small farms and include a bank's systems for delivering retail financial services.

Retail lending assessment area means a geographic area delineated pursuant to § __.17.

Retail Lending Test Area means a facility-based assessment area, a retail lending assessment area, or an outside retail lending area.

Small bank means a bank, excluding a bank designated as a limited purpose bank pursuant to § __.26, that had assets of less than \$600 million as of December 31 in either of the prior two calendar years. The [Agency] adjusts and publishes the dollar figure in this paragraph annually based on the year-to-year change in the average of the Consumer Price Index for Urban Wage Earners and Clerical Workers, not seasonally adjusted, for each 12-month period ending in November, with rounding to the nearest million.

Small business means a business, other than a farm, that had gross annual revenues for its preceding fiscal year of \$5 million or less.

Small business loan means, notwithstanding the definition of "small business" in this section, a loan included in "loans to small businesses" as defined in the instructions for preparation of the Call Report.

Small farm means a farm that had gross annual revenues for its preceding fiscal year of \$5 million or less.

Small farm loan means, notwithstanding the definition of “small farm” in this section, a loan included in “loans to small farms” as defined in the instructions for preparation of the Call Report.

State means a U.S. State or territory, and includes the District of Columbia.

Targeted census tract means:

- (1) A low-income census tract or a moderate-income census tract; or
- (2) A distressed or underserved nonmetropolitan middle-income census tract.

Tribal government means the recognized governing body of any Indian or Alaska Native tribe, band, nation, pueblo, village, community, component band, or component reservation, individually identified (including parenthetically) in the list most recently published pursuant to section 104 of the Federally Recognized Indian Tribe List Act of 1994 (25 U.S.C. 5131).

Women’s depository institution (WDI) means “women’s depository institution” as defined in 12 U.S.C. 2907(b)(2).

§ __.13 Consideration of community development loans, community development investments, and community development services.

As provided in paragraph (a) of this section, a bank may receive consideration for a loan, investment, or service that supports community development as described in paragraphs (b) through (l) of this section.

(a) Full and partial credit for community development loans, community development investments, and community development services. (1) Full credit. A bank will receive credit for its entire loan, investment, or service if it meets the majority standard in paragraph (a)(1)(i) of this section; meets the bona fide intent standard in paragraph (a)(1)(ii) of this section; involves an MDI, WDI, LICU, and CDFI as provided in paragraph (a)(1)(iii) of this section; or involves a LIHTC as provided in paragraph (a)(1)(iv) of this section.

(i) Majority standard. A loan, investment, or service meets the majority standard if:

(A) The loan, investment, or service supports community development under one or more of paragraphs (b) through (l) of this section; and

(B)(I) For loans, investments, or services supporting community development under paragraphs (b)(1) through (b)(3) of this section, the majority of the housing units are affordable to low- or moderate-income individuals, families, or households;

(2) For loans, investments, or services supporting community development under paragraphs (b)(4), (b)(5), and (d) of this section, the majority of the beneficiaries are, or the majority of dollars benefit or serve, low- or moderate-income individuals, families, or households;

(3) For loans, investments, or services supporting community development under paragraph (c) of this section, the majority of the beneficiaries are, or the majority of dollars benefit or serve, small businesses or small farms;

(4) For loans, investments, or services supporting community development under paragraphs (e), (f), (g), and (i) of this section, the majority of the beneficiaries are, or the majority of dollars benefit or serve, residents of targeted census tracts;

(5) For loans, investments, or services supporting community development under paragraph (h) of this section, the majority of the beneficiaries are, or the majority of dollars benefit or serve, residents of designated disaster areas;

(6) For loans, investments, or services supporting community development under paragraph (j) of this section, the majority of the beneficiaries are, or the majority of dollars benefit or serve, residents of Native Land Areas; or

(7) For loans, investments, or services supporting community development under paragraph (l) of this section, the loan, investment, or service primarily supports community development under paragraph (l) of this section.

(ii) *Bona fide intent standard.* A loan, investment, or service meets the bona fide intent standard if:

(A) The housing units, beneficiaries, or proportion of dollars necessary to meet the majority standard are not reasonably quantifiable pursuant to paragraph (a)(1)(i) of this section;

(B) The loan, investment, or service has the express, bona fide intent of community development under one or more of paragraphs (b) through (l) of this section; and

(C) The loan, investment, or service is specifically structured to achieve community development under one or more of paragraphs (b) through (l) of this section.

(iii) MDI, WDI, LICU, and CDFI. The loan, investment, or service supports community development under paragraph (k) of this section.

(iv) *LIHTC*. The loan, investment, or service supports LIHTC-financed affordable housing under paragraph (b)(1) of this section.

(2) *Partial credit*. If a loan, investment, or service supporting affordable housing under paragraph (b)(1) of this section does not meet the majority standard under paragraph (a)(1)(i) of this section, a bank will receive partial credit for the loan, investment, or service in proportion to the percentage of total housing units in any development that are affordable to low- or moderate-income individuals.

(b) *Affordable housing*. Affordable housing comprises the following:

(1) *Rental housing in conjunction with a government affordable housing plan, program, initiative, tax credit, or subsidy*. Rental housing for low- or moderate-income individuals purchased, developed, financed, rehabilitated, improved, or preserved in conjunction with a Federal, State, local, or tribal government affordable housing plan, program, initiative, tax credit, or subsidy.

(2) *Multifamily rental housing with affordable rents*. Multifamily rental housing purchased, developed, financed, rehabilitated, improved, or preserved if:

(i) For the majority of units, the monthly rent as underwritten by the bank, reflecting post-construction or post-renovation changes as applicable, does not exceed 30 percent of 80 percent of the area median income; and

(ii) One or more of the following additional criteria are met:

(A) The housing is located in a low- or moderate-income census tract;

(B) The housing is located in a census tract in which the median income of renters is low- or moderate-income and the median rent does not exceed 30 percent of 80 percent of the area median income;

(C) The housing is purchased, developed, financed, rehabilitated, improved, or preserved by any nonprofit organization with a stated mission of, or that otherwise directly supports, providing affordable housing; or

(D) The bank provides documentation that a majority of the housing units are occupied by low- or moderate-income individuals, families, or households.

(3) *One-to-four family rental housing with affordable rents in a nonmetropolitan area.* One-to-four family rental housing purchased, developed, financed, rehabilitated, improved, or preserved in a nonmetropolitan area that meets the criteria in paragraph (b)(2) of this section;

(4) *Affordable owner-occupied housing for low- or moderate-income individuals.* Assistance for low- or moderate-income individuals to obtain, maintain, rehabilitate, or improve affordable owner-occupied housing, excluding loans by a bank directly to one or more owner-occupants of such housing.

(5) *Mortgage-backed securities.* Purchases of mortgage-backed securities where a majority of the underlying loans are not loans that the bank originated or purchased and:

(i) Are home mortgage loans made to low- or moderate-income individuals; or

(ii) Are loans that finance multifamily affordable housing that meets the requirements of paragraph (b)(1) of this section.

(c) *Economic development.* Economic development comprises:

(1) *Government-related support for small businesses and small farms.* Loans, investments, and services undertaken in conjunction or in syndication with Federal, State, local, or tribal government plans, programs, or initiatives that support small businesses or small farms, as follows:

(i) *Loans, investments, and services other than direct loans to small businesses and small farms.* Loans, investments, and services that support small businesses or small farms in accordance with how small businesses and small farms are defined in the applicable plan, program, or initiative, but excluding loans by a bank directly to small businesses or small farms (either as defined in a government plan, program, or initiative or in § __.12). If the government plan, program, or initiative does not identify a standard for the size of the small businesses or small farms supported by the plan, program, or initiative, the small businesses or small farms

supported must meet the definition of small business or small farm in § __.12. Loans to, investments in, or services provided to the following are presumed to meet the criteria of this paragraph:

- (A) Small Business Investment Company (13 CFR 107);
- (B) New Markets Venture Capital Company (13 CFR 108);
- (C) Qualified Community Development Entity (26 U.S.C. 45D(c)); or
- (D) U.S. Department of Agriculture Rural Business Investment Company (7 CFR 4290.50).

(ii) *Direct loans to small businesses and small farms.* Loans by a bank directly to businesses or farms, including, but not limited to, loans in conjunction or syndicated with a U.S. Small Business Administration (SBA) Certified Development Company (13 CFR 120.10) or Small Business Investment Company (13 CFR 107), that meet the following size and purpose criteria:

(A) *Size eligibility standard.* Loans that may be considered under paragraph (c)(1)(ii) of this section must be to businesses and farms that meet the size eligibility standards of the U.S. Small Business Administration Development Company (13 CFR 121.301) or Small Business Investment Company (13 CFR 121.301 and 13 CFR 121.201) programs or that meet the definition of small business or small farm in § __.12.

(B) *Purpose test.* Loans that may be considered under paragraph (c)(1)(ii) of this section must have the purpose of promoting permanent job creation or retention for low- or moderate-income individuals or in low- or moderate-income census tracts.

(2) *Intermediary support for small businesses and small farms.* Loans, investments, or services provided to intermediaries that lend to, invest in, or provide assistance, such as financial counseling, shared space, technology, or administrative assistance, to small businesses or small farms; or

(3) *Other support for small businesses and small farms.* Assistance, such as financial counseling, shared space, technology, or administrative assistance, to small businesses or small farms.

(d) *Community supportive services.* Community supportive services are activities that assist, benefit, or contribute to the health, stability, or well-being of low- or moderate-income individuals, such as childcare, education, workforce development and job training programs, health services programs, and housing services programs. Community supportive services include, but are not limited to, activities that:

(1) Are conducted with a mission-driven nonprofit organization;

(2) Are conducted with a nonprofit organization located in and serving low- or moderate-income census tracts;

(3) Are conducted in a low- or moderate-income census tract and targeted to the residents of the census tract;

(4) Are offered to individuals at a workplace where the majority of employees are low- or moderate-income, based on U.S. Bureau of Labor Statistics data for the average wage for workers in that particular occupation or industry;

(5) Are provided to students or their families through a school at which the majority of students qualify for free or reduced-price meals under the U.S. Department of Agriculture's National School Lunch Program;

(6) Primarily benefit or serve individuals who receive or are eligible to receive Medicaid;

(7) Primarily benefit or serve individuals who receive or are eligible to receive Federal Supplemental Security Income, Social Security Disability Insurance, or support through other Federal disability assistance programs; or

(8) Primarily benefit or serve recipients of government assistance plans, programs, or initiatives that have income qualifications equivalent to, or stricter than, the definitions of low- and moderate-income as defined in this part. Examples include, but are not limited to, the U.S. Department of Housing and Urban Development's section 8, 202, 515, and 811 programs or the U.S. Department of Agriculture's section 514, 516, and Supplemental Nutrition Assistance programs.

(e) *Revitalization or stabilization.* (1) *In general.* Revitalization or stabilization comprises activities that support revitalization or stabilization of targeted census tracts, including adaptive reuse of vacant or blighted buildings, brownfield redevelopment, support of a plan for a business

improvement district or main street program, or any other activity that supports revitalization or stabilization, and that:

(i) Are undertaken in conjunction with a plan, program, or initiative of a Federal, State, local, or tribal government or a mission-driven nonprofit organization, where the plan, program, or initiative includes a focus on revitalizing or stabilizing targeted census tracts;

(ii) Benefit or serve residents, including low- or moderate-income individuals, of targeted census tracts; and

(iii) Do not directly result in the forced or involuntary relocation of low- or moderate-income individuals in targeted census tracts.

(2) *Mixed-use revitalization or stabilization project.* Projects to revitalize or stabilize a targeted census tract that include both commercial and residential components qualify as revitalization or stabilization activities under this paragraph, if:

(i) The criteria in paragraph (e)(1) of this section are met; and

(ii) More than 50 percent of the project is non-residential as measured by the percentage of total square footage or dollar amount of the project.

(f) *Essential community facilities.* Essential community facilities are public facilities that provide essential services generally accessible by a local community, including, but not limited to, schools, libraries, childcare facilities, parks, hospitals, healthcare facilities, and community centers that benefit or serve targeted census tracts, and that:

(1) Are undertaken in conjunction with a plan, program, or initiative of a Federal, State, local, or tribal government or a mission-driven nonprofit organization, where the plan, program, or initiative includes a focus on benefitting or serving targeted census tracts;

(2) Benefit or serve residents, including low- or moderate-income individuals, of targeted census tracts; and

(3) Do not directly result in the forced or involuntary relocation of low- or moderate-income individuals in targeted census tracts.

(g) *Essential community infrastructure.* Essential community infrastructure comprises activities benefitting or serving targeted census tracts, including, but not limited to, broadband,

telecommunications, mass transit, water supply and distribution, and sewage treatment and collection systems, and that:

(1) Are undertaken in conjunction with a plan, program, or initiative of a Federal, State, local, or tribal government or a mission-driven nonprofit organization, where the plan, program, or initiative includes a focus on benefitting or serving targeted census tracts;

(2) Benefit or serve residents, including low- or moderate-income individuals, of targeted census tracts; and

(3) Do not directly result in the forced or involuntary relocation of low- or moderate-income individuals in targeted census tracts.

(h) *Recovery of designated disaster areas.* (1) *In general.* Activities that promote recovery of a designated disaster area are those that revitalize or stabilize geographic areas subject to a Major Disaster Declaration administered by the Federal Emergency Management Agency (FEMA), and that:

(i) Are undertaken in conjunction with a disaster plan, program, or initiative of a Federal, State, local, or tribal government or a mission-driven nonprofit organization, where the plan, program, or initiative includes a focus on benefitting or serving the designated disaster area;

(ii) Benefit or serve residents, including low- or moderate-income individuals, of the designated disaster area; and

(iii) Do not directly result in the forced or involuntary relocation of low- or moderate-income individuals in the designated disaster area.

(2) *Eligibility limitations for loans, investments, or services supporting recovery of a designated disaster area.* (i) Loans, investments, or services that support recovery from a designated disaster in counties designated to receive only FEMA Public Assistance Emergency Work Category A (Debris Removal) and/or Category B (Emergency Protective Measures) are not eligible for consideration under this paragraph, unless the Board, the FDIC, and the OCC announce a temporary exception.

(ii) The [Agency] will consider loans, investments, and services that support recovery from a designated disaster under this paragraph for 36 months after a Major Disaster Declaration, unless that time period is extended by the Board, the FDIC, and the OCC.

(i) *Disaster preparedness and weather resiliency.* Disaster preparedness and weather resiliency activities assist individuals and communities to prepare for, adapt to, and withstand natural disasters or weather-related risks or disasters. Disaster preparedness and weather resiliency activities benefit or serve targeted census tracts and:

(1) Are undertaken in conjunction with a plan, program, or initiative of a Federal, State, local, or tribal government or a mission-driven nonprofit organization, where the plan, program, or initiative includes a focus on benefitting or serving targeted census tracts;

(2) Benefit or serve residents, including low- or moderate-income individuals, in targeted census tracts; and

(3) Do not directly result in the forced or involuntary relocation of low- or moderate-income individuals in targeted census tracts.

(j) *Revitalization or stabilization, essential community facilities, essential community infrastructure, and disaster preparedness and weather resiliency in Native Land Areas.* (1) Revitalization or stabilization, essential community facilities, essential community infrastructure, and disaster preparedness and weather resiliency activities in Native Land Areas are activities specifically targeted to and conducted in Native Land Areas.

(2) Revitalization or stabilization activities in Native Land Areas are defined consistent with paragraph (e) of this section, but specifically:

(i) Are undertaken in conjunction with a plan, program, or initiative of a Federal, State, local, or tribal government or a mission-driven nonprofit organization, where the plan, program, or initiative includes an explicit focus on revitalizing or stabilizing Native Land Areas and a particular focus on low- or moderate-income households.

(ii) Benefit or serve residents in Native Land Areas, with substantial benefits for low- or moderate-income individuals in Native Land Areas; and

(iii) Do not directly result in the forced or involuntary relocation of low- or moderate-income individuals in Native Land Areas.

(3) Essential community facilities, essential community infrastructure, and disaster preparedness and weather resiliency activities in Native Land Areas are defined consistent with paragraphs (f), (g), and (i) of this section, respectively, but specifically:

(i) Are undertaken in conjunction with a plan, program, or initiative of a Federal, State, local, or tribal government or a mission-driven nonprofit organization, where the plan, program, or initiative includes an explicit focus on benefitting or serving Native Land Areas;

(ii) Benefit or serve residents, including low- or moderate-income individuals, in Native Land Areas; and

(iii) Do not directly result in the forced or involuntary relocation of low- or moderate-income individuals in Native Land Areas.

(k) *Activities with MDIs, WDIs, LICUs, or CDFIs.* Activities with MDIs, WDIs, LICUs, or CDFIs are loans, investments, or services undertaken by any bank, including by an MDI, WDI, or CDFI bank evaluated under part 25, 228, or 345 of this title, in cooperation with an MDI, WDI, LICU, or CDFI. Such activities do not include investments by an MDI, WDI, or CDFI bank in itself.

(l) *Financial literacy.* Activities that promote financial literacy are those that assist individuals, families, and households, including low- or moderate-income individuals, families, and households, to make informed financial decisions regarding managing income, savings, credit, and expenses, including with respect to homeownership.

§ __.14 Community development illustrative list; Confirmation of eligibility.

(a) *Illustrative list.* (1) *Issuing and maintaining the illustrative list.* The Board, the FDIC, and the OCC jointly issue and maintain a publicly available illustrative list of non-exhaustive examples of loans, investments, and services that qualify for community development consideration as provided in § __.13.

(2) *Modifying the illustrative list.* (i) The Board, the FDIC, and the OCC update the illustrative list in paragraph (a)(1) of this section periodically.

(ii) If the Board, the FDIC, and the OCC determine that a loan or investment is no longer eligible for community development consideration, the owner of the loan or investment at the time of the determination will continue to receive community development consideration for the remaining term or period of the loan or investment. However, these loans or investments will not be considered eligible for community development consideration for any new purchasers of

that loan or investment after the agencies make a determination that the loan or investment is no longer eligible for community development consideration.

(b) *Confirmation of eligibility.* (1) *Request for confirmation of eligibility.* A bank subject to this part may request that the [Agency] confirm that a loan, investment, or service is eligible for community development consideration by submitting a request to, and in a format prescribed by, the [Agency].

(2) *Determination of eligibility.* (i) To determine the eligibility of a loan, investment, or service for which a request has been submitted under paragraph (b)(1) of this section, the [Agency] considers:

(A) Information that describes and supports the request; and

(B) Any other information that the [Agency] deems relevant.

(ii) The Board, the FDIC, and the OCC expect and are presumed to jointly determine eligibility of a loan, investment, or service under paragraph (b)(2)(i) of this section to promote consistency. Before making a determination under paragraph (b)(2)(i) of this section, the [Agency] consults with the [other Agencies] regarding the eligibility of a loan, investment, or service.

(iii) The [Agency] may impose limitations or requirements on a determination of the eligibility of a loan, investment, or service to ensure consistency with this part.

(3) *Notification of eligibility.* The [Agency] notifies the requestor and the [other Agencies] in writing of any determination under paragraph (b)(2) of this section, as well as the rationale for such determination.

§ __.15 Impact and responsiveness review of community development loans, community development investments, and community development services.

(a) *Impact and responsiveness review, in general.* Under the Community Development Financing Test in § __.24, the Community Development Services Test in § __.25, and the Community Development Financing Test for Limited Purpose Banks in § __.26, the [Agency] evaluates the extent to which a bank's community development loans, community development investments, and community development services are impactful and responsive in meeting community development needs in each facility-based assessment area and, as applicable, each

State, multistate MSA, and the nationwide area. The [Agency] evaluates the impact and responsiveness of a bank's community development loans, community development investments, or community development services based on paragraph (b) of this section, and may take into account performance context information pursuant to § __.21(d).

(b) *Impact and responsiveness review factors.* Factors considered in evaluating the impact and responsiveness of a bank's community development loans, community development investments, and community development services include, but are not limited to, whether the community development loan, community development investment, or community development service:

- (1) Benefits or serves one or more persistent poverty counties;
- (2) Benefits or serves one or more census tracts with a poverty rate of 40 percent or higher;
- (3) Benefits or serves one or more geographic areas with low levels of community development financing;
- (4) Supports an MDI, WDI, LICU, or CDFI, excluding certificates of deposit with a term of less than one year;
- (5) Benefits or serves low-income individuals, families, or households;
- (6) Supports small businesses or small farms with gross annual revenues of \$250,000 or less;
- (7) Directly facilitates the acquisition, construction, development, preservation, or improvement of affordable housing in High Opportunity Areas;
- (8) Benefits or serves residents of Native Land Areas;
- (9) Is a grant or donation;
- (10) Is an investment in projects financed with LIHTCs or NMTCs;
- (11) Reflects bank leadership through multi-faceted or instrumental support; or
- (12) Is a new community development financing product or service that addresses community development needs for low- or moderate-income individuals, families, or households.

Subpart B—Geographic Considerations

§ __.16 Facility-based assessment areas.

(a) *In general.* A bank must delineate one or more facility-based assessment areas within which the [Agency] evaluates the bank's record of helping to meet the credit needs of its entire community pursuant to the performance tests and strategic plan described in § __.21.

(b) *Geographic requirements for facility-based assessment areas.* (1) Except as provided in paragraph (b)(3) of this section, a bank's facility-based assessment areas must include each county in which a bank has a main office, a branch, or a deposit-taking remote service facility, as well as the surrounding counties in which the bank has originated or purchased a substantial portion of its loans (including home mortgage loans, multifamily loans, small business loans, small farm loans, and automobile loans).

(2) Except as provided in paragraph (b)(3) of this section, each of a bank's facility-based assessment areas must consist of a single MSA, one or more contiguous counties within an MSA, or one or more contiguous counties within the nonmetropolitan area of a State.

(3) An intermediate bank or a small bank may adjust the boundaries of its facility-based assessment areas to include only the portion of a county that it reasonably can be expected to serve, subject to paragraph (c) of this section. A facility-based assessment area that includes a partial county must consist of contiguous whole census tracts.

(c) Other limitations on the delineation of a facility-based assessment area. Each of a bank's facility-based assessment areas:

(1) May not reflect illegal discrimination; and

(2) May not arbitrarily exclude low- or moderate-income census tracts. In determining whether a bank has arbitrarily excluded low- or moderate-income census tracts from a facility-based assessment area, the [Agency] takes into account the bank's capacity and constraints, including its size and financial condition.

(d) *Military banks.* Notwithstanding the requirements of this section, a military bank whose customers are not located within a defined geographic area may delineate the entire United States and its territories as its sole facility-based assessment area.

(e) *Use of facility-based assessment areas.* The [Agency] uses the facility-based assessment areas delineated by a bank in its evaluation of the bank's CRA performance unless the [Agency]

determines that the facility-based assessment areas do not comply with the requirements of this section.

§ __.17 Retail lending assessment areas.

(a) *In general.* (1) Based upon the criteria described in paragraphs (b) and (c) of this section, a large bank must delineate retail lending assessment areas within which the [Agency] evaluates the bank's record of helping to meet the credit needs of its entire community pursuant to § __.22.

(2) A large bank is not required to delineate retail lending assessment areas for a particular calendar year if, in the prior two calendar years, the large bank originated or purchased within its facility-based assessment areas more than 80 percent of its home mortgage loans, multifamily loans, small business loans, small farm loans, and automobile loans if automobile loans are a product line for the large bank as described in paragraph II.a.1 of appendix A of this part.

(3) If, in a retail lending assessment area delineated pursuant to paragraph (c) of this section, the large bank did not originate or purchase any reported loans in any of the product lines that formed the basis of the retail lending assessment area delineation pursuant to paragraph (c)(1) or (c)(2) of this section, the [Agency] will not consider the retail lending assessment area to have been delineated for that calendar year.

(b) *Geographic requirements for retail lending assessment areas.* (1) A large bank's retail lending assessment area must consist of either:

(i) The entirety of a single MSA (using the MSA boundaries that were in effect as of January 1 of the calendar year in which the delineation applies), excluding any counties inside the large bank's facility-based assessment areas; or

(ii) All of the counties in the nonmetropolitan area of a State (using the MSA boundaries that were in effect as of January 1 of the calendar year in which the delineation applies), excluding:

(A) Any counties included in the large bank's facility-based assessment areas; and

(B) Any counties in which the large bank did not originate any closed-end home mortgage loans or small business loans that are reported loans during that calendar year.

(2) A retail lending assessment area may not extend beyond a State boundary unless the retail lending assessment area consists of counties in a multistate MSA.

(c) *Delineation of retail lending assessment areas.* Subject to the geographic requirements in paragraph (b) of this section, a large bank must delineate, for a particular calendar year, a retail lending assessment area in any MSA or in the nonmetropolitan area of any State in which it originated:

(1) At least 150 closed-end home mortgage loans that are reported loans in each year of the prior two calendar years; or

(2) At least 400 small business loans that are reported loans in each year of the prior two calendar years.

(d) *Use of retail lending assessment areas.* The [Agency] uses the retail lending assessment areas delineated by a large bank in its evaluation of the bank's closed-end home mortgage lending and small business lending performance unless the [Agency] determines that the retail lending assessment areas do not comply with the requirements of this section.

§ __.18 Outside retail lending areas.

(a) *In general.* (1) *Large banks.* The [Agency] evaluates a large bank's record of helping to meet the credit needs of its entire community in its outside retail lending area pursuant to § __.22. However, the [Agency] will not evaluate a large bank in its outside retail lending area if it did not originate or purchase loans in any product lines in the outside retail lending area during the evaluation period.

(2) *Intermediate or small banks.* The [Agency] evaluates the record of an intermediate bank, or a small bank that opts to be evaluated under the Retail Lending Test, of helping to meet the credit needs of its entire community in its outside retail lending area pursuant to § __.22, for a particular calendar year, if:

(i) The bank opts to have its major product lines evaluated in its outside retail lending area; or

(ii) In the prior two calendar years, the bank originated or purchased outside the bank's facility-based assessment areas more than 50 percent of the bank's home mortgage loans, multifamily loans, small business loans, small farm loans, and automobile loans if automobile loans are a product line for the bank, as described in paragraph II.a.2 of appendix A of this part.

(b) *Geographic requirements of outside retail lending areas.* (1) *In general.* A bank's outside retail lending area consists of the nationwide area, excluding:

(i) The bank's facility-based assessment areas and retail lending assessment areas; and

(ii) Any county in a nonmetropolitan area in which the bank did not originate or purchase any closed-end home mortgage loans, small business loans, small farm loans, or automobile loans if automobile loans are a product line for the bank.

(2) *Component geographic area.* The outside retail lending area is comprised of component geographic areas. A component geographic area is any MSA or the nonmetropolitan area of any State, or portion thereof, included within the outside retail lending area.

§ __.19 Areas for eligible community development loans, community development investments, and community development services.

The [Agency] may consider a bank's community development loans, community development investments, and community development services provided outside of its facility-based assessment areas, as provided in this part.

§ __.20 [RESERVED]

Subpart C—Standards for Assessing Performance

§ __.21 Evaluation of CRA performance in general.

(a) Application of performance tests and strategic plans. (1) Large banks. To evaluate the performance of a large bank, the [Agency] applies the Retail Lending Test in § __.22, the Retail Services and Products Test in § __.23, the Community Development Financing Test in § __.24, and the Community Development Services Test in § __.25.

(2) *Intermediate banks.* (i) *In general.* To evaluate the performance of an intermediate bank, the [Agency] applies the Retail Lending Test in § __.22 and either the Intermediate Bank Community Development Test in § __.30(a)(2) or, at the bank's option, the Community Development Financing Test in § __.24.

(ii) *Intermediate banks evaluated under § __.24.* If an intermediate bank opts to be evaluated pursuant to the Community Development Financing Test in § __.24, the [Agency] evaluates the intermediate bank for the evaluation period preceding the bank's next CRA

examination pursuant to the Community Development Financing Test in § __.24 and continues evaluations pursuant to this performance test for subsequent evaluation periods until the bank opts out. If an intermediate bank opts out of the Community Development Financing Test in § __.24, the [Agency] reverts to evaluating the bank pursuant to the Intermediate Bank Community Development Test in § __.30(a)(2), starting with the evaluation period preceding the bank's next CRA examination.

(iii) *Additional consideration.* An intermediate bank may request additional consideration pursuant to § __.30(b).

(3) *Small banks.* (i) *In general.* To evaluate the performance of a small bank, the [Agency] applies the Small Bank Lending Test in § __.29(a)(2), unless the bank opts to be evaluated pursuant to the Retail Lending Test in § __.22.

(ii) *Small banks evaluated under the Retail Lending Test.* If a small bank opts to be evaluated pursuant to the Retail Lending Test in § __.22, the following applies:

(A) The [Agency] evaluates the small bank using the same provisions used to evaluate intermediate banks pursuant to the Retail Lending Test in § __.22.

(B) The [Agency] evaluates the small bank for the evaluation period preceding the bank's next CRA examination pursuant to the Retail Lending Test in § __.22 and continues evaluations under this performance test for subsequent evaluation periods until the bank opts out. If a small bank opts out of the Retail Lending Test in § __.22, the [Agency] reverts to evaluating the bank pursuant to the Small Bank Lending Test in § __.29(a)(2), starting with the evaluation period preceding the bank's next CRA examination.

(iii) *Additional consideration.* A small bank may request additional consideration pursuant to § __.29(b).

(4) *Limited purpose banks.* (i) *In general.* The [Agency] evaluates a limited purpose bank pursuant to the Community Development Financing Test for Limited Purpose Banks in § __.26.

(ii) *Additional consideration.* A limited purpose bank may request additional consideration pursuant to § __.26(b)(2).

(5) *Military banks.* (i) *In general.* The [Agency] evaluates a military bank pursuant to the applicable performance tests described in paragraph (a) of this section.

(ii) *Evaluation approach for military banks operating under § __.16(d)*. If a military bank delineates the entire United States and its territories as its sole facility-based assessment area pursuant to § __.16(d), the [Agency] evaluates the bank exclusively at the institution level based on its performance in its sole facility-based assessment area.

(6) *Banks operating under a strategic plan*. The [Agency] evaluates the performance of a bank that has an approved strategic plan pursuant to § __.27.

(b) *Loans, investments, services, and products of [operations subsidiaries or operating subsidiaries] and other affiliates*. (1) *In general*. In the performance evaluation of a bank, the [Agency] considers the loans, investments, services, and products of a bank's [operations subsidiaries or operating subsidiaries] and other affiliates, as applicable, as provided in paragraphs (b)(2) and (b)(3) of this section, so long as no other depository institution claims the loan, investment, service, or product for purposes of 12 CFR part 25, 228, or 345.

(2) *Loans, investments, services, and products of [operations subsidiaries or operating subsidiaries]*. The [Agency] considers the loans, investment, services, and products of a bank's [operations subsidiaries or operating subsidiaries] under this part, unless an [operations subsidiary or operating subsidiary] is independently subject to the CRA. The bank must collect, maintain, and report data on the loans, investments, services, and products of its [operations subsidiaries or operating subsidiaries] as provided in § __.42(c).

(3) *Loans, investments, services, and products of other affiliates*. The [Agency] considers the loans, investments, services, and products of affiliates of a bank that are not [operations subsidiaries or operating subsidiaries], at the bank's option, subject to the following:

(i) The affiliate is not independently subject to the CRA.

(ii) The bank collects, maintains, and reports data on the loans, investments, services, or products of the affiliate as provided in § __.42(d).

(iii) Pursuant to the Retail Lending Test in § __.22, if a bank opts to have the [Agency] consider the closed-end home mortgage loans, small business loans, small farm loans, or automobile loans that are originated or purchased by one or more of the bank's affiliates in a particular Retail Lending Test Area, the [Agency] will consider, subject to paragraphs (b)(3)(i)

and (b)(3)(ii) of this section, all of the loans in that product line originated or purchased by all of the bank's affiliates in the particular Retail Lending Test Area.

(iv) Pursuant to the Retail Lending Test in § __.22, if a large bank opts to have the [Agency] consider the closed-end home mortgage loans or small business loans that are originated or purchased by any of the bank's affiliates in any Retail Lending Test Area, the [Agency] will consider, subject to paragraphs (b)(3)(i) and (b)(3)(ii) of this section, the closed-end home mortgage loans or small business loans originated by all of the bank's affiliates in the nationwide area when delineating retail lending assessment areas pursuant to § __.17(c).

(v) Pursuant to the Community Development Financing Test in § __.24, the Community Development Financing Test for Limited Purpose Banks in § __.26, the Intermediate Bank Community Development Test in § __.30(a)(2), or pursuant to an approved strategic plan in § __.27, the [Agency] will consider, at the bank's option, community development loans or community development investments that are originated, purchased, refinanced, or renewed by one or more of the bank's affiliates, subject to paragraphs (b)(3)(i) and (b)(3)(ii) of this section.

(c) *Community development lending and community development investment by a consortium or a third party.* If a bank invests in or participates in a consortium that originates, purchases, refinances, or renews community development loans or community development investments, or if a bank invests in a third party that originates, purchases, refinances, or renews community development loans or community development investments, the [Agency] may consider, at the bank's option, either those loans or investments, subject to the limitations in paragraphs (c)(1) through (c)(3) of this section, or the investment in the consortium or third party.

(1) The bank must collect, maintain, and report the data pertaining to the community development loans and community development investments as provided in § __.42(e), as applicable;

(2) If the participants or investors choose to allocate community development loans or community development investments among themselves for consideration under this section, no participant or investor may claim a loan origination, loan purchase, or investment for community development consideration if another participant or investor claims the same loan origination, loan purchase, or investment; and

(3) The bank may not claim community development loans or community development investments accounting for more than its percentage share (based on the level of its participation or investment) of the total loans or investments made by the consortium or third party.

(d) *Performance context information considered.* When applying performance tests and strategic plans pursuant to paragraph (a) of this section, and when determining whether to approve a strategic plan pursuant to § __.27(h), the [Agency] may consider the following performance context information to the extent that it is not considered as part of the performance tests as provided in paragraph (a) of this section:

(1) Any information regarding a bank's institutional capacity or constraints, including the size and financial condition of the bank, safety and soundness limitations, or any other bank-specific factors that significantly affect the bank's ability to provide retail lending, retail banking services and retail banking products, community development loans, community development investments, or community development services;

(2) Any information regarding the bank's past performance;

(3) Demographic data on income levels and income distribution, nature of housing stock, housing costs, economic climate, or other relevant data;

(4) Any information about retail banking and community development needs and opportunities provided by the bank or other relevant sources, including, but not limited to, members of the community, community organizations, State, local, and tribal governments, and economic development agencies;

(5) Data and information provided by the bank regarding the bank's business strategy and product offerings;

(6) The bank's public file, as provided in § __.43, including any written comments about the bank's CRA performance submitted to the bank or the [Agency] and the bank's responses to those comments; and

(7) Any other information deemed relevant by the [Agency].

(e) *Conclusions and ratings.* (1) *Conclusions.* The [Agency] assigns conclusions to a large bank's or limited purpose bank's performance on the applicable tests described in paragraph (a) of this section pursuant to § __.28 and appendix C of this part. The [Agency] assigns

conclusions to a small bank's or intermediate bank's performance on the applicable tests described in paragraph (a) of this section pursuant to § __.28 and appendices C and E of this part. The [Agency] assigns conclusions to a bank that has an approved strategic plan pursuant to § __.28 and paragraph g of appendix C of this part.

(2) *Ratings*. The [Agency] assigns an overall CRA performance rating to a bank in each State or multistate MSA, as applicable, and for the institution pursuant to § __.28 and appendices D and E of this part.

(f) *Safe and sound operations*. The CRA and this part do not require a bank to originate or purchase loans or investments or to provide services that are inconsistent with safe and sound banking practices, including underwriting standards. Banks are permitted to develop and apply flexible underwriting standards for loans that benefit low- or moderate-income individuals, small businesses or small farms, and low- or moderate-income census tracts, only if consistent with safe and sound operations.

§ __.22 Retail lending test.

(a) *Retail Lending Test*. (1) *In general*. Pursuant to § __.21, the Retail Lending Test evaluates a bank's record of helping to meet the credit needs of its entire community through the bank's origination and purchase of home mortgage loans, multifamily loans, small business loans, and small farm loans.

(2) *Automobile loans*. The Retail Lending Test evaluates a bank's record of helping to meet the credit needs of its entire community through the bank's origination and purchase of automobile loans if the bank is a majority automobile lender. A bank that is not a majority automobile lender may opt to have automobile loans evaluated under this section.

(b) *Methodology overview*. (1) *Retail Lending Volume Screen*. The [Agency] evaluates whether a bank meets or surpasses the Retail Lending Volume Threshold in each facility-based assessment area pursuant to the Retail Lending Volume Screen as provided in paragraph (c) of this section.

(2) *Retail lending distribution analysis*. Except as provided in paragraph (b)(5) of this section, the [Agency] evaluates the geographic and borrower distributions of each of a bank's

major product lines in each Retail Lending Test Area, as provided in paragraphs (d) and (e) of this section.

(3) *Retail Lending Test recommended conclusions.* Except as provided in paragraph (b)(5) of this section, the [Agency] develops a Retail Lending Test recommended conclusion pursuant to paragraph (f) of this section for each Retail Lending Test Area.

(4) *Retail Lending Test conclusions.* The [Agency]'s determination of a bank's Retail Lending Test conclusion for a Retail Lending Test Area is informed by the bank's Retail Lending Test recommended conclusion for the Retail Lending Test Area, performance context factors provided in § __.21(d), and the additional factors provided in paragraph (g) of this section.

(5) *Exceptions.* (i) *No major product line.* If a bank has no major product line in a facility-based assessment area, the [Agency] assigns the bank a Retail Lending Test conclusion for that facility-based assessment area based upon its performance on the Retail Lending Volume Screen pursuant to paragraph (c) of this section, performance context factors provided in § __.21(d), and the additional factors provided in paragraph (g) of this section.

(ii) *Banks that lack an acceptable basis for not meeting the Retail Lending Volume Threshold.* The [Agency] assigns a Retail Lending Test conclusion for a facility-based assessment area in which a bank lacks an acceptable basis for not meeting the Retail Lending Volume Threshold as provided in paragraph (c)(3)(iii) of this section.

(c) *Retail Lending Volume Screen.* (1) *Retail Lending Volume Threshold.* A bank meets or surpasses the Retail Lending Volume Threshold in a facility-based assessment area if the bank has a Bank Volume Metric of 30 percent or greater of the Market Volume Benchmark for that facility-based assessment area. The [Agency] calculates the Bank Volume Metric and the Market Volume Benchmark pursuant to section I of appendix A of this part.

(2) *Banks that meet or surpass the Retail Lending Volume Threshold in a facility-based assessment area.* If a bank meets or surpasses the Retail Lending Volume Threshold in a facility-based assessment area pursuant to paragraph (c)(1) of this section, the [Agency] develops a Retail Lending Test recommended conclusion for the facility-based assessment area pursuant to paragraphs (d) through (f) of this section.

(3) *Banks that do not meet the Retail Lending Volume Threshold in a facility-based assessment area.* (i) *Acceptable basis factors.* If a bank does not meet the Retail Lending Volume Threshold in a facility-based assessment area pursuant to paragraph (c)(1) of this section, the [Agency] determines whether the bank has an acceptable basis for not meeting the Retail Lending Volume Threshold in the facility-based assessment area by considering:

(A) The bank's dollar volume of non-automobile consumer loans;

(B) The bank's institutional capacity and constraints, including the financial condition of the bank;

(C) The presence or lack of other lenders in the facility-based assessment area;

(D) Safety and soundness limitations;

(E) The bank's business strategy; and

(F) Any other factors that limit the bank's ability to lend in the facility-based assessment area.

(ii) *Banks that have an acceptable basis for not meeting the Retail Lending Volume Threshold in a facility-based assessment area.* If, after reviewing the factors described in paragraph (c)(3)(i) of this section, the [Agency] determines that a bank has an acceptable basis for not meeting the Retail Lending Volume Threshold in a facility-based assessment area, the [Agency] develops a Retail Lending Test recommended conclusion for the facility-based assessment area in the same manner as for a bank that meets or surpasses the Retail Lending Volume Threshold under paragraph (c)(2) of this section.

(iii) *Banks that lack an acceptable basis for not meeting the Retail Lending Volume Threshold in a facility-based assessment area.* (A) *Large banks.* If, after reviewing the factors in paragraph (c)(3)(i) of this section, the [Agency] determines that a large bank lacks an acceptable basis for not meeting the Retail Lending Volume Threshold in a facility-based assessment area, the [Agency] assigns the bank a Retail Lending Test conclusion of "Needs to Improve" or "Substantial Noncompliance" for that facility-based assessment area. In determining whether "Needs to Improve" or "Substantial Noncompliance" is the appropriate conclusion, the [Agency] considers:

(1) The bank's retail lending volume and the extent by which it did not meet the Retail Lending Volume Threshold;

(2) The bank's distribution analysis pursuant to paragraphs (d) through (f) of this section;

(3) Performance context factors provided in § __.21(d); and

(4) Additional factors provided in paragraph (g) of this section.

(B) *Intermediate or small banks.* If, after reviewing the factors in paragraph (c)(3)(i) of this section, the [Agency] determines that an intermediate bank, or a small bank that opts to be evaluated under the Retail Lending Test, lacks an acceptable basis for not meeting the Retail Lending Volume Threshold in a facility-based assessment area, the [Agency] develops a Retail Lending Test recommended conclusion for the facility-based assessment area pursuant to paragraphs (d) through (f) of this section. The [Agency]'s determination of a bank's Retail Lending Test conclusion for the facility-based assessment area is informed by:

(1) The bank's Retail Lending Test recommended conclusion for the facility-based assessment area;

(2) The bank's retail lending volume and the extent by which it did not meet the Retail Lending Volume Threshold;

(3) Performance context factors provided in § __.21(d); and

(4) Additional factors provided in paragraph (g) of this section.

(d) *Scope of Retail Lending Test distribution analysis.* (1) *Product lines evaluated in a Retail Lending Test Area.* In each applicable Retail Lending Test Area, the [Agency] evaluates originated and purchased loans in each of the following product lines that is a major product line, as described in paragraph (d)(2) of this section:

(i) Closed-end home mortgage loans in a bank's facility-based assessment areas and, as applicable, retail lending assessment areas and outside retail lending area;

(ii) Small business loans in a bank's facility-based assessment areas and, as applicable, retail lending assessment areas and outside retail lending area;

(iii) Small farm loans in a bank's facility-based assessment areas and, as applicable, outside retail lending area; and

(iv) Automobile loans in a bank's facility-based assessment areas and, as applicable, outside retail lending area.

(2) *Major product line standards.* (i) *Major product line standard for facility-based assessment areas and outside retail lending areas.* In a facility-based assessment area or outside retail lending area, a product line is a major product line if the bank's loans in that product line comprise 15 percent or more of the bank's loans across all of the bank's product lines in the facility-based assessment area or outside retail lending area, as determined pursuant to paragraph II.b.1 of appendix A of this part.

(ii) *Major product line standards for retail lending assessment areas.* In a retail lending assessment area:

(A) Closed-end home mortgage loans are a major product line in any calendar year in the evaluation period in which the bank delineates a retail lending assessment area based on its closed-end home mortgage loans as determined by the standard in § __.17(c)(1); and

(B) Small business loans are a major product line in any calendar year in the evaluation period in which the bank delineates a retail lending assessment area based on its small business loans as determined by the standard in § __.17(c)(2).

(e) *Retail Lending Test distribution analysis.* The [Agency] evaluates a bank's Retail Lending Test performance in each of its Retail Lending Test Areas by considering the geographic and borrower distributions of a bank's loans in its major product lines.

(1) *Distribution analysis in general.* (i) *Distribution analysis for closed-end home mortgage loans, small business loans, and small farm loans.* For closed-end home mortgage loans, small business loans, and small farm loans, respectively, the [Agency] compares a bank's geographic and borrower distributions to performance ranges based on the applicable market and community benchmarks, as provided in paragraph (f) of this section and section V of appendix A of this part.

(ii) *Distribution analysis for automobile loans.* For automobile loans, the [Agency] compares a bank's geographic and borrower distributions to the applicable community benchmarks, as provided in paragraph (f) of this section and section VI of appendix A of this part.

(2) *Categories of lending evaluated.* (i) *Geographic distributions.* For each major product line in each Retail Lending Test Area, the [Agency] evaluates the geographic distributions separately for the following categories of census tracts:

(A) Low-income census tracts; and

(B) Moderate-income census tracts.

(ii) *Borrower distributions.* For each major product line in each Retail Lending Test Area, the [Agency] evaluates the borrower distributions separately for, as applicable, the following categories of borrowers:

(A) Low-income borrowers;

(B) Moderate-income borrowers;

(C) Businesses with gross annual revenues of \$250,000 or less;

(D) Businesses with gross annual revenues greater than \$250,000 but less than or equal to \$1 million;

(E) Farms with gross annual revenues of \$250,000 or less; and

(F) Farms with gross annual revenues greater than \$250,000 but less than or equal to \$1 million.

(3) *Geographic distribution measures.* To evaluate the geographic distributions in a Retail Lending Test Area, the [Agency] considers the following measures:

(i) *Geographic Bank Metric.* For each major product line, a Geographic Bank Metric, calculated pursuant to paragraph III.a of appendix A of this part;

(ii) *Geographic Market Benchmark.* For each major product line except automobile loans, a Geographic Market Benchmark, calculated pursuant to paragraph III.b of appendix A of this part for facility-based assessment areas and retail lending assessment areas, and paragraph III.d of appendix A of this part for outside retail lending areas; and

(iii) *Geographic Community Benchmark.* For each major product line, a Geographic Community Benchmark, calculated pursuant to paragraph III.c of appendix A of this part for

facility-based assessment areas and retail lending assessment areas, and paragraph III.e of appendix A of this part for outside retail lending areas.

(4) *Borrower distribution measures.* To evaluate the borrower distributions in a Retail Lending Test Area, the [Agency] considers the following measures:

(i) *Borrower Bank Metric.* For each major product line, a Borrower Bank Metric, calculated pursuant to paragraph IV.a of appendix A of this part;

(ii) *Borrower Market Benchmark.* For each major product line except automobile loans, a Borrower Market Benchmark, calculated pursuant to paragraph IV.b of appendix A of this part for facility-based assessment areas and retail lending assessment areas, and paragraph IV.d of appendix A of this part for outside retail lending areas; and

(iii) *Borrower Community Benchmark.* For each major product line, a Borrower Community Benchmark, calculated pursuant to paragraph IV.c of appendix A of this part for facility-based assessment areas and retail lending assessment areas, and paragraph IV.e of appendix A of this part for outside retail lending areas.

(f) *Retail Lending Test recommended conclusions.* (1) *In general.* Except as described in paragraphs (b)(5)(i) and (c)(3)(iii)(A) of this section, the [Agency] develops a Retail Lending Test recommended conclusion for each of a bank's Retail Lending Test Areas based on the distribution analysis described in paragraph (e) of this section and using performance ranges, supporting conclusions, and product line scores as provided in sections V through VII of appendix A of this part. For each major product line, the [Agency] develops a separate supporting conclusion for each category of census tracts and each category of borrowers described in paragraphs V.a and VI.a of appendix A of this part.

(2) *Geographic distribution supporting conclusions.* (i) *Geographic distribution supporting conclusions for closed-end home mortgage loans, small business loans, and small farm loans.* To develop supporting conclusions for geographic distributions of closed-end home mortgage loans, small business loans, and small farm loans, the [Agency] evaluates the bank's performance by comparing the Geographic Bank Metric to performance ranges, based on the Geographic Market Benchmark, the Geographic Community Benchmark, and multipliers, as described in paragraphs V.b and V.c of appendix A of this part.

(ii) *Geographic distribution supporting conclusions for automobile loans.* To develop supporting conclusions for geographic distributions for automobile loans, the [Agency] evaluates the bank's performance by comparing the Geographic Bank Metric to the Geographic Community Benchmark, as described in paragraph VI.b of appendix A of this part.

(3) *Borrower distribution supporting conclusions.* (i) *Borrower distribution supporting conclusions for closed-end home mortgage loans, small business loans, and small farm loans.* To develop supporting conclusions for borrower distributions of closed-end home mortgage loans, small business loans, and small farm loans, the [Agency] evaluates the bank's performance by comparing the Borrower Bank Metric to performance ranges, based on the Borrower Market Benchmark, Borrower Community Benchmark, and multipliers, as described in paragraphs V.d and V.e of appendix A of this part.

(ii) *Borrower distribution supporting conclusions for automobile loans.* To develop supporting conclusions for borrower distributions for automobile loans, the [Agency] evaluates the bank's performance by comparing the Borrower Bank Metric to the Borrower Community Benchmark, as described in paragraph VI.c of appendix A of this part.

(4) *Development of Retail Lending Test recommended conclusions.* (i) *Assignment of performance scores.* For each supporting conclusion developed pursuant to paragraphs (f)(2) and (f)(3) of this section, the [Agency] assigns a corresponding performance score as described in sections V and VI of appendix A of this part.

(ii) *Combination of performance scores.* As described in section VII of appendix A of this part, for each Retail Lending Test Area, the [Agency]:

(A) Combines the performance scores for each supporting conclusion for each major product line into a product line score; and

(B) Calculates a weighted average of product line scores across all major product lines.

(iii) *Retail Lending Test recommended conclusions.* For each Retail Lending Test Area, the [Agency] develops the Retail Lending Test recommended conclusion that corresponds to the weighted average of product line scores developed pursuant to paragraph (f)(4)(ii)(B) of this section, as described in section VII of appendix A of this part.

(g) *Additional factors considered when evaluating retail lending performance.* The factors in paragraphs (g)(1) through (g)(7) of this section, as appropriate, inform the [Agency]'s determination of a bank's Retail Lending Test conclusion for a Retail Lending Test Area:

(1) Information indicating that a bank purchased closed-end home mortgage loans, small business loans, small farm loans, or automobile loans for the sole or primary purpose of inappropriately enhancing its retail lending performance, including, but not limited to, information indicating subsequent resale of such loans or any indication that such loans have been considered in multiple depository institutions' CRA evaluations, in which case the [Agency] does not consider such loans in the bank's performance evaluation;

(2) The dispersion of a bank's closed-end home mortgage lending, small business lending, small farm lending, or automobile lending within a facility-based assessment area to determine whether there are gaps in lending that are not explained by performance context;

(3) The number of lenders whose home mortgage loans, multifamily loans, small business loans, and small farm loans and deposits data are used to establish the applicable Retail Lending Volume Threshold, geographic distribution market benchmarks, and borrower distribution market benchmarks;

(4) Missing or faulty data that would be necessary to calculate the relevant metrics and benchmarks or any other factors that prevent the [Agency] from calculating a Retail Lending Test recommended conclusion. If unable to calculate a Retail Lending Test recommended conclusion, the [Agency] assigns a Retail Lending Test conclusion based on consideration of the relevant available data;

(5) Whether the Retail Lending Test recommended conclusion does not accurately reflect the bank's performance in a Retail Lending Test Area in which one or more of the bank's major product lines consists of fewer than 30 loans;

(6) A bank's closed-end home mortgage lending, small business lending, small farm lending, or automobile lending in distressed or underserved nonmetropolitan middle-income census tracts where a bank's nonmetropolitan facility-based assessment area or nonmetropolitan retail lending assessment area includes very few or no low- and moderate-income census tracts; and

(7) Information indicating that the credit needs of the facility-based assessment area or retail lending assessment area are not being met by lenders in the aggregate, such that the relevant benchmarks do not adequately reflect community credit needs.

(h) *Retail Lending Test performance conclusions and ratings.* (1) *Conclusions.* (i) *In general.* Pursuant to § __.28, section VIII of appendix A of this part, and appendix C of this part, the [Agency] assigns conclusions for a bank's Retail Lending Test performance in each Retail Lending Test Area, State, and multistate MSA, as applicable, and for the institution.

(ii) *Retail Lending Test Area conclusions.* The [Agency] assigns a Retail Lending Test conclusion for each Retail Lending Test Area based on the Retail Lending Test recommended conclusion, performance context factors provided in § __.21(d), and the additional factors provided in paragraph (g) of this section, except as provided below:

(A) *Facility-based assessment areas with no major product line.* The [Agency] assigns a Retail Lending Test conclusion for a facility-based assessment area in which a bank has no major product line based on the bank's performance on the Retail Lending Volume Screen pursuant to paragraph (c) of this section, performance context information provided in § __.21(d), and the additional factors provided in paragraph (g) of this section.

(B) *Facility-based assessment areas in which a bank lacks an acceptable basis for not meeting the Retail Lending Volume Threshold.* The [Agency] assigns a Retail Lending Test conclusion for a facility-based assessment area in which a bank lacks an acceptable basis for not meeting the Retail Lending Volume Threshold as provided in paragraph (c)(3)(iii) of this section.

(2) *Ratings.* Pursuant to § __.28 and appendix D of this part, the [Agency] incorporates a bank's Retail Lending Test conclusions into its State or multistate MSA ratings, as applicable, and its institution rating.

§ __.23 Retail services and products test.

(a) *Retail Services and Products Test.* (1) *In general.* Pursuant to § __.21, the Retail Services and Products Test evaluates the availability of a bank's retail banking services and retail banking products and the responsiveness of those services and products to the credit needs of the bank's entire community, including low- and moderate-income individuals, families, or households, low- and moderate-income census tracts, and small businesses and small farms. The

[Agency] evaluates the bank's retail banking services, as described in paragraph (b) of this section, and the bank's retail banking products, as described in paragraph (c) of this section.

(2) *Main offices.* For purposes of this section, references to a branch also include a main office that is open to, and accepts deposits from, the general public.

(3) *Exclusion.* If the [Agency] considers services under the Community Development Services Test in § __.25, the [Agency] does not consider those services under the Retail Services and Products Test.

(b) *Retail banking services.* (1) *Scope of evaluation.* To evaluate a bank's retail banking services, the [Agency] considers a bank's branch availability and services provided at branches, remote service facility availability, and digital delivery systems and other delivery systems, as follows:

(i) *Branch availability and services.* The [Agency] considers the branch availability and services provided at branches of banks that operate one or more branches pursuant to paragraph (b)(2) of this section.

(ii) *Remote service facility availability.* The [Agency] considers the remote service facility availability of banks that operate one or more remote service facilities pursuant to paragraph (b)(3) of this section.

(iii) *Digital delivery systems and other delivery systems.* The [Agency] considers the digital delivery systems and other delivery systems of banks pursuant to paragraph (b)(4) of this section, as follows:

(A) The [Agency] considers the digital delivery systems and other delivery systems of the following banks:

(1) Large banks that had assets greater than \$10 billion as of December 31 in both of the prior two calendar years; and

(2) Large banks that had assets less than or equal to \$10 billion as of December 31 in either of the prior two calendar years and that do not operate branches.

(B) For a large bank that had assets less than or equal \$10 billion as of December 31 in either of the prior two calendar years and that operates at least one branch, the [Agency] considers the bank's digital delivery systems and other delivery systems at the bank's option.

(2) *Branch availability and services.* The [Agency] evaluates a bank's branch availability and services in a facility-based assessment area based on the following:

(i) *Branch distribution.* The [Agency] considers a bank's branch distribution using the following:

(A) *Branch distribution metrics.* The [Agency] considers the number and percentage of the bank's branches within low-, moderate-, middle-, and upper-income census tracts.

(B) *Benchmarks.* The [Agency]'s consideration of the branch distribution metrics is informed by the following benchmarks:

(1) Percentage of census tracts in the facility-based assessment area that are low-, moderate-, middle-, and upper-income census tracts;

(2) Percentage of households in the facility-based assessment area that are in low-, moderate-, middle-, and upper-income census tracts;

(3) Percentage of total businesses in the facility-based assessment area that are in low-, moderate-, middle-, and upper-income census tracts; and

(4) Percentage of all full-service depository institution branches in the facility-based assessment area that are in low-, moderate-, middle-, and upper-income census tracts.

(C) *Additional geographic considerations.* The [Agency] considers the availability of branches in the following geographic areas:

(1) Middle- and upper-income census tracts in which a branch delivers services to low- and moderate-income individuals, families, or households to the extent that these individuals, families, or households use the services offered;

(2) Distressed or underserved nonmetropolitan middle-income census tracts; and

(3) Native Land Areas.

(ii) *Branch openings and closings.* The [Agency] considers a bank's record of opening and closing branches since the previous CRA examination to inform the degree of accessibility of services to low- and moderate-income individuals, families, or households, small businesses, and small farms, and low- and moderate-income census tracts.

(iii) *Branch hours of operation and services.* The [Agency] considers the following:

(A) The reasonableness of branch hours in low- and moderate-income census tracts compared to middle- and upper-income census tracts, including, but not limited to, whether branches offer extended and weekend hours.

(B) The range of services provided at branches in low-, moderate-, middle-, and upper-income census tracts, respectively, including, but not limited to:

(1) Bilingual and translation services;

(2) Free or low-cost check cashing services, including, but not limited to, check cashing services for government-issued and payroll checks;

(3) Reasonably priced international remittance services; and

(4) Electronic benefit transfers.

(C) The degree to which branch-provided retail banking services are responsive to the needs of low- and moderate-income individuals, families, or households in a bank's facility-based assessment areas.

(3) *Remote service facility availability.* The [Agency] evaluates a bank's remote service facility availability in a facility-based assessment area based on the following:

(i) *Remote service facility distribution.* The [Agency] considers a bank's remote service facility distribution using the following:

(A) *Remote service facility distribution metrics.* The [Agency] considers the number and percentage of the bank's remote service facilities within low-, moderate-, middle-, and upper-income census tracts.

(B) *Benchmarks.* The [Agency]'s consideration of the remote service facility distribution metrics is informed by the following benchmarks:

(1) Percentage of census tracts in the facility-based assessment area that are low-, moderate-, middle-, and upper-income census tracts;

(2) Percentage of households in the facility-based assessment area that are in low-, moderate-, middle-, and upper-income census tracts; and

(3) Percentage of total businesses in the facility-based assessment area that are in low-, moderate-, middle-, and upper-income census tracts.

(C) *Additional geographic considerations.* The [Agency] considers the availability of remote service facilities in the following geographic areas:

(1) Middle- and upper-income census tracts in which a remote service facility delivers services to low- and moderate-income individuals, families, or households to the extent that these individuals, families, or households use the services offered;

(2) Distressed or underserved nonmetropolitan middle-income census tracts; and

(3) Native Land Areas.

(ii) *Access to out-of-network ATMs.* The [Agency] considers whether the bank offers customers fee-free access to out-of-network ATMs in low- and moderate-income census tracts.

(4) *Digital delivery systems and other delivery systems.* The [Agency] evaluates the availability and responsiveness of a bank's digital delivery systems and other delivery systems, including to low- and moderate-income individuals, families, or households at the institution level by considering:

(i) The range of retail banking services and retail banking products offered through digital delivery systems and other delivery systems;

(ii) The bank's strategy and initiatives to serve low- and moderate-income individuals, families, or households with digital delivery systems and other delivery systems as reflected by, for example, the costs, features, and marketing of the delivery systems; and

(iii) Digital delivery systems and other delivery systems activity by individuals, families or households in low-, moderate-, middle-, and upper-income census tracts as evidenced by:

(A) The number of checking and savings accounts opened each calendar year during the evaluation period digitally and through other delivery systems in low-, moderate-, middle-, and upper-income census tracts;

(B) The number of checking and savings accounts opened digitally and through other delivery systems and that are active at the end of each calendar year during the evaluation period in low-, moderate-, middle-, and upper-income census tracts; and

(C) Any other bank data that demonstrates digital delivery systems and other delivery systems are available to individuals and in census tracts of different income levels, including low- and moderate-income individuals, families, or households and low- and moderate-income census tracts.

(c) *Retail banking products evaluation.* (1) *Scope of evaluation.* The [Agency] evaluates a bank's retail banking products offered in the bank's facility-based assessment areas and nationwide, as applicable, at the institution level as follows:

(i) *Credit products and programs.* The [Agency] evaluates a bank's credit products and programs pursuant to paragraph (c)(2) of this section.

(ii) *Deposit products.* The [Agency] evaluates a bank's deposit products pursuant to paragraph (c)(3) of this section as follows:

(A) For large banks that had assets greater than \$10 billion as of December 31 in both of the prior two calendar years; and

(B) For large banks that had assets less than or equal to \$10 billion as of December 31 in either of the prior two calendar years, the [Agency] considers a bank's deposit products only at the bank's option.

(2) *Credit products and programs.* The [Agency] evaluates whether a bank's credit products and programs are, consistent with safe and sound operations, responsive to the credit needs of the bank's entire community, including the needs of low- and moderate-income individuals, families, or households, residents of low- and moderate-income census tracts, small businesses, and small farms. Responsive credit products and programs may include, but are not limited to, credit products and programs that:

(i) Facilitate home mortgage and consumer lending targeted to low- or moderate-income borrowers;

(ii) Meet the needs of small businesses and small farms, including small businesses and small farms with gross annual revenues of \$250,000 or less;

(iii) Are conducted in cooperation with MDIs, WDIs, LICUs, or CDFIs;

(iv) Are low-cost education loans; or

(v) Are special purpose credit programs pursuant to 12 CFR 1002.8.

(3) *Deposit products.* The [Agency] evaluates the availability and usage of a bank's deposit products responsive to the needs of low- and moderate-income individuals, families, or households as follows:

(i) *Availability of deposit products responsive to the needs of low- and moderate-income individuals, families, or households.* The [Agency] considers the availability of deposit products responsive to the needs of low- and moderate-income individuals, families, or households based on the extent to which a bank offers deposit products that, consistent with safe and sound operations, have features and cost characteristics responsive to the needs of low- and moderate-income individuals, families, or households. Deposit products responsive to the needs of low- and moderate-income individuals, families, or households include but are not limited to, deposit products with the following types of features:

(A) Low-cost features, including, but not limited to, deposit products with no overdraft or insufficient funds fees, no or low minimum opening balance, no or low monthly maintenance fees, or free or low-cost check-cashing and bill-pay services;

(B) Features facilitating broad functionality and accessibility, including, but not limited to, deposit products with in-network ATM access, debit cards for point-of-sale and bill payments, and immediate access to funds for customers cashing government, payroll, or bank-issued checks; or

(C) Features facilitating inclusivity of access by individuals without banking or credit histories or with adverse banking histories.

(ii) *Usage of deposit products responsive to the needs of low- and moderate-income individuals.* The [Agency] considers the usage of a bank's deposit products responsive to the needs of low- and moderate-income individuals, families, or households based on the following information:

(A) The number of responsive deposit accounts opened and closed during each year of the evaluation period in low-, moderate-, middle-, and upper-income census tracts;

(B) In connection with paragraph (c)(3)(ii)(A) of this section, the percentage of responsive deposit accounts compared to total deposit accounts for each year of the evaluation period;

(C) Marketing, partnerships, and other activities that the bank has undertaken to promote awareness and use of responsive deposit accounts by low- and moderate-income individuals, families, or households; and

(D) Optionally, any other information the bank provides that demonstrates usage of the bank's deposit products that have features and cost characteristics responsive to the needs of low- and moderate-income individuals, families, or households and low- and moderate-income census tracts.

(d) *Retail Services and Products Test performance conclusions and ratings.* (1) *Conclusions.* Pursuant to § __.28 and appendix C of this part, the [Agency] assigns conclusions for a bank's Retail Services and Products Test performance in each facility-based assessment area, State and multistate MSA, as applicable, and for the institution. In assigning conclusions under this performance test, the [Agency] may consider performance context information as provided in § __.21(d). The evaluation of a bank's retail banking products under paragraph (c) of this section may only contribute positively to the bank's Retail Services and Products Test conclusion.

(2) *Ratings.* Pursuant to § __.28 and appendix D of this part, the [Agency] incorporates a bank's Retail Services and Products Test conclusions into its State or multistate MSA ratings, as applicable, and its institution rating.

§ __.24 Community development financing test.

(a) *Community Development Financing Test.* (1) *In general.* Pursuant to § __.21, the Community Development Financing Test evaluates the bank's record of helping to meet the credit needs of its entire community through community development loans and community development investments (*i.e., the bank's community development financing performance*).

(2) *Allocation.* The [Agency] considers community development loans and community development investments allocated pursuant to paragraph I.b of appendix B of this part.

(b) *Facility-based assessment area evaluation.* The [Agency] evaluates a bank's community development financing performance in a facility-based assessment area using the metric in paragraph (b)(1) of this section, benchmarks in paragraph (b)(2) of this section, and a review of the impact and responsiveness of the bank's community development loans and community development investments in paragraph (b)(3) of this section, and assigns a conclusion for a facility-based assessment area pursuant to paragraph d.1 of appendix C of this part.

(1) *Bank Assessment Area Community Development Financing Metric.* The Bank Assessment Area Community Development Financing Metric measures the dollar volume of a bank's community development loans and community development investments that benefit or serve a facility-based assessment area compared to deposits in the bank that are located in the facility-based assessment area, calculated pursuant to paragraph II.a of appendix B of this part.

(2) *Benchmarks.* The [Agency] compares the Bank Assessment Area Community Development Financing Metric to the following benchmarks:

(i) *Assessment Area Community Development Financing Benchmark.* For each of a bank's facility-based assessment areas, the Assessment Area Community Development Financing Benchmark measures the dollar volume of community development loans and community development investments that benefit or serve the facility-based assessment area for all large depository institutions compared to deposits located in the facility-based assessment area for all large depository institutions, calculated pursuant to paragraph II.b of appendix B of this part.

(ii) *MSA and Nonmetropolitan Nationwide Community Development Financing Benchmarks.* (A) For each of a bank's facility-based assessment areas within an MSA, the MSA Nationwide Community Development Financing Benchmark measures the dollar volume of community development loans and community development investments that benefit or serve MSAs in the

nationwide area for all large depository institutions compared to deposits located in the MSAs in the nationwide area for all large depository institutions.

(B) For each of a bank's facility-based assessment areas within a nonmetropolitan area, the Nonmetropolitan Nationwide Community Development Financing Benchmark measures the dollar volume of community development loans and community development investments that benefit or serve nonmetropolitan areas in the nationwide area for all large depository institutions compared to deposits located in nonmetropolitan areas in the nationwide area for all large depository institutions.

(C) The [Agency] calculates the MSA and Nonmetropolitan Nationwide Community Development Financing Benchmarks pursuant to paragraph II.c of appendix B of this part.

(3) *Impact and responsiveness review.* The [Agency] reviews the impact and responsiveness of a bank's community development loans and community development investments that benefit or serve a facility-based assessment area, as provided in § __.15.

(c) *State evaluation.* The [Agency] evaluates a bank's community development financing performance in a State, pursuant to §§ __.19 and __.28(c), using the two components in paragraphs (c)(1) and (c)(2) of this section and assigns a conclusion for each State based on a weighted combination of those components pursuant to paragraph II.p of appendix B of this part.

(1) *Component one – weighted average of facility-based assessment area performance conclusions in a State.* The [Agency] considers the weighted average of a bank's Community Development Financing Test conclusions for its facility-based assessment areas within the State, pursuant to section IV of appendix B of this part.

(2) *Component two – State performance.* The [Agency] considers a bank's community development financing performance in a State using the metric and benchmarks in paragraph (c)(2)(i) and (c)(2)(ii) of this section and a review of the impact and responsiveness of the bank's community development loans and community development investments in paragraph (c)(2)(iii) of this section.

(i) *Bank State Community Development Financing Metric.* The Bank State Community Development Financing Metric measures the dollar volume of a bank's community development loans and community development investments that benefit or serve all or part of a State

compared to deposits in the bank that are located in the State, calculated pursuant to paragraph II.d of appendix B of this part.

(ii) *Benchmarks.* The [Agency] compares the Bank State Community Development Financing Metric to the following benchmarks:

(A) *State Community Development Financing Benchmark.* The State Community Development Financing Benchmark measures the dollar volume of community development loans and community development investments that benefit or serve all or part of a State for all large depository institutions compared to deposits located in the State for all large depository institutions, calculated pursuant to paragraph II.e of appendix B of this part.

(B) *State Weighted Assessment Area Community Development Financing Benchmark.* The State Weighted Assessment Area Community Development Financing Benchmark is the weighted average of the bank's Assessment Area Community Development Financing Benchmarks for each facility-based assessment area within the State, calculated pursuant to paragraph II.f of appendix B of this part.

(iii) *Impact and responsiveness review.* The [Agency] reviews the impact and responsiveness of the bank's community development loans and community development investments that benefit or serve a State, as provided in § __.15.

(d) *Multistate MSA evaluation.* The [Agency] evaluates a bank's community development financing performance in a multistate MSA, pursuant to §§ __.19 and __.28(c), using the two components in paragraphs (d)(1) and (d)(2) of this section and assigns a conclusion in each multistate MSA based on a weighted combination of those components pursuant to paragraph II.p of appendix B of this part.

(1) *Component one – weighted average of facility-based assessment area performance in a multistate MSA.* The [Agency] considers the weighted average of the performance scores corresponding to the bank's Community Development Financing Test conclusions for its facility-based assessment areas within the multistate MSA, calculated pursuant to section IV of appendix B of this part.

(2) *Component two – multistate MSA performance.* The [Agency] considers a bank's community development financing performance in a multistate MSA using the metric and

benchmarks in paragraph (d)(2)(i) and (d)(2)(ii) of this section and a review of the impact and responsiveness of the bank's community development loans and community development investments in paragraph (d)(2)(iii) of this section.

(i) *Bank Multistate MSA Community Development Financing Metric.* The Bank Multistate MSA Community Development Financing Metric measures the dollar volume of a bank's community development loans and community development investments that benefit or serve a multistate MSA compared to deposits in the bank located in the multistate MSA, calculated pursuant to paragraph II.g of appendix B of this part.

(ii) *Benchmarks.* The [Agency] compares the Bank Multistate MSA Community Development Financing Metric to the following benchmarks:

(A) *Multistate MSA Community Development Financing Benchmark.* The Multistate MSA Community Development Financing Benchmark measures the dollar volume of community development loans and community development investments that benefit or serve a multistate MSA for all large depository institutions compared to deposits located in the multistate MSA for all large depository institutions, calculated pursuant to paragraph II.h of appendix B of this part.

(B) *Multistate MSA Weighted Assessment Area Community Development Financing Benchmark.* The Multistate MSA Weighted Assessment Area Community Development Financing Benchmark is the weighted average of the bank's Assessment Area Community Development Financing Benchmarks for each facility-based assessment area within the multistate MSA, calculated pursuant to paragraph II.i of appendix B of this part.

(iii) *Impact and responsiveness review.* The [Agency] reviews the impact and responsiveness of the bank's community development loans and community development investments that benefit or serve a multistate MSA, as provided in § __.15.

(e) *Nationwide area evaluation.* The [Agency] evaluates a bank's community development financing performance in the nationwide area, pursuant to § __.19, using the two components in paragraphs (e)(1) and (e)(2) of this section and assigns a conclusion for the institution based on a weighted combination of those components pursuant to paragraph II.p of appendix B of this part.

(1) *Component one – weighted average of facility-based assessment area performance in the nationwide area.* The [Agency] considers the weighted average of the performance scores

corresponding to the bank's conclusions for the Community Development Financing Test for its facility-based assessment areas within the nationwide area, calculated pursuant to section IV of appendix B of this part.

(2) *Component two – nationwide area performance.* The [Agency] considers a bank's community development financing performance in the nationwide area using the metrics and benchmarks in paragraphs (e)(2)(i) through (e)(2)(iv) of this section and a review of the impact and responsiveness of the bank's community development loans and community development investments in paragraph (e)(v) of this section.

(i) *Bank Nationwide Community Development Financing Metric.* The Bank Nationwide Community Development Financing Metric measures the dollar volume of the bank's community development loans and community development investments that benefit or serve all or part of the nationwide area compared to deposits in the bank located in the nationwide area, calculated pursuant to paragraph II.j of appendix B of this part.

(ii) *Community Development Financing Benchmarks.* The [Agency] compares the Bank Nationwide Community Development Financing Metric to the following benchmarks:

(A) *Nationwide Community Development Financing Benchmark.* The Nationwide Community Development Financing Benchmark measures the dollar volume of community development loans and community development investments that benefit or serve all or part of the nationwide area for all large depository institutions compared to the deposits located in the nationwide area for all large depository institutions, calculated pursuant to paragraph II.k of appendix B of this part.

(B) *Nationwide Weighted Assessment Area Community Development Financing Benchmark.* The Nationwide Weighted Assessment Area Community Development Financing Benchmark is the weighted average of the bank's Assessment Area Community Development Financing Benchmarks for each facility-based assessment area within the nationwide area, calculated pursuant to paragraph II.l of appendix B of this part.

(iii) *Bank Nationwide Community Development Investment Metric.* For a large bank that had assets greater than \$10 billion as of December 31 in both of the prior two calendar years, the Bank Nationwide Community Development Investment Metric measures the dollar volume of

the bank's community development investments that benefit or serve all or part of the nationwide area, excluding mortgage-backed securities, compared to the deposits in the bank located in the nationwide area, calculated pursuant to paragraph II.m of appendix B of this part.

(iv) *Nationwide Community Development Investment Benchmark.* (A) For a large bank that had assets greater than \$10 billion as of December 31 in both of the prior two calendar years, the [Agency] compares the Bank Nationwide Community Development Investment Metric to the Nationwide Community Development Investment Benchmark. This comparison may only contribute positively to the bank's Community Development Financing Test conclusion for the institution.

(B) The Nationwide Community Development Investment Benchmark measures the dollar volume of community development investments that benefit or serve all or part of the nationwide area, excluding mortgage-backed securities, of all large depository institutions that had assets greater than \$10 billion as of December 31 in both of the prior two calendar years compared to deposits located in the nationwide area for those depository institutions, calculated pursuant to paragraph II.n of appendix B of this part.

(v) *Impact and responsiveness review.* The [Agency] reviews the impact and responsiveness of the bank's community development loans and community development investments that benefit or serve the nationwide area, as provided in § __.15.

(f) *Community Development Financing Test performance conclusions and ratings.* (1) *Conclusions.* Pursuant to § __.28 and appendix C of this part, the [Agency] assigns conclusions for a bank's Community Development Financing Test performance in each facility-based assessment area, each State or multistate MSA, as applicable, and for the institution. In assigning conclusions under this performance test, the [Agency] may consider performance context information as provided in § __.21(d).

