

Oilseeds: World Markets and Trade

Oilseeds Stocks Forecast to Reach Record Highs in 2024/25

Oilseeds Year-Over-Year Growth

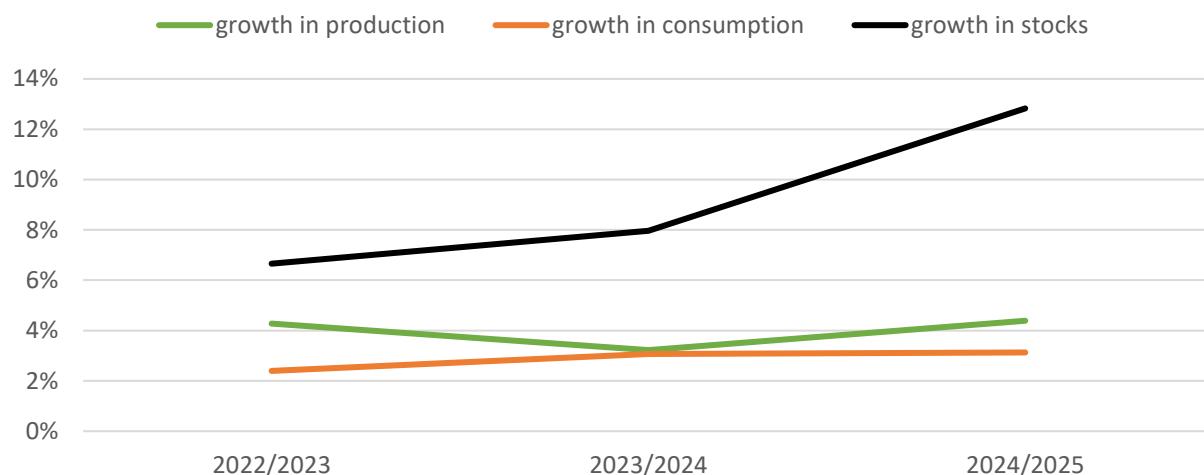

Global oilseed production in 2024/25 is projected at a new record of 687 million tons, up 4 percent compared to the 2023/24 marketing year. This boost is driven by higher soybean output in South America and the United States. World soybean production is forecast to rise over 25 million tons (over 6 percent) to 422 million. Global rapeseed production is almost unchanged as gains in Canada, Australia, and China are forecast to offset declines in the European Union, Ukraine, and India. World sunflowerseed production is projected to grow modestly as gains in Ukraine and the European Union slightly outpace reductions for Argentina and Russia. Other oilseeds such as cottonseed, peanut, and palm kernel seed are also projected to grow slightly, while copra is forecast to decline.

Global oilseed consumption is forecast to rise 3 percent in 2024/25, driven by soybean crush recovery in Argentina, growing feed demand in China, as well as rising demand for soybean oil in the United States. Global oilseeds crush is projected at nearly 561 million tons with China, the United States, Brazil, the European Union, and Argentina driving gains. Soybean crush and consumption are projected to account for most of the growth in global oilseed use. Global rapeseed crush is forecast unchanged as gains in Canada and the European Union are offset by reductions in China, Ukraine, and India. Global sunflowerseed processing is expected slightly lower as reductions in Argentina and Ukraine are not fully offset by gains in the European Union and Russia.

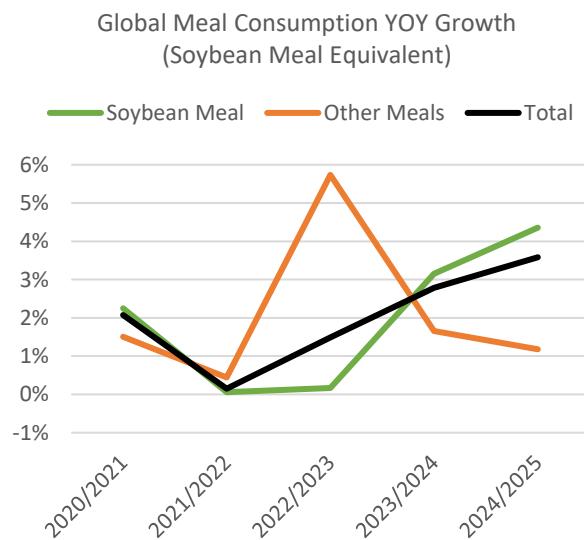

Global oilseed trade is forecast up 4 percent with higher soybean and rapeseed demand more than offsetting lower sunflowerseed imports. Continuing expansion of soybean planted area in South America will likely pressure soybean prices in 2024/25 and encourage more imports in Asia, the Middle East, and North Africa. The European Union is projected to import more rapeseed while imports of sunflowerseed will be curbed by lower supplies in the Black Sea region. Soybean exports from Brazil are projected at a new record and will account for 58 percent of global trade. Although U.S. exports are forecast to rise compared to the current marketing year, market share is expected at only 28 percent, below the 5-year average.

Oilseeds Year-Over-Year Growth

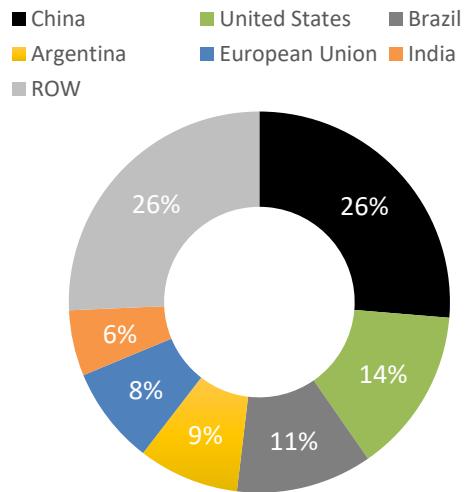

Global oilseed ending stocks are projected to rise 13 percent to record highs as growing global production outpaces demand. Increasing world stocks are mainly driven by soybean output gains in South America and the United States. China stocks are also projected to grow as another record Brazil crop is likely to drive global export prices lower and encourage more imports.