(2) *Ratings.* Pursuant to § __.28 and appendix D of this part, the [Agency] incorporates a bank's Community Development Financing Test conclusions into its State or multistate MSA ratings, as applicable, and its institution rating.

§ __.25 Community development services test.

(a) *Community Development Services Test.* (1) *In general.* Pursuant to § __.21, the Community Development Services Test evaluates a bank's record of helping to meet the community development services needs of its entire community.

(2) *Allocation.* The [Agency] considers information provided by the bank and may consider publicly available information and information provided by government or community sources that demonstrates that a community development service benefits or serves a facility-based assessment area, State, or multistate MSA, or the nationwide area.

(b) *Facility-based assessment area evaluation.* The [Agency] evaluates a bank's community development services performance in a facility-based assessment area and assigns a conclusion for a facility-based assessment area, by considering one or more of the following:

(1) The number of community development services attributable to each type of community development described in § __.13(b) through (l);

(2) The capacities in which a bank's or its affiliate's board members or employees serve (e.g., board member of a nonprofit organization, technical assistance, financial education, general volunteer);

(3) Total hours of community development services performed by the bank;

(4) Any other evidence demonstrating that the bank's community development services are responsive to community development needs, such as the number of low- and moderate-income individuals that are participants, or number of organizations served; and

(5) The impact and responsiveness of the bank's community development services that benefit or serve the facility-based assessment area, as provided in § __.15.

(c) *State, multistate MSA, or nationwide area evaluation.* The [Agency] evaluates a bank's community development services performance in a State or multistate MSA, as applicable, or nationwide area, and assigns a conclusion for those areas, based on the following two components:

(1) *Component one – weighted average of facility-based assessment area performance in a State, multistate MSA, or nationwide area.* The [Agency] considers the weighted average of the

performance scores corresponding to the bank's Community Development Services Test conclusions for its facility-based assessment areas within a State, multistate MSA, or the institution pursuant to section IV of appendix B of this part.

(2) *Component two – evaluation of community development services outside of facility-based assessment areas.* The [Agency] may adjust upwards the conclusion based on the weighted average derived under paragraph (c)(1) of this section and an evaluation of the bank's community development services performed outside of its facility-based assessment areas pursuant to § __.19, which may consider one or more of the factors in paragraphs (b)(1) through (b)(5) of this section.

(d) *Community Development Services Test performance conclusions and ratings.* (1) *Conclusions.* Pursuant to § __.28 and appendix C of this part, the [Agency] assigns conclusions for a bank's Community Development Services Test performance in each facility-based assessment area, each State or multistate MSA, as applicable, and for the institution. In assigning conclusions under this performance test, the [Agency] may consider performance context information as provided in § __.21(d).

(2) *Ratings.* Pursuant to § __.28 and appendix D of this part, the [Agency] incorporates a bank's Community Development Services Test conclusions into its State or multistate MSA ratings, as applicable, and its institution rating.

§ __.26 Limited purpose banks.

(a) *Bank request for designation as a limited purpose bank.* To receive a designation as a limited purpose bank, a bank must file a written request with the [Agency] at least 90 days prior to the proposed effective date of the designation. If the [Agency] approves the designation, it remains in effect until the bank requests revocation of the designation or until one year after the [Agency] notifies a limited purpose bank that the [Agency] has revoked the designation on the [Agency]'s own initiative.

(b) *Performance evaluation.* (1) *In general.* To evaluate a limited purpose bank, the [Agency] applies the Community Development Financing Test for Limited Purpose Banks as described in paragraphs (c) through (f) of this section.

(2) *Additional consideration.* (i) *Community development services.* The [Agency] may adjust a limited purpose bank's institution rating from "Satisfactory" to "Outstanding" where a bank requests and receives additional consideration for services that would qualify under the Community Development Services Test in § __.25.

(ii) *Additional consideration for low-cost education loans.* A limited purpose bank may request and receive additional consideration at the institution level for providing low-cost education loans to low-income borrowers pursuant to 12 U.S.C. 2903(d), regardless of the limited purpose bank's overall institution rating.

(c) *Community Development Financing Test for Limited Purpose Banks.* (1) *In general.* Pursuant to § __.21, the Community Development Financing Test for Limited Purpose Banks evaluates a limited purpose bank's record of helping to meet the credit needs of its entire community through community development loans and community development investments (*i.e., the bank's community development financing performance*).

(2) *Allocation.* The [Agency] considers community development loans and community development investments allocated pursuant to paragraph I.b of appendix B of this part.

(d) *Facility-based assessment area evaluation.* The [Agency] evaluates a limited purpose bank's community development financing performance in a facility-based assessment area and assigns a conclusion in the facility-based assessment area based on the [Agency]'s:

(1) Consideration of the dollar volume of the limited purpose bank's community development loans and community development investments that benefit or serve the facility-based assessment area; and

(2) A review of the impact and responsiveness of the limited purpose bank's community development loans and community development investments that benefit or serve a facility-based assessment area, as provided in § __.15.

(e) *State or multistate MSA evaluation.* The [Agency] evaluates a limited purpose bank's community development financing performance in each State or multistate MSA, as applicable pursuant to §§ __.19 and __.28(c), and assigns a conclusion for the bank's performance in the State or multistate MSA based on the [Agency]'s consideration of the following two components:

(1) *Component one – facility-based assessment area performance conclusions in a State or multistate MSA.* A limited purpose bank’s community development financing performance in its facility-based assessment areas in the State or multistate MSA; and

(2) *Component two – State or multistate MSA performance.* The dollar volume of the limited purpose bank’s community development loans and community development investments that benefit or serve the State or multistate MSA and a review of the impact and responsiveness of those loans and investments, as provided in § __.15.

(f) *Nationwide area evaluation.* The [Agency] evaluates a limited purpose bank’s community development financing performance in the nationwide area, pursuant to § __.19, and assigns a conclusion for the institution based on the [Agency]’s consideration of the following two components:

(1) *Component one – facility-based assessment area performance.* The limited purpose bank’s community development financing performance in all of its facility-based assessment areas; and

(2) *Component two – nationwide area performance.* The limited purpose bank’s community development financing performance in the nationwide area based on the following metrics and benchmarks in paragraphs (f)(2)(i) through (f)(2)(iv) of this section and a review of the impact and responsiveness of the bank’s community development loans and community development investments in paragraph (f)(2)(v) of this section.

(i) *Limited Purpose Bank Community Development Financing Metric.* The Limited Purpose Bank Community Development Financing Metric measures the dollar volume of a bank’s community development loans and community development investments that benefit or serve all or part of the nationwide area compared to the bank’s assets calculated pursuant to paragraph III.a of appendix B of this part.

(ii) *Community Development Financing Benchmarks.* The [Agency] compares the Limited Purpose Bank Community Development Financing Metric to the following benchmarks:

(A) *Nationwide Limited Purpose Bank Community Development Financing Benchmark.* The Nationwide Limited Purpose Bank Community Development Financing Benchmark measures the dollar volume of community development loans and community development investments of

depository institutions designated as limited purpose banks or savings associations pursuant to 12 CFR 25.26(a) or designated as limited purpose banks pursuant to 12 CFR 228.26(a) or 345.26(a) reported pursuant to 12 CFR 25.42(b), 228(b), or 345(b) that benefit and serve all or part of the nationwide area compared to assets for those depository institutions, calculated pursuant to paragraph III.b of appendix B of this part; and

(B) *Nationwide Asset-Based Community Development Financing Benchmark.* The Nationwide Asset-Based Community Development Financing Benchmark measures the dollar volume of community development loans and community development investments that benefit or serve all or part of the nationwide area of all depository institutions that reported pursuant to 12 CFR 25.42(b), 228.42(b), or 345.42(b) compared to assets for those depository institutions, calculated pursuant to paragraph III.c of appendix B of this part.

(iii) *Limited Purpose Bank Community Development Investment Metric.* For a limited purpose bank that had assets greater than \$10 billion as of December 31 in both of the prior two calendar years, the Limited Purpose Bank Community Development Investment Metric measures the dollar volume of the bank's community development investments that benefit or serve all or part of the nationwide area, excluding mortgage-backed securities, compared to the bank's assets, calculated pursuant to paragraph III.d of appendix B of this part.

(iv) *Nationwide Asset-Based Community Development Investment Benchmark.* (A) For a limited purpose bank that had assets greater than \$10 billion as of December 31 in both of the prior two calendar years, the [Agency] compares the Limited Purpose Bank Community Development Investment Metric to the Nationwide Asset-Based Community Development Investment Benchmark. This comparison may only contribute positively to the bank's Community Development Financing Test for Limited Purpose Banks conclusion for the institution.

(B) The Nationwide Asset-Based Community Development Investment Benchmark measures the dollar volume of community development investments that benefit or serve all or part of the nationwide area, excluding mortgage-backed securities, of all depository institutions that had assets greater than \$10 billion as of December 31 in both of the prior two calendar years, compared to assets for those depository institutions, calculated pursuant to paragraph III.e of appendix B of this part.

(v) *Impact and responsiveness review.* The [Agency] reviews the impact and responsiveness of the bank's community development loans and community development investments that benefit or serve the nationwide area, as provided in § __.15.

(g) *Community Development Financing Test for Limited Purpose Banks performance conclusions and ratings.* (1) *Conclusions.* Pursuant to § __.28 and appendix C of this part, the [Agency] assigns conclusions for a limited purpose bank's Community Development Financing Test for Limited Purpose Banks performance in each facility-based assessment area, each State or multistate MSA, as applicable, and for the institution. In assigning conclusions under this performance test, the [Agency] may consider performance context information as provided in § __.21(d).

(2) *Ratings.* Pursuant to § __.28 and appendix D of this part, the [Agency] incorporates a limited purpose bank's Community Development Financing Test for Limited Purpose Banks conclusions into its State or multistate MSA ratings, as applicable, and its institution rating.

§ __.27 Strategic plan.

(a) *Alternative election.* Pursuant to § __.21, the [Agency] evaluates a bank's record of helping to meet the credit needs of its entire community under a strategic plan, if:

- (1) The [Agency] has approved the plan pursuant to this section;
- (2) The plan is in effect; and
- (3) The bank has been operating under an approved plan for at least one year.

(b) *Data requirements.* The [Agency]'s approval of a plan does not affect the bank's obligation, if any, to collect, maintain, and report data as required by § __.42.

(c) *Plans in general.* (1) *Term.* A plan may have a term of not more than five years.

(2) *Performance tests in plan.* (i) A bank's plan must include the same performance tests that would apply in the absence of an approved plan, except as provided in paragraph (g)(1) of this section.

(ii) Consistent with paragraph (g) of this section, a bank's plan may include optional evaluation components or eligible modifications and additions to the performance tests that would apply in the absence of an approved plan.

(3) *Assessment areas and other geographic areas.* (i) *Multiple geographic areas.* A bank may prepare a single plan or separate plans for its facility-based assessment areas, retail lending assessment areas, outside retail lending area, or other geographic areas that would be evaluated in the absence of an approved plan.

(ii) *Geographic areas not included in a plan.* Any facility-based assessment area, retail lending assessment area, outside retail lending area, or other geographic area that would be evaluated in the absence of an approved plan, but is not included in an approved plan, will be evaluated pursuant to the performance tests that would apply in the absence of an approved plan.

(4) *[Operations subsidiaries or operating subsidiaries] and affiliates.* (i) *[Operations subsidiaries or operating subsidiaries].* The loans, investments, services, and products of a bank's [operations subsidiary or operating subsidiary] must be included in the bank's plan, unless the [operations subsidiary or operating subsidiary] is independently subject to CRA requirements.

(ii) *Affiliates.* (A) *Optional inclusion of other affiliates' loans, investments, services and products.* Consistent with § __.21(b)(3), a bank may include loans, investments, services, and products of affiliates of a bank that are not [operations subsidiaries or operating subsidiaries] in a plan, if those loans, investments, services, and products are not included in the CRA performance evaluation of any other depository institution.

(B) *Joint plans.* Affiliated depository institutions supervised by the same Federal financial supervisory agency may prepare a joint plan, provided that the plan includes, for each bank, the applicable performance tests that would apply in the absence of an approved plan. The joint plan may include optional evaluation components or eligible modifications and additions to the performance tests that would apply in the absence of an approved plan.

(C) *Allocation.* The inclusion of an affiliate's loans, investments, services, and products in a bank's plan, or in a joint plan of affiliated depository institutions, is subject to the following:

(1) The loans, investments, services, and products may not be included in the CRA performance evaluation of another depository institution; and

(2) The allocation of loans, investments, services, and products to a bank, or among affiliated banks, must reflect a reasonable basis for the allocation and may not be for the sole or primary purpose of inappropriately enhancing any bank's CRA evaluation.

(d) *Justification and appropriateness of plan election.* (1) *Justification requirements.* A bank's plan must provide a justification that demonstrates the need for the following aspects of a plan due to the bank's business model (e.g., its retail banking services and retail banking products):

(i) Optional evaluation components pursuant to paragraph (g)(1) of this section;

(ii) Eligible modifications or additions to the applicable performance tests pursuant to paragraph (g)(2) of this section;

(iii) Additional geographic areas pursuant to paragraph (g)(3) of this section; and

(iv) The conclusions and ratings methodology pursuant to paragraph (g)(6) of this section.

(2) *Justification elements.* Each justification must specify the following:

(i) Why the bank's business model is outside the scope of, or inconsistent with, one or more aspects of the performance tests that would apply in the absence of an approved plan;

(ii) Why an evaluation of the bank pursuant to any aspect of a plan in paragraph (d)(1) of this section would more meaningfully reflect a bank's record of helping to meet the credit needs of its community than if it were evaluated under the performance tests that would apply in the absence of an approved plan; and

(iii) Why the optional performance components and eligible modifications or additions meet the standards of paragraphs (g)(1) and (g)(2) of this section, as applicable.

(e) *Public participation in initial draft plan development.* (1) *In general.* Before submitting a draft plan to the [Agency] for approval pursuant to paragraph (h) of this section, a bank must:

(i) Informally seek suggestions from members of the public while developing the plan;

(ii) Once the bank has developed its initial draft plan, formally solicit public comment on the initial draft plan for at least 60 days by:

(A) Submitting the initial draft plan for publication on the [Agency]'s website and by publishing the initial draft plan on the bank's website, if the bank maintains one; and

(B) Publishing notice in at least one print newspaper of general circulation (if available, otherwise a digital publication) in each facility-based assessment area covered by the plan;

(C) Notwithstanding paragraph (e)(1)(ii)(B) of this section, for a military bank, publish notice in at least one print newspaper of general circulation targeted to members of the military, if available, otherwise a digital publication targeted to members of the military; and

(iii) Include in the notice required under paragraph (e)(1)(ii) of this section a means by which members of the public can electronically submit and mail comments to the bank on its initial draft plan.

(2) *Availability of initial draft plan.* During the period when the bank is formally soliciting public comment on its initial draft plan, the bank must make copies of the initial draft plan available for review at no cost at all offices of the bank in any facility-based assessment area covered by the plan and provide copies of the initial draft plan upon request for a reasonable fee to cover copying and mailing, if applicable.

(f) *Submission of a draft plan.* The bank must submit its draft plan to the [Agency] at least 90 days prior to the proposed effective date of the plan. The bank must also submit with its draft plan:

(1) Proof of notice publication and a description of its efforts to seek input from members of the public, including individuals and organizations the bank contacted and how the bank gathered information;

(2) Any written comments or other public input received;

(3) If the bank revised the initial draft plan in response to the public input received, the initial draft plan as released for public comment with an explanation of the relevant changes; and

(4) If the bank did not revise the initial draft plan in response to suggestions or concerns from public input received, an explanation for why any suggestion or concern was not addressed in the draft plan.

(g) *Plan content.* In addition to meeting the requirements in paragraph (c) and (d) of this section, the plan must meet the following requirements:

(1) *Applicable performance tests and optional evaluation components.* A bank must include in its plan a focus on the credit needs of its entire community, including low- and moderate-income individuals, families, or households, low- and moderate-income census tracts, and small businesses and small farms. The bank must describe how its plan is responsive to the characteristics and credit needs of its facility-based assessment areas, retail lending assessment areas, outside retail lending area or other geographic areas served by the bank, considering public comment and the bank's capacity and constraints, product offerings, and business strategy. As applicable, a bank must specify components in its plan for helping to meet:

(i) The retail lending needs of its facility-based assessment areas, retail lending assessment areas, and outside retail lending area that are covered by the plan. A bank that originates or purchases loans in a product line evaluated pursuant to the Retail Lending Test in § __.22 or originates or purchases loans evaluated pursuant to the Small Bank Lending Test in § __.29(a)(2) must include the applicable test in its plan, subject to eligible modifications or additions specified in paragraph (g)(2) of this section.

(ii) The retail banking services and retail banking products needs of its facility-based assessment areas and at the institution level that are covered by the plan.

(A) A large bank that maintains delivery systems evaluated pursuant to the Retail Services and Products Test in § __.23(b) must include this component of the test in its plan, subject to eligible modifications or additions specified in paragraph (g)(2) of this section.

(B) A large bank that does not maintain delivery systems evaluated pursuant to the Retail Services and Products Test in § __.23(b) may include retail banking products components in § __.23(c) and accompanying annual measurable goals in its plan.

(C) A bank other than a large bank may include components of retail banking services or retail banking products and accompanying annual measurable goals in its plan.

(iii) The community development loan and community development investment needs of its facility-based assessment areas, States, or multistate MSAs, as applicable, and the nationwide

area that are covered by the plan. Subject to eligible modifications or additions as provided in paragraph (g)(2) of this section:

(A) A large bank must include the Community Development Financing Test in § __.24 in its plan.

(B) An intermediate bank must include either the Community Development Financing Test in § __.24 or the Intermediate Bank Community Development Test in § __.30(a)(2) in its plan.

(C) A limited purpose bank must include the Community Development Financing Test for Limited Purpose Banks in § __.26 in its plan.

(D) A small bank may include a community development loan or community development investment component and accompanying annual measurable goals in its plan.

(iv) The community development services needs of its facility-based assessment areas served by the bank that are covered by the plan.

(A) A large bank must include the Community Development Services Test in § __.25 in its plan, subject to eligible modifications or additions as provided in paragraph (g)(2) of this section, for each facility-based assessment area where the bank has employees.

(B) A bank other than a large bank may include a community development services component and accompanying annual measurable goals in its plan.

(2) *Eligible modifications or additions to applicable performance tests.* (i) *Retail lending.*

(A) For a bank that the [Agency] would otherwise evaluate pursuant to the Small Bank Lending Test in § __.29(a)(2):

(1) A bank may omit, as applicable, the evaluation of performance criteria related to the loan-to-deposit ratio or the percentage of loans located in the bank's facility-based assessment area(s).

(2) A bank may add annual measurable goals for any aspect of the bank's retail lending.

(B) For a bank the [Agency] would otherwise evaluate pursuant to the Retail Lending Test in § __.22:

(1) A bank may add additional loan products, such as non-automobile consumer loans or open-end home mortgage loans, or additional goals for major product lines, such as closed-end home mortgage loans to first-time homebuyers, with accompanying annual measurable goals.

(2) Where annual measurable goals for additional loan products or additional goals for major product lines have been added pursuant to paragraph (g)(2)(i)(B)(1) of this section, a bank may provide different weights for averaging together the performance across these loan products or may include those loan products in the numerator of the Bank Volume Metric.

(3) A bank may use alternative weights for combining the borrower and geographic distribution analyses for major product line(s) or other loan products.

(ii) *Retail banking services and retail banking products.* (A) A large bank may add annual measurable goals for any component of the Retail Services and Products Test in § __.23.

(B) A large bank may modify the Retail Services and Products Test by removing a component of the test.

(C) A large bank may assign specific weights to applicable components in paragraph (g)(3)(ii)(A) of this section in reaching a Retail Services and Products Test conclusion.

(D) A bank other than a large bank may include retail banking services or retail banking products component(s) and accompanying annual measurable goals in its plan.

(iii) *Community development loans and community development investments.* (A) A bank may specify annual measurable goals for community development loans, community development investments, or both. The bank must base any annual measurable goals as a percentage or ratio of the bank's community development loans and community development investments for all or certain types of community development described in § __.13 (b) through (l), presented either on a combined or separate basis, relative to the bank's capacity and should account for community development needs and opportunities.

(B) A bank may specify using assets as an alternative denominator for a community development financing metric if it better measures a bank's capacity.

(C) A bank may specify additional benchmarks to evaluate a community development financing metric.

(D) A small bank may include community development loans, community development investments, or both, and accompanying annual measurable goals in its plan.

(iv) *Community development services.* (A) A bank may specify annual measurable goals for community development services activity, by number of activity hours, number of hours per full-time equivalent employee, or some other measure.

(B) A bank other than a large bank may include a community development services component and accompanying annual measurable goals in its plan.

(v) *Weights for assessing performance across geographic areas.* A bank may specify alternative weights for averaging test performance across assessment areas or other geographic areas. These alternative weights must be based on the bank's capacity and community needs and opportunities in specific geographic areas.

(vi) *Test weights.* For ratings at the State, multistate MSA, and institution levels pursuant to § __.28(b) and paragraph g.2 of appendix D of this part, as applicable:

(A) A bank may request an alternate weighting method for combining performance under the applicable performance tests and optional evaluation components. In specifying alternative test weights for each applicable test, a bank must emphasize retail lending, community development financing, or both. Alternative weights must be responsive to the characteristics and credit needs of a bank's assessment areas and public comments and must be based on the bank's capacity and constraints, product offerings, and business strategy.

(B) A bank that requests an alternate weighting method pursuant to paragraph (g)(2)(vi)(A) of this section must compensate for decreasing the weight under one test by committing to enhance its efforts to help meet the credit needs of its community under another performance test.

(3) *Geographic coverage of plan.* (i) A bank may incorporate performance evaluation components and accompanying annual measurable goals for additional geographic areas but may not eliminate the evaluation of its performance in any geographic area that would be included in its performance evaluation in the absence of an approved plan.

(ii) If a large bank is no longer required to delineate a retail lending assessment area previously identified in the plan as a result of not meeting the required retail lending assessment

area thresholds pursuant to § __.17, the [Agency] will not evaluate the bank for its performance in that area for the applicable years of the plan in which the area is no longer a retail lending assessment area.

(iii) A bank that includes additional performance evaluation components with accompanying annual measurable goals in its plan must specify the geographic areas where those components and goals apply.

(4) *Confidential information.* A bank may submit additional information to the [Agency] on a confidential basis, but the goals stated in the plan must be sufficiently specific to enable the public and the [Agency] to judge the merits of the plan.

(5) *“Satisfactory” and “Outstanding” performance goals.* A bank that includes modified or additional performance evaluation components with accompanying annual measurable goals in its plan must specify in its plan annual measurable goals that constitute “Satisfactory” performance and may specify annual measurable goals that constitute “Outstanding” performance.

(6) *Conclusions and rating methodology.* A bank must specify in its plan how all elements of a plan covered in paragraphs (g)(1) through (g)(5) of this section, in conjunction with any other applicable performance tests not included in an approved strategic plan, should be considered to assign:

(i) *Conclusions.* Pursuant to § __.28 and appendix C of this part, the [Agency] assigns conclusions for each facility-based assessment area, retail lending assessment area, outside retail lending area, State, and multistate MSA, as applicable, and the institution. In assigning conclusions under a strategic plan, the [Agency] may consider performance context information as provided in § __.21(d).

(ii) *Ratings.* Pursuant to § __.28 and paragraph f of appendix D of this part, the [Agency] incorporates the conclusions of a bank evaluated under an approved plan into its State or multistate MSA ratings, as applicable, and its institution rating, accounting for paragraph g.2 of appendix D of this part, as applicable.

(h) *Draft plan evaluation.* (1) *Timing.* The [Agency] seeks to act upon a draft plan within 90 calendar days after the [Agency] receives the complete draft plan and other materials required

pursuant to paragraph (f) of this section. If the [Agency] does not act within this time period, the [Agency] will communicate to the bank the rationale for the delay and an expected timeframe for a decision on the draft plan.

(2) *Public participation.* In evaluating the draft plan, the [Agency] considers:

(i) The public's involvement in formulating the draft plan, including specific information regarding the members of the public and organizations the bank contacted and how the bank collected information relevant to the draft plan;

(ii) Written public comments and other public input on the draft plan;

(iii) Any response by the bank to public input on the draft plan; and

(iv) Whether to solicit additional public input or require the bank to provide any additional response to public input already received.

(3) *Criteria for evaluating plan for approval.* (i) The [Agency] evaluates all plans using the following criteria:

(A) The extent to which the plan meets the standards set forth in this section; and

(B) The extent to which the plan has adequately justified the need for a plan and each aspect of the plan as required in paragraph (d) of this section.

(ii) The [Agency] evaluates a plan under the following criteria, as applicable, considering performance context information pursuant to § __.21(d):

(A) The extent and breadth of retail lending or retail lending-related activities to address credit needs, including the distribution of loans among census tracts of different income levels, businesses and farms of different sizes, and individuals of different income levels, pursuant to §§ __.22, and __.29, as applicable;

(B) The effectiveness of the bank's systems for delivering retail banking services and the availability and responsiveness of the bank's retail banking products, pursuant to § __.23, as applicable;

(C) The extent, breadth, impact, and responsiveness of the bank's community development loans and community development investments, pursuant to §§ __.24, __.26, and __.30, as applicable; and

(D) The number, hours, and types of community development services performed and the extent to which the bank's community development services are impactful and responsive, pursuant to §§ __.25 and __.30, as applicable.

(4) *Plan decisions.* (i) *Approval.* The [Agency] may approve a plan after considering the criteria in paragraph (h)(3) of this section and if it determines that the bank has provided adequate justification for the plan and each aspect of the plan as required in paragraph (d) of this section.

(ii) *Denial.* The [Agency] may deny a bank's request to be evaluated under a plan for any of the following reasons:

(A) The Agency determines that the bank has not provided adequate justification for the plan and each aspect of the plan as required pursuant to paragraph (d) of this section;

(B) The [Agency] determines that evaluation under the plan would not provide a more meaningful reflection of the bank's record of helping to meet the credit needs of the bank's community;

(C) The plan is not responsive to public comment received pursuant to paragraph (e) of this section;

(D) The [Agency] determines that the plan otherwise fails to meet the requirements of this section; or

(E) The bank fails to provide information requested by the [Agency] that is necessary for the [Agency] to make an informed decision.

(5) *Publication of approved plan.* The [Agency] will publish an approved plan on the [Agency]'s website.

(i) *Plan amendment.* (1) *Mandatory plan amendment.* During the term of a plan, a bank must submit to the [Agency] for approval an amendment to its plan if a material change in circumstances:

(i) Impedes its ability to perform at a satisfactory level under the plan, such as financial constraints caused by significant events that impact the local or national economy; or

(ii) Significantly increases its financial capacity and ability to engage in retail lending, retail banking services, retail banking products, community development loans, community development investments, or community development services referenced in an approved plan, such as a merger or consolidation.

(2) *Elective plan amendment.* During the term of a plan, a bank may request the [Agency] to approve an amendment to the plan in the absence of a material change in circumstances.

(3) *Requirements for plan amendments.* (i) *Amendment explanation.* When submitting a plan amendment for approval, a bank must explain:

(A) The material change in circumstances necessitating the amendment; or

(B) Why it is necessary and appropriate to amend its plan in the absence of a material change in circumstances.

(ii) *Compliance requirement.* An amendment to a plan must comply with all relevant requirements of this section, unless the [Agency] waives a requirement as not applicable.

(j) *Performance evaluation under a plan.* (1) *In general.* The [Agency] evaluates a bank's performance under an approved plan based on the performance tests that would apply in the absence of an approved plan and any optional evaluation components or eligible modifications and additions to the applicable performance tests set forth in the bank's approved plan.

(2) *Goal considerations.* If a bank established annual measurable goals and does not meet one or more of its satisfactory goals, the [Agency] will consider the following factors to determine the effect on a bank's CRA performance evaluation:

(i) The degree to which the goal was not met;

(ii) The importance of the unmet goals to the plan as a whole; and

(iii) Any circumstances beyond the control of the bank, such as economic conditions or other market factors or events, that have adversely impacted the bank's ability to perform.

(3) *Ratings.* The [Agency] rates the performance of a bank under this section pursuant to appendix D of this part.

§ __.28 Assigned conclusions and ratings.

(a) *Conclusions.* (1) *State, multistate MSA, and institution test conclusions and performance scores.* (i) *In general.* For each of the applicable performance tests pursuant to §§ __.22 through __.26, and § __.30, the [Agency] assigns conclusions and associated test performance scores of “Outstanding,” “High Satisfactory,” “Low Satisfactory,” “Needs to Improve,” or “Substantial Noncompliance” for the performance of a bank in each State and multistate MSA, as applicable pursuant to paragraph (c) of this section, and for the institution.

(ii) *Small banks.* The [Agency] assigns conclusions of “Outstanding,” “Satisfactory,” “Needs to Improve,” or “Substantial Noncompliance” for the performance of a small bank evaluated under the Small Bank Lending Test in § __.29(a)(2) in each State and multistate MSA, as applicable pursuant to paragraph (c) of this section, and for the institution pursuant to § __.29 and appendix E of this part.

(iii) *Banks operating under a strategic plan.* The [Agency] assigns conclusions for the performance of a bank operating under a strategic plan pursuant to § __.27 in each State and multistate MSA, as applicable pursuant to paragraph (c) of this section, and for the institution in accordance with the methodology of the plan and appendix C of this part.

(2) *Bank performance in metropolitan and nonmetropolitan areas.* Pursuant to 12 U.S.C. 2906, the [Agency] provides conclusions derived under this part separately for metropolitan areas in which a bank maintains one or more domestic branch offices and for the nonmetropolitan area of a State if a bank maintains one or more domestic branch offices in such nonmetropolitan area.

(b) *Ratings.* (1) *In general.* The [Agency] assigns a rating for a bank’s overall CRA performance of “Outstanding,” “Satisfactory,” “Needs to Improve,” or “Substantial Noncompliance” in each State and multistate MSA, as applicable pursuant to paragraph (c) of this section, and for the institution, as provided in this section and appendices D and E of this part. The ratings assigned by the [Agency] reflect the bank’s record of helping to meet the credit needs of its entire community, including low- and moderate-income neighborhoods, consistent with the safe and sound operation of the bank.

(2) *State, multistate MSA, and institution ratings and overall performance scores.* (i) For large banks, intermediate banks, small banks that opt into the Retail Lending Test in § __.22, and limited purpose banks, the [Agency] calculates and discloses the bank’s overall performance

score for each State and multistate MSA, as applicable, and for the institution. The [Agency] uses a bank's overall performance scores described in this section to assign a rating for the bank's overall performance in each State and multistate MSA, as applicable, and for the institution, subject to paragraphs (d) and (e) of this section.

(ii) Overall performance scores are based on the bank's performance score for each applicable performance test and derived as provided paragraph (b)(3) of this section, as applicable, and appendix D of this part.

(3) *Weighting of performance scores.* In calculating a large bank's or intermediate bank's overall performance score for each State and multistate MSA, as applicable, and the institution, the [Agency] weights the performance scores for the bank for each applicable performance test as provided below.

(i) *Large bank performance test weights.* The [Agency] weights the bank's performance score for the performance tests applicable to a large bank as follows:

- (A) Retail Lending Test, 40 percent;
- (B) Retail Services and Products Test, 10 percent;
- (C) Community Development Financing Test, 40 percent; and
- (D) Community Development Services Test, 10 percent.

(ii) *Intermediate bank performance test weights.* The [Agency] weights the bank's performance score for the performance tests applicable to an intermediate bank as follows:

- (A) Retail Lending Test, 50 percent, and
- (B) Intermediate Bank Community Development Test or Community Development Financing Test, as applicable, 50 percent.

(4) *Minimum conclusion requirements.* (i) *Retail Lending Test minimum conclusion.* An intermediate bank or a large bank must receive at least a "Low Satisfactory" Retail Lending Test conclusion for the State, multistate MSA, or institution to receive, respectively, a State, multistate MSA, or institution rating of "Satisfactory" or "Outstanding."

(ii) *Minimum of "Low Satisfactory" overall facility-based assessment area and retail lending assessment area conclusion.* (A) For purposes of this paragraph, the [Agency] assigns a large

bank an overall conclusion for each facility-based assessment area and, as applicable, each retail lending assessment area, as provided in paragraph g.2.ii of appendix D of this part.

(B) Except as provided in § __.51(e), a large bank with a combined total of 10 or more facility-based assessment areas and retail lending assessment areas in any State or multistate MSA, as applicable, or for the institution may not receive a rating of “Satisfactory” or “Outstanding” in that State or multistate MSA, as applicable, or for the institution, unless the bank receives an overall conclusion of at least “Low Satisfactory” in 60 percent or more of the total number of its facility-based assessment areas and retail lending assessment areas in that State or multistate MSA, as applicable, or for the institution.

(c) *Conclusions and ratings for States and multistate MSAs.* (1) *States.* (i) *In general.* Except as provided in paragraph (c)(1)(ii) of this section, the [Agency] evaluates a bank and assigns conclusions and ratings for any State in which the bank maintains a main office, branch, or deposit-taking remote service facility.

(ii) *States with rated multistate MSAs.* The [Agency] evaluates a bank and assigns conclusions and ratings for a State only if the bank maintains a main office, branch, or deposit-taking remote service facility outside the portion of the State comprising any multistate MSA identified in paragraph (c)(2) of this section. In evaluating a bank and assigning conclusions and ratings for a State, the [Agency] does not consider activities to be in the State if those activities take place in the portion of the State comprising any multistate MSA identified in paragraph (c)(2) of this section.

(iii) *States with non-rated multistate MSAs.* If a facility-based assessment area of a bank comprises a geographic area spanning two or more States within a multistate MSA that is not identified in paragraph (c)(2) of this section, the [Agency] considers activities in the entire facility-based assessment area to be in the State in which the bank maintains, within the multistate MSA, a main office, branch, or deposit-taking remote service facility. In evaluating a bank and assigning conclusions and ratings for a State, the [Agency] does not consider activities to be in the State if those activities take place in any facility-based assessment area that is considered to be in another State pursuant to this paragraph.

(iv) *States with multistate retail lending assessment areas.* In assigning Retail Lending Test conclusions for a State pursuant to § __.22(h), the [Agency] does not consider a bank’s activities

to be in the State if those activities take place in a retail lending assessment area consisting of counties in more than one State.

(2) *Rated multistate MSAs.* The [Agency] evaluates a bank and assigns conclusions and ratings under this part in any multistate MSA in which the bank maintains a main office, a branch, or a deposit-taking remote service facility in two or more States within that multistate MSA.

(d) *Effect of evidence of discriminatory or other illegal credit practices.* (1) *Scope.* For each State and multistate MSA, as applicable, and the institution, the [Agency]'s evaluation of a bank's performance under this part is adversely affected by evidence of discriminatory or other illegal credit practices, as provided in paragraph (d)(2) of this section. The [Agency] considers evidence of discriminatory or other illegal credit practices described in this section by:

- (i) The bank, including by an [operations subsidiary or operating subsidiary] of the bank; or
- (ii) Any other affiliate related to any activities considered in the evaluation of the bank.

(2) *Discriminatory or other illegal credit practices.* For purposes of paragraph (d)(1) of this section, discriminatory or other illegal credit practices consist of the following:

- (i) Discrimination on a prohibited basis, including in violation of the Equal Credit Opportunity Act (15 U.S.C. § 1691 et seq.) or the Fair Housing Act (42 U.S.C. § 3601 et seq.);
- (ii) Violations of the Home Ownership and Equity Protection Act (15 U.S.C. 1639);
- (iii) Violations of section 5 of the Federal Trade Commission Act (15 U.S.C. 45);
- (iv) Violations of section 1031 of the Dodd-Frank Wall Street Reform and Consumer Protection Act (12 U.S.C. 5531, 5536);
- (v) Violations of section 8 of the Real Estate Settlement Procedures Act (12 U.S.C. 2601 et seq.);
- (vi) Violations of the Truth in Lending Act (15 U.S.C. 1601 et seq.);
- (vii) Violations of the Military Lending Act (10 U.S.C. 987);
- (viii) Violations of the Servicemembers Civil Relief Act (50 U.S.C. 3901 et seq.); and

(ix) Any other violation of a law, rule, or regulation consistent with the types of violations in paragraphs (d)(2)(i) through (d)(2)(viii) of this section, as determined by the [Agency].

(3) *Agency considerations.* In determining the effect of evidence of discriminatory or other illegal credit practices described in paragraph (d)(1) of this section on the bank's assigned State, multistate MSA, and institution ratings, the [Agency] will consider:

(i) The root cause or causes of any such violations of law, rule, or regulation;

(ii) The severity of any harm to any communities, individuals, small businesses, and small farms resulting from such violations;

(iii) The duration of time over which the violations occurred;

(iv) The pervasiveness of the violations;

(v) The degree to which the bank, [operations subsidiary or operating subsidiary], or affiliate, as applicable, has established an effective compliance management system across the institution to self-identify risks and to take the necessary actions to reduce the risk of non-compliance and harm to communities, individuals, small businesses, and small farms; and

(vi) Any other relevant information.

(e) *Consideration of past performance.* When assigning ratings, the [Agency] considers a bank's past performance. If a bank's prior rating was "Needs to Improve," the [Agency] may determine that a "Substantial Noncompliance" rating is appropriate where the bank failed to improve its performance since the previous evaluation period, with no acceptable basis for such failure.

§ __.29 Small bank performance evaluation.

(a) *Small bank performance evaluation.* (1) *In general.* The [Agency] evaluates a small bank's record of helping to meet the credit needs of its entire community pursuant to the Small Bank Lending Test as provided in paragraph (a)(2) of this section, unless the small bank opts to be evaluated pursuant to the Retail Lending Test in § __.22.

(2) *Small Bank Lending Test.* A small bank's retail lending performance is evaluated pursuant to the following criteria:

(i) The bank's loan-to-deposit ratio, adjusted for seasonal variation, and, as appropriate, other retail and community development lending-related activities, such as loan originations for sale to the secondary markets, community development loans, or community development investments;

(ii) The percentage of loans and, as appropriate, other retail and community development lending-related activities located in the bank's facility-based assessment areas;

(iii) The bank's record of lending to and, as appropriate, engaging in other retail and community development lending-related activities for borrowers of different income levels and businesses and farms of different sizes;

(iv) The geographic distribution of the bank's loans; and

(v) The bank's record of taking action, if warranted, in response to written complaints about its performance in helping to meet credit needs in its facility-based assessment areas.

(b) *Additional consideration.* (1) *Small banks evaluated pursuant to the Small Bank Lending Test.* The [Agency] may adjust a small bank rating from "Satisfactory" to "Outstanding" at the institution level where the bank requests and receives additional consideration for the following activities, without regard to whether the activity is in one or more of the bank's facility-based assessment areas, as applicable:

(i) Making community development investments;

(ii) Providing community development services; and

(iii) Providing branches and other services, digital delivery systems and other delivery systems, and deposit products responsive to the needs of low- and moderate-income individuals, families, or households, residents of low- and moderate-income census tracts, small businesses, and small farms.

(2) *Small banks that opt to be evaluated pursuant to the Retail Lending Test in § __.22.* The [Agency] may adjust a small bank rating from "Satisfactory" to "Outstanding" at the institution level where the bank requests and receives additional consideration for activities that would qualify pursuant to the Retail Services and Products Test in § __.23, the Community Development Financing Test in § __.24, or the Community Development Services Test in § __.25.

(3) *Additional consideration for activities with MDIs, WDIs, and LICUs, and for providing low-cost education loans.* Notwithstanding paragraphs (b)(1) and (b)(2) of this section, a small bank may request and receive additional consideration at the institution level for activities with MDIs, WDIs, and LICUs pursuant to 12 U.S.C. 2903(b) and 2907(a) and for providing low-cost education loans to low-income borrowers pursuant to 12 U.S.C. 2903(d), regardless of the small bank's overall institution rating.

(c) *Small bank performance conclusions and ratings.* (1) *Conclusions.* Except for a small bank that opts to be evaluated pursuant to the Retail Lending Test in § __.22, the [Agency] assigns conclusions for the performance of a small bank evaluated under this section as provided in appendix E of this part. If a bank opts to be evaluated pursuant to the Retail Lending Test, the [Agency] assigns conclusions for the bank's Retail Lending Test performance as provided in appendix C of this part. In assigning conclusions for a small bank, the [Agency] may consider performance context information as provided in § __.21(d).

(2) *Ratings.* For a small bank evaluated under the Small Bank Lending Test, the [Agency] rates the bank's performance under this section as provided in appendix E of this part. If a small bank opts to be evaluated under the Retail Lending Test in § __.22, the [Agency] rates the performance of a small bank as provided by appendix D of this part.

§ __.30 Intermediate bank performance evaluation.

(a) *Intermediate bank performance evaluation.* (1) *In general.* The [Agency] evaluates an intermediate bank's record of helping to meet the credit needs of its entire community pursuant to the Retail Lending Test in § __.22 and the Intermediate Bank Community Development Test as provided in paragraph (a)(2) of this section, unless an intermediate bank opts to be evaluated pursuant to the Community Development Financing Test in § __.24.

(2) *Intermediate Bank Community Development Test.* (i) An intermediate bank's community development performance is evaluated pursuant to the following criteria:

- (A) The number and dollar amount of community development loans;
- (B) The number and dollar amount of community development investments;
- (C) The extent to which the bank provides community development services; and

(D) The bank's responsiveness through such community development loans, community development investments, and community development services to community development needs. The [Agency]'s evaluation of the responsiveness of the bank's activities is informed by information provided by the bank, and may be informed by the impact and responsiveness review factors described in § __.15(b).

(ii) The [Agency] considers an intermediate bank's community development loans, community development investments, and community development services without regard to whether the activity is made in one or more of the bank's facility-based assessment areas. The extent of the [Agency]'s consideration of community development loans, community development investments, and community development services outside of the bank's facility-based assessment areas will depend on the adequacy of the bank's responsiveness to community development needs and opportunities within the bank's facility-based assessment areas and applicable performance context information.

(b) *Additional consideration.* (1) *Intermediate banks evaluated pursuant to the Intermediate Bank Community Development Test.* The [Agency] may adjust the rating of an intermediate bank evaluated as provided in paragraph (a)(2) of this section from "Satisfactory" to "Outstanding" at the institution level where the bank requests and receives additional consideration for activities that would qualify pursuant to the Retail Services and Products Test in § __.23.

(2) *Intermediate banks evaluated pursuant to the Community Development Financing Test.* The [Agency] may adjust the rating of an intermediate bank that opts to be evaluated pursuant to the Community Development Financing Test in § __.24 from "Satisfactory" to "Outstanding" at the institution level where the bank requests and receives additional consideration for activities that would qualify pursuant to the Retail Services and Products Test in § __.23, the Community Development Services Test in § __.25, or both.

(3) *Additional consideration for low-cost education loans.* Notwithstanding paragraphs (b)(1) and (b)(2) of this section, an intermediate bank may request and receive additional consideration at the institution level for providing low-cost education loans to low-income borrowers pursuant to 12 U.S.C. 2903(d), regardless of the intermediate bank's overall institution rating.

(c) *Intermediate bank performance conclusions and ratings.* (1) *Conclusions.* The [Agency] assigns a conclusion for the performance of an intermediate bank evaluated pursuant to this section as provided in appendices C and E of this part. In assigning conclusions for an intermediate bank, the [Agency] may consider performance context information as provided in § __.21(d).

(2) *Ratings.* The [Agency] rates the performance of an intermediate bank evaluated under this section as provided in appendix D of this part.

§ __.31 [RESERVED]

Subpart D—Records, Reporting, Disclosure, and Public Engagement Requirements

§ __.42 **Data collection, reporting, and disclosure.**

(a) *Information required to be collected and maintained.* (1) *Small business loans and small farm loans data.* A large bank must collect and maintain in electronic form, as prescribed by the [Agency], until the completion of the bank's next CRA examination in which the data are evaluated, the following data for each small business loan or small farm loan originated or purchased by the bank during the evaluation period:

(i) A unique number or alpha-numeric symbol that can be used to identify the relevant loan file;

(ii) An indicator for the loan type as reported on the bank's Call Report or Report of Assets and Liabilities of U.S. Branches and Agencies of Foreign Banks, as applicable.

(iii) The date of the loan origination or purchase;

(iv) The loan amount at origination or purchase;

(v) The loan location, including State, county, and census tract;

(vi) An indicator for whether the loan was originated or purchased by the bank;

(vii) An indicator for whether the loan was to a business or farm with gross annual revenues of \$250,000 or less;

(viii) An indicator for whether the loan was to a business or farm with gross annual revenues greater than \$250,000 but less than or equal to \$1 million;

(ix) An indicator for whether the loan was to a business or farm with gross annual revenues greater than \$1 million; and

(x) An indicator for whether the loan was to a business or farm for which gross annual revenues are not known by the bank.

(2) *Consumer loans data—automobile loans.* (i) *Large banks.* A large bank for which automobile loans are a product line must collect and maintain in electronic form, as prescribed by the [Agency], until the completion of the bank's next CRA examination in which the data is evaluated, the data described in paragraphs (a)(2)(iii)(A) through (a)(2)(iii)(F) of this section for each automobile loan originated or purchased by the bank during the evaluation period.

(ii) *Intermediate or small banks.* An intermediate bank or a small bank for which automobile loans are a product line may collect and maintain in a format of the bank's choosing, including in an electronic form prescribed by the [Agency], until the completion of the bank's next CRA examination in which the data are evaluated, the data described in paragraphs (a)(2)(iii)(A) through (a)(2)(iii)(F) of this section for each automobile loan originated or purchased by the bank during the evaluation period.

(iii) *Data collected and maintained.* Data collected and maintained pursuant to paragraph (a)(2)(i) or (a)(2)(ii) of this section include the following:

(A) A unique number or alpha-numeric symbol that can be used to identify the relevant loan file;

(B) The date of the loan origination or purchase;

(C) The loan amount at origination or purchase;

(D) The loan location, including State, county, and census tract;

(E) An indicator for whether the loan was originated or purchased by the bank; and

(F) The gross annual income relied on in making the credit decision.

(3) *Home mortgage loans.* (i) If a large bank is subject to reporting under 12 CFR part 1003, the bank must collect and maintain, in electronic form, as prescribed by the [Agency], until the completion of the bank's next CRA examination in which the data are evaluated, the location of each home mortgage loan application, origination, or purchase outside the MSAs in which the

bank has a home or branch office (or outside any MSA) pursuant to the requirements in 12 CFR 1003.4(e).

(ii) If a large bank is not subject to reporting under 12 CFR part 1003 due to the location of its branches, but would otherwise meet the Home Mortgage Disclosure Act (HMDA) size and lending activity requirements pursuant to 12 CFR part 1003, the bank must collect and maintain, in electronic form, as prescribed by the [Agency], until the completion of the bank's next CRA examination in which the data are evaluated, the following data, for each closed-end home mortgage loan, excluding multifamily loans, originated or purchased during the evaluation period:

(A) A unique number or alpha-numeric symbol that can be used to identify the relevant loan file;

(B) The date of the loan origination or purchase;

(C) The loan amount at origination or purchase;

(D) The location of each home mortgage loan origination or purchase, including State, county, and census tract;

(E) The gross annual income relied on in making the credit decision; and

(F) An indicator for whether the loan was originated or purchased by the bank.

(4) *Retail banking services and retail banking products data.* (i) *Branches and remote service facilities.* A large bank must collect and maintain in electronic form, as prescribed by the [Agency], until completion of the bank's next CRA examination in which the data are evaluated, the following data with respect to retail banking services and retail banking products offered and provided by the bank during each calendar year:

(A) Location of branches, main offices described in § __.23(a)(2), and remote service facilities. Location information must include:

(1) Street address;

(2) City;

(3) County;

(4) State;

(5) Zip code; and

(6) Census tract;

(B) An indicator for whether each branch is full-service or limited-service, and for each remote service facility whether it is deposit-taking, cash-advancing, or both;

(C) Locations and dates of branch, main office described in § __.23(a)(2), and remote service facility openings and closings, as applicable;

(D) Hours of operation of each branch, main office described in § __.23(a)(2), and remote service facility, as applicable; and

(E) Services offered at each branch or main office described in § __.23(a)(2) that are responsive to low- and moderate-income individuals, families, or households and low- and moderate-income census tracts.

(ii) *Digital delivery systems and other delivery systems data.* (A) *In general.* A large bank that had assets greater than \$10 billion as of December 31 in both of the prior two calendar years, a large bank that had assets less than or equal to \$10 billion as of December 31 in either of the prior two calendar years that does not operate any branches or a main office described in § __.23(a)(2), and a large bank that had assets less than or equal to \$10 billion as of December 31 in either of the prior two calendar years that requests additional consideration for digital delivery systems and other delivery systems pursuant to § __.23(b)(4), must collect and maintain in electronic form, as prescribed by the [Agency], until the completion of the bank's next CRA examination in which the data are evaluated, the data described in paragraph (a)(4)(ii)(B) of this section. A bank may opt to collect and maintain additional data pursuant to paragraph (a)(4)(ii)(C) of this section in a format of the bank's own choosing.

(B) *Required data.* Pursuant to paragraph (a)(4)(ii)(A) of this section, a bank must collect and maintain the following data:

(1) The range of retail banking services and retail banking products offered through digital delivery systems and other delivery systems; and

(2) The digital delivery systems and other delivery systems activity by individuals, families, or households in low-, moderate-, middle-, and upper-income census tracts, as evidenced by:

(i) The number of checking and savings accounts opened digitally and through other delivery systems by census tract income level for each calendar year; and

(ii) The number of checking and savings accounts opened digitally and through other delivery systems that are active at the end of each calendar year by census tract income level for each calendar year.

(C) *Optional data.* Pursuant to paragraph (a)(4)(ii)(A) of this section, a bank may collect and maintain any additional information not required in paragraph (a)(4)(ii)(B) that demonstrates that digital delivery systems and other delivery systems serve low- and moderate-income individuals, families, or households and low- and moderate-income census tracts.

(iii) *Data for deposit products responsive to the needs of low- and moderate-income individuals, families, or households.* (A) *In general.* A large bank that had assets greater than \$10 billion as of December 31 in both of the prior two calendar years and a large bank that had assets less than or equal to \$10 billion as of December 31 in either of the prior two calendar years that requests additional consideration for deposit products responsive to the needs of low- and moderate-income individuals, families, or households pursuant to § __.23(c)(3), must collect and maintain in electronic form, as prescribed by the [Agency], until the completion of the bank's next CRA examination in which the data are evaluated, the data described in paragraph (a)(4)(iii)(B) of this section. A bank may opt to collect and maintain additional data pursuant to paragraph (a)(4)(iii)(C) of this section in a format of the bank's choosing.

(B) *Required data.* Pursuant to paragraph (a)(4)(iii)(A) of this section, a bank must collect and maintain the following data:

(1) The number of responsive deposit accounts opened and closed during each year of the evaluation period in low-, moderate-, middle-, and upper-income census tracts; and

(2) In connection with paragraph (a)(4)(iii)(B)(1) of this section, the percentage of responsive deposit accounts compared to total deposit accounts for each year of the evaluation period.

(C) *Optional data.* Pursuant to paragraph (a)(4)(iii)(A) of this section, a bank may collect and maintain any other information that demonstrates the availability and usage of the bank's

deposit products responsive to the needs of low- and moderate-income individuals, families, or households and low- and moderate-income census tracts.

(5) *Community development loans and community development investments data.* (i)(A) A large bank and a limited purpose bank that would be a large bank based on the asset size described in the definition of a large bank, must collect and maintain in electronic form, as prescribed by the [Agency], until the completion of the bank's next CRA examination in which the data are evaluated, the data listed in paragraph (a)(5)(ii) of this section for community development loans and community development investments originated, purchased, refinanced, renewed, or modified by the bank during the evaluation period.

(B) An intermediate bank that opts to be evaluated under the Community Development Financing Test in § __.24 must collect and maintain in the format used by the bank in the normal course of business, until the completion of the bank's next CRA examination in which the data are evaluated, the data listed in paragraph (a)(5)(ii) of this section for community development loans and community development investments originated, purchased, refinanced, renewed, or modified by the bank during the evaluation period.

(ii) Pursuant to paragraphs (a)(5)(i)(A) and (a)(5)(i)(B) of this section, a bank must collect and maintain, on an annual basis, the following data for community development loans and community development investments:

(A) General information on the loan or investment:

(1) A unique number or alpha-numeric symbol that can be used to identify the loan or investment;

(2) Date of origination, purchase, refinance, or renewal of the loan or investment;

(3) Date the loan or investment was sold or paid off; and

(4) The dollar amount of:

(i) A community development loan originated or purchased, or a community development investment made, including a legally binding commitment to extend credit or a legally binding commitment to invest, in the calendar year, as described in paragraph I.a.1.i of appendix B of this part;

(ii) Any increase in the calendar year to an existing community development loan that is refinanced or renewed or to an existing community development investment that is renewed;

(iii) The outstanding balance of a community development loan originated, purchased, refinanced, or renewed in previous years or community development investment made or renewed in previous years, as of December 31 for each year that the loan or investment remains on the bank's balance sheet; or

(iv) The outstanding balance, less any increase reported in paragraph (a)(5)(ii)(A)(4)(ii) of this section in the same calendar year, of a community development loan refinanced or renewed in a year subsequent to the year of origination or purchase, as of December 31 of the calendar year for each year that the loan remains on the bank's balance sheet; or an existing community development investment renewed in a year subsequent to the year the investment was made as of December 31 for each year that the investment remains on the bank's balance sheet.

(B) Community development loan or community development investment information:

(1) Name of organization or entity;

(2) Activity type (loan or investment);

(3) The type of community development described in § __.13(b) through (1); and

(4) Community development loan or community development investment detail, such as the specific type of financing and type of entity supported (*e.g.*, LIHTC, NMTC, Small Business Investment Company, multifamily mortgage, private business, or mission-driven nonprofit organization, mortgage-backed security, or other).

(C) Indicators of the impact and responsiveness, including whether the community development loan or community development investment:

(1) Benefits or serves one or more persistent poverty counties;

(2) Benefits or serves one or more census tracts with a poverty rate of 40 percent or higher;

(3) Benefits or serves one or more geographic areas with low levels of community development financing;

(4) Supports an MDI, WDI, LICU, or CDFI, excluding certificates of deposit with a term of less than one year;

- (5) Benefits or serves low-income individuals, families, or households;
- (6) Supports small businesses or small farms with gross annual revenues of \$250,000 or less;
- (7) Directly facilitates the acquisition, construction, development, preservation, or improvement of affordable housing in High Opportunity Areas;
- (8) Benefits or serves residents of Native Land Areas;
- (9) Is a grant or donation;
- (10) Is an investment in a project financed with LIHTCs or NMTCs;
- (11) Reflects bank leadership through multi-faceted or instrumental support; or
- (12) Is a new community development financing product that addresses community development needs for low- or moderate-income individuals, families, or households.

(D) Specific location information, if applicable:

- (1) Street address;
- (2) City;
- (3) County;
- (4) State;
- (5) Zip code; and
- (6) Census tract.

(E) Allocation of the dollar amount of the community development loan or community development investment to geographic areas served by the loan or investment:

(1) A list of the geographic areas served by the community development loan or community development investment, specifying any county, State, multistate MSA, or nationwide area served; and

(2) Specific information about the dollar amount of the community development loan or community development investment that was allocated to each county served by the loan or investment, if available.

(F) Other information relevant to determining that the community development loan or community development investment meets the standards pursuant to § __.13.

(6) *Community development services data.* A large bank must collect and maintain, in a format of the bank's choosing or in a standardized format, as provided by the [Agency], until the completion of the bank's next CRA examination in which the data are evaluated, the following community development services data:

(i) Community development services information:

(A) Date of service;

(B) Number of board member or employee service hours;

(C) Name of organization or entity;

(D) The type of community development described in § __.13(b) through (l);

(E) Capacity in which a bank's or its affiliate's board member or employee serves (*e.g.*, board member of a nonprofit organization, technical assistance, financial education, general volunteer); and

(F) Indicators of the impact and responsiveness, including whether the community development service:

(1) Benefits or serves one or more persistent poverty counties;

(2) Benefits or serves one or more census tracts with a poverty rate of 40 percent or higher;

(3) Benefits or serves one or more geographic areas with low levels of community development financing;

(4) Supports an MDI, WDI, LICU, or CDFI, excluding certificates of deposit with a term of less than one year;

(5) Benefits or serves low-income individuals, families, or households;

(6) Supports small businesses or small farms with gross annual revenues of \$250,000 or less;

(7) Directly facilitates the acquisition, construction, development, preservation, or improvement of affordable housing in High Opportunity Areas;

(8) Benefits or serves residents of Native Land Areas;

(9) Reflects bank leadership through multi-faceted or instrumental support; or

(10) Is a new community development service that addresses community development needs for low- or moderate-income individuals, families, or households.

(ii) Location information:

(A) *Location list.* A list of the geographic areas served by the activity, specifying any census tracts, counties, States, or nationwide area served; and

(B) *Geographic-level.* Whether the bank is seeking consideration in a facility-based assessment area, State, multistate MSA, or nationwide area.

(7) *Deposits data.* A large bank that had assets greater than \$10 billion as of December 31 in both of the prior two calendar years must collect and maintain annually, in electronic form, as prescribed by the [Agency], until the completion of the bank's next CRA examination in which the data are evaluated, the dollar amount of its deposits at the county level based on deposit location. The bank allocates the deposits for which a deposit location is not available to the nationwide area. Annual deposits must be calculated based on average daily balances as provided in statements such as monthly or quarterly statements. Any other bank that opts to collect and maintain the data in this paragraph must do so in the same form and for the same duration as described in this paragraph.

(b) *Information required to be reported.* (1) *Small business loan and small farm loan data.* A large bank must report annually by April 1 to the [Agency] in electronic form, as prescribed by the [Agency], the small business loan and small farm loan data described in paragraphs (b)(1)(i) through (b)(1)(vii) of this section for the prior calendar year. For each census tract in which the bank originated or purchased a small business loan or small farm loan, the bank must report the aggregate number and dollar amount of small business loans and small farm loans:

(i) With an amount at origination of \$100,000 or less;

(ii) With an amount at origination of greater than \$100,000 but less than or equal to \$250,000;

(iii) With an amount at origination of greater than \$250,000;

(iv) To businesses and farms with gross annual revenues of \$250,000 or less (using the revenues relied on in making the credit decision);

(v) To businesses and farms with gross annual revenues greater than \$250,000 but less than or equal to \$1 million (using the revenues relied on in making the credit decision);

(vi) To businesses and farms with gross annual revenues greater than \$1 million; and

(vii) To businesses and farms for which gross annual revenues are not known by the bank.

(2) *Community development loans and community development investments data.* A large bank and a limited purpose bank that would be a large bank based on the asset size described in the definition of a large bank must report annually by April 1 to the [Agency] in electronic form, as prescribed by the [Agency], the community development loan and community development investment data described in paragraph (a)(5)(ii) of this section for the prior calendar year, except for the data described in paragraph (a)(5)(ii)(B)(1) of this section and paragraphs (a)(5)(ii)(D)(1) through (a)(5)(ii)(D)(5) of this section.

(3) *Deposits data.* (i) A large bank that had assets greater than \$10 billion as of December 31 in both of the prior two calendar years must report annually by April 1 to the [Agency] in electronic form, as prescribed by the [Agency], the deposits data for the prior calendar year collected and maintained pursuant to paragraph (a)(7) of this section. This reporting must include, for each county, State, and multistate MSA, and for the institution overall, the average annual deposit balances (calculated based on average daily balances as provided in statements such as monthly or quarterly statements, as applicable), in aggregate, of deposit accounts with associated addresses located in such county, State, or multistate MSA, where available, and for the institution overall. Any other bank that opts to collect and maintain the data in paragraph (a)(7) of this section must report these data in the same form and for the same duration as described in this paragraph.

(ii) A bank that reports deposits data pursuant to paragraph (b)(3)(i) of this section for which a deposit location is not available must report these deposits at the nationwide area.

(c) *Data on [operations subsidiaries or operating subsidiaries].* To the extent that its [operations subsidiaries or operating subsidiaries] engage in retail banking services, retail banking products, community development lending, community development investments, or

community development services, a bank must collect, maintain, and report these loans, investments, services, and products of its [operations subsidiaries or operating subsidiaries] pursuant to paragraphs (a) and (b) of this section, as applicable, for purposes of evaluating the bank's performance. For home mortgage loans, the bank must identify the home mortgage loans reported by its [operations subsidiary or operating subsidiary] under 12 CFR part 1003, if applicable, or collect and maintain data on home mortgage loans by its [operations subsidiary or operating subsidiary] that the bank would have collected and maintained pursuant to paragraph (a)(3) of this section had the bank originated or purchased the loans.

(d) *Data on other affiliates.* A bank that elects to have the [Agency] consider retail banking services, retail banking products, community development lending, community development investments, or community development services engaged in by affiliates of a bank (other than an [operations subsidiary or operating subsidiary]), for purposes of this part must collect, maintain, and report the data that the bank would have collected, maintained, and reported pursuant to paragraphs (a) and (b) of this section had the loans, investments, services, or products been engaged in by the bank. For home mortgage loans, the bank must also identify the home mortgage loans reported by bank affiliates under 12 CFR part 1003, if applicable, or collect and maintain data on home mortgage loans by the affiliate that the bank would have collected and maintained pursuant to paragraphs (a)(3) of this section had the loans been originated or purchased by the bank.

(e) *Data on community development loans and community development investments by a consortium or a third party.* A bank that elects to have the [Agency] consider community development loans and community development investments by a consortium or third party for purposes of this part must collect, maintain, and report the loans and investments data that the bank would have collected, maintained, and reported pursuant to paragraphs (a)(5) and (b)(2) of this section had the bank originated, purchased, refinanced, or renewed the loans or investments.

(f) *Assessment area data.* (1) *Facility-based assessment areas.* A large bank and a limited purpose bank that would be a large bank based on the asset size described in the definition of a large bank must collect and report to the [Agency] annually by April 1 a list of each facility-based assessment area showing the States, MSAs, and counties in the facility-based assessment area, as of December 31 of the prior calendar year or the last date the facility-based assessment area was

in effect, provided the facility-based assessment area was delineated for at least six months of the prior calendar year.

(2) *Retail lending assessment areas.* A large bank must collect and report to the [Agency] annually by April 1 a list of each retail lending assessment area showing the States, MSAs, and counties in the retail lending assessment area for the prior calendar year.

(g) *CRA Disclosure Statement.* The [Agency] or its appointed agent, prepares annually, for each bank that reports data pursuant to this section, a CRA Disclosure Statement that contains, on a State-by-State basis:

(1) For each county with a population of 500,000 persons or fewer in which the bank reported a small business loan or a small farm loan:

(i) The number and dollar volume of small business loans and small farm loans reported as originated or purchased located in low-, moderate-, middle-, and upper-income census tracts;

(ii) A list grouping each census tract according to whether the census tract is low-, moderate-, middle-, or upper-income;

(iii) A list showing each census tract in which the bank reported a small business loan or a small farm loan;

(iv) The number and dollar volume of small business loans and small farm loans to businesses and farms with gross annual revenues of \$250,000 or less; and

(v) The number and dollar volume of small business loans and small farm loans to businesses and farms with gross annual revenues greater than \$250,000 but less than or equal to \$1 million.

(2) For each county with a population in excess of 500,000 persons in which the bank reported a small business loan or a small farm loan:

(i) The number and dollar volume of small business loans and small farm loans reported as originated or purchased located in census tracts with median income relative to the area median income of less than 10 percent, equal to or greater than 10 percent but less than 20 percent, equal to or greater than 20 percent but less than 30 percent, equal to or greater than 30 percent but less than 40 percent, equal to or greater than 40 percent but less than 50 percent, equal to or greater than 50 percent but less than 60 percent, equal to or greater than 60 percent but less than 70

percent, equal to or greater than 70 percent but less than 80 percent, equal to or greater than 80 percent but less than 90 percent, equal to or greater than 90 percent but less than 100 percent, equal to or greater than 100 percent but less than 110 percent, equal to or greater than 110 percent but less than 120 percent, and equal to or greater than 120 percent;

(ii) A list grouping each census tract in the county, facility-based assessment area, or retail lending assessment area according to whether the median income in the census tract relative to the area median income is less than 10 percent, equal to or greater than 10 percent but less than 20 percent, equal to or greater than 20 percent but less than 30 percent, equal to or greater than 30 percent but less than 40 percent, equal to or greater than 40 percent but less than 50 percent, equal to or greater than 50 percent but less than 60 percent, equal to or greater than 60 percent but less than 70 percent, equal to or greater than 70 percent but less than 80 percent, equal to or greater than 80 percent but less than 90 percent, equal to or greater than 90 percent but less than 100 percent, equal to or greater than 100 percent but less than 110 percent, equal to or greater than 110 percent but less than 120 percent, and equal to or greater than 120 percent; and

(iii) A list showing each census tract in which the bank reported a small business loan or a small farm loan;

(3) The number and dollar volume of small business loans and small farm loans located inside each facility-based assessment area and retail lending assessment area reported by the bank and the number and dollar volume of small business loans and small farm loans located outside of the facility-based assessment areas and retail lending assessment areas reported by the bank; and

(4) The number and dollar volume of community development loans and community development investments reported as originated or purchased inside each facility-based assessment area, each State in which the bank has a branch, each multistate MSA in which a bank has a branch in two or more States of the multistate MSA, and nationwide area outside of these States and multistate MSAs.

(h) *Aggregate disclosure statements.* The [Agency] or its appointed agent, prepares annually, for each MSA or metropolitan division (including an MSA or metropolitan division that crosses a State boundary) and the nonmetropolitan portion of each State, an aggregate disclosure statement of reported small business lending, small farm lending, community development

lending, and community development investments by all depository institutions subject to reporting under 12 CFR part 25, 228, or 345. These disclosure statements indicate the number and dollar amount of all small business loans and small farm loans originated or purchased for each census tract and the number and dollar amount of all community development loans and community development investments for each county by reporting banks, except that the [Agency] may adjust the form of the disclosure if necessary, because of special circumstances, to protect the privacy of a borrower or the competitive position of a bank.

(i) *Availability of disclosure statements.* The [Agency] makes the aggregate disclosure statements, described in paragraph (h) of this section, and the individual bank CRA Disclosure Statements, described in paragraph (g) of this section, available on the FFIEC's website at: <https://www.ffiec.gov>.

(j) *HMDA data disclosure.* (1) *In general.* For a large bank required to report home mortgage loan data pursuant to 12 CFR part 1003, the [Agency] will publish on the [Agency]'s website the data required by paragraph (j)(2) of this section concerning the distribution of a large bank's originations and applications of home mortgage loans by borrower or applicant income level, race, and ethnicity in each of the bank's facility-based assessment areas, and as applicable, its retail lending assessment areas. This information is published annually based on data reported pursuant to 12 CFR part 1003.

(2) *Data to be published on the [Agency]'s website.* For each of the large bank's facility-based assessment areas, and as applicable, its retail lending assessment areas, the [Agency] publishes on the [Agency]'s website:

(i) The number and percentage of originations and applications of the large bank's home mortgage loans by borrower or applicant income level, race, and ethnicity;

(ii) The number and percentage of originations and applications of aggregate mortgage lending of all lenders reporting HMDA data in the facility-based assessment area and as applicable, the retail lending assessment area; and

(iii) Demographic data of the geographic area.

(3) *Announcement of data publication.* Upon publishing the data required pursuant to paragraphs (j)(1) and (j)(2) of this section, the [Agency] will publicly announce that the information is available on the [Agency]'s public website.

(4) *Effect on CRA conclusions and ratings.* The race and ethnicity information published pursuant to paragraphs (j)(1) and (j)(2) of this section does not impact the conclusions or ratings of the large bank.

§ __.43 Content and availability of public file.

(a) *Information available to the public.* A bank must maintain a public file, in either paper or digital format, that includes the following information:

(1) All written comments received from the public for the current year (updated on a quarterly basis for the prior quarter by March 31, June 30, September 30, and December 31) and each of the prior two calendar years that specifically relate to the bank's performance in helping to meet community credit needs, and any response to the comments by the bank, if neither the comments nor the responses contain statements that reflect adversely on the good name or reputation of any persons other than the bank or publication of which would violate specific provisions of law;

(2) A copy of the public section of the bank's most recent CRA performance evaluation prepared by the [Agency]. The bank must include this copy in the public file within 30 business days after its receipt from the [Agency];

(3) A list of the bank's branches, their street addresses, and census tracts;

(4) A list of branches opened or closed by the bank during the current year (updated on a quarterly basis for the prior quarter by March 31, June 30, September 30, and December 31) and each of the prior two calendar years, their street addresses, and census tracts;

(5) A list of retail banking services (including hours of operation, available loan and deposit products, and transaction fees) generally offered at the bank's branches and descriptions of material differences in the availability or cost of services at particular branches, if any. A bank may elect to include information regarding the availability of other systems for delivering retail banking services (for example, mobile or online banking, loan production offices, and bank-at-work or mobile branch programs);

(6) A map of each facility-based assessment area and, as applicable, each retail lending assessment area showing the boundaries of the area and identifying the census tracts contained in the area, either on the map or in a separate list; and

(7) Any other information the bank chooses.

(b) *Additional information available to the public*—(1) *Banks subject to data reporting requirements pursuant to § __.42.* A bank subject to data reporting requirements pursuant to § __.42 must include in its public file a written notice that the CRA Disclosure Statement pertaining to the bank, its [operations subsidiaries or operating subsidiaries], and its other affiliates, if applicable, may be obtained on the FFIEC’s website at: <https://www.ffiec.gov>. The bank must include the written notice in the public file within three business days after receiving notification from the FFIEC of the availability of the disclosure statement.

(2) *Banks required to report HMDA data.* (i) *HMDA Disclosure Statement.* A bank required to report home mortgage loan data pursuant to 12 CFR part 1003 must include in its public file a written notice that the bank’s HMDA Disclosure Statement may be obtained on the Consumer Financial Protection Bureau’s (CFPB’s) website at: <https://www.consumerfinance.gov/hmda>. In addition, if the [Agency] considered the home mortgage lending of a bank’s [operations subsidiaries or operating subsidiaries] or, at a bank’s election, the [Agency] considered the home mortgage lending of other bank affiliates, the bank must include in its public file the names of the [operations subsidiaries or operating subsidiaries] and the names of the affiliates and a written notice that the [operations subsidiaries’ or operating subsidiaries’] and other affiliates’ HMDA Disclosure Statements may be obtained at the CFPB’s website. The bank must include the written notices in the public file within three business days after receiving notification from the FFIEC of the availability of the disclosure statements.

(ii) *Availability of bank HMDA data.* A large bank required to report home mortgage loan data pursuant to 12 CFR part 1003 must include in its public file a written notice that the home mortgage loan data published by the [Agency] under § __.42(j) are available at the [Agency]’s website.

(3) *Small banks.* A small bank, or a bank that was a small bank during the prior calendar year, must include in its public file the bank’s loan-to-deposit ratio for each quarter of the prior calendar year and, at its option, additional data on its loan-to-deposit ratio.

(4) *Banks with strategic plans.* A bank that has been approved to be evaluated under a strategic plan must include in its public file a copy of that plan while it is in effect. A bank need not include information submitted to the [Agency] on a confidential basis in conjunction with the plan.

(5) *Banks with less than “Satisfactory” ratings.* A bank that received a less than “Satisfactory” institution rating during its most recent examination must include in its public file a description of its current efforts to improve its performance in helping to meet the credit needs of its entire community. The bank must update the description quarterly by March 31, June 30, September 30, and December 31, respectively.

(c) *Location of public information.* A bank must make available to the public for inspection, upon request and at no cost, the information required in this section as follows:

(1) For banks that maintain a website, all information required for the bank’s public file under this section must be maintained on the bank’s website.

(2) For banks that do not maintain a website:

(i) All the information required for the bank’s public file must be maintained at the main office and, if an interstate bank, at one branch office in each State; and

(ii) At each branch, the following must be maintained:

(A) A copy of the public section of the bank’s most recent CRA performance evaluation and a list of services provided by the branch; and

(B) Within five calendar days of the request, all the information that the bank is required to maintain under this section in the public file relating to the facility-based assessment area in which the branch is located.

(d) *Copies.* Upon request, a bank must provide copies, either on paper or in digital form acceptable to the person making the request, of the information in its public file. The bank may charge a reasonable fee not to exceed the cost of copying and mailing (if not provided in digital form).

(e) *Timing requirements.* Except as otherwise provided in this section, a bank must ensure that its public file contains the information required by this section for each of the previous three

calendar years, with the most recent calendar year included in its file annually by April 1 of the current calendar year.

§ __.44 Public notice by banks.

A bank must provide in the public area of its main office and each of its branches the appropriate public notice set forth in appendix F of this part. Only a branch of a bank having more than one facility-based assessment area must include the bracketed material in the notice for branch offices. Only a bank that is an affiliate of a holding company must include the next to the last sentence of the notices. A bank must include the last sentence of the notices only if it is an affiliate of a holding company that is not prevented by statute from acquiring additional depository institutions.

§ __.45 Publication of planned examination schedule.

The [Agency] publishes on its public website, at least 30 days in advance of the beginning of each calendar quarter, a list of banks scheduled for CRA examinations for the next two quarters.

§ __.46 Public engagement.

(a) *In general.* The [Agency] encourages communication between members of the public and banks, including through members of the public submitting written public comments regarding community credit needs and opportunities as well as a bank's record of helping to meet community credit needs. The [Agency] will take these comments into account in connection with the bank's next scheduled CRA examination.

(b) *Submission of public comments.* Members of the public may submit public comments regarding community credit needs and a bank's CRA performance by submitting comments to the [Agency] at [Agency contact information].

(c) *Timing of public comments.* If the [Agency] receives a public comment before the close date of a bank's CRA examination, the public comment will be considered in connection with that CRA examination. If the [Agency] receives a public comment after the close date of a

bank's CRA examination, it will be considered in connection with the bank's subsequent CRA examination.

(d) *Distribution of public comments.* The [Agency] will forward all public comments received regarding a bank's CRA performance to the bank.

Subpart E—Transition Rules

§ __.51 Applicability dates and transition provisions.

(a) *Applicability dates.* (1) *In general.* Except as provided in paragraphs (a)(2), (b), and (d) of this section, this part is applicable, beginning on April 1, 2024.

(2) *Specific applicability dates.* The following sections are applicable as follows:

(i) On January 1, 2026, §§ __.12 through __.15; __.17 through __.30; __.42(a); the data collection and maintenance requirements in § __.42(c), (d), (e), and (f); and appendices A through F of this part become applicable.

(ii) On January 1, 2027, § __.42(b), (g), (h), and (i) and the reporting requirements in § __.42(c), (d), (e), and (f) become applicable.

(iii) *Rules during transition period.* Prior to the applicability dates in paragraphs (a)(2)(i) and (ii) of this section, banks must comply with the relevant provisions of this part in effect on March 31, 2024, as set forth in appendix G of this part. The relevant provisions set forth in appendix G of this part are applicable to CRA performance evaluations pursuant to 12 U.S.C. 2903(a)(1) that assess activities that a bank conducted prior to the dates set forth in paragraphs (a)(2)(i) and (ii) of this section, as applicable, except as provided in paragraphs (c) and (d) of this section.

(b) *HMDA data disclosures.* The [Agency] will publish the data pursuant to § __.42(j) beginning January 1, 2027.

(c) *Consideration of Bank Activities.* (1) In assessing a bank's CRA performance, the [Agency] will consider any loan, investment, service, or product that was eligible for CRA consideration at the time the bank conducted the activity.

(2) Notwithstanding paragraph (c)(1) of this section, in assessing a bank's CRA performance, the [Agency] will consider any loan or investment that was eligible for CRA

consideration at the time that the bank entered into a legally binding commitment to make the loan or investment.

(d) *Strategic Plans.* (1) *New and replaced strategic plans.* The CRA regulatory requirements in effect on [INSERT DATE THAT IS ONE DAY BEFORE DATE OF PUBLICATION IN THE FEDERAL REGISTER], as set forth in appendix G of this part, apply to any new strategic plan, including a plan that replaces an expired strategic plan, submitted to the [Agency] for approval on or after [INSERT DATE OF PUBLICATION IN THE FEDERAL REGISTER] but before November 1, 2025, and that the agency has determined is a complete plan consistent with the requirements under 12 CFR __.27 of the rule in effect on [INSERT DATE THAT IS ONE DAY BEFORE DATE OF PUBLICATION IN THE FEDERAL REGISTER], as set forth in appendix G of this part. Strategic plans approved under this paragraph remain in effect until the expiration date of the plan. The [Agency] will not accept any strategic plan submitted on or after November 1, 2025, and before January 1, 2026.

(2) *Existing strategic plans.* A strategic plan in effect as of [INSERT DATE OF PUBLICATION IN THE FEDERAL REGISTER] remains in effect until the expiration date of the plan.

(e) *First evaluation under amended [part X].* In its first performance evaluation under this part as amended by the final rule published on [INSERT DATE OF PUBLICATION IN THE FEDERAL REGISTER], a large bank that has a total of 10 or more facility-based assessment areas in any State or multistate MSA, or nationwide, as applicable, and that was subject to evaluation under this part, [other Agencies' regulations] prior to [INSERT DATE OF PUBLICATION IN THE FEDERAL REGISTER], may not receive a rating of “Satisfactory” or “Outstanding” in that State or multistate MSA, or for the institution unless the bank received an overall facility-based assessment area conclusion, calculated as described in paragraph g.2.ii of appendix D of this part, of at least “Low Satisfactory” in 60 percent or more of the total number of its facility-based assessment areas in that State or multistate MSA, or nationwide, as applicable.

Appendix A to Part __—Calculations for the Retail Lending Test

Appendix A, based on requirements described in §§ __.22 and __.28, includes the following sections:

- I. Retail Lending Volume Screen
- II. Retail Lending Test Distribution Metrics – Scope of Evaluation
- III. Geographic Distribution Metrics and Benchmarks
- IV. Borrower Distribution Metrics and Benchmarks
- V. Supporting Conclusions for Major Product Lines Other Than Automobile Lending
- VI. Supporting Conclusions for Automobile Lending
- VII. Retail Lending Test Conclusions – All Major Product Lines
- VIII. Retail Lending Test Weighting and Conclusions for States, Multistate MSAs, and the Institution

I. RETAIL LENDING VOLUME SCREEN

The [Agency] calculates the Bank Volume Metric and the Market Volume Benchmark for a facility-based assessment area and determines whether the bank has met or surpassed the Retail Lending Volume Threshold in that facility-based assessment area.

a. *Bank Volume Metric.* The [Agency] calculates the Bank Volume Metric for each facility-based assessment area by:

1. Summing, over the years in the evaluation period, the bank's annual dollar volume of loans included in the Bank Volume Metric (*i.e., volume metric loans*). The bank's annual dollar volume of volume metric loans is the total dollar amount of all home mortgage loans, multifamily loans, small business loans, small farm loans, and automobile loans originated or purchased by the bank in the facility-based assessment area in that year. Automobile loans are included in the bank's annual dollar amount of volume metric loans only if automobile loans are a product line for the bank.

2. Summing, over the years in the evaluation period, the bank's annual dollar volume of deposits in the facility-based assessment area. For a bank that reports deposits data pursuant to § __.42(b)(3), the bank's annual dollar volume of deposits in a facility-based assessment area is

the total of annual average daily balances of deposits reported by the bank in counties in the facility-based assessment area for that year. For a bank that does not report deposits data pursuant to § __.42(b)(3), the bank's annual dollar volume of deposits in a facility-based assessment area is the total of deposits assigned to facilities reported by the bank in the facility-based assessment area in FDIC's Summary of Deposits for that year.

3. Dividing the result of paragraph I.a.1 of this appendix by the result of paragraph I.a.2 of this appendix.

Example A-1: The bank has a three-year evaluation period. The bank's annual dollar amounts of *volume metric loans* are \$300,000 (year 1), \$300,000 (year 2), and \$400,000 (year 3). The sum of the bank's annual dollar amount of *volume metric loans* in a facility-based assessment area, over the years in the evaluation period, is therefore \$1 million. The annual dollar volumes of deposits in the bank located in the facility-based assessment area are \$1.7 million (year 1), \$1.6 million (year 2), and \$1.7 million (year 3). The sum of the annual dollar volume of deposits in the facility-based assessment area, over the years in the evaluation period, is therefore \$5 million. The Bank Volume Metric for the facility-based assessment area would be \$1 million divided by \$5 million, or 0.2 (equivalently, 20 percent).

$$\frac{\text{Bank Volume Metric Loans (\$1 million)}}{\text{Bank Deposits (\$5 million)}} = \text{Bank Volume Metric (20\%)}$$

b. *Market Volume Benchmark.* The [Agency] calculates the Market Volume Benchmark for the facility-based assessment area. For purposes of calculating the Market Volume Benchmark, a *benchmark depository institution* for a particular year is a depository institution that, in that year, was subject to reporting pursuant to 12 CFR 25.42(b)(1), 228.42(b)(1), 345.42(b)(1), or 12 CFR part 1003, and operated a facility included in the FDIC's Summary of Deposits data in the facility-based assessment area. The [Agency] calculates the Market Volume Benchmark by:

1. Summing, over the years in the evaluation period, the annual dollar volume of volume benchmark loans. The annual dollar volume of volume benchmark loans is the total dollar volume of all home mortgage loans, multifamily loans, small business loans, and small farm loans in the facility-based assessment area in that year that are reported loans originated by benchmark depository institutions.

2. Summing, over the years in the evaluation period, the annual dollar volume of deposits for benchmark depository institutions in the facility-based assessment area. The annual dollar volume of deposits for benchmark depository institutions in the facility-based assessment area is the sum across benchmark depository institutions of: (i) for a benchmark depository institution that reports data pursuant to 12 CFR 25.42(b)(3), 228.42(b)(3), or 345(b)(3), the total of annual average daily balances of deposits reported by that depository institution in counties in the facility-based assessment area for that year; and (ii) for a benchmark depository institution that does not report data pursuant to 12 CFR 25.42(b)(3), 228.42(b)(3), or 345.42(b)(3), the total of deposits assigned to facilities reported by that depository institution in counties in the facility-based assessment area in the FDIC's Summary of Deposits for that year.

3. Dividing the result of paragraph I.b.1 of this appendix by the result of paragraph I.b.2 of this appendix.

Example A-2: With reference to example A-1, the annual dollar volume of volume benchmark loans is \$6 million (year 1), \$7 million (year 2), and \$7 million (year 3). The sum of the annual dollar volume of volume benchmark loans, over the years in the evaluation period, is therefore \$20 million. The annual dollar volume of deposits for benchmark depository institutions is \$17 million (year 1), \$15 million (year 2), and \$18 million (year 3). The sum of the annual dollar volume of deposits for benchmark depository institutions, over the years in the evaluation period, is therefore \$50 million. The Market Volume Benchmark for that facility-based assessment area would be \$20 million divided by \$50 million, or 0.4 (equivalently, 40 percent).

$$\frac{\text{Volume Benchmark Loans } (\$20 \text{ million})}{\text{Aggregate Market Deposits } (\$50 \text{ million})} = \text{Market Volume Benchmark } (40\%)$$

c. Retail Lending Volume Threshold. For each facility-based assessment area, the [Agency] calculates a Retail Lending Volume Threshold by multiplying the Market Volume Benchmark for that facility-based assessment area by 0.3 (equivalently, 30 percent). A bank meets or surpasses the Retail Lending Volume Threshold in a facility-based assessment area if the Bank Volume Metric is equal to or greater than the Retail Lending Volume Threshold.

Example A-3: Based on examples A-1 and A-2, the [Agency] calculates the Retail Lending Volume Threshold by multiplying the Market Volume Benchmark of 40 percent by 0.3, equal to

0.12 (equivalently, 12 percent). The Bank Volume Metric, 0.2 (equivalently, 20 percent), is greater than the Retail Lending Volume Threshold. Accordingly, the bank surpasses the Retail Lending Volume Threshold.

Bank Volume Metric (20%) > Retail Lending Volume Threshold [(40%) x 0.3 = 12%]

II. RETAIL LENDING DISTRIBUTION METRICS – SCOPE OF EVALUATION

a. *Retail Lending Test Areas evaluated.* A bank's major product lines are evaluated in its Retail Lending Test Areas, as provided in § __.22(d) and as described below.

1. *Large banks exempt from evaluation in retail lending assessment areas.* Pursuant to § __.17(a)(2), a large bank is not required to delineate retail lending assessment areas in a particular calendar year if the following ratio exceeds 80 percent, based on the combination of loan dollars and loan count as defined in § __.12:

i. The sum, over the prior two calendar years, of the large bank's home mortgage loans, multifamily loans, small business loans, small farm loans, and automobile loans if automobile loans are a product line for the large bank, originated or purchased in its facility-based assessment areas; divided by

ii. The sum, over the prior two calendar years, of the large bank's home mortgage loans, multifamily loans, small business loans, small farm loans, and automobile loans if automobile loans are a product line for the large bank, originated or purchased overall.

Example A-4: A large bank (for which automobile loans are not a product line) originated or purchased 20,000 closed-end home mortgage loans, small business loans, and small farm loans in the prior two calendar years, representing \$6 billion in loan dollars. Of these loans, 18,000 loans, representing \$4.5 billion in loan dollars, were originated or purchased in the large bank's facility-based assessment areas. As such, the large bank originated or purchased 75 percent of closed-end home mortgage loans, small business loans, and small farm loans ($\$4.5 \text{ billion} / \6 billion) by loan dollars and 90 percent ($18,000 / 20,000$) of these loans by loan count within its facility-based assessment areas. The combination of loan dollars and loan count is 82.5 percent, or $(75 + 90)/2$. Thus, this large bank is not required to delineate retail lending assessment areas pursuant to § __.17(a)(2) in the current calendar year because the 82.5 percent exceeds the 80 percent threshold.

2. *Small banks and intermediate banks evaluated in outside retail lending areas.* Pursuant to § __.18(a)(2), the [Agency] evaluates the geographic and borrower distributions of the major product lines of an intermediate bank, or a small bank that opts to be evaluated under the Retail Lending Test, in the bank's outside retail lending area if either:

- i. The bank opts to have its major product lines evaluated in its outside retail lending area; or
- ii. The following ratio exceeds 50 percent, based on the combination of loan dollars and loan count as defined in § __.12:

A. The sum, over the prior two calendar years, of the bank's home mortgage loans, multifamily loans, small business loans, small farm loans, and automobile loans if automobile loans are a product line for the bank, originated or purchased outside of its facility-based assessment areas; divided by

B. The sum, over the prior two calendar years, of the bank's home mortgage loans, multifamily loans, small business loans, small farm loans, and automobile loans if automobile loans are a product line for the bank, originated or purchased overall.

b. *Product lines and major product lines.* In each of a bank's Retail Lending Test Areas, the [Agency] evaluates each of a bank's major product lines, as provided in § __.22(d)(2) and as described below.

1. *Major product line standard for facility-based assessment areas and outside retail lending areas.* Except as provided in paragraph II.b.1.iii of this appendix, a product line is a major product line in a facility-based assessment area or outside retail lending area if the following ratio is 15 percent or more, based on the combination of loan dollars and loan count as defined in § __.12:

i. The sum, over the years of the evaluation period, of the bank's loans in the product line originated or purchased in the facility-based assessment area or outside retail lending area; divided by

ii. The sum, over the years of the evaluation period, of the bank's loans in all product lines originated or purchased in the facility-based assessment area or outside retail lending area.

iii. If a bank has not collected, maintained, or reported loan data on a product line in a facility-based assessment area or outside retail lending area for one or more years of an

evaluation period, the product line is a major product line if the [Agency] determines that the product line is material to the bank's business in the facility-based assessment area or outside retail lending area.

2. Major product line standard for retail lending assessment areas. In a retail lending assessment area:

(i) Closed-end home mortgage loans are a major product line in any calendar year in the evaluation period in which the bank delineates a retail lending assessment area based on its closed-end home mortgage loans as determined by the standard in § __.17(c)(1); and

(ii) Small business loans are a major product line in any calendar year in the evaluation period in which the bank delineates a retail lending assessment area based on its small business loans as determined by the standard in § __.17(c)(2).

3. Banks for which automobile loans are a product line.

i. If a bank's automobile loans are a product line (either because the bank is a majority automobile lender or opts to have its automobile loans evaluated pursuant to § __.22), automobile loans are a product line for the bank for the entire evaluation period.

ii. A bank is a majority automobile lender if the following ratio, calculated at the institution level, exceeds 50 percent, based on the combination of loan dollars and loan count as defined in § __.12:

A. The sum, over the two calendar years preceding the first year of the evaluation period, of the bank's automobile loans originated or purchased overall; divided by

B. The sum, over the two calendar years preceding the first year of the evaluation period, of the bank's automobile loans, home mortgage loans, multifamily loans, small business loans, and small farm loans originated or purchased overall.

III. GEOGRAPHIC DISTRIBUTION METRICS AND BENCHMARKS

The [Agency] calculates the Geographic Bank Metric, the Geographic Market Benchmark, and the Geographic Community Benchmark for low-income census tracts and for moderate-income census tracts, respectively, as set forth below. For each facility-based assessment area, retail lending assessment area, and component geographic area of the bank's outside retail

lending area, the [Agency] includes either low-income census tracts or moderate-income census tracts (*i.e.*, designated census tracts) in the numerator of the metrics and benchmarks calculations for a particular year. To evaluate small banks and intermediate banks without data collection, maintenance and reporting requirements, the [Agency] will use bank collected data in the ordinary course of business or through sampling of bank loan data.

a. *Calculation of Geographic Bank Metric.* The [Agency] calculates the Geographic Bank Metric for low-income census tracts and for moderate-income census tracts, respectively, for each major product line in each Retail Lending Test Area. The [Agency] calculates the Geographic Bank Metric by:

1. Summing, over the years in the evaluation period, the bank's annual number of originated and purchased loans in the major product line in designated census tracts in the Retail Lending Test Area.

2. Summing, over the years in the evaluation period, the bank's annual number of originated and purchased loans in the major product line in the Retail Lending Test Area.

3. Dividing the result of paragraph III.a.1 of this appendix by the result of paragraph III.a.2 of this appendix.

Example A-5: The bank has a three-year evaluation period, and small farm loans are a major product line for the bank in a facility-based assessment area (FBAA-1). The bank's annual numbers of originated and purchased small farm loans (*i.e.*, the bank's originated and purchased small farm loans) are 100 (year 1), 75 (year 2), and 75 (year 3) in FBAA-1. The sum of the annual numbers of originated and purchased small farm loans is therefore 250 in the evaluation period. In the low-income census tracts within FBAA-1, the bank originated and purchased 25 small farm loans (year 1), 15 small farm loans (year 2), and 10 small farm loans (year 3) (a total of 50 small farm loans). In FBAA-1, the Geographic Bank Metric for small farm loans would be 50 divided by 250, or 0.2 (equivalently, 20 percent).

In the moderate-income census tract within FBAA-1, the bank originated and purchased 30 small farm loans (year 1), 20 small farm loans (year 2), and 10 small farm loans (year 3) (a total of 60 small farm loans). In FBAA-1, the Geographic Bank Metric for small farm loans in moderate-income census tracts would be 60 divided by 250, or 0.24 (equivalently, 24 percent).

$$\frac{\text{Bank Loans in Low – Income Census Tracts (50)}}{\text{Bank Loans (250)}} = \text{Geographic Bank Metric (20\%)}$$

$$\frac{\text{Bank Loans in Moderate – Income Census Tracts (60)}}{\text{Bank Loans (250)}} = \text{Geographic Bank Metric (24\%)}$$

b. *Calculation of Geographic Market Benchmarks for facility-based assessment areas and retail lending assessment areas.* For each facility-based assessment area and retail lending assessment area, the [Agency] calculates the Geographic Market Benchmark for designated census tracts for each major product line, excluding automobile loans. The [Agency] calculates the Geographic Market Benchmark by:

1. Summing, over the years in the evaluation period, the annual number of reported loans in the major product line in designated census tracts in the facility-based assessment area or retail lending assessment area originated by all lenders.

2. Summing, over the years in the evaluation period, the annual number of reported loans in the major product line in the facility-based assessment area or retail lending assessment area originated by all lenders.

3. Dividing the result of paragraph III.b.1 of this appendix by the result of paragraph III.b.2 of this appendix.

Example A-6: The Geographic Market Benchmarks for small farm loans in FBAA-1 use a three-year evaluation period. Lenders that report small farm loan data originated 500 small farm loans (year 1), 250 small farm loans (year 2), and 250 small farm loans (year 3) within FBAA-1. The sum of the annual numbers of originated small farm loans is therefore 1,000 in the evaluation period. Lenders that report small farm loan data originated 200 small farm loans (year 1), 100 small farm loans (year 2) and 100 small farm loans (year 3) in low-income census tracts within FBAA-1. The sum of the annual numbers of originated small farm loans in low-income census tracts within FBAA-1 is therefore 400. The Geographic Market Benchmark for small farm loans in low-income census tracts within FBAA-1 would be 400 divided by 1,000, or 0.4 (equivalently, 40 percent).

Lenders that report small farm loan data originated 100 small farm loans (year 1), 100 small farm loans (year 2), and 100 small farm loans (year 3) in moderate-income census tracts within FBAA-1. The sum of the annual numbers of originated small farm loans in moderate-income census tracts within FBAA-1 is therefore 300. The Geographic Market Benchmark for small farm loans in moderate-income census tracts within FBAA-1 would be 300 divided by 1,000, or 0.3 (equivalently, 30 percent).

$$\frac{\textit{Aggregate Market Loans in Low – Income Census Tracts (400)}}{\textit{Aggregate Market Loans (1,000)}} = \textit{Geographic Market Benchmark (40\%)}$$

$$\frac{\textit{Aggregate Market Loans in Moderate – Income Census Tracts (300)}}{\textit{Aggregate Market Loans (1,000)}} = \textit{Geographic Market Benchmark (30\%)}$$

c. Calculation of Geographic Community Benchmarks for facility-based assessment areas and retail lending assessment areas. The [Agency] calculates the Geographic Community Benchmark for designated census tracts for each major product line in each facility-based assessment area or retail lending assessment area.

1. For closed-end home mortgage loans, the [Agency] calculates a Geographic Community Benchmark for low-income census tracts by:

i. Summing, over the years in the evaluation period, the annual number of owner-occupied housing units in low-income census tracts in the facility-based assessment area or retail lending assessment area.

ii. Summing, over the years in the evaluation period, the annual number of owner-occupied housing units in the facility-based assessment area or retail lending assessment area.

iii. Dividing the result of paragraph III.c.1.i of this appendix by the result of paragraph III.c.1.ii of this appendix.

2. For closed-end home mortgage loans, the [Agency] calculates a Geographic Community Benchmark for moderate-income census tracts by:

i. Summing, over the years in the evaluation period, the annual number of owner-occupied housing units in moderate-income census tracts in the facility-based assessment area or retail lending assessment area.

ii. Summing, over the years in the evaluation period, the annual number of owner-occupied housing units in the facility-based assessment area or retail lending assessment area.

iii. Dividing the result of paragraph III.c.2.i of this appendix by the result of paragraph III.c.2.ii of this appendix.

3. For small business loans, the [Agency] calculates a Geographic Community Benchmark for low-income census tracts by:

i. Summing, over the years in the evaluation period, the annual number of non-farm businesses in low-income census tracts in the facility-based assessment area or retail lending assessment area.

ii. Summing, over the years in the evaluation period, the annual number of non-farm businesses in the facility-based assessment area or retail lending assessment area.

iii. Dividing the result of paragraph III.c.3.i of this appendix by the result of paragraph III.c.3.ii of this appendix.

4. For small business loans, the [Agency] calculates a Geographic Community Benchmark for moderate-income census tracts by:

i. Summing, over the years in the evaluation period, the annual number of non-farm businesses in moderate-income census tracts in the facility-based assessment area or retail lending assessment area.

ii. Summing, over the years in the evaluation period, the annual number of non-farm businesses in the facility-based assessment area or retail lending assessment area.

iii. Dividing the result of paragraph III.c.4.i of this appendix by the result of paragraph III.c.4.ii of this appendix.

5. For small farm loans, the [Agency] calculates a Geographic Community Benchmark for low-income census tracts by:

i. Summing, over the years in the evaluation period, the annual number of farms in low-income census tracts in the facility-based assessment area.

ii. Summing, over the years in the evaluation period, the annual number of farms in the facility-based assessment area.

iii. Dividing the result of paragraph III.c.5.i of this appendix by the result of paragraph III.c.5.ii of this appendix.

6. For small farm loans, the [Agency] calculates a Geographic Community Benchmark for moderate-income census tracts by:

i. Summing, over the years in the evaluation period, the annual number of farms in moderate-income census tracts in the facility-based assessment area.

ii. Summing, over the years in the evaluation period, the annual number of farms in the facility-based assessment area.

iii. Dividing the result of paragraph III.c.6.i of this appendix by the result of paragraph III.c.6.ii of this appendix.

7. For automobile loans, the [Agency] calculates a Geographic Community Benchmark for low-income census tracts by:

i. Summing, over the years in the evaluation period, the annual number of households in low-income census tracts in the facility-based assessment area.

ii. Summing, over the years in the evaluation period, the annual number of households in the facility-based assessment area.

iii. Dividing the result of paragraph III.c.7.i of this appendix by the result of paragraph III.c.7.ii of this appendix.

8. For automobile loans, the [Agency] calculates a Geographic Community Benchmark for moderate-income census tracts by:

i. Summing, over the years in the evaluation period, the annual number of households in moderate-income census tracts in the facility-based assessment area.

ii. Summing, over the years in the evaluation period, the annual number of households in the facility-based assessment area.

iii. Dividing the result of paragraph III.c.8.i of this appendix by the result of paragraph III.c.8.ii of this appendix.

Example A-7: The Geographic Community Benchmarks for small business loans in FBAA-1 use a three-year evaluation period. There were 1,300 businesses (year 1), 1,300 businesses (year 2), and 1,400 businesses (year 3) in FBAA-1. The sum of the number of non-farm businesses in FBAA-1 is therefore 4,000 in the evaluation period. In low-income census tracts within FBAA-1, there were 200 businesses (year 1), 150 businesses (year 2), and 150 businesses (year 3) (a total of 500 businesses). The Geographic Community Benchmark for small business loans in low-income census tracts within FBAA-1 would be 500 divided by 4,000, or 0.125 (equivalently, 12.5 percent).

In moderate-income census tracts within FBAA-1, there were 400 businesses (year 1), 300 businesses (year 2), and 300 businesses (year 3) (a total of 1,000 businesses). The Geographic Community Benchmark for small business loans in moderate-income census tracts within FBAA-1 would be 1,000 divided by 4,000, or 0.25 (equivalently, 25 percent).

$$\frac{\text{Businesses in Low – Income Census Tracts (500)}}{\text{Businesses (4,000)}} = \text{Geographic Community Benchmark (12.5\%)}$$

$$\frac{\text{Businesses in Moderate – Income Census Tracts (1,000)}}{\text{Businesses (4,000)}} = \text{Geographic Community Benchmark (25\%)}$$

d. *Calculation of Geographic Market Benchmarks for the outside retail lending area.* For a bank's outside retail lending area, the [Agency] calculates the Geographic Market Benchmark for each major product line, excluding automobile loans, and for each category of designated census tracts by taking a weighted average of benchmarks for each component geographic area as follows:

1. Calculating a benchmark for each category of designated census tracts and each major product line within each component geographic area as described in § __.18(b) using the formula for the Geographic Market Benchmark described in paragraph III.b of this appendix with the

component geographic area in place of the facility-based assessment area or retail lending assessment area, as applicable.

2. Calculating the weighting for each component geographic area and major product line as the percentage of the bank's loans in the major product line originated or purchased in the outside retail lending area that are within the component geographic area, based on loan count.

3. Calculating the weighted average benchmark for the outside retail lending area using the component geographic area benchmarks in paragraph III.d.1 of this appendix and associated weightings in paragraph III.d.2 of this appendix.

e. Calculation of Geographic Community Benchmarks for the outside retail lending area.

For a bank's outside retail lending area, the [Agency] calculates the Geographic Community Benchmark for each category of designated census tract and for each major product line by taking a weighted average of benchmarks for each component geographic area as follows:

1. Calculating a benchmark for each category of designated census tracts and each major product line within each component geographic area as described in § __.18(b) using the formula for the Geographic Community Benchmark described in paragraph III.c of this appendix with the component geographic area in place of the facility-based assessment area or retail lending assessment area, as applicable.

2. Calculating the weighting for each component geographic area and major product line as the percentage of the bank's loans in the major product line originated or purchased in the outside retail lending area that are within the component geographic area, based on loan count.

3. Calculating the weighted average benchmark for the outside retail lending area using the component geographic area benchmarks in paragraph III.e.1 of this appendix and associated weightings in paragraph III.e.2 of this appendix.

IV. BORROWER DISTRIBUTION METRICS AND BENCHMARKS

The [Agency] calculates the Borrower Bank Metric, the Borrower Market Benchmark, and the Borrower Community Benchmark for each category of borrowers (*i.e., designated borrowers*), as set forth below.

For closed-end home mortgage loans, the [Agency] calculates these metrics and benchmarks for each of the following designated borrowers: (i) low-income borrowers; and (ii) moderate income borrowers.

For small business loans, the [Agency] calculates these metrics and benchmarks for each of the following designated borrowers: (i) businesses with gross annual revenues of \$250,000 or less; and (ii) businesses with gross annual revenues greater than \$250,000 but less than or equal to \$1 million.

For small farm loans, the [Agency] calculates these metrics and benchmarks for each of the following designated borrowers: (i) farms with gross annual revenues of \$250,000 or less; and (ii) farms with gross annual revenues greater than \$250,000 but less than or equal to \$1 million.

For automobile loans, the [Agency] calculates these metrics and benchmarks for each of the following designated borrowers: (i) low-income borrowers; and (ii) moderate income borrowers.

To evaluate small banks and intermediate banks without data collection, maintenance and reporting requirements, the [Agency] will use bank collected data in the ordinary course of business or through sampling of bank loan data.

a. *Calculation of Borrower Bank Metric.* The [Agency] calculates the Borrower Bank Metric for each major product line and category of designated borrowers in each Retail Lending Test Area by:

1. Summing, over the years in the evaluation period, the bank's annual number of originated and purchased loans in the major product line to designated borrowers in the Retail Lending Test Area.

2. Summing, over the years in the evaluation period, the bank's annual number of originated and purchased loans in the major product line in the Retail Lending Test Area.

3. Dividing the result of paragraph IV.a.1 of this appendix by the result of paragraph IV.a.2 of this appendix.

Example A-8: The bank has a three-year evaluation period, and closed-end home mortgage loans are a major product line for the bank in FBAA-1. The bank's annual numbers of originated and purchased closed-end home mortgage loans (*i.e.*, the bank's originated and purchased closed-end home mortgage loans) are 30 (year 1), 40 (year 2), and 30 (year 3) in FBAA-1. The sum of the annual numbers of originated and purchased closed-end home mortgage loans is therefore 100 in the evaluation period. In the low-income census tracts within FBAA-1, the bank originated and purchased 10 closed-end home mortgage loans (year 1), 3 closed-end home mortgage loans (year 2), and 7 closed-end home mortgage loans (year 3) (a total of 20 closed-end home mortgage loans). In FBAA-1, the Borrower Bank Metric for closed-end home mortgage loans to low-income borrowers would be 20 divided by 100, or 0.2 (equivalently, 20 percent).

In moderate income census tracts within FBAA-1, the bank also originated and purchased 12 closed-end home mortgage loans (year 1), 5 closed-end home mortgage loans (year 2), and 13 closed-end home mortgage loans (year 3) (a total of 30 closed-end home mortgage loans). In FBAA-1, the Borrower Bank Metric for closed-end home mortgage loans to moderate-income borrowers would be 30 divided by 100, or 0.3 (equivalently, 30 percent).

$$\frac{\textit{Bank Loans to Low – Income Borrowers (20)}}{\textit{Bank Loans (100)}} = \textit{Borrower Bank Metric (20\%)}$$

$$\frac{\textit{Bank Loans to Moderate – Income Borrowers (30)}}{\textit{Bank Loans (100)}} = \textit{Borrower Bank Metric (30\%)}$$

b. *Calculation of Borrower Market Benchmarks for facility-based assessment areas and retail lending assessment areas.* For each facility-based assessment area and retail lending assessment area, the [Agency] calculates the Borrower Market Metric for each major product line, excluding automobile loans, and for each category of designated borrowers by:

1. Summing, over the years in the evaluation period, the annual number of reported loans in the major product line to designated borrowers in the facility-based assessment area or retail lending assessment area originated by all lenders.

2. Summing, over the years in the evaluation period, the annual number of reported loans in the major product line in the facility-based assessment area or retail lending assessment area originated by all lenders.

3. Dividing the result of paragraph IV.b.1 of this appendix by the result of paragraph IV.b.2 of this appendix.

Example A-9: The Borrower Market Benchmarks for closed-end home mortgage loans use a three-year evaluation period. Lenders that report closed-end home mortgage loans originated 500 closed-end home mortgage loans (year 1), 275 closed-end home mortgage loans (year 2), and 225 closed-end home mortgage loans (year 3). The sum of the annual numbers of originated closed-end home mortgage loans is therefore 1,000 in the evaluation period. Lenders that report closed-end home mortgage loans originated 50 closed-end home mortgage loans (year 1), 20 closed-end home mortgage loans (year 2), and 30 closed-end home mortgage loans (year 3) to low-income borrowers in FBAA-1. The sum of the annual numbers of originated closed-end home mortgage loans to low-income borrowers within FBAA-1 is therefore 100. The Borrower Market Benchmark for closed-end home mortgage loans to low-income borrowers would be 100 divided by 1,000, or 0.1 (equivalently, 10 percent).

Lenders that report closed-end home mortgage loans originated 100 loans (year 1), 75 loans (year 2), and 25 loans (year 3) to moderate-income borrowers. The sum of the annual numbers of originated closed-end home mortgage loans to moderate-income borrowers within FBAA-1 is therefore 200. The Borrower Market Benchmark for closed-end home mortgage loans to moderate-income borrowers in FBAA-1 would be 200 divided by 1,000, or 0.2 (equivalently, 20 percent).

$$\frac{\textit{Aggregate Market Loans to Low – Income Borrowers (100)}}{\textit{Aggregate Market Loans (1,000)}} \\ = \textit{Borrower Market Benchmark (10\%)}$$

$$\frac{\textit{Aggregate Loans to Moderate – Income Borrowers (200)}}{\textit{Aggregate Market Loans (1,000)}} \\ = \textit{Borrower Market Benchmark (20\%)}$$

c. *Calculation of Borrower Community Benchmarks for facility-based assessment areas and retail lending assessment areas.* The [Agency] calculates the Borrower Community Benchmark

for each category of designated borrowers for each major product line in each facility-based assessment area or retail lending assessment area.

1. For closed-end home mortgage loans, the [Agency] calculates a Borrower Community Benchmark for low-income borrowers by:

i. Summing, over the years in the evaluation period, the annual number of low-income families in the facility-based assessment area or retail lending assessment area.

ii. Summing, over the years in the evaluation period, the annual number of families in the facility-based assessment area or retail lending assessment area.

iii. Dividing the result of paragraph IV.c.1.i of this appendix by the result of paragraph IV.c.1.ii of this appendix.

2. For closed-end home mortgage loans, the [Agency] calculates a Borrower Community Benchmark for moderate-income borrowers by:

i. Summing, over the years in the evaluation period, the annual number of moderate-income families in the facility-based assessment area or retail lending assessment area.

ii. Summing, over the years in the evaluation period, the annual number of families in the facility-based assessment area or retail lending assessment area.

iii. Dividing the result of paragraph IV.c.2.i of this appendix by the result of paragraph IV.c.2.ii of this appendix.

3. For small business loans, the [Agency] calculates a Borrower Community Benchmark for non-farm businesses with gross annual revenues of \$250,000 or less by:

i. Summing, over the years in the evaluation period, the annual number of non-farm businesses with gross annual revenues of \$250,000 or less in the facility-based assessment area or retail lending assessment area.

ii. Summing, over the years in the evaluation period, the annual number of non-farm businesses in the facility-based assessment area or retail lending assessment area.

iii. Dividing the result of paragraph IV.c.3.i of this appendix by the result of paragraph IV.c.3.ii of this appendix.

4. For small business loans, the [Agency] calculates a Borrower Community Benchmark for non-farm businesses with gross annual revenues greater than \$250,000 but less than or equal to \$1 million by:

i. Summing, over the years in the evaluation period, the annual number of non-farm businesses with gross annual revenues greater than \$250,000 but less than or equal to \$1 million in the facility-based assessment area or retail lending assessment area.

ii. Summing, over the years in the evaluation period, the annual number of non-farm businesses in the facility-based assessment area or retail lending assessment area.

iii. Dividing the result of paragraph IV.c.4.i of this appendix by the result of paragraph IV.c.1.ii of this appendix.

5. For small farm loans, the [Agency] calculates a Borrower Community Benchmark for farms with gross annual revenues of \$250,000 or less by:

i. Summing, over the years in the evaluation period, the annual number of farms with gross annual revenues of \$250,000 or less in the facility-based assessment area.

ii. Summing, over the years in the evaluation period, the annual number of farms in the facility-based assessment area.

iii. Dividing the result of paragraph IV.c.5.i of this appendix by the result of paragraph IV.c.5.ii of this appendix.

6. For small farm loans, the [Agency] calculates a Borrower Community Benchmark for farms with gross annual revenues greater than \$250,000 but less than or equal to \$1 million:

i. Summing, over the years in the evaluation period, the annual number of farms with gross annual revenues greater than \$250,000 but less than or equal to \$1 million in the facility-based assessment area.

ii. Summing, over the years in the evaluation period, the annual number of farms in the facility-based assessment area.

iii. Dividing the result of paragraph IV.c.6.i of this appendix by the result of paragraph IV.c.6.ii of this appendix.

7. For automobile loans, the [Agency] calculates a Borrower Community Benchmark for low-income borrowers by:

i. Summing, over the years in the evaluation period, the annual number of low-income households in the facility-based assessment area.

ii. Summing, over the years in the evaluation period, the annual number of households in the facility-based assessment area.

iii. Dividing the result of paragraph IV.c.7.i of this appendix by the result of paragraph IV.c.7.ii of this appendix.

8. For automobile loans, the [Agency] calculates a Borrower Community Benchmark for moderate-income borrowers by:

i. Summing, over the years in the evaluation period, the annual number of moderate-income households in the facility-based assessment area.

ii. Summing, over the years in the evaluation period, the annual number of households in the facility-based assessment area.

iii. Dividing the result of paragraph IV.c.8.i of this appendix by the result of paragraph IV.c.8.ii of this appendix.

Example A-10: The Borrower Community Benchmarks for closed-end home mortgage loans use a three-year evaluation period. There were 1,300 families (year 1), 1,300 families (year 2), and 1,400 families (year 3) in FBAA-1. The sum of the number of families in FBAA-1 is therefore 4,000 in the evaluation period. There were 300 low-income families (year 1), 300 low-income families (year 2), and 400 low-income families (year 3) (a total of 1,000 low-income families). The Borrower Community Benchmark for closed-end home mortgage loans to low-income families within the FBAA-1 would be 1,000 divided by 4,000, or 0.25 (equivalently, 25 percent).

There were 350 moderate-income families (year 1), 400 moderate-income families (year 2), and 450 moderate-income families (year 3) (a total of 1,200 moderate-income families). The Borrower Community Benchmark for closed-end home mortgage loans to moderate-income families in FBAA-1 would be 1,200 divided by 4,000, or 0.3 (equivalently, 30 percent).

$$\frac{\text{Low – Income Families (1,000)}}{\text{Families (4,000)}} = \text{Borrower Community Benchmark (25\%)}$$

$$\frac{\text{Moderate – Income Families (1,200)}}{\text{Families (4,000)}} = \text{Borrower Community Benchmark (30\%)}$$

d. *Calculation of Borrower Market Benchmark for the outside retail lending area.* For a bank's outside retail lending area, the [Agency] calculates the Borrower Market Benchmark for each major product line, excluding automobile loans, and for each category of designated borrowers by taking a weighted average of benchmarks for each component geographic area as follows:

1. Calculating a benchmark for each category of designated borrowers and each major product line within each component geographic area as described in § __.18(b) using the formula for the Borrower Market Benchmark described in section IV.b of this appendix with the component geographic area in place of the facility-based assessment area or retail lending assessment area, as applicable .

2. Calculating the weighting for each component geographic area and major product line as the percentage of the bank's loans in the major product line originated or purchased in the outside retail lending area that are within the component geographic area, based on loan count.

3. Calculating the weighted average benchmark for the outside retail lending area using the component geographic area benchmarks in paragraph IV.d.1 of this appendix and associated weightings in paragraph IV.d.2 of this appendix.

e. *Calculation of Borrower Community Benchmarks for the outside retail lending area.* For a bank's outside retail lending area, the [Agency] calculates the Borrower Community Benchmark for each major product line and for each category of designated borrowers in the bank's outside retail lending area by taking a weighted average of benchmarks for each component geographic area as follows:

1. Calculating the benchmark for each category of *designated borrowers* and each major product line within each component geographic area as described in § __.18(b) using the formula for the Borrower Community Benchmark described in paragraph IV.c of this appendix with the

component geographic area in place of the facility-based assessment area or retail lending assessment area, as applicable.

2. Calculating the weighting for each component geographic area and major product line as the percentage of the bank’s loans in the major product line originated or purchased in the outside retail lending area that are within the component geographic area, based on loan count.

3. Calculating the weighted average benchmark for the outside retail lending area using the component geographic area benchmarks in paragraph IV.e.1 of this appendix and associated weightings calculated in paragraph IV.e.2 of this appendix.

V. SUPPORTING CONCLUSIONS FOR MAJOR PRODUCT LINES OTHER THAN AUTOMOBILE LENDING

The [Agency] evaluates a bank’s Retail Lending Test performance in each Retail Lending Test Area by comparing the bank’s distribution metrics to sets of performance ranges determined by, as applicable, the market and community benchmarks, as described below.

a. *Supporting conclusions for categories of designated census tracts and designated borrowers.* For each major product line, excluding automobile lending, the [Agency] develops separate supporting conclusions for each of the categories outlined below.

**Table 1 to Appendix A
Retail Lending Test Categories of Designated Census Tracts and Designated Borrowers**

| Major Product Line | Designated Census Tracts | Designated Borrowers |
|---------------------------------------|---------------------------------|---|
| Closed-End Home Mortgage Loans | Low-Income Census Tracts | Low-Income Borrowers |
| | Moderate-Income Census Tracts | Moderate-Income Borrowers |
| Small Business Loans | Low-Income Census Tracts | Non-farm businesses with Gross Annual Revenues of \$250,000 or Less |
| | Moderate-Income Census Tracts | Non-farm businesses with Gross Annual Revenues Greater than |

| | | |
|-------------------------|-------------------------------|---|
| | | \$250,000 but Less Than or Equal to \$1 million |
| Small Farm Loans | Low-Income Census Tracts | Farms with Gross Annual Revenues of \$250,000 or Less |
| | Moderate-Income Census Tracts | Farms with Gross Annual Revenues Greater than \$250,000 but Less Than or Equal to \$1 million |

b. *Geographic distribution performance ranges.* To evaluate a bank’s geographic distributions for each major product line, excluding automobile lending, the [Agency] compares the relevant Geographic Bank Metric for each category of designated census tracts to the applicable set of performance ranges. The performance ranges are determined by the values of the Geographic Market Benchmark and the Geographic Community Benchmark, as well as the multipliers associated with each supporting conclusion category, as follows:

1. The performance threshold for an “Outstanding” supporting conclusion is the lesser of either:
 - i. The product of 1.0 times the Geographic Community Benchmark; or
 - ii. The product of 1.15 times the Geographic Market Benchmark.

The Outstanding performance range is all potential values of the Geographic Bank Metric equal to or above the Outstanding performance threshold.

2. The performance threshold for a “High Satisfactory” Retail Lending Test supporting conclusion is the lesser of either:
 - i. The product of 0.8 times the Geographic Community Benchmark; or
 - ii. The product of 1.05 times the Geographic Market Benchmark.

The High Satisfactory performance range is all potential values of the Geographic Bank Metric equal to or above the High Satisfactory performance threshold but below the Outstanding performance threshold.

3. The performance threshold for a “Low Satisfactory” supporting conclusion is the lesser of either:

- i. The product of 0.6 times the Geographic Community Benchmark; or
- ii. The product of the 0.8 times the Geographic Market Benchmark.

The Low Satisfactory performance range is all potential values of the Geographic Bank Metric equal to or above the Low Satisfactory performance threshold but below the High Satisfactory performance threshold.

4. The performance threshold for a “Needs to Improve” supporting conclusion is the lesser of either:

- i. The product of 0.3 times the Geographic Community Benchmark; or
- ii. The product of 0.33 times the Geographic Market Benchmark.

The Needs to Improve performance range is all potential values of the Geographic Bank Metric equal to or above the Needs to Improve performance threshold but below the Low Satisfactory performance threshold.

5. The Substantial Noncompliance performance range is all potential values of the Geographic Bank Metric below the Needs to Improve performance threshold.

c. Geographic distribution supporting conclusions and performance scores. The [Agency] compares each Geographic Bank Metric to the performance ranges provided in paragraphs V.b.1 through V.b.5 of this appendix. The geographic distribution supporting conclusion for each category of designated census tracts is determined by the performance range within which the

Geographic Bank Metric falls. Each supporting conclusion is assigned a numerical performance score using the following corresponding points values:

| Conclusion | Performance Score |
|---------------------------|--------------------------|
| Outstanding | 10 |
| High Satisfactory | 7 |
| Low Satisfactory | 6 |
| Needs to Improve | 3 |
| Substantial Noncompliance | 0 |

d. *Borrower distribution performance ranges.* To evaluate a bank’s borrower distributions for each major product line, excluding automobile lending, the [Agency] compares the relevant Borrower Bank Metric for each category of designated borrowers to the applicable set of performance ranges. The performance ranges are determined by the values of the Borrower Market Benchmark and Borrower Community Benchmark, as well as the multipliers associated with each supporting conclusion category, as follows:

1. The performance threshold for an “Outstanding” supporting conclusion is the lesser of either:

- i. The product of 1.0 times the Borrower Community Benchmark; or
- ii. The product of 1.15 times the Borrower Market Benchmark.

The Outstanding performance range is all potential values of the Borrower Bank Metric equal to or above the Outstanding performance threshold.

2. The performance threshold for a “High Satisfactory” supporting conclusion is the lesser of either:

- i. The product of 0.8 times the Borrower Community Benchmark; or
- ii. The product of 1.05 times the Borrower Market Benchmark.

The High Satisfactory performance range is all potential values of the Borrower Bank Metric equal to or above the High Satisfactory performance threshold but below the Outstanding performance threshold.

3. The performance threshold for a “Low Satisfactory” supporting conclusion is the lesser of either:

- i. The product of 0.6 times the Borrower Community Benchmark; or
- ii. The product of 0.8 times the Borrower Market Benchmark.

The Low Satisfactory performance range is all potential values of the Borrower Bank Metric equal to or above the Low Satisfactory performance threshold but below the High Satisfactory performance threshold.

4. The performance threshold for a “Needs to Improve” supporting conclusion is the lesser of either:

- i. The product of 0.3 times the Borrower Community Benchmark; or
- ii. The product of 0.33 times the Borrower Market Benchmark.

The Needs to Improve performance range is all potential values of the Borrower Bank Metric equal to or above the Needs to Improve performance threshold but below the Low Satisfactory performance threshold.

5. The Substantial Noncompliance performance range is all potential values of the Borrower Bank Metric below the Needs to Improve performance threshold.

e. Borrower distribution supporting conclusions and performance scores. The [Agency] compares each Borrower Bank Metric to the performance ranges provided in paragraphs V.d.1 through V.d.5 of this appendix. The borrower distribution supporting conclusion for each category of designated borrowers is determined by the performance range within which the Borrower Bank Metric falls. Each supporting conclusion is assigned a numerical performance score using the following corresponding point values:

| Conclusion | Performance Score |
|---------------------------|--------------------------|
| Outstanding | 10 |
| High Satisfactory | 7 |
| Low Satisfactory | 6 |
| Needs to Improve | 3 |
| Substantial Noncompliance | 0 |

VI. SUPPORTING CONCLUSIONS FOR AUTOMOBILE LENDING

a. *Supporting conclusions for categories of designated census tracts and designated borrowers.* For any bank in which automobile lending is evaluated under § __.22, the [Agency] develops separate supporting conclusions for each of the categories outlined below.

Table 2 to Appendix A
Automobile Loans: Categories of Designated Census Tracts and Designated Borrowers

| Major Product Line | Designated Census Tracts | Designated Borrowers |
|---------------------------|---------------------------------|-----------------------------|
| Automobile Lending | Low-Income Census Tracts | Low-Income Borrowers |
| | Moderate-Income Census Tracts | Moderate-Income Borrowers |

b. *Geographic distribution.* The [Agency] develops the supporting conclusion for a bank’s geographic distribution for automobile lending based on a comparison of the Geographic Bank Metric for automobile lending in each category of designated census tracts to the corresponding Geographic Community Benchmark.

c. *Borrower distribution.* The [Agency] develops the supporting conclusion for a bank’s borrower distribution for automobile lending based on a comparison of the Borrower Bank Metric for automobile lending in each category of designated borrowers to the corresponding Borrower Community Benchmark.

d. *Performance scores.* Each supporting conclusion is assigned a numerical performance score using the following corresponding point values:

| Conclusion | Performance Score |
|---------------------------|--------------------------|
| Outstanding | 10 |
| High Satisfactory | 7 |
| Low Satisfactory | 6 |
| Needs to Improve | 3 |
| Substantial Noncompliance | 0 |

VII. RETAIL LENDING TEST CONCLUSIONS – ALL MAJOR PRODUCT LINES

a. The [Agency] determines a bank’s Retail Lending Test performance conclusion for a major product line in a Retail Lending Test Area by calculating a weighted performance score for each major product line:

1. The [Agency] develops a weighted average performance score for each major product line in each Retail Lending Test Area as follows:

i. The [Agency] creates a weighted average performance score across the categories of designated census tracts (*i.e., geographic distribution average*) and a weighted average performance score across the categories of designated borrowers (*i.e., borrower distribution average*).

ii. For the geographic distribution average of each major product line, the weighting assigned to each category of designated census tracts is based on the demographics of the Retail Testing Area as outlined in the following table:

**Table 3 to Appendix A
Retail Lending Test
Geographic Distribution Average — Weights**

| Major Product Line | Category of Designated Census Tracts | Weight |
|---------------------------|---|---------------|
| | | |

| | | |
|---------------------------------------|-------------------------------|--|
| Closed-End Home Mortgage Loans | Low-Income Census Tracts | Percentage of total number of owner-occupied housing units in low- and moderate-income census tracts in the applicable Retail Lending Test Area that are in low-income census tracts. |
| | Moderate-Income Census Tracts | Percentage of total number of owner-occupied housing units in low- and moderate-income census tracts in the applicable Retail Lending Test Area that are in moderate-income census tracts. |
| | | |
| Small Business Loans | Low-Income Census Tracts | Percentage of total number of non-farm businesses in low- and moderate-income census tracts in the applicable Retail Lending Test Area that are in low-income census tracts |
| | Moderate-Income Census Tracts | Percentage of total number of non-farm businesses in low- and moderate-income census tracts in the applicable Retail Lending Test Area that are in moderate-income census tracts. |
| | | |
| Small Farm Loans | Low-Income Census Tracts | Percentage of total number of farms in low- and moderate-income census tracts in the applicable Retail Lending Test Area that are in low-income census tracts. |
| | Moderate-Income Census Tracts | Percentage of total number of farms in low- and moderate-income census tracts in the applicable Retail Lending Test Area that are in moderate-income census tracts. |
| | | |

| | | |
|-------------------------|-------------------------------|--|
| Automobile Loans | Low-Income Census Tracts | Percentage of total number of households in low- and moderate-income census tracts in the applicable Retail Lending Test Area that are in low-income census tracts. |
| | Moderate-Income Census Tracts | Percentage of total number of households in low- and moderate-income census tracts in the applicable Retail Lending Test Area that are in moderate-income census tracts. |

In the case of a Retail Lending Test Area that contains no low-income census tracts and no moderate-income census tracts, the bank will not receive a geographic distribution average for that assessment area.

Example A-11: A large bank’s closed-end mortgage loans constitute a major product line for the bank in a facility-based assessment area. The bank’s geographic distribution supporting conclusions for closed-end home mortgage loans in this facility-based assessment area are “High Satisfactory” (performance score of 7 points) for low-income census tracts and “Needs to Improve” (performance score of 3 points) for moderate-income census tracts. Owner-occupied housing units in moderate-income census tracts represents 20 percent of all owner-occupied housing units in the facility-based assessment area, and owner-occupied housing units in low-income census tracts represents 5 percent of all owner-occupied housing units in the facility-based assessment area. Accordingly, the weight assigned to the moderate-income geographic distribution performance score is 80 percent $[20 \text{ percent} / (20 \text{ percent} + 5 \text{ percent}) = 80 \text{ percent}]$ and the weight assigned to the low-income geographic distribution performance score is 20 percent $[5 \text{ percent} / (20 \text{ percent} + 5 \text{ percent}) = 20 \text{ percent}]$. The bank’s geographic distribution average for closed-end home mortgage loans in this facility-based assessment area is 3.8 $[(7 \text{ points} \times 0.2 \text{ weight} = 1.4) + (3 \text{ points} \times 0.8 \text{ weight} = 2.4)]$.

iii. For the borrower distribution average of each major product line, the weighting assigned to each category of designated borrowers is based on the demographics of the Retail Lending Test Area as outlined in the following table:

**Table 4 to Appendix A
Retail Lending Test**

Borrower Distribution Average — Weights

| Major Product Line | Categories of Designated Borrowers | Weight |
|---------------------------------------|--|---|
| Closed-End Home Mortgage Loans | Low-Income Borrowers | Percentage of total number of low-income and moderate-income families in the applicable Retail Lending Test Area that are low-income families |
| | Moderate-Income Borrowers | Percentage of total number of low-income and moderate-income families in the applicable Retail Lending Test Area that are moderate-income families |
| Small Business Loans | Businesses with gross annual revenues of \$250,000 or less | Percentage of total number of non-farm businesses with gross annual revenues of \$250,000 or less and businesses with gross annual revenues greater than \$250,000 but less than or equal to \$1 million in the applicable Retail Lending Test Area that are non-farm businesses with gross annual revenues of \$250,000 or less |
| | Businesses with gross annual revenues greater than \$250,000 and less than or equal to \$1 million | Percentage of total number of non-farm businesses with gross annual revenues of \$250,000 or less and businesses with gross annual revenues greater than \$250,000 but less than or equal to \$1 million in the applicable Retail Lending Test Area that are non-farm businesses with gross annual revenues greater than \$250,00 but less than or equal to \$1 million |

| | | |
|------------------|---|---|
| | | |
| Small Farm Loans | Farms with gross annual revenues of \$250,000 or less | Percentage of total number of farms with gross annual revenues of \$250,000 or less and farms with gross annual revenues greater than \$250,000 but less than or equal to \$1 million in the applicable Retail Lending Test Area that are farms with gross annual revenues of \$250,000 or less |
| | Farms with gross annual revenues greater than \$250,000 and less than or equal to \$1 million | Percentage of total number of farms with gross annual revenues of \$250,000 or less and farms with gross annual revenues greater than \$250,000 but less than or equal to \$1 million in the applicable Retail Lending Test Area that are farms with gross annual revenues greater than \$250,000 but less than or equal to \$1 million |
| Automobile Loans | Low-Income Borrowers | Percentage of total number of low-income and moderate-income households in the applicable Retail Lending Test Area that are low-income households. |

| | | |
|--|---------------------------|---|
| | | |
| | Moderate-Income Borrowers | Percentage of total number of low-income and moderate-income households in the applicable Retail Lending Test Area that are moderate-income households. |

Example A-12: Building on example A-11, the bank’s borrower distribution supporting conclusions for closed-end home mortgage loans in this facility-based assessment area are “Outstanding” (performance score of 10 points) for low-income borrowers and “Low Satisfactory” (performance score of 6 points) for moderate-income borrowers. Low-income families represent 14 percent of all families in the facility-based assessment area and moderate-income families represent 6 percent of all families in the facility-based assessment area. Accordingly, the weight assigned to the low-income borrower distribution performance score is 70 percent $[14 \text{ percent} / (14 \text{ percent} + 6 \text{ percent}) = 70 \text{ percent}]$ and the weight assigned to the moderate-income borrower distribution performance score is 30 percent $[6 \text{ percent} / (14 \text{ percent} + 6 \text{ percent}) = 30 \text{ percent}]$. The bank’s borrower distribution average for closed-end home mortgage loans in this facility-based assessment area is 8.8 $[(10 \text{ points} \times 0.7 \text{ weight} = 7.0) + (6 \text{ points} \times 0.3 \text{ weight} = 1.8)]$.

2. For each major product line, the [Agency] calculates the average of the geographic distribution average and the borrower distribution average (*i.e., product line score*). If a bank has no geographic distribution average for a product (due to the absence of both low-income census tracts and moderate-income census tracts in the geographic area), the product line score is the borrower distribution average.

Example A-13: Based on examples A-11 and A-12, the bank’s product line score for closed-end home mortgage loans is 6.3 $[(3.8 \text{ geographic distribution average} \times 0.5 \text{ weight} = 1.9) + (8.8 \text{ borrower distribution average} \times 0.5 \text{ weight} = 4.4)]$.

b. For each Retail Lending Test Area, the [Agency] calculates a weighted average of product line scores across all major product lines (*i.e.*, *Retail Lending Test Area Score*). For each Retail Lending Test Area, the [Agency] uses a ratio of the bank’s loan originations and purchases in each major product line to its loan originations and purchases in all major product lines during the evaluation period, based on the combination of loan dollars and loan count as defined in § __.12, as weights in the weighted average.

Example A-14: In addition to the product line score of 6.3 for closed-end home mortgage loans in example A-13, the bank has a product line score of 4.2 for small business lending in the same facility-based assessment area. Among major product lines, 60 percent of the bank’s loans in the facility-based assessment area are closed-end home mortgages and 40 percent are small business loans based upon the combination of loan dollars and loan count. Accordingly, the weight assigned to the closed-end home mortgage product line score is 60 percent and the weight assigned to the small business product line score is 40 percent. The bank’s Retail Lending Test Area Score for this facility-based assessment area is 5.46 [(6.3 closed-end home mortgage loan product line score x 0.6 weight = 3.78) + (4.2 small business loan product line score x 0.4 weight = 1.68)].

c. The [Agency] then develops a Retail Lending Test recommended conclusion corresponding with the conclusion category that is nearest to the Retail Lending Test Area Score, as follows:

| Recommended Conclusion | Retail Lending Test Area Score |
|-------------------------------|---------------------------------------|
| Outstanding | 8.5 or more |
| High Satisfactory | 6.5 or more but less than 8.5 |
| Low Satisfactory | 4.5 or more but less than 6.5 |
| Needs to Improve | 1.5 or more but less than 4.5 |
| Substantial Noncompliance | less than 1.5 |

Example A-15: Based on example A-14, the bank’s Retail Lending Test Area Score is associated with a “Low Satisfactory” conclusion, so the bank’s Retail Lending Test recommended conclusion for this facility-based assessment area is “Low Satisfactory.”

d. Once a recommended conclusion is determined for a Retail Lending Test Area, the performance context information provided in § __.21(d) and the additional factors provided in § __.22(g) inform the [Agency]’s determination of the Retail Lending Test conclusion for the Retail Lending Test Area. The agency assigns a Retail Lending Test conclusion for the Retail Lending Test Area of “Outstanding,” “High Satisfactory,” “Low Satisfactory,” “Needs to Improve,” or “Substantial Noncompliance.”

VIII. RETAIL LENDING TEST WEIGHTING AND CONCLUSIONS FOR STATES, MULTISTATE MSAS, AND THE INSTITUTION

The [Agency] develops the Retail Lending Test conclusions for States, multistate MSAs, and the institution as described in this section.

a. The [Agency] translates Retail Lending Test conclusions for facility-based assessment areas, retail lending assessment areas, and as applicable, the outside retail lending area into numerical performance scores, as follows:

| Conclusion | Performance Score |
|---------------------------|--------------------------|
| Outstanding | 10 |
| High Satisfactory | 7 |
| Low Satisfactory | 6 |
| Needs to Improve | 3 |
| Substantial Noncompliance | 0 |

b. The [Agency] calculates the weighted average of Retail Lending Test Area performance scores for a State or multistate MSA, as applicable, and for the institution (*i.e.*, a performance score for the Retail Lending Test). For the weighted average for a State or multistate MSA, the

[Agency] considers facility-based assessment areas and retail lending assessment areas in the State or multistate MSA pursuant to § __.28(c). For the weighted average for the institution, the [Agency] considers all of the bank's facility-based assessment areas and retail lending assessment areas and, as applicable, the bank's outside retail lending area. Each Retail Lending Test Area performance score is weighted by the average the following two ratios:

1. The ratio measuring the share of the bank's deposits in the Retail Lending Test Area, calculated by:

i. Summing, over the years in the evaluation period, the bank's annual dollar volume of deposits in the Retail Lending Test Area.

ii. Summing, over the years in the evaluation period, the bank's annual dollar volume of deposits in all Retail Lending Test Areas in the State, in the multistate MSA, or for the institution, as applicable.

iii. Dividing the result of paragraph VIII.b.1.i of this appendix by the result of paragraph VIII.b.1.ii of this appendix.

For a bank that reports deposits data pursuant to § __.42(b)(3), the bank's annual dollar volume of deposits in a Retail Lending Test Area is the total of annual average daily balances of deposits reported by the bank in counties in the Retail Lending Test Area for that year. For a bank that does not report deposits data pursuant to § __.42(b)(3), the bank's annual dollar volume of deposits in a Retail Lending Test Area is the total of deposits assigned to facilities reported by the bank in the Retail Lending Test Area in FDIC's Summary of Deposits for that year.

2. The ratio measuring the share of the bank's loans in the Retail Lending Test Area, based on the combination of loan dollars and loan count, as defined in § __.12, calculated by dividing:

i. The bank's closed-end home mortgage loans, small business loans, small farm loans, and, if a product line for the bank, automobile loans in the Retail Lending Test Area originated or purchased during the evaluation period; by

ii. The bank's closed-end home mortgage loans, small business loans, small farm loans, and, if a product line for the bank, automobile loans in all Retail Lending Test Areas in the State, in

the multistate MSA, or for the institution, as applicable, originated or purchased during the evaluation period.

c. The [Agency] develops a conclusion corresponding to the conclusion category that is nearest to the performance score for the Retail Lending Test for the State, the multistate MSA, or the institution, as applicable, as follows:

| Conclusion | Retail Lending Test Performance Score |
|---------------------------|--|
| Outstanding | 8.5 or more |
| High Satisfactory | 6.5 or more but less than 8.5 |
| Low Satisfactory | 4.5 or more but less than 6.5 |
| Needs to Improve | 1.5 or more but less than 4.5 |
| Substantial Noncompliance | Less than 1.5 |

d. The agency considers relevant performance context information provided in § __.21(d) to inform the [Agency]’s determination of the bank’s Retail Lending Test conclusion for the State, the multistate MSA, or the institution, as applicable.

Example A-16: A large bank operates in one State only, and has two facility-based assessment areas and one retail lending assessment area in that state and also engages in closed-end home mortgage lending, small business lending, and small farm lending (but not automobile lending, as it is not a product line for the bank) in its outside retail lending area.

Additionally:

i. Facility-based assessment area 1 is associated with 75 percent of the deposits in all of the Retail Lending Test Areas of the bank (based on dollar amount) and 10 percent of the bank’s closed-end home mortgage loans, small business loans, and small farm loans (based on the combination of loan dollars and loan count as defined in § __.12). The bank received a “Needs to Improve” (3 points) Retail Lending Test conclusion in facility-based assessment area 1;

ii. Facility-based assessment area 2 is associated with 15 percent of the deposits in all of the Retail Lending Test Areas of the bank and 20 percent of the bank’s closed-end home mortgage

loans, small business loans, and small farm loans (based on the combination of loan dollars and loan count as defined in § __.12). The bank received a “Low Satisfactory” (6 points) Retail Lending Test conclusion in facility-based assessment area 2;

iii. Retail lending assessment area is associated with 8 percent of the deposits in all of the Retail Lending Test Areas of the bank and 68 percent of the bank’s closed-end home mortgage loans, small business loans, and small farm loans (based on the combination of loan dollars and loan count as defined in § __.12). The bank received an “Outstanding” (10 points) Retail Lending Test conclusion in the retail lending assessment area; and

iv. The bank’s outside retail lending area, is associated with 2 percent of the deposits in all of the Retail Lending Test Areas of the bank and 2 percent of the bank’s closed-end home mortgage loans, small business loans, and small farm loans (based on the combination of loan dollars and loan count as defined in § __.12). The bank received a “High Satisfactory” (7 points) Retail Lending Test conclusion in the outside retail lending area.

Calculating weights:

i. For facility-based assessment area 1: weight = 42.5 percent [(75 percent of deposits + 10 percent of closed-end home mortgage loans, small business loans, and small farm loans)/2];

ii. For facility-based assessment area 2: weight = 17.5 percent [(15 percent of deposits + 20 percent of closed-end home mortgage loans, small business loans, and small farm loans)/2];

iii. For the retail lending assessment area: weight = 38 percent [(8 percent of deposits + 68 percent of closed-end home mortgage loans, small business loans, and small farm loans)/2]; and

iv. For the outside retail lending area: weight = 2 percent [(2 percent of deposits + 2 percent of closed-end home mortgage loans, small business loans, and small farm loans)/2].

Institution Retail Lending Test Performance Score and Conclusion: Using the relevant points values – “Outstanding” (10 points); “High Satisfactory” (7 points); “Low Satisfactory” (6 points); “Needs to Improve” (3 points); “Substantial Noncompliance” (0 points) – and based on the illustration above, the bank’s Retail Lending Test performance score for the institution is 6.3 [(0.425 weight x 3 points in facility-based assessment area 1) + (0.175 weight x 6 points in

facility-based assessment area 2) + (0.38 weight x 10 points in retail lending assessment area) + (0.02 weight x 7 points in the outside retail lending area)].

A performance score of 6.3 corresponds with the conclusion category “Low Satisfactory,” so the bank’s Retail Lending Test recommended conclusion at the institution level is “Low Satisfactory.” Relevant performance context information provided in § __.21(d) may inform the [Agency]’s determination of the bank’s conclusion at the institution level.

Example A-17: An intermediate bank operates in a single State, has two facility-based assessment areas, and also engages in closed-end home mortgage lending, small business lending, and small farm lending (but not automobile lending, as automobile lending is not a product line for the bank) in its outside retail lending area.

Additionally:

i. FBAA-1 is associated with 60 percent of the deposits in all of the Retail Lending Test Areas of the bank and 30 percent of the bank’s closed-end home mortgage loans, small business loans, and small farm loans. The bank received an “Outstanding” (10 points) Retail Lending Test conclusion in facility-based assessment area 1;

ii. FBAA-2 is associated with 40 percent of the deposits in all of the Retail Lending Test Areas of the bank and 10 percent of the bank’s closed-end home mortgage loans, small business loans, and small farm loans. The bank received a “High Satisfactory” (7 points) Retail Lending Test conclusion in facility-based assessment area 2; and

iii. The bank’s outside retail lending area is associated with 0 percent of the deposits in all of the Retail Lending Test Areas of the bank (the bank did not voluntarily collect and maintain depositor location data, so all deposits in the bank are attributed to its branches within facility-based assessment areas) and 60 percent of the bank’s closed-end home mortgage loans, small business loans, and small farm loans. The bank received a “Needs to Improve” (3 points) Retail Lending Test conclusion in the outside retail lending area.

Calculating weights:

i. For FBAA-1: weight = 45 percent [(60 percent of deposits + 30 percent of closed-end home mortgage loans, small business loans, and small farm loans)/2];

ii. For FBAA-2: weight = 25 percent [(40 percent of deposits + 10 percent of closed-end home mortgage loans, small business loans, and small farm loans)/2]; and

iii. For the outside retail lending area: weight = 30 percent [(0 percent of deposits + 60 percent of closed-end home mortgage loans, small business loans, and small farm loans)/2].

Institution Retail Lending Test Performance Score and Conclusion: Using the relevant points values – “Outstanding” (10 points); “High Satisfactory” (7 points); “Low Satisfactory” (6 points); “Needs to Improve” (3 points); “Substantial Noncompliance” (0 points) – and based on the illustration above, the bank’s recommended Retail Lending Test performance score at the institution level is 7.2 [(0.45 weight x 10 points in FBAA-1) + (0.25 weight x 7 points in FBAA-2) + (0.3 weight x 3 points in the outside retail lending area)].

A performance score of 7.2 corresponds with the conclusion category “High Satisfactory,” so the bank’s Retail Lending Test recommended conclusion at the institution level is “High Satisfactory.” Relevant performance context information provided in § __.21(d) may inform the [Agency]’s determination of the bank’s conclusion at the institution level.

Appendix B to Part __—Calculations for the Community Development Tests

Appendix B, based on requirements described in §§ __.24, __.25, __.26, and __.28, includes the following sections:

- I. Community Development Financing Tests—Calculation Components and Allocation of Community Development Loans and Community Development Investments
- II. Community Development Financing Test in § __.24—Calculations for Metrics, Benchmarks, and Combining Performance Scores
- III. Community Development Financing Test for Limited Purpose Banks in § __.26—Calculations for Metrics and Benchmarks
- IV. Weighting of Conclusions

I. COMMUNITY DEVELOPMENT FINANCING TESTS—CALCULATION COMPONENTS AND ALLOCATION OF COMMUNITY DEVELOPMENT LOANS AND COMMUNITY DEVELOPMENT INVESTMENTS

For purposes of the Community Development Financing Test in § __.24 and Community Development Financing Test for Limited Purpose Banks in § __.26, the [Agency] identifies the community development loans and community development investments included in the numerator of the metrics and benchmarks and the deposits or assets included in the denominator of the metrics and benchmarks, as applicable, pursuant to paragraph I.a of this appendix. The [Agency] determines whether to include a community development loan or community development investment in the numerator for a particular metric or benchmark pursuant to the allocation provisions in paragraph I.b of this appendix.

a. *Community development loans and community development investments, deposits, and assets included in the community development financing metrics and benchmarks— in general.* The [Agency] calculates the community development financing metrics and benchmarks in §§ __.24 and __.26 using community development loans and community development investments and deposits or assets, as follows:

1. *Numerator—i. Community development loans and community development investments considered.* The [Agency] includes community development loans and community development investments originated, purchased, refinanced, or renewed by a depository institution or attributed to a depository institution pursuant to § __.21(b) and (c) (e.g., an affiliate community development loan) in the numerator of the metrics and benchmarks. The [Agency] calculates the annual dollar volume of community development loans and community development investments by summing the dollar volume of the following community development loans and community development investments for each calendar year in an evaluation period (*i.e.*, annual dollar volume of community development loans and community development investments):

A. The dollar volume of all community development loans originated or purchased and community development investments made, including legally binding commitments to extend credit or legally binding commitments to invest,

1

¹ The dollar volume of a legally binding commitment to extend credit or legally binding commitment to invest in any given year is: (1) the full dollar volume committed; or (2) if drawn upon, the combined dollar volume of the outstanding commitment and any drawn portion of the commitment.

in that calendar year;

B. The dollar volume of any increase in the calendar year to an existing community development loan that is refinanced or renewed and in an existing community development investment that is renewed;

C. The outstanding dollar volume of community development loans originated or purchased in previous calendar years and community development investments made in previous calendar years, as of December 31 for each calendar year that the loan or investment remains on the depository institution's balance sheet; and

D. The outstanding dollar volume, less any increase reported in paragraph I.a.1.B of this appendix in the same calendar year, of a community development loan the depository institution refinanced or renewed in a calendar year subsequent to the calendar year of origination or purchase, as of December 31 for each calendar year that the loan remains on the depository institution's balance sheet, and an existing community development investment renewed in a calendar year subsequent to the calendar year of the investment, as of December 31 for each calendar year that the investment remains on the depository institution's balance sheet.

ii. *Community development loan and community development investment allocation.* To calculate the metrics and benchmarks provided in §§ __.24 and __.26, the [Agency] includes all community development loans and community development investments that are allocated to the specific facility-based assessment area, State, multistate MSA, or nationwide area, respectively, in the numerator for the metric and benchmarks applicable to that geographic area. *See* paragraph I.b of this appendix for the community development financing allocation provisions.

2. *Denominator.* i. *Annual dollar volume of deposits.* For purposes of metrics and benchmarks in § __.24, the [Agency] calculates an annual dollar volume of deposits in a depository institution that is specific to each metric or benchmark for each calendar year in the evaluation period (*i.e.*, annual dollar volume of deposits). For a depository institution that collects, maintains, and reports deposits data as provided in 12 CFR 25.42, 228.42, or 345.42, the annual dollar volume of deposits is determined using the annual average daily balance of deposits in the depository institution as provided in statements (*e.g.*, monthly or quarterly statements) based on the deposit location. For a depository institution that does not collect,

maintain, and report deposits data as provided in 12 CFR 25.42, 228.42, or 345.42, the annual dollar volume of deposits is determined using the deposits assigned to each facility pursuant to the FDIC's Summary of Deposits.

ii. *Annual dollar volume of assets.* For purposes of the metrics and benchmarks in § ____.26, the [Agency] calculates an annual dollar volume of assets for each calendar year in the evaluation period (*i.e., the annual dollar volume of assets*). The annual dollar volume of assets is calculated by averaging the assets for each quarter end in the calendar year.

b. *Allocation of community development loans and community development investments.* 1. *In general.* For the Community Development Financing Test in § ____.24 and the Community Development Financing Test for Limited Purpose Banks in § ____.26, the [Agency] considers community development loans and community development investments in the evaluation of a bank's performance in a facility-based assessment area, State and multistate MSA, as applicable, and the nationwide area, based on the data provided by the bank pursuant to § ____.42(a)(5)(ii)(E) and the specific location, if available, pursuant to § ____.42(a)(5)(ii)(D). As appropriate, the [Agency] may also consider publicly available information and information provided by government or community sources that demonstrates that a community development loan or community development investment benefits or serves a facility-based assessment area, State, or multistate MSA, or the nationwide area.

2. A bank may allocate a community development loan or community development investment as follows:

i. A community development loan or community development investment that benefits or serves only one county, and not any areas beyond that one county, would have the full dollar amount of the activity allocated to that county.

ii. A community development loan or community development investment that benefits or serves multiple counties, a State, a multistate MSA, multiple States, multiple multistate MSAs, or the nationwide area is allocated according to either specific documentation that the bank can provide regarding the dollar amount allocated to each county or based on the geographic scope of the activity, as follows:

A. Allocation approach if specific documentation is available. A bank may allocate a community development loan or community development investment or portion of a loan or investment based on documentation that specifies the appropriate dollar volume to assign to each county, such as specific addresses and dollar volumes associated with each address, or other information that indicates the specific dollar volume of the loan or investment that benefits or serves each county.

*B. Allocation approach based on geographic scope of a community development loan or community development investment.*¹⁶⁵⁰ In the absence of specific documentation, the [Agency] will allocate a community development loan or community development investment based on the geographic scope of the loan or investment as follows:

1. Allocate at the county level for a loan or investment with a geographic scope of one county;
2. Allocate at the county level based on the proportion of low- and moderate-income families in each county for a loan or investment with a geographic scope of less than an entire State or multistate MSA;
3. Allocate at the State or multistate MSA level for a loan or investment with a geographic scope of the entire State or multistate MSA, as applicable;
4. Allocate at the State or multistate MSA level, as applicable, based on the proportion of low- and moderate-income families in each State or multistate MSA for a loan or investment with a geographic scope of one or more State(s) or multistate MSA(s), but not the entire nation; and
5. Allocate at the nationwide area level for a loan or investment with a geographic scope of the entire nation.