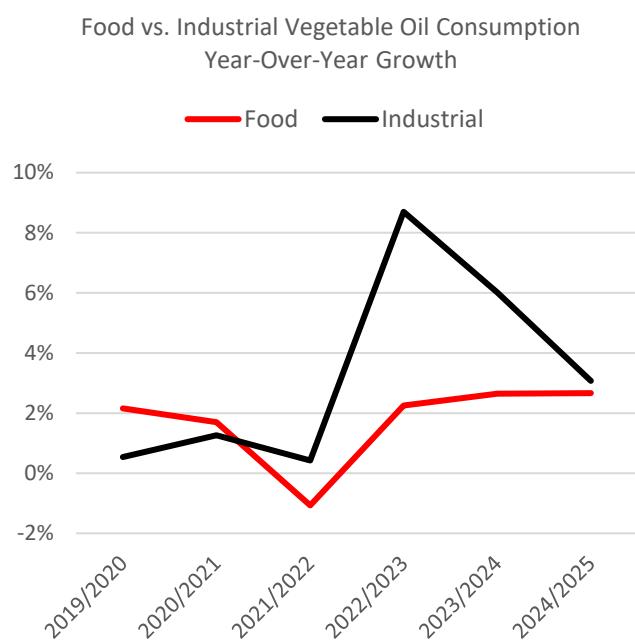

Global oilseed meal production is forecast to grow 4 percent in 2024/25 led by soybean crush growth in China, the United States, Brazil, and Argentina. China is projected to remain the world's largest oilseeds crusher, accounting for 26 percent of global oilseed meal production. Global oilseed meal consumption is expected to climb nearly 4 percent, mostly on soybean meal demand in China, the United States, Brazil, and the European Union. Other oilseed meal consumption is also projected to grow but at a slower pace than soybean meal.

2024/2025 Global Oilseed Meal Production

Global vegetable oil production in 2024/25 is expected to grow by 2 percent to 228 million tons, with major gains for soybean, palm, and rapeseed oil. Additionally, small growth is forecast for sunflowerseed oil production and a slight recovery in olive oil output. Global consumption is forecast to expand by 3 percent to nearly 224 million tons, causing ending stocks to plummet. On a volume basis, vegetable oil food consumption is projected to expand more than industrial use, however, the growth rate of industrial consumption is again expected to outpace food.

expected to remain flat as reductions in rapeseed and sunflowerseed oil exports are offset by raised soybean and palm oil trade. Although global palm oil production is projected to grow slightly in 2024/25, combined exports from Indonesia and Malaysia are marginally lower due to higher domestic demand and declining stocks. Slowing global vegetable oil production and growing consumption is likely to deplete global vegetable oil stocks, especially in China, India, and Indonesia. Global vegetable oil stocks at the end of 2024/25 are projected to drop nearly 6 percent to 30 million tons.

Global vegetable oil food consumption is expected to grow nearly 3 percent with major gains in soybean and palm oil and a slight increase in rapeseed oil, while sunflowerseed oil shrinks. Global growth is driven by the two largest consumers – China and India – while the European Union remains almost unchanged. Global industrial consumption growth is driven by the United States, Indonesia, and Brazil. Usage of palm oil is expected higher in Indonesia, while Malaysia is projected unchanged. Soybean oil industrial usage is expected to increase in the United States, Brazil, and Argentina. Expansion in rapeseed oil industrial usage is forecast for the United States, while the European Union is projected to curb slightly.

Global vegetable oil trade in 2024/25 is

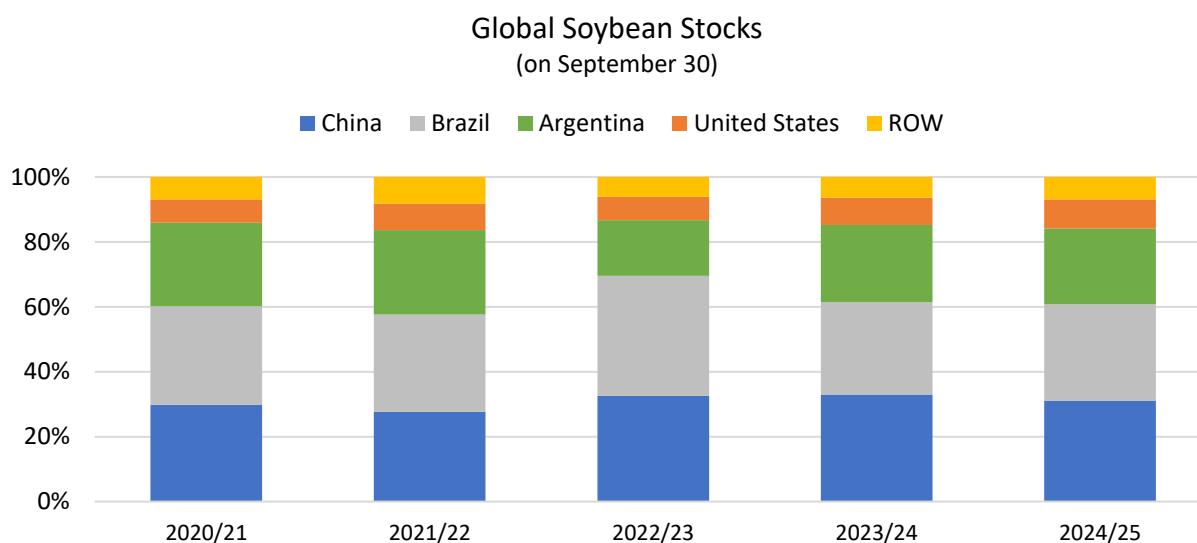

2024/25 COMMODITY OUTLOOKS

SOYBEANS

Global **soybean** production in 2024/25 is forecast at a record 422 million tons, up over 6 percent from 2023/24. If realized, soybean production will expand by the largest annual percentage in over a decade, predominantly on area expansion in Brazil and raised plantings in the United States.

Growth in soybean import demand continues to be led by China, as crush has recovered on strong feed and vegetable oil consumption demand. A slight recovery in imports is projected in Pakistan, Egypt, and Bangladesh, where economic difficulties and restrictive trade policies for Pakistan, have reduced soybean imports significantly in the last 2 years. EU soybean imports are unchanged as growth in feed demand is mostly satisfied through higher imports of rapeseed, soybean meal, and sunflowerseed meal. Argentina is expected to import fewer soybeans in 2024/25 on continuing production recovery. However, strong global demand for soybean meal and oil will support crush in Argentina and steady imports of soybeans from Paraguay.

Global soybean stocks are expected to rise by nearly 17 million tons, with the majority of that growth in major exporting countries – Brazil, the United States, and Argentina. However, China is also projected to build stocks to 39 million tons, accounting for nearly 31 percent of global soybean stocks at the end of the marketing year. With global and exporter stocks rising, global soybean prices are expected to soften in 2024/25.

Global **soybean meal** consumption is projected to rise 4 percent in 2024/25 on ample supplies and growing demand, with China accounting for nearly one third of that growth. Exports of soybean meal are forecast to rise 5 percent on a continuing rebound in Argentina crush and increased processing in the United States driven by demand for the domestic biofuel program. Brazil crush is expected to remain unchanged with soybean meal exports declining compared to the current marketing year. Argentina's share of global soybean meal trade is projected to rise to 37 percent in 2024/25 but remain below the 5-year average. U.S. soybean meal exports are projected at a new record with global share rising to 21 percent compared to the 5-year average of 19 percent.

Global soybean oil production is projected to grow by nearly 3 million tons (5 percent), but much of this growth will occur in China and the United States where exports are limited. Rising exports from Argentina and the European Union will support growing import demand in India and various smaller markets in North Africa and the Middle East. With global consumption rising faster than production, global ending stocks are expected to decline from 2023/24 levels.

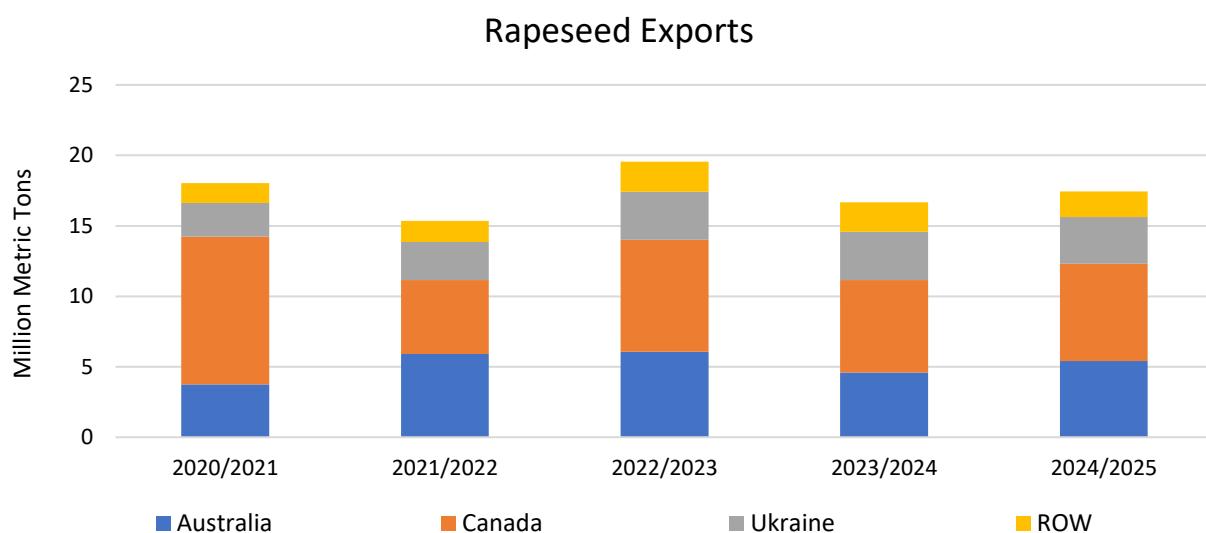

Highlights

- **United States** soybean exports are projected up to nearly 50 million tons, with higher exports at the beginning of the marketing year due to lower Brazilian supplies from the drought-impacted 2024 harvest. U.S. exports are likely to be pressured after South America starts harvest in early 2025. Soybean crush is forecast at a record high driven by strong domestic demand for soybean oil supporting biofuel production. Soybean stocks are forecast up to the highest level in 4 years on larger supplies and increased export competition. Soybean meal exports are forecast at a record, but strong domestic demand for soybean oil as a renewable diesel feedstock will keep U.S. prices at a premium and continue to limit soybean oil exports.
- **Argentina** soybean production is projected to rise to 51 million tons. Trade is expected to partially rebound from the current year with exports, mostly to China, and imports, primarily from Paraguay. Strong global demand for meal and oil and larger soybean supplies will boost crush. Product exports as well as end-of-September stocks are expected to rebound.
- **Brazil** soybean production is forecast to surge by 15 million tons to a new record of 169 million. Exports are projected to rise while crush remain unchanged. September 30 stocks are forecast up by nearly 6 million tons on larger supplies and will increase competition for the United States. Exports of soybean meal are expected to contract following strong domestic disappearance. Soybean oil exports are also projected to decline due to strong domestic demand for biodiesel and for food consumption.
- **China** soybean imports are projected at 109 million on recovering crush and strong demand for vegetable oil consumption. Crush is expected to continue to grow, and stocks are projected to reach a new record of 39 million.