¹⁶⁵⁰ For the purposes of allocating community development loans and community development investments, the [Agency] considers low-or moderate-income families to be located in a State or multistate MSA, as applicable, consistent with § __.28(c).

Table 1 to Appendix B

Community Development Loan or Community Development Investment Allocation

| Community Development Loan or Community Development Investment Benefits or Serves | Allocation Approach if Specific Documentation is Available | Allocation approach based on Geographic Scope of Activity |
|--|---|--|
| One county | Allocate to county | NA |
| Multiple counties that are part of one State or multistate MSA | Allocate to counties | Allocate to counties in proportions equivalent to the distribution of low- and moderate-income families |
| One State or multistate MSA | Allocate to counties | Allocate to the State or multistate MSA |
| Multiple States or multistate MSAs, less than the entire nation | Allocate to counties | Allocate to the States or multistate MSAs, as applicable, based on the proportion of low- and moderate-income families in each State or multistate MSA |
| Nationwide area | Allocate to counties | Allocate to nationwide area |

II. COMMUNITY DEVELOPMENT FINANCING TEST IN § __.24—CALCULATIONS FOR METRICS, BENCHMARKS, AND COMBINING PERFORMANCE SCORES

The calculations for metrics, benchmarks, and combination of performance scores for Community Development Financing Test in § __.24 are provided below. Additional information regarding relevant calculation components is set forth in paragraph I.a of this appendix.

a. *Bank Assessment Area Community Development Financing Metric.* The [Agency] calculates the Bank Assessment Area Community Development Financing Metric in § __.24(b)(1) by:

1. Summing the bank's annual dollar volume of community development loans and community development investments that benefit or serve the facility-based assessment area for each year in the evaluation period.

2. Summing the bank's annual dollar volume of deposits located in the facility-based assessment area for each year in the evaluation period.

3. Dividing the result of paragraph II.a.1 of this appendix by the result of paragraph II.a.2 of this appendix.

Example B-1: The bank has a three-year evaluation period. The bank's annual dollar volumes of community development loans and community development investments that benefit or serve a facility-based assessment area are \$35,000 (year 1), \$25,000 (year 2), and \$40,000 (year 3). The sum of the bank's annual dollar volumes of community development loans and community development investments that benefit or serve a facility-based assessment area is therefore \$100,000. The bank's annual dollar volumes of deposits located in the facility-based assessment area are \$3.1 million (year 1), \$3.3 million (year 2), and \$3.6 million (year 3). The sum of the bank's annual dollar volumes of deposits located in the facility-based assessment is therefore \$10 million. For the evaluation period, the Bank Assessment Area Community Development Financing Metric would be \$100,000 divided by \$10 million, or 0.01 (equivalently, 1 percent).

$$\frac{\text{Bank's community development loans and investments in the assessment area } (\$100,000)}{\text{Deposits in the bank in the assessment area } (\$10 \text{ million})} = \text{Bank Assessment Area Community Development Financing Metric } (1\%)$$

b. *Assessment Area Community Development Financing Benchmark.* The [Agency] calculates the Assessment Area Community Development Financing Benchmark in § __.24(b)(2)(i) for each facility-based assessment area by:

1. Summing all large depository institutions' annual dollar volume of community development loans and community development investments that benefit or serve the facility-based assessment area for each year in the evaluation period.

2. Summing all large depository institutions' annual dollar volume of deposits located in the facility-based assessment area for each year in the evaluation period.

3. Dividing the result of paragraph II.b.1 of this appendix by the result of paragraph II.b.2 of this appendix.

Example B-2: The applicable benchmark uses a three-year evaluation period. The annual dollar volumes of community development loans and community development investments that benefit or serve a facility-based assessment area for all large depository institutions are \$3.25 million (year 1), \$3 million (year 2), and \$3.75 million (year 3). The sum of the annual dollar volumes of community development loans and community development investments that benefit or serve the facility-based assessment area conducted by all large depository institutions is therefore \$10 million. The annual dollar volumes of deposits located in the facility-based assessment area in all large depository institutions are \$330 million (year 1), \$330 million (year 2), and \$340 million (year 3). The sum of the annual dollar volumes of deposits located in the facility-based assessment area in all large depository institutions is therefore \$1 billion. For the evaluation period, the Assessment Area Community Development Financing Benchmark for the facility-based assessment area would be \$10 million divided by \$1 billion, or 0.01 (equivalently, 1 percent).

$$\frac{\text{Community development loans and investments in the assessment area by all large depository institutions (\$10 million)}}{\text{Deposits in the assessment area in all large depository institutions (\$1 billion)}}$$

= Assessment Area Community Development Financing Benchmark (1%)

c. MSA and Nonmetropolitan Nationwide Community Development Financing Benchmarks.

The [Agency] calculates an MSA Nationwide Community Development Financing Benchmark to be used for each MSA in which the bank has a facility-based assessment area in the MSA.

The [Agency] calculates a Nonmetropolitan Nationwide Community Development Financing Benchmark to be used for each nonmetropolitan area in which the bank has a facility-based assessment area in the nonmetropolitan area.

1. *MSA Nationwide Community Development Financing Benchmark.* The [Agency] calculates the MSA Nationwide Community Development Financing Benchmark in § __.24(b)(2)(ii)(A) by:

i. Summing all large depository institutions' annual dollar volume of community development loans and community development investments that benefit or serve metropolitan areas in the nationwide area for each year in the evaluation period.

ii. Summing all large depository institutions' annual dollar volume of deposits located in metropolitan areas in the nationwide area for each year in the evaluation period.

iii. Dividing the result of paragraph II.c.1.i of this appendix by the result of paragraph II.c.1.ii of this appendix.

Example B-3: The applicable benchmark uses a three-year evaluation period. The annual dollar volumes of community development loans and community development investments that benefit or serve metropolitan areas in the nationwide area conducted by all large depository institutions are \$98 billion (year 1), \$100 billion (year 2), and \$102 billion (year 3). The sum of

the annual dollar volumes of community development loans and community development investments that benefit or serve metropolitan areas in the nationwide area conducted by all large depository institutions is therefore \$300 billion. The annual dollar volumes of deposits located in metropolitan areas in the nationwide area in all large depository institutions are \$14.9 trillion (year 1), \$15 trillion (year 2), and \$15.1 trillion (year 3). The sum of the annual dollar volumes of deposits located in metropolitan areas in the nationwide area in all large depository institutions is therefore \$45 trillion. For the evaluation period, the Metropolitan Nationwide Community Development Financing Benchmark would be \$300 billion divided by \$45 trillion, or 0.007 (equivalently, 0.7 percent).

$$\frac{\textit{Community development loans and investments nationwide in metropolitan areas by all large depository institutions (\$300 billion)}}{\textit{Deposits nationwide in metropolitan areas in all large depository institutions (\$45 trillion)}} = \textit{Metropolitan Nationwide Community Development Financing Benchmark (0.7\%)}$$

2. *Nonmetropolitan Nationwide Community Development Financing Benchmark.* The [Agency] calculates the Nonmetropolitan Nationwide Community Development Financing Benchmark in § __.24(b)(2)(ii)(B) by:

i. Summing all large depository institutions' annual dollar volume of community development loans and community development investments that benefit or serve nonmetropolitan areas in the nationwide area for each year in the evaluation period.

ii. Summing all large depository institutions' annual dollar volume of deposits located in nonmetropolitan areas in the nationwide area for each year in the evaluation period.

iii. Dividing the result of paragraph II.c.2.i of this appendix by the result of paragraph II.c.2.ii of this appendix.

Example B-4: The applicable benchmark uses a three-year evaluation period. The annual dollar volumes of community development loans and community development investments that benefit or serve nonmetropolitan areas in the nationwide area conducted by all large depository institutions are \$3 billion (year 1), \$3.2 billion (year 2), and \$3.8 billion (year 3). The sum of the annual dollar volumes of community development loans and community development investments that benefit or serve nonmetropolitan areas in the nationwide area conducted by all large depository institutions is therefore \$10 billion. The annual dollar volumes of deposits located in nonmetropolitan areas in all large depository institutions are \$330 billion (year 1), \$334 billion (year 2), and \$336 billion (year 3). The sum of the annual dollar volumes of deposits located in nonmetropolitan areas in the nationwide area in all large depository institutions is therefore \$1 trillion. For the evaluation period, the Nonmetropolitan Nationwide Community Development Financing Benchmark would be \$10 billion divided by \$1 trillion, or 0.01 (equivalently, 1 percent).

$$\frac{\text{Community development loans and investments nationwide in nonmetropolitan areas by all large depository institutions (\$10 billion)}}{\text{Deposits nationwide in nonmetropolitan areas in all large depository institutions (\$1 trillion)}} = \text{Nonmetropolitan Nationwide Community Development Financing Benchmark (1\%)}$$

d. *Bank State Community Development Financing Metric.* The [Agency] calculates the Bank State Community Development Financing Metric in § __.24(c)(2)(i) for each State in which the bank has a facility-based assessment area by:

1. Summing the bank's annual dollar volume of community development loans and community development investments that benefit or serve a State (which includes all activities within the bank's facility-based assessment areas and outside of its facility-based assessment areas but within the State) for each year in the evaluation period.

2. Summing the bank's annual dollar volume of deposits located in a State for each year in the evaluation period.

3. Dividing the result of paragraphs II.d.1 of this appendix by the result of paragraph II.d.2 of this appendix.

Example B-5: The bank has a three-year evaluation period. The bank's annual dollar volumes of community development loans and community development investments that benefit or serve the State are \$15 million (year 1), \$17 million (year 2), and \$18 million (year 3). The sum of the bank's annual dollar volumes of community development loans and community development investments that benefit or serve the State conducted by a bank is therefore \$50 million. The bank's annual dollar volumes of deposits located in the State are \$1.5 billion (year 1), \$1.6 billion (year 2), and \$1.9 billion (year 3). The sum of the bank's annual dollar volumes of deposits located in the State is therefore \$5 billion. For the evaluation period, the Bank State Community Development Financing Metric would be \$50 million divided by \$5 billion, or 0.01 (equivalently, 1 percent).

$$\frac{\textit{Bank's community development loans and investments in the State } (\$50 \textit{ million})}{\textit{Deposits in the bank in the State } (\$5 \textit{ billion})} = \textit{State Community Development Financing Metric } (1\%)$$

e. *State Community Development Financing Benchmark.* The [Agency] calculates the State Community Development Financing Benchmark in § __.24(c)(2)(ii)(A) by:

1. Summing all large depository institutions' annual dollar volume of community development loans and community development investments that benefit or serve all or part of a State for each year in the evaluation period.

2. Summing all large depository institutions' annual dollar volume of deposits located in the State for each year in the evaluation period.

3. Dividing the result of paragraph II.e.1 of this appendix by the result of paragraph II.e.2 of this appendix.

Example B-6: The applicable benchmark uses a three-year evaluation period. The annual dollar volumes of community development loans and community development investments that benefit or serve the State conducted by all large depository institutions are \$2.3 billion (year 1), \$2.5 billion (year 2), and \$2.7 billion (year 3). The sum of the annual dollar volumes of community development loans and community development investments that benefit or serve the State conducted by all large depository institutions is therefore \$7.5 billion. The annual dollar volumes of deposits located in the State in all large depository institutions are \$160 billion (year 1), \$170 billion (year 2), and \$170 billion (year 3). The sum of the annual dollar volumes of deposits located in the State in all large depository institutions is therefore \$500 billion. For the evaluation period, the State Community Development Financing Benchmark would be \$7.5 billion divided by \$500 billion, or 0.015 (equivalently, 1.5 percent).

$$\frac{\textit{Community development loans and investments in the State by all large depository institutions (\$7.5 billion)}}{\textit{Deposits in the State in all large depository institutions (\$500 billion)}}$$

$$= \textit{State Community Development Financing Benchmark (1.5\%)}$$

f. *State Weighted Assessment Area Community Development Financing Benchmark.* The [Agency] calculates the State Weighted Assessment Area Community Development Financing Benchmark in § __.24(c)(2)(ii)(B) by averaging all of the applicable Assessment Area Community Development Financing Benchmarks (see paragraph II.b of this appendix) in a State for the evaluation period, after weighting each pursuant to paragraph II.o of this appendix.

Example B-7: The bank has two facility-based assessment areas (FBAA) in a State (FBAA-1 and FBAA-2). The [Agency] does not evaluate the bank's automobile lending.

- In FBAA-1, the Assessment Area Community Development Financing Benchmark is 3.0 percent. FBAA-1 represents 70 percent of the combined dollar volume of the deposits in the bank in FBAA-1 and FBAA-2. FBAA-1 represents 65 percent of the bank’s combined dollar volume of originated and purchased closed-end home mortgage loans, small business loans, and small farm loans in FBAA-1 and FBAA-2. FBAA-1 represents 55 percent of the bank’s number of originated and purchased closed-end home mortgage loans, small business loans, and small farm loans in FBAA-1 and FBAA-2;
- In FBAA-2, the Assessment Area Community Development Financing Benchmark is 5.0 percent. FBAA-2 represents 30 percent of the combined dollar volume of the deposits in the bank in FBAA-1 and FBAA-2. FBAA-2 represents 35 percent of the bank’s combined dollar volume of originated and purchased closed-end home mortgage loans, small business loans, and small farm loans in FBAA-1 and FBAA-2. FBAA-2 represents 45 percent of the bank’s number of originated and purchased closed-end home mortgage loans, small business loans, and small farm loans in FBAA-1 and FBAA-2.

| | FBAA-1 | FBAA-2 |
|----------------------------|--------|--------|
| Benchmark | 3.0 | 5.0 |
| % of deposits | 70% | 30% |
| % of lending dollar volume | 65% | 35% |
| % of number of loans | 55% | 45% |

- Calculating weights for FBAA-1:
 - The percent of originated and purchased closed-end home mortgage lending, small business lending, and small farm lending, based on the combination of loan dollars and loan count, for FBAA-1 is 60 percent.

$$\frac{\text{Percent of lending dollar volume (55\%)} + \text{Percent of loans (65\%)}}{2}$$

$$= \text{Percent of lending FBAA} - 1 (60\%)$$

- The weight for FBAA-1 is 65 percent.

$$\frac{\text{Percent of deposits (70\%)} + \text{Percent of lending (60\%)}}{2}$$

$$= \text{Weight for FBAA} - 1 (65\%)$$

- Calculating weights for FBAA-2:

- The percent of originated and purchased closed-end home mortgage lending, small business lending, and small farm lending, based on the combination of loan dollars and loan count, for FBAA-2 is 40 percent.

$$\frac{\text{Percent of lending dollar volume (35\%)} + \text{Percent of loans (45\%)}}{2}$$

$$= \text{Percent of lending FBAA} - 2 (40\%)$$

- The weight for FBAA-2 is 35 percent.

$$\frac{\text{Percent of deposits (30\%)} + \text{Percent of lending (40\%)}}{2} = \text{Weight for FBAA} - 2 (35\%)$$

- Applying the calculated weights for FBAA-1 and FBAA-2:

- The bank's State Weighted Assessment Area Community Development Financing Benchmark is 3.7 percent.

$$(\text{Weight for FBAA-1 (0.65)} * \text{Benchmark in FBAA-1 (3 \%)} + (\text{Weight for FBAA-2 (0.35)} *$$

Benchmark in FBAA-2 (5%)) = State Weighted Assessment Area Community Development Financing Benchmark (3.7%)

g. Bank Multistate MSA Community Development Financing Metric. The [Agency]

calculates the Bank Multistate MSA Community Development Financing Metric in

§ __.24(d)(2)(i) for each multistate MSA in which the bank has a facility-based assessment area by:

1. Summing the bank's annual dollar volume of community development loans and community development investments that benefit or serve a multistate MSA (which includes all activities within the bank's facility-based assessment areas and outside of its facility-based assessment areas but within the multistate MSA) for each year in the evaluation period.

2. Summing the bank's annual dollar volume of deposits located in the multistate MSA for each year in the evaluation period.

3. Dividing the result of paragraph II.g.1 of this appendix by the result of paragraph II.g.2 of this appendix.

Example B-8: The bank has a three-year evaluation period. The bank's annual dollar volumes of community development loans and community development investments that benefit or serve a multistate MSA are \$47 million (year 1), \$51 million (year 2), and \$52 million (year 3). The sum of the bank's annual dollar volumes of community development loans and community development investments that benefit or serve a multistate MSA conducted by the bank is therefore \$150 million. The bank's annual dollar volumes of deposits located in the multistate MSA are \$3.1 billion (year 1), \$3.3 billion (year 2), and \$3.6 billion (year 3). The sum of the bank's annual dollar volumes of deposits located in the multistate MSA is therefore \$10 billion. For the evaluation period, the Bank Multistate MSA Community Development Financing Metric would be \$150 million divided by \$10 billion, or 0.015 (equivalently, 1.5 percent).

$$\frac{\text{Bank's community development loans and investments in multistate MSA } (\$150 \text{ million})}{\text{Deposits in the bank in multistate MSA } (\$10 \text{ billion})}$$

$$= \text{Bank's Multistate MSA Community Development Financing Metric } (1.5\%)$$

h. *Multistate MSA Community Development Financing Benchmark.* The [Agency] calculates the Multistate MSA Community Development Financing Benchmark in § __.24(d)(2)(ii)(A) by:

1. Summing all large depository institutions' annual dollar volume of community development loans and community development investments that benefit or serve all or part of a multistate MSA for each year in the evaluation period.

2. Summing all large depository institutions' annual dollar volume of deposits located in the multistate MSA for each year in the evaluation period.

3. Dividing the result of paragraph II.h.1 of this appendix by the result of paragraph II.h.2 of this appendix.

Example B-9: The applicable benchmark uses a three-year evaluation period. The annual dollar volumes of community development loans and community development investments that benefit or serve a multistate MSA for all large depository institutions are \$135 million (year 1), \$140 million (year 2), and \$145 million (year 3). The sum of the annual dollar volumes of community development loans and community development investments that benefit or serve a multistate MSA conducted by all large depository institutions is therefore \$420 million. The annual dollar volumes of deposits located in the multistate MSA in all large depository institutions are \$4 billion (year 1), \$5 billion (year 2), and \$6 billion (year 3). The sum of the annual dollar volume of deposits located in the multistate MSA in all large depository institutions is therefore \$15 billion. For the evaluation period, the Multistate MSA Community Development Financing Benchmark would be \$420 million divided by \$15 billion, or 0.028 (equivalently, 2.8 percent).

$$\frac{\text{All large depository institutions' community development loans and investments in multistate MSA (\$420 million)}}{\text{Deposits in multistate MSA in all large depository institutions (\$15 billion)}} = \text{Multistate MSA Community Development Financing Benchmark (2.8\%)}$$

i. *Multistate MSA Weighted Assessment Area Community Development Financing Benchmark.* The [Agency] calculates the Multistate MSA Weighted Assessment Area Community Development Financing Benchmark in § __.24 (c)(3)(ii)(B)(2) is calculated by averaging all of the bank's Assessment Area Community Development Financing Benchmarks (see paragraph II.b of this appendix) in a multistate MSA for the evaluation period, after weighting each pursuant to paragraph II.o of this appendix.

Example B-10: The bank has two facility-based assessment areas in a multistate MSA (FBAA-1 and FBAA-2). The [Agency] does not evaluate the bank's automobile lending.

- In FBAA-1, the bank's Assessment Area Community Development Financing Benchmark is 3.0 percent. FBAA-1 represents 70 percent of the total dollar volume of the deposits in the bank in FBAA-1 and FBAA-2. FBAA-1 represents 65 percent of the bank's combined dollar volume of originated and purchased closed-end home mortgage loans, small business loans, and small farm loans in FBAA-1 and FBAA-2. FBAA-1 represents 55 percent of the bank's number of originated and purchased closed-end home mortgage loans, small business loans, and small farm loans in FBAA-1 and FBAA-2;
- In FBAA-2, the bank's Assessment Area Community Development Financing Benchmark is 5.0 percent. FBAA-2 represents 30 percent of the total dollar volume of the deposits in the bank in FBAA-1 and FBAA-2. FBAA-2 represents 35 percent of the bank's combined dollar volume of originated and purchased closed-end home mortgage loans, small business loans, and small farm loans in FBAA-1 and FBAA-2. FBAA-2

represents 45 percent of the bank’s number of originated and purchased closed-end home mortgage loans, small business loans, and small farm loans in FBAA-1 and FBAA-2.

| | FBAA-1 | FBAA-2 |
|----------------------------|--------|--------|
| Benchmark | 3.0 | 5.0 |
| % of deposits | 70% | 30% |
| % of lending dollar volume | 65% | 35% |
| % of loans | 55% | 45% |

- Calculating weights for FBAA-1:

- The percent of originated and purchased closed-end home mortgage lending, small business lending, and small farm lending, based on the combination of loan dollars and loan count, for FBAA-1 is 60 percent.

$$\frac{\text{Percent of lending dollar volume (55\%)} + \text{Percent of loans (65\%)}}{2} = \text{Percent of lending FBAA} - 1 \text{ (60\%)}$$

- The weight for FBAA-1 is 65 percent.

$$\frac{\text{Percent of deposits (70\%)} + \text{Percent of lending (60\%)}}{2} = \text{Weight for FBAA} - 1 \text{ (65\%)}$$

- Calculating weights for FBAA-2:

- The percent of originated and purchased closed-end home mortgage lending, small business lending, and small farm lending, based on the combination of loan dollars and loan count, for FBAA-2 is 40 percent.

$$\frac{\text{Percent of lending dollar volume (35\%)} + \text{Percent of loans (45\%)}}{2} = \text{Percent of lending FBAA} - 2 \text{ (40\%)}$$

- The weight for FBAA-2 is 35 percent

$$\frac{\text{Percent of deposits (30\%)} + \text{Percent of lending (40\%)}}{2} = \text{Weight for assessment area 2 (35\%)}$$

- Applying the calculated weights from FBAA-1 and FBAA-2:
 - The bank's Multistate MSA Weighted Assessment Area Community Development Financing Benchmark is 3.7 percent.

$$(\text{Weight of FBAA-1 (0.65)} * \text{Benchmark in FBAA-1 (3 \%)}) + (\text{weight of FBAA-2 (0.35)} * \text{benchmark in FBAA-2 (5 \%)}) = \text{Multistate MSA Weighted Assessment Area Community Development Financing Benchmark (3.7 \%)}$$

j. *Bank Nationwide Community Development Financing Metric.* The [Agency] calculates the Bank Nationwide Community Development Financing Metric in § __.24(e)(2)(i) for the nationwide area by:

1. Summing the bank's annual dollar volume of community development loans and community development investments that benefit or serve the nationwide area (which includes all activities within the bank's facility-based assessment areas and outside of its facility-based assessment areas within the nationwide area) for each year in the evaluation period.

2. Summing the bank's annual dollar volume of deposits located in the nationwide area for each year in the evaluation period.

3. Dividing the results of paragraph II.j.1 of this appendix by the results of paragraph II.j.2 of this appendix.

Example B-11: The bank has a three-year evaluation period. The bank's annual dollar volumes of community development loans and community development investments that benefit or serve the nationwide area are \$60 million (year 1), \$65 million (year 2), and \$75 million (year 3). The sum of the bank's annual dollar volumes of community development loans and

community development investments that benefit or serve the nationwide area conducted by the bank is therefore \$200 million. The bank's annual dollar volumes of deposits located in the nationwide area are \$2.5 billion (year 1), \$2.7 billion (year 2), and \$2.8 billion (year 3). The sum of the bank's annual dollar volumes of deposits located in the nationwide area is therefore \$8 billion. For the evaluation period, the Bank Nationwide Community Development Financing Metric would be \$200 million divided by \$8 billion, or 0.025 (equivalently, 2.5 percent).

$$\frac{\text{Bank's community development loans and investments nationwide (\$200 million)}}{\text{Deposits nationwide in the bank (\$8 billion)}} = \text{Nationwide Community Development Financing Metric (2.5\%)}$$

k. *Nationwide Community Development Financing Benchmark.* The [Agency] calculates the Nationwide Community Development Financing Benchmark in § __.24(e)(2)(ii)(A) by:

1. Summing all large depository institutions' annual dollar volume of community development loans and community development investments that benefit or serve all or part of the nationwide area for each year in the evaluation period.
2. Summing all depository institutions' annual dollar volume of deposits located in the nationwide area for each year in the evaluation period.
3. Dividing the result of paragraph II.k.1 of this appendix by the result of paragraph II.k.2 of this appendix.

Example B-12: The applicable benchmark uses a three-year evaluation period. The annual dollar volumes of community development loans and community development investments that benefit or serve the nationwide area for all large depository institutions are \$100 billion (year 1), \$103 billion (year 2), and \$107 billion (year 3). The sum of the annual dollar volumes of community development loans and community development investments that benefit or serve the nationwide area conducted by all large depository institutions is therefore \$310 billion. The

annual dollar volumes of deposits located in the nationwide area in all large depository institutions are \$15.2 trillion (year 1), \$15.3 trillion (year 2), and \$15.5 trillion (year 3). The sum of the annual dollar volumes of deposits located in the nationwide area in all large depository institutions is \$46 trillion. For the evaluation period, the Nationwide Community Development Financing Benchmark would be \$310 billion divided by \$46 trillion, or 0.0067 (equivalently, 0.67 percent)

$$\frac{\textit{Community development loans and investments nationwide by all large depository institutions (\$310 billion)}}{\textit{Deposits nationwide in all large depository institutions (\$46 trillion)}} = \textit{State Community Development Financing Benchmark (0.67\%)}$$

1. *Nationwide Weighted Assessment Area Community Development Financing Benchmark.*

The [Agency] calculates the Nationwide Weighted Assessment Area Community Development Financing Benchmark in § __.24(e)(2)(ii)(B) by averaging all of the bank’s Assessment Area Community Development Financing Benchmarks (see paragraph II.b of this appendix) in the nationwide area, after weighting each pursuant to paragraph II.o of this appendix.

Example B-13: The bank has three facility-based assessment areas in the nationwide area (FBAA-1, FBAA-2, and FBAA-3).

- In FBAA-1, the bank’s Assessment Area Community Development Financing Benchmark is 2.0 percent. FBAA-1 represents 60 percent of the combined dollar volume of the deposits in the bank in FBAA-1, FBAA-2, and FBAA-3. FBAA-1 represents 40 percent of the bank’s combined dollar volume of originated and purchased closed-end home mortgage loans, small business loans, and small farm loans in FBAA-1, FBAA-2, and FBAA-3. FBAA-1 represents 60 percent of the bank’s number of originated and

purchased closed-end home mortgage loans, small business loans, and small farm loans in FBAA-1, FBAA-2, and FBAA-3.

- In FBAA-2, the bank’s Assessment Area Community Development Financing Benchmark is 3.0 percent. FBAA-2 represents 30 percent of the combined dollar volume of the deposits in the bank in FBAA-1, FBAA-2, and FBAA-3. FBAA-2 represents 45 percent of the bank’s combined dollar volume of originated and purchased closed-end home mortgage loans, small business loans, and small farm loans in FBAA-1, FBAA-2, and FBAA-3. FBAA-2 represents 35 percent of the bank’s number of originated and purchased closed-end home mortgage loans, small business loans, and small farm loans in FBAA-1, FBAA-2, and FBAA-3.
- In FBAA-3, the bank’s Assessment Area Community Development Financing Benchmark is 4.0 percent. FBAA-3 represents 10 percent of the combined dollar volume of the deposits in the bank in FBAA-1, FBAA-2, and FBAA-3. FBAA-3 represents 15 percent of the bank’s combined dollar volume of originated and purchased closed-end home mortgage loans, small business loans, and small farm loans in FBAA-1, FBAA-2, and FBAA-3. FBAA-3 represents 5 percent of the bank’s number of originated and purchased closed-end home mortgage loans, small business loans, and small farm loans in FBAA-1, FBAA-2, and FBAA-3.

| | FBAA-1 | FBAA-2 | FBAA-3 |
|----------------------------|--------|--------|--------|
| Benchmark | 2.0 | 3.0 | 4.0 |
| % of deposits | 60% | 30% | 10% |
| % of lending dollar volume | 40% | 45% | 15% |
| % of loans | 60% | 35% | 5% |

- Calculating weights for FBAA-1:

- The percent of originated and purchased closed-end home mortgage lending, small business lending, and small farm lending, based on the combination of loan dollars and loan count, for FBAA-1 is 50 percent.

$$\frac{\text{Percent of lending dollar volume (40\%)} + \text{Percent of loans (60\%)}}{2}$$

$$= \text{Percent of lending FBAA} - 1 \text{ (50\%)}$$

- The weight for FBAA-1 is 55 percent.

$$\frac{\text{Percent of deposits (60\%)} + \text{Percent of lending (50\%)}}{2}$$

$$= \text{Weight for FBAA} - 1 \text{ (55\%)}$$

- Calculating weights for FBAA-2:

- The percent of originated and purchased closed-end home mortgage lending, small business lending, and small farm lending, based on the combination of loan dollars and loan count, for FBAA-2 is 40 percent.

$$\frac{\text{Percent of lending dollar volume (45\%)} + \text{Percent of loans (35\%)}}{2}$$

$$= \text{Percent of lending FBAA} - 2 \text{ (40\%)}$$

- The weight for FBAA-2 is 35 percent.

$$\frac{\text{Percent of deposits (30\%)} + \text{Percent of lending (40\%)}}{2}$$

$$= \text{Weight for FBAA} - 2 \text{ (35\%)}$$

- Calculating weights for FBAA-3:

- The percent of originated and purchased closed-end home mortgage lending, small business lending, and small farm lending, based on the combination of loan dollars and loan count, for FBAA-3 is 10 percent.

$$\frac{\text{Percent of lending dollar volume (15\%)} + \text{Percent of loans (5\%)}}{2}$$

$$= \text{Percent of lending FBAA - 3 (10\%)}$$

- The weight for FBAA-3 is 10 percent.

$$\frac{\text{Percent of deposits (10\%)} + \text{Percent of lending (10\%)}}{2}$$

$$= \text{Weight for FBAA - 3 (10\%)}$$

- Applying the calculated weights from FBAA-1, FBAA-2, and FBAA-3:
 - The bank's Nationwide Weighted Assessment Area Community Development Financing Benchmark is 2.55 percent.

$$(\text{Weight of FBAA-1 (0.55)} * \text{Benchmark in FBAA-1 (2\%)}) + (\text{Weight of FBAA-2 (0.35)} * \text{Benchmark FBAA-2 (3\%)}) + (\text{Weight of FBAA-3 (0.10)} * \text{Benchmark in FBAA-3 (4\%)}) =$$

Nationwide Weighted Assessment Area Community Development Financing Benchmark (2.55%)

m. *Bank Nationwide Community Development Investment Metric.* The [Agency] calculates the Bank Nationwide Community Development Investment Metric in § __.24(e)(2)(iii) for the nationwide area by:

1. Summing the bank's annual dollar volume of community development investments, excluding mortgage-backed securities, that benefit or serve the nationwide area (which includes all activities within the bank's facility-based assessment areas and outside of its facility-based assessment areas within the nationwide area) for each year in the evaluation period.

2. Summing the bank's annual dollar volume of deposits located in the nationwide area for each year in the evaluation period.

3. Dividing the results of paragraph II.m.1 of this appendix by the results of paragraph II.m.2 of this appendix.

Example B-14: The bank has a three-year evaluation period. The bank's annual dollar volumes of community development investments (excluding mortgage-backed securities) that benefit or serve the nationwide area are \$600 million (year 1), \$680 million (year 2), and \$720 million (year 3). The sum of the bank's annual dollar volumes of community development investments (excluding mortgage-backed securities) that benefit or serve the nationwide area conducted by the bank is therefore \$2 billion. The bank's annual dollar volumes of deposits located in the nationwide area are \$24 billion (year 1), \$27 billion (year 2), and \$29 billion (year 3). The sum of the bank's annual dollar volumes of deposits located in the nationwide area is therefore \$80 billion. For the evaluation period, the Bank Nationwide Community Development Investment Metric would be \$2 billion divided by \$80 billion, or 0.025 (equivalently, 2.5 percent).

$$\frac{\text{Bank's community development investments nationwide } (\$2 \text{ billion})}{\text{Deposits at the bank nationwide } (\$80 \text{ billion})}$$

$$= \text{Nationwide Community Development Investment Metric } (2.5\%)$$

n. *Nationwide Community Development Investment Benchmark.* The [Agency] calculates the Nationwide Community Development Investment Benchmark in § __.24(e)(2)(iv) by:

1. Summing the annual dollar volume of community development investments that benefit or serve all or part of the nationwide area, excluding mortgage-backed securities, for each year in the evaluation period for all large depository institutions that had assets greater than \$10 billion as of December 31 in both of the prior two calendar years.

2. Summing the annual dollar volume of deposits in the nationwide area for each year in the evaluation period for all large depository institutions that had assets greater than \$10 billion as of December 31 in both of the prior two calendar years.

3. Dividing the result of paragraph II.n.1 of this appendix by the result of paragraph II.n.2 of this appendix.

Example B-15: The applicable benchmark uses a three-year evaluation period. The annual dollar volumes of community development investments (excluding mortgage-backed securities) that benefit or serve the nationwide area for all large depository institutions are \$350 billion (year 1), \$360 billion (year 2), and \$390 billion (year 3). The sum of the annual dollar volumes of community development investments (excluding mortgage-backed securities) that benefit or serve the nationwide area conducted by all large depository institutions is therefore \$1.1 trillion. The annual dollar volumes of deposits located in the nationwide area in all large depository institutions are \$21.9 trillion (year 1), \$22 trillion (year 2), and \$22.1 trillion (year 3). The sum of the annual dollar volumes of deposits located in the nationwide area in all large depository institutions is therefore \$66 trillion. For the evaluation period, the Nationwide Community Development Investment Benchmark would be \$1.1 trillion divided by \$66 trillion, or 0.0167 (equivalently, 1.67 percent).

$$\frac{\text{Community development investments nationwide by all large depository institutions } (\$1.1 \text{ trillion})}{\text{Deposits nationwide at all large depository institutions } (\$66 \text{ trillion})}$$

= Nationwide Community Development Investment Benchmark (1.67%)

o. *Weighting of benchmarks.* The [Agency] calculates a weighted average of the Assessment Area Community Development Financing Benchmarks for a bank's facility-based assessment areas in each State or multistate MSA, as applicable, or the nationwide area. For the weighted average for a State or multistate MSA, the [Agency] considers Assessment Area Community

Development Financing Benchmarks for facility-based assessment areas in the State or multistate MSA pursuant to § __.28(c). For the weighted average for the nationwide area, the [Agency] considers Assessment Area Community Development Financing Benchmarks for all of the bank's facility-based assessment areas. Each Assessment Area Community Development Financing Benchmark is weighted by the average of the following two ratios:

1. The ratio measuring the share of the deposits in the bank in the facility-based assessment area, calculated by:

i. Summing, over the years in the evaluation period, the bank's annual dollar volume of deposits in the facility-based assessment area.

ii. Summing, over the years in the evaluation period, the bank's annual dollar volume of deposits in all facility-based assessment areas in the State, multistate MSA, or nationwide area, as applicable.

iii. Dividing the result of paragraph II.o.1.i of this appendix by the result of paragraph II.o.1.ii of this appendix.

For a bank that reports deposits data pursuant to § __.42(b)(3), the bank's annual dollar volume of deposits in a facility-based assessment area is the total of annual average daily balances of deposits reported by the bank in counties in the facility-based assessment area for that year. For a bank that does not report deposits data pursuant to § __.42(b)(3), the bank's annual dollar volume of deposits in a facility-based assessment area is the total of deposits assigned to facilities reported by the bank in the facility-based assessment area in FDIC's Summary of Deposits for that year.

2. The ratio measuring the share of the bank’s loans in the facility-based assessment area, based on the combination of loan dollars and loan count, as defined in § __.12, calculated by dividing:

i. The bank’s closed-end home mortgage loans, small business loans, small farm loans, and, if a product line for the bank, automobile loans in the facility-based assessment area originated or purchased during the evaluation period; by

ii. The bank’s closed-end home mortgage loans, small business loans, small farm loans, and, if a product line for the bank, automobile loans in all facility-based assessment areas in the State, multistate MSA, or nationwide area, as applicable, originated or purchased during the evaluation period.

p. *Combined score for facility-based assessment area conclusions and the metrics and benchmarks analyses and the impact and responsiveness reviews.* 1. As described in § __.24(c), (d), and (e), the [Agency] assigns a conclusion corresponding to the conclusion category that is nearest to the performance score calculated in paragraph p.2.iii of this appendix for a bank’s performance under the Community Development Financing Test in each State or multistate MSA, as applicable pursuant to § __.28(c), and for the institution as follows

| Performance Score | Conclusion |
|-------------------------------|-------------------|
| 8.5 or more | Outstanding |
| 6.5 or more but less than 8.5 | High Satisfactory |
| 4.5 or more but less than 6.5 | Low Satisfactory |
| 1.5 or more but less than 4.5 | Needs to Improve |

| | |
|---------------|---------------------------|
| Less than 1.5 | Substantial Noncompliance |
|---------------|---------------------------|

2. The [Agency] bases a Community Development Financing Test combined performance score on the following:

i. *Component one – Weighted average of the bank’s performance scores corresponding to facility-based assessment area conclusions.* The [Agency] derives a performance score based on a weighted average of the performance scores corresponding to conclusions for facility-based assessment areas in each State or multistate MSA, as applicable, and the nationwide area, calculated pursuant to section IV of this appendix.

ii. *Component two – Bank score for metric and benchmarks analyses and the impact and responsiveness reviews.* For each State or multistate MSA, as applicable, and the nationwide area, the [Agency] determines a performance score (as shown below in paragraph IV.a of this appendix) corresponding to a conclusion category by considering the relevant metric and benchmarks and a review of the impact and responsiveness of the bank’s community development loans and community development investments. In the nationwide area, for large banks that had assets greater than \$10 billion as of December 31 in both of the prior two calendar years, the [Agency] also considers whether the bank’s performance under the Nationwide Community Development Investment Metric, compared to the Community Development Investment Benchmark, contributes positively to the bank’s Community Development Financing Test conclusion.

iii. *Combined score.* The [Agency] associates the performance score calculated pursuant to this paragraph with a conclusion category. The [Agency] derives the combined performance score corresponding to a conclusion category as follows:

A. The [Agency] calculates the average of two components to determine weighting:

1. The percentage, calculated using the combination of loan dollars and loan count, of the bank's total originated and purchased closed-end home mortgage lending, small business lending, small farm lending, and automobile lending, as applicable, in its facility-based assessment areas out of all of the bank's originated and purchased closed-end home mortgage lending, small business lending, small farm lending, and automobile lending, as applicable, in the State or multistate MSA, as applicable, or the nationwide area during the evaluation period; and
2. The percentage of the total dollar volume of deposits in its facility-based assessment areas out of all of the deposits in the bank in the State or multistate MSA, as applicable, or the nationwide area during the evaluation period. For purposes of this paragraph, "deposits" excludes deposits reported under § __.42(b)(3)(ii).

B. If the average is:

1. At least 80 percent, then component one receives a 50 percent weight and component two receives a 50 percent weight.
2. At least 60 percent but less than 80 percent, then component one receives a 40 percent weight and component two receives a 60 percent weight.
3. At least 40 percent but less than 60 percent, then component one receives a 30 percent weight and component two receives a 70 percent weight.
4. At least 20 percent but less than 40 percent, then component one receives a 20 percent weight and component two receives an 80 percent weight.
5. Below 20 percent, then component one receives a 10 percent weight and component two receives a 90 percent weight.

Table 2 to Appendix B
Component Weights for Combined Performance Score

| Average of the percentage of deposits and percentage of loans | Weight on Component 1 | Weight on Component 2 |
|---|-----------------------|-----------------------|
| Greater than or equal to 80% | 50% | 50% |
| Greater than or equal to 60% but less than 80% | 40% | 60% |
| Greater than or equal to 40% but less than 60% | 30% | 70% |
| Greater than or equal to 20% but less than 40% | 20% | 80% |
| Below 20% | 10% | 90% |

Example B-16:

- Assume that the weighted average of the bank’s performance scores corresponding to its facility-based assessment area conclusions nationwide is 7.5. Assume further that the bank score for the metrics and benchmarks analysis and the review of the impact and responsiveness of the bank’s community development loans and community development investments nationwide is 6.
- Assume further that 95 percent of the deposits in the bank and 75 percent of the bank’s originated and purchased closed-end home mortgage lending, small business lending, small farm lending, and automobile loans (calculated using the combination of loan dollars and loan count) during the evaluation period are associated with its facility-based assessment areas.
- The [Agency] assigns weights for component one and component two based on the share of deposits in the bank and the share of the bank’s originated and purchased closed-end

home mortgage lending, small business lending, small farm lending, and automobile lending, calculated using the combination of loan dollars and loan count, associated with its facility-based assessment areas: (95 percent of deposits + 75 percent of originated and purchased closed-end home mortgage lending, small business lending, small farm lending, and automobile lending, based on the combination of loan dollars and loan count)/2 = 85 percent, which is between 80 percent and 100 percent.

- Thus, the weighted average of the bank’s facility-based assessment area conclusions in the nationwide area (component one – paragraph II.p.2.i of this appendix) receives a weight of 50 percent, and the metrics and benchmarks analysis and the review of the impact and responsiveness of the bank’s community development loans and community development investments in the nationwide area (component two – paragraph II.p.2.ii of this appendix) receives a weight of 50 percent.
- Using the point values – “Outstanding” (10 points); “High Satisfactory” (7 points); “Low Satisfactory” (6 points); “Needs to Improve” (3 points); “Substantial Noncompliance” (0 points) – the bank’s Community Development Financing Test conclusion at the institution level is a “High Satisfactory”: (0.50 weight x 7.5 points for the weighted average of the performance scores corresponding to the bank’s facility-based assessment area conclusions nationwide) + (0.50 weight x 6 points for the bank score for metrics and benchmarks analysis and review of the impact and responsiveness of the bank’s community development loans and community development investments nationwide) results in a performance score of 6.75, which is closest to the point value (7) associated with “High Satisfactory.”

III. COMMUNITY DEVELOPMENT FINANCING TEST FOR LIMITED PURPOSE BANKS IN § __.26—CALCULATIONS FOR METRICS AND BENCHMARKS

The calculations for metrics and benchmarks for Community Development Financing Test for Limited Purpose Banks in § __.26 are provided below. Additional information regarding relevant calculation components is set forth in paragraph I.a of this appendix.

a. *Limited Purpose Bank Community Development Financing Metric.* The [Agency] calculates the Limited Purpose Bank Community Development Financing Metric provided in § __.26 by:

1. Summing the bank's annual dollar volume of community development loans and community development investments that benefit or serve the nationwide area for each year in the evaluation period.

2. Summing the bank's annual dollar volume of the assets for each year in the evaluation period.

3. Dividing the result of paragraph III.a.1 of this appendix by the result of paragraph III.a.2 of this appendix.

b. *Nationwide Limited Purpose Bank Community Development Financing Benchmark.* The [Agency] calculates the Nationwide Limited Purpose Bank Community Development Financing Benchmark by:

1. Summing annual dollar volume of community development loans and community development investments of depository institutions designated as limited purpose banks or savings associations pursuant to 12 CFR 25.26(a) or designated as limited purpose banks pursuant to 12 CFR 228.26(a) or 345.26(a) reported pursuant to 12 CFR 25.42(b), 228.42(b), or 345.42(b) that benefit or serve all or part of the nationwide area for each year in the evaluation period.

2. Summing the annual dollar volume of assets of depository institutions designated as limited purpose banks or savings associations pursuant to 12 CFR 25.26(a) or designated as limited purpose banks pursuant to 12 CFR 228.26(a) or 345.26(a) that reported community development loans and community development investments pursuant to 12 CFR 25.42(b), 228.42(b), or 345.42(b) for each year in the evaluation period.

3. Dividing the result of paragraph III.b.1 of this appendix by the result of paragraph III.b.2 of this appendix.

c. Nationwide Asset-Based Community Development Financing Benchmark. The [Agency] calculates the Nationwide Asset-Based Community Development Financing Benchmark by:

1. Summing the annual dollar volume of community development loans and community development investments of all depository institutions that reported pursuant to 12 CFR 25.42(b), 228.42(b), or 345.42(b) that benefit or serve all or part of the nationwide area for each year in the evaluation period.

2. Summing the annual dollar volume of assets of all depository institutions that reported community development loans and community development investments pursuant to 12 CFR 25.42(b), 228.42(b), or 345.42(b) for each year in the evaluation period.

3. Dividing the result of paragraph III.c.1 of this appendix by the result of paragraph III.c.2 of this appendix.

d. Limited Purpose Bank Community Development Investment Metric. The [Agency] calculates the Limited Purpose Bank Nationwide Community Development Investment Metric, provided in § __.26(f)(2)(iii), for the nationwide area by:

1. Summing the bank's annual dollar volume of community development investments, excluding mortgage-backed securities, that benefit or serve the nationwide area for each year in the evaluation period.

2. Summing the bank's annual dollar volume of assets for each year in the evaluation period.

3. Dividing the results of paragraph III.d.1 of this appendix by the results of paragraph III.d.2 of this appendix.

Example B-17: The bank has a three-year evaluation period. The bank's annual dollar volumes of community development investments (excluding mortgage-backed securities) that benefit or serve the nationwide area are \$62 million (year 1), \$65 million (year 2), and \$73 million (year 3). The sum of the bank's annual dollar volumes of community development investments that benefit or serve the nationwide area conducted by the bank is therefore \$200 million. The bank's annual dollar volumes of assets in the bank are \$2.4 billion (year 1), \$2.7 billion (year 2), and \$2.9 billion (year 3). The sum of the bank's annual dollar volumes of assets in the bank over the evaluation period is therefore \$8 billion. For the evaluation period, the Bank Nationwide Community Development Investment Metric would be \$200 million divided by \$8 billion, or 0.025 (equivalently, 2.5 percent).

$$\frac{\textit{Bank's community development investments nationwide (\$200 million)}}{\textit{Assets in the bank (\$8 billion)}}$$

$$= \textit{Nationwide Community Development Investment Metric (2.5\%)}$$

e. *Nationwide Asset-Based Community Development Investment Benchmark.* The [Agency] calculates the Nationwide Asset-Based Community Development Investment Benchmark, provided in § __.26(f)(2)(iv), by:

1. Summing the annual dollar volume of community development investments, excluding mortgage-backed securities, of all depository institutions that had assets greater than \$10 billion, as of December 31 in both of the prior two calendar years, that benefit or serve all or part of the nationwide area for each year in the evaluation period.

2. Summing the annual dollar volume of assets of all depository institutions that had assets greater than \$10 billion, as of December 31 in both of the prior two calendar years, for each year in the evaluation period.

3. Dividing the result of paragraph III.e.1 of this appendix by the result of paragraph III.e.2 of this appendix.

Example B-18: The applicable benchmark uses a three-year evaluation period. The annual dollar volumes of community development investments (excluding mortgage-backed securities) that benefit or serve the nationwide area for all depository institutions that had assets greater than \$10 billion are \$35 billion (year 1), \$37 billion (year 2), and \$38 billion (year 3). The sum of the annual dollar volumes of community development investments that benefit or serve the nationwide area conducted by all depository institutions that had assets greater than \$10 billion is therefore \$110 billion. The annual dollar volumes of assets in all depository institutions that had assets greater than \$10 billion are \$1.8 trillion (year 1), \$2.1 trillion (year 2), and \$2.1 trillion (year 3). The sum of the annual dollar volumes of assets in all depository institutions that had assets greater than \$10 billion is therefore \$6 trillion. For the evaluation period, the Nationwide Asset-Based Community Development Investment Benchmark would be \$110 billion divided by \$6 trillion, or 0.0183 (equivalently, 1.83 percent).

$$\frac{\text{Community development investments nationwide by depository institutions with assets greater than \$10 billion (\$110 billion)}}{\text{Assets of depository institutions with assets greater than \$10 billion (\$6 trillion)}}$$

= Nationwide Asset

– Based Community Development Investment Benchmark (1.83%)

IV. WEIGHTING OF CONCLUSIONS

The [Agency] calculates component one of the combined performance score, as set forth in paragraph II.p.2.i of this appendix, for the Community Development Financing Test in § __.24 and a performance score for the Community Development Services Test in § __.25 in each State, multistate MSA, and the nationwide area, as applicable, as described in this section.

a. The [Agency] translates the Community Development Financing Test and the Community Development Services Test conclusions for facility-based assessment areas into numerical performance scores, as follows:

| Conclusion | Performance Score |
|---------------------------|--------------------------|
| Outstanding | 10 |
| High Satisfactory | 7 |
| Low Satisfactory | 6 |
| Needs to Improve | 3 |
| Substantial Noncompliance | 0 |

b. The [Agency] calculates the weighted average of facility-based assessment area performance scores for a State or multistate MSA, as applicable, and for the institution. For the

weighted average for a State or multistate MSA, the [Agency] considers facility-based assessment areas in the State or multistate MSA pursuant to § __.28(c). For the weighted average for the institution, the [Agency] considers all of the bank's facility-based assessment areas. Each facility-based assessment area performance score is weighted by the average the following two ratios:

1. The ratio measuring the share of the deposits in the bank in the facility-based assessment area, calculated by:

i. Summing, over the years in the evaluation period, the bank's annual dollar volume of deposits in the facility-based assessment area.

ii. Summing, over the years in the evaluation period, the bank's annual dollar volume of deposits in all facility-based assessment areas in the State, in the multistate MSA, or for the nationwide area, as applicable.

iii. Dividing the result of paragraph IV.b.1.i of this appendix by the result of paragraph IV.b.1.ii of this appendix.

For a bank that reports deposits data pursuant to § __.42(b)(3), the bank's annual dollar volume of deposits in a facility-based assessment area is the total of annual average daily balances of deposits reported by the bank in counties in the facility-based assessment area for that year. For a bank that does not report deposits data pursuant to § __.42(b)(3), the bank's annual dollar volume of deposits in a facility-based assessment area is the total of deposits assigned to facilities reported by the bank in the facility-based assessment area in FDIC's Summary of Deposits for that year.

2. The ratio measuring the share of the bank's loans in the facility-based assessment area, based on the combination of loan dollars and loan count, as defined in § __.12, calculated by dividing:

i. The bank's closed-end home mortgage loans, small business loans, small farm loans, and, if a product line for the bank, automobile loans in the facility-based assessment area originated or purchased during the evaluation period; by

ii. The bank's closed-end home mortgage loans, small business loans, small farm loans, and, if a product line for the bank, automobile loans in all facility-based assessment areas in the State, in the multistate MSA, or for the nationwide area, as applicable, originated or purchased during the evaluation period.

Appendix C to Part __—Performance Test Conclusions

a. *Performance test conclusions, in general.* For a bank evaluated under, as applicable, the Retail Lending Test in § __.22, the Retail Services and Products Test in § __.23, the Community Development Financing Test in § __.24, the Community Development Services Test in § __.25, and the Community Development Financing Test for Limited Purpose Banks in § __.26, the [Agency] assigns conclusions for the bank's CRA performance pursuant to these tests and this Appendix C. In assigning conclusions, the [Agency] may consider performance context information as provided in § __.21(d).

b. *Retail Lending Test conclusions.* The [Agency] assigns Retail Lending Test conclusions for each applicable Retail Lending Test Area, each State or multistate MSA, as applicable pursuant to § __.28(c), and for the institution.

1. *Retail Lending Test Area.*

i. For each applicable Retail Lending Test Area, the [Agency] assigns a Retail Lending Test conclusion and corresponding performance score pursuant to § __.22(h)(1), as follows:

| Conclusion | Performance Score |
|---------------------------|--------------------------|
| Outstanding | 10 |
| High Satisfactory | 7 |
| Low Satisfactory | 6 |
| Needs to Improve | 3 |
| Substantial Noncompliance | 0 |

2. *State, multistate MSA, and institution.* The [Agency] assigns the Retail Lending Test conclusions for a bank’s performance in each State or multistate MSA, as applicable, and for the institution, as set forth in section VIII of appendix A of this part.

c. *Retail Services and Products Test conclusions.* The [Agency] assigns Retail Services and Products Test conclusions for each facility-based assessment area, for each State or multistate MSA, as applicable pursuant to § __.28(c), and for the institution. For a bank that does not operate any branches, a main office described in § __.23(a)(2), or remote service facilities, the [Agency] assigns the bank’s digital delivery systems and other delivery systems conclusion as the Retail Services and Product Test conclusion for the State or multistate MSA, as applicable.

1. *Facility-based assessment area.*

i. The [Agency] assigns a Retail Services and Products Test conclusion for a bank’s performance in a facility-based assessment area based on an evaluation of the bank’s branch

availability and services and remote services facilities availability, if applicable, pursuant to § __.23(b)(2) and (b)(3), respectively.

2. *State, multistate MSA, and institution.* The [Agency] develops the Retail Services and Products Test conclusions for States, multistate MSAs, and the institution as described in this paragraph.

i. The [Agency] translates Retail Services and Products Test conclusions for facility-based assessment areas into numerical performance scores as follows:

| Conclusion | Performance Score |
|---------------------------|--------------------------|
| Outstanding | 10 |
| High Satisfactory | 7 |
| Low Satisfactory | 6 |
| Needs to Improve | 3 |
| Substantial Noncompliance | 0 |

ii. The [Agency] calculates the weighted average of facility-based assessment area performance scores for a State or multistate MSA, as applicable, and for the institution. For the weighted average for a State or multistate MSA, the [Agency] considers facility-based assessment areas in the State or multistate MSA pursuant to § __.28(c). For the weighted average for the institution, the [Agency] considers all of the bank's facility-based assessment

areas. Each facility-based assessment area performance score is weighted by the average the following two ratios:

A. The ratio measuring the share of the bank's deposits in the facility-based assessment area, calculated by:

1. Summing, over the years in the evaluation period, the bank's annual dollar volume of deposits in the facility-based assessment area.

2. Summing, over the years in the evaluation period, the bank's annual dollar volume of deposits in all facility-based assessment areas in the State, in the multistate MSA, or for the institution, as applicable.

3. Dividing the result of paragraph c.2.ii.A.1 of this appendix by the result of paragraph c.2.ii.A.2 of this appendix.

For a bank that reports deposits data pursuant to § __.42(b)(3), the bank's annual dollar volume of deposits in a facility-based assessment area is the total of annual average daily balances of deposits reported by the bank in counties in the facility-based assessment area for that year. For a bank that does not report deposits data pursuant to § __.42(b)(3), the bank's annual dollar volume of deposits in a facility-based assessment area is the total of deposits assigned to facilities reported by the bank in the facility-based assessment area in FDIC's Summary of Deposits for that year.

B. The ratio measuring the share of the bank's loans in the facility-based assessment area, based on the combination of loan dollars and loan count, as defined in § __.12, calculated by dividing:

1. The bank’s closed-end home mortgage loans, small business loans, small farm loans, and, if a product line for the bank, automobile loans in the facility-based assessment area originated or purchased during the evaluation period; by

2. The bank’s closed-end home mortgage loans, small business loans, small farm loans, and, if a product line for the bank, automobile loans in all facility-based assessment areas in the State, in the multistate MSA, or for the institution, as applicable, originated or purchased during the evaluation period.

iii. For a State or multistate MSA, as applicable, the [Agency] assigns a Retail Services and Products Test conclusion corresponding to the conclusion category that is nearest to the weighted average for the State or multistate MSA calculated pursuant to paragraph c.2.ii of this appendix (*i.e.*, the performance score for the Retail Services and Products Test for the State or multistate MSA).

| Performance Score for the Retail Services and Products Test | Conclusion |
|--|---------------------------|
| 8.5 or more | Outstanding |
| 6.5 or more but less than 8.5 | High Satisfactory |
| 4.5 or more but less than 6.5 | Low Satisfactory |
| 1.5 or more but less than 4.5 | Needs to Improve |
| less than 1.5 | Substantial Noncompliance |

iv. For the institution, the [Agency] assigns a Retail Services and Products Test conclusion based on the bank’s combined retail banking services conclusion, developed pursuant to paragraph c.2.iv.A of this appendix, and an evaluation of the bank’s retail banking products, pursuant to paragraph c.2.iv.B of this appendix. The [Agency] translates the Retail Services and Products Test conclusion for the institution into a numerical performance score, as follows:

| Conclusion | Performance Score |
|---------------------------|--------------------------|
| Outstanding | 10 |
| High Satisfactory | 7 |
| Low Satisfactory | 6 |
| Needs to Improve | 3 |
| Substantial Noncompliance | 0 |

A. *Combined retail banking services conclusion.* The [Agency] evaluates the bank’s retail banking services, as applicable, and assigns a combined retail banking services conclusion based the weighted average for the institution calculated pursuant to paragraph c.2.ii of this appendix and a digital and other delivery systems conclusion, assigned pursuant to paragraph c.2.iv.A.1 of this appendix. For a large bank without branches, a main office described in § __.23(a)(2), or remote service facilities, the [Agency] assigns a combined retail banking services conclusion based only on a digital delivery systems and other delivery systems conclusion, assigned pursuant to paragraph c.2.iv.A.1 of this appendix.

1. Digital delivery systems and other delivery systems conclusion. The [Agency] assigns a digital delivery systems and other delivery systems conclusion based on an evaluation of a bank's digital delivery systems and other delivery systems pursuant to § __.23(b)(4).

B. Retail banking products evaluation. The [Agency] evaluates the bank's retail banking products offered in the bank's facility-based assessment areas and nationwide, as applicable, as follows:

1. Credit products and programs. The [Agency] evaluates the bank's performance regarding its credit products and programs pursuant to § __.23(c)(2) and determines whether the bank's performance contributes positively to the bank's Retail Services and Products Test conclusion that would have resulted based solely on the retail banking services conclusion pursuant to paragraph c.2.iv.A of this appendix.

2. Deposit products. The [Agency] evaluates the bank's performance regarding its deposit products pursuant to § __.23(c)(3), as applicable, and determines whether the bank's performance contributes positively to the bank's Retail Services and Products Test conclusion that would have resulted based solely on the combined retail banking services conclusion pursuant to paragraph c.2.iv.A of this appendix.

3. Impact of retail banking products on Retail Services and Products Test conclusion. The bank's retail banking products evaluated pursuant to § __.23(c) may positively impact the bank's Retail Services and Products Test conclusion. The bank's lack of responsive retail banking products does not adversely affect the bank's Retail Services and Products Test performance conclusion.

d. *Community Development Financing Test conclusions.* The [Agency] assigns Community Development Financing Test conclusions for each facility-based assessment area, each State or multistate MSA, as applicable pursuant to § __.28(c), and for the institution.

1. *Facility-based assessment area.*

i. For each facility-based assessment area, the [Agency] assigns a Community Development Financing Test conclusion and corresponding performance score based on the metric and benchmarks as provided in § __.24 and a review of the impact and responsiveness of a bank's activities as provided in § __.15 as follows:

| Conclusion | Performance Score |
|---------------------------|--------------------------|
| Outstanding | 10 |
| High Satisfactory | 7 |
| Low Satisfactory | 6 |
| Needs to Improve | 3 |
| Substantial Noncompliance | 0 |

2. *State, multistate MSA, and institution.* The [Agency] assigns Community Development Financing Test conclusions for a bank's performance in each State and multistate MSA, as applicable pursuant to § __.28(c), and for the institution as set forth in paragraph II.p of appendix B of this part.

e. *Community Development Services Test conclusions.* The [Agency] assigns Community Development Services Test conclusions for each facility-based assessment area, each State or multistate MSA, as applicable pursuant to § __.28(c), and for the institution.

1. *Facility-based assessment area.* For each facility-based assessment area, the [Agency] develops a Community Development Services Test conclusion based on the extent to which a bank provided community development services, considering the factors in § __.25(b). The [Agency] translates the conclusion for each facility-based assessment area into a numerical performance score as follows:

| Conclusion | Performance Score |
|---------------------------|--------------------------|
| Outstanding | 10 |
| High Satisfactory | 7 |
| Low Satisfactory | 6 |
| Needs to Improve | 3 |
| Substantial Noncompliance | 0 |

2. *State, multistate MSA, or nationwide area.* For each State or multistate MSA, as applicable pursuant to § __.28(c), and the nationwide area, the [Agency] develops a Community Development Services Test conclusion as follows:

i. The [Agency] calculates a weighted average of the performance scores corresponding to the performance test conclusions pursuant to section IV of appendix B of this part. The resulting number is the Community Development Services Test performance score for a State, multistate

MSA, or the institution. Subject to paragraph e.2.ii of this appendix, the [Agency] assigns a Community Development Services Test conclusion corresponding to the conclusion category that is nearest to the performance score for the Community Development Services Test as follows:

| Performance Score for the Community Development Services Test | Conclusion |
|--|---------------------------|
| 8.5 or more | Outstanding |
| 6.5 or more but less than 8.5 | High Satisfactory |
| 4.5 or more but less than 6.5 | Low Satisfactory |
| 1.5 or more but less than 4.5 | Needs to Improve |
| Less than 1.5 | Substantial Noncompliance |

ii. The [Agency] may adjust upwards the Community Development Services Test conclusion assigned under paragraph e.2.i of this appendix, based on Community Development Services Test activities performed outside of facility-based assessment areas as provided in § __.19. If there is no upward adjustment, the performance score used for the ratings calculations described in paragraph b.1 of appendix D of this part is the Community Development Services Test performance score discussed in paragraph e.2.i of this appendix. If there is an upward adjustment, the [Agency] translates the Community Development Services Test conclusion into a numerical performance score, which will be used for the ratings calculations described in paragraph b.1 of appendix D of this part, as follows:

| Conclusion | Performance Score |
|---------------------------|--------------------------|
| Outstanding | 10 |
| High Satisfactory | 7 |
| Low Satisfactory | 6 |
| Needs to Improve | 3 |
| Substantial Noncompliance | 0 |

f. *Community Development Financing Test for Limited Purpose Banks conclusions.* The [Agency] assigns conclusions for each facility-based assessment area, each State or multistate MSA, as applicable pursuant to § __.28(c), and for the institution.

1. *Facility-based assessment area.* For each facility-based assessment area, the [Agency] assigns one of the following Community Development Financing Test for Limited Purpose Banks conclusions based on consideration of the dollar volume of a bank’s community development loans and community development investments that benefit or serve the facility-based assessment area over the evaluation period, and a review of the impact and responsiveness of the bank’s activities in the facility-based assessment area as provided in § __.15:

“Outstanding;” “High Satisfactory;” “Low Satisfactory;” “Needs to Improve;” “Substantial Noncompliance.”

2. *State or multistate MSA.* For each State or multistate MSA, as applicable pursuant to § __.28(c), the [Agency] assigns a Community Development Financing Test for Limited Purpose

Banks conclusion of “Outstanding,” “High Satisfactory,” “Low Satisfactory,” “Needs to Improve,” or “Substantial Noncompliance” based on the following:

i. The bank’s facility-based assessment area performance test conclusions in each State or multistate MSA, as applicable;

ii. The dollar volume of a bank’s community development loans and community development investments that benefit or serve the State or multistate MSAs, as applicable, over the evaluation period, and

iii. A review of the impact and responsiveness of the bank’s activities in the State or multistate MSAs, as provided in § __.15.

3. *Institution.* For the institution, the [Agency] assigns a Community Development Financing Test for Limited Purpose Banks conclusion of “Outstanding,” “High Satisfactory,” “Low Satisfactory,” “Needs to Improve,” or “Substantial Noncompliance” based on the following:

i. The bank’s community development financing performance in all of its facility-based assessment areas;

ii. The [Agency]’s comparison of the bank’s Limited Purpose Bank Community Development Financing Metric to both the Nationwide Limited Purpose Bank Community Development Financing Benchmark and the Nationwide Asset-Based Community Development Financing Benchmark;

iii. The [Agency]’s comparison of the bank’s Limited Purpose Bank Community Development Investment Metric to the Nationwide Asset-Based Community Development Investment Benchmark; and

iv. A review of the impact and responsiveness of the bank’s activities in a nationwide area as provided in § __.15.

g. Strategic Plan conclusions. The [Agency] assigns conclusions for a bank that operates under an approved plan in facility-based assessment areas, retail lending assessment areas, outside retail lending areas, State or multistate MSA, as applicable pursuant to § __.28(c), and for the institution. The [Agency] assigns conclusions consistent with the methodology set forth by the bank in its plan. For elements of the plan that correspond to performance tests that would apply to the bank in the absence of an approved plan, the plan should include a conclusion methodology that is generally consistent with paragraphs b through f of this appendix.

Appendix D to Part __—Ratings

a. Ratings, in general. In assigning a rating, the [Agency] evaluates a bank’s performance under the applicable performance criteria in this part, pursuant to §§ __.21 and __.28. The agency calculates an overall performance score for each State and multistate MSA, as applicable pursuant to § __.28(c), and for the institution. The [Agency] assigns a rating of “Outstanding,” “Satisfactory,” “Needs to Improve,” or “Substantial Noncompliance” for the bank’s performance in each State and multistate MSA, as applicable pursuant to § __.28(c), and for the institution that is nearest to the overall performance score, as follows:

| Performance Score | Rating |
|-------------------------------|------------------|
| 8.5 or more | Outstanding |
| 4.5 or more but less than 8.5 | Satisfactory |
| 1.5 or more but less than 4.5 | Needs to Improve |

| | |
|---------------|---------------------------|
| Less than 1.5 | Substantial Noncompliance |
|---------------|---------------------------|

The [Agency] also considers any evidence of discriminatory or other illegal credit practices pursuant to § __.28(d) of this part and the bank’s past performance pursuant to § __.28(e) of this part.

b. *Large bank ratings at the State, multistate MSA, and institution levels.* Subject to paragraph g of this appendix, the [Agency] combines a large bank’s performance scores for its State, multistate MSA, or institution-level performance under the Retail Lending Test in § __.22, Retail Services and Products Test in § __.23, Community Development Financing Test in § __.24, and Community Development Services Test in § __.25 to determine the bank’s rating in each State or multistate MSA, as applicable pursuant to § __.28(c), and for the institution.

1. The [Agency] weights the performance scores as follows: Retail Lending Test (40 percent); Retail Services and Products Test (10 percent); Community Development Financing Test (40 percent); and Community Development Services Test (10 percent). The [Agency] multiplies each of these weights by the bank’s performance score on the respective performance test, and then adds the resulting values together to develop a State, multistate MSA, or institution-level performance score.

2. The [Agency] assigns a rating corresponding with the rating category that is nearest to the State, multistate MSA, or institution performance score using the table in paragraph a of this appendix.

Example D-1: A large bank received the following performance scores and conclusions in a State:

- On the Retail Lending Test, the bank received a 7.3 performance score and a

corresponding conclusion of “High Satisfactory;”

- On the Retail Services and Products Test, the bank received a 6.0 performance score and a corresponding conclusion of “Low Satisfactory;”
- On the Community Development Financing Test, the bank received a 5.7 performance score and a corresponding conclusion of “Low Satisfactory;” and
- On the Community Development Services Test, the bank received a 3.0 performance score and a corresponding conclusion of “Needs to Improve.”

Calculating weights:

- For the Retail Lending Test, the weight is 40 percent (or 0.4);
- For the Retail Services and Products Test, the weight is 10 percent (or 0.1);
- For the Community Development Financing Test, the weight is 40 percent (or 0.4); and
- For the Community Development Services Test, the weight is 10 percent (or 0.1).

State Performance Score: Based on the illustration above, the bank’s State performance score is 6.1.

$(0.4 \text{ weight} \times 7.3 \text{ performance score on the Retail Lending Test} = 2.92) + (0.1 \text{ weight} \times 6.0 \text{ performance score on the Retail Services and Products Test} = 0.6) + (0.4 \text{ weight} \times 5.7 \text{ performance score on the Community Development Financing Test} = 2.28) + (0.1 \text{ weight} \times 3.0 \text{ performance score on the Community Development Services Test} = 0.3).$

State Rating: A State performance score of 6.1 is greater than 4.5 but less than 8.5, resulting in a rating of “Satisfactory.”

c. Intermediate bank ratings. 1. Intermediate banks evaluated pursuant to the Retail Lending Test and the Community Development Financing Test. Subject to paragraph g of this

appendix, the [Agency] combines an intermediate bank's performance scores for its State, multistate MSA, or institution performance under the Retail Lending Test and the Community Development Financing Test to determine the bank's rating in each State or multistate MSA, as applicable pursuant to § __.28(c), and for the institution.

i. The [Agency] weights the performance scores as follows: Retail Lending Test (50 percent) and Community Development Financing Test (50 percent). The [Agency] multiplies each of these weights by the bank's corresponding performance score on the respective performance test, and then adds the resulting values together to develop a State, multistate MSA, or institution performance score.

ii. The [Agency] assigns a rating corresponding with the rating category that is nearest to the State, multistate MSA, or institution performance score, using the table in paragraph a of this appendix.

iii. The [Agency] may adjust an intermediate bank's institution rating where the bank has requested and received sufficient additional consideration pursuant to § __.30(b)(2) and (3).

2. Intermediate banks evaluated pursuant to the Retail Lending Test and the Intermediate Bank Community Development Test in § __.30(a)(2). The [Agency] combines an intermediate bank's performance scores for its State, multistate MSA, or institution conclusions under the Retail Lending Test and the Intermediate Bank Community Development Test in § __.30(a)(2) to determine the bank's rating in each State or multistate MSA, as applicable pursuant to § __.28(c), and for the institution.

i. The [Agency] weights the performance scores as follows: Retail Lending Test (50 percent) and Intermediate Bank Community Development Test (50 percent). The [Agency] multiplies each of these weights by the bank's corresponding performance score on the respective

performance test, and then adds the resulting values together to develop a State, multistate MSA, or institution performance score. For purposes of this paragraph, the performance score for the Intermediate Bank Community Development Test corresponds to the conclusion assigned, as follows:

| Conclusion | Performance Score |
|---------------------------|-------------------|
| Outstanding | 10 |
| High Satisfactory | 7 |
| Low Satisfactory | 6 |
| Needs to Improve | 3 |
| Substantial Noncompliance | 0 |

ii. The [Agency] assigns a rating corresponding with the rating category that is nearest to the State, multistate MSA, or institution performance score using the table in paragraph a of this appendix.

iii. The [Agency] may adjust an intermediate bank’s institution rating where the bank has requested and received sufficient additional consideration pursuant to § __.30(b)(1) and (3).

d. *Small bank ratings.* 1. *Ratings for small banks that opt to be evaluated pursuant to the Retail Lending Test in § __.22.* The [Agency] determines a small bank’s rating for each State or multistate MSA, as applicable pursuant to § __.28(c), and for the institution based on the performance score for its Retail Lending Test conclusions for the State, multistate MSA or institution, respectively.

i. The [Agency] assigns a rating corresponding with the rating category that is nearest to the State, multistate MSA, or institution performance score using the table in paragraph a of this appendix.

ii. The [Agency] may adjust a small bank's institution rating where the bank has requested and received sufficient additional consideration pursuant to § __.29(b)(2) and (3).

2. *Ratings for small banks evaluated under the Small Bank Lending Test pursuant to § __.29(a)(2).* The [Agency] assigns a rating for small banks evaluated under the Small Bank Lending Test pursuant to § __.29(a)(2) as provided in appendix E of this part.

e. *Limited purpose banks.* The [Agency] determines a limited purpose bank's rating for each State or multistate MSA, as applicable pursuant to § __.28(c), and for the institution based on the performance score for its Community Development Financing Test for Limited Purpose Banks conclusion for the State, multistate MSA, or the institution, respectively.

1. The [Agency] assigns a rating corresponding with the rating category that is nearest to the State, multistate MSA, or institution performance score, respectively, using the table in paragraph a of this appendix.

2. The [Agency] may adjust a limited purpose bank's institution rating where the bank has requested and received sufficient additional consideration pursuant to § __.26(b)(2).

f. *Ratings for banks operating under an approved strategic plan.* The [Agency] evaluates the performance of a bank operating under an approved plan consistent with the rating methodology that is specified in the plan pursuant to § __.27(g)(6). The [Agency] assigns a rating according to the category assigned under the rating methodology specified in the plan: "Outstanding," "Satisfactory," "Needs to Improve," or "Substantial Noncompliance."

g. Minimum performance test conclusion requirements. 1. *Retail Lending Test minimum conclusion.* An intermediate bank or a large bank must receive at least a “Low Satisfactory” Retail Lending Test conclusion at, respectively, the State, multistate MSA, or institution to receive an overall State, multistate MSA, or institution rating of “Satisfactory” or “Outstanding.”

2. *Minimum of “low satisfactory” overall conclusion for 60 percent of facility-based assessment areas and retail lending assessment areas.* i. Except as provided in § __.51(e), a large bank with a combined total of 10 or more facility-based assessment areas and retail lending assessment areas in any State, multistate MSA, or for the institution, as applicable, may not receive a rating of “Satisfactory” or “Outstanding” in that State, multistate MSA, or for the institution unless the bank received an overall conclusion of at least “Low Satisfactory” in 60 percent or more of the total number of its facility-based assessment areas and retail lending assessment areas in that State or multistate MSA or for the institution, as applicable.

ii. *Overall conclusion in facility-based assessment areas and retail lending assessment areas.* For purposes of the requirement in paragraph g.2 of this appendix:

A. The [Agency] calculates an overall conclusion in a facility-based assessment area by combining a large bank’s performance scores for its conclusions in the facility-based assessment area pursuant to the Retail Lending Test in § __.22, Retail Services and Products Test in § __.23, Community Development Financing Test in § __.24, and Community Development Services Test in § __.25.

The [Agency] weights the performance scores as follows: Retail Lending Test (40 percent); Retail Services and Products Test (10 percent); Community Development Financing Test (40 percent); and Community Development Services Test (10 percent). The [Agency] multiplies each of these weights by the bank’s performance score on the respective performance test, and

then adds the resulting values together to develop a facility-based assessment area performance score.

The [Agency] assigns a conclusion corresponding with the conclusion category that is nearest to the performance score, as follows:

| Performance Score | Conclusion |
|-------------------------------|---------------------------|
| 8.5 or more | Outstanding |
| 6.5 or more but less than 8.5 | High Satisfactory |
| 4.5 or more but less than 6.5 | Low Satisfactory |
| 1.5 or more but less than 4.5 | Needs to Improve |
| Less than 1.5 | Substantial Noncompliance |

B. An overall conclusion in a retail lending assessment area is the retail lending assessment area conclusion assigned pursuant to the Retail Lending Test in § __.22 as provided in appendix C of this part.