RAPESEED

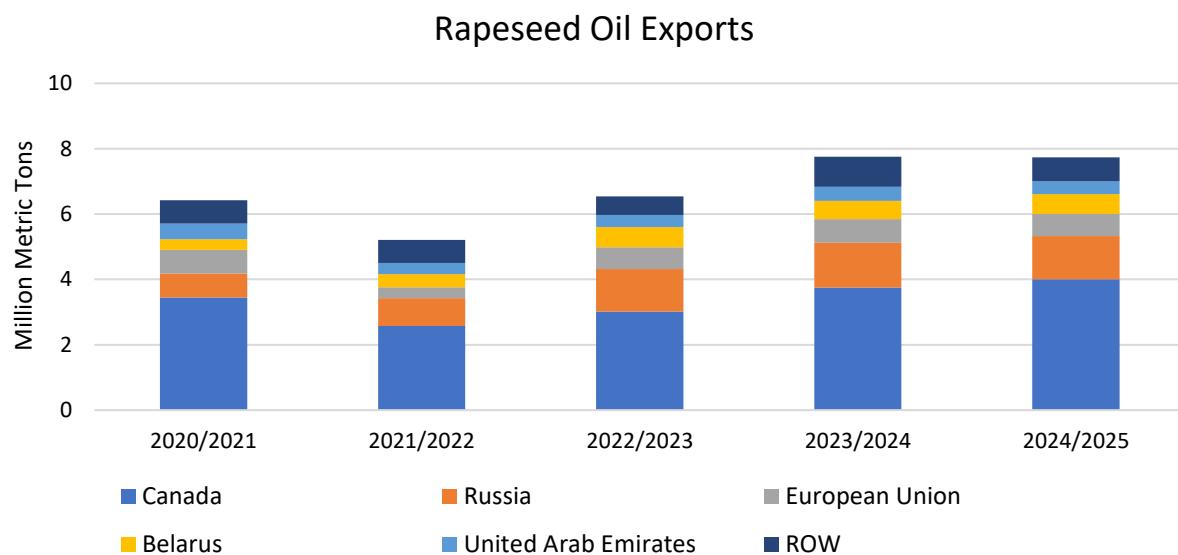

Global rapeseed production in 2024/25 is projected almost unchanged at over 88 million tons. Canada is expected to reclaim its position as the largest producer in the world after being surpassed by the European Union for the past 3 years. The European Union is expected to face a substantial decline in rapeseed production. Additionally, production gains in Australia and Bangladesh are expected to largely offset losses in Ukraine and India.

Global rapeseed carryout is expected to decline in 2024/25, with Canada and Australia drawing down stocks with increasing exports. Global exports are projected to grow modestly with higher production in Australia. Exports from Canada are also projected to strengthen on higher EU demand due to a smaller crop. Global rapeseed crush is unchanged with increases in Canada and Bangladesh offset by declines in China, Ukraine, and the United Kingdom.

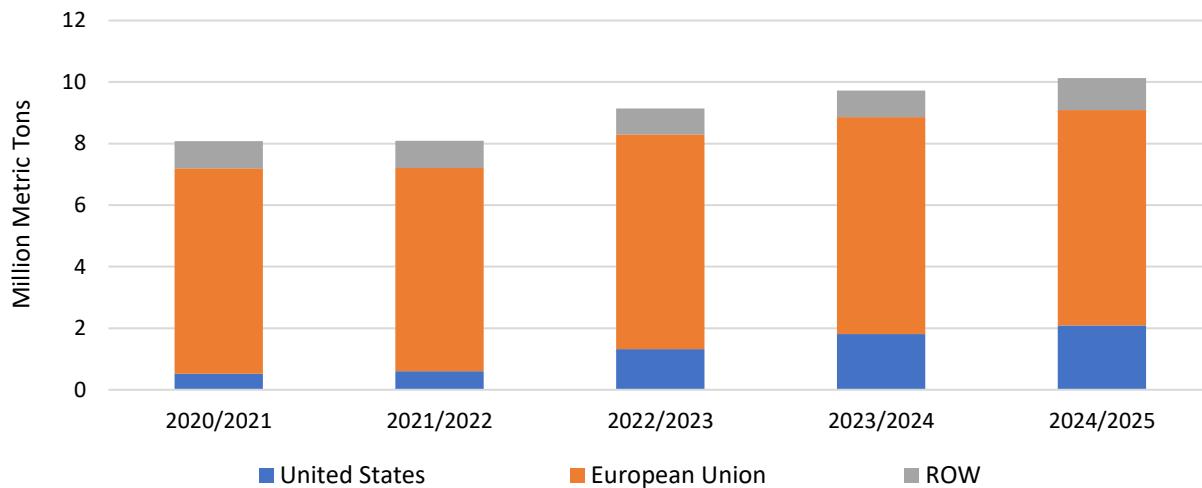

Global rapeseed meal production is forecast at a similar level to the record high of 2023/24. Crush capacity expansion in Canada partially offsets a decline in Ukraine crush. Ukraine crush is lower with a smaller crop expected in 2024/25. Rapeseed meal trade is unchanged as higher Canada rapeseed exports offset lower Ukraine and India rapeseed meal trade. Additionally, European Union imports are expected to drop with higher domestic meal production. China rapeseed meal imports are forecast higher due to lower domestic crush. The United States is expected to remain the largest rapeseed meal importer, mostly sourced from Canada.

Rapeseed oil production is nearly unchanged from 2023/24 with Canada continuing to expand production, offsetting lower expected Ukraine rapeseed oil production. Global rapeseed oil supplies are expected to tighten further with stocks down on rising industrial and food usage. Rapeseed oil trade is lower with declining China imports more than offsetting higher U.S. imports. Higher consumption in the U.S. industrial sector is expected to drive global industrial usage up 2 percent. Rapeseed oil for global food use is expected up 3 percent.

Rapeseed Oil Industrial Usage

Highlights

- U.S. rapeseed oil imports are expected at new heights in 2024/25 as industrial usage increases by 15 percent. Additionally, rapeseed crush is forecast at a new record to supply the burgeoning renewable diesel industry.
- Australia rapeseed production is forecast to grow to 6.5 million tons which would be the third-largest crop on record. In line with the production increase, exports are also expected to rise.
- Canada rapeseed production is projected to reach a 5-year high in 2024/25. Rapeseed exports are up but remain below the previous 5-year average due to higher domestic crush. Exports of meal and oil are expected at record levels on higher U.S. demand for renewable diesel.
- China rapeseed imports are projected to drop for the second year in a row on boosted domestic production. Imports of rapeseed meal and rapeseed oil are expected to curb owing to abundant soybean products available in the market with rapeseed crush expected to shrink. Rapeseed oil stocks are expected down with consumption for food use increasing.
- European Union rapeseed production is forecast to fall to a 3-year low. Imports of rapeseed are expected to accelerate more than the decline in production, facilitating a return to past levels of rapeseed crush. Imports of rapeseed meal and rapeseed oil are expected to contract with increased crush and higher soybean meal consumption.

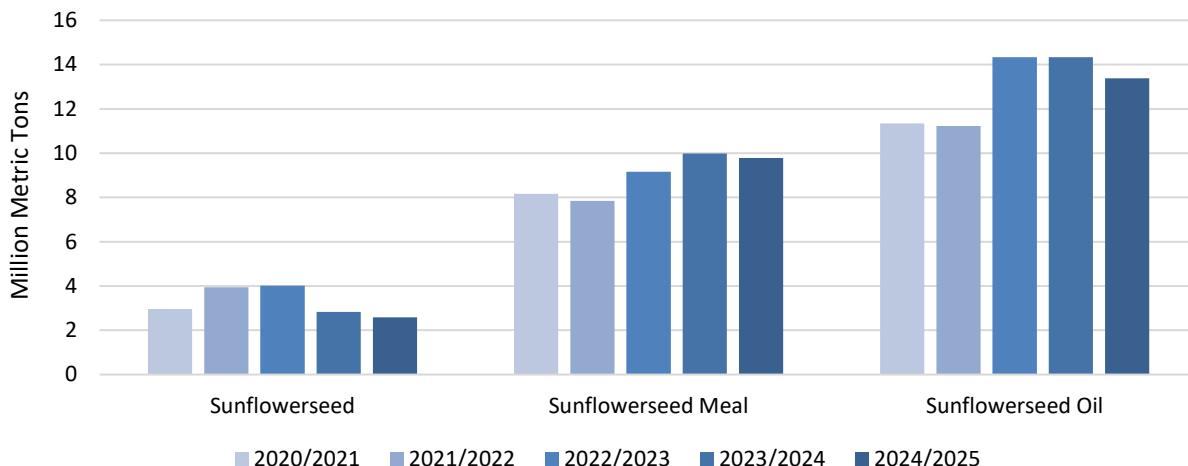

SUNFLOWERSEED

Global **sunflowerseed** production in 2024/25 is forecast to grow 1 percent from the previous year to 55.4 million tons. Reduced production in Russia and Argentina is more than offset by growth in Ukraine and Turkey as well as a record European Union crop. Russia is expected to remain the world's largest producer, followed by Ukraine and the European Union.

Global sunflowerseed stocks are expected to decline, largely due to Russia stocks halving from the previous year. Sunflowerseed imports are expected to ease modestly, with European Union imports

down because of strong domestic production. Global crush remains unchanged from the previous year, with decreases in Ukraine and Argentina offset by increases in Russia and the European Union.