**Appendix E to Part __—Small Bank and Intermediate Bank Performance Evaluation
Conclusions and Ratings**

a. *Small banks evaluated under the small bank performance evaluation.* 1. *Small Bank Lending Test conclusions.* Unless a small bank opts to be evaluated pursuant to the Retail Lending Test in § __.22, the [Agency] assigns conclusions for a small bank’s test performance pursuant to the Small Bank Lending Test in § __.29(a)(2) for each facility-based assessment

area, in each State or multistate MSA, as applicable pursuant to § __.28(c), and for the institution of “Outstanding,” “Satisfactory,” “Needs to Improve,” or “Substantial Noncompliance.”

i. *Eligibility for a “Satisfactory” Small Bank Lending Test conclusion.* The [Agency] assigns a small bank’s performance pursuant to the Small Bank Lending Test a conclusion of “Satisfactory” if, in general, the bank demonstrates:

A. A reasonable loan-to-deposit ratio (considering seasonal variations) given the bank’s size, financial condition, the credit needs of its facility-based assessment areas, and taking into account, as appropriate, other lending-related activities such as loan originations for sale to the secondary markets, community development loans, and community development investments;

B. A majority of its loans and, as appropriate, other lending-related activities, are in its facility-based assessment areas;

C. A distribution of retail lending to and, as appropriate, other lending-related activities for individuals of different income levels (including low- and moderate-income individuals) and businesses and farms of different sizes that is reasonable given the demographics of the bank’s facility-based assessment areas;

D. A reasonable geographic distribution of loans among census tracts of different income levels in the bank’s facility-based assessment areas; and

E. A record of taking appropriate action, when warranted, in response to written complaints, if any, about the bank’s performance in helping to meet the credit needs of its facility-based assessment areas.

ii. *Eligibility for an “Outstanding” Small Bank Lending Test conclusion.* A small bank that meets each of the standards for a “Satisfactory” conclusion under this paragraph and exceeds

some or all of those standards may warrant consideration for a lending evaluation conclusion of “Outstanding.”

iii. *“Needs to Improve” or “Substantial Noncompliance” Small Bank Lending Test conclusions.* A small bank may also receive a lending evaluation conclusion of “Needs to Improve” or “Substantial Noncompliance” depending on the degree to which its performance has failed to meet the standard for a “Satisfactory” conclusion.

2. *Small bank ratings.* Unless a small bank opts to be evaluated pursuant to the Retail Lending Test in § __.22, the [Agency] determines a small bank’s rating for each State and multistate MSA, as applicable pursuant to § __.28(c), and for the institution based on its Small Bank Lending Test conclusions at the State, multistate MSA, and institution level, respectively.

i. The [Agency] assigns a rating based on the lending evaluation conclusion according to the category of the conclusion assigned: “Outstanding,” “Satisfactory,” “Needs to Improve,” or “Substantial Noncompliance.”

ii. The [Agency] may adjust a small bank’s institution rating where the bank has requested and received sufficient additional consideration pursuant to § __.29(b)(1) and (3).

iii. The [Agency] also considers any evidence of discriminatory or other illegal credit practices pursuant to § __.28(d) of this part and the bank’s past performance pursuant to § __.28(e) of this part.

3. The [Agency] assigns a rating for small banks evaluated pursuant to the Retail Lending Test in § __.22 as provided in appendix D of this part.

b. *Intermediate banks evaluated pursuant to the Intermediate Bank Community Development Test in § __.30.* Unless an intermediate bank opts to be evaluated pursuant to the Community Development Financing Test in § __.24, the [Agency] assigns conclusions for an intermediate

bank's performance pursuant to the Intermediate Bank Community Development Test in § __.30 for each State and multistate MSA, as applicable pursuant to § __.28(c), and for the institution of "Outstanding," "High Satisfactory," "Low Satisfactory," "Needs to Improve," or "Substantial Noncompliance."

1. *Intermediate Bank Community Development Test conclusions.* i. *Eligibility for a "Satisfactory" Intermediate Bank Community Development Test conclusion.* The [Agency] assigns an intermediate bank's community development performance a "Low Satisfactory" conclusion if the bank demonstrates adequate responsiveness, and a "High Satisfactory" conclusion if the bank demonstrates good responsiveness, to the community development needs of its facility-based assessment areas and, as applicable, nationwide area through community development loans, community development investments, and community development services. The adequacy of the bank's response will depend on its capacity for such community development activities, the need for such community development activities, and the availability of community development opportunities.

ii. *Eligibility for an "Outstanding" Intermediate Bank Community Development Test conclusion.* The [Agency] assigns an intermediate bank's community development performance an "Outstanding" conclusion if the bank demonstrates excellent responsiveness to community development needs in its facility-based assessment areas and, as applicable, nationwide area through community development loans, community development investments, and community development services. The adequacy of the bank's response will depend on its capacity for such community development activities, the need for such community development activities, and the availability of community development opportunities.

iii. “Needs to Improve” or “Substantial Noncompliance” Intermediate Bank Community Development Test conclusions. The [Agency] assigns an intermediate bank’s community development performance a “Needs to Improve” or “Substantial Noncompliance” conclusion depending on the degree to which its performance has failed to meet the standards for a “Satisfactory” conclusion.

2. *Intermediate bank ratings.* The [Agency] rates an intermediate bank’s performance as provided in appendix D of this part.

Appendix F to Part __[RESERVED]

END OF COMMON RULE TEXT

List of Subjects

12 CFR Part 25

Community development, Credit, Investments, National banks, Reporting and recordkeeping requirements, Savings associations.

12 CFR Part 228

Banks, banking, Community development, Credit, Investments, Reporting and recordkeeping requirements.

12 CFR Part 345

Banks, Banking, Community development, Credit, Investments, Reporting and recordkeeping requirements.

Adoption of Common Rule

The adoption of the common rule by the agencies, as modified by the agency-specific text, is set forth below:

DEPARTMENT OF THE TREASURY

Office of the Comptroller of the Currency

12 CFR Chapter I

Authority and Issuance

For the reasons set forth in the common preamble and under the authority of 12 U.S.C. 93a and 2905, the Office of the Comptroller of the Currency amends part 25 of chapter I of title 12, Code of Federal Regulations as follows:

PART 25— COMMUNITY REINVESTMENT ACT AND INTERSTATE DEPOSIT PRODUCTION REGULATIONS

1. The authority citation for part 25 continues to read as follows:

Authority: 12 U.S.C. 21, 22, 26, 27, 30, 36, 93a, 161, 215, 215a, 481, 1462a, 1463, 1464, 1814, 1816, 1828(c), 1835a, 2901 through 2908, 3101 through 3111, and 5412(b)(2)(B).

Subpart E—[Redesignated as subpart F]

2. Redesignate subpart E as subpart F.

3. Amend part 25 by revising subparts A through D, adding a new subpart E, revising appendices A and B and adding appendices C through F to read as set forth at the end of the common preamble.

4. In newly revised part 25, amend subparts A through E and appendices A through F by:

a. Removing “[Agency]” wherever it appears and adding “*appropriate Federal banking agency*” in its place;

b. Removing “[Agency]” wherever it appears and adding in its place, “appropriate Federal banking agency”;

c. Except in the examples in appendix A, appendix B, and appendix D, removing “bank”, “*bank*”, “banks”, “*banks*”, “bank’s”, “*bank’s*”, and “banks” wherever they appear and adding

“bank or savings association”, “*bank or savings association*”, “banks or savings associations”, “*banks or savings associations*”, “bank’s or savings association’s”, “*bank’s or savings association’s*”, or “banks’ or savings associations” in their places, respectively;

d. Except in the examples in appendix A and appendix B, removing “*Bank*” and “*Banks*” wherever they appear and adding “*Bank and savings association*” or “*Banks and savings associations*” in their places, respectively;

e. Removing “[operations subsidiary or operating subsidiary]” wherever it appears and adding “operating subsidiary” in its place;

f. Removing “[operations subsidiaries or operating subsidiaries]” wherever it appears and adding “operating subsidiaries” in its place;

g. Removing “[*operations subsidiaries or operating subsidiaries*]” wherever it appears and adding “*operating subsidiaries*” in its place;

h. Removing “*Bank and savings association Volume Metric*”, “*Geographic Bank and savings association Metric*”, and “*Borrower Bank and savings association Metric*” wherever they appear and adding “*Bank Volume Metric*”, “*Geographic Bank Metric*”, and “*Borrower Bank Metric*” in their places, respectively;

i. Removing “Community Development Financing Test for Limited Purpose Banks” wherever it appears and adding “Community Development Financing Test for Limited Purpose Banks and Savings Associations” in its place;

j. Removing “*Community Development Financing Test for Limited Purpose Banks and savings associations*” wherever it appears and adding “*Community Development Financing Test for Limited Purpose Banks and Savings Associations*” in its place;

k. Removing “Intermediate Bank Community Development Test” wherever it appears and adding “Intermediate Bank and Savings Association Community Development Test” in its place;

l. Removing “*Intermediate Bank and savings association Community Development Test*” wherever it appears and adding “*Intermediate Bank and Savings Association Community Development Test*” in its place;

m. Removing “Small Bank Lending Test” wherever it appears and adding “Small Bank and Savings Association Lending Test” in its place;

n. Removing “*Small Bank and savings association Lending Test*” wherever it appears and adding “*Small Bank and Savings Association Lending Test*” in its place;

o. Removing “*Limited Purpose Bank and savings association Community Development Financing Metric*” wherever it appears and adding “*Limited Purpose Bank Community Development Financing Metric*” in its place; and

p. Removing “*Nationwide Limited Purpose Bank and savings association Community Development Financing Benchmark*” wherever it appears and adding “*Nationwide Limited Purpose Bank Community Development Financing Benchmark*” in each place.

5. Amend § 25.11 by revising paragraphs (a) and (c) to read as follows:

§ 25.11 Authority, purposes, and scope.

(a) *Authority.* The authority for this part is 12 U.S.C. 21, 22, 26, 27, 30, 36, 93a, 161, 215, 215a, 481, 1462a, 1463, 1464, 1814, 1816, 1828(c), 1835a, 2901 through 2908, 3101 through 3111, and 5412(b)(2)(B).

* * * * *

(c) *Scope*—(1) *General*. (i) Subparts A through E and appendices A through G apply to all banks and savings associations except as provided in paragraphs (c)(2) and (c)(3) of this section. Subpart F only applies to banks.

(ii) With respect to subparts A, through E and appendices A through F:

(A) The OCC has the authority to prescribe these regulations for national banks, Federal savings associations, Federal branches of foreign banks, and State savings associations and has the authority to enforce these regulations for national banks, Federal branches of foreign banks, and Federal savings associations; and

(B) The FDIC has the authority to enforce these regulations for State savings associations.

(2) *Federal branches and agencies*. (i) This part applies to all insured Federal branches and to any Federal branch that is uninsured that results from an acquisition described in section 5(a)(8) of the International Banking Act of 1978 (12 U.S.C. 3103(a)(8)).

(ii) Except as provided in paragraph (c)(2)(i) of this section, this part does not apply to uninsured Federal branches, limited Federal branches, or Federal agencies, as those terms are defined or used in part 28 of this chapter.

(3) *Certain special purpose banks and savings associations*. This part does not apply to special purpose banks or special purpose savings associations that do not perform commercial or retail banking services by granting credit to the public in the ordinary course of business, other than as incident to their specialized operations. These banks or savings associations include banker's banks, as defined in 12 U.S.C. 24 (Seventh), and banks or savings associations that engage only in one or more of the following activities: providing cash management controlled disbursement services or serving as correspondent banks or savings associations, trust companies, or clearing agents.

6. In § 25.12:

a. Add the definitions of “*Appropriate Federal banking agency*”, “*Bank*”, “*Operating subsidiary*”, and “*Savings association*”.;” . ;

b. In the definition of “*Deposits*”:

1. Removing “commercial banks or savings associations” and adding “commercial banks”;
and

2. Removing “foreign banks and savings associations” and adding “foreign banks”.

c. In the definitions of “*Intermediate bank and savings association*,” “*Large bank and savings association*”, and “*Small bank and savings association*”, removing “appropriate Federal banking agency” and adding “OCC”.

The amendments and additions read as follows:

§ 25.12 Definitions.

* * * * *

Appropriate Federal banking agency means, with respect to subparts A (except in the definition of Minority depository institution in § 25.12) through E and appendices A through G:

- (1) The OCC when the institution is a bank or Federal savings association; and
- (2) The FDIC when the institution is a State savings association.

* * * * *

Bank means a national bank (including a Federal branch as defined in part 28 of this chapter) with Federally insured deposits, except as provided in § 25.11(c).

* * * * *

Operating subsidiary means an operating subsidiary as described in 12 CFR 5.34 in the case of an operating subsidiary of a national bank or an operating subsidiary as described in 12 CFR 5.38 in the case of a savings association.

* * * * *

Savings association means a Federal savings association or a State savings association.

* * * * *

7. Delayed indefinitely, § 25.12 is amended by:

- a. In the definition of “*Loan location*”, revising paragraph (3);
- b. In the definition of “*Reported loan*”, revising paragraph (2); and
- c. Revising the definitions of “*Small business*”, “*Small business loan*”, “*Small farm*”, and “*Small farm loan*”.

The revisions read as follows:

§ 25.12 Definitions.

* * * * *

Loan location * * *

* * * * *

(3) A small business loan or small farm loan is located in the census tract reported pursuant to subpart B of 12 CFR part 1002.

Reported loan means * * *

* * * * *

(2) A small business loan or small farm loan reported by a bank pursuant to subpart B of 12 CFR part 1002.

* * * * *

Small business means a small business, other than a small farm, as defined in Section 704B of the Equal Credit Opportunity Act (15 U.S.C. 1691c-2) and implemented by 12 CFR 1002.106.

Small business loan means a loan to a small business as defined in this section.

Small farm means a small business, as defined in Section 704B of the Equal Credit Opportunity Act (15 U.S.C. 1691c-2) and implemented by 12 CFR 1002.106, and that is identified with one of the 3-digit North American Industry Classification System (NAICS) codes 111-115.

Small farm loan means a loan to a small farm as defined in this section.

§ 25.13 [Amended]

8. In § 25.13, amend paragraph (k) by removing “CDFI bank or savings associations” wherever it appears and adding “CDFI bank” in its place.

§ 25.14 [Amended]

9. In § 25.14, amend paragraphs (b)(2)(ii) and (b)(3) by removing “[other Agencies]” wherever it appears and adding “Board and the FDIC or Board and the OCC, as appropriate” in its place.

§ 25.21 [Amended]

10. Amend paragraph (f) of § 25.21 by removing “Banks” and adding “Banks and savings associations” in its place.

§ 25.22 [Amended]

11. Delayed indefinitely, § 25.22 is amended as follows:

a. By removing each use of the term “Businesses” in § 25.22(e)(2)(ii)(C) and § 25.22(e)(2)(ii)(D) and adding in their place “Small businesses”; and

b. By removing each use of the term “Farms” in § 25.22(e)(2)(ii)(E) and § 25.22(e)(2)(ii)(F) and adding in their place “Small farms”.

12. Amend the section headings for §§ 26, 29, 30, and 44 by removing “Bank” or “Banks” wherever they appear and adding “Bank and savings association” or “Banks and savings associations” in each place, respectively.

13. Add § 25.31 to read as follows:

§ 25.31 Effect of CRA performance on applications.

(a) *CRA performance.* Among other factors, the appropriate Federal banking agency takes into account the record of performance under the CRA of each applicant bank or savings association, and for applications under 10(e) of the Home Owners’ Loan Act (12 U.S.C. 1467a(e)), of each proposed subsidiary savings association, in considering an application for:

(1) The establishment of:

(i) A domestic branch for insured banks; or

(ii) A domestic branch or other facility that would be authorized to take deposits for savings associations;

(2) The relocation of the main office or a branch;

(3) The merger or consolidation with or the acquisition of assets or assumption of liabilities of an insured depository institution requiring approval under the Bank Merger Act (12 U.S.C. 1828(c));

(4) The conversion of an insured depository institution to a national bank or Federal savings association charter; and

(5) Acquisitions subject to section 10(e) of the Home Owners’ Loan Act (12 U.S.C. 1467a(e)).

(b) *Charter application.* (1) An applicant (other than an insured depository institution) for a national bank charter must submit with its application a description of how it will meet its CRA objectives. The OCC takes the description into account in considering the application and may deny or condition approval on that basis.

(2) An applicant for a Federal savings association charter must submit with its application a description of how it will meet its CRA objectives. The appropriate Federal banking agency takes the description into account in considering the application and may deny or condition approval on that basis.

(c) *Interested parties.* The appropriate Federal banking agency takes into account any views expressed by interested parties that are submitted in accordance with the applicable comment procedures in considering CRA performance in an application listed in paragraphs (a) and (b) of this section.

(d) *Denial or conditional approval of application.* A bank's or savings association's record of performance may be the basis for denying or conditioning approval of an application listed in paragraph (a) of this section.

(e) *Insured depository institution.* For purposes of this section, the term "insured depository institution" has the meaning given to that term in 12 U.S.C. 1813.

14. Delayed indefinitely, § 25.42 is amended as follows:

- a. By revising paragraph (a)(1);
- b. By removing and reserving paragraph (b)(1); and
- c. By removing each use of the phrase "small business loans and small farm loans reported as originated or purchased" in paragraphs (g)(1)(i) and (g)(2)(i) and adding in their place "small business loans and small farm loans reported as originated".

The revision reads as follows:

§ 25.42 Data collection, reporting, and disclosure.

(a) *Information required to be collected and maintained. (1) Purchases of small business loans and small farm loans data.* A bank that opts to have the OCC consider its purchases of small business loans and small farm loans must collect and maintain in electronic form, as prescribed by the OCC, until the completion of the bank's next CRA examination in which the data are evaluated, the following data for each small business loan or small farm loan purchased by the bank during the evaluation period:

- (i) A unique number or alpha-numeric symbol that can be used to identify the relevant loan file;
- (ii) An indicator for the loan type as reported on the bank's Call Report or Report of Assets and Liabilities of U.S. Branches and Agencies of Foreign Banks, as applicable;
- (iii) The date of the loan purchase;
- (iv) The loan amount at purchase;
- (v) The loan location, including State, county, and census tract;
- (vi) An indicator for whether the purchased loan was to a business or farm with gross annual revenues of \$250,000 or less;
- (vii) An indicator for whether the purchased loan was to a business or farm with gross annual revenues greater than \$250,000 but less than or equal to \$1 million;
- (viii) An indicator for whether the purchased loan was to a business or farm with gross annual revenues greater than \$1 million; and
- (ix) An indicator for whether the purchased loan was to a business or farm for which gross annual revenues are not known by the bank.”

* * * * *

§ 25.43 [Amended]

15. Amend § 25.43 by:

a. In paragraph (a)(5), removing “bank and savings association-at-work” and adding “bank-at-work” in its place.

b. In paragraph (b)(2)(i), by removing “[operations subsidiaries’ or operating subsidiaries’]” and adding “operating subsidiaries” in its place; and

16. Delayed indefinitely, § 25.43 is amended by:

a. Revising the heading in paragraph (b)(2); and

b. Adding a new paragraph (b)(2)(iii).

The revision and addition read as follows:

§ 25.43 Content and availability of public file

* * * * *

(b) * * *

(2) *Banks required to report HMDA data and Small Business Lending data.* * * *

* * * * *

“(iii) *Small business lending data notice.* A bank required to report small business loan or small farm loan data pursuant to 12 CFR part 1002 must include in its public file a written notice that the bank’s small business loan and small farm loan data may be obtained on the CFPB’s website at: <https://www.consumerfinance.gov/data-research/small-business-lending/>.”

§ 25.46 [Amended]

17. In § 25.46 amend paragraph (b) by removing “[Agency contact information]” and adding in its place “CRAComments@occ.treas.gov, or by mailing comments to: Compliance Risk

Policy Division, Bank Supervision Policy, OCC, Washington, DC 20219, for banks and Federal savings associations; or CRACommentCollector@fdic.gov or by mailing comments to the address of the appropriate FDIC regional office found at <https://www.fdic.gov/resources/bankers/community-reinvestment-act/cra-regional-contacts-list.html>” for State savings associations.

18. Amend § 25.51 by:

a. In paragraph (a)(2)(iii), in the first sentence, removing “banks or savings associations” and adding “banks and savings associations” in its place.

b. Revising paragraphs (d)(2);

c. In paragraph (e):

1. Removing “[*part X*]” and adding “*part 25*” in its place; and

2. Removing the phrase “[other Agencies’ CRA regulations]” and adding the phrase “12 CFR 228, or 12 CFR 345” in its place.

The revision reads as follows:

§ 25.51 Applicability dates, and transition provisions.

* * * * *

(d) * * *

(2) *Existing strategic plans.* A strategic plan in effect as of [INSERT DATE OF PUBLICATION IN THE *FEDERAL REGISTER*] remains in effect until the expiration date of the plan except for provisions that were not permissible under this part as of January 1, 2022.

19. Revise the heading of Appendix A to read as follows:

Appendix A to Part 25—Calculations for the Retail Tests

20. Delayed indefinitely, appendix A to part 25 is amended as follows:

a. By adding “A bank’s loan purchases that otherwise meet the definition of a covered credit transaction to a small business, as those terms are defined in 12 CFR 1002.104 and 12 CFR 1002.106(b), may be included in the numerator of the Bank Volume Metric at the bank’s option.” at the end of paragraph I.a.1;

b. By removing the phrase “subject to reporting pursuant to 12 CFR 25.42(b)(1), 228.42(b)(1), 345.42(b)(1),” in paragraph I.b and adding in its place the phrase “subject to reporting pursuant to subpart B of 12 CFR part 1002”;

c. By adding the phrase “A bank’s loan purchases that otherwise meet the definition of a covered credit transaction to a small business, as provided in 12 CFR 1002.104 and 12 CFR 1002.106(b), may be included in the numerator of the Geographic Bank Metric at the bank’s option.” at the end of paragraph III.a.1;

d. By removing paragraphs III.c.3.i and III.c.3.ii and adding in their place “i. Summing, over the years in the evaluation period, the numbers of small businesses in low-income census tracts in the facility-based assessment area or retail lending assessment area. ii. Summing, over the years in the evaluation period, the numbers of small businesses in the facility-based assessment area or retail lending assessment area.”;

e. By removing paragraphs III.c.4.i and III.c.4.ii and adding in their place “i. Summing, over the years in the evaluation period, the numbers of small businesses in moderate-income census tracts in the facility-based assessment area or retail lending assessment area. ii. Summing, over the years in the evaluation period, the numbers of small businesses in the facility-based assessment area or retail lending assessment area.”;

f. By removing paragraphs III.c.5.i and III.c.5.ii and adding in their place “i. Summing, over the years in the evaluation period, the numbers of small farms in low-income census tracts in the

facility-based assessment area or retail lending assessment area. ii. Summing, over the years in the evaluation period, the numbers of small farms in the facility-based assessment area or retail lending assessment area.”;

g. By removing paragraphs III.c.6.i and III.c.6.ii and adding in their place “i. Summing, over the years in the evaluation period, the numbers of small farms in moderate-income census tracts in the facility-based assessment area or retail lending assessment area. ii. Summing, over the years in the evaluation period, the numbers of small farms in the facility-based assessment area or retail lending assessment area.”;

h. By removing Example A-7 and adding in its place “The applicable benchmark uses a three-year evaluation period. There were 4,000 small business establishments, based upon the sum of the numbers of small business establishments over the years in the evaluation period (1,300 small business establishments in year 1, 1,300 small business establishments in year 2, and 1,400 small business establishments in year 3), in a bank’s facility-based assessment area. Of these small business establishments, 500 small business establishments were in low-income census tracts, based upon the sum of the numbers of small business establishments in low-income census tracts over the years in the evaluation period (200 small business establishments in year 1, 150 small business in year 2, and 150 small business establishments in year 3). The Geographic Community Benchmark for small business loans in low-income census tracts would be 500 divided by 4,000, or 0.125 (equivalently, 12.5 percent). In addition, 1,000 small business establishments in that facility-based assessment area were in moderate-income census tracts, over the years in the evaluation period (400 small business establishments in year 1, 300 small business establishments in year 2, and 300 small business establishments in year 3). The

Geographic Community Benchmark for small business loans in moderate-income census tracts would be 1,000 divided by 4,000, or 0.25 (equivalently, 25 percent).”

$$\frac{\textit{Small Businesses in Low – Income Census Tracts (500)}}{\textit{Small Businesses (4,000)}}$$

= *Geographic Community Benchmark (12.5%)*

$$\frac{\textit{Small Businesses in Moderate – Income Census Tracts (1,000)}}{\textit{Small Businesses (4,000)}}$$

= *Geographic Community Benchmark (25%)*

i. By removing from the third introductory paragraph to section IV: “For small business loans, the [Agency] calculates these metrics and benchmarks for each of the following *designated borrowers*: (i) businesses with gross annual revenues of \$250,000 or less; and (ii) businesses with gross annual revenues of more than \$250,000 but less than or equal to \$1 million.” And adding in its place “For small business loans, the [Agency] calculates these metrics and benchmarks for each of the following *designated borrowers*: (i) small businesses with gross annual revenues of \$250,000 or less; and (ii) small businesses with gross annual revenues of more than \$250,000 but less than or equal to \$1 million.”;

j. By removing from the fourth introductory paragraph to section IV: “For small farm loans, the appropriate Federal banking agency calculates these metrics and benchmarks for each of the following *designated borrowers*: (i) farms with gross annual revenues of \$250,000 or less; and (ii) farms with gross annual revenues of more than \$250,000 but less than or equal to \$1 million.” And adding in its place: “For small farm loans, the appropriate Federal banking agency calculates these metrics and benchmarks for each of the following *designated borrowers*: (i) small farms with gross annual revenues of \$250,000 or less; and (ii) small farms with gross annual revenues of more than \$250,000 but less than or equal to \$1 million.”;

k. By adding at the end of paragraph IV.a.1: “A bank’s loan purchases that otherwise meet the definition of a covered credit transaction to a small business, as provided in 12 CFR 1002.104 and 12 CFR 1002.106(b), may be included in the numerator of the Borrower Bank Metric at the bank’s option.”;

l. By removing the introductory paragraph to IV.c.3 and paragraphs IV.c.3.i, and IV.c.3.ii and adding in their place: “3. For small business loans, the [Agency] calculates a Borrower Community Benchmark for small businesses with gross annual revenues of \$250,000 or less by: i. Summing, over the years in the evaluation period, the numbers of small businesses with gross annual revenues of \$250,000 or less in the facility-based lending area or retail lending assessment area. ii. Summing, over the years in the evaluation period, the numbers of small businesses in the facility-based lending area or retail lending assessment area.”;

m. By removing the introductory paragraph to IV.c.4 and paragraphs IV.c.4.i, and IV.c.4.ii and adding in their place: “4. For small business loans, the [Agency] calculates a Borrower Community Benchmark for small businesses with gross annual revenues of more than \$250,000 but less than or equal to \$1 million by: i. Summing, over the years in the evaluation period, the numbers of small businesses with gross annual revenues of more than \$250,000 but less than or equal to \$1 million in the facility-based lending area or retail lending assessment area. ii. Summing, over the years in the evaluation period, the numbers of small businesses in the facility-based lending area or retail lending assessment area.”;

n. By removing the introductory paragraph to IV.c.5 and paragraphs IV.c.5.i, and IV.c.5.ii and adding in their place: “5. For small farm loans, the [Agency] calculates a Borrower Community Benchmark for small farms with gross annual revenues of \$250,000 or less by: i. Summing, over the years in the evaluation period, the numbers of small farms with gross annual

revenues of \$250,000 or less in the facility-based lending area or retail lending assessment area.

ii. Summing, over the years in the evaluation period, the numbers of small farms in the facility-based lending area or retail lending assessment area.”;

o. By removing the introductory paragraph to IV.c.6 and paragraphs IV.c.6.i, and IV.c.6.ii and adding in their place: “6. For small farm loans, the [Agency] calculates a Borrower Community Benchmark for small farms with gross annual revenues of more than \$250,000 but less than or equal to \$1 million by: i. Summing, over the years in the evaluation period, the numbers of small farms with gross annual revenues of more than \$250,000 but less than or equal to \$1 million in the facility-based lending area or retail lending assessment area. ii. Summing, over the years in the evaluation period, the numbers of small farms in the facility-based lending area or retail lending assessment area.”;

p. By removing each use of the term “businesses” and adding in its place “small businesses” in Table 1 to Appendix A;

q. By removing each use of the term “Businesses” and adding in its place “Small businesses” in Table 1 to Appendix A;

r. By removing each use of the term “farms” and adding in its place “small farms” in Table 1 to Appendix A;

s. By removing each use of the term “Farms” and adding in its place “Small farms” in Table 1 to Appendix A;

t. By removing each use of the term “businesses” and adding in its place “small businesses” in Table 3 to Appendix A;

u. By removing each use of the term “Businesses” and adding in its place “Small businesses” in Table 3 to Appendix A;

v. By removing each use of the term “farms” and adding in its place “small farms” in Table 3 to Appendix A;

w. By removing each use of the term “Farms” and adding in its place “Small farms” in Table 3 to Appendix A;

x. By removing each use of the term “businesses” and adding in its place “small businesses” in Table 4 to Appendix A; and

y. By removing each use of the term “Businesses” and adding in its place “Small businesses” in Table 4 to Appendix A; and

z. By removing each use of the term “farms” and adding in its place “small farms” in Table 4 to Appendix A.

aa. By removing each use of the term “Farms” and adding in its place “Small farms” in Table 4 to Appendix A.

21. Amend Appendix B by:

1. Revising the heading;

2. In Section II:

a. Revising paragraph a. by removing “*Bank and savings association Assessment Area Community Development Financing Metric*” and adding “*Bank Assessment Area Community Development Financing Metric*” in its place;

b. Revising paragraph d. by removing “*Bank and savings association State Community Development Financing Metric*” and adding “*Bank State Community Development Financing Metric*” in its place;

c. Revising paragraph g. by removing “*Bank and savings association Multistate MSA Community Development Financing Metric*” and adding “*Bank Multistate MSA Community Development Financing Metric*” in its place;

d. Revising paragraph j. by removing “*Bank and savings association Nationwide Community Development Financing Metric*” and adding “*Bank Nationwide Community Development Financing Metric*” in its place; and

e. Revising paragraph m. by removing “*Bank and savings association Nationwide Community Development Investment Metric*” and adding “*Bank Nationwide Community Development Investment Metric*” in its place.

3. In the heading for Section III, removing “BANKS” and adding “BANKS AND SAVINGS ASSOCIATIONS” in its place.

The revision reads as follows:

Appendix B to Part 25— Calculations for the Community Development Tests

22. Revise the heading of Appendix C to read as follows:

Appendix C to Part 25— Performance Test Conclusions

23. Revise the heading of Appendix D to read as follows:

Appendix D to Part 25—Ratings

24. Revise the heading of Appendix E to read as follows:

Appendix E to Part 25— Small Bank and Savings Association and Intermediate Bank and Savings Association Performance Evaluation Conclusions and Ratings

25. Revise Appendix F to read as follows:

Appendix F to Part 25—CRA Notice

(a) Notice for main offices and, if an interstate bank, one branch office in each State.

COMMUNITY REINVESTMENT ACT NOTICE

Under the Federal Community Reinvestment Act (CRA), the [Office of the Comptroller of the Currency (OCC) or Federal Deposit Insurance Corporation (FDIC), as appropriate] evaluates our record of helping to meet the credit needs of this community consistent with safe and sound operations. The [OCC or FDIC, as appropriate] also takes this record into account when deciding on certain applications submitted by us.

Your involvement is encouraged.

You are entitled to certain information about our operations and our performance under the CRA, including, for example, information about our branches, such as their location and services provided at them; the public section of our most recent CRA Performance Evaluation, prepared by the [OCC or FDIC, as appropriate]; and comments received from the public relating to our performance in helping to meet community credit needs, as well as our responses to those comments. You may review this information today.

At least 30 days before the beginning of each calendar quarter, the [OCC or FDIC, as appropriate] publishes a list of the banks that are scheduled for CRA examination by the [OCC or FDIC, as appropriate] for the next two quarters. This list is available through the [OCC's or FDIC's, as appropriate] website at [*OCC.gov* or *FDIC.gov*, as appropriate].

You may send written comments about our performance in helping to meet community credit needs to (name and address of official at bank), (title of responsible official), to the [OCC or FDIC Regional Director, as appropriate, (address)]. You may also submit comments electronically to the [OCC at *CRAComments@occ.treas.gov* or FDIC through the FDIC's website at *FDIC.gov/regulations/cra*, as appropriate]. Your written comments, together with any

response by us, will be considered by the [OCC or FDIC, as appropriate] in evaluating our CRA performance and may be made public.

You may ask to look at any comments received by the [OCC or FDIC Regional Director, as appropriate]. You may also request from the [OCC or FDIC Regional Director, as appropriate] an announcement of our applications covered by the CRA filed with the [OCC or FDIC, as appropriate]. [We are an affiliate of (name of holding company), a bank holding company. You may request from (title of responsible official), Federal Reserve Bank of _____ (address) an announcement of applications covered by the CRA filed by bank holding companies.]

(b) Notice for branch offices.

COMMUNITY REINVESTMENT ACT NOTICE

Under the Federal Community Reinvestment Act (CRA), the [Office of the Comptroller of the Currency (OCC) or Federal Deposit Insurance Corporation (FDIC), as appropriate] evaluates our record of helping to meet the credit needs of this community consistent with safe and sound operations. The [OCC or FDIC, as appropriate] also takes this record into account when deciding on certain applications submitted by us.

Your involvement is encouraged.

You are entitled to certain information about our operations and our performance under the CRA. You may review today the public section of our most recent CRA Performance Evaluation, prepared by the [OCC or FDIC, as appropriate], and a list of services provided at this branch. You may also have access to the following additional information, which we will make available to you at this branch within five calendar days after you make a request to us:

(1) A map showing the facility-based assessment area containing this branch, which is the area in which the [OCC or FDIC, as appropriate] evaluates our CRA performance in this community;

(2) Information about our branches in this facility-based assessment area;

(3) A list of services we provide at those locations;

(4) Data on our lending performance in this facility-based assessment area; and

(5) Copies of all written comments received by us that specifically relate to our CRA performance in this facility-based assessment area, and any responses we have made to those comments. If we are operating under an approved strategic plan, you may also have access to a copy of the plan.

[If you would like to review information about our CRA performance in other communities served by us, the public file for our entire bank is available on our website (website address) and at (name of office located in State), located at (address).]

At least 30 days before the beginning of each calendar quarter, the [OCC or FDIC, as appropriate] publishes a list of the banks that are scheduled for CRA examination by the [OCC or FDIC, as appropriate] for the next two quarters. This list is available through the [OCC's or FDIC's, as appropriate] website at [*OCC.gov* or *FDIC.gov*, as appropriate].

You may send written comments about our performance in helping to meet community credit needs to (name and address of official at bank), (title of responsible official), to the [OCC or FDIC Regional Director, as appropriate (address)]. You may also submit comments electronically to the [OCC at *CRAComments@occ.treas.gov* or FDIC through the FDIC's website at *FDIC.gov/regulations/cra*, as appropriate]. Your written comment, together with any

response by us, will be considered by the [OCC or FDIC, as appropriate] in evaluating our CRA performance and may be made public.

You may ask to look at any comments received by the [OCC or FDIC Regional Director, as appropriate]. You may also request from the [OCC or FDIC Regional Director, as appropriate] an announcement of our applications covered by the CRA filed with the [OCC or FDIC, as appropriate]. [We are an affiliate of (name of holding company), a bank holding company. You may request from (title of responsible official), Federal Reserve Bank of _____ (address) an announcement of applications covered by the CRA filed by bank holding companies.]

26. Effective April 1, 2024, to January 1, 2031, add appendix G to part 25 to read as follows:

Appendix G TO Part 25—Community Reinvestment Act and Interstate Deposit Production Regulations

Note: The content of this appendix reproduces part 25 implementing the Community Reinvestment Act as of March 31, 2024.

Subpart A—General

§ 25.11 Authority, purposes, and scope.

(a) *Authority and OMB control number* —(1) *Authority.* The authority for subparts A, B, C, D, and E is 12 U.S.C. 21, 22, 26, 27, 30, 36, 93a, 161, 215, 215a, 481, 1462a, 1463, 1464, 1814, 1816, 1828(c), 1835a, 2901 through 2908, 3101 through 3111, and 5412(b)(2)(B).

(2) *OMB control number.* The information collection requirements contained in this part were approved by the Office of Management and Budget under the provisions of 44 U.S.C. 3501 *et seq.* and have been assigned OMB control number 1557–0160.

(b) *Purposes.* In enacting the Community Reinvestment Act (CRA), the Congress required each appropriate Federal financial supervisory agency to assess an institution’s record of helping

to meet the credit needs of the local communities in which the institution is chartered, consistent with the safe and sound operation of the institution, and to take this record into account in the agency's evaluation of an application for a deposit facility by the institution. This part is intended to carry out the purposes of the CRA by:

(1) Establishing the framework and criteria by which the Office of the Comptroller of the Currency (OCC) or the Federal Deposit Insurance Corporation (FDIC), as appropriate, assesses a bank's or savings association's record of helping to meet the credit needs of its entire community, including low- and moderate-income neighborhoods, consistent with the safe and sound operation of the bank or savings association; and

(2) Providing that the OCC takes that record into account in considering certain applications.

(c) *Scope* —(1) *General*. (i) Subparts A, B, C, and D, and Appendices A and B, apply to all banks and savings associations except as provided in paragraphs (c)(2) and (3) of this section. Subpart E only applies to banks.

(ii) With respect to subparts A, B, C, and D, and Appendices A and B—

(A) The OCC has the authority to prescribe these regulations for national banks, Federal savings associations, and State savings associations and has the authority to enforce these regulations for national banks and Federal savings associations.

(B) The FDIC has the authority to enforce these regulations for State savings associations.

(iii) With respect to subparts A, B, C, and D, and appendix A, references to appropriate Federal banking agency will mean the OCC when the institution is a national bank or Federal savings association and the FDIC when the institution is a State savings association.

(2) *Federal branches and agencies.* (i) This part applies to all insured Federal branches and to any Federal branch that is uninsured that results from an acquisition described in section 5(a)(8) of the International Banking Act of 1978 (12 U.S.C. 3103(a)(8)).

(ii) Except as provided in paragraph (c)(2)(i) of this section, this part does not apply to Federal branches that are uninsured, limited Federal branches, or Federal agencies, as those terms are defined in part 28 of this chapter.

(3) *Certain special purpose banks and savings associations.* This part does not apply to special purpose banks or special purpose savings associations that do not perform commercial or retail banking services by granting credit to the public in the ordinary course of business, other than as incident to their specialized operations. These banks or savings associations include banker's banks, as defined in 12 U.S.C. 24 (Seventh), and banks or savings associations that engage only in one or more of the following activities: Providing cash management controlled disbursement services or serving as correspondent banks or savings associations, trust companies, or clearing agents.

§ 25.12 Definitions.

For purposes of subparts A, B, C, and D, and appendices A and B, of this part, the following definitions apply:

(a) *Affiliate* means any company that controls, is controlled by, or is under common control with another company. The term "control" has the meaning given to that term in 12 U.S.C. 1841(a)(2), and a company is under common control with another company if both companies are directly or indirectly controlled by the same company.

(b) *Area median income* means:

(1) The median family income for the MSA, if a person or geography is located in an MSA, or for the metropolitan division, if a person or geography is located in an MSA that has been subdivided into metropolitan divisions; or

(2) The statewide nonmetropolitan median family income, if a person or geography is located outside an MSA.

(c) *Assessment area* means a geographic area delineated in accordance with § 25.41.

(d) *Automated teller machine (ATM)* means an automated, unstaffed banking facility owned or operated by, or operated exclusively for, the bank or savings association at which deposits are received, cash dispersed, or money lent.

(e) (1) *Bank or savings association* means, except as provided in § 25.11(c), a national bank (including a Federal branch as defined in part 28 of this chapter) with Federally insured deposits or a savings association;

(2) *Bank and savings association* means, except as provided in § 25.11(c), a national bank (including a Federal branch as defined in part 28 of this chapter) with Federally insured deposits and a savings association.

(f) *Branch* means a staffed banking facility authorized as a branch, whether shared or unshared, including, for example, a mini-branch in a grocery store or a branch operated in conjunction with any other local business or nonprofit organization.

(g) *Community development* means:

(1) Affordable housing (including multifamily rental housing) for low- or moderate-income individuals;

(2) Community services targeted to low- or moderate-income individuals;

(3) Activities that promote economic development by financing businesses or farms that meet the size eligibility standards of the Small Business Administration's Development Company or Small Business Investment Company programs (13 CFR 121.301) or have gross annual revenues of \$1 million or less; or

(4) Activities that revitalize or stabilize—

(i) Low-or moderate-income geographies;

(ii) Designated disaster areas; or

(iii) Distressed or underserved nonmetropolitan middle-income geographies designated by the Board of Governors of the Federal Reserve System, FDIC, and the OCC, based on—

(A) Rates of poverty, unemployment, and population loss; or

(B) Population size, density, and dispersion. Activities revitalize and stabilize geographies designated based on population size, density, and dispersion if they help to meet essential community needs, including needs of low- and moderate-income individuals.

(h) *Community development loan* means a loan that:

(1) Has as its primary purpose community development; and

(2) Except in the case of a wholesale or limited purpose bank or savings association:

(i) Has not been reported or collected by the bank or savings association or an affiliate for consideration in the bank's or savings association's assessment as a home mortgage, small business, small farm, or consumer loan, unless the loan is for a multifamily dwelling (as defined in § 1003.2(n) of this title); and

(ii) Benefits the bank's or savings association's assessment area(s) or a broader statewide or regional area(s) that includes the bank's or savings association's assessment area(s).

(i) *Community development service* means a service that:

(1) Has as its primary purpose community development;

(2) Is related to the provision of financial services; and

(3) Has not been considered in the evaluation of the bank's or savings association's retail banking services under § 25.24(d).

(j) *Consumer loan* means a loan to one or more individuals for household, family, or other personal expenditures. A consumer loan does not include a home mortgage, small business, or small farm loan. Consumer loans include the following categories of loans:

(1) *Motor vehicle loan*, which is a consumer loan extended for the purchase of and secured by a motor vehicle;

(2) *Credit card loan*, which is a line of credit for household, family, or other personal expenditures that is accessed by a borrower's use of a "credit card," as this term is defined in § 1026.2 of this title;

(3) *Other secured consumer loan*, which is a secured consumer loan that is not included in one of the other categories of consumer loans; and

(4) *Other unsecured consumer loan*, which is an unsecured consumer loan that is not included in one of the other categories of consumer loans.

(k) *Geography* means a census tract delineated by the United States Bureau of the Census in the most recent decennial census.

(l) *Home mortgage loan* means a closed-end mortgage loan or an open-end line of credit as these terms are defined under § 1003.2 of this title, and that is not an excluded transaction under § 1003.3(c)(1) through (10) and (13) of this title.

(m) *Income level* includes:

(1) *Low-income*, which means an individual income that is less than 50 percent of the area median income, or a median family income that is less than 50 percent, in the case of a geography.

(2) *Moderate-income*, which means an individual income that is at least 50 percent and less than 80 percent of the area median income, or a median family income that is at least 50 and less than 80 percent, in the case of a geography.

(3) *Middle-income*, which means an individual income that is at least 80 percent and less than 120 percent of the area median income, or a median family income that is at least 80 and less than 120 percent, in the case of a geography.

(4) *Upper-income*, which means an individual income that is 120 percent or more of the area median income, or a median family income that is 120 percent or more, in the case of a geography.

(n) *Limited purpose bank* or savings association means a bank or savings association that offers only a narrow product line (such as credit card or motor vehicle loans) to a regional or broader market and for which a designation as a limited purpose bank or savings association is in effect, in accordance with § 25.25(b).

(o) *Loan location*. A loan is located as follows:

(1) A consumer loan is located in the geography where the borrower resides;

(2) A home mortgage loan is located in the geography where the property to which the loan relates is located; and

(3) A small business or small farm loan is located in the geography where the main business facility or farm is located or where the loan proceeds otherwise will be applied, as indicated by the borrower.

(p) *Loan production office* means a staffed facility, other than a branch, that is open to the public and that provides lending-related services, such as loan information and applications.

(q) *Metropolitan division* means a metropolitan division as defined by the Director of the Office of Management and Budget.

(r) *MSA* means a metropolitan statistical area as defined by the Director of the Office of Management and Budget.

(s) *Nonmetropolitan area* means any area that is not located in an MSA.

(t) *Qualified investment* means a lawful investment, deposit, membership share, or grant that has as its primary purpose community development.

(u) *Small bank or savings association*—(1) *Definition.* *Small bank or savings association* means a bank or savings association that, as of December 31 of either of the prior two calendar years, had assets of less than \$1.322 billion. *Intermediate small bank or savings association* means a small bank or savings association with assets of at least \$330 million as of December 31 of both of the prior two calendar years and less than \$1.322 billion as of December 31 of either of the prior two calendar years.

(2) *Adjustment.* The dollar figures in paragraph (u)(1) of this section shall be adjusted annually and published by the appropriate Federal banking agency, based on the year-to-year change in the average of the Consumer Price Index for Urban Wage Earners and Clerical Workers, not seasonally adjusted, for each twelve-month period ending in November, with rounding to the nearest million.

(v) *Small business loan* means a loan included in “loans to small businesses” as defined in the instructions for preparation of the Consolidated Report of Condition and Income.

(w) *Small farm loan* means a loan included in “loans to small farms” as defined in the instructions for preparation of the Consolidated Report of Condition and Income.

(x) *Wholesale bank or savings association* means a bank or savings association that is not in the business of extending home mortgage, small business, small farm, or consumer loans to retail customers, and for which a designation as a wholesale bank or savings association is in effect, in accordance with § 25.25(b).

Subpart B—Standards for Assessing Performance

§ 25.21 Performance tests, standards, and ratings, in general.

(a) *Performance tests and standards.* The appropriate Federal banking agency assesses the CRA performance of a bank or savings association in an examination as follows:

(1) *Lending, investment, and service tests.* The appropriate Federal banking agency applies the lending, investment, and service tests, as provided in §§ 25.22 through 25.24, in evaluating the performance of a bank or savings association, except as provided in paragraphs (a)(2), (3), and (4) of this section.

(2) *Community development test for wholesale or limited purpose banks and savings associations.* The appropriate Federal banking agency applies the community development test for a wholesale or limited purpose bank or savings association, as provided in § 25.25, except as provided in paragraph (a)(4) of this section.

(3) *Small bank and savings association performance standards.* The appropriate Federal banking agency applies the small bank or savings association performance standards as provided in § 25.26 in evaluating the performance of a small bank or savings association or a bank or savings association that was a small bank or savings association during the prior calendar year, unless the bank or savings association elects to be assessed as provided in paragraphs (a)(1), (2),

or (4) of this section. The bank or savings association may elect to be assessed as provided in paragraph (a)(1) of this section only if it collects and reports the data required for other banks or savings associations under § 25.42.

(4) *Strategic plan.* The appropriate Federal banking agency evaluates the performance of a bank or savings association under a strategic plan if the bank or savings association submits, and the appropriate Federal banking agency approves, a strategic plan as provided in § 25.27.

(b) *Performance context.* The appropriate Federal banking agency applies the tests and standards in paragraph (a) of this section and also considers whether to approve a proposed strategic plan in the context of:

(1) Demographic data on median income levels, distribution of household income, nature of housing stock, housing costs, and other relevant data pertaining to a bank's or savings association's assessment area(s);

(2) Any information about lending, investment, and service opportunities in the bank's or savings association's assessment area(s) maintained by the bank or savings association or obtained from community organizations, state, local, and tribal governments, economic development agencies, or other sources;

(3) The bank's or savings association's product offerings and business strategy as determined from data provided by the bank or savings association;

(4) Institutional capacity and constraints, including the size and financial condition of the bank or savings association, the economic climate (national, regional, and local), safety and soundness limitations, and any other factors that significantly affect the bank's or savings association's ability to provide lending, investments, or services in its assessment area(s);

(5) The bank's or savings association's past performance and the performance of similarly situated lenders;

(6) The bank's or savings association's public file, as described in § 25.43, and any written comments about the bank's or savings association's CRA performance submitted to the bank or savings association or the appropriate Federal banking agency; and

(7) Any other information deemed relevant by the appropriate Federal banking agency.

(c) *Assigned ratings.* The appropriate Federal banking agency assigns to a bank or savings association one of the following four ratings pursuant to § 25.28 and appendix A of this part: "outstanding"; "satisfactory"; "needs to improve"; or "substantial noncompliance" as provided in 12 U.S.C. 2906(b)(2). The rating assigned by the appropriate Federal banking agency reflects the bank's or savings association's record of helping to meet the credit needs of its entire community, including low- and moderate-income neighborhoods, consistent with the safe and sound operation of the bank or savings association.

(d) *Safe and sound operations.* This part and the CRA do not require a bank or savings association to make loans or investments or to provide services that are inconsistent with safe and sound operations. To the contrary, the appropriate Federal banking agency anticipates banks and savings associations can meet the standards of this part with safe and sound loans, investments, and services on which the banks and savings associations expect to make a profit. Banks and savings associations are permitted and encouraged to develop and apply flexible underwriting standards for loans that benefit low- or moderate-income geographies or individuals, only if consistent with safe and sound operations.

(e) *Low-cost education loans provided to low-income borrowers.* In assessing and taking into account the record of a bank or savings association under this part, the appropriate Federal

banking agency considers, as a factor, low-cost education loans originated by the bank or savings association to borrowers, particularly in its assessment area(s), who have an individual income that is less than 50 percent of the area median income. For purposes of this paragraph, “low-cost education loans” means any education loan, as defined in section 140(a)(7) of the Truth in Lending Act (15 U.S.C. 1650(a)(7)) (including a loan under a State or local education loan program), originated by the bank or savings association for a student at an “institution of higher education,” as that term is generally defined in sections 101 and 102 of the Higher Education Act of 1965 (20 U.S.C. 1001 and 1002) and the implementing regulations published by the U.S. Department of Education, with interest rates and fees no greater than those of comparable education loans offered directly by the U.S. Department of Education. Such rates and fees are specified in section 455 of the Higher Education Act of 1965 (20 U.S.C. 1087e).

(f) *Activities in cooperation with minority- or women-owned financial institutions and low-income credit unions.* In assessing and taking into account the record of a nonminority-owned and nonwomen-owned bank or savings association under this part, the appropriate Federal banking agency considers as a factor capital investment, loan participation, and other ventures undertaken by the bank or savings association in cooperation with minority- and women-owned financial institutions and low-income credit unions. Such activities must help meet the credit needs of local communities in which the minority- and women-owned financial institutions and low-income credit unions are chartered. To be considered, such activities need not also benefit the bank’s or savings association’s assessment area(s) or the broader statewide or regional area(s) that includes the bank’s or savings association’s assessment area(s).

§ 25.22 Lending test.

(a) *Scope of test.* (1) The lending test evaluates a bank's or savings association's record of helping to meet the credit needs of its assessment area(s) through its lending activities by considering a bank's or savings association's home mortgage, small business, small farm, and community development lending. If consumer lending constitutes a substantial majority of a bank's or savings association's business, the appropriate Federal banking agency will evaluate the bank's or savings association's consumer lending in one or more of the following categories: motor vehicle, credit card, other secured, and other unsecured loans. In addition, at a bank's or savings association's option, the appropriate Federal banking agency will evaluate one or more categories of consumer lending, if the bank or savings association has collected and maintained, as required in § 25.42(c)(1), the data for each category that the bank or savings association elects to have the appropriate Federal banking agency evaluate.

(2) The appropriate Federal banking agency considers originations and purchases of loans. The appropriate Federal banking agency will also consider any other loan data the bank or savings association may choose to provide, including data on loans outstanding, commitments and letters of credit.

(3) A bank or savings association may ask the appropriate Federal banking agency to consider loans originated or purchased by consortia in which the bank or savings association participates or by third parties in which the bank or savings association has invested only if the loans meet the definition of community development loans and only in accordance with paragraph (d) of this section. The appropriate Federal banking agency will not consider these loans under any criterion of the lending test except the community development lending criterion.

(b) *Performance criteria.* The appropriate Federal banking agency evaluates a bank's or savings association's lending performance pursuant to the following criteria:

(1) *Lending activity.* The number and amount of the bank's or savings association's home mortgage, small business, small farm, and consumer loans, if applicable, in the bank's or savings association's assessment area(s);

(2) *Geographic distribution.* The geographic distribution of the bank's or savings association's home mortgage, small business, small farm, and consumer loans, if applicable, based on the loan location, including:

(i) The proportion of the bank's or savings association's lending in the bank's or savings association's assessment area(s);

(ii) The dispersion of lending in the bank's or savings association's assessment area(s); and

(iii) The number and amount of loans in low-, moderate-, middle-, and upper-income geographies in the bank's or savings association's assessment area(s);

(3) *Borrower characteristics.* The distribution, particularly in the bank's or savings association's assessment area(s), of the bank's or savings association's home mortgage, small business, small farm, and consumer loans, if applicable, based on borrower characteristics, including the number and amount of:

(i) Home mortgage loans to low-, moderate-, middle-, and upper-income individuals;

(ii) Small business and small farm loans to businesses and farms with gross annual revenues of \$1 million or less;

(iii) Small business and small farm loans by loan amount at origination; and

(iv) Consumer loans, if applicable, to low-, moderate-, middle-, and upper-income individuals;

(4) *Community development lending.* The bank's or savings association's community development lending, including the number and amount of community development loans, and their complexity and innovativeness; and

(5) *Innovative or flexible lending practices.* The bank's or savings association's use of innovative or flexible lending practices in a safe and sound manner to address the credit needs of low- or moderate-income individuals or geographies.

(c) *Affiliate lending.* (1) At a bank's or savings association's option, the appropriate Federal banking agency will consider loans by an affiliate of the bank or savings association, if the bank or savings association provides data on the affiliate's loans pursuant to § 25.42.

(2) The appropriate Federal banking agency considers affiliate lending subject to the following constraints:

(i) No affiliate may claim a loan origination or loan purchase if another institution claims the same loan origination or purchase; and

(ii) If a bank or savings association elects to have the appropriate Federal banking agency consider loans within a particular lending category made by one or more of the bank's or savings association's affiliates in a particular assessment area, the bank or savings association shall elect to have the appropriate Federal banking agency consider, in accordance with paragraph (c)(1) of this section, all the loans within that lending category in that particular assessment area made by all of the bank's or savings association's affiliates.

(3) The appropriate Federal banking agency does not consider affiliate lending in assessing a bank's or savings association's performance under paragraph (b)(2)(i) of this section.

(d) *Lending by a consortium or a third party.* Community development loans originated or purchased by a consortium in which the bank or savings association participates or by a third party in which the bank or savings association has invested:

(1) Will be considered, at the bank's or savings association's option, if the bank or savings association reports the data pertaining to these loans under § 25.42(b)(2); and

(2) May be allocated among participants or investors, as they choose, for purposes of the lending test, except that no participant or investor:

(i) May claim a loan origination or loan purchase if another participant or investor claims the same loan origination or purchase; or

(ii) May claim loans accounting for more than its percentage share (based on the level of its participation or investment) of the total loans originated by the consortium or third party.

(e) *Lending performance rating.* The appropriate Federal banking agency rates a bank's or savings association's lending performance as provided in appendix A of this part.

§ 25.23 Investment test.

(a) *Scope of test.* The investment test evaluates a bank's or savings association's record of helping to meet the credit needs of its assessment area(s) through qualified investments that benefit its assessment area(s) or a broader statewide or regional area that includes the bank's or savings association's assessment area(s).

(b) *Exclusion.* Activities considered under the lending or service tests may not be considered under the investment test.

(c) *Affiliate investment.* At a bank's or savings association's option, the appropriate Federal banking agency will consider, in its assessment of a bank's or savings association's investment

performance, a qualified investment made by an affiliate of the bank or savings association, if the qualified investment is not claimed by any other institution.

(d) *Disposition of branch premises.* Donating, selling on favorable terms, or making available on a rent-free basis a branch of the bank or savings association that is located in a predominantly minority neighborhood to a minority depository institution or women's depository institution (as these terms are defined in 12 U.S.C. 2907(b)) will be considered as a qualified investment.

(e) *Performance criteria.* The appropriate Federal banking agency evaluates the investment performance of a bank or savings association pursuant to the following criteria:

(1) The dollar amount of qualified investments;

(2) The innovativeness or complexity of qualified investments;

(3) The responsiveness of qualified investments to credit and community development needs;

and

(4) The degree to which the qualified investments are not routinely provided by private investors.

(f) *Investment performance rating.* The appropriate Federal banking agency rates a bank's or savings association's investment performance as provided in appendix A of this part.

§ 25.24 Service test.

(a) *Scope of test.* The service test evaluates a bank's or savings association's record of helping to meet the credit needs of its assessment area(s) by analyzing both the availability and effectiveness of a bank's or savings association's systems for delivering retail banking services and the extent and innovativeness of its community development services.

(b) *Area(s) benefitted.* Community development services must benefit a bank's or savings association's assessment area(s) or a broader statewide or regional area that includes the bank's or savings association's assessment area(s).

(c) *Affiliate service.* At a bank's or savings association's option, the appropriate Federal banking agency will consider, in its assessment of a bank's or savings association's service performance, a community development service provided by an affiliate of the bank or savings association, if the community development service is not claimed by any other institution.

(d) *Performance criteria—retail banking services.* The appropriate Federal banking agency evaluates the availability and effectiveness of a bank's or savings association's systems for delivering retail banking services, pursuant to the following criteria:

(1) The current distribution of the bank's or savings association's branches among low-, moderate-, middle-, and upper-income geographies;

(2) In the context of its current distribution of the bank's or savings association's branches, the bank's or savings association's record of opening and closing branches, particularly branches located in low- or moderate-income geographies or primarily serving low- or moderate-income individuals;

(3) The availability and effectiveness of alternative systems for delivering retail banking services (*e.g.*, ATMs, ATMs not owned or operated by or exclusively for the bank or savings association, banking by telephone or computer, loan production offices, and bank-at-work or bank-by-mail programs) in low- and moderate-income geographies and to low- and moderate-income individuals; and

(4) The range of services provided in low-, moderate-, middle-, and upper-income geographies and the degree to which the services are tailored to meet the needs of those geographies.

(e) *Performance criteria—community development services.* The appropriate Federal banking agency evaluates community development services pursuant to the following criteria:

(1) The extent to which the bank or savings association provides community development services; and

(2) The innovativeness and responsiveness of community development services.

(f) *Service performance rating.* The appropriate Federal banking agency rates a bank's or savings association's service performance as provided in appendix A of this part.

§ 25.25 Community development test for wholesale or limited purpose banks and savings associations.

(a) *Scope of test.* The appropriate Federal banking agency assesses a wholesale or limited purpose bank's or savings association's record of helping to meet the credit needs of its assessment area(s) under the community development test through its community development lending, qualified investments, or community development services.

(b) *Designation as a wholesale or limited purpose bank or savings association.* In order to receive a designation as a wholesale or limited purpose bank or savings association, a bank or savings association shall file a request, in writing, with the appropriate Federal banking agency, at least three months prior to the proposed effective date of the designation. If the appropriate Federal banking agency approves the designation, it remains in effect until the bank or savings association requests revocation of the designation or until one year after the appropriate Federal

banking agency notifies the bank or savings association that it has revoked the designation on its own initiative.

(c) *Performance criteria.* The appropriate Federal banking agency evaluates the community development performance of a wholesale or limited purpose bank or savings association pursuant to the following criteria:

(1) The number and amount of community development loans (including originations and purchases of loans and other community development loan data provided by the bank or savings association, such as data on loans outstanding, commitments, and letters of credit), qualified investments, or community development services;

(2) The use of innovative or complex qualified investments, community development loans, or community development services and the extent to which the investments are not routinely provided by private investors; and

(3) The bank's or savings association's responsiveness to credit and community development needs.

(d) *Indirect activities.* At a bank's or savings association's option, the appropriate Federal banking agency will consider in its community development performance assessment:

(1) Qualified investments or community development services provided by an affiliate of the bank or savings association, if the investments or services are not claimed by any other institution; and

(2) Community development lending by affiliates, consortia and third parties, subject to the requirements and limitations in § 25.22(c) and (d).

(e) *Benefit to assessment area(s)*—(1) *Benefit inside assessment area(s).* The appropriate Federal banking agency considers all qualified investments, community development loans, and

community development services that benefit areas within the bank's or savings association's assessment area(s) or a broader statewide or regional area that includes the bank's or savings association's assessment area(s).

(2) *Benefit outside assessment area(s)*. The appropriate Federal banking agency considers the qualified investments, community development loans, and community development services that benefit areas outside the bank's or savings association's assessment area(s), if the bank or savings association has adequately addressed the needs of its assessment area(s).

(f) *Community development performance rating*. The appropriate Federal banking agency rates a bank's or savings association's community development performance as provided in appendix A of this part.

§ 25.26 Small bank and savings association performance standards.

(a) *Performance criteria*—(1) *Small banks and savings associations that are not intermediate small banks or savings associations*. The appropriate Federal banking agency evaluates the record of a small bank or savings association that is not, or that was not during the prior calendar year, an intermediate small bank or savings association, of helping to meet the credit needs of its assessment area(s) pursuant to the criteria set forth in paragraph (b) of this section.

(2) *Intermediate small banks and savings associations*. The appropriate Federal banking agency evaluates the record of a small bank or savings association that is, or that was during the prior calendar year, an intermediate small bank or savings association, of helping to meet the credit needs of its assessment area(s) pursuant to the criteria set forth in paragraphs (b) and (c) of this section.

(b) *Lending test.* A small bank's or savings association's lending performance is evaluated pursuant to the following criteria:

(1) The bank's or savings association's loan-to-deposit ratio, adjusted for seasonal variation, and, as appropriate, other lending-related activities, such as loan originations for sale to the secondary markets, community development loans, or qualified investments;

(2) The percentage of loans and, as appropriate, other lending-related activities located in the bank's or savings association's assessment area(s);

(3) The bank's or savings association's record of lending to and, as appropriate, engaging in other lending-related activities for borrowers of different income levels and businesses and farms of different sizes;

(4) The geographic distribution of the bank's or savings association's loans; and

(5) The bank's or savings association's record of taking action, if warranted, in response to written complaints about its performance in helping to meet credit needs in its assessment area(s).

(c) *Community development test.* An intermediate small bank's or savings association's community development performance also is evaluated pursuant to the following criteria:

(1) The number and amount of community development loans;

(2) The number and amount of qualified investments;

(3) The extent to which the bank or savings association provides community development services; and

(4) The bank's or savings association's responsiveness through such activities to community development lending, investment, and services needs.

(d) *Small bank or savings association performance rating.* The appropriate Federal banking agency rates the performance of a bank or savings association evaluated under this section as provided in appendix A of this part.

§ 25.27 Strategic plan.

(a) *Alternative election.* The appropriate Federal banking agency will assess a bank's or savings association's record of helping to meet the credit needs of its assessment area(s) under a strategic plan if:

(1) The bank or savings association has submitted the plan to the appropriate Federal banking agency as provided for in this section;

(2) The appropriate Federal banking agency has approved the plan;

(3) The plan is in effect; and

(4) The bank or savings association has been operating under an approved plan for at least one year.

(b) *Data reporting.* The appropriate Federal banking agency's approval of a plan does not affect the bank's or savings association's obligation, if any, to report data as required by § 25.42.

(c) *Plans in general* —(1) *Term.* A plan may have a term of no more than five years, and any multi-year plan must include annual interim measurable goals under which the appropriate Federal banking agency will evaluate the bank's or savings association's performance.

(2) *Multiple assessment areas.* A bank or savings association with more than one assessment area may prepare a single plan for all of its assessment areas or one or more plans for one or more of its assessment areas.

(3) *Treatment of affiliates.* Affiliated institutions may prepare a joint plan if the plan provides measurable goals for each institution. Activities may be allocated among institutions at

the institutions' option, provided that the same activities are not considered for more than one institution.

(d) *Public participation in plan development.* Before submitting a plan to the appropriate Federal banking agency for approval, a bank or savings association shall:

(1) Informally seek suggestions from members of the public in its assessment area(s) covered by the plan while developing the plan;

(2) Once the bank or savings association has developed a plan, formally solicit public comment on the plan for at least 30 days by publishing notice in at least one newspaper of general circulation in each assessment area covered by the plan; and

(3) During the period of formal public comment, make copies of the plan available for review by the public at no cost at all offices of the bank or savings association in any assessment area covered by the plan and provide copies of the plan upon request for a reasonable fee to cover copying and mailing, if applicable.

(e) *Submission of plan.* The bank or savings association shall submit its plan to the appropriate Federal banking agency at least three months prior to the proposed effective date of the plan. The bank or savings association shall also submit with its plan a description of its informal efforts to seek suggestions from members of the public, any written public comment received, and, if the plan was revised in light of the comment received, the initial plan as released for public comment.

(f) *Plan content* —(1) *Measurable goals.* (i) A bank or savings association shall specify in its plan measurable goals for helping to meet the credit needs of each assessment area covered by the plan, particularly the needs of low- and moderate-income geographies and low- and moderate-income individuals, through lending, investment, and services, as appropriate.

(ii) A bank or savings association shall address in its plan all three performance categories and, unless the bank or savings association has been designated as a wholesale or limited purpose bank or savings association, shall emphasize lending and lending-related activities.

Nevertheless, a different emphasis, including a focus on one or more performance categories, may be appropriate if responsive to the characteristics and credit needs of its assessment area(s), considering public comment and the bank's or savings association's capacity and constraints, product offerings, and business strategy.

(2) *Confidential information.* A bank or savings association may submit additional information to the appropriate Federal banking agency on a confidential basis, but the goals stated in the plan must be sufficiently specific to enable the public and the appropriate Federal banking agency to judge the merits of the plan.

(3) *Satisfactory and outstanding goals.* A bank or savings association shall specify in its plan measurable goals that constitute "satisfactory" performance. A plan may specify measurable goals that constitute "outstanding" performance. If a bank or savings association submits, and the appropriate Federal banking agency approves, both "satisfactory" and "outstanding" performance goals, the appropriate Federal banking agency will consider the bank or savings association eligible for an "outstanding" performance rating.

(4) *Election if satisfactory goals not substantially met.* A bank or savings association may elect in its plan that, if the bank or savings association fails to meet substantially its plan goals for a satisfactory rating, the appropriate Federal banking agency will evaluate the bank's or savings association's performance under the lending, investment, and service tests, the community development test, or the small bank or savings association performance standards, as appropriate.

(g) *Plan approval*—(1) *Timing*. The appropriate Federal banking agency will act upon a plan within 60 calendar days after the appropriate Federal banking agency receives the complete plan and other material required under paragraph (e) of this section. If the appropriate Federal banking agency fails to act within this time period, the plan shall be deemed approved unless the appropriate Federal banking agency extends the review period for good cause.

(2) *Public participation*. In evaluating the plan's goals, the appropriate Federal banking agency considers the public's involvement in formulating the plan, written public comment on the plan, and any response by the bank or savings association to public comment on the plan.

(3) *Criteria for evaluating plan*. The appropriate Federal banking agency evaluates a plan's measurable goals using the following criteria, as appropriate:

(i) The extent and breadth of lending or lending-related activities, including, as appropriate, the distribution of loans among different geographies, businesses and farms of different sizes, and individuals of different income levels, the extent of community development lending, and the use of innovative or flexible lending practices to address credit needs;

(ii) The amount and innovativeness, complexity, and responsiveness of the bank's or savings association's qualified investments; and

(iii) The availability and effectiveness of the bank's or savings association's systems for delivering retail banking services and the extent and innovativeness of the bank's or savings association's community development services.

(h) *Plan amendment*. During the term of a plan, a bank or savings association may request the appropriate Federal banking agency to approve an amendment to the plan on grounds that there has been a material change in circumstances. The bank or savings association shall

develop an amendment to a previously approved plan in accordance with the public participation requirements of paragraph (d) of this section.

(i) *Plan assessment.* The appropriate Federal banking agency approves the goals and assesses performance under a plan as provided for in appendix A of this part.

§ 25.28 Assigned ratings.

(a) *Ratings in general.* Subject to paragraphs (b) and (c) of this section, the appropriate Federal banking agency assigns to a bank or savings association a rating of “outstanding,” “satisfactory,” “needs to improve,” or “substantial noncompliance” based on the bank’s or savings association’s performance under the lending, investment and service tests, the community development test, the small bank or savings association performance standards, or an approved strategic plan, as applicable.

(b) *Lending, investment, and service tests.* The appropriate Federal banking agency assigns a rating for a bank or savings association assessed under the lending, investment, and service tests in accordance with the following principles:

(1) A bank or savings association that receives an “outstanding” rating on the lending test receives an assigned rating of at least “satisfactory”;

(2) A bank or savings association that receives an “outstanding” rating on both the service test and the investment test and a rating of at least “high satisfactory” on the lending test receives an assigned rating of “outstanding”; and

(3) No bank or savings association may receive an assigned rating of “satisfactory” or higher unless it receives a rating of at least “low satisfactory” on the lending test.

(c) *Effect of evidence of discriminatory or other illegal credit practices.* (1) The appropriate Federal banking agency’s evaluation of a bank’s or savings association’s CRA performance is

adversely affected by evidence of discriminatory or other illegal credit practices in any geography by the bank or savings association or in any assessment area by any affiliate whose loans have been considered as part of the bank's or savings association's lending performance. In connection with any type of lending activity described in § 25.22(a), evidence of discriminatory or other credit practices that violate an applicable law, rule, or regulation includes, but is not limited to:

- (i) Discrimination against applicants on a prohibited basis in violation, for example, of the Equal Credit Opportunity Act or the Fair Housing Act;
- (ii) Violations of the Home Ownership and Equity Protection Act;
- (iii) Violations of section 5 of the Federal Trade Commission Act;
- (iv) Violations of section 8 of the Real Estate Settlement Procedures Act; and
- (v) Violations of the Truth in Lending Act provisions regarding a consumer's right of rescission.

(2) In determining the effect of evidence of practices described in paragraph (c)(1) of this section on the bank's or savings association's assigned rating, the appropriate Federal banking agency considers the nature, extent, and strength of the evidence of the practices; the policies and procedures that the bank or savings association (or affiliate, as applicable) has in place to prevent the practices; any corrective action that the bank or savings association (or affiliate, as applicable) has taken or has committed to take, including voluntary corrective action resulting from self-assessment; and any other relevant information.

§ 25.29 Effect of CRA performance on applications.

(a) *CRA performance.* Among other factors, the appropriate Federal banking agency takes into account the record of performance under the CRA of each applicant bank or savings

association, and for applications under 10(e) of the Home Owners' Loan Act (12 U.S.C. 1467a(e)), of each proposed subsidiary savings association, in considering an application for:

(1) The establishment of:

(i) A domestic branch for insured national banks; or

(ii) A domestic branch or other facility that would be authorized to take deposits for savings associations;

(2) The relocation of the main office or a branch;

(3) The merger or consolidation with or the acquisition of assets or assumption of liabilities of an insured depository institution requiring approval under the Bank Merger Act (12 U.S.C. 1828(c)); and

(4) The conversion of an insured depository institution to a national bank or Federal savings association charter; and

(5) Acquisitions subject to section 10(e) of the Home Owners' Loan Act (12 U.S.C. 1467a(e)).

(b) *Charter application.* (1) An applicant (other than an insured depository institution) for a national bank charter shall submit with its application a description of how it will meet its CRA objectives. The OCC takes the description into account in considering the application and may deny or condition approval on that basis.

(2) An applicant for a Federal savings association charter shall submit with its application a description of how it will meet its CRA objectives. The appropriate Federal banking agency takes the description into account in considering the application and may deny or condition approval on that basis.

(c) *Interested parties.* The appropriate Federal banking agency takes into account any views expressed by interested parties that are submitted in accordance with the applicable comment procedures in considering CRA performance in an application listed in paragraphs (a) and (b) of this section.

(d) *Denial or conditional approval of application.* A bank's or savings association's record of performance may be the basis for denying or conditioning approval of an application listed in paragraph (a) of this section.

(e) *Insured depository institution.* For purposes of this section, the term "insured depository institution" has the meaning given to that term in 12 U.S.C. 1813.

Subpart C—Records, Reporting, and Disclosure Requirements

§ 25.41 Assessment area delineation.

(a) *In general.* A bank or savings association shall delineate one or more assessment areas within which the appropriate Federal banking agency evaluates the bank's or savings association's record of helping to meet the credit needs of its community. The appropriate Federal banking agency does not evaluate the bank's or savings association's delineation of its assessment area(s) as a separate performance criterion, but the appropriate Federal banking agency reviews the delineation for compliance with the requirements of this section.

(b) *Geographic area(s) for wholesale or limited purpose banks or savings associations.* The assessment area(s) for a wholesale or limited purpose bank or savings association must consist generally of one or more MSAs or metropolitan divisions (using the MSA or metropolitan division boundaries that were in effect as of January 1 of the calendar year in which the delineation is made) or one or more contiguous political subdivisions, such as counties, cities, or

towns, in which the bank or savings association has its main office, branches, and deposit-taking ATMs.

(c) *Geographic area(s) for other banks and savings association.* The assessment area(s) for a bank or savings association other than a wholesale or limited purpose bank or savings association must:

(1) Consist generally of one or more MSAs or metropolitan divisions (using the MSA or metropolitan division boundaries that were in effect as of January 1 of the calendar year in which the delineation is made) or one or more contiguous political subdivisions, such as counties, cities, or towns; and

(2) Include the geographies in which the bank or savings association has its main office, its branches, and its deposit-taking ATMs, as well as the surrounding geographies in which the bank or savings association has originated or purchased a substantial portion of its loans (including home mortgage loans, small business and small farm loans, and any other loans the bank or savings association chooses, such as those consumer loans on which the bank or savings association elects to have its performance assessed).

(d) *Adjustments to geographic area(s).* A bank or savings association may adjust the boundaries of its assessment area(s) to include only the portion of a political subdivision that it reasonably can be expected to serve. An adjustment is particularly appropriate in the case of an assessment area that otherwise would be extremely large, of unusual configuration, or divided by significant geographic barriers.