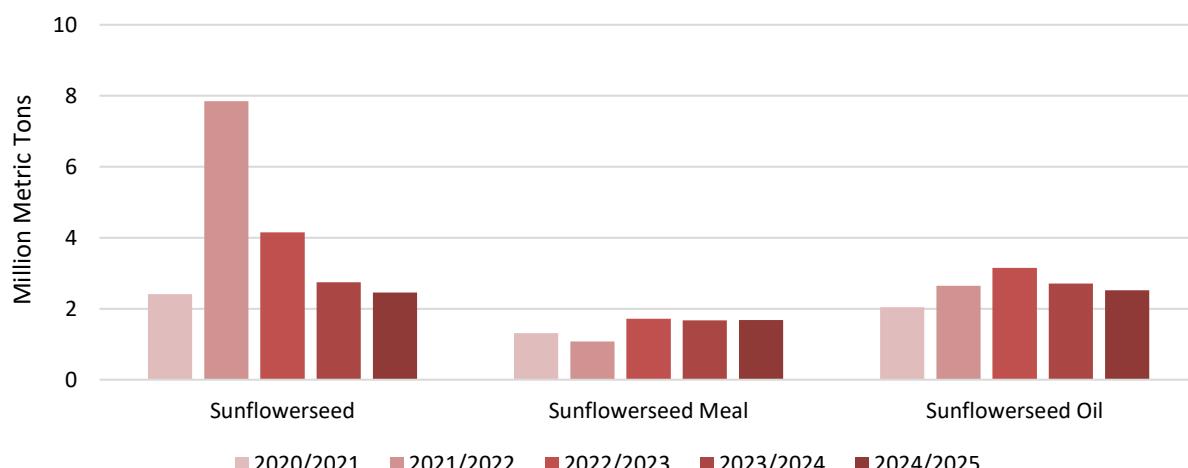

Global Sunflowerseed and Products Exports

Global **sunflowerseed meal** consumption is projected down slightly, driven by decreases in the European Union and Turkey, while consumption in Russia is expected to reach a record level. Sunflowerseed meal stocks are expected to increase slightly, with rising stocks in the European Union, Ukraine, and Turkey more than offsetting falling stocks in Russia and Argentina. Sunflowerseed meal exports are forecast down slightly, with declining exports for Ukraine, Russia, and Argentina to offset large export growth for the European Union.

Global **sunflowerseed oil** consumption is projected down slightly due to lower consumption in the European Union and India. Sunflowerseed oil stocks are forecast to fall from record levels in 2022/23, with reductions in India and Russia offsetting growth in European Union stocks. Sunflowerseed oil exports are also expected to drop, driven by large reductions for Argentina and Turkey. India and the European Union are projected to experience the largest import plunge.

Global Sunflowerseed and Products Stocks

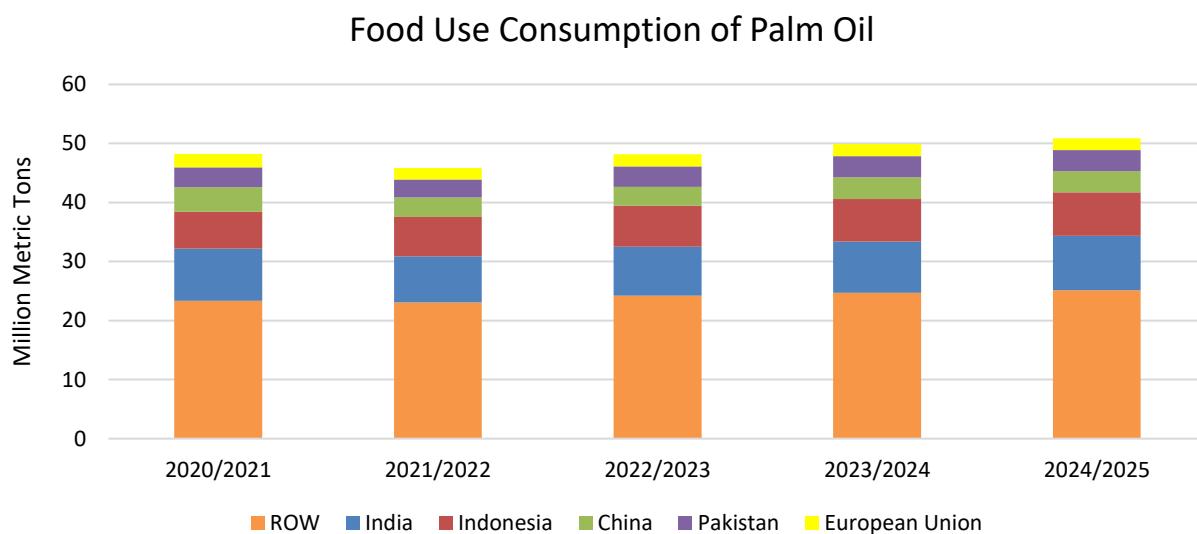

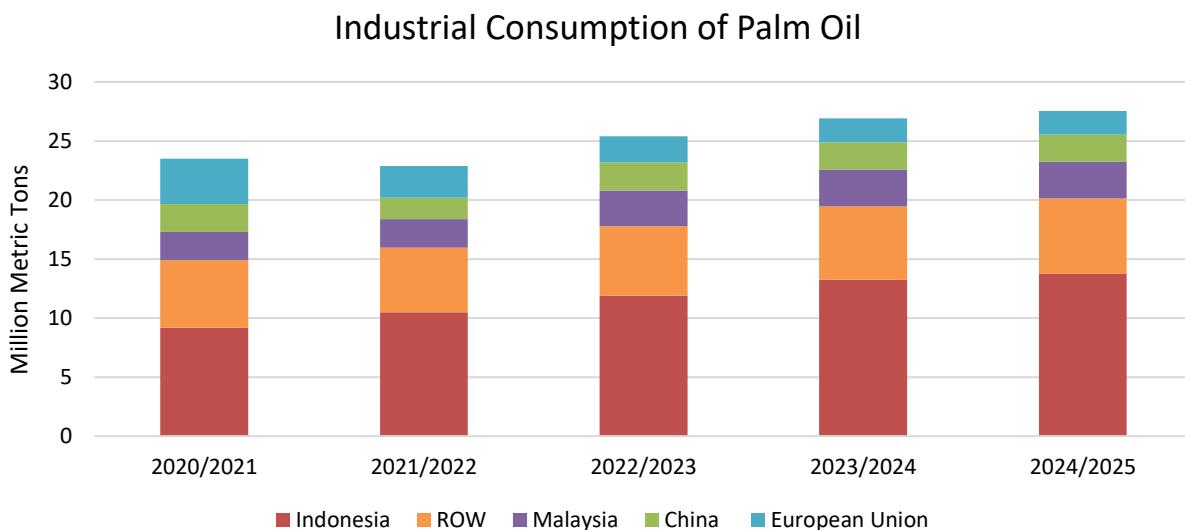

Highlights

- **European Union** sunflowerseed meal exports are forecast to grow by more than half to 1.15 million tons on higher sunflowerseed production and crush, as well as abundant availability of alternative meals for domestic feed use.
- **Ukraine** sunflowerseed crush is forecast down slightly from the previous year on smaller carryin, but Ukraine is expected to remain the world's top exporter of both sunflowerseed meal and oil, accounting for nearly half of the world's exports.
- **Russia** sunflowerseed meal and oil domestic consumption are both expected to grow to meet higher demand, as Russia lowers exports of both products. Sunflowerseed crush is expected to grow slightly despite reduced production, necessitating a drawdown of stocks.
- **Turkey** sunflowerseed oil exports are forecast down by nearly half on lower beginning stocks, requiring a higher proportion of supplies to be used for domestic consumption.