(e) *Limitations on the delineation of an assessment area.* Each bank's or savings associations assessment area(s):

(1) Must consist only of whole geographies;

(2) May not reflect illegal discrimination;

(3) May not arbitrarily exclude low- or moderate-income geographies, taking into account the bank's or savings association's size and financial condition; and

(4) May not extend substantially beyond an MSA boundary or beyond a state boundary unless the assessment area is located in a multistate MSA. If a bank or savings association serves a geographic area that extends substantially beyond a state boundary, the bank or savings association shall delineate separate assessment areas for the areas in each state. If a bank or savings association serves a geographic area that extends substantially beyond an MSA boundary, the bank or savings association shall delineate separate assessment areas for the areas inside and outside the MSA.

(f) *Banks and savings association serving military personnel.* Notwithstanding the requirements of this section, a bank or savings association whose business predominantly consists of serving the needs of military personnel or their dependents who are not located within a defined geographic area may delineate its entire deposit customer base as its assessment area.

(g) *Use of assessment area(s).* The appropriate Federal banking agency uses the assessment area(s) delineated by a bank or savings association in its evaluation of the bank's or savings association's CRA performance unless the appropriate Federal banking agency determines that the assessment area(s) do not comply with the requirements of this section.

§ 25.42 Data collection, reporting, and disclosure.

(a) *Loan information required to be collected and maintained.* A bank or savings association, except a small bank or savings association, shall collect, and maintain in machine readable form (as prescribed by the appropriate Federal banking agency) until the completion of

its next CRA examination, the following data for each small business or small farm loan originated or purchased by the bank or savings association:

(1) A unique number or alpha-numeric symbol that can be used to identify the relevant loan file;

(2) The loan amount at origination;

(3) The loan location; and

(4) An indicator whether the loan was to a business or farm with gross annual revenues of \$1 million or less.

(b) *Loan information required to be reported.* A bank or savings association, except a small bank or savings association or a bank or savings association that was a small bank or savings association during the prior calendar year, shall report annually by March 1 to the appropriate Federal banking agency in machine readable form (as prescribed by the appropriate Federal banking agency) the following data for the prior calendar year:

(1) *Small business and small farm loan data.* For each geography in which the bank or savings association originated or purchased a small business or small farm loan, the aggregate number and amount of loans:

(i) With an amount at origination of \$100,000 or less;

(ii) With amount at origination of more than \$100,000 but less than or equal to \$250,000;

(iii) With an amount at origination of more than \$250,000; and

(iv) To businesses and farms with gross annual revenues of \$1 million or less (using the revenues that the bank or savings association considered in making its credit decision);

(2) *Community development loan data.* The aggregate number and aggregate amount of community development loans originated or purchased; and

(3) *Home mortgage loans.* If the bank or savings association is subject to reporting under part 1003 of this title, the location of each home mortgage loan application, origination, or purchase outside the MSAs in which the bank or savings association has a home or branch office (or outside any MSA) in accordance with the requirements of part 1003 of this title.

(c) *Optional data collection and maintenance—(1) Consumer loans.* A bank or savings association may collect and maintain in machine readable form (as prescribed by the appropriate Federal banking agency) data for consumer loans originated or purchased by the bank or savings association for consideration under the lending test. A bank or savings association may maintain data for one or more of the following categories of consumer loans: Motor vehicle, credit card, other secured, and other unsecured. If the bank or savings association maintains data for loans in a certain category, it shall maintain data for all loans originated or purchased within that category. The bank or savings association shall maintain data separately for each category, including for each loan:

(i) A unique number or alpha-numeric symbol that can be used to identify the relevant loan file;

(ii) The loan amount at origination or purchase;

(iii) The loan location; and

(iv) The gross annual income of the borrower that the bank or savings association considered in making its credit decision.

(2) *Other loan data.* At its option, a bank or savings association may provide other information concerning its lending performance, including additional loan distribution data.

(d) *Data on affiliate lending.* A bank or savings association that elects to have the appropriate Federal banking agency consider loans by an affiliate, for purposes of the lending or

community development test or an approved strategic plan, shall collect, maintain, and report for those loans the data that the bank or savings association would have collected, maintained, and reported pursuant to paragraphs (a), (b), and (c) of this section had the loans been originated or purchased by the bank or savings association. For home mortgage loans, the bank or savings association shall also be prepared to identify the home mortgage loans reported under part 1003 of this title by the affiliate.

(e) *Data on lending by a consortium or a third party.* A bank or savings association that elects to have the appropriate Federal banking agency consider community development loans by a consortium or third party, for purposes of the lending or community development tests or an approved strategic plan, shall report for those loans the data that the bank or savings association would have reported under paragraph (b)(2) of this section had the loans been originated or purchased by the bank or savings association.

(f) *Small banks and savings associations electing evaluation under the lending, investment, and service tests.* A bank or savings association that qualifies for evaluation under the small bank or savings association performance standards but elects evaluation under the lending, investment, and service tests shall collect, maintain, and report the data required for other banks or savings association pursuant to paragraphs (a) and (b) of this section.

(g) *Assessment area data.* A bank or savings association, except a small bank or savings association or a bank or savings association that was a small bank or savings association during the prior calendar year, shall collect and report to the appropriate Federal banking agency by March 1 of each year a list for each assessment area showing the geographies within the area.

(h) *CRA Disclosure Statement.* The appropriate Federal banking agency prepares annually for each bank or savings association that reports data pursuant to this section a CRA Disclosure Statement that contains, on a state-by-state basis:

(1) For each county (and for each assessment area smaller than a county) with a population of 500,000 persons or fewer in which the bank or savings association reported a small business or small farm loan:

(i) The number and amount of small business and small farm loans reported as originated or purchased located in low-, moderate-, middle-, and upper-income geographies;

(ii) A list grouping each geography according to whether the geography is low-, moderate-, middle-, or upper-income;

(iii) A list showing each geography in which the bank or savings association reported a small business or small farm loan; and

(iv) The number and amount of small business and small farm loans to businesses and farms with gross annual revenues of \$1 million or less;

(2) For each county (and for each assessment area smaller than a county) with a population in excess of 500,000 persons in which the bank or savings association reported a small business or small farm loan:

(i) The number and amount of small business and small farm loans reported as originated or purchased located in geographies with median income relative to the area median income of less than 10 percent, 10 or more but less than 20 percent, 20 or more but less than 30 percent, 30 or more but less than 40 percent, 40 or more but less than 50 percent, 50 or more but less than 60 percent, 60 or more but less than 70 percent, 70 or more but less than 80 percent, 80 or more but

less than 90 percent, 90 or more but less than 100 percent, 100 or more but less than 110 percent, 110 or more but less than 120 percent, and 120 percent or more;

(ii) A list grouping each geography in the county or assessment area according to whether the median income in the geography relative to the area median income is less than 10 percent, 10 or more but less than 20 percent, 20 or more but less than 30 percent, 30 or more but less than 40 percent, 40 or more but less than 50 percent, 50 or more but less than 60 percent, 60 or more but less than 70 percent, 70 or more but less than 80 percent, 80 or more but less than 90 percent, 90 or more but less than 100 percent, 100 or more but less than 110 percent, 110 or more but less than 120 percent, and 120 percent or more;

(iii) A list showing each geography in which the bank or savings association reported a small business or small farm loan; and

(iv) The number and amount of small business and small farm loans to businesses and farms with gross annual revenues of \$1 million or less;

(3) The number and amount of small business and small farm loans located inside each assessment area reported by the bank or savings association and the number and amount of small business and small farm loans located outside the assessment area(s) reported by the bank or savings association; and

(4) The number and amount of community development loans reported as originated or purchased.

(i) *Aggregate disclosure statements.* The OCC, in conjunction with the Board of Governors of the Federal Reserve System and the FDIC, prepares annually, for each MSA or metropolitan division (including an MSA or metropolitan division that crosses a state boundary) and the nonmetropolitan portion of each state, an aggregate disclosure statement of small business and

small farm lending by all institutions subject to reporting under this part or parts 228 or 345 of this title. These disclosure statements indicate, for each geography, the number and amount of all small business and small farm loans originated or purchased by reporting institutions, except that the appropriate Federal banking agency may adjust the form of the disclosure if necessary, because of special circumstances, to protect the privacy of a borrower or the competitive position of an institution.

(j) *Central data depositories.* The appropriate Federal banking agency makes the aggregate disclosure statements, described in paragraph (i) of this section, and the individual bank or savings association CRA Disclosure Statements, described in paragraph (h) of this section, available to the public at central data depositories. The appropriate Federal banking agency publishes a list of the depositories at which the statements are available.

§ 25.43 Content and availability of public file.

(a) *Information available to the public.* A bank or savings association shall maintain a public file that includes the following information:

(1) All written comments received from the public for the current year and each of the prior two calendar years that specifically relate to the bank's or savings association's performance in helping to meet community credit needs, and any response to the comments by the bank or savings association, if neither the comments nor the responses contain statements that reflect adversely on the good name or reputation of any persons other than the bank or savings association or publication of which would violate specific provisions of law;

(2) A copy of the public section of the bank's or savings association's most recent CRA Performance Evaluation prepared by the appropriate Federal banking agency. The bank or

savings association shall place this copy in the public file within 30 business days after its receipt from the appropriate Federal banking agency;

(3) A list of the bank's or savings association's branches, their street addresses, and geographies;

(4) A list of branches opened or closed by the bank or savings association during the current year and each of the prior two calendar years, their street addresses, and geographies;

(5) A list of services (including hours of operation, available loan and deposit products, and transaction fees) generally offered at the bank's or savings association's branches and descriptions of material differences in the availability or cost of services at particular branches, if any. At its option, a bank or savings association may include information regarding the availability of alternative systems for delivering retail banking services (*e.g.*, ATMs, ATMs not owned or operated by or exclusively for the bank or savings association, banking by telephone or computer, loan production offices, and bank-at-work or bank-by-mail programs);

(6) A map of each assessment area showing the boundaries of the area and identifying the geographies contained within the area, either on the map or in a separate list; and

(7) Any other information the bank or savings association chooses.

(b) *Additional information available to the public* —(1) *Banks and savings associations other than small banks or savings associations.* A bank or savings association, except a small bank or savings association or a bank or savings association that was a small bank or savings association during the prior calendar year, shall include in its public file the following information pertaining to the bank or savings association and its affiliates, if applicable, for each of the prior two calendar years:

(i) If the bank or savings association has elected to have one or more categories of its consumer loans considered under the lending test, for each of these categories, the number and amount of loans:

(A) To low-, moderate-, middle-, and upper-income individuals;

(B) Located in low-, moderate-, middle-, and upper-income census tracts; and

(C) Located inside the bank's or savings association's assessment area(s) and outside the bank's or savings association's assessment area(s); and

(ii) The bank's or savings association's CRA Disclosure Statement. The bank or savings association shall place the statement in the public file within three business days of its receipt from the appropriate Federal banking agency.

(2) *Banks and savings associations required to report Home Mortgage Disclosure Act (HMDA) data.* A bank or savings association required to report home mortgage loan data pursuant part 1003 of this title shall include in its public file a written notice that the institution's HMDA Disclosure Statement may be obtained on the Consumer Financial Protection Bureau's (Bureau's) website at www.consumerfinance.gov/hmda. In addition, a bank or savings association that elected to have the appropriate Federal banking agency consider the mortgage lending of an affiliate shall include in its public file the name of the affiliate and a written notice that the affiliate's HMDA Disclosure Statement may be obtained at the Bureau's website. The bank or savings association shall place the written notice(s) in the public file within three business days after receiving notification from the Federal Financial Institutions Examination Council of the availability of the disclosure statement(s).

(3) *Small banks and savings associations.* A small bank or savings association or a bank or savings association that was a small bank or savings association during the prior calendar year shall include in its public file:

(i) The bank's or savings association's loan-to-deposit ratio for each quarter of the prior calendar year and, at its option, additional data on its loan-to-deposit ratio; and

(ii) The information required for other banks or savings associations by paragraph (b)(1) of this section, if the bank or savings association has elected to be evaluated under the lending, investment, and service tests.

(4) *Banks and savings associations with strategic plans.* A bank or savings association that has been approved to be assessed under a strategic plan shall include in its public file a copy of that plan. A bank or savings association need not include information submitted to the appropriate Federal banking agency on a confidential basis in conjunction with the plan.

(5) *Banks and savings associations with less than satisfactory ratings.* A bank or savings association that received a less than satisfactory rating during its most recent examination shall include in its public file a description of its current efforts to improve its performance in helping to meet the credit needs of its entire community. The bank or savings association shall update the description quarterly.

(c) *Location of public information.* A bank or savings association shall make available to the public for inspection upon request and at no cost the information required in this section as follows:

(1) At the main office and, if an interstate bank or savings association, at one branch office in each state, all information in the public file; and

(2) At each branch:

(i) A copy of the public section of the bank's or savings association's most recent CRA Performance Evaluation and a list of services provided by the branch; and

(ii) Within five calendar days of the request, all the information in the public file relating to the assessment area in which the branch is located.

(d) *Copies.* Upon request, a bank or savings association shall provide copies, either on paper or in another form acceptable to the person making the request, of the information in its public file. The bank or savings association may charge a reasonable fee not to exceed the cost of copying and mailing (if applicable).

(e) *Updating.* Except as otherwise provided in this section, a bank or savings association shall ensure that the information required by this section is current as of April 1 of each year.

§ 25.44 Public notice by banks and savings associations.

A bank or savings association shall provide in the public lobby of its main office and each of its branches the appropriate public notice set forth in appendix B of this part. Only a branch of a bank or savings association having more than one assessment area shall include the bracketed material in the notice for branch offices. Only an insured national bank that is an affiliate of a holding company shall include the next to the last sentence of the notices. An insured national bank shall include the last sentence of the notices only if it is an affiliate of a holding company that is not prevented by statute from acquiring additional banks. Only a savings association that is an affiliate of a holding company shall include the last two sentences of the notices.

§ 25.45 Publication of planned examination schedule.

The appropriate Federal banking agency publishes at least 30 days in advance of the beginning of each calendar quarter a list of banks and savings associations scheduled for CRA examinations in that quarter.

Subpart D—Transition Provisions

§ 25.51 Consideration of Bank Activities.

(a) In assessing a bank's CRA performance, the appropriate Federal banking agency will consider any loan, investment, or service that was eligible for CRA consideration at the time the bank conducted the activity.

(b) Notwithstanding paragraph (a), in assessing a bank's CRA performance, the appropriate Federal banking agency will consider any loan or investment that was eligible for CRA consideration at the time the bank entered into a legally binding commitment to make the loan or investment.

§ 25.52 Strategic Plan Retention.

A bank or savings association strategic plan approved by the appropriate Federal banking agency and in effect as of December 31, 2021, remains in effect, except that provisions of the plan that are not consistent with this part in effect as of January 1, 2022, are void, unless amended pursuant to § 25.27.

Subpart E—Prohibition Against Use of Interstate Branches Primarily for Deposit Production

§ 25.61 Purpose and scope.

(a) *Purpose.* The purpose of this subpart is to implement section 109 (12 U.S.C. 1835a) of the Riegle-Neal Interstate Banking and Branching Efficiency Act of 1994 (Interstate Act).

(b) *Scope.* (1) This subpart applies to any national bank that has operated a covered interstate branch for a period of at least one year, and any foreign bank that has operated a covered interstate branch that is a Federal branch for a period of at least one year.

(2) This subpart describes the requirements imposed under 12 U.S.C. 1835a, which requires the appropriate Federal banking agencies (the OCC, the Board of Governors of the Federal Reserve System, and the FDIC) to prescribe uniform rules that prohibit a bank from using any authority to engage in interstate branching pursuant to the Interstate Act, or any amendment made by the Interstate Act to any other provision of law, primarily for the purpose of deposit production.

§ 25.62 Definitions.

For purposes of this subpart, the following definitions apply:

(a) *Bank* means, unless the context indicates otherwise:

(1) A national bank; and

(2) A foreign bank as that term is defined in 12 U.S.C. 3101(7) and 12 CFR 28.11(i).

(b) *Covered interstate branch* means:

(1) Any branch of a national bank, and any Federal branch of a foreign bank, that:

(i) Is established or acquired outside the bank's home State pursuant to the interstate branching authority granted by the Interstate Act or by any amendment made by the Interstate Act to any other provision of law; or

(ii) Could not have been established or acquired outside of the bank's home State but for the establishment or acquisition of a branch described in paragraph (b)(1)(i) of this section; and

(2) Any bank or branch of a bank controlled by an out-of-State bank holding company.

(c) *Federal branch* means Federal branch as that term is defined in 12 U.S.C. 3101(6) and 12 CFR 28.11(h).

(d) *Home State* means:

(1) With respect to a State bank, the State that chartered the bank;

(2) With respect to a national bank, the State in which the main office of the bank is located;

(3) With respect to a bank holding company, the State in which the total deposits of all banking subsidiaries of such company are the largest on the later of:

(i) July 1, 1966; or

(ii) The date on which the company becomes a bank holding company under the Bank Holding Company Act;

(4) With respect to a foreign bank:

(i) For purposes of determining whether a U.S. branch of a foreign bank is a covered interstate branch, the home State of the foreign bank as determined in accordance with 12 U.S.C. 3103(c) and 12 CFR 28.11(n); and

(ii) For purposes of determining whether a branch of a U.S. bank controlled by a foreign bank is a covered interstate branch, the State in which the total deposits of all banking subsidiaries of such foreign bank are the largest on the later of:

(A) July 1, 1966; or

(B) The date on which the foreign bank becomes a bank holding company under the Bank Holding Company Act.

(e) *Host State* means a State in which a covered interstate branch is established or acquired.

(f) *Host state loan-to-deposit ratio* generally means, with respect to a particular host state, the ratio of total loans in the host state relative to total deposits from the host state for all banks (including institutions covered under the definition of “bank” in 12 U.S.C. 1813(a)(1)) that have that state as their home state, as determined and updated periodically by the appropriate Federal banking agencies and made available to the public.

(g) *Out-of-State bank holding company* means, with respect to any State, a bank holding company whose home State is another State.

(h) *State* means state as that term is defined in 12 U.S.C. 1813(a)(3).

(i) *Statewide loan-to-deposit ratio* means, with respect to a bank, the ratio of the bank's loans to its deposits in a state in which the bank has one or more covered interstate branches, as determined by the OCC.

§ 25.63 Loan-to-deposit ratio screen.

(a) *Application of screen.* Beginning no earlier than one year after a covered interstate branch is acquired or established, the OCC will consider whether the bank's statewide loan-to-deposit ratio is less than 50 percent of the relevant host State loan-to-deposit ratio.

(b) *Results of screen.* (1) If the OCC determines that the bank's statewide loan-to-deposit ratio is 50 percent or more of the host state loan-to-deposit ratio, no further consideration under this subpart is required.

(2) If the OCC determines that the bank's statewide loan-to-deposit ratio is less than 50 percent of the host state loan-to-deposit ratio, or if reasonably available data are insufficient to calculate the bank's statewide loan-to-deposit ratio, the OCC will make a credit needs determination for the bank as provided in § 25.64.

§ 25.64 Credit needs determination.

(a) *In general.* The OCC will review the loan portfolio of the bank and determine whether the bank is reasonably helping to meet the credit needs of the communities in the host state that are served by the bank.

(b) *Guidelines.* The OCC will use the following considerations as guidelines when making the determination pursuant to paragraph (a) of this section:

(1) Whether covered interstate branches were formerly part of a failed or failing depository institution;

(2) Whether covered interstate branches were acquired under circumstances where there was a low loan-to-deposit ratio because of the nature of the acquired institution's business or loan portfolio;

(3) Whether covered interstate branches have a high concentration of commercial or credit card lending, trust services, or other specialized activities, including the extent to which the covered interstate branches accept deposits in the host state;

(4) The CRA ratings received by the bank, if any;

(5) Economic conditions, including the level of loan demand, within the communities served by the covered interstate branches;

(6) The safe and sound operation and condition of the bank; and

(7) The OCC's CRA regulations (subparts A through D of this part) and interpretations of those regulations.

§ 25.65 Sanctions.

(a) *In general.* If the OCC determines that a bank is not reasonably helping to meet the credit needs of the communities served by the bank in the host state, and that the bank's statewide loan-to-deposit ratio is less than 50 percent of the host state loan-to-deposit ratio, the OCC:

(1) May order that a bank's covered interstate branch or branches be closed unless the bank provides reasonable assurances to the satisfaction of the OCC, after an opportunity for public comment, that the bank has an acceptable plan under which the bank will reasonably help to meet the credit needs of the communities served by the bank in the host state; and

(2) Will not permit the bank to open a new branch in the host state that would be considered to be a covered interstate branch unless the bank provides reasonable assurances to the satisfaction of the OCC, after an opportunity for public comment, that the bank will reasonably help to meet the credit needs of the community that the new branch will serve.

(b) *Notice prior to closure of a covered interstate branch.* Before exercising the OCC's authority to order the bank to close a covered interstate branch, the OCC will issue to the bank a notice of the OCC's intent to order the closure and will schedule a hearing within 60 days of issuing the notice.

(c) *Hearing.* The OCC will conduct a hearing scheduled under paragraph (b) of this section in accordance with the provisions of 12 U.S.C. 1818(h) and 12 CFR part 19.

Appendix A to Part 25—Ratings

(a) *Ratings in general.* (1) In assigning a rating, the appropriate Federal banking agency evaluates a bank's or savings association's performance under the applicable performance criteria in this part, in accordance with §§ 25.21 and 25.28. This includes consideration of low-cost education loans provided to low-income borrowers and activities in cooperation with minority- or women-owned financial institutions and low-income credit unions, as well as adjustments on the basis of evidence of discriminatory or other illegal credit practices.

(2) A bank's or savings association's performance need not fit each aspect of a particular rating profile in order to receive that rating, and exceptionally strong performance with respect to some aspects may compensate for weak performance in others. The bank's or savings association's overall performance, however, must be consistent with safe and sound banking practices and generally with the appropriate rating profile as follows.

(b) *Banks and savings associations evaluated under the lending, investment, and service tests*

—(1) *Lending performance rating.* The appropriate Federal banking agency assigns each bank’s or savings association’s lending performance one of the five following ratings.

(i) *Outstanding.* The appropriate Federal banking agency rates a bank’s or savings association’s lending performance “outstanding” if, in general, it demonstrates:

(A) Excellent responsiveness to credit needs in its assessment area(s), taking into account the number and amount of home mortgage, small business, small farm, and consumer loans, if applicable, in its assessment area(s);

(B) A substantial majority of its loans are made in its assessment area(s);

(C) An excellent geographic distribution of loans in its assessment area(s);

(D) An excellent distribution, particularly in its assessment area(s), of loans among individuals of different income levels and businesses (including farms) of different sizes, given the product lines offered by the bank or savings association;

(E) An excellent record of serving the credit needs of highly economically disadvantaged areas in its assessment area(s), low-income individuals, or businesses (including farms) with gross annual revenues of \$1 million or less, consistent with safe and sound operations;

(F) Extensive use of innovative or flexible lending practices in a safe and sound manner to address the credit needs of low- or moderate-income individuals or geographies; and

(G) It is a leader in making community development loans.

(ii) *High satisfactory.* The appropriate Federal banking agency rates a bank’s or savings association’s lending performance “high satisfactory” if, in general, it demonstrates:

(A) Good responsiveness to credit needs in its assessment area(s), taking into account the number and amount of home mortgage, small business, small farm, and consumer loans, if applicable, in its assessment area(s);

(B) A high percentage of its loans are made in its assessment area(s);

(C) A good geographic distribution of loans in its assessment area(s);

(D) A good distribution, particularly in its assessment area(s), of loans among individuals of different income levels and businesses (including farms) of different sizes, given the product lines offered by the bank or savings association;

(E) A good record of serving the credit needs of highly economically disadvantaged areas in its assessment area(s), low-income individuals, or businesses (including farms) with gross annual revenues of \$1 million or less, consistent with safe and sound operations;

(F) Use of innovative or flexible lending practices in a safe and sound manner to address the credit needs of low- or moderate-income individuals or geographies; and

(G) It has made a relatively high level of community development loans.

(iii) *Low satisfactory*. The appropriate Federal banking agency rates a bank's or savings association's lending performance "low satisfactory" if, in general, it demonstrates:

(A) Adequate responsiveness to credit needs in its assessment area(s), taking into account the number and amount of home mortgage, small business, small farm, and consumer loans, if applicable, in its assessment area(s);

(B) An adequate percentage of its loans are made in its assessment area(s);

(C) An adequate geographic distribution of loans in its assessment area(s);

(D) An adequate distribution, particularly in its assessment area(s), of loans among individuals of different income levels and businesses (including farms) of different sizes, given the product lines offered by the bank or savings association;

(E) An adequate record of serving the credit needs of highly economically disadvantaged areas in its assessment area(s), low-income individuals, or businesses (including farms) with gross annual revenues of \$1 million or less, consistent with safe and sound operations;

(F) Limited use of innovative or flexible lending practices in a safe and sound manner to address the credit needs of low- or moderate-income individuals or geographies; and

(G) It has made an adequate level of community development loans.

(iv) *Needs to improve.* The appropriate Federal banking agency rates a bank's or savings association's lending performance "needs to improve" if, in general, it demonstrates:

(A) Poor responsiveness to credit needs in its assessment area(s), taking into account the number and amount of home mortgage, small business, small farm, and consumer loans, if applicable, in its assessment area(s);

(B) A small percentage of its loans are made in its assessment area(s);

(C) A poor geographic distribution of loans, particularly to low- or moderate-income geographies, in its assessment area(s);

(D) A poor distribution, particularly in its assessment area(s), of loans among individuals of different income levels and businesses (including farms) of different sizes, given the product lines offered by the bank or savings association;

(E) A poor record of serving the credit needs of highly economically disadvantaged areas in its assessment area(s), low-income individuals, or businesses (including farms) with gross annual revenues of \$1 million or less, consistent with safe and sound operations;

(F) Little use of innovative or flexible lending practices in a safe and sound manner to address the credit needs of low- or moderate-income individuals or geographies; and

(G) It has made a low level of community development loans.

(v) *Substantial noncompliance.* The appropriate Federal banking agency rates a bank's or savings association's lending performance as being in "substantial noncompliance" if, in general, it demonstrates:

(A) A very poor responsiveness to credit needs in its assessment area(s), taking into account the number and amount of home mortgage, small business, small farm, and consumer loans, if applicable, in its assessment area(s);

(B) A very small percentage of its loans are made in its assessment area(s);

(C) A very poor geographic distribution of loans, particularly to low- or moderate-income geographies, in its assessment area(s);

(D) A very poor distribution, particularly in its assessment area(s), of loans among individuals of different income levels and businesses (including farms) of different sizes, given the product lines offered by the bank or savings association;

(E) A very poor record of serving the credit needs of highly economically disadvantaged areas in its assessment area(s), low-income individuals, or businesses (including farms) with gross annual revenues of \$1 million or less, consistent with safe and sound operations;

(F) No use of innovative or flexible lending practices in a safe and sound manner to address the credit needs of low- or moderate-income individuals or geographies; and

(G) It has made few, if any, community development loans.

(2) *Investment performance rating.* The appropriate Federal banking agency assigns each bank's or savings association's investment performance one of the five following ratings.

(i) *Outstanding*. The appropriate Federal banking agency rates a bank's or savings association's investment performance "outstanding" if, in general, it demonstrates:

(A) An excellent level of qualified investments, particularly those that are not routinely provided by private investors, often in a leadership position;

B) Extensive use of innovative or complex qualified investments; and

(C) Excellent responsiveness to credit and community development needs.

(ii) *High satisfactory*. The appropriate Federal banking agency rates a bank's or savings association's investment performance "high satisfactory" if, in general, it demonstrates:

(A) A significant level of qualified investments, particularly those that are not routinely provided by private investors, occasionally in a leadership position;

(B) Significant use of innovative or complex qualified investments; and

(C) Good responsiveness to credit and community development needs.

(iii) *Low satisfactory*. The appropriate Federal banking agency rates a bank's or savings association's investment performance "low satisfactory" if, in general, it demonstrates:

(A) An adequate level of qualified investments, particularly those that are not routinely provided by private investors, although rarely in a leadership position;

(B) Occasional use of innovative or complex qualified investments; and

(C) Adequate responsiveness to credit and community development needs.

(iv) *Needs to improve*. The appropriate Federal banking agency rates a bank's or savings association's investment performance "needs to improve" if, in general, it demonstrates:

(A) A poor level of qualified investments, particularly those that are not routinely provided by private investors;

(B) Rare use of innovative or complex qualified investments; and

(C) Poor responsiveness to credit and community development needs.

(v) *Substantial noncompliance*. The appropriate Federal banking agency rates a bank's or savings association's investment performance as being in "substantial noncompliance" if, in general, it demonstrates:

(A) Few, if any, qualified investments, particularly those that are not routinely provided by private investors;

(B) No use of innovative or complex qualified investments; and

(C) Very poor responsiveness to credit and community development needs.

(3) *Service performance rating*. The appropriate Federal banking agency assigns each bank's or savings association's service performance one of the five following ratings.

(i) *Outstanding*. The appropriate Federal banking agency rates a bank's or savings association's service performance "outstanding" if, in general, the bank or savings association demonstrates:

(A) Its service delivery systems are readily accessible to geographies and individuals of different income levels in its assessment area(s);

(B) To the extent changes have been made, its record of opening and closing branches has improved the accessibility of its delivery systems, particularly in low- or moderate-income geographies or to low- or moderate-income individuals;

(C) Its services (including, where appropriate, business hours) are tailored to the convenience and needs of its assessment area(s), particularly low- or moderate-income geographies or low- or moderate-income individuals; and

(D) It is a leader in providing community development services.

(ii) *High satisfactory.* The appropriate Federal banking agency rates a bank's or savings association's service performance "high satisfactory" if, in general, the bank or savings association demonstrates:

(A) Its service delivery systems are accessible to geographies and individuals of different income levels in its assessment area(s);

(B) To the extent changes have been made, its record of opening and closing branches has not adversely affected the accessibility of its delivery systems, particularly in low- and moderate-income geographies and to low- and moderate-income individuals;

(C) Its services (including, where appropriate, business hours) do not vary in a way that inconveniences its assessment area(s), particularly low- and moderate-income geographies and low- and moderate-income individuals; and

(D) It provides a relatively high level of community development services.

(iii) *Low satisfactory.* The appropriate Federal banking agency rates a bank's or savings association's service performance "low satisfactory" if, in general, the bank or savings association demonstrates:

(A) Its service delivery systems are reasonably accessible to geographies and individuals of different income levels in its assessment area(s);

(B) To the extent changes have been made, its record of opening and closing branches has generally not adversely affected the accessibility of its delivery systems, particularly in low- and moderate-income geographies and to low- and moderate-income individuals;

(C) Its services (including, where appropriate, business hours) do not vary in a way that inconveniences its assessment area(s), particularly low- and moderate-income geographies and low- and moderate-income individuals; and

(D) It provides an adequate level of community development services.

(iv) *Needs to improve.* The appropriate Federal banking agency rates a bank's or savings association's service performance "needs to improve" if, in general, the bank or savings association demonstrates:

(A) Its service delivery systems are unreasonably inaccessible to portions of its assessment area(s), particularly to low- or moderate-income geographies or to low- or moderate-income individuals;

(B) To the extent changes have been made, its record of opening and closing branches has adversely affected the accessibility its delivery systems, particularly in low- or moderate-income geographies or to low- or moderate-income individuals;

(C) Its services (including, where appropriate, business hours) vary in a way that inconveniences its assessment area(s), particularly low- or moderate-income geographies or low- or moderate-income individuals; and

(D) It provides a limited level of community development services.

(v) *Substantial noncompliance.* The appropriate Federal banking agency rates a bank's or savings association's service performance as being in "substantial noncompliance" if, in general, the bank or savings association demonstrates:

(A) Its service delivery systems are unreasonably inaccessible to significant portions of its assessment area(s), particularly to low- or moderate-income geographies or to low- or moderate-income individuals;

(B) To the extent changes have been made, its record of opening and closing branches has significantly adversely affected the accessibility of its delivery systems, particularly in low- or moderate-income geographies or to low- or moderate-income individuals;

(C) Its services (including, where appropriate, business hours) vary in a way that significantly inconveniences its assessment area(s), particularly low- or moderate-income geographies or low- or moderate-income individuals; and

(D) It provides few, if any, community development services.

(c) *Wholesale or limited purpose banks.* The appropriate Federal banking agency assigns each wholesale or limited purpose bank's or savings association's community development performance one of the four following ratings.

(1) *Outstanding.* The appropriate Federal banking agency rates a wholesale or limited purpose bank's or savings association's community development performance "outstanding" if, in general, it demonstrates:

(i) A high level of community development loans, community development services, or qualified investments, particularly investments that are not routinely provided by private investors;

(ii) Extensive use of innovative or complex qualified investments, community development loans, or community development services; and

(iii) Excellent responsiveness to credit and community development needs in its assessment area(s).

(2) *Satisfactory.* The appropriate Federal banking agency rates a wholesale or limited purpose bank's or savings association's community development performance "satisfactory" if, in general, it demonstrates:

(i) An adequate level of community development loans, community development services, or qualified investments, particularly investments that are not routinely provided by private investors;

(ii) Occasional use of innovative or complex qualified investments, community development loans, or community development services; and

(iii) Adequate responsiveness to credit and community development needs in its assessment area(s).

(3) *Needs to improve.* The appropriate Federal banking agency rates a wholesale or limited purpose bank's or savings association's community development performance as "needs to improve" if, in general, it demonstrates:

(i) A poor level of community development loans, community development services, or qualified investments, particularly investments that are not routinely provided by private investors;

(ii) Rare use of innovative or complex qualified investments, community development loans, or community development services; and

(iii) Poor responsiveness to credit and community development needs in its assessment area(s).

(4) *Substantial noncompliance.* The appropriate Federal banking agency rates a wholesale or limited purpose bank's or savings association's community development performance in "substantial noncompliance" if, in general, it demonstrates:

(i) Few, if any, community development loans, community development services, or qualified investments, particularly investments that are not routinely provided by private investors;

(ii) No use of innovative or complex qualified investments, community development loans, or community development services; and

(iii) Very poor responsiveness to credit and community development needs in its assessment area(s).

(d) *Banks and savings associations evaluated under the small bank and savings association performance standards* —(1) *Lending test ratings.* (i) *Eligibility for a satisfactory lending test rating.* The appropriate Federal banking agency rates a small bank's or savings association's lending performance "satisfactory" if, in general, the bank or savings association demonstrates:

(A) A reasonable loan-to-deposit ratio (considering seasonal variations) given the bank's or savings association's size, financial condition, the credit needs of its assessment area(s), and taking into account, as appropriate, other lending-related activities such as loan originations for sale to the secondary markets and community development loans and qualified investments;

(B) A majority of its loans and, as appropriate, other lending-related activities, are in its assessment area;

(C) A distribution of loans to and, as appropriate, other lending-related activities for individuals of different income levels (including low- and moderate-income individuals) and businesses and farms of different sizes that is reasonable given the demographics of the bank's or savings association's assessment area(s);

(D) A record of taking appropriate action, when warranted, in response to written complaints, if any, about the bank's or savings association's performance in helping to meet the credit needs of its assessment area(s); and

(E) A reasonable geographic distribution of loans given the bank's or savings association's assessment area(s).

(ii) *Eligibility for an "outstanding" lending test rating.* A small bank or savings association that meets each of the standards for a "satisfactory" rating under this paragraph and exceeds

some or all of those standards may warrant consideration for a lending test rating of “outstanding.”

(iii) *Needs to improve or substantial noncompliance ratings.* A small bank or savings association may also receive a lending test rating of “needs to improve” or “substantial noncompliance” depending on the degree to which its performance has failed to meet the standard for a “satisfactory” rating.

(2) *Community development test ratings for intermediate small banks and savings associations—(i) Eligibility for a satisfactory community development test rating.* The appropriate Federal banking agency rates an intermediate small bank’s or savings association’s community development performance “satisfactory” if the bank or savings association demonstrates adequate responsiveness to the community development needs of its assessment area(s) through community development loans, qualified investments, and community development services. The adequacy of the bank’s or savings association’s response will depend on its capacity for such community development activities, its assessment area’s need for such community development activities, and the availability of such opportunities for community development in the bank’s or savings association’s assessment area(s).

(ii) *Eligibility for an outstanding community development test rating.* The appropriate Federal banking agency rates an intermediate small bank’s or savings association’s community development performance “outstanding” if the bank or savings association demonstrates excellent responsiveness to community development needs in its assessment area(s) through community development loans, qualified investments, and community development services, as appropriate, considering the bank’s or savings association’s capacity and the need and

availability of such opportunities for community development in the bank's or savings association's assessment area(s).

(iii) *Needs to improve or substantial noncompliance ratings.* An intermediate small bank or savings association may also receive a community development test rating of “needs to improve” or “substantial noncompliance” depending on the degree to which its performance has failed to meet the standards for a “satisfactory” rating.

(3) *Overall rating* —(i) *Eligibility for a satisfactory overall rating.* No intermediate small bank or savings association may receive an assigned overall rating of “satisfactory” unless it receives a rating of at least “satisfactory” on both the lending test and the community development test.

(ii) *Eligibility for an outstanding overall rating.* (A) An intermediate small bank or savings association that receives an “outstanding” rating on one test and at least “satisfactory” on the other test may receive an assigned overall rating of “outstanding.”

(B) A small bank or savings association that is not an intermediate small bank or savings association that meets each of the standards for a “satisfactory” rating under the lending test and exceeds some or all of those standards may warrant consideration for an overall rating of “outstanding.” In assessing whether a bank's or savings association's performance is “outstanding,” the appropriate Federal banking agency considers the extent to which the bank or savings association exceeds each of the performance standards for a “satisfactory” rating and its performance in making qualified investments and its performance in providing branches and other services and delivery systems that enhance credit availability in its assessment area(s).

(iii) *Needs to improve or substantial noncompliance overall ratings.* A small bank or savings association may also receive a rating of “needs to improve” or “substantial noncompliance”

depending on the degree to which its performance has failed to meet the standards for a “satisfactory” rating.

(e) *Strategic plan assessment and rating*—(1) *Satisfactory goals*. The appropriate Federal banking agency approves as “satisfactory” measurable goals that adequately help to meet the credit needs of the bank’s or savings association’s assessment area(s).

(2) *Outstanding goals*. If the plan identifies a separate group of measurable goals that substantially exceed the levels approved as “satisfactory,” the appropriate Federal banking agency will approve those goals as “outstanding.”

(3) *Rating*. The appropriate Federal banking agency assesses the performance of a bank or savings association operating under an approved plan to determine if the bank or savings association has met its plan goals:

(i) If the bank or savings association substantially achieves its plan goals for a satisfactory rating, the appropriate Federal banking agency will rate the bank’s or savings association’s performance under the plan as “satisfactory.”

(ii) If the bank or savings association exceeds its plan goals for a satisfactory rating and substantially achieves its plan goals for an outstanding rating, the appropriate Federal banking agency will rate the bank’s or savings association’s performance under the plan as “outstanding.”

(iii) If the bank or savings association fails to meet substantially its plan goals for a satisfactory rating, the appropriate Federal banking agency will rate the bank or savings association as either “needs to improve” or “substantial noncompliance,” depending on the extent to which it falls short of its plan goals, unless the bank or savings association elected in its plan to be rated otherwise, as provided in § 25.27(f)(4).

Appendix B to Part 25—CRA Notice

(a) Notice for main offices and, if an interstate bank and savings association, one branch office in each state.

Community Reinvestment Act Notice

Under the Federal Community Reinvestment Act (CRA), the [Office of the Comptroller of the Currency (OCC) or Federal Deposit Insurance Corporation (FDIC), as appropriate] evaluates our record of helping to meet the credit needs of this community consistent with safe and sound operations. The [OCC or FDIC, as appropriate] also takes this record into account when deciding on certain applications submitted by us.

Your Involvement is Encouraged

You are entitled to certain information about our operations and our performance under the CRA, including, for example, information about our branches, such as their location and services provided at them; the public section of our most recent CRA Performance Evaluation, prepared by the [OCC or FDIC, as appropriate]; and comments received from the public relating to our performance in helping to meet community credit needs, as well as our responses to those comments. You may review this information today.

At least 30 days before the beginning of each quarter, the [OCC or FDIC, as appropriate] publishes a nationwide list of the banks and savings associations that are scheduled for CRA examination in that quarter. This list is available from the [OCC or FDIC, as appropriate], at [address]. You may send written comments about our performance in helping to meet community credit needs to [name and address of official at bank or savings association] and to the [OCC or FDIC, as appropriate], at [address]. Your letter, together with any response by us, will be considered by the [OCC or FDIC, as appropriate] in evaluating our CRA performance and may be made public.

You may ask to look at any comments received by the [OCC or FDIC, as appropriate]. You may also request from the [OCC or FDIC, as appropriate] an announcement of our applications covered by the CRA filed with the [OCC or FDIC, as appropriate]. We are an affiliate of [name of holding company], a [bank holding company or savings and loan holding company, as appropriate]. You may request from the [title of responsible official], Federal Reserve Bank of [] [address] an announcement of applications covered by the CRA filed by [bank holding companies or savings and loan holding companies, as appropriate].

(b) Notice for branch offices.

Community Reinvestment Act Notice

Under the Federal Community Reinvestment Act (CRA), the [Comptroller of the Currency (OCC) and Federal Deposit Insurance Corporation (FDIC), as appropriate] evaluates our record of helping to meet the credit needs of this community consistent with safe and sound operations. The [OCC or FDIC, as appropriate] also takes this record into account when deciding on certain applications submitted by us.

Your Involvement is Encouraged

You are entitled to certain information about our operations and our performance under the CRA. You may review today the public section of our most recent CRA evaluation, prepared by the [OCC or FDIC, as appropriate], and a list of services provided at this branch. You may also have access to the following additional information, which we will make available to you at this branch within five calendar days after you make a request to us: (1) A map showing the assessment area containing this branch, which is the area in which the [OCC or FDIC, as appropriate] evaluates our CRA performance in this community; (2) information about our branches in this assessment area; (3) a list of services we provide at those locations; (4) data on

our lending performance in this assessment area; and (5) copies of all written comments received by us that specifically relate to our CRA performance in this assessment area, and any responses we have made to those comments. If we are operating under an approved strategic plan, you may also have access to a copy of the plan.

[If you would like to review information about our CRA performance in other communities served by us, the public file for our entire [bank or savings association, as appropriate] is available at [name of office located in state], located at [address].]

At least 30 days before the beginning of each quarter, the [OCC or FDIC, as appropriate] publishes a nationwide list of the banks and savings associations that are scheduled for CRA examination in that quarter. This list is available from the [OCC or FDIC, as appropriate] at [address]. You may send written comments about our performance in helping to meet community credit needs to [name and address of official at bank or savings association, as appropriate] and to the [OCC or FDIC, as appropriate] at [address]. Your letter, together with any response by us, will be considered by the [OCC or FDIC, as appropriate] in evaluating our CRA performance and may be made public.

You may ask to look at any comments received by the [OCC or FDIC, as appropriate]. You may also request from the [OCC or FDIC, as appropriate] an announcement of our applications covered by the CRA filed with the [OCC or FDIC, as appropriate]. We are an affiliate of [name of holding company], a [bank holding company or savings and loan holding company, as appropriate]. You may request from the [title of responsible official], Federal Reserve Bank of [], [address], an announcement of applications covered by the CRA filed by [bank holding companies or savings and loan holding companies, as appropriate].

FEDERAL RESERVE SYSTEM

12 CFR Chapter II

Authority and Issuance

For the reasons discussed in the common preamble section, the Board of Governors of the Federal Reserve System amends part 228 of chapter II of title 12 of the Code of Federal Regulations as follows:

PART 228 – COMMUNITY REINVESTMENT (REGULATION BB)

27. The authority citation for part 228 continues to read as follows:

Authority: 12 U.S.C. 321, 325, 1828(c), 1842, 1843, 1844, and 2901 *et seq.*

28. Revise part 228 as set forth at the end of the common preamble.

29. Amend newly revised part 228 by:

- a. Removing “[Agency]” wherever it appears and adding in its place, “Board” ;
- b. Removing “[Agency]” wherever it appears and adding in its place, “Board”;
- b. Removing “[operations subsidiary or operating subsidiary]” wherever it appears and adding in its place, “operations subsidiary”;
- c. Removing “[operations subsidiaries or operating subsidiaries]” wherever it appears and adding in its place, “operations subsidiaries”;
- d. Removing “[operations subsidiaries or operating subsidiaries]” wherever it appears and adding in its place, “operations subsidiaries”.

30. Amend § 228.11 by revising paragraphs (a) and (c) to read as follows:

§ 228.11 Authority, purposes and scope.

(a) *Authority.* The Board of Governors of the Federal Reserve System (the Board) issues this part to implement the Community Reinvestment Act (12 U.S.C. 2901 *et seq.*) (CRA). The

regulations comprising this part are issued under the authority of the CRA and under the provisions of the United States Code authorizing the Federal Reserve:

(1) To conduct examinations of State-chartered banks that are members of the Federal Reserve System (12 U.S.C. 325);

(2) To conduct examinations of bank holding companies and their subsidiaries (12 U.S.C. 1844) and savings and loan holding companies and their subsidiaries (12 U.S.C. 1467a); and

(3) To consider applications for:

(i) Domestic branches by State member banks (12 U.S.C. 321);

(ii) Mergers in which the resulting bank would be a State member bank (12 U.S.C. 1828(c));

(iii) Formations of, acquisitions of banks by, and mergers of, bank holding companies (12 U.S.C. 1842);

(iv) The acquisition of savings associations by bank holding companies (12 U.S.C. 1843); and

(v) Formations of, acquisitions of savings associations by, conversions of, and mergers of, savings and loan holding companies (12 U.S.C. 1467a).

* * * * *

(c) *Scope.* (1) *General.* This part applies to all banks except as provided in paragraph (c)(3) of this section.

(2) *Foreign bank acquisitions.* This part also applies to an uninsured State branch (other than a limited branch) of a foreign bank that results from an acquisition described in section 5(a)(8) of the International Banking Act of 1978 (12 U.S.C. 3103(a)(8)). The terms “State branch” and “foreign bank” have the same meanings as given to those terms in section 1(b) of the International Banking Act of 1978 (12 U.S.C. 3101 *et seq.*); the term “uninsured State branch”

means a State branch the deposits of which are not insured by the Federal Deposit Insurance Corporation; the term “limited branch” means a State branch that accepts only deposits that are permissible for a corporation organized under section 25A of the Federal Reserve Act (12 U.S.C. 611 *et seq.*).

(3) *Certain exempt banks.* This part does not apply to banks that do not perform commercial or retail banking services by granting credit to the public in the ordinary course of business, other than as incident to their specialized operations and done on an accommodation basis. These banks include bankers’ banks, as defined in 12 U.S.C. 24 (Seventh), and banks that engage only in one or more of the following activities: providing cash management controlled disbursement services or serving as correspondent banks, trust companies, or clearing agents.

§ 228.11 [Amended]

31. In § 228.11 amend paragraph (b) by removing “Community Reinvestment Act (12 U.S.C. 2901 *et seq.*) (CRA)” and adding in its place, “CRA”.

32. In § 228.12:

- a. Revise the definition of “*Affiliate*”.
- b. Add the definition of “*Bank*”.
- c. Add the definition of “*Operations subsidiary*”.

The revision and additions read as follows:

§ 228.12 Definitions.

* * * * *

Affiliate means any company that controls, is controlled by, or is under common control with another company. The term “control” has the meaning given to that term in 12 U.S.C.

1841(a)(2), as implemented by the Board in 12 CFR part 225, and a company is under common

control with another company if both companies are directly or indirectly controlled by the same company.

* * * * *

Bank means a State member bank as that term is defined in section 3(d)(2) of the Federal Deposit Insurance Act (12 U.S.C. 1813(d)(2)), except as provided in § 228.11(c)(3), and includes an uninsured State branch (other than a limited branch) of a foreign bank described in § 228.11(c)(2).

* * * * *

Operations subsidiary means an organization designed to serve, in effect, as a separately incorporated department of the bank, performing, at locations at which the bank is authorized to engage in business, functions that the bank is empowered to perform directly.

33. Delayed indefinitely, in § 228.12:

- a. Revise paragraph (3) in the definition of “*Loan location*”;
- b. Revise paragraph (2) in the definition of “*Reported loan*”; and
- c. Revise the definitions of “*Small business*”, “*Small business loan*”, “*Small farm*”, and “*Small farm loan*”.

The revisions read as follows:

§ 228.12 Definitions.

* * * * *

Loan location * * *

* * * * *

(3) A small business loan or small farm loan is located in the census tract reported pursuant to subpart B of 12 CFR part 1002.

Reported loan means * * *

* * * * *

(2) A small business loan or small farm loan reported by a bank pursuant to subpart B of 12 CFR part 1002.

* * * * *

Small business means a small business, other than a small farm, as defined in Section 704B of the Equal Credit Opportunity Act (15 U.S.C. 1691c-2) and implemented by 12 CFR 1002.106.

Small business loan means a loan to a small business as defined in this section.

Small farm means a small business, as defined in Section 704B of the Equal Credit Opportunity Act (15 U.S.C. 1691c-2) and implemented by 12 CFR 1002.106, and that is identified with one of the 3-digit North American Industry Classification System (NAICS) codes 111-115.

Small farm loan means a loan to a small farm as defined in this section.

§ 228.14 [Amended]

34. In § 228.14, amend paragraph (b) by removing “[other Agencies]” wherever it appears and adding in its place, “OCC and FDIC”.

§ 228.22 [Amended]

35. Delayed indefinitely, amend § 228.22 by:

a. In paragraphs (e)(2)(ii)(C) and (e)(2)(ii)(D) by removing “Businesses” and adding in its place “Small businesses”.

b. In paragraphs (e)(2)(ii)(E) and (e)(2)(ii)(F) removing “Farms” and adding in its place “Small farms”.

36. Add § 228.31 to read as follows:

§ 228.31 Effect of CRA performance on applications.

(a) *CRA performance.* Among other factors, the Board takes into account the record of performance under the CRA of:

(1) Each applicant bank for the:

(i) Establishment of a domestic branch by a State member bank; and

(ii) Merger, consolidation, acquisition of assets, or assumption of liabilities requiring approval under the Bank Merger Act (12 U.S.C. 1828(c)) if the acquiring, assuming, or resulting bank is to be a State member bank; and

(2) Each insured depository institution (as defined in 12 U.S.C. 1813) controlled by an applicant and subsidiary bank or savings association proposed to be controlled by an applicant:

(i) To become a bank holding company in a transaction that requires approval under section 3 of the Bank Holding Company Act (12 U.S.C. 1842);

(ii) To acquire ownership or control of shares or all or substantially all of the assets of a bank, to cause a bank to become a subsidiary of a bank holding company, or to merge or consolidate a bank holding company with any other bank holding company in a transaction that requires approval under section 3 of the Bank Holding Company Act (12 U.S.C. 1842);

(iii) To own, control, or operate a savings association in a transaction that requires approval under section 4 of the Bank Holding Company Act (12 U.S.C. 1843);

(iv) To become a savings and loan holding company in a transaction that requires approval under section 10 of the Home Owners' Loan Act (12 U.S.C. 1467a); and

(v) To acquire ownership or control of shares or all or substantially all of the assets of a savings association, to cause a savings association to become a subsidiary of a savings and loan holding company, or to merge or consolidate a savings and loan holding company with any other

savings and loan holding company in a transaction that requires approval under section 10 of the Home Owners' Loan Act (12 U.S.C. 1467a).

(b) *Interested parties.* In considering CRA performance in an application described in paragraph (a) of this section, the Board takes into account any views expressed by interested parties that are submitted in accordance with the Board's Rules of Procedure set forth in 12 CFR part 262.

(c) *Denial or conditional approval of application.* A bank or savings association's record of performance may be the basis for denying or conditioning approval of an application listed in paragraph (a) of this section.

(d) *Definitions.* For purposes of paragraphs (a)(2)(i) – (iii) of this section, “bank,” “bank holding company,” “subsidiary,” and “savings association” have the same meanings given to those terms in section 2 of the Bank Holding Company Act (12 U.S.C. 1841). For purposes of paragraphs (a)(2)(iv) and (v) of this section, “savings and loan holding company” and “subsidiary” have the same meaning given to those terms in section 10 of the Home Owners' Loan Act (12 U.S.C. 1467a).

§ 228.42 [Amended]

37. Delayed indefinitely, in § 228.42, amend paragraphs (a)(1), (b)(1), (g)(1)(i), and (g)(2)(i) as follows:

- a. Revise paragraph (a)(1);
- b. Remove and reserve paragraph (b)(1); and
- c. In paragraphs (g)(1)(i) and (g)(2)(i), Remove “small business loans and small farm loans reported as originated or purchased” in and adding in their place, “small business loans and small farm loans reported as originated”.

The revision reads as follows:

§ 228.42 Data collection, reporting, and disclosure.

(a) *Information required to be collected and maintained.* (1) *Purchases of small business loans and small farm loans data.* A bank that opts to have the Board consider its purchases of small business loans and small farm loans must collect and maintain in electronic form, as prescribed by the Board, until the completion of the bank's next CRA examination in which the data are evaluated, the following data for each small business loan or small farm loan purchased by the bank during the evaluation period:

- (i) A unique number or alpha-numeric symbol that can be used to identify the relevant loan file;
- (ii) An indicator for the loan type as reported on the bank's Call Report or on the bank's Report of Assets and Liabilities of U.S. Branches and Agencies of Foreign Banks, as applicable;
- (iii) The date of the loan purchase;
- (iv) The loan amount at purchase;
- (v) The loan location, including State, county, and census tract;
- (vi) An indicator for whether the purchased loan was to a business or farm with gross annual revenues of \$250,000 or less;
- (vii) An indicator for whether the purchased loan was to a business or farm with gross annual revenues greater than \$250,000 but less than or equal to \$1 million;
- (viii) An indicator for whether the purchased loan was to a business or farm with gross annual revenues greater than \$1 million; and
- (ix) An indicator for whether the purchased loan was to a business or farm for which gross annual revenues are not known by the bank.”

* * * * *

§ 228.43 [Amended]

38. In § 228.43 amend paragraph (b)(2) by removing “[operations subsidiaries’ or operating subsidiaries’]” and adding in its place, “operations subsidiaries”.

39. Delayed indefinitely, in § 228.43 amend paragraph (b)(2) by:

- a. Revising the heading; and
- b. Adding a new paragraph (b)(2)(iii).

The revision and addition read as follows:

§ 228.43 Content and availability of public file.

* * * * *

(b) * * *

(2) *Banks required to report HMDA data and Small Business Lending data.* * * *

* * * * *

“(iii) *Small business lending data notice.* A bank required to report small business loan or small farm loan data pursuant to 12 CFR part 1002 must include in its public file a written notice that the bank’s small business loan and small farm loan data may be obtained on the CFPB’s website at: <https://www.consumerfinance.gov/data-research/small-business-lending/>.”

§ 228.46 [Amended]

40. In § 228.46 amend paragraph (b) by removing “[Agency contact information]” and adding in its place, “Staff Group: Community Reinvestment Act at <https://federalreserve.gov/apps/contactus/feedback.aspx?Submit=Submit>, by mail to Secretary of the Board, Board of Governors of the Federal Reserve System, 20th Street and Constitution Avenue NW, Washington, DC 20551, or by facsimile at (202) 452-3819”.

§ 228.51 [Amended]

41. In § 228.51 amend paragraph (e) by:

a. Removing “[*part X*]” and adding in its place, “*12 CFR part 228*”;

b. Removing “[other Agencies’ regulations]” and adding in its place, “12 CFR part 25, or 12 CFR part 345”;

42. Revise the heading of Appendix A to read as follows:

Appendix A to Part 228—Calculations for the Retail Lending Test

43. Delayed indefinitely, amend Appendix A to part 228 by:

a. Adding “A bank’s loan purchases that otherwise meet the definition of a covered credit transaction to a small business, as those terms are defined in 12 CFR 1002.104 and 12 CFR 1002.106(b), may be included in the numerator of the Bank Volume Metric at the bank’s option.” at the end of paragraph I.a.1;

b. Removing “subject to reporting pursuant to 12 CFR 25.42(b)(1), 228.42(b)(1), 345.42(b)(1),” in paragraph I.b and adding in its place, “subject to reporting pursuant to subpart B of 12 CFR part 1002” ;

c. Adding “A bank’s loan purchases that otherwise meet the definition of a covered credit transaction to a small business, as provided in 12 CFR 1002.104 and 12 CFR 1002.106(b), may be included in the numerator of the Geographic Bank Metric at the bank’s option.” at the end of paragraph III.a.1;

d. Removing paragraphs III.c.3.i and III.c.3.ii and adding “i. Summing, over the years in the evaluation period, the numbers of small businesses in low-income census tracts in the facility-based assessment area or retail lending assessment area. ii. Summing, over the years in the

evaluation period, the numbers of small businesses in the facility-based assessment area or retail lending assessment area.” in their place;

e. Removing paragraphs III.c.4.i and III.c.4.ii and adding “i. Summing, over the years in the evaluation period, the numbers of small businesses in moderate-income census tracts in the facility-based assessment area or retail lending assessment area. ii. Summing, over the years in the evaluation period, the numbers of small businesses in the facility-based assessment area or retail lending assessment area.” in their place;

f. Removing paragraphs III.c.5.i and III.c.5.ii and adding “i. Summing, over the years in the evaluation period, the numbers of small farms in low-income census tracts in the facility-based assessment area or retail lending assessment area. ii. Summing, over the years in the evaluation period, the numbers of small farms in the facility-based assessment area or retail lending assessment area.” in their place;

g. Removing paragraphs III.c.6.i and III.c.6.ii and adding “i. Summing, over the years in the evaluation period, the numbers of small farms in moderate-income census tracts in the facility-based assessment area or retail lending assessment area. ii. Summing, over the years in the evaluation period, the numbers of small farms in the facility-based assessment area or retail lending assessment area.” in their place;

h. Revising paragraph III.c.8.iii. *Example A-7*, to read as follows: “*Example A-7*: The applicable benchmark uses a three-year evaluation period. There were 4,000 small business establishments, based upon the sum of the numbers of small business establishments over the years in the evaluation period (1,300 small business establishments in year 1, 1,300 small business establishments in year 2, and 1,400 small business establishments in year 3), in a bank’s facility-based assessment area. Of these small business establishments, 500 small business

establishments were in low-income census tracts, based upon the sum of the numbers of small business establishments in low-income census tracts over the years in the evaluation period (200 small business establishments in year 1, 150 small business establishments in year 2, and 150 small business establishments in year 3). The Geographic Community Benchmark for small business loans in low-income census tracts would be 500 divided by 4,000, or 0.125 (equivalently, 12.5 percent). In addition, 1,000 small business establishments in that facility-based assessment area were in moderate-income census tracts, over the years in the evaluation period (400 small business establishments in year 1, 300 small business establishments in year 2, and 300 small business establishments in year 3). The Geographic Community Benchmark for small business loans in moderate-income census tracts would be 1,000 divided by 4,000, or 0.25 (equivalently, 25 percent).”

Small Businesses in Low – Income Census Tracts (500)

Small Businesses (4,000)
= Geographic Community Benchmark (12.5%)

Small Businesses in Moderate – Income Census Tracts (1,000)

Small Businesses (4,000)
= Geographic Community Benchmark (25%)

i. Removing from the third introductory paragraph to section IV: “For small business loans, the FDIC calculates these metrics and benchmarks for each of the following designated borrowers: (i) businesses with gross annual revenues of \$250,000 or less; and (ii) businesses with gross annual revenues of more than \$250,000 but less than or equal to \$1 million.” And adding in its place “For small business loans, the Board calculates these metrics and benchmarks for each of the following designated borrowers: (i) small businesses with gross annual revenues of \$250,000 or less; and (ii) small businesses with gross annual revenues of more than \$250,000 but less than or equal to \$1 million.”;

j. Removing from the fourth introductory paragraph to section IV: “For small farm loans, the Board calculates these metrics and benchmarks for each of the following designated borrowers: (i) farms with gross annual revenues of \$250,000 or less; and (ii) farms with gross annual revenues of more than \$250,000 but less than or equal to \$1 million.” And adding in its place: “For small farm loans, the Board calculates these metrics and benchmarks for each of the following designated borrowers: (i) small farms with gross annual revenues of \$250,000 or less; and (ii) small farms with gross annual revenues of more than \$250,000 but less than or equal to \$1 million.”;

k. Adding “A bank’s loan purchases that otherwise meet the definition of a covered credit transaction to a small business, as provided in 12 CFR 1002.104 and 12 CFR 1002.106(b), may be included in the numerator of the Borrower Bank Metric at the bank’s option.” at the end of paragraph IV.a.1;

l. Removing the introductory paragraph to IV.c.3 and paragraphs IV.c.3.i, and IV.c.3.ii and adding “3. For small business loans, the Board calculates a Borrower Community Benchmark for small businesses with gross annual revenues of \$250,000 or less by: i. Summing, over the years in the evaluation period, the numbers of small businesses with gross annual revenues of \$250,000 or less in the facility-based lending area or retail lending assessment area. ii. Summing, over the years in the evaluation period, the numbers of small businesses in the facility-based lending area or retail lending assessment area.” in their place;

m. Removing the introductory paragraph to IV.c.4 and paragraphs IV.c.4.i, and IV.c.4.ii and adding “4. For small business loans, the Board calculates a Borrower Community Benchmark for small businesses with gross annual revenues of more than \$250,000 but less than or equal to \$1 million by: i. Summing, over the years in the evaluation period, the numbers of small businesses

with gross annual revenues of more than \$250,000 but less than or equal to \$1 million in the facility-based lending area or retail lending assessment area. ii. Summing, over the years in the evaluation period, the numbers of small businesses in the facility-based lending area or retail lending assessment area.” in their place;

n. Removing the introductory paragraph to IV.c.5 and paragraphs IV.c.5.i, and IV.c.5.ii and adding “5. For small farm loans, the Board calculates a Borrower Community Benchmark for small farms with gross annual revenues of \$250,000 or less by: i. Summing, over the years in the evaluation period, the numbers of small farms with gross annual revenues of \$250,000 or less in the facility-based lending area or retail lending assessment area. ii. Summing, over the years in the evaluation period, the numbers of small farms in the facility-based lending area or retail lending assessment area.” in their place;

o. Removing the introductory paragraph to IV.c.6 and paragraphs IV.c.6.i, and IV.c.6.ii and adding “6. For small farm loans, the Board calculates a Borrower Community Benchmark for small farms with gross annual revenues of more than \$250,000 but less than or equal to \$1 million by: i. Summing, over the years in the evaluation period, the numbers of small farms with gross annual revenues of more than \$250,000 but less than or equal to \$1 million in the facility-based lending area or retail lending assessment area. ii. Summing, over the years in the evaluation period, the numbers of small farms in the facility-based lending area or retail lending assessment area.” in their place;

p. Removing each use of the term “businesses” and adding “small businesses” in its place in Tables 1, 3, and 4 to Appendix A;

q. Removing each use of the term “Businesses” and adding “Small businesses” in its place in Tables 1, 3, and 4 to Appendix A;

r. Removing each use of the term “farms” and adding “small farms” in its place in Tables 1, 3, and 4 to Appendix A;

s. Removing each use of the term “Farms” and adding “Small farms” in its place in Tables 1, 3, and 4 to Appendix A.

44. Revise the heading of Appendix B to read as follows:

Appendix B to Part 228—Calculations for the Community Development Tests

45. Revise the heading of Appendix C to read as follows:

Appendix C to Part 228—Performance Test Conclusions

46. Revise the heading of Appendix D to read as follows:

Appendix D to Part 228—Ratings

47. Revise the heading of Appendix E to read as follows:

Appendix E to Part 228—Small Bank and Intermediate Bank Performance Evaluation

Conclusions and Ratings

48. Add Appendix F to read as follows:

Appendix F to Part 228—CRA Notice

(a) Notice for main offices and, if an interstate bank, one branch office in each State.

COMMUNITY REINVESTMENT ACT NOTICE

Under the Federal Community Reinvestment Act (CRA), the Federal Reserve Board (Board) evaluates our record of helping to meet the credit needs of this community consistent with safe and sound operations. The Board also takes this record into account when deciding on certain applications submitted by us.

Your involvement is encouraged.

You are entitled to certain information about our operations and our performance under the CRA, including, for example, information about our branches, such as their location and services provided at them; the public section of our most recent CRA Performance Evaluation, prepared by the Federal Reserve Bank of ____ (Reserve Bank); and comments received from the public relating to our performance in helping to meet community credit needs, as well as our responses to those comments. You may review this information today.

At least 30 days before the beginning of each calendar quarter, the Federal Reserve System publishes a list of the banks that are scheduled for CRA examination by the Reserve Bank for the next two quarters. This list is available from (title of responsible official), Federal Reserve Bank of ____ (address), or through the Board's website at <https://www.federalreserve.gov>.

You may send written comments about our performance in helping to meet community credit needs to (name and address of official at bank) and (title of responsible official), Federal Reserve Bank of ____ (address), or through the Board's website at <https://www.federalreserve.gov>. Your letter, together with any response by us, will be considered by the Federal Reserve System in evaluating our CRA performance and may be made public.

You may ask to look at any comments received by the Reserve Bank. You may also request from the Reserve Bank an announcement of our applications covered by the CRA filed with the Reserve Bank. [We are an affiliate of (name of holding company), a bank holding company. You may request from (title of responsible official), Federal Reserve Bank of ____ (address) an announcement of applications covered by the CRA filed by bank holding companies.]

(b) Notice for branch offices.

COMMUNITY REINVESTMENT ACT NOTICE

Under the Federal Community Reinvestment Act (CRA), the Federal Reserve Board (Board) evaluates our record of helping to meet the credit needs of this community consistent with safe and sound operations. The Board also takes this record into account when deciding on certain applications submitted by us.

Your involvement is encouraged.

You are entitled to certain information about our operations and our performance under the CRA. You may review today the public section of our most recent CRA evaluation, prepared by the Federal Reserve Bank of ____ (address), and a list of services provided at this branch. You may also have access to the following additional information, which we will make available to you at this branch within five calendar days after you make a request to us: (1) a map showing the assessment area containing this branch, which is the area in which the Board evaluates our CRA performance in this community; (2) information about our branches in this assessment area; (3) a list of services we provide at those locations; (4) data on our lending performance in this assessment area; and (5) copies of all written comments received by us that specifically relate to our CRA performance in this assessment area, and any responses we have made to those comments. If we are operating under an approved strategic plan, you may also have access to a copy of the plan.

[If you would like to review information about our CRA performance in other communities served by us, the public file for our entire bank is available at (name of office located in state), located at (address).]

At least 30 days before the beginning of each calendar quarter, the Federal Reserve System publishes a list of the banks that are scheduled for CRA examination by the Reserve Bank for the

next two quarters. This list is available from (title of responsible official), Federal Reserve Bank of ____ (address), or through the Board's website at <https://www.federalreserve.gov>.

You may request from (title of responsible official), Federal Reserve Bank of ____ (address) an announcement of applications covered by the CRA filed by bank holding companies.]

49. Effective April 1, 2024, to January 1, 2031, add appendix G to part 228 to read as follows:

Appendix G to Part 228—Community Reinvestment Act (Regulation BB)

Note: The content of this appendix reproduces part 228 implementing the Community Reinvestment Act as of March 31, 2024.

Subpart A—General

§ 228.11 Authority, purposes, and scope.

(a) *Authority.* The Board of Governors of the Federal Reserve System (the Board) issues this part to implement the Community Reinvestment Act (12 U.S.C. 2901 *et seq.*) (CRA). The regulations comprising this part are issued under the authority of the CRA and under the provisions of the United States Code authorizing the Board:

(1) To conduct examinations of State-chartered banks that are members of the Federal Reserve System (12 U.S.C. 325);

(2) To conduct examinations of bank holding companies and their subsidiaries (12 U.S.C. 1844) and savings and loan holding companies and their subsidiaries (12 U.S.C. 1467a); and(3)

To consider applications for:

(i) Domestic branches by State member banks (12 U.S.C. 321);

(ii) Mergers in which the resulting bank would be a State member bank (12 U.S.C. 1828(c));

(iii) Formations of, acquisitions of banks by, and mergers of, bank holding companies (12 U.S.C. 1842);

(iv) The acquisition of savings associations by bank holding companies (12 U.S.C. 1843);

and

(v) Formations of, acquisitions of savings associations by, conversions of, and mergers of, savings and loan holding companies (12 U.S.C. 1467a).

(b) *Purposes.* In enacting the CRA, the Congress required each appropriate Federal financial supervisory agency to assess an institution's record of helping to meet the credit needs of the local communities in which the institution is chartered, consistent with the safe and sound operation of the institution, and to take this record into account in the agency's evaluation of an application for a deposit facility by the institution. This part is intended to carry out the purposes of the CRA by:

(1) Establishing the framework and criteria by which the Board assesses a bank's record of helping to meet the credit needs of its entire community, including low- and moderate-income neighborhoods, consistent with the safe and sound operation of the bank; and

(2) Providing that the Board takes that record into account in considering certain applications.

(c) *Scope* — (1) *General*. This part applies to all banks except as provided in paragraph (c)(3) of this section.

(2) *Foreign bank acquisitions*. This part also applies to an uninsured State branch (other than a limited branch) of a foreign bank that results from an acquisition described in section 5(a)(8) of the International Banking Act of 1978 (12 U.S.C. 3103(a)(8)). The terms “State branch” and “foreign bank” have the same meanings as in section 1(b) of the International Banking Act of 1978 (12 U.S.C. 3101 *et seq.*); the term “uninsured State branch” means a State branch the deposits of which are not insured by the Federal Deposit Insurance Corporation; the term “limited branch” means a State branch that accepts only deposits that are permissible for a corporation organized under section 25A of the Federal Reserve Act (12 U.S.C. 611 *et seq.*).

(3) *Certain special purpose banks*. This part does not apply to special purpose banks that do not perform commercial or retail banking services by granting credit to the public in the ordinary course of business, other than as incident to their specialized operations. These banks include banker’s banks, as defined in 12 U.S.C. 24 (Seventh), and banks that engage only in one or more of the following activities: providing cash management controlled disbursement services or serving as correspondent banks, trust companies, or clearing agents.

§ 228.12 Definitions.

For purposes of this part, the following definitions apply:

(a) *Affiliate* means any company that controls, is controlled by, or is under common control with another company. The term “control” has the meaning given to that term in 12 U.S.C.

1841(a)(2), and a company is under common control with another company if both companies are directly or indirectly controlled by the same company.

(b) *Area median income* means:

(1) The median family income for the MSA, if a person or geography is located in an MSA, or for the metropolitan division, if a person or geography is located in an MSA that has been subdivided into metropolitan divisions; or

(2) The statewide nonmetropolitan median family income, if a person or geography is located outside an MSA.

(c) *Assessment area* means a geographic area delineated in accordance with § 228.41.

(d) *Automated teller machine (ATM)* means an automated, unstaffed banking facility owned or operated by, or operated exclusively for, the bank at which deposits are received, cash dispersed, or money lent.

(e) *Bank* means a State member bank as that term is defined in section 3(d)(2) of the Federal Deposit Insurance Act (12 U.S.C. 1813(d)(2)), except as provided in § 228.11(c)(3), and includes an uninsured State branch (other than a limited branch) of a foreign bank described in § 228.11(c)(2).

(f) *Branch* means a staffed banking facility approved as a branch, whether shared or unshared, including, for example, a mini-branch in a grocery store or a branch operated in conjunction with any other local business or nonprofit organization.

(g) *Community development* means:

(1) Affordable housing (including multifamily rental housing) for low- or moderate-income individuals;

(2) Community services targeted to low- or moderate-income individuals;

(3) Activities that promote economic development by financing businesses or farms that meet the size eligibility standards of the Small Business Administration's Development Company or Small Business Investment Company programs (13 CFR 121.301) or have gross annual revenues of \$1 million or less; or

(4) Activities that revitalize or stabilize—

(i) Low-or moderate-income geographies;

(ii) Designated disaster areas; or

(iii) Distressed or underserved nonmetropolitan middle-income geographies designated by the Board, Federal Deposit Insurance Corporation, and Office of the Comptroller of the Currency, based on—(A) Rates of poverty, unemployment, and population loss; or

(B) Population size, density, and dispersion. Activities revitalize and stabilize geographies designated based on population size, density, and dispersion if they help to meet essential community needs, including needs of low- and moderate-income individuals.

(h) *Community development loan* means a loan that:

(1) Has as its primary purpose community development; and

(2) Except in the case of a wholesale or limited purpose bank:

(i) Has not been reported or collected by the bank or an affiliate for consideration in the bank's assessment as a home mortgage, small business, small farm, or consumer loan, unless the loan is for a multifamily dwelling (as defined in § 1003.2(n) of this title); and

(ii) Benefits the bank's assessment area(s) or a broader statewide or regional area that includes the bank's assessment area(s).

(i) *Community development service* means a service that:

(1) Has as its primary purpose community development;

(2) Is related to the provision of financial services; and

(3) Has not been considered in the evaluation of the bank's retail banking services under § 228.24(d).

(j) *Consumer loan* means a loan to one or more individuals for household, family, or other personal expenditures. A consumer loan does not include a home mortgage, small business, or small farm loan. Consumer loans include the following categories of loans:

(1) *Motor vehicle loan*, which is a consumer loan extended for the purchase of and secured by a motor vehicle;

(2) *Credit card loan*, which is a line of credit for household, family, or other personal expenditures that is accessed by a borrower's use of a "credit card," as this term is defined in § 1026.2 of this chapter;

(3) *Other secured consumer loan*, which is a secured consumer loan that is not included in one of the other categories of consumer loans; and

(4) *Other unsecured consumer loan*, which is an unsecured consumer loan that is not included in one of the other categories of consumer loans.

(k) *Geography* means a census tract delineated by the United States Bureau of the Census in the most recent decennial census.

(l) *Home mortgage loan* means a closed-end mortgage loan or an open-end line of credit as these terms are defined under § 1003.2 of this title and that is not an excluded transaction under § 1003.3(c)(1) through (10) and (13) of this title.

(m) *Income level* includes:

(1) *Low-income*, which means an individual income that is less than 50 percent of the area median income, or a median family income that is less than 50 percent, in the case of a geography.

(2) *Moderate-income*, which means an individual income that is at least 50 percent and less than 80 percent of the area median income, or a median family income that is at least 50 and less than 80 percent, in the case of a geography.

(3) *Middle-income*, which means an individual income that is at least 80 percent and less than 120 percent of the area median income, or a median family income that is at least 80 and less than 120 percent, in the case of a geography.

(4) *Upper-income*, which means an individual income that is 120 percent or more of the area median income, or a median family income that is 120 percent or more, in the case of a geography.

(n) *Limited purpose bank* means a bank that offers only a narrow product line (such as credit card or motor vehicle loans) to a regional or broader market and for which a designation as a limited purpose bank is in effect, in accordance with § 228.25(b).

(o) *Loan location*. A loan is located as follows:

(1) A consumer loan is located in the geography where the borrower resides;

(2) A home mortgage loan is located in the geography where the property to which the loan relates is located; and

(3) A small business or small farm loan is located in the geography where the main business facility or farm is located or where the loan proceeds otherwise will be applied, as indicated by the borrower.

(p) *Loan production office* means a staffed facility, other than a branch, that is open to the public and that provides lending-related services, such as loan information and applications.

(q) *Metropolitan division* means a metropolitan division as defined by the Director of the Office of Management and Budget.

(r) *MSA* means a metropolitan statistical area as defined by the Director of the Office of Management and Budget.

(s) *Nonmetropolitan area* means any area that is not located in an MSA.

(t) *Qualified investment* means a lawful investment, deposit, membership share, or grant that has as its primary purpose community development.

(u) *Small bank* —(1) *Definition.* *Small bank* means a bank that, as of December 31 of either of the prior two calendar years, had assets of less than \$1.384 billion. *Intermediate small bank* means a small bank with assets of at least \$346 million as of December 31 of both of the prior two calendar years and less than \$1.384 billion as of December 31 of either of the prior two calendar years.

(2) *Adjustment.* The dollar figures in paragraph (u)(1) of this section shall be adjusted annually and published by the Board, based on the year-to-year change in the average of the Consumer Price Index for Urban Wage Earners and Clerical Workers, not seasonally adjusted, for each twelve-month period ending in November, with rounding to the nearest million.

(v) *Small business loan* means a loan included in “loans to small businesses” as defined in the instructions for preparation of the Consolidated Report of Condition and Income.

(w) *Small farm loan* means a loan included in “loans to small farms” as defined in the instructions for preparation of the Consolidated Report of Condition and Income.

(x) *Wholesale bank* means a bank that is not in the business of extending home mortgage, small business, small farm, or consumer loans to retail customers, and for which a designation as a wholesale bank is in effect, in accordance with § 228.25(b).

Subpart B—Standards for Assessing Performance

§ 228.21 Performance tests, standards, and ratings, in general.

(a) *Performance tests and standards.* The Board assesses the CRA performance of a bank in an examination as follows:

(1) *Lending, investment, and service tests.* The Board applies the lending, investment, and service tests, as provided in §§ 228.22 through 228.24, in evaluating the performance of a bank, except as provided in paragraphs (a)(2), (a)(3), and (a)(4) of this section.

(2) *Community development test for wholesale or limited purpose banks.* The Board applies the community development test for a wholesale or limited purpose bank, as provided in § 228.25, except as provided in paragraph (a)(4) of this section.

(3) *Small bank performance standards.* The Board applies the small bank performance standards as provided in § 228.26 in evaluating the performance of a small bank or a bank that was a small bank during the prior calendar year, unless the bank elects to be assessed as provided in paragraphs (a)(1), (a)(2), or (a)(4) of this section. The bank may elect to be assessed as provided in paragraph (a)(1) of this section only if it collects and reports the data required for other banks under § 228.42.

(4) *Strategic plan.* The Board evaluates the performance of a bank under a strategic plan if the bank submits, and the Board approves, a strategic plan as provided in § 228.27.

(b) *Performance context.* The Board applies the tests and standards in paragraph (a) of this section and also considers whether to approve a proposed strategic plan in the context of:

(1) Demographic data on median income levels, distribution of household income, nature of housing stock, housing costs, and other relevant data pertaining to a bank's assessment area(s);

(2) Any information about lending, investment, and service opportunities in the bank's assessment area(s) maintained by the bank or obtained from community organizations, state, local, and tribal governments, economic development agencies, or other sources;

(3) The bank's product offerings and business strategy as determined from data provided by the bank;

(4) Institutional capacity and constraints, including the size and financial condition of the bank, the economic climate (national, regional, and local), safety and soundness limitations, and any other factors that significantly affect the bank's ability to provide lending, investments, or services in its assessment area(s);

(5) The bank's past performance and the performance of similarly situated lenders;

(6) The bank's public file, as described in § 228.43, and any written comments about the bank's CRA performance submitted to the bank or the Board; and

(7) Any other information deemed relevant by the Board.

(c) *Assigned ratings.* The Board assigns to a bank one of the following four ratings pursuant to § 228.28 and appendix A of this part: "outstanding"; "satisfactory"; "needs to improve"; or "substantial noncompliance" as provided in 12 U.S.C. 2906(b)(2). The rating assigned by the Board reflects the bank's record of helping to meet the credit needs of its entire community, including low- and moderate-income neighborhoods, consistent with the safe and sound operation of the bank.

(d) *Safe and sound operations.* This part and the CRA do not require a bank to make loans or investments or to provide services that are inconsistent with safe and sound operations. To the

contrary, the Board anticipates banks can meet the standards of this part with safe and sound loans, investments, and services on which the banks expect to make a profit. Banks are permitted and encouraged to develop and apply flexible underwriting standards for loans that benefit low- or moderate-income geographies or individuals, only if consistent with safe and sound operations.

(e) *Low-cost education loans provided to low-income borrowers.* In assessing and taking into account the record of a bank under this part, the Board considers, as a factor, low-cost education loans originated by the bank to borrowers, particularly in its assessment area(s), who have an individual income that is less than 50 percent of the area median income. For purposes of this paragraph, “low-cost education loans” means any education loan, as defined in section 140(a)(7) of the Truth in Lending Act (15 U.S.C. 1650(a)(7)) (including a loan under a state or local education loan program), originated by the bank for a student at an “institution of higher education,” as that term is generally defined in sections 101 and 102 of the Higher Education Act of 1965 (20 U.S.C. 1001 and 1002) and the implementing regulations published by the U.S. Department of Education, with interest rates and fees no greater than those of comparable education loans offered directly by the U.S. Department of Education. Such rates and fees are specified in section 455 of the Higher Education Act of 1965 (20 U.S.C. 1087e).

(f) *Activities in cooperation with minority- or women-owned financial institutions and low-income credit unions.* In assessing and taking into account the record of a nonminority-owned and nonwomen-owned bank under this part, the Board considers as a factor capital investment, loan participation, and other ventures undertaken by the bank in cooperation with minority- and women-owned financial institutions and low-income credit unions. Such activities must help meet the credit needs of local communities in which the minority- and women-owned financial

institutions and low-income credit unions are chartered. To be considered, such activities need not also benefit the bank's assessment area(s) or the broader statewide or regional area that includes the bank's assessment area(s).

§ 228.22 Lending test.

(a) *Scope of test.* (1) The lending test evaluates a bank's record of helping to meet the credit needs of its assessment area(s) through its lending activities by considering a bank's home mortgage, small business, small farm, and community development lending. If consumer lending constitutes a substantial majority of a bank's business, the Board will evaluate the bank's consumer lending in one or more of the following categories: motor vehicle, credit card, other secured, and other unsecured loans. In addition, at a bank's option, the Board will evaluate one or more categories of consumer lending, if the bank has collected and maintained, as required in § 228.42(c)(1), the data for each category that the bank elects to have the Board evaluate.

(2) The Board considers originations and purchases of loans. The Board will also consider any other loan data the bank may choose to provide, including data on loans outstanding, commitments and letters of credit.

(3) A bank may ask the Board to consider loans originated or purchased by consortia in which the bank participates or by third parties in which the bank has invested only if the loans meet the definition of community development loans and only in accordance with paragraph (d) of this section. The Board will not consider these loans under any criterion of the lending test except the community development lending criterion.

(b) *Performance criteria.* The Board evaluates a bank's lending performance pursuant to the following criteria:

(1) *Lending activity.* The number and amount of the bank's home mortgage, small business, small farm, and consumer loans, if applicable, in the bank's assessment area(s);

(2) *Geographic distribution.* The geographic distribution of the bank's home mortgage, small business, small farm, and consumer loans, if applicable, based on the loan location, including:

(i) The proportion of the bank's lending in the bank's assessment area(s);

(ii) The dispersion of lending in the bank's assessment area(s); and

(iii) The number and amount of loans in low-, moderate-, middle-, and upper-income geographies in the bank's assessment area(s);

(3) *Borrower characteristics.* The distribution, particularly in the bank's assessment area(s), of the bank's home mortgage, small business, small farm, and consumer loans, if applicable, based on borrower characteristics, including the number and amount of:

(i) Home mortgage loans to low-, moderate-, middle-, and upper-income individuals;

(ii) Small business and small farm loans to businesses and farms with gross annual revenues of \$1 million or less;

(iii) Small business and small farm loans by loan amount at origination; and (iv) Consumer loans, if applicable, to low-, moderate-, middle-, and upper-income individuals;

(4) *Community development lending.* The bank's community development lending, including the number and amount of community development loans, and their complexity and innovativeness; and

(5) *Innovative or flexible lending practices.* The bank's use of innovative or flexible lending practices in a safe and sound manner to address the credit needs of low- or moderate-income individuals or geographies.

(c) *Affiliate lending.* (1) At a bank's option, the Board will consider loans by an affiliate of the bank, if the bank provides data on the affiliate's loans pursuant to § 228.42.(2) The Board considers affiliate lending subject to the following constraints:

(i) No affiliate may claim a loan origination or loan purchase if another institution claims the same loan origination or purchase; and

(ii) If a bank elects to have the Board consider loans within a particular lending category made by one or more of the bank's affiliates in a particular assessment area, the bank shall elect to have the Board consider, in accordance with paragraph (c)(1) of this section, all the loans within that lending category in that particular assessment area made by all of the bank's affiliates.

(3) The Board does not consider affiliate lending in assessing a bank's performance under paragraph (b)(2)(i) of this section.

(d) *Lending by a consortium or a third party.* Community development loans originated or purchased by a consortium in which the bank participates or by a third party in which the bank has invested:

(1) Will be considered, at the bank's option, if the bank reports the data pertaining to these loans under § 228.42(b)(2); and

(2) May be allocated among participants or investors, as they choose, for purposes of the lending test, except that no participant or investor:

(i) May claim a loan origination or loan purchase if another participant or investor claims the same loan origination or purchase; or

(ii) May claim loans accounting for more than its percentage share (based on the level of its participation or investment) of the total loans originated by the consortium or third party.

(e) *Lending performance rating.* The Board rates a bank's lending performance as provided in appendix A of this part.

§ 228.23 Investment test.

(a) *Scope of test.* The investment test evaluates a bank's record of helping to meet the credit needs of its assessment area(s) through qualified investments that benefit its assessment area(s) or a broader statewide or regional area that includes the bank's assessment area(s).

(b) *Exclusion.* Activities considered under the lending or service tests may not be considered under the investment test.

(c) *Affiliate investment.* At a bank's option, the Board will consider, in its assessment of a bank's investment performance, a qualified investment made by an affiliate of the bank, if the qualified investment is not claimed by any other institution.

(d) *Disposition of branch premises.* Donating, selling on favorable terms, or making available on a rent-free basis a branch of the bank that is located in a predominantly minority neighborhood to a minority depository institution or women's depository institution (as these terms are defined in 12 U.S.C. 2907(b)) will be considered as a qualified investment.

(e) *Performance criteria.* The Board evaluates the investment performance of a bank pursuant to the following criteria:

- (1) The dollar amount of qualified investments;
- (2) The innovativeness or complexity of qualified investments;
- (3) The responsiveness of qualified investments to credit and community development needs;

and

(4) The degree to which the qualified investments are not routinely provided by private investors.

(f) *Investment performance rating.* The Board rates a bank's investment performance as provided in appendix A of this part.

§ 228.24 Service test.

(a) *Scope of test.* The service test evaluates a bank's record of helping to meet the credit needs of its assessment area(s) by analyzing both the availability and effectiveness of a bank's systems for delivering retail banking services and the extent and innovativeness of its community development services.

(b) *Area(s) benefitted.* Community development services must benefit a bank's assessment area(s) or a broader statewide or regional area that includes the bank's assessment area(s).

(c) *Affiliate service.* At a bank's option, the Board will consider, in its assessment of a bank's service performance, a community development service provided by an affiliate of the bank, if the community development service is not claimed by any other institution.

(d) *Performance criteria—retail banking services.* The Board evaluates the availability and effectiveness of a bank's systems for delivering retail banking services, pursuant to the following criteria:

(1) The current distribution of the bank's branches among low-, moderate-, middle-, and upper-income geographies;

(2) In the context of its current distribution of the bank's branches, the bank's record of opening and closing branches, particularly branches located in low- or moderate-income geographies or primarily serving low- or moderate-income individuals;

(3) The availability and effectiveness of alternative systems for delivering retail banking services (*e.g.*, ATMs, ATMs not owned or operated by or exclusively for the bank, banking by

telephone or computer, loan production offices, and bank-at-work or bank-by-mail programs) in low- and moderate-income geographies and to low- and moderate-income individuals; and

(4) The range of services provided in low-, moderate-, middle-, and upper-income geographies and the degree to which the services are tailored to meet the needs of those geographies.

(e) *Performance criteria—community development services.* The Board evaluates community development services pursuant to the following criteria:

(1) The extent to which the bank provides community development services; and

(2) The innovativeness and responsiveness of community development services.

(f) *Service performance rating.* The Board rates a bank's service performance as provided in appendix A of this part.

§ 228.25 Community development test for wholesale or limited purpose banks.

(a) *Scope of test.* The Board assesses a wholesale or limited purpose bank's record of helping to meet the credit needs of its assessment area(s) under the community development test through its community development lending, qualified investments, or community development services.

(b) *Designation as a wholesale or limited purpose bank.* In order to receive a designation as a wholesale or limited purpose bank, a bank shall file a request, in writing, with the Board, at least three months prior to the proposed effective date of the designation. If the Board approves the designation, it remains in effect until the bank requests revocation of the designation or until one year after the Board notifies the bank that the Board has revoked the designation on its own initiative.

(c) *Performance criteria.* The Board evaluates the community development performance of a wholesale or limited purpose bank pursuant to the following criteria:

(1) The number and amount of community development loans (including originations and purchases of loans and other community development loan data provided by the bank, such as data on loans outstanding, commitments, and letters of credit), qualified investments, or community development services;

(2) The use of innovative or complex qualified investments, community development loans, or community development services and the extent to which the investments are not routinely provided by private investors; and

(3) The bank's responsiveness to credit and community development needs.

(d) *Indirect activities.* At a bank's option, the Board will consider in its community development performance assessment:

(1) Qualified investments or community development services provided by an affiliate of the bank, if the investments or services are not claimed by any other institution; and

(2) Community development lending by affiliates, consortia and third parties, subject to the requirements and limitations in § 228.22(c) and (d).

(e) *Benefit to assessment area(s)* —(1) *Benefit inside assessment area(s).* The Board considers all qualified investments, community development loans, and community development services that benefit areas within the bank's assessment area(s) or a broader statewide or regional area that includes the bank's assessment area(s).

(2) *Benefit outside assessment area(s).* The Board considers the qualified investments, community development loans, and community development services that benefit areas outside

the bank's assessment area(s), if the bank has adequately addressed the needs of its assessment area(s).

(f) *Community development performance rating.* The Board rates a bank's community development performance as provided in appendix A of this part.

§ 228.26 Small bank performance standards.

(a) *Performance criteria* —(1) *Small banks that are not intermediate small banks.* The Board evaluates the record of a small bank that is not, or that was not during the prior calendar year, an intermediate small bank, of helping to meet the credit needs of its assessment area(s) pursuant to the criteria set forth in paragraph (b) of this section.

(2) *Intermediate small banks.* The Board evaluates the record of a small bank that is, or that was during the prior calendar year, an intermediate small bank, of helping to meet the credit needs of its assessment area(s) pursuant to the criteria set forth in paragraphs (b) and (c) of this section.

(b) *Lending test.* A small bank's lending performance is evaluated pursuant to the following criteria:

(1) The bank's loan-to-deposit ratio, adjusted for seasonal variation, and, as appropriate, other lending-related activities, such as loan originations for sale to the secondary markets, community development loans, or qualified investments;

(2) The percentage of loans and, as appropriate, other lending-related activities located in the bank's assessment area(s);

(3) The bank's record of lending to and, as appropriate, engaging in other lending-related activities for borrowers of different income levels and businesses and farms of different sizes;

(4) The geographic distribution of the bank's loans; and

(5) The bank's record of taking action, if warranted, in response to written complaints about its performance in helping to meet credit needs in its assessment area(s).

(c) *Community development test.* An intermediate small bank's community development performance also is evaluated pursuant to the following criteria:

- (1) The number and amount of community development loans;
- (2) The number and amount of qualified investments;
- (3) The extent to which the bank provides community development services; and
- (4) The bank's responsiveness through such activities to community development lending, investment, and services needs.

(d) *Small bank performance rating.* The Board rates the performance of a bank evaluated under this section as provided in appendix A of this part.

§ 228.27 Strategic plan.

(a) *Alternative election.* The Board will assess a bank's record of helping to meet the credit needs of its assessment area(s) under a strategic plan if:

- (1) The bank has submitted the plan to the Board as provided for in this section;
- (2) The Board has approved the plan;
- (3) The plan is in effect; and
- (4) The bank has been operating under an approved plan for at least one year.

(b) *Data reporting.* The Board's approval of a plan does not affect the bank's obligation, if any, to report data as required by § 228.42.

(c) *Plans in general* —(1) *Term.* A plan may have a term of no more than five years, and any multi-year plan must include annual interim measurable goals under which the Board will evaluate the bank's performance.

(2) *Multiple assessment areas.* A bank with more than one assessment area may prepare a single plan for all of its assessment areas or one or more plans for one or more of its assessment areas.

(3) *Treatment of affiliates.* Affiliated institutions may prepare a joint plan if the plan provides measurable goals for each institution. Activities may be allocated among institutions at the institutions' option, provided that the same activities are not considered for more than one institution.

(d) *Public participation in plan development.* Before submitting a plan to the Board for approval, a bank shall:

(1) Informally seek suggestions from members of the public in its assessment area(s) covered by the plan while developing the plan;

(2) Once the bank has developed a plan, formally solicit public comment on the plan for at least 30 days by publishing notice in at least one newspaper of general circulation in each assessment area covered by the plan; and

(3) During the period of formal public comment, make copies of the plan available for review by the public at no cost at all offices of the bank in any assessment area covered by the plan and provide copies of the plan upon request for a reasonable fee to cover copying and mailing, if applicable.

(e) *Submission of plan.* The bank shall submit its plan to the Board at least three months prior to the proposed effective date of the plan. The bank shall also submit with its plan a description of its informal efforts to seek suggestions from members of the public, any written public comment received, and, if the plan was revised in light of the comment received, the initial plan as released for public comment.

(f) *Plan content* —(1) *Measurable goals*. (i) A bank shall specify in its plan measurable goals for helping to meet the credit needs of each assessment area covered by the plan, particularly the needs of low- and moderate-income geographies and low- and moderate-income individuals, through lending, investment, and services, as appropriate.

(ii) A bank shall address in its plan all three performance categories and, unless the bank has been designated as a wholesale or limited purpose bank, shall emphasize lending and lending-related activities. Nevertheless, a different emphasis, including a focus on one or more performance categories, may be appropriate if responsive to the characteristics and credit needs of its assessment area(s), considering public comment and the bank's capacity and constraints, product offerings, and business strategy.

(2) *Confidential information*. A bank may submit additional information to the Board on a confidential basis, but the goals stated in the plan must be sufficiently specific to enable the public and the Board to judge the merits of the plan.

(3) *Satisfactory and outstanding goals*. A bank shall specify in its plan measurable goals that constitute "satisfactory" performance. A plan may specify measurable goals that constitute "outstanding" performance. If a bank submits, and the Board approves, both "satisfactory" and "outstanding" performance goals, the Board will consider the bank eligible for an "outstanding" performance rating.

(4) *Election if satisfactory goals not substantially met*. A bank may elect in its plan that, if the bank fails to meet substantially its plan goals for a satisfactory rating, the Board will evaluate the bank's performance under the lending, investment, and service tests, the community development test, or the small bank performance standards, as appropriate.

(g) *Plan approval* —(1) *Timing*. The Board will act upon a plan within 60 calendar days after the Board receives the complete plan and other material required under paragraph (e) of this section. If the Board fails to act within this time period, the plan shall be deemed approved unless the Board extends the review period for good cause.

(2) *Public participation*. In evaluating the plan's goals, the Board considers the public's involvement in formulating the plan, written public comment on the plan, and any response by the bank to public comment on the plan.

(3) *Criteria for evaluating plan*. The Board evaluates a plan's measurable goals using the following criteria, as appropriate:

(i) The extent and breadth of lending or lending-related activities, including, as appropriate, the distribution of loans among different geographies, businesses and farms of different sizes, and individuals of different income levels, the extent of community development lending, and the use of innovative or flexible lending practices to address credit needs;

(ii) The amount and innovativeness, complexity, and responsiveness of the bank's qualified investments; and

(iii) The availability and effectiveness of the bank's systems for delivering retail banking services and the extent and innovativeness of the bank's community development services.

(h) *Plan amendment*. During the term of a plan, a bank may request the Board to approve an amendment to the plan on grounds that there has been a material change in circumstances. The bank shall develop an amendment to a previously approved plan in accordance with the public participation requirements of paragraph (d) of this section.

(i) *Plan assessment*. The Board approves the goals and assesses performance under a plan as provided for in appendix A of this part.

§ 228.28 Assigned ratings.

(a) *Ratings in general.* Subject to paragraphs (b) and (c) of this section, the Board assigns to a bank a rating of “outstanding,” “satisfactory,” “needs to improve,” or “substantial noncompliance” based on the bank’s performance under the lending, investment and service tests, the community development test, the small bank performance standards, or an approved strategic plan, as applicable.

(b) *Lending, investment, and service tests.* The Board assigns a rating for a bank assessed under the lending, investment, and service tests in accordance with the following principles:

(1) A bank that receives an “outstanding” rating on the lending test receives an assigned rating of at least “satisfactory”;

(2) A bank that receives an “outstanding” rating on both the service test and the investment test and a rating of at least “high satisfactory” on the lending test receives an assigned rating of “outstanding”; and

(3) No bank may receive an assigned rating of “satisfactory” or higher unless it receives a rating of at least “low satisfactory” on the lending test.

(c) *Effect of evidence of discriminatory or other illegal credit practices.* (1) The Board’s evaluation of a bank’s CRA performance is adversely affected by evidence of discriminatory or other illegal credit practices in any geography by the bank or in any assessment area by any affiliate whose loans have been considered as part of the bank’s lending performance. In connection with any type of lending activity described in § 228.22(a), evidence of discriminatory or other credit practices that violate an applicable law, rule, or regulation includes, but is not limited to:

(i) Discrimination against applicants on a prohibited basis in violation, for example, of the Equal Credit Opportunity Act or the Fair Housing Act;

(ii) Violations of the Home Ownership and Equity Protection Act;

(iii) Violations of section 5 of the Federal Trade Commission Act;

(iv) Violations of section 8 of the Real Estate Settlement Procedures Act; and

(v) Violations of the Truth in Lending Act provisions regarding a consumer's right of rescission.

(2) In determining the effect of evidence of practices described in paragraph (c)(1) of this section on the bank's assigned rating, the Board considers the nature, extent, and strength of the evidence of the practices; the policies and procedures that the bank (or affiliate, as applicable) has in place to prevent the practices; any corrective action that the bank (or affiliate, as applicable) has taken or has committed to take, including voluntary corrective action resulting from self-assessment; and any other relevant information.

§ 228.29 Effect of CRA performance on applications.

(a) *CRA performance.* Among other factors, the Board takes into account the record of performance under the CRA of:

(1) Each applicant bank for the:

(i) Establishment of a domestic branch by a State member bank; and

(ii) Merger, consolidation, acquisition of assets, or assumption of liabilities requiring approval under the Bank Merger Act (12 U.S.C. 1828(c)) if the acquiring, assuming, or resulting bank is to be a State member bank; and

(2) Each insured depository institution (as defined in 12 U.S.C. 1813) controlled by an applicant and subsidiary bank or savings association proposed to be controlled by an applicant:

(i) To become a bank holding company in a transaction that requires approval under section 3 of the Bank Holding Company Act (12 U.S.C. 1842);

(ii) To acquire ownership or control of shares or all or substantially all of the assets of a bank, to cause a bank to become a subsidiary of a bank holding company, or to merge or consolidate a bank holding company with any other bank holding company in a transaction that requires approval under section 3 of the Bank Holding Company Act (12 U.S.C. 1842);

(iii) To own, control or operate a savings association in a transaction that requires approval under section 4 of the Bank Holding Company Act (12 U.S.C. 1843);

(iv) To become a savings and loan holding company in a transaction that requires approval under section 10 of the Home Owners' Loan Act (12 U.S.C. 1467a); and

(v) To acquire ownership or control of shares or all or substantially all of the assets of a savings association, to cause a savings association to become a subsidiary of a savings and loan holding company, or to merge or consolidate a savings and loan holding company with any other savings and loan holding company in a transaction that requires approval under section 10 of the Home Owners' Loan Act (12 U.S.C. 1467a).

(b) *Interested parties.* In considering CRA performance in an application described in paragraph (a) of this section, the Board takes into account any views expressed by interested parties that are submitted in accordance with the Board's Rules of Procedure set forth in part 262 of this chapter.

(c) *Denial or conditional approval of application.* A bank or savings association's record of performance may be the basis for denying or conditioning approval of an application listed in paragraph (a) of this section.

(d) *Definitions.* For purposes of paragraphs (a)(2)(i), (ii), and (iii) of this section, “bank,” “bank holding company,” “subsidiary,” and “savings association” have the meanings given to those terms in section 2 of the Bank Holding Company Act (12 U.S.C. 1841). For purposes of paragraphs (a)(2)(iv) and (v) of this section, “savings and loan holding company” and “subsidiary” has the meaning given to that term in section 10 of the Home Owners’ Loan Act (12 U.S.C. 1467a).

Subpart C—Records, Reporting, and Disclosure Requirements

§ 228.41 Assessment area delineation.

(a) *In general.* A bank shall delineate one or more assessment areas within which the Board evaluates the bank’s record of helping to meet the credit needs of its community. The Board does not evaluate the bank’s delineation of its assessment area(s) as a separate performance criterion, but the Board reviews the delineation for compliance with the requirements of this section.

(b) *Geographic area(s) for wholesale or limited purpose banks.* The assessment area(s) for a wholesale or limited purpose bank must consist generally of one or more MSAs or metropolitan divisions (using the MSA or metropolitan division boundaries that were in effect as of January 1 of the calendar year in which the delineation is made) or one or more contiguous political subdivisions, such as counties, cities, or towns, in which the bank has its main office, branches, and deposit-taking ATMs.

(c) *Geographic area(s) for other banks.* The assessment area(s) for a bank other than a wholesale or limited purpose bank must:

(1) Consist generally of one or more MSAs or metropolitan divisions (using the MSA or metropolitan division boundaries that were in effect as of January 1 of the calendar year in which

the delineation is made) or one or more contiguous political subdivisions, such as counties, cities, or towns; and

(2) Include the geographies in which the bank has its main office, its branches, and its deposit-taking ATMs, as well as the surrounding geographies in which the bank has originated or purchased a substantial portion of its loans (including home mortgage loans, small business and small farm loans, and any other loans the bank chooses, such as those consumer loans on which the bank elects to have its performance assessed).

(d) *Adjustments to geographic area(s)*. A bank may adjust the boundaries of its assessment area(s) to include only the portion of a political subdivision that it reasonably can be expected to serve. An adjustment is particularly appropriate in the case of an assessment area that otherwise would be extremely large, of unusual configuration, or divided by significant geographic barriers.

(e) *Limitations on the delineation of an assessment area*. Each bank's assessment area(s):

(1) Must consist only of whole geographies;

(2) May not reflect illegal discrimination;

(3) May not arbitrarily exclude low- or moderate-income geographies, taking into account the bank's size and financial condition; and

(4) May not extend substantially beyond an MSA boundary or beyond a state boundary unless the assessment area is located in a multistate MSA. If a bank serves a geographic area that extends substantially beyond a state boundary, the bank shall delineate separate assessment areas for the areas in each state. If a bank serves a geographic area that extends substantially beyond an MSA boundary, the bank shall delineate separate assessment areas for the areas inside and outside the MSA.

(f) *Banks serving military personnel.* Notwithstanding the requirements of this section, a bank whose business predominantly consists of serving the needs of military personnel or their dependents who are not located within a defined geographic area may delineate its entire deposit customer base as its assessment area.

(g) *Use of assessment area(s).* The Board uses the assessment area(s) delineated by a bank in its evaluation of the bank's CRA performance unless the Board determines that the assessment area(s) do not comply with the requirements of this section.

§ 228.42 Data collection, reporting, and disclosure.

(a) *Loan information required to be collected and maintained.* A bank, except a small bank, shall collect, and maintain in machine readable form (as prescribed by the Board) until the completion of its next CRA examination, the following data for each small business or small farm loan originated or purchased by the bank:

(1) A unique number or alpha-numeric symbol that can be used to identify the relevant loan file;

(2) The loan amount at origination;

(3) The loan location; and

(4) An indicator whether the loan was to a business or farm with gross annual revenues of \$1 million or less.

(b) *Loan information required to be reported.* A bank, except a small bank or a bank that was a small bank during the prior calendar year, shall report annually by March 1 to the Board in machine readable form (as prescribed by the Board) the following data for the prior calendar year:

(1) *Small business and small farm loan data.* For each geography in which the bank originated or purchased a small business or small farm loan, the aggregate number and amount of loans:

- (i) With an amount at origination of \$100,000 or less;
- (ii) With amount at origination of more than \$100,000 but less than or equal to \$250,000;
- (iii) With an amount at origination of more than \$250,000; and
- (iv) To businesses and farms with gross annual revenues of \$1 million or less (using the revenues that the bank considered in making its credit decision);

(2) *Community development loan data.* The aggregate number and aggregate amount of community development loans originated or purchased; and

(3) *Home mortgage loans.* If the bank is subject to reporting under part 1003 of this chapter, the location of each home mortgage loan application, origination, or purchase outside the MSAs in which the bank has a home or branch office (or outside any MSA) in accordance with the requirements of part 1003 of this chapter.

(c) *Optional data collection and maintenance* —(1) *Consumer loans.* A bank may collect and maintain in machine readable form (as prescribed by the Board) data for consumer loans originated or purchased by the bank for consideration under the lending test. A bank may maintain data for one or more of the following categories of consumer loans: motor vehicle, credit card, other secured, and other unsecured. If the bank maintains data for loans in a certain category, it shall maintain data for all loans originated or purchased within that category. The bank shall maintain data separately for each category, including for each loan:

- (i) A unique number or alpha-numeric symbol that can be used to identify the relevant loan file;

(ii) The loan amount at origination or purchase;

(iii) The loan location; and

(iv) The gross annual income of the borrower that the bank considered in making its credit decision.

(2) *Other loan data.* At its option, a bank may provide other information concerning its lending performance, including additional loan distribution data.

(d) *Data on affiliate lending.* A bank that elects to have the Board consider loans by an affiliate, for purposes of the lending or community development test or an approved strategic plan, shall collect, maintain, and report for those loans the data that the bank would have collected, maintained, and reported pursuant to paragraphs (a), (b), and (c) of this section had the loans been originated or purchased by the bank. For home mortgage loans, the bank shall also be prepared to identify the home mortgage loans reported under part 1003 of this chapter by the affiliate.

(e) *Data on lending by a consortium or a third party.* A bank that elects to have the Board consider community development loans by a consortium or third party, for purposes of the lending or community development tests or an approved strategic plan, shall report for those loans the data that the bank would have reported under paragraph (b)(2) of this section had the loans been originated or purchased by the bank.

(f) *Small banks electing evaluation under the lending, investment, and service tests.* A bank that qualifies for evaluation under the small bank performance standards but elects evaluation under the lending, investment, and service tests shall collect, maintain, and report the data required for other banks pursuant to paragraphs (a) and (b) of this section.

(g) *Assessment area data.* A bank, except a small bank or a bank that was a small bank during the prior calendar year, shall collect and report to the Board by March 1 of each year a list for each assessment area showing the geographies within the area.

(h) *CRA Disclosure Statement.* The Board prepares annually for each bank that reports data pursuant to this section a CRA Disclosure Statement that contains, on a state-by-state basis:

(1) For each county (and for each assessment area smaller than a county) with a population of 500,000 persons or fewer in which the bank reported a small business or small farm loan:

(i) The number and amount of small business and small farm loans reported as originated or purchased located in low-, moderate-, middle-, and upper-income geographies;

(ii) A list grouping each geography according to whether the geography is low-, moderate-, middle-, or upper-income;

(iii) A list showing each geography in which the bank reported a small business or small farm loan; and

(iv) The number and amount of small business and small farm loans to businesses and farms with gross annual revenues of \$1 million or less;

(2) For each county (and for each assessment area smaller than a county) with a population in excess of 500,000 persons in which the bank reported a small business or small farm loan:

(i) The number and amount of small business and small farm loans reported as originated or purchased located in geographies with median income relative to the area median income of less than 10 percent, 10 or more but less than 20 percent, 20 or more but less than 30 percent, 30 or more but less than 40 percent, 40 or more but less than 50 percent, 50 or more but less than 60 percent, 60 or more but less than 70 percent, 70 or more but less than 80 percent, 80 or more but

less than 90 percent, 90 or more but less than 100 percent, 100 or more but less than 110 percent, 110 or more but less than 120 percent, and 120 percent or more;

(ii) A list grouping each geography in the county or assessment area according to whether the median income in the geography relative to the area median income is less than 10 percent, 10 or more but less than 20 percent, 20 or more but less than 30 percent, 30 or more but less than 40 percent, 40 or more but less than 50 percent, 50 or more but less than 60 percent, 60 or more but less than 70 percent, 70 or more but less than 80 percent, 80 or more but less than 90 percent, 90 or more but less than 100 percent, 100 or more but less than 110 percent, 110 or more but less than 120 percent, and 120 percent or more;

(iii) A list showing each geography in which the bank reported a small business or small farm loan; and

(iv) The number and amount of small business and small farm loans to businesses and farms with gross annual revenues of \$1 million or less;

(3) The number and amount of small business and small farm loans located inside each assessment area reported by the bank and the number and amount of small business and small farm loans located outside the assessment area(s) reported by the bank; and

(4) The number and amount of community development loans reported as originated or purchased.

(i) *Aggregate disclosure statements.* The Board, in conjunction with the Office of the Comptroller of the Currency and the Federal Deposit Insurance Corporation, prepares annually, for each MSA or metropolitan division (including an MSA or metropolitan division that crosses a state boundary) and the nonmetropolitan portion of each state, an aggregate disclosure statement of small business and small farm lending by all institutions subject to reporting under

this part or parts 25, 195, or 345 of this title. These disclosure statements indicate, for each geography, the number and amount of all small business and small farm loans originated or purchased by reporting institutions, except that the Board may adjust the form of the disclosure if necessary, because of special circumstances, to protect the privacy of a borrower or the competitive position of an institution.

(j) *Central data depositories.* The Board makes the aggregate disclosure statements, described in paragraph (i) of this section, and the individual bank CRA Disclosure Statements, described in paragraph (h) of this section, available to the public at central data depositories. The Board publishes a list of the depositories at which the statements are available.

§ 228.43 Content and availability of public file.

(a) *Information available to the public.* A bank shall maintain a public file that includes the following information:

(1) All written comments received from the public for the current year and each of the prior two calendar years that specifically relate to the bank's performance in helping to meet community credit needs, and any response to the comments by the bank, if neither the comments nor the responses contain statements that reflect adversely on the good name or reputation of any persons other than the bank or publication of which would violate specific provisions of law;

(2) A copy of the public section of the bank's most recent CRA Performance Evaluation prepared by the Board. The bank shall place this copy in the public file within 30 business days after its receipt from the Board;

(3) A list of the bank's branches, their street addresses, and geographies;

(4) A list of branches opened or closed by the bank during the current year and each of the prior two calendar years, their street addresses, and geographies;

(5) A list of services (including hours of operation, available loan and deposit products, and transaction fees) generally offered at the bank's branches and descriptions of material differences in the availability or cost of services at particular branches, if any. At its option, a bank may include information regarding the availability of alternative systems for delivering retail banking services (e.g., ATMs, ATMs not owned or operated by or exclusively for the bank, banking by telephone or computer, loan production offices, and bank-at-work or bank-by-mail programs);

(6) A map of each assessment area showing the boundaries of the area and identifying the geographies contained within the area, either on the map or in a separate list; and

(7) Any other information the bank chooses.

(b) *Additional information available to the public* —(1) *Banks other than small banks.* A bank, except a small bank or a bank that was a small bank during the prior calendar year, shall include in its public file the following information pertaining to the bank and its affiliates, if applicable, for each of the prior two calendar years:

(i) If the bank has elected to have one or more categories of its consumer loans considered under the lending test, for each of these categories, the number and amount of loans:

(A) To low-, moderate-, middle-, and upper-income individuals;

(B) Located in low-, moderate-, middle-, and upper-income census tracts; and

(C) Located inside the bank's assessment area(s) and outside the bank's assessment area(s);

and

(ii) The bank's CRA Disclosure Statement. The bank shall place the statement in the public file within three business days of its receipt from the Board.

(2) *Banks required to report Home Mortgage Disclosure Act (HMDA) data.* A bank required to report home mortgage loan data pursuant part 1003 of this title shall include in its public file a

written notice that the institution's HMDA Disclosure Statement may be obtained on the Consumer Financial Protection Bureau's (Bureau's) Web site at www.consumerfinance.gov/hmda. In addition, a bank that elected to have the Board consider the mortgage lending of an affiliate shall include in its public file the name of the affiliate and a written notice that the affiliate's HMDA Disclosure Statement may be obtained at the Bureau's Web site. The bank shall place the written notice(s) in the public file within three business days after receiving notification from the Federal Financial Institutions Examination Council of the availability of the disclosure statement(s).

(3) *Small banks.* A small bank or a bank that was a small bank during the prior calendar year shall include in its public file:

(i) The bank's loan-to-deposit ratio for each quarter of the prior calendar year and, at its option, additional data on its loan-to-deposit ratio; and

(ii) The information required for other banks by paragraph (b)(1) of this section, if the bank has elected to be evaluated under the lending, investment, and service tests.

(4) *Banks with strategic plans.* A bank that has been approved to be assessed under a strategic plan shall include in its public file a copy of that plan. A bank need not include information submitted to the Board on a confidential basis in conjunction with the plan.

(5) *Banks with less than satisfactory ratings.* A bank that received a less than satisfactory rating during its most recent examination shall include in its public file a description of its current efforts to improve its performance in helping to meet the credit needs of its entire community. The bank shall update the description quarterly.

(c) *Location of public information.* A bank shall make available to the public for inspection upon request and at no cost the information required in this section as follows:

(1) At the main office and, if an interstate bank, at one branch office in each state, all information in the public file; and

(2) At each branch:

(i) A copy of the public section of the bank's most recent CRA Performance Evaluation and a list of services provided by the branch; and

(ii) Within five calendar days of the request, all the information in the public file relating to the assessment area in which the branch is located.

(d) *Copies.* Upon request, a bank shall provide copies, either on paper or in another form acceptable to the person making the request, of the information in its public file. The bank may charge a reasonable fee not to exceed the cost of copying and mailing (if applicable).

(e) *Updating.* Except as otherwise provided in this section, a bank shall ensure that the information required by this section is current as of April 1 of each year.

§ 228.44 Public notice by banks.

A bank shall provide in the public lobby of its main office and each of its branches the appropriate public notice set forth in appendix B of this part. Only a branch of a bank having more than one assessment area shall include the bracketed material in the notice for branch offices. Only a bank that is an affiliate of a holding company shall include the next to the last sentence of the notices. A bank shall include the last sentence of the notices only if it is an affiliate of a holding company that is not prevented by statute from acquiring additional banks.

§ 228.45 Publication of planned examination schedule.

The Board publishes at least 30 days in advance of the beginning of each calendar quarter a list of banks scheduled for CRA examinations in that quarter.

Appendix A to Part 228—Ratings

(a) *Ratings in general.* (1) In assigning a rating, the Board evaluates a bank's performance under the applicable performance criteria in this part, in accordance with §§ 228.21 and 228.28. This includes consideration of low-cost education loans provided to low-income borrowers and activities in cooperation with minority- or women-owned financial institutions and low-income credit unions, as well as adjustments on the basis of evidence of discriminatory or other illegal credit practices.

(2) A bank's performance need not fit each aspect of a particular rating profile in order to receive that rating, and exceptionally strong performance with respect to some aspects may compensate for weak performance in others. The bank's overall performance, however, must be consistent with safe and sound banking practices and generally with the appropriate rating profile as follows.

(b) *Banks evaluated under the lending, investment, and service tests—*(1) *Lending performance rating.* The Board assigns each bank's lending performance one of the five following ratings.

(i) *Outstanding.* The Board rates a bank's lending performance "outstanding" if, in general, it demonstrates:

(A) Excellent responsiveness to credit needs in its assessment area(s), taking into account the number and amount of home mortgage, small business, small farm, and consumer loans, if applicable, in its assessment area(s);

(B) A substantial majority of its loans are made in its assessment area(s);

(C) An excellent geographic distribution of loans in its assessment area(s);

(D) An excellent distribution, particularly in its assessment area(s), of loans among individuals of different income levels and businesses (including farms) of different sizes, given the product lines offered by the bank;

(E) An excellent record of serving the credit needs of highly economically disadvantaged areas in its assessment area(s), low-income individuals, or businesses (including farms) with gross annual revenues of \$1 million or less, consistent with safe and sound operations;

(F) Extensive use of innovative or flexible lending practices in a safe and sound manner to address the credit needs of low- or moderate-income individuals or geographies; and

(G) It is a leader in making community development loans.

(ii) *High satisfactory*. The Board rates a bank's lending performance "high satisfactory" if, in general, it demonstrates:

(A) Good responsiveness to credit needs in its assessment area(s), taking into account the number and amount of home mortgage, small business, small farm, and consumer loans, if applicable, in its assessment area(s);

(B) A high percentage of its loans are made in its assessment area(s);

(C) A good geographic distribution of loans in its assessment area(s);

(D) A good distribution, particularly in its assessment area(s), of loans among individuals of different income levels and businesses (including farms) of different sizes, given the product lines offered by the bank;

(E) A good record of serving the credit needs of highly economically disadvantaged areas in its assessment area(s), low-income individuals, or businesses (including farms) with gross annual revenues of \$1 million or less, consistent with safe and sound operations;

(F) Use of innovative or flexible lending practices in a safe and sound manner to address the credit needs of low- or moderate-income individuals or geographies; and

(G) It has made a relatively high level of community development loans.

(iii) *Low satisfactory.* The Board rates a bank's lending performance "low satisfactory" if, in general, it demonstrates:

(A) Adequate responsiveness to credit needs in its assessment area(s), taking into account the number and amount of home mortgage, small business, small farm, and consumer loans, if applicable, in its assessment area(s);

(B) An adequate percentage of its loans are made in its assessment area(s);

(C) An adequate geographic distribution of loans in its assessment area(s);

(D) An adequate distribution, particularly in its assessment area(s), of loans among individuals of different income levels and businesses (including farms) of different sizes, given the product lines offered by the bank;

(E) An adequate record of serving the credit needs of highly economically disadvantaged areas in its assessment area(s), low-income individuals, or businesses (including farms) with gross annual revenues of \$1 million or less, consistent with safe and sound operations;

(F) Limited use of innovative or flexible lending practices in a safe and sound manner to address the credit needs of low- or moderate-income individuals or geographies; and

(G) It has made an adequate level of community development loans.

(iv) *Needs to improve.* The Board rates a bank's lending performance "needs to improve" if, in general, it demonstrates:

(A) Poor responsiveness to credit needs in its assessment area(s), taking into account the number and amount of home mortgage, small business, small farm, and consumer loans, if applicable, in its assessment area(s);

(B) A small percentage of its loans are made in its assessment area(s);

(C) A poor geographic distribution of loans, particularly to low- or moderate-income geographies, in its assessment area(s);

(D) A poor distribution, particularly in its assessment area(s), of loans among individuals of different income levels and businesses (including farms) of different sizes, given the product lines offered by the bank;

(E) A poor record of serving the credit needs of highly economically disadvantaged areas in its assessment area(s), low-income individuals, or businesses (including farms) with gross annual revenues of \$1 million or less, consistent with safe and sound operations;

(F) Little use of innovative or flexible lending practices in a safe and sound manner to address the credit needs of low- or moderate-income individuals or geographies; and

(G) It has made a low level of community development loans.

(v) *Substantial noncompliance.* The Board rates a bank's lending performance as being in "substantial noncompliance" if, in general, it demonstrates:

(A) A very poor responsiveness to credit needs in its assessment area(s), taking into account the number and amount of home mortgage, small business, small farm, and consumer loans, if applicable, in its assessment area(s);

(B) A very small percentage of its loans are made in its assessment area(s);

(C) A very poor geographic distribution of loans, particularly to low- or moderate-income geographies, in its assessment area(s);

(D) A very poor distribution, particularly in its assessment area(s), of loans among individuals of different income levels and businesses (including farms) of different sizes, given the product lines offered by the bank;

(E) A very poor record of serving the credit needs of highly economically disadvantaged areas in its assessment area(s), low-income individuals, or businesses (including farms) with gross annual revenues of \$1 million or less, consistent with safe and sound operations;

(F) No use of innovative or flexible lending practices in a safe and sound manner to address the credit needs of low- or moderate-income individuals or geographies; and

(G) It has made few, if any, community development loans.

(2) *Investment performance rating.* The Board assigns each bank's investment performance one of the five following ratings.

(i) *Outstanding.* The Board rates a bank's investment performance "outstanding" if, in general, it demonstrates:

(A) An excellent level of qualified investments, particularly those that are not routinely provided by private investors, often in a leadership position;

(B) Extensive use of innovative or complex qualified investments; and

(C) Excellent responsiveness to credit and community development needs.

(ii) *High satisfactory.* The Board rates a bank's investment performance "high satisfactory" if, in general, it demonstrates:

(A) A significant level of qualified investments, particularly those that are not routinely provided by private investors, occasionally in a leadership position;

(B) Significant use of innovative or complex qualified investments; and

(C) Good responsiveness to credit and community development needs.

(iii) *Low satisfactory*. The Board rates a bank's investment performance "low satisfactory" if, in general, it demonstrates:

(A) An adequate level of qualified investments, particularly those that are not routinely provided by private investors, although rarely in a leadership position;

(B) Occasional use of innovative or complex qualified investments; and

(C) Adequate responsiveness to credit and community development needs.

(iv) *Needs to improve*. The Board rates a bank's investment performance "needs to improve" if, in general, it demonstrates:

(A) A poor level of qualified investments, particularly those that are not routinely provided by private investors;

(B) Rare use of innovative or complex qualified investments; and

(C) Poor responsiveness to credit and community development needs.

(v) *Substantial noncompliance*. The Board rates a bank's investment performance as being in "substantial noncompliance" if, in general, it demonstrates:

(A) Few, if any, qualified investments, particularly those that are not routinely provided by private investors;

(B) No use of innovative or complex qualified investments; and

(C) Very poor responsiveness to credit and community development needs.

(3) *Service performance rating*. The Board assigns each bank's service performance one of the five following ratings.

(i) *Outstanding*. The Board rates a bank's service performance "outstanding" if, in general, the bank demonstrates:

(A) Its service delivery systems are readily accessible to geographies and individuals of different income levels in its assessment area(s);

(B) To the extent changes have been made, its record of opening and closing branches has improved the accessibility of its delivery systems, particularly in low- or moderate-income geographies or to low- or moderate-income individuals;

(C) Its services (including, where appropriate, business hours) are tailored to the convenience and needs of its assessment area(s), particularly low- or moderate-income geographies or low- or moderate-income individuals; and

(D) It is a leader in providing community development services.

(ii) *High satisfactory*. The Board rates a bank's service performance "high satisfactory" if, in general, the bank demonstrates:

(A) Its service delivery systems are accessible to geographies and individuals of different income levels in its assessment area(s);

(B) To the extent changes have been made, its record of opening and closing branches has not adversely affected the accessibility of its delivery systems, particularly in low- and moderate-income geographies and to low- and moderate-income individuals;

(C) Its services (including, where appropriate, business hours) do not vary in a way that inconveniences its assessment area(s), particularly low- and moderate-income geographies and low- and moderate-income individuals; and

(D) It provides a relatively high level of community development services.

(iii) *Low satisfactory*. The Board rates a bank's service performance "low satisfactory" if, in general, the bank demonstrates:

(A) Its service delivery systems are reasonably accessible to geographies and individuals of different income levels in its assessment area(s);

(B) To the extent changes have been made, its record of opening and closing branches has generally not adversely affected the accessibility of its delivery systems, particularly in low- and moderate-income geographies and to low- and moderate-income individuals;

(C) Its services (including, where appropriate, business hours) do not vary in a way that inconveniences its assessment area(s), particularly low- and moderate-income geographies and low- and moderate-income individuals; and

(D) It provides an adequate level of community development services.

(iv) *Needs to improve.* The Board rates a bank's service performance "needs to improve" if, in general, the bank demonstrates:

(A) Its service delivery systems are unreasonably inaccessible to portions of its assessment area(s), particularly to low- or moderate-income geographies or to low- or moderate-income individuals;

(B) To the extent changes have been made, its record of opening and closing branches has adversely affected the accessibility its delivery systems, particularly in low- or moderate-income geographies or to low- or moderate-income individuals;

(C) Its services (including, where appropriate, business hours) vary in a way that inconveniences its assessment area(s), particularly low- or moderate-income geographies or low- or moderate-income individuals; and

(D) It provides a limited level of community development services.

(v) *Substantial noncompliance.* The Board rates a bank's service performance as being in "substantial noncompliance" if, in general, the bank demonstrates:

(A) Its service delivery systems are unreasonably inaccessible to significant portions of its assessment area(s), particularly to low- or moderate-income geographies or to low- or moderate-income individuals;

(B) To the extent changes have been made, its record of opening and closing branches has significantly adversely affected the accessibility of its delivery systems, particularly in low- or moderate-income geographies or to low- or moderate-income individuals;

(C) Its services (including, where appropriate, business hours) vary in a way that significantly inconveniences its assessment area(s), particularly low- or moderate-income geographies or low- or moderate-income individuals; and

(D) It provides few, if any, community development services.

(c) *Wholesale or limited purpose banks.* The Board assigns each wholesale or limited purpose bank's community development performance one of the four following ratings.

(1) *Outstanding.* The Board rates a wholesale or limited purpose bank's community development performance "outstanding" if, in general, it demonstrates:

(i) A high level of community development loans, community development services, or qualified investments, particularly investments that are not routinely provided by private investors;

(ii) Extensive use of innovative or complex qualified investments, community development loans, or community development services; and

(iii) Excellent responsiveness to credit and community development needs in its assessment area(s).

(2) *Satisfactory.* The Board rates a wholesale or limited purpose bank's community development performance "satisfactory" if, in general, it demonstrates:

(i) An adequate level of community development loans, community development services, or qualified investments, particularly investments that are not routinely provided by private investors;

(ii) Occasional use of innovative or complex qualified investments, community development loans, or community development services; and

(iii) Adequate responsiveness to credit and community development needs in its assessment area(s).

(3) *Needs to improve.* The Board rates a wholesale or limited purpose bank's community development performance as "needs to improve" if, in general, it demonstrates:

(i) A poor level of community development loans, community development services, or qualified investments, particularly investments that are not routinely provided by private investors;

(ii) Rare use of innovative or complex qualified investments, community development loans, or community development services; and

(iii) Poor responsiveness to credit and community development needs in its assessment area(s).

(4) *Substantial noncompliance.* The Board rates a wholesale or limited purpose bank's community development performance in "substantial noncompliance" if, in general, it demonstrates:

(i) Few, if any, community development loans, community development services, or qualified investments, particularly investments that are not routinely provided by private investors;

(ii) No use of innovative or complex qualified investments, community development loans, or community development services; and

(iii) Very poor responsiveness to credit and community development needs in its assessment area(s).

(d) *Banks evaluated under the small bank performance standards—(1) Lending test ratings.*

(i) *Eligibility for a satisfactory lending test rating.* The Board rates a small bank's lending performance "satisfactory" if, in general, the bank demonstrates:

(A) A reasonable loan-to-deposit ratio (considering seasonal variations) given the bank's size, financial condition, the credit needs of its assessment area(s), and taking into account, as appropriate, other lending-related activities such as loan originations for sale to the secondary markets and community development loans and qualified investments;

(B) A majority of its loans and, as appropriate, other lending-related activities, are in its assessment area;

(C) A distribution of loans to and, as appropriate, other lending-related activities for individuals of different income levels (including low- and moderate-income individuals) and businesses and farms of different sizes that is reasonable given the demographics of the bank's assessment area(s);

(D) A record of taking appropriate action, when warranted, in response to written complaints, if any, about the bank's performance in helping to meet the credit needs of its assessment area(s); and

(E) A reasonable geographic distribution of loans given the bank's assessment area(s).

(ii) *Eligibility for an “outstanding” lending test rating.* A small bank that meets each of the standards for a “satisfactory” rating under this paragraph and exceeds some or all of those standards may warrant consideration for a lending test rating of “outstanding.”

(iii) *Needs to improve or substantial noncompliance ratings.* A small bank may also receive a lending test rating of “needs to improve” or “substantial noncompliance” depending on the degree to which its performance has failed to meet the standard for a “satisfactory” rating.

(2) *Community development test ratings for intermediate small banks* —(i) *Eligibility for a satisfactory community development test rating.* The Board rates an intermediate small bank’s community development performance “satisfactory” if the bank demonstrates adequate responsiveness to the community development needs of its assessment area(s) through community development loans, qualified investments, and community development services. The adequacy of the bank’s response will depend on its capacity for such community development activities, its assessment area’s need for such community development activities, and the availability of such opportunities for community development in the bank’s assessment area(s).

(ii) *Eligibility for an outstanding community development test rating.* The Board rates an intermediate small bank’s community development performance “outstanding” if the bank demonstrates excellent responsiveness to community development needs in its assessment area(s) through community development loans, qualified investments, and community development services, as appropriate, considering the bank’s capacity and the need and availability of such opportunities for community development in the bank’s assessment area(s).

(iii) *Needs to improve or substantial noncompliance ratings.* An intermediate small bank may also receive a community development test rating of “needs to improve” or “substantial

noncompliance” depending on the degree to which its performance has failed to meet the standards for a “satisfactory” rating.

(3) *Overall rating* —(i) *Eligibility for a satisfactory overall rating.* No intermediate small bank may receive an assigned overall rating of “satisfactory” unless it receives a rating of at least “satisfactory” on both the lending test and the community development test.

(ii) *Eligibility for an outstanding overall rating.* (A) An intermediate small bank that receives an “outstanding” rating on one test and at least “satisfactory” on the other test may receive an assigned overall rating of “outstanding.”

(B) A small bank that is not an intermediate small bank that meets each of the standards for a “satisfactory” rating under the lending test and exceeds some or all of those standards may warrant consideration for an overall rating of “outstanding.” In assessing whether a bank’s performance is “outstanding,” the Board considers the extent to which the bank exceeds each of the performance standards for a “satisfactory” rating and its performance in making qualified investments and its performance in providing branches and other services and delivery systems that enhance credit availability in its assessment area(s).

(iii) *Needs to improve or substantial noncompliance overall ratings.* A small bank may also receive a rating of “needs to improve” or “substantial noncompliance” depending on the degree to which its performance has failed to meet the standards for a “satisfactory” rating.

(e) *Strategic plan assessment and rating*—(1) *Satisfactory goals.* The Board approves as “satisfactory” measurable goals that adequately help to meet the credit needs of the bank’s assessment area(s).

(2) *Outstanding goals.* If the plan identifies a separate group of measurable goals that substantially exceed the levels approved as “satisfactory,” the Board will approve those goals as “outstanding.”

(3) *Rating.* The Board assesses the performance of a bank operating under an approved plan to determine if the bank has met its plan goals:

(i) If the bank substantially achieves its plan goals for a satisfactory rating, the Board will rate the bank’s performance under the plan as “satisfactory.”

(ii) If the bank exceeds its plan goals for a satisfactory rating and substantially achieves its plan goals for an outstanding rating, the Board will rate the bank’s performance under the plan as “outstanding.”

(iii) If the bank fails to meet substantially its plan goals for a satisfactory rating, the Board will rate the bank as either “needs to improve” or “substantial noncompliance,” depending on the extent to which it falls short of its plan goals, unless the bank elected in its plan to be rated otherwise, as provided in § 228.27(f)(4).

Appendix B to Part 228—CRA Notice

(a) Notice for main offices and, if an interstate bank, one branch office in each state.

COMMUNITY REINVESTMENT ACT NOTICE

Under the Federal Community Reinvestment Act (CRA), the Federal Reserve Board (Board) evaluates our record of helping to meet the credit needs of this community consistent with safe and sound operations. The Board also takes this record into account when deciding on certain applications submitted by us.

Your involvement is encouraged.

You are entitled to certain information about our operations and our performance under the CRA, including, for example, information about our branches, such as their location and services provided at them; the public section of our most recent CRA Performance Evaluation, prepared by the Federal Reserve Bank of ____ (Reserve Bank); and comments received from the public relating to our performance in helping to meet community credit needs, as well as our responses to those comments. You may review this information today.

At least 30 days before the beginning of each quarter, the Federal Reserve System publishes a list of the banks that are scheduled for CRA examination by the Reserve Bank in that quarter. This list is available from (title of responsible official), Federal Reserve Bank of ____ (address). You may send written comments about our performance in helping to meet community credit needs to (name and address of official at bank) and (title of responsible official), Federal Reserve Bank of ____ (address). Your letter, together with any response by us, will be considered by the Federal Reserve System in evaluating our CRA performance and may be made public.

You may ask to look at any comments received by the Reserve Bank. You may also request from the Reserve Bank an announcement of our applications covered by the CRA filed with the Reserve Bank. We are an affiliate of (name of holding company), a bank holding company. You may request from (title of responsible official), Federal Reserve Bank of ____ (address) an announcement of applications covered by the CRA filed by bank holding companies.

(b) Notice for branch offices.

COMMUNITY REINVESTMENT ACT NOTICE

Under the Federal Community Reinvestment Act (CRA), the Federal Reserve Board (Board) evaluates our record of helping to meet the credit needs of this community consistent with safe

and sound operations. The Board also takes this record into account when deciding on certain applications submitted by us.

Your involvement is encouraged.

You are entitled to certain information about our operations and our performance under the CRA. You may review today the public section of our most recent CRA evaluation, prepared by the Federal Reserve Bank of ____ (address), and a list of services provided at this branch. You may also have access to the following additional information, which we will make available to you at this branch within five calendar days after you make a request to us: (1) a map showing the assessment area containing this branch, which is the area in which the Board evaluates our CRA performance in this community; (2) information about our branches in this assessment area; (3) a list of services we provide at those locations; (4) data on our lending performance in this assessment area; and (5) copies of all written comments received by us that specifically relate to our CRA performance in this assessment area, and any responses we have made to those comments. If we are operating under an approved strategic plan, you may also have access to a copy of the plan.

[If you would like to review information about our CRA performance in other communities served by us, the public file for our entire bank is available at (name of office located in state), located at (address).]

At least 30 days before the beginning of each quarter, the Federal Reserve System publishes a list of the banks that are scheduled for CRA examination by the Reserve Bank in that quarter. This list is available from (title of responsible official), Federal Reserve Bank of ____ (address). You may send written comments about our performance in helping to meet community credit needs to (name and address of official at bank) and (title of responsible official), Federal Reserve

Bank of ____ (address). Your letter, together with any response by us, will be considered by the Federal Reserve System in evaluating our CRA performance and may be made public.

You may ask to look at any comments received by the Reserve Bank. You may also request from the Reserve Bank an announcement of our applications covered by the CRA filed with the Reserve Bank. We are an affiliate of (name of holding company), a bank holding company.

You may request from (title of responsible official), Federal Reserve Bank of ____ (address) an announcement of applications covered by the CRA filed by bank holding companies.

FEDERAL DEPOSIT INSURANCE CORPORATION

12 CFR Chapter III

Authority and Issuance

For the reasons discussed in the preamble, the Federal Deposit Insurance Corporation proposes to revise part 345 of chapter III of title 12 of the Code of Federal Regulations to read as follows:

PART 345— COMMUNITY REINVESTMENT

50. Revise the authority citation for part 345 to read as follows:

Authority: 12 U.S.C. 1814-1817, 1819-1820, 1828, 1831u, 2901-2908, 3103-3104, and 3108(a).

51. Revise part 345 as set forth at the end of the common preamble.

52. Amend newly revised part 345 by:

- a. Removing the word “[Agency]” wherever it appears and adding “FDIC” in its place;
- b. Removing the word “[Agency]” wherever it appears and adding “FDIC” in its place;
- c. Removing “[operations subsidiary or operating subsidiary]” wherever it appears and adding “operating subsidiary” in its place;

d. Removing “[*operations subsidiaries or operating subsidiaries*]” wherever it appears and adding “*operating subsidiaries*” in its place.

53. Amend § 345.11 by revising paragraphs (a) and (c) to read as follows:

§ 345.11 Authority, purposes, and scope.

(a) *Authority.* The authority for this part is 12 U.S.C. 1814-1817, 1819-1820, 1828, 1831u, 2901-2908, 3103-3104, and 3108(a).

* * * * *

(c) *Scope.* (1) *General.* Except for certain special purpose banks described in paragraph (c)(3) of this section, this part applies to all insured State nonmember banks, including insured State branches as described in paragraph (c)(2) and any uninsured State branch that results from an acquisition described in section 5(a)(8) of the International Banking Act of 1978 (12 U.S.C. 3103(a)(8)).

(2) *Insured State branches.* Insured State branches are branches of a foreign bank established and operating under the laws of any State, the deposits of which are insured in accordance with the provisions of the Federal Deposit Insurance Act. In the case of insured State branches, references in this part to main office mean the principal branch within the United States and the term branch or branches refers to any insured State branch or branches located within the United States. The facility-based assessment areas and, as applicable, retail lending assessment areas and outside retail lending area of an insured State branch is the community or communities located within the United States served by the branch as described in § 345.16 and, as applicable, § 345.17 and § 345.18.

(3) *Certain special purpose banks.* This part does not apply to special purpose banks that do not perform commercial or retail banking services by granting credit to the public in the ordinary

course of business, other than as incident to their specialized operations. These banks include banker's banks, as defined in 12 U.S.C. 24 (Seventh), and banks that engage only in one or more of the following activities: providing cash management controlled disbursement services or serving as correspondent banks, trust companies, or clearing agents.

54. Amend § 345.12 as follows:

- a. Add the definition of "*Bank*"; and
- b. Add the definition of "*Operating subsidiary*".

The revisions and addition read as follows:

§ 345.12 Definitions

* * * * *

Bank means a State nonmember bank, as that term is defined in section 3(e)(2) of the Federal Deposit Insurance Act (FDIA) (12 U.S.C. 1813(e)(2)), with Federally insured deposits, except as defined in § 345.11(c)). The term bank also includes an insured State branch as defined in § 345.11(c)).

Operating subsidiary, for purposes of this part, means an operating subsidiary as described in 12 CFR 5.34.

55. Delayed indefinitely, § 345.12 is amended by:

- a. In the definition of "*Loan location*", revising paragraph (3);
- b. In the definition of "*Reported loan*", revising paragraph (2); and
- c. Revising the definitions of "*Small business*", "*Small business loan*", "*Small farm*", and "*Small farm loan*".

The revisions read as follows:

§ 345.12 Definitions.

* * * * *

Loan location * * *

* * * * *

(3) A small business loan or small farm loan is located in the census tract reported pursuant to subpart B of 12 CFR part 1002.

Reported loan means * * *

* * * * *

(2) A small business loan or small farm loan reported by a bank pursuant to subpart B of 12 CFR part 1002.

* * * * *

Small business means a small business, other than a small farm, as defined in Section 704B of the Equal Credit Opportunity Act (15 U.S.C. 1691c-2) and implemented by 12 CFR 1002.106.

Small business loan means a loan to a small business as defined in this section.

Small farm means a small business, as defined in Section 704B of the Equal Credit Opportunity Act (15 U.S.C. 1691c-2) and implemented by 12 CFR 1002.106, and that is identified with one of the 3-digit North American Industry Classification System (NAICS) codes 111-115.

Small farm loan means a loan to a small farm as defined in this section.

§ 345.14 Community development illustrative list; Confirmation of eligibility.

56. In § 345.14 amend paragraphs (b)(2)(ii) and (b)(3) by removing “[other Agencies]” and adding in their place “Federal Reserve and OCC”.

§ 345.22 Retail lending test.

57. Delayed indefinitely, § 345.22 is amended by:

a. Removing each use of the term “Businesses” in § 345.22(e)(2)(ii)(C) and § 345.22(e)(2)(ii)(D) and adding in their place “Small businesses”; and

b. Removing each use of the term “Farms” in § 345.22(e)(2)(ii)(E) and § 345.22(e)(2)(ii)(F) and adding in their place “Small farms”.

58. Add § 345.31 to read as follows:

§ 345.31 Effect of CRA performance on applications.

(a) *CRA performance.* Among other factors, the FDIC takes into account the record of performance under the CRA of each applicant bank in considering an application for approval of:

(1) The establishment of a domestic branch or other facility with the ability to accept deposits;

(2) The relocation of the bank’s main office or a branch;

(3) The merger, consolidation, acquisition of assets, or assumption of liabilities; and

(4) Deposit insurance for a newly chartered financial institution.

(b) *New financial institutions.* A newly chartered financial institution shall submit with its application for deposit insurance a description of how it will meet its CRA objectives. The FDIC takes the description into account in considering the application and may deny or condition approval on that basis.

(c) *Interested parties.* The FDIC takes into account any views expressed by interested parties that are submitted in accordance with the FDIC’s procedures set forth in part 303 of this chapter in considering CRA performance in an application listed in paragraphs (a) and (b) of this section.

(d) *Denial or conditional approval of application.* A bank’s record of performance may be the basis for denying or conditioning approval of an application listed in paragraph (a) of this section.

§ 345.42 Data collection, reporting, and disclosure.

59. Delayed indefinitely, § 345.42 is amended as follows:

- a. By revising paragraph (a)(1);
- b. By removing and reserving paragraph (b)(1); and
- c. By removing each use of the phrase “small business loans and small farm loans reported as originated or purchased” in paragraphs (g)(1)(i) and (g)(2)(i) and adding in their place “small business loans and small farm loans reported as originated”.

The revision reads as follows:

§ 345.42 Data collection, reporting, and disclosure.

(a) *Information required to be collected and maintained.* (1) *Purchases of small business loans and small farm loans data.* A bank that opts to have the FDIC consider its purchases of small business loans and small farm loans must collect and maintain in electronic form, as prescribed by the FDIC, until the completion of the bank’s next CRA examination in which the data are evaluated, the following data for each small business loan or small farm loan purchased by the bank during the evaluation period:

- (i) A unique number or alpha-numeric symbol that can be used to identify the relevant loan file;
- (ii) An indicator for the loan type as reported on the bank’s Call Report or on the bank’s Report of Assets and Liabilities of U.S. Branches and Agencies of Foreign Banks, as applicable;
- (iii) The date of the loan purchase;
- (iv) The loan amount at purchase;
- (v) The loan location, including State, county, and census tract;

(vi) An indicator for whether the purchased loan was to a business or farm with gross annual revenues of \$250,000 or less;

(vii) An indicator for whether the purchased loan was to a business or farm with gross annual revenues greater than \$250,000 but less than or equal to \$1 million;

(viii) An indicator for whether the purchased loan was to a business or farm with gross annual revenues greater than \$1 million; and

(ix) An indicator for whether the purchased loan was to a business or farm for which gross annual revenues are not known by the bank.

* * * * *

§ 345.43 Content and availability of public file.

60. In § 345.43 amend paragraph (b)(2)(i) by removing “[operations subsidiaries’ or operating subsidiaries’]” and adding “operating subsidiaries” in its place.

61. Delayed indefinitely, § 345.43 paragraph (b)(2) is amended as follows:

- a. By revising the heading; and
- b. Adding a new paragraph (b)(2)(iii).

The revision and addition read as follows:

§ 345.43 Content and availability of public file

* * * * *

(b) * * *

(2) *Banks required to report HMDA data and Small Business Lending data.* * * *

* * * * *

“(iii) *Small business lending data notice.* A bank required to report small business loan or small farm loan data pursuant to 12 CFR part 1002 must include in its public file a written notice

that the bank’s small business loan and small farm loan data may be obtained on the CFPB’s website at: <https://www.consumerfinance.gov/data-research/small-business-lending/>.”

§ 345.46 Public engagement.

62. In § 345.46 amend paragraph (b) by removing “[Agency contact information]” and adding in its place “CRACommentCollector@fdic.gov or to the address of the appropriate FDIC regional office found at <https://www.fdic.gov/resources/bankers/community-reinvestment-act/cra-regional-contacts-list.html>”.

§ 345.51 Applicability dates and transition provisions.

63. In § 345.51 amend paragraph (e) by:

a. Removing “[*part x*]” and adding “*12 CFR part 345*” in its place;

b. Removing “[other Agencies’ regulations]” and adding “12 CFR part 25, or 12 CFR part 228” in its place.