PALM OIL

Global **palm oil** production in 2024/25 is up marginally on improved weather conditions expected in Indonesia and smaller markets in South America. Stocks are projected to shrink on heightened food use in India and industrial consumption in Malaysia and Indonesia. Trade is expected to grow marginally as rising Malaysia and other smaller exporters offset lower Indonesia exports. Indonesia exports are lower due to domestic biodiesel demand growth. Import demand is forecast lower for the European Union, but more than offset by stronger demand from China, India, and many markets in Africa and the Middle East.

Highlights:

- **Indonesia** palm oil domestic consumption is expected to have strong growth with a continuation of a national mandatory B35 biodiesel production program and raised domestic biodiesel demand leading to a decrease in exports despite higher production.
- **India** imports are up on rising food demand and decreased import duties on vegetable oils, including palm oil, extended until March 2025.
- **European Union** imports continue to decline on changing market preferences and concerns over health and sustainability compared to other vegetable oils available at competitive prices.
- **Malaysia** exports are expected to rise moderately on lower competition from Indonesia.

CHANGES TO PSD TABLES

This month, USDA made a series revision to the Brazil local year (LY) soybean, soybean meal, and soybean oil balance sheets. The local year was changed from February-January to January-December and data series were revised back to 2000 (LY 1999/2000). This change was made to capture the early harvest activities. Soybean import, export, crush, feed and waste are adjusted to reflect the January-December period, and ending stocks are estimated for the end of December. The series can be found under “Oilseed, Soybean (Local)” in the Production, Supply and Distribution (PSD) system.

OVERVIEW 2024/25

Global oilseed production is forecast at over 687 million tons, almost 29 million tons above 2023/24. Substantial expansion in Brazil soybeans accounts for about half of this increase. Significant growth in U.S. and Argentina soybeans, European Union sunflowerseed, and Canada rapeseed also contribute to this production surge. Accordingly, crush, trade, and ending stocks are all expected higher. Oilseeds trade is forecast almost 9 million tons higher, with raised soybean exports from the United States, Brazil, and Argentina, barely moderated by lower soybean exports from Russia and Canada. Ending stocks are expected over 16 million tons higher than 2023/24 carryout, mostly on increases in soybean stocks.

Global meal production is forecast over 13 million tons higher than the previous year, and meal consumption is forecast over 12 million tons higher on increased availability of soybean meal. Global meal trade is also up, largely on greater soybean meal trade. Trade in other major meals is virtually unchanged.

Oil production is forecast over 4 million tons higher year over year, driven largely by expanded soybean crush. Total oil trade is unchanged as most major exporters utilize more oil domestically. Ending stocks of vegetable oils are expected lower in 2024/25 with palm oil accounting for the largest decrease in stocks, followed by rapeseed oil. Indonesia and India are expected to drawdown palm oil stocks with China drawing down rapeseed oil stocks.

The projected U.S. season-average farm price for soybeans is \$11.20 per bushel.

OVERVIEW 2023/24

Global oilseeds production is down almost 400,000 tons on lower Sudan peanuts due to conflict and Brazil soybeans on flood damage, partially offset by higher India and Uruguay soybeans. Oilseed trade is down, primarily on lower soybean exports from Brazil and rapeseed exports from Canada. Crush is up almost 2 million tons on higher Brazil and China soybean crush. Meal exports are raised more than 600,000 tons, primarily on a surge from Brazil. Global oil trade is reduced almost 800,000 tons on lower palm oil exports from Indonesia. Global vegetable oil stocks are raised over 700,000 tons on higher sunflowerseed oil and soybean oil carryout.

The projected U.S. season-average farm price for soybeans is unchanged at \$12.55 per bushel.