64. Revise the heading of appendix A to read as follows:

Appendix A to Part 345—Calculations for the Retail Lending Test

65. Delayed indefinitely, appendix A to part 345 is amended as follows:

a. By adding “A bank’s loan purchases that otherwise meet the definition of a covered credit transaction to a small business, as those terms are defined in 12 CFR 1002.104 and 12 CFR 1002.106(b), may be included in the numerator of the Bank Volume Metric at the bank’s option.” at the end of paragraph I.a.1;

b. By removing the phrase “subject to reporting pursuant to 12 CFR 25.42(b)(1), 228.42(b)(1), 345.42(b)(1),” in paragraph I.b and adding in its place the phrase “subject to reporting pursuant to subpart B of 12 CFR part 1002”;

c. By adding the phrase “A bank’s loan purchases that otherwise meet the definition of a covered credit transaction to a small business, as provided in 12 CFR 1002.104 and 12 CFR 1002.106(b), may be included in the numerator of the Geographic Bank Metric at the bank’s option.” at the end of paragraph III.a.1;

d. By removing paragraphs III.c.3.i and III.c.3.ii and adding in their place “i. Summing, over the years in the evaluation period, the numbers of small businesses in low-income census tracts in the facility-based assessment area or retail lending assessment area. ii. Summing, over the years in the evaluation period, the numbers of small businesses in the facility-based assessment area or retail lending assessment area.”;

e. By removing paragraphs III.c.4.i and III.c.4.ii and adding in their place “i. Summing, over the years in the evaluation period, the numbers of small businesses in moderate-income census tracts in the facility-based assessment area or retail lending assessment area. ii. Summing, over the years in the evaluation period, the numbers of small businesses in the facility-based assessment area or retail lending assessment area.”;

f. By removing paragraphs III.c.5.i and III.c.5.ii and adding in their place “i. Summing, over the years in the evaluation period, the numbers of small farms in low-income census tracts in the facility-based assessment area or retail lending assessment area. ii. Summing, over the years in the evaluation period, the numbers of small farms in the facility-based assessment area or retail lending assessment area.”;

g. By removing paragraphs III.c.6.i and III.c.6.ii and adding in their place “i. Summing, over the years in the evaluation period, the numbers of small farms in moderate-income census tracts in the facility-based assessment area or retail lending assessment area. ii. Summing, over the

years in the evaluation period, the numbers of small farms in the facility-based assessment area or retail lending assessment area.”;

h. By removing Example A-7 and adding in its place “The applicable benchmark uses a three-year evaluation period. There were 4,000 small business establishments, based upon the sum of the numbers of small business establishments over the years in the evaluation period (1,300 small business establishments in year 1, 1,300 small business establishments in year 2, and 1,400 small business establishments in year 3), in a bank’s facility-based assessment area. Of these small business establishments, 500 small business establishments were in low-income census tracts, based upon the sum of the numbers of small business establishments in low-income census tracts over the years in the evaluation period (200 small business establishments in year 1, 150 small business in year 2, and 150 small business establishments in year 3). The Geographic Community Benchmark for small business loans in low-income census tracts would be 500 divided by 4,000, or 0.125 (equivalently, 12.5 percent). In addition, 1,000 small business establishments in that facility-based assessment area were in moderate-income census tracts, over the years in the evaluation period (400 small business establishments in year 1, 300 small business establishments in year 2, and 300 small business establishments in year 3). The Geographic Community Benchmark for small business loans in moderate-income census tracts would be 1,000 divided by 4,000, or 0.25 (equivalently, 25 percent).”

$$\frac{\textit{Small Businesses in Low – Income Census Tracts (500)}}{\textit{Small Businesses (4,000)}}$$

$$= \textit{Geographic Community Benchmark (12.5\%)}$$

$$\frac{\textit{Small Businesses in Moderate – Income Census Tracts (1,000)}}{\textit{Small Businesses (4,000)}}$$

$$= \textit{Geographic Community Benchmark (25\%)}$$

i. By removing from the third introductory paragraph to section IV: “For small business loans, the FDIC calculates these metrics and benchmarks for each of the following *designated borrowers*: (i) businesses with gross annual revenues of \$250,000 or less; and (ii) businesses with gross annual revenues of more than \$250,000 but less than or equal to \$1 million.” And adding in its place “For small business loans, the FDIC calculates these metrics and benchmarks for each of the following *designated borrowers*: (i) small businesses with gross annual revenues of \$250,000 or less; and (ii) small businesses with gross annual revenues of more than \$250,000 but less than or equal to \$1 million.”;

j. By removing from the fourth introductory paragraph to section IV: “For small farm loans, the FDIC calculates these metrics and benchmarks for each of the following *designated borrowers*: (i) farms with gross annual revenues of \$250,000 or less; and (ii) farms with gross annual revenues of more than \$250,000 but less than or equal to \$1 million.” And adding in its place: “For small farm loans, the FDIC calculates these metrics and benchmarks for each of the following *designated borrowers*: (i) small farms with gross annual revenues of \$250,000 or less; and (ii) small farms with gross annual revenues of more than \$250,000 but less than or equal to \$1 million.”;

k. By adding at the end of paragraph IV.a.1: “A bank’s loan purchases that otherwise meet the definition of a covered credit transaction to a small business, as provided in 12 CFR 1002.104 and 12 CFR 1002.106(b), may be included in the numerator of the Borrower Bank Metric at the bank’s option.”;

l. By removing the introductory paragraph to IV.c.3 and paragraphs IV.c.3.i, and IV.c.3.ii and adding in their place: “3. For small business loans, the FDIC calculates a Borrower Community Benchmark for small businesses with gross annual revenues of \$250,000 or less by:

i. Summing, over the years in the evaluation period, the numbers of small businesses with gross annual revenues of \$250,000 or less in the facility-based lending area or retail lending assessment area. ii. Summing, over the years in the evaluation period, the numbers of small businesses in the facility-based lending area or retail lending assessment area.”;

m. By removing the introductory paragraph to IV.c.4 and paragraphs IV.c.4.i, and IV.c.4.ii and adding in their place: “4. For small business loans, the FDIC calculates a Borrower Community Benchmark for small businesses with gross annual revenues of more than \$250,000 but less than or equal to \$1 million by: i. Summing, over the years in the evaluation period, the numbers of small businesses with gross annual revenues of more than \$250,000 but less than or equal to \$1 million in the facility-based lending area or retail lending assessment area. ii. Summing, over the years in the evaluation period, the numbers of small businesses in the facility-based lending area or retail lending assessment area.”;

n. By removing the introductory paragraph to IV.c.5 and paragraphs IV.c.5.i, and IV.c.5.ii and adding in their place: “5. For small farm loans, the FDIC calculates a Borrower Community Benchmark for small farms with gross annual revenues of \$250,000 or less by: i. Summing, over the years in the evaluation period, the numbers of small farms with gross annual revenues of \$250,000 or less in the facility-based lending area or retail lending assessment area. ii. Summing, over the years in the evaluation period, the numbers of small farms in the facility-based lending area or retail lending assessment area.”;

o. By removing the introductory paragraph to IV.c.6 and paragraphs IV.c.6.i, and IV.c.6.ii and adding in their place: “6. For small farm loans, the FDIC calculates a Borrower Community Benchmark for small farms with gross annual revenues of more than \$250,000 but less than or equal to \$1 million by: i. Summing, over the years in the evaluation period, the numbers of

small farms with gross annual revenues of more than \$250,000 but less than or equal to \$1 million in the facility-based lending area or retail lending assessment area. ii. Summing, over the years in the evaluation period, the numbers of small farms in the facility-based lending area or retail lending assessment area.”;

p. By removing each use of the term “businesses” and adding in its place “small businesses” in Table 1 to Appendix A;

q. By removing each use of the term “Businesses” and adding in its place “Small businesses” in Table 1 to Appendix A;

r. By removing each use of the term “farms” and adding in its place “small farms” in Table 1 to Appendix A;

s. By removing each use of the term “Farms” and adding in its place “Small farms” in Table 1 to Appendix A;

t. By removing each use of the term “businesses” and adding in its place “small businesses” in Table 3 to Appendix A;

u. By removing each use of the term “Businesses” and adding in its place “Small businesses” in Table 3 to Appendix A;

v. By removing each use of the term “farms” and adding in its place “small farms” in Table 3 to Appendix A;

w. By removing each use of the term “Farms” and adding in its place “Small farms” in Table 3 to Appendix A;

x. By removing each use of the term “businesses” and adding in its place “small businesses” in Table 4 to Appendix A;

y. By removing each use of the term “Businesses” and adding in its place “Small businesses” in Table 4 to Appendix A;

z. By removing each use of the term “farms” and adding in its place “small farms” in Table 4 to Appendix A.

aa. By removing each use of the term “Farms” and adding in its place “Small farms” in Table 4 to Appendix A.

66. Revise the heading of Appendix B to read as follows:

Appendix B to Part 345—Calculations for the Community Development Tests

67. Revise the heading of Appendix C to read as follows:

Appendix C to Part 345—Performance Test Conclusions

68. Revise the heading of Appendix D to read as follows:

Appendix D to Part 345—Ratings

69. Revise the heading of Appendix E to read as follows:

Appendix E to Part 345—Small Bank and Intermediate Bank Performance Evaluation

Conclusions and Ratings

70. Add Appendix F to read as follows:

Appendix F to Part 345—CRA Notice

(a) Notice for main offices and, if an interstate bank, one branch office in each State.

COMMUNITY REINVESTMENT ACT NOTICE

Under the Federal Community Reinvestment Act (CRA), the Federal Deposit Insurance Corporation (FDIC) evaluates our record of helping to meet the credit needs of this community consistent with safe and sound operations. The FDIC also takes this record into account when deciding on certain applications submitted by us.

Your involvement is encouraged.

You are entitled to certain information about our operations and our performance under the CRA, including, for example, information about our branches, such as their location and services provided at them; the public section of our most recent CRA Performance Evaluation, prepared by the FDIC; and comments received from the public relating to our performance in helping to meet community credit needs, as well as our responses to those comments. You may review this information today.

At least 30 days before the beginning of each calendar quarter, the FDIC publishes a nationwide list of the banks that are scheduled for CRA examination for the next two quarters. This list is available from the Regional Director, FDIC (address). You may send written comments about our performance in helping to meet community credit needs to (name and address of official at bank) and FDIC Regional Director. You may also submit comments electronically through the FDIC's Web site at www.fdic.gov/regulations/cra. Your letter, together with any response by us, will be considered by the FDIC in evaluating our CRA performance and may be made public.

You may ask to look at any comments received by the FDIC Regional Director. You may also request from the FDIC Regional Director an announcement of our applications covered by the CRA filed with the FDIC. [We are an affiliate of (name of holding company), a bank holding company. You may request from the (title of responsible official), Federal Reserve Bank of _____(address) an announcement of applications covered by the CRA filed by bank holding companies.]

(b) Notice for branch offices.

COMMUNITY REINVESTMENT ACT NOTICE

Under the Federal Community Reinvestment Act (CRA), the Federal Deposit Insurance Corporation (FDIC) evaluates our record of helping to meet the credit needs of this community consistent with safe and sound operations. The FDIC also takes this record into account when deciding on certain applications submitted by us.

Your involvement is encouraged.

You are entitled to certain information about our operations and our performance under the CRA. You may review today the public section of our most recent CRA evaluation, prepared by the FDIC, and a list of services provided at this branch. You may also have access to the following additional information, which we will make available to you at this branch within five calendar days after you make a request to us: (1) a map showing the assessment area containing this branch, which is the area in which the FDIC evaluates our CRA performance in this community; (2) information about our branches in this assessment area; (3) a list of services we provide at those locations; (4) data on our lending performance in this assessment area; and (5) copies of all written comments received by us that specifically relate to our CRA performance in this assessment area, and any responses we have made to those comments. If we are operating under an approved strategic plan, you may also have access to a copy of the plan.

[If you would like to review information about our CRA performance in other communities served by us, the public file for our entire bank is available at (name of office located in state), located at (address).]

At least 30 days before the beginning of each calendar quarter, the FDIC publishes a nationwide list of the banks that are scheduled for CRA examination for the next two quarters. This list is available from the Regional Director, FDIC (address). You may send written comments about our performance in helping to meet community credit needs to (name and

address of official at bank) and the FDIC Regional Director. You may also submit comments electronically through the FDIC's Web site at www.fdic.gov/regulations/cra. Your letter, together with any response by us, will be considered by the FDIC in evaluating our CRA performance and may be made public.

You may ask to look at any comments received by the FDIC Regional Director. You may also request from the FDIC Regional Director an announcement of our applications covered by the CRA filed with the FDIC. [We are an affiliate of (name of holding company), a bank holding company. You may request from the (title of responsible official), Federal Reserve Bank of _____ (address) an announcement of applications covered by the CRA filed by bank holding companies.]

71. Effective April 1, 2024, to January 1, 2031, add appendix G to part 345 to read as follows:

Appendix G to Part 345—Community Reinvestment Regulations

Note: The content of this appendix reproduces part 345 implementing the Community Reinvestment Act as of March 31, 2024.

PART 345—COMMUNITY REINVESTMENT

Subpart A—General

§ 345.11 Authority, purposes, and scope.

(a) *Authority and OMB control number—(1) Authority.* The authority for this part is 12 U.S.C. 1814–1817, 1819–1820, 1828, 1831u and 2901–2907, 3103–3104, and 3108(a).

(2) *OMB control number.* The information collection requirements contained in this part were approved by the Office of Management and Budget under the provisions of 44 U.S.C. 3501 et seq. and have been assigned OMB control number 3064–0092.

(b) *Purposes.* In enacting the Community Reinvestment Act (CRA), the Congress required each appropriate Federal financial supervisory agency to assess an institution's record of helping to meet the credit needs of the local communities in which the institution is chartered, consistent with the safe and sound operation of the institution, and to take this record into account in the agency's evaluation of an application for a deposit facility by the institution. This part is intended to carry out the purposes of the CRA by:

(1) Establishing the framework and criteria by which the Federal Deposit Insurance Corporation (FDIC) assesses a bank's record of helping to meet the credit needs of its entire community, including low- and moderate-income neighborhoods, consistent with the safe and sound operation of the bank; and

(2) Providing that the FDIC takes that record into account in considering certain applications.

(c) *Scope—(1) General.* Except for certain special purpose banks described in paragraph (c)(3) of this section, this part applies to all insured State nonmember banks, including insured State branches as described in paragraph (c)(2) and any uninsured State branch that results from an acquisition described in section 5(a)(8) of the International Banking Act of 1978 (12 U.S.C. 3103(a)(8)).

(2) *Insured State branches.* Insured State branches are branches of a foreign bank established and operating under the laws of any State, the deposits of which are insured in accordance with the provisions of the Federal Deposit Insurance Act. In the case of insured State branches, references in this part to main office mean the principal branch within the United States and the term branch or branches refers to any insured State branch or branches located within the United States. The assessment area of an insured State branch is the community or communities located within the United States served by the branch as described in § 345.41.

(3) *Certain special purpose banks.* This part does not apply to special purpose banks that do not perform commercial or retail banking services by granting credit to the public in the ordinary course of business, other than as incident to their specialized operations. These banks include banker's banks, as defined in 12 U.S.C. 24 (Seventh), and banks that engage only in one or more of the following activities: providing cash management controlled disbursement services or serving as correspondent banks, trust companies, or clearing agents.

§ 345.12 Definitions.

For purposes of this part, the following definitions apply:

(a) *Affiliate* means any company that controls, is controlled by, or is under common control with another company. The term control has the meaning given to that term in 12 U.S.C. 1841(a)(2), and a company is under common control with another company if both companies are directly or indirectly controlled by the same company.

(b) *Area median income* means:

(1) The median family income for the MSA, if a person or geography is located in an MSA, or for the metropolitan division, if a person or geography is located in an MSA that has been subdivided into metropolitan divisions; or

(2) The statewide nonmetropolitan median family income, if a person or geography is located outside an MSA.

(c) *Assessment area* means a geographic area delineated in accordance with § 345.41.

(d) *Remote Service Facility (RSF)* means an automated, unstaffed banking facility owned or operated by, or operated exclusively for, the bank, such as an automated teller machine, cash dispensing machine, point-of-sale terminal, or other remote electronic facility, at which deposits are received, cash dispersed, or money lent.

(e) *Bank* means a State nonmember bank, as that term is defined in section 3(e)(2) of the Federal Deposit Insurance Act, as amended (FDIA) (12 U.S.C. 1813(e)(2)), with Federally insured deposits, except as provided in § 345.11(c). The term bank also includes an insured State branch as defined in § 345.11(c).

(f) *Branch* means a staffed banking facility authorized as a branch, whether shared or unshared, including, for example, a mini-branch in a grocery store or a branch operated in conjunction with any other local business or nonprofit organization. The term “branch” only includes a “domestic branch” as that term is defined in section 3(o) of the FDIA (12 U.S.C. 1813(o)).

(g) *Community development* means:

(1) Affordable housing (including multifamily rental housing) for low- or moderate-income individuals;

(2) Community services targeted to low- or moderate-income individuals;

(3) Activities that promote economic development by financing businesses or farms that meet the size eligibility standards of the Small Business Administration’s Development Company or Small Business Investment Company programs (13 CFR 121.301) or have gross annual revenues of \$1 million or less; or

(4) Activities that revitalize or stabilize—

(i) Low-or moderate-income geographies;

(ii) Designated disaster areas; or

(iii) Distressed or underserved nonmetropolitan middle-income geographies designated by the Board of Governors of the Federal Reserve System, FDIC, and Office of the Comptroller of the Currency, based on—

(A) Rates of poverty, unemployment, and population loss; or

(B) Population size, density, and dispersion. Activities revitalize and stabilize geographies designated based on population size, density, and dispersion if they help to meet essential community needs, including needs of low- and moderate-income individuals.

(h) *Community development loan* means a loan that:

(1) Has as its primary purpose community development; and

(2) Except in the case of a wholesale or limited purpose bank:

(i) Has not been reported or collected by the bank or an affiliate for consideration in the bank's assessment as a home mortgage, small business, small farm, or consumer loan, unless the loan is for a multifamily dwelling (as defined in § 1003.2(n) of this title); and

(ii) Benefits the bank's assessment area(s) or a broader statewide or regional area that includes the bank's assessment area(s).

(i) *Community development service* means a service that:

(1) Has as its primary purpose community development;

(2) Is related to the provision of financial services; and

(3) Has not been considered in the evaluation of the bank's retail banking services under § 345.24(d).

(j) *Consumer loan* means a loan to one or more individuals for household, family, or other personal expenditures. A consumer loan does not include a home mortgage, small business, or small farm loan. Consumer loans include the following categories of loans:

(1) *Motor vehicle loan*, which is a consumer loan extended for the purchase of and secured by a motor vehicle;

(2) *Credit card loan*, which is a line of credit for household, family, or other personal expenditures that is accessed by a borrower's use of a "credit card," as this term is defined in § 1026.2 of this title;

(3) Other secured consumer loan, which is a secured consumer loan that is not included in one of the other categories of consumer loans; and

(4) *Other unsecured consumer loan*, which is an unsecured consumer loan that is not included in one of the other categories of consumer loans.

(k) *Geography* means a census tract delineated by the United States Bureau of the Census in the most recent decennial census.

(l) *Home mortgage loan* means a closed-end mortgage loan or an open-end line of credit as these terms are defined under § 1003.2 of this title and that is not an excluded transaction under § 1003.3(c)(1) through (10) and (13) of this title.

(m) *Income level* includes:

(1) *Low-income*, which means an individual income that is less than 50 percent of the area median income or a median family income that is less than 50 percent in the case of a geography.

(2) *Moderate-income*, which means an individual income that is at least 50 percent and less than 80 percent of the area median income or a median family income that is at least 50 and less than 80 percent in the case of a geography.

(3) *Middle-income*, which means an individual income that is at least 80 percent and less than 120 percent of the area median income or a median family income that is at least 80 and less than 120 percent in the case of a geography.

(4) *Upper-income*, which means an individual income that is 120 percent or more of the area median income or a median family income that is 120 percent or more in the case of a geography.

(n) *Limited purpose bank* means a bank that offers only a narrow product line (such as credit card or motor vehicle loans) to a regional or broader market and for which a designation as a limited purpose bank is in effect, in accordance with § 345.25(b).

(o) *Loan location*. A loan is located as follows:

(1) A consumer loan is located in the geography where the borrower resides;

(2) A home mortgage loan is located in the geography where the property to which the loan relates is located; and

(3) A small business or small farm loan is located in the geography where the main business facility or farm is located or where the loan proceeds otherwise will be applied, as indicated by the borrower.

(p) *Loan production office* means a staffed facility, other than a branch, that is open to the public and that provides lending-related services, such as loan information and applications.

(q) *Metropolitan division* means a metropolitan division as defined by the Director of the Office of Management and Budget.

(r) *MSA* means a metropolitan statistical area as defined by the Director of the Office of Management and Budget.

(s) *Nonmetropolitan area* means any area that is not located in an MSA.

(t) *Qualified investment* means a lawful investment, deposit, membership share, or grant that has as its primary purpose community development.

(u) *Small bank*—(1) *Definition.* *Small bank* means a bank that, as of December 31 of either of the prior two calendar years, had assets of less than \$1.503 billion. Intermediate small bank means a small bank with assets of at least \$376 million as of December 31 of both of the prior two calendar years and less than \$1.503 billion as of December 31 of either of the prior two calendar years.

(2) *Adjustment.* The dollar figures in paragraph (u)(1) of this section shall be adjusted annually and published by the FDIC, based on the year-to-year change in the average of the Consumer Price Index for Urban Wage Earners and Clerical Workers, not seasonally adjusted, for each twelve-month period ending in November, with rounding to the nearest million.

(v) *Small business loan* means a loan included in “loans to small businesses” as defined in the instructions for preparation of the Consolidated Report of Condition and Income.

(w) *Small farm loan* means a loan included in “loans to small farms” as defined in the instructions for preparation of the Consolidated Report of Condition and Income.

(x) *Wholesale bank* means a bank that is not in the business of extending home mortgage, small business, small farm, or consumer loans to retail customers, and for which a designation as a wholesale bank is in effect, in accordance with § 345.25(b).

Subpart B—Standards for Assessing Performance

§ 345.21 Performance tests, standards, and ratings, in general.

(a) *Performance tests and standards.* The FDIC assesses the CRA performance of a bank in an examination as follows:

(1) *Lending, investment, and service tests.* The FDIC applies the lending, investment, and service tests, as provided in §§ 345.22 through 345.24, in evaluating the performance of a bank, except as provided in paragraphs (a)(2), (a)(3), and (a)(4) of this section.

(2) *Community development test for wholesale or limited purpose banks.* The FDIC applies the community development test for a wholesale or limited purpose bank, as provided in § 345.25, except as provided in paragraph (a)(4) of this section.

(3) *Small bank performance standards.* The FDIC applies the small bank performance standards as provided in § 345.26 in evaluating the performance of a small bank or a bank that was a small bank during the prior calendar year, unless the bank elects to be assessed as provided in paragraphs (a)(1), (a)(2), or (a)(4) of this section. The bank may elect to be assessed as provided in paragraph (a)(1) of this section only if it collects and reports the data required for other banks under § 345.42.

(4) *Strategic plan.* The FDIC evaluates the performance of a bank under a strategic plan if the bank submits, and the FDIC approves, a strategic plan as provided in § 345.27.

(b) *Performance context.* The FDIC applies the tests and standards in paragraph (a) of this section and also considers whether to approve a proposed strategic plan in the context of:

(1) Demographic data on median income levels, distribution of household income, nature of housing stock, housing costs, and other relevant data pertaining to a bank's assessment area(s);

(2) Any information about lending, investment, and service opportunities in the bank's assessment area(s) maintained by the bank or obtained from community organizations, state, local, and tribal governments, economic development agencies, or other sources;

(3) The bank's product offerings and business strategy as determined from data provided by the bank;

(4) Institutional capacity and constraints, including the size and financial condition of the bank, the economic climate (national, regional, and local), safety and soundness limitations, and

any other factors that significantly affect the bank's ability to provide lending, investments, or services in its assessment area(s);

(5) The bank's past performance and the performance of similarly situated lenders;

(6) The bank's public file, as described in § 345.43, and any written comments about the bank's CRA performance submitted to the bank or the FDIC; and

(7) Any other information deemed relevant by the FDIC.

(c) *Assigned ratings.* The FDIC assigns to a bank one of the following four ratings pursuant to § 345.28 and Appendix A of this part: "outstanding"; "satisfactory"; "needs to improve"; or "substantial noncompliance" as provided in 12 U.S.C. 2906(b)(2). The rating assigned by the FDIC reflects the bank's record of helping to meet the credit needs of its entire community, including low- and moderate-income neighborhoods, consistent with the safe and sound operation of the bank.

(d) *Safe and sound operations.* This part and the CRA do not require a bank to make loans or investments or to provide services that are inconsistent with safe and sound operations. To the contrary, the FDIC anticipates banks can meet the standards of this part with safe and sound loans, investments, and services on which the banks expect to make a profit. Banks are permitted and encouraged to develop and apply flexible underwriting standards for loans that benefit low- or moderate-income geographies or individuals, only if consistent with safe and sound operations.

(e) *Low-cost education loans provided to low-income borrowers.* In assessing and taking into account the record of a bank under this part, the FDIC considers, as a factor, low-cost education loans originated by the bank to borrowers, particularly in its assessment area(s), who have an individual income that is less than 50 percent of the area median income. For purposes

of this paragraph, “low-cost education loans” means any education loan, as defined in section 140(a)(7) of the Truth in Lending Act (15 U.S.C. 1650(a)(7)) (including a loan under a state or local education loan program), originated by the bank for a student at an “institution of higher education,” as that term is generally defined in sections 101 and 102 of the Higher Education Act of 1965 (20 U.S.C. 1001 and 1002) and the implementing regulations published by the U.S. Department of Education, with interest rates and fees no greater than those of comparable education loans offered directly by the U.S. Department of Education. Such rates and fees are specified in section 455 of the Higher Education Act of 1965 (20 U.S.C. 1087e).

(f) *Activities in cooperation with minority- or women-owned financial institutions and low-income credit unions.* In assessing and taking into account the record of a nonminority-owned and nonwomen-owned bank under this part, the FDIC considers as a factor capital investment, loan participation, and other ventures undertaken by the bank in cooperation with minority- and women-owned financial institutions and low-income credit unions. Such activities must help meet the credit needs of local communities in which the minority- and women-owned financial institutions and low-income credit unions are chartered. To be considered, such activities need not also benefit the bank’s assessment area(s) or the broader statewide or regional area that includes the bank’s assessment area(s).

§ 345.22 Lending test.

(a) *Scope of test.* (1) The lending test evaluates a bank’s record of helping to meet the credit needs of its assessment area(s) through its lending activities by considering a bank’s home mortgage, small business, small farm, and community development lending. If consumer lending constitutes a substantial majority of a bank’s business, the FDIC will evaluate the bank’s consumer lending in one or more of the following categories: motor vehicle, credit card, other

secured, and other unsecured loans. In addition, at a bank's option, the FDIC will evaluate one or more categories of consumer lending, if the bank has collected and maintained, as required in § 345.42(c)(1), the data for each category that the bank elects to have the FDIC evaluate.

(2) The FDIC considers originations and purchases of loans. The FDIC will also consider any other loan data the bank may choose to provide, including data on loans outstanding, commitments and letters of credit.

(3) A bank may ask the FDIC to consider loans originated or purchased by consortia in which the bank participates or by third parties in which the bank has invested only if the loans meet the definition of community development loans and only in accordance with paragraph (d) of this section. The FDIC will not consider these loans under any criterion of the lending test except the community development lending criterion.

(b) *Performance criteria.* The FDIC evaluates a bank's lending performance pursuant to the following criteria:

(1) *Lending activity.* The number and amount of the bank's home mortgage, small business, small farm, and consumer loans, if applicable, in the bank's assessment area(s);

(2) *Geographic distribution.* The geographic distribution of the bank's home mortgage, small business, small farm, and consumer loans, if applicable, based on the loan location,

including:

(i) The proportion of the bank's lending in the bank's assessment area(s);

(ii) The dispersion of lending in the bank's assessment area(s); and

(iii) The number and amount of loans in low-, moderate-, middle-, and upper-income geographies in the bank's assessment area(s);

(3) *Borrower characteristics.* The distribution, particularly in the bank's assessment area(s), of the bank's home mortgage, small business, small farm, and consumer loans, if applicable, based on borrower characteristics, including the number and amount of:

(i) Home mortgage loans to low-, moderate-, middle-, and upper-income individuals;

(ii) Small business and small farm loans to businesses and farms with gross annual revenues of \$1 million or less;

(iii) Small business and small farm loans by loan amount at origination; and

(iv) Consumer loans, if applicable, to low-, moderate-, middle-, and upper-income individuals;

(4) *Community development lending.* The bank's community development lending, including the number and amount of community development loans, and their complexity and innovativeness; and

(5) *Innovative or flexible lending practices.* The bank's use of innovative or flexible lending practices in a safe and sound manner to address the credit needs of low- or moderate-income individuals or geographies.

(c) *Affiliate lending.* (1) At a bank's option, the FDIC will consider loans by an affiliate of the bank, if the bank provides data on the affiliate's loans pursuant to § 345.42.

(2) The FDIC considers affiliate lending subject to the following constraints:

(i) No affiliate may claim a loan origination or loan purchase if another institution claims the same loan origination or purchase; and

(ii) If a bank elects to have the FDIC consider loans within a particular lending category made by one or more of the bank's affiliates in a particular assessment area, the bank shall elect to have the FDIC consider, in accordance with paragraph (c)(1) of this section, all the loans

within that lending category in that particular assessment area made by all of the bank's affiliates.

(3) The FDIC does not consider affiliate lending in assessing a bank's performance under paragraph (b)(2)(i) of this section.

(d) *Lending by a consortium or a third party.* Community development loans originated or purchased by a consortium in which the bank participates or by a third party in which the bank has invested:

(1) Will be considered, at the bank's option, if the bank reports the data pertaining to these loans under § 345.42(b)(2); and

(2) May be allocated among participants or investors, as they choose, for purposes of the lending test, except that no participant or investor:

(i) May claim a loan origination or loan purchase if another participant or investor claims the same loan origination or purchase; or

(ii) May claim loans accounting for more than its percentage share (based on the level of its participation or investment) of the total loans originated by the consortium or third party.

(e) *Lending performance rating.* The FDIC rates a bank's lending performance as provided in Appendix A of this part.

§ 345.23 Investment test.

(a) *Scope of test.* The investment test evaluates a bank's record of helping to meet the credit needs of its assessment area(s) through qualified investments that benefit its assessment area(s) or a broader statewide or regional area that includes the bank's assessment area(s).

(b) *Exclusion.* Activities considered under the lending or service tests may not be considered under the investment test.

(c) *Affiliate investment.* At a bank's option, the FDIC will consider, in its assessment of a bank's investment performance, a qualified investment made by an affiliate of the bank, if the qualified investment is not claimed by any other institution.

(d) *Disposition of branch premises.* Donating, selling on favorable terms, or making available on a rent-free basis a branch of the bank that is located in a predominantly minority neighborhood to a minority depository institution or women's depository institution (as these terms are defined in 12 U.S.C. 2907(b)) will be considered as a qualified investment.

(e) *Performance criteria.* The FDIC evaluates the investment performance of a bank pursuant to the following criteria:

(1) The dollar amount of qualified investments;

(2) The innovativeness or complexity of qualified investments;

(3) The responsiveness of qualified investments to credit and community development needs;

and

(4) The degree to which the qualified investments are not routinely provided by private investors.

(f) *Investment performance rating.* The FDIC rates a bank's investment performance as provided in Appendix A of this part.

§ 345.24 Service test.

(a) *Scope of test.* The service test evaluates a bank's record of helping to meet the credit needs of its assessment area(s) by analyzing both the availability and effectiveness of a bank's systems for delivering retail banking services and the extent and innovativeness of its community development services.

(b) *Area(s) benefited.* Community development services must benefit a bank's assessment area(s) or a broader statewide or regional area that includes the bank's assessment area(s).

(c) *Affiliate service.* At a bank's option, the FDIC will consider, in its assessment of a bank's service performance, a community development service provided by an affiliate of the bank, if the community development service is not claimed by any other institution.

(d) *Performance criteria—retail banking services.* The FDIC evaluates the availability and effectiveness of a bank's systems for delivering retail banking services, pursuant to the following criteria:

(1) The current distribution of the bank's branches among low-, moderate-, middle-, and upper-income geographies;

(2) In the context of its current distribution of the bank's branches, the bank's record of opening and closing branches, particularly branches located in low- or moderate-income geographies or primarily serving low- or moderate-income individuals;

(3) The availability and effectiveness of alternative systems for delivering retail banking services (*e.g.*, RSFs, RSFs not owned or operated by or exclusively for the bank, banking by telephone or computer, loan production offices, and bank-at-work or bank-by-mail programs) in low- and moderate-income geographies and to low- and moderate-income individuals; and

(4) The range of services provided in low-, moderate-, middle-, and upper-income geographies and the degree to which the services are tailored to meet the needs of those geographies.

(e) *Performance criteria—community development services.* The FDIC evaluates community development services pursuant to the following criteria:

(1) The extent to which the bank provides community development services; and

(2) The innovativeness and responsiveness of community development services.

(f) *Service performance rating.* The FDIC rates a bank's service performance as provided in Appendix A of this part.

§ 345.25 Community development test for wholesale or limited purpose banks.

(a) *Scope of test.* The FDIC assesses a wholesale or limited purpose bank's record of helping to meet the credit needs of its assessment area(s) under the community development test through its community development lending, qualified investments, or community development services.

(b) *Designation as a wholesale or limited purpose bank.* In order to receive a designation as a wholesale or limited purpose bank, a bank shall file a request, in writing, with the FDIC, at least three months prior to the proposed effective date of the designation. If the FDIC approves the designation, it remains in effect until the bank requests revocation of the designation or until one year after the FDIC notifies the bank that the FDIC has revoked the designation on its own initiative.

(c) *Performance criteria.* The FDIC evaluates the community development performance of a wholesale or limited purpose bank pursuant to the following criteria:

(1) The number and amount of community development loans (including originations and purchases of loans and other community development loan data provided by the bank, such as data on loans outstanding, commitments, and letters of credit), qualified investments, or community development services;

(2) The use of innovative or complex qualified investments, community development loans, or community development services and the extent to which the investments are not routinely provided by private investors; and

(3) The bank's responsiveness to credit and community development needs.

(d) *Indirect activities.* At a bank's option, the FDIC will consider in its community development performance assessment:

(1) Qualified investments or community development services provided by an affiliate of the bank, if the investments or services are not claimed by any other institution; and

(2) Community development lending by affiliates, consortia and third parties, subject to the requirements and limitations in § 345.22 (c) and (d).

(e) *Benefit to assessment area(s)*—(1) *Benefit inside assessment area(s).* The FDIC considers all qualified investments, community development loans, and community development services that benefit areas within the bank's assessment area(s) or a broader statewide or regional area that includes the bank's assessment area(s).

(2) *Benefit outside assessment area(s).* The FDIC considers the qualified investments, community development loans, and community development services that benefit areas outside the bank's assessment area(s), if the bank has adequately addressed the needs of its assessment area(s).

(f) *Community development performance rating.* The FDIC rates a bank's community development performance as provided in Appendix A of this part.

§ 345.26 Small bank performance standards.

(a) *Performance criteria*—(1) *Small banks that are not intermediate small banks.* The FDIC evaluates the record of a small bank that is not, or that was not during the prior calendar year, an intermediate small bank, of helping to meet the credit needs of its assessment area(s) pursuant to the criteria set forth in paragraph (b) of this section.

(2) *Intermediate small banks.* The FDIC evaluates the record of a small bank that is, or that was during the prior calendar year, an intermediate small bank, of helping to meet the credit

needs of its assessment area(s) pursuant to the criteria set forth in paragraphs (b) and (c) of this section.

(b) *Lending test.* A small bank's lending performance is evaluated pursuant to the following criteria:

(1) The bank's loan-to-deposit ratio, adjusted for seasonal variation, and, as appropriate, other lending-related activities, such as loan originations for sale to the secondary markets, community development loans, or qualified investments;

(2) The percentage of loans and, as appropriate, other lending-related activities located in the bank's assessment area(s);

(3) The bank's record of lending to and, as appropriate, engaging in other lending-related activities for borrowers of different income levels and businesses and farms of different sizes;

(4) The geographic distribution of the bank's loans; and

(5) The bank's record of taking action, if warranted, in response to written complaints about its performance in helping to meet credit needs in its assessment area(s).

(c) *Community development test.* An intermediate small bank's community development performance also is evaluated pursuant to the following criteria:

(1) The number and amount of community development loans;

(2) The number and amount of qualified investments;

(3) The extent to which the bank provides community development services; and

(4) The bank's responsiveness through such activities to community development lending, investment, and services needs.

(d) *Small bank performance rating.* The FDIC rates the performance of a bank evaluated under this section as provided in appendix A of this part.

§ 345.27 Strategic plan.

(a) *Alternative election.* The FDIC will assess a bank's record of helping to meet the credit needs of its assessment area(s) under a strategic plan if:

- (1) The bank has submitted the plan to the FDIC as provided for in this section;
- (2) The FDIC has approved the plan;
- (3) The plan is in effect; and
- (4) The bank has been operating under an approved plan for at least one year.

(b) *Data reporting.* The FDIC's approval of a plan does not affect the bank's obligation, if any, to report data as required by § 345.42.

(c) *Plans in general—(1) Term.* A plan may have a term of no more than five years, and any multi-year plan must include annual interim measurable goals under which the FDIC will evaluate the bank's performance.

(2) *Multiple assessment areas.* A bank with more than one assessment area may prepare a single plan for all of its assessment areas or one or more plans for one or more of its assessment areas.

(3) *Treatment of affiliates.* Affiliated institutions may prepare a joint plan if the plan provides measurable goals for each institution. Activities may be allocated among institutions at the institutions' option, provided that the same activities are not considered for more than one institution.

(d) *Public participation in plan development.* Before submitting a plan to the FDIC for approval, a bank shall:

- (1) Informally seek suggestions from members of the public in its assessment area(s) covered by the plan while developing the plan;

(2) Once the bank has developed a plan, formally solicit public comment on the plan for at least 30 days by publishing notice in at least one newspaper of general circulation in each assessment area covered by the plan; and

(3) During the period of formal public comment, make copies of the plan available for review by the public at no cost at all offices of the bank in any assessment area covered by the plan and provide copies of the plan upon request for a reasonable fee to cover copying and mailing, if applicable.

(e) *Submission of plan.* The bank shall submit its plan to the FDIC at least three months prior to the proposed effective date of the plan. The bank shall also submit with its plan a description of its informal efforts to seek suggestions from members of the public, any written public comment received, and, if the plan was revised in light of the comment received, the initial plan as released for public comment.

(f) *Plan content—(1) Measurable goals.* (i) A bank shall specify in its plan measurable goals for helping to meet the credit needs of each assessment area covered by the plan, particularly the needs of low- and moderate-income geographies and low- and moderate-income individuals, through lending, investment, and services, as appropriate.

(ii) A bank shall address in its plan all three performance categories and, unless the bank has been designated as a wholesale or limited purpose bank, shall emphasize lending and lending-related activities. Nevertheless, a different emphasis, including a focus on one or more performance categories, may be appropriate if responsive to the characteristics and credit needs of its assessment area(s), considering public comment and the bank's capacity and constraints, product offerings, and business strategy.

(2) *Confidential information.* A bank may submit additional information to the FDIC on a confidential basis, but the goals stated in the plan must be sufficiently specific to enable the public and the FDIC to judge the merits of the plan.

(3) *Satisfactory and outstanding goals.* A bank shall specify in its plan measurable goals that constitute “satisfactory” performance. A plan may specify measurable goals that constitute “outstanding” performance. If a bank submits, and the FDIC approves, both “satisfactory” and “outstanding” performance goals, the FDIC will consider the bank eligible for an “outstanding” performance rating.

(4) *Election if satisfactory goals not substantially met.* A bank may elect in its plan that, if the bank fails to meet substantially its plan goals for a satisfactory rating, the FDIC will evaluate the bank’s performance under the lending, investment, and service tests, the community development test, or the small bank performance standards, as appropriate.

(g) *Plan approval—(1) Timing.* The FDIC will act upon a plan within 60 calendar days after the FDIC receives the complete plan and other material required under paragraph (e) of this section. If the FDIC fails to act within this time period, the plan shall be deemed approved unless the FDIC extends the review period for good cause.

(2) *Public participation.* In evaluating the plan’s goals, the FDIC considers the public’s involvement in formulating the plan, written public comment on the plan, and any response by the bank to public comment on the plan.

(3) *Criteria for evaluating plan.* The FDIC evaluates a plan’s measurable goals using the following criteria, as appropriate:

(i) The extent and breadth of lending or lending-related activities, including, as appropriate, the distribution of loans among different geographies, businesses and farms of different sizes,

and individuals of different income levels, the extent of community development lending, and the use of innovative or flexible lending practices to address credit needs;

(ii) The amount and innovativeness, complexity, and responsiveness of the bank's qualified investments; and

(iii) The availability and effectiveness of the bank's systems for delivering retail banking services and the extent and innovativeness of the bank's community development services.

(h) *Plan amendment.* During the term of a plan, a bank may request the FDIC to approve an amendment to the plan on grounds that there has been a material change in circumstances. The bank shall develop an amendment to a previously approved plan in accordance with the public participation requirements of paragraph (d) of this section.

(i) *Plan assessment.* The FDIC approves the goals and assesses performance under a plan as provided for in Appendix A of this part.

§ 345.28 Assigned ratings.

(a) *Ratings in general.* Subject to paragraphs (b) and (c) of this section, the FDIC assigns to a bank a rating of "outstanding," "satisfactory," "needs to improve," or "substantial noncompliance" based on the bank's performance under the lending, investment and service tests, the community development test, the small bank performance standards, or an approved strategic plan, as applicable.

(b) *Lending, investment, and service tests.* The FDIC assigns a rating for a bank assessed under the lending, investment, and service tests in accordance with the following principles:

(1) A bank that receives an "outstanding" rating on the lending test receives an assigned rating of at least "satisfactory";

(2) A bank that receives an “outstanding” rating on both the service test and the investment test and a rating of at least “high satisfactory” on the lending test receives an assigned rating of “outstanding”; and

(3) No bank may receive an assigned rating of “satisfactory” or higher unless it receives a rating of at least “low satisfactory” on the lending test.

(c) *Effect of evidence of discriminatory or other illegal credit practices.* (1) The FDIC’s evaluation of a bank’s CRA performance is adversely affected by evidence of discriminatory or other illegal credit practices in any geography by the bank or in any assessment area by any affiliate whose loans have been considered as part of the bank’s lending performance. In connection with any type of lending activity described in § 345.22(a), evidence of discriminatory or other credit practices that violate an applicable law, rule, or regulation includes, but is not limited to:

(i) Discrimination against applicants on a prohibited basis in violation, for example, of the Equal Credit Opportunity Act or the Fair Housing Act;

(ii) Violations of the Home Ownership and Equity Protection Act;

(iii) Violations of section 5 of the Federal Trade Commission Act;

(iv) Violations of section 8 of the Real Estate Settlement Procedures Act; and

(v) Violations of the Truth in Lending Act provisions regarding a consumer’s right of rescission.

(2) In determining the effect of evidence of practices described in paragraph (c)(1) of this section on the bank’s assigned rating, the FDIC considers the nature, extent, and strength of the evidence of the practices; the policies and procedures that the bank (or affiliate, as applicable) has in place to prevent the practices; any corrective action that the bank (or affiliate, as

applicable) has taken or has committed to take, including voluntary corrective action resulting from self-assessment; and any other relevant information.

§ 345.29 Effect of CRA performance on applications.

(a) *CRA performance.* Among other factors, the FDIC takes into account the record of performance under the CRA of each applicant bank in considering an application for approval of:

(1) The establishment of a domestic branch or other facility with the ability to accept deposits;

(2) The relocation of the bank's main office or a branch;

(3) The merger, consolidation, acquisition of assets, or assumption of liabilities; and

(4) Deposit insurance for a newly chartered financial institution.

(b) *New financial institutions.* A newly chartered financial institution shall submit with its application for deposit insurance a description of how it will meet its CRA objectives. The FDIC takes the description into account in considering the application and may deny or condition approval on that basis.

(c) *Interested parties.* The FDIC takes into account any views expressed by interested parties that are submitted in accordance with the FDIC's procedures set forth in part 303 of this chapter in considering CRA performance in an application listed in paragraphs (a) and (b) of this section.

(d) *Denial or conditional approval of application.* A bank's record of performance may be the basis for denying or conditioning approval of an application listed in paragraph (a) of this section.

Subpart C—Records, Reporting, and Disclosure Requirements

§ 345.41 Assessment area delineation.

(a) *In general.* A bank shall delineate one or more assessment areas within which the FDIC evaluates the bank's record of helping to meet the credit needs of its community. The FDIC does not evaluate the bank's delineation of its assessment area(s) as a separate performance criterion, but the FDIC reviews the delineation for compliance with the requirements of this section.

(b) *Geographic area(s) for wholesale or limited purpose banks.* The assessment area(s) for a wholesale or limited purpose bank must consist generally of one or more MSAs or metropolitan divisions (using the MSA or metropolitan division boundaries that were in effect as of January 1 of the calendar year in which the delineation is made) or one or more contiguous political subdivisions, such as counties, cities, or towns, in which the bank has its main office, branches, and deposit-taking ATMs.

(c) *Geographic area(s) for other banks.* The assessment area(s) for a bank other than a wholesale or limited purpose bank must:

(1) Consist generally of one or more MSAs or metropolitan divisions (using the MSA or metropolitan division boundaries that were in effect as of January 1 of the calendar year in which the delineation is made) or one or more contiguous political subdivisions, such as counties, cities, or towns; and

(2) Include the geographies in which the bank has its main office, its branches, and its deposit-taking RSFs, as well as the surrounding geographies in which the bank has originated or purchased a substantial portion of its loans (including home mortgage loans, small business and small farm loans, and any other loans the bank chooses, such as those consumer loans on which the bank elects to have its performance assessed).

(d) *Adjustments to geographic area(s).* A bank may adjust the boundaries of its assessment area(s) to include only the portion of a political subdivision that it reasonably can be expected to

serve. An adjustment is particularly appropriate in the case of an assessment area that otherwise would be extremely large, of unusual configuration, or divided by significant geographic barriers.

(e) *Limitations on the delineation of an assessment area.* Each bank's assessment area(s):

(1) Must consist only of whole geographies;

(2) May not reflect illegal discrimination;

(3) May not arbitrarily exclude low- or moderate-income geographies, taking into account the bank's size and financial condition; and

(4) May not extend substantially beyond an MSA boundary or beyond a state boundary unless the assessment area is located in a multistate MSA. If a bank serves a geographic area that extends substantially beyond a state boundary, the bank shall delineate separate assessment areas for the areas in each state. If a bank serves a geographic area that extends substantially beyond an MSA boundary, the bank shall delineate separate assessment areas for the areas inside and outside the MSA.

(f) *Banks serving military personnel.* Notwithstanding the requirements of this section, a bank whose business predominantly consists of serving the needs of military personnel or their dependents who are not located within a defined geographic area may delineate its entire deposit customer base as its assessment area.

(g) *Use of assessment area(s).* The FDIC uses the assessment area(s) delineated by a bank in its evaluation of the bank's CRA performance unless the FDIC determines that the assessment area(s) do not comply with the requirements of this section.

§ 345.42 Data collection, reporting, and disclosure.

(a) *Loan information required to be collected and maintained.* A bank, except a small bank, shall collect, and maintain in machine readable form (as prescribed by the FDIC) until the completion of its next CRA examination, the following data for each small business or small farm loan originated or purchased by the bank:

(1) A unique number or alpha-numeric symbol that can be used to identify the relevant loan file;

(2) The loan amount at origination;

(3) The loan location; and

(4) An indicator whether the loan was to a business or farm with gross annual revenues of \$1 million or less.

(b) *Loan information required to be reported.* A bank, except a small bank or a bank that was a small bank during the prior calendar year, shall report annually by March 1 to the FDIC in machine readable form (as prescribed by the FDIC) the following data for the prior calendar year:

(1) *Small business and small farm loan data.* For each geography in which the bank originated or purchased a small business or small farm loan, the aggregate number and amount of loans:

(i) With an amount at origination of \$100,000 or less;

(ii) With an amount at origination of more than \$100,000 but less than or equal to \$250,000;

(iii) With an amount at origination of more than \$250,000; and

(iv) To businesses and farms with gross annual revenues of \$1 million or less (using the revenues that the bank considered in making its credit decision);

(2) *Community development loan data.* The aggregate number and aggregate amount of community development loans originated or purchased; and

(3) *Home mortgage loans.* If the bank is subject to reporting under part 1003 of this title, the location of each home mortgage loan application, origination, or purchase outside the MSAs in which the bank has a home or branch office (or outside any MSA) in accordance with the requirements of part 1003 of this title.

(c) *Optional data collection and maintenance—(1) Consumer loans.* A bank may collect and maintain in machine readable form (as prescribed by the FDIC) data for consumer loans originated or purchased by the bank for consideration under the lending test. A bank may maintain data for one or more of the following categories of consumer loans: motor vehicle, credit card, other secured, and other unsecured. If the bank maintains data for loans in a certain category, it shall maintain data for all loans originated or purchased within that category. The bank shall maintain data separately for each category, including for each loan:

(i) A unique number or alpha-numeric symbol that can be used to identify the relevant loan file;

(ii) The loan amount at origination or purchase;

(iii) The loan location; and

(iv) The gross annual income of the borrower that the bank considered in making its credit decision.

(2) *Other loan data.* At its option, a bank may provide other information concerning its lending performance, including additional loan distribution data.

(d) *Data on affiliate lending.* A bank that elects to have the FDIC consider loans by an affiliate, for purposes of the lending or community development test or an approved strategic

plan, shall collect, maintain, and report for those loans the data that the bank would have collected, maintained, and reported pursuant to paragraphs (a), (b), and (c) of this section had the loans been originated or purchased by the bank. For home mortgage loans, the bank shall also be prepared to identify the home mortgage loans reported under part 1003 of this title by the affiliate.

(e) *Data on lending by a consortium or a third party.* A bank that elects to have the FDIC consider community development loans by a consortium or third party, for purposes of the lending or community development tests or an approved strategic plan, shall report for those loans the data that the bank would have reported under paragraph (b)(2) of this section had the loans been originated or purchased by the bank.

(f) *Small banks electing evaluation under the lending, investment, and service tests.* A bank that qualifies for evaluation under the small bank performance standards but elects evaluation under the lending, investment, and service tests shall collect, maintain, and report the data required for other banks pursuant to paragraphs (a) and (b) of this section.

(g) *Assessment area data.* A bank, except a small bank or a bank that was a small bank during the prior calendar year, shall collect and report to the FDIC by March 1 of each year a list for each assessment area showing the geographies within the area.

(h) *CRA Disclosure Statement.* The FDIC prepares annually for each bank that reports data pursuant to this section a CRA Disclosure Statement that contains, on a state-by-state basis:

(1) For each county (and for each assessment area smaller than a county) with a population of 500,000 persons or fewer in which the bank reported a small business or small farm loan:

(i) The number and amount of small business and small farm loans reported as originated or purchased located in low-, moderate-, middle-, and upper-income geographies;

(ii) A list grouping each geography according to whether the geography is low-, moderate-, middle-, or upper-income;

(iii) A list showing each geography in which the bank reported a small business or small farm loan; and

(iv) The number and amount of small business and small farm loans to businesses and farms with gross annual revenues of \$1 million or less;

(2) For each county (and for each assessment area smaller than a county) with a population in excess of 500,000 persons in which the bank reported a small business or small farm loan:

(i) The number and amount of small business and small farm loans reported as originated or purchased located in geographies with median income relative to the area median income of less than 10 percent, 10 or more but less than 20 percent, 20 or more but less than 30 percent, 30 or more but less than 40 percent, 40 or more but less than 50 percent, 50 or more but less than 60 percent, 60 or more but less than 70 percent, 70 or more but less than 80 percent, 80 or more but less than 90 percent, 90 or more but less than 100 percent, 100 or more but less than 110 percent, 110 or more but less than 120 percent, and 120 percent or more;

(ii) A list grouping each geography in the county or assessment area according to whether the median income in the geography relative to the area median income is less than 10 percent, 10 or more but less than 20 percent, 20 or more but less than 30 percent, 30 or more but less than 40 percent, 40 or more but less than 50 percent, 50 or more but less than 60 percent, 60 or more but less than 70 percent, 70 or more but less than 80 percent, 80 or more but less than 90 percent, 90 or more but less than 100 percent, 100 or more but less than 110 percent, 110 or more but less than 120 percent, and 120 percent or more;

(iii) A list showing each geography in which the bank reported a small business or small farm loan; and

(iv) The number and amount of small business and small farm loans to businesses and farms with gross annual revenues of \$1 million or less;

(3) The number and amount of small business and small farm loans located inside each assessment area reported by the bank and the number and amount of small business and small farm loans located outside the assessment area(s) reported by the bank; and

(4) The number and amount of community development loans reported as originated or purchased.

(i) *Aggregate disclosure statements.* The FDIC, in conjunction with the Board of Governors of the Federal Reserve System and the Office of the Comptroller of the Currency, prepares annually, for each MSA or metropolitan division (including an MSA or metropolitan division that crosses a state boundary) and the nonmetropolitan portion of each state, an aggregate disclosure statement of small business and small farm lending by all institutions subject to reporting under this part or parts 25, 195, or 228 of this title. These disclosure statements indicate, for each geography, the number and amount of all small business and small farm loans originated or purchased by reporting institutions, except that the FDIC may adjust the form of the disclosure if necessary, because of special circumstances, to protect the privacy of a borrower or the competitive position of an institution.

(j) *Central data depositories.* The FDIC makes the aggregate disclosure statements, described in paragraph (i) of this section, and the individual bank CRA Disclosure Statements, described in paragraph (h) of this section, available to the public at central data depositories. The FDIC publishes a list of the depositories at which the statements are available.

§ 345.43 Content and availability of public file.

(a) *Information available to the public.* A bank shall maintain a public file that includes the following information:

(1) All written comments received from the public for the current year and each of the prior two calendar years that specifically relate to the bank's performance in helping to meet community credit needs, and any response to the comments by the bank, if neither the comments nor the responses contain statements that reflect adversely on the good name or reputation of any persons other than the bank or publication of which would violate specific provisions of law;

(2) A copy of the public section of the bank's most recent CRA Performance Evaluation prepared by the FDIC. The bank shall place this copy in the public file within 30 business days after its receipt from the FDIC;

(3) A list of the bank's branches, their street addresses, and geographies;

(4) A list of branches opened or closed by the bank during the current year and each of the prior two calendar years, their street addresses, and geographies;

(5) A list of services (including hours of operation, available loan and deposit products, and transaction fees) generally offered at the bank's branches and descriptions of material differences in the availability or cost of services at particular branches, if any. At its option, a bank may include information regarding the availability of alternative systems for delivering retail banking services (*e.g.*, RSFs, RSFs not owned or operated by or exclusively for the bank, banking by telephone or computer, loan production offices, and bank-at-work or bank-by-mail programs);

(6) A map of each assessment area showing the boundaries of the area and identifying the geographies contained within the area, either on the map or in a separate list; and

(7) Any other information the bank chooses.

(b) *Additional information available to the public*—(1) *Banks other than small banks*. A bank, except a small bank or a bank that was a small bank during the prior calendar year, shall include in its public file the following information pertaining to the bank and its affiliates, if applicable, for each of the prior two calendar years:

(i) If the bank has elected to have one or more categories of its consumer loans considered under the lending test, for each of these categories, the number and amount of loans:

(A) To low-, moderate-, middle-, and upper-income individuals;

(B) Located in low-, moderate-, middle-, and upper-income census tracts; and

(C) Located inside the bank's assessment area(s) and outside the bank's assessment area(s);

and

(ii) The bank's CRA Disclosure Statement. The bank shall place the statement in the public file within three business days of its receipt from the FDIC.

(2) *Banks required to report Home Mortgage Disclosure Act (HMDA) data*. A bank required to report home mortgage loan data pursuant part 1003 of this title shall include in its public file a written notice that the institution's HMDA Disclosure Statement may be obtained on the Consumer Financial Protection Bureau's (Bureau's) Web site at www.consumerfinance.gov/hmda. In addition, a bank that elected to have the FDIC consider the mortgage lending of an affiliate shall include in its public file the name of the affiliate and a written notice that the affiliate's HMDA Disclosure Statement may be obtained at the Bureau's Web site. The bank shall place the written notice(s) in the public file within three business days after receiving notification from the Federal Financial Institutions Examination Council of the availability of the disclosure statement(s).

(3) *Small banks.* A small bank or a bank that was a small bank during the prior calendar year shall include in its public file:

(i) The bank's loan-to-deposit ratio for each quarter of the prior calendar year and, at its option, additional data on its loan-to-deposit ratio; and

(ii) The information required for other banks by paragraph (b)(1) of this section, if the bank has elected to be evaluated under the lending, investment, and service tests.

(4) *Banks with strategic plans.* A bank that has been approved to be assessed under a strategic plan shall include in its public file a copy of that plan. A bank need not include information submitted to the FDIC on a confidential basis in conjunction with the plan.

(5) *Banks with less than satisfactory ratings.* A bank that received a less than satisfactory rating during its most recent examination shall include in its public file a description of its current efforts to improve its performance in helping to meet the credit needs of its entire community. The bank shall update the description quarterly.

(c) *Location of public information.* A bank shall make available to the public for inspection upon request and at no cost the information required in this section as follows:

(1) At the main office and, if an interstate bank, at one branch office in each state, all information in the public file; and

(2) At each branch:

(i) A copy of the public section of the bank's most recent CRA Performance Evaluation and a list of services provided by the branch; and

(ii) Within five calendar days of the request, all the information in the public file relating to the assessment area in which the branch is located.

(d) *Copies.* Upon request, a bank shall provide copies, either on paper or in another form acceptable to the person making the request, of the information in its public file. The bank may charge a reasonable fee not to exceed the cost of copying and mailing (if applicable).

(e) *Updating.* Except as otherwise provided in this section, a bank shall ensure that the information required by this section is current as of April 1 of each year.

§ 345.44 Public notice by banks.

A bank shall provide in the public lobby of its main office and each of its branches the appropriate public notice set forth in Appendix B of this part. Only a branch of a bank having more than one assessment area shall include the bracketed material in the notice for branch offices. Only a bank that is an affiliate of a holding company shall include the next to the last sentence of the notices. A bank shall include the last sentence of the notices only if it is an affiliate of a holding company that is not prevented by statute from acquiring additional banks.

§ 345.45 Publication of planned examination schedule.

The FDIC publishes at least 30 days in advance of the beginning of each calendar quarter a list of banks scheduled for CRA examinations in that quarter.

Appendix A to Part 345—Ratings

(a) *Ratings in general.* (1) In assigning a rating, the FDIC evaluates a bank's performance under the applicable performance criteria in this part, in accordance with §§ 345.21 and 345.28. This includes consideration of low-cost education loans provided to low-income borrowers and activities in cooperation with minority- or women-owned financial institutions and low-income credit unions, as well as adjustments on the basis of evidence of discriminatory or other illegal credit practices.

(2) A bank's performance need not fit each aspect of a particular rating profile in order to receive that rating, and exceptionally strong performance with respect to some aspects may compensate for weak performance in others. The bank's overall performance, however, must be consistent with safe and sound banking practices and generally with the appropriate rating profile as follows.

(b) *Banks evaluated under the lending, investment, and service tests* —(1) *Lending performance rating*. The FDIC assigns each bank's lending performance one of the five following ratings.

(i) *Outstanding*. The FDIC rates a bank's lending performance "outstanding" if, in general, it demonstrates:

(A) Excellent responsiveness to credit needs in its assessment area(s), taking into account the number and amount of home mortgage, small business, small farm, and consumer loans, if applicable, in its assessment area(s);

(B) A substantial majority of its loans are made in its assessment area(s);

(C) An excellent geographic distribution of loans in its assessment area(s);

(D) An excellent distribution, particularly in its assessment area(s), of loans among individuals of different income levels and businesses (including farms) of different sizes, given the product lines offered by the bank;

(E) An excellent record of serving the credit needs of highly economically disadvantaged areas in its assessment area(s), low-income individuals, or businesses (including farms) with gross annual revenues of \$1 million or less, consistent with safe and sound operations;

(F) Extensive use of innovative or flexible lending practices in a safe and sound manner to address the credit needs of low- or moderate-income individuals or geographies; and

(G) It is a leader in making community development loans.

(ii) *High satisfactory*. The FDIC rates a bank's lending performance "high satisfactory" if, in general, it demonstrates:

(A) Good responsiveness to credit needs in its assessment area(s), taking into account the number and amount of home mortgage, small business, small farm, and consumer loans, if applicable, in its assessment area(s);

(B) A high percentage of its loans are made in its assessment area(s);

(C) A good geographic distribution of loans in its assessment area(s);

(D) A good distribution, particularly in its assessment area(s), of loans among individuals of different income levels and businesses (including farms) of different sizes, given the product lines offered by the bank;

(E) A good record of serving the credit needs of highly economically disadvantaged areas in its assessment area(s), low-income individuals, or businesses (including farms) with gross annual revenues of \$1 million or less, consistent with safe and sound operations;

(F) Use of innovative or flexible lending practices in a safe and sound manner to address the credit needs of low- or moderate-income individuals or geographies; and

(G) It has made a relatively high level of community development loans.

(iii) *Low satisfactory*. The FDIC rates a bank's lending performance "low satisfactory" if, in general, it demonstrates:

(A) Adequate responsiveness to credit needs in its assessment area(s), taking into account the number and amount of home mortgage, small business, small farm, and consumer loans, if applicable, in its assessment area(s);

(B) An adequate percentage of its loans are made in its assessment area(s);

(C) An adequate geographic distribution of loans in its assessment area(s);

(D) An adequate distribution, particularly in its assessment area(s), of loans among individuals of different income levels and businesses (including farms) of different sizes, given the product lines offered by the bank;

(E) An adequate record of serving the credit needs of highly economically disadvantaged areas in its assessment area(s), low-income individuals, or businesses (including farms) with gross annual revenues of \$1 million or less, consistent with safe and sound operations;

(F) Limited use of innovative or flexible lending practices in a safe and sound manner to address the credit needs of low- or moderate-income individuals or geographies; and

(G) It has made an adequate level of community development loans.

(iv) *Needs to improve.* The FDIC rates a bank's lending performance "needs to improve" if, in general, it demonstrates:

(A) Poor responsiveness to credit needs in its assessment area(s), taking into account the number and amount of home mortgage, small business, small farm, and consumer loans, if applicable, in its assessment area(s);

(B) A small percentage of its loans are made in its assessment area(s);

(C) A poor geographic distribution of loans, particularly to low- or moderate-income geographies, in its assessment area(s);

(D) A poor distribution, particularly in its assessment area(s), of loans among individuals of different income levels and businesses (including farms) of different sizes, given the product lines offered by the bank;

(E) A poor record of serving the credit needs of highly economically disadvantaged areas in its assessment area(s), low-income individuals, or businesses (including farms) with gross annual revenues of \$1 million or less, consistent with safe and sound operations;

(F) Little use of innovative or flexible lending practices in a safe and sound manner to address the credit needs of low- or moderate-income individuals or geographies; and

(G) It has made a low level of community development loans.

(v) *Substantial noncompliance*. The FDIC rates a bank's lending performance as being in "substantial noncompliance" if, in general, it demonstrates:

(A) A very poor responsiveness to credit needs in its assessment area(s), taking into account the number and amount of home mortgage, small business, small farm, and consumer loans, if applicable, in its assessment area(s);

(B) A very small percentage of its loans are made in its assessment area(s);

(C) A very poor geographic distribution of loans, particularly to low- or moderate-income geographies, in its assessment area(s);

(D) A very poor distribution, particularly in its assessment area(s), of loans among individuals of different income levels and businesses (including farms) of different sizes, given the product lines offered by the bank;

(E) A very poor record of serving the credit needs of highly economically disadvantaged areas in its assessment area(s), low-income individuals, or businesses (including farms) with gross annual revenues of \$1 million or less, consistent with safe and sound operations;

(F) No use of innovative or flexible lending practices in a safe and sound manner to address the credit needs of low- or moderate-income individuals or geographies; and

(G) It has made few, if any, community development loans.

(2) *Investment performance rating.* The FDIC assigns each bank's investment performance one of the five following ratings.

(i) *Outstanding.* The FDIC rates a bank's investment performance "outstanding" if, in general, it demonstrates:

(A) An excellent level of qualified investments, particularly those that are not routinely provided by private investors, often in a leadership position;

(B) Extensive use of innovative or complex qualified investments; and

(C) Excellent responsiveness to credit and community development needs.

(ii) *High satisfactory.* The FDIC rates a bank's investment performance "high satisfactory" if, in general, it demonstrates:

(A) A significant level of qualified investments, particularly those that are not routinely provided by private investors, occasionally in a leadership position;

(B) Significant use of innovative or complex qualified investments; and

(C) Good responsiveness to credit and community development needs.

(iii) *Low satisfactory.* The FDIC rates a bank's investment performance "low satisfactory" if, in general, it demonstrates:

(A) An adequate level of qualified investments, particularly those that are not routinely provided by private investors, although rarely in a leadership position;

(B) Occasional use of innovative or complex qualified investments; and

(C) Adequate responsiveness to credit and community development needs.

(iv) *Needs to improve.* The FDIC rates a bank's investment performance "needs to improve" if, in general, it demonstrates:

(A) A poor level of qualified investments, particularly those that are not routinely provided by private investors;

(B) Rare use of innovative or complex qualified investments; and

(C) Poor responsiveness to credit and community development needs.

(v) *Substantial noncompliance*. The FDIC rates a bank's investment performance as being in "substantial noncompliance" if, in general, it demonstrates:

(A) Few, if any, qualified investments, particularly those that are not routinely provided by private investors;

(B) No use of innovative or complex qualified investments; and

(C) Very poor responsiveness to credit and community development needs.

(3) *Service performance rating*. The FDIC assigns each bank's service performance one of the five following ratings.

(i) *Outstanding*. The FDIC rates a bank's service performance "outstanding" if, in general, the bank demonstrates:

(A) Its service delivery systems are readily accessible to geographies and individuals of different income levels in its assessment area(s);

(B) To the extent changes have been made, its record of opening and closing branches has improved the accessibility of its delivery systems, particularly in low- or moderate-income geographies or to low- or moderate-income individuals;

(C) Its services (including, where appropriate, business hours) are tailored to the convenience and needs of its assessment area(s), particularly low- or moderate-income geographies or low- or moderate-income individuals; and

(D) It is a leader in providing community development services.

(ii) *High satisfactory*. The FDIC rates a bank's service performance "high satisfactory" if, in general, the bank demonstrates:

(A) Its service delivery systems are accessible to geographies and individuals of different income levels in its assessment area(s);

(B) To the extent changes have been made, its record of opening and closing branches has not adversely affected the accessibility of its delivery systems, particularly in low- and moderate-income geographies and to low- and moderate-income individuals;

(C) Its services (including, where appropriate, business hours) do not vary in a way that inconveniences its assessment area(s), particularly low- and moderate-income geographies and low- and moderate-income individuals; and

(D) It provides a relatively high level of community development services.

(iii) *Low satisfactory*. The FDIC rates a bank's service performance "low satisfactory" if, in general, the bank demonstrates:

(A) Its service delivery systems are reasonably accessible to geographies and individuals of different income levels in its assessment area(s);

(B) To the extent changes have been made, its record of opening and closing branches has generally not adversely affected the accessibility of its delivery systems, particularly in low- and moderate-income geographies and to low- and moderate-income individuals;

(C) Its services (including, where appropriate, business hours) do not vary in a way that inconveniences its assessment area(s), particularly low- and moderate-income geographies and low- and moderate-income individuals; and

(D) It provides an adequate level of community development services.

(iv) *Needs to improve.* The FDIC rates a bank's service performance "needs to improve" if, in general, the bank demonstrates:

(A) Its service delivery systems are unreasonably inaccessible to portions of its assessment area(s), particularly to low- or moderate-income geographies or to low- or moderate-income individuals;

(B) To the extent changes have been made, its record of opening and closing branches has adversely affected the accessibility its delivery systems, particularly in low- or moderate-income geographies or to low- or moderate-income individuals;

(C) Its services (including, where appropriate, business hours) vary in a way that inconveniences its assessment area(s), particularly low- or moderate-income geographies or low- or moderate-income individuals; and

(D) It provides a limited level of community development services.

(v) *Substantial noncompliance.* The FDIC rates a bank's service performance as being in "substantial noncompliance" if, in general, the bank demonstrates:

(A) Its service delivery systems are unreasonably inaccessible to significant portions of its assessment area(s), particularly to low- or moderate-income geographies or to low- or moderate-income individuals;

(B) To the extent changes have been made, its record of opening and closing branches has significantly adversely affected the accessibility of its delivery systems, particularly in low- or moderate-income geographies or to low- or moderate-income individuals;

(C) Its services (including, where appropriate, business hours) vary in a way that significantly inconveniences its assessment area(s), particularly low- or moderate-income geographies or low- or moderate-income individuals; and

(D) It provides few, if any, community development services.

(c) *Wholesale or limited purpose banks.* The FDIC assigns each wholesale or limited purpose bank's community development performance one of the four following ratings.

(1) *Outstanding.* The FDIC rates a wholesale or limited purpose bank's community development performance "outstanding" if, in general, it demonstrates:

(i) A high level of community development loans, community development services, or qualified investments, particularly investments that are not routinely provided by private investors;

(ii) Extensive use of innovative or complex qualified investments, community development loans, or community development services; and

(iii) Excellent responsiveness to credit and community development needs in its assessment area(s).

(2) *Satisfactory.* The FDIC rates a wholesale or limited purpose bank's community development performance "satisfactory" if, in general, it demonstrates:

(i) An adequate level of community development loans, community development services, or qualified investments, particularly investments that are not routinely provided by private investors;

(ii) Occasional use of innovative or complex qualified investments, community development loans, or community development services; and

(iii) Adequate responsiveness to credit and community development needs in its assessment area(s).

(3) *Needs to improve.* The FDIC rates a wholesale or limited purpose bank's community development performance as "needs to improve" if, in general, it demonstrates:

(i) A poor level of community development loans, community development services, or qualified investments, particularly investments that are not routinely provided by private investors;

(ii) Rare use of innovative or complex qualified investments, community development loans, or community development services; and

(iii) Poor responsiveness to credit and community development needs in its assessment area(s).

(4) *Substantial noncompliance.* The FDIC rates a wholesale or limited purpose bank's community development performance in "substantial noncompliance" if, in general, it demonstrates:

(i) Few, if any, community development loans, community development services, or qualified investments, particularly investments that are not routinely provided by private investors;

(ii) No use of innovative or complex qualified investments, community development loans, or community development services; and

(iii) Very poor responsiveness to credit and community development needs in its assessment area(s).

(d) *Banks evaluated under the small bank performance standards* —(1) *Lending test ratings*

—(i) *Eligibility for a satisfactory lending test rating.* The FDIC rates a small bank's lending performance "satisfactory" if, in general, the bank demonstrates:

(A) A reasonable loan-to-deposit ratio (considering seasonal variations) given the bank's size, financial condition, the credit needs of its assessment area(s), and taking into account, as

appropriate, other lending-related activities such as loan originations for sale to the secondary markets and community development loans and qualified investments;

(B) A majority of its loans and, as appropriate, other lending-related activities, are in its assessment area;

(C) A distribution of loans to and, as appropriate, other lending-related activities for individuals of different income levels (including low- and moderate-income individuals) and businesses and farms of different sizes that is reasonable given the demographics of the bank's assessment area(s);

(D) A record of taking appropriate action, when warranted, in response to written complaints, if any, about the bank's performance in helping to meet the credit needs of its assessment area(s); and

(E) A reasonable geographic distribution of loans given the bank's assessment area(s).

(ii) *Eligibility for an "outstanding" lending test rating.* A small bank that meets each of the standards for a "satisfactory" rating under this paragraph and exceeds some or all of those standards may warrant consideration for a lending test rating of "outstanding."

(iii) *Needs to improve or substantial noncompliance ratings.* A small bank may also receive a lending test rating of "needs to improve" or "substantial noncompliance" depending on the degree to which its performance has failed to meet the standard for a "satisfactory" rating.

(2) *Community development test ratings for intermediate small banks* —(i) *Eligibility for a satisfactory community development test rating.* The FDIC rates an intermediate small bank's community development performance "satisfactory" if the bank demonstrates adequate responsiveness to the community development needs of its assessment area(s) through community development loans, qualified investments, and community development services.

The adequacy of the bank's response will depend on its capacity for such community development activities, its assessment area's need for such community development activities, and the availability of such opportunities for community development in the bank's assessment area(s).

(ii) *Eligibility for an outstanding community development test rating.* The FDIC rates an intermediate small bank's community development performance "outstanding" if the bank demonstrates excellent responsiveness to community development needs in its assessment area(s) through community development loans, qualified investments, and community development services, as appropriate, considering the bank's capacity and the need and availability of such opportunities for community development in the bank's assessment area(s).

(iii) *Needs to improve or substantial noncompliance ratings.* An intermediate small bank may also receive a community development test rating of "needs to improve" or "substantial noncompliance" depending on the degree to which its performance has failed to meet the standards for a "satisfactory" rating.

(3) *Overall rating* —(i) *Eligibility for a satisfactory overall rating.* No intermediate small bank may receive an assigned overall rating of "satisfactory" unless it receives a rating of at least "satisfactory" on both the lending test and the community development test.

(ii) *Eligibility for an outstanding overall rating.* (A) An intermediate small bank that receives an "outstanding" rating on one test and at least "satisfactory" on the other test may receive an assigned overall rating of "outstanding."

(B) A small bank that is not an intermediate small bank that meets each of the standards for a "satisfactory" rating under the lending test and exceeds some or all of those standards may warrant consideration for an overall rating of "outstanding." In assessing whether a bank's

performance is “outstanding,” the FDIC considers the extent to which the bank exceeds each of the performance standards for a “satisfactory” rating and its performance in making qualified investments and its performance in providing branches and other services and delivery systems that enhance credit availability in its assessment area(s).

(iii) *Needs to improve or substantial noncompliance overall ratings.* A small bank may also receive a rating of “needs to improve” or “substantial noncompliance” depending on the degree to which its performance has failed to meet the standards for a “satisfactory” rating.

(e) *Strategic plan assessment and rating* —(1) *Satisfactory goals.* The FDIC approves as “satisfactory” measurable goals that adequately help to meet the credit needs of the bank’s assessment area(s).

(2) *Outstanding goals.* If the plan identifies a separate group of measurable goals that substantially exceed the levels approved as “satisfactory,” the FDIC will approve those goals as “outstanding.”

(3) *Rating.* The FDIC assesses the performance of a bank operating under an approved plan to determine if the bank has met its plan goals:

(i) If the bank substantially achieves its plan goals for a satisfactory rating, the FDIC will rate the bank’s performance under the plan as “satisfactory.”

(ii) If the bank exceeds its plan goals for a satisfactory rating and substantially achieves its plan goals for an outstanding rating, the FDIC will rate the bank’s performance under the plan as “outstanding.”

(iii) If the bank fails to meet substantially its plan goals for a satisfactory rating, the FDIC will rate the bank as either “needs to improve” or “substantial noncompliance,” depending on the

extent to which it falls short of its plan goals, unless the bank elected in its plan to be rated otherwise, as provided in § 345.27(f)(4).

Appendix B to Part 345—CRA Notice

(a) Notice for main offices and, if an interstate bank, one branch office in each state.

Community Reinvestment Act Notice

Under the Federal Community Reinvestment Act (CRA), the Federal Deposit Insurance Corporation (FDIC) evaluates our record of helping to meet the credit needs of this community consistent with safe and sound operations. The FDIC also takes this record into account when deciding on certain applications submitted by us.

Your involvement is encouraged.

You are entitled to certain information about our operations and our performance under the CRA, including, for example, information about our branches, such as their location and services provided at them; the public section of our most recent CRA Performance Evaluation, prepared by the FDIC; and comments received from the public relating to our performance in helping to meet community credit needs, as well as our responses to those comments. You may review this information today.

At least 30 days before the beginning of each quarter, the FDIC publishes a nationwide list of the banks that are scheduled for CRA examination in that quarter. This list is available from the Regional Director, FDIC (address). You may send written comments about our performance in helping to meet community credit needs to (name and address of official at bank) and FDIC Regional Director. You may also submit comments electronically through the FDIC's Web site at www.fdic.gov/regulations/cra. Your letter, together with any response by us, will be considered by the FDIC in evaluating our CRA performance and may be made public.

You may ask to look at any comments received by the FDIC Regional Director. You may also request from the FDIC Regional Director an announcement of our applications covered by the CRA filed with the FDIC. We are an affiliate of (name of holding company), a bank holding company. You may request from the (title of responsible official), Federal Reserve Bank of _____(address) an announcement of applications covered by the CRA filed by bank holding companies.

(b) Notice for branch offices.

Community Reinvestment Act Notice

Under the Federal Community Reinvestment Act (CRA), the Federal Deposit Insurance Corporation (FDIC) evaluates our record of helping to meet the credit needs of this community consistent with safe and sound operations. The FDIC also takes this record into account when deciding on certain applications submitted by us.

Your involvement is encouraged.

You are entitled to certain information about our operations and our performance under the CRA. You may review today the public section of our most recent CRA evaluation, prepared by the FDIC, and a list of services provided at this branch. You may also have access to the following additional information, which we will make available to you at this branch within five calendar days after you make a request to us: (1) a map showing the assessment area containing this branch, which is the area in which the FDIC evaluates our CRA performance in this community; (2) information about our branches in this assessment area; (3) a list of services we provide at those locations; (4) data on our lending performance in this assessment area; and (5) copies of all written comments received by us that specifically relate to our CRA performance in

this assessment area, and any responses we have made to those comments. If we are operating under an approved strategic plan, you may also have access to a copy of the plan.

[If you would like to review information about our CRA performance in other communities served by us, the public file for our entire bank is available at (name of office located in state), located at (address).]

At least 30 days before the beginning of each quarter, the FDIC publishes a nationwide list of the banks that are scheduled for CRA examination in that quarter. This list is available from the Regional Director, FDIC (address).