EXPORT PRICES

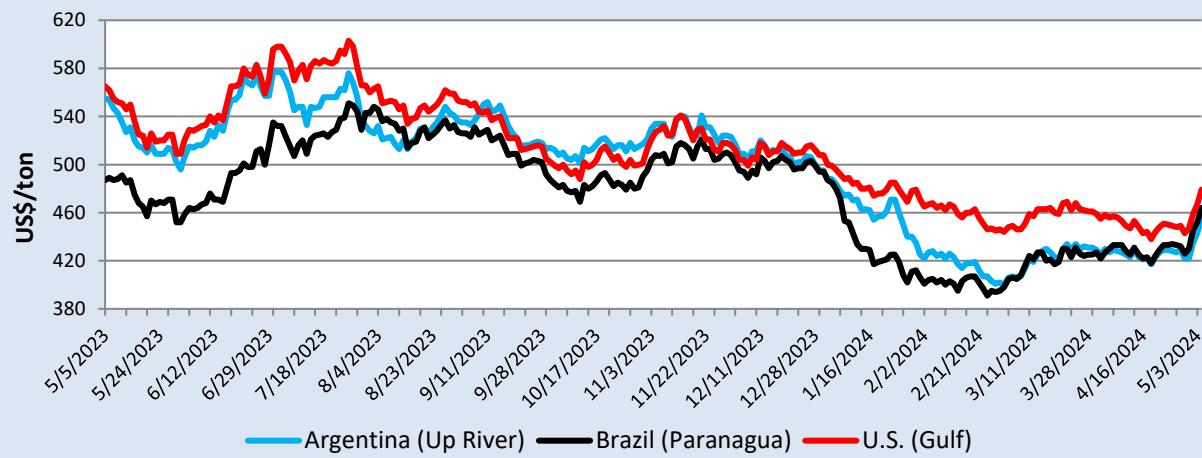

Soybean prices reversed their decline in the past month and gained strength since the April WASDE. Sharp price increases at the beginning of May were due to flooding in Rio Grande Do Sul, threatening Brazil's crop. Soybean meal prices followed the trend of soybeans with a greater magnitude, bouncing back to January levels. Vegetable oil prices decreased on lower energy prices and reduced demand for biodiesel use. Soybean oil prices in the United States declined on record imports of vegetable oil, used cooking oil and fats as well as higher-than-expected oil stocks reported by the National Oilseed Processors Association in mid-April. Palm oil prices dropped, shrinking the price gap and increasing competitiveness with other vegetable oils as production seasonally accelerates.

Soybean Export Prices (U.S. dollars per metric ton)

	U.S. Gulf	Argentina	Brazil
April 5	\$457	\$429	\$433
May 6	\$479	\$456	\$464
Change	+\$22	+\$27	+\$31

2023/24 OUTLOOK CHANGES (All figures are in thousand metric tons)

Country	Commodity	Attribute	Previous	Current	Change	Reason
Argentina	Oilseed, Soybean	Imports	6,100	6,500	400	Higher exportable supplies in neighboring countries
	Meal, Soybean	Exports	20,600	21,100	500	Strong crush and exports to date
Brazil	Oilseed, Soybean	Exports	103,000	102,000	-1,000	Lower exportable supplies on reduced production
	Oilseed, Rapeseed	Exports	7,250	6,550	-700	Pace of trade to date
Egypt	Oilseed, Soybean	Imports	3,100	2,800	-300	Pace of trade to date
India	Oil, Soybean	Imports	3,300	3,000	-300	Pace of trade to date; production increase
Indonesia	Oil, Palm	Exports	27,350	26,750	-600	Raised industrial consumption forecast
Iran	Meal, Soybean	Imports	1,400	1,600	200	Pace of trade to date
Malaysia	Oil, Palm	Imports	1,000	800	-200	Refining less Indonesia palm oil
Uruguay	Oilseed, Soybean	Exports	2,400	2,800	400	Larger crop

ENDNOTES

REGION DEFINITIONS

North America: Canada, Mexico, the United States

Central America: Belize, Costa Rica, El Salvador, Guatemala, Honduras, Nicaragua, Panama

Caribbean: Cuba, Dominican Republic, Haiti, Jamaica, Trinidad and Tobago

South America: Argentina, Bolivia, Brazil, Chile, Colombia, Ecuador, Guyana, Paraguay, Peru, Suriname, Uruguay, Venezuela

EU: Austria, Belgium/Luxembourg, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Malta, Netherlands, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, and Sweden. Effective January 1, 2021, the separation of the United Kingdom (UK) from the European Union (EU) was complete, including trade between both entities. Starting in May 2021 with the release of 2021/22 data, grain PSDs reflect EU27 (shown in the PSD system as "European Union") and UK separately. Beginning with the release of 2021/22 data, historical data for both EU27 and the UK are provided for 5 years (2016/17 through 2020/21).

Other Europe: Albania, Bosnia and Herzegovina, Former Yugoslavia, Gibraltar, Iceland, North Macedonia, Montenegro, Norway, Serbia, Switzerland, United Kingdom

Former Soviet Union: Armenia, Azerbaijan, Belarus, Georgia, Kazakhstan, Kyrgyzstan, Moldova, Russia, Tajikistan, Turkmenistan, Ukraine, Uzbekistan

Middle East: Afghanistan, Bahrain, Iran, Iraq, Israel, Jordan, Kuwait, Lebanon, Oman, Qatar, Saudi Arabia, Syria, Turkey, United Arab Emirates, and Yemen

North Africa: Algeria, Egypt, Libya, Morocco, Tunisia

Sub-Saharan Africa: all African countries except North Africa

East Asia: China, Hong Kong, Japan, South Korea, North Korea, Macau, Mongolia, Taiwan

South Asia: Bangladesh, Bhutan, India, Nepal, Pakistan, Sri Lanka

Southeast Asia: Brunei, Burma, Cambodia, Indonesia, Laos, Malaysia, Philippines, Singapore, Thailand, Vietnam

Oceania: Australia, Fiji, New Zealand, Papua New Guinea

OTHER NOTES

Marketing Years (MY): MY refers to the 12-month period at the onset of the main harvest, when the crop is marketed (i.e., consumed, traded, or stored). The year first listed begins a country's MY for that commodity (2022/23 starts in 2022); except for oilseeds in certain Southern Hemisphere countries, where the second year begins the MY (2022/23 starts in 2023). For a complete list of local marketing

years, please see the FAS website (<https://apps.fas.usda.gov/psdonline/>): go to Reports, Reference Data, and then Data Availability.

Stocks: Unless otherwise stated, stock data are based on an aggregate of differing local marketing years and should not be construed as representing world stock levels at a fixed point in time.

Consumption: World totals for consumption reflect total utilization, including food, seed, industrial, feed, and waste; as well as differences in local marketing year imports and local marketing year exports. Consumption statistics for regions and individual countries, however, reflect food, seed, industrial, feed, and waste only.

Trade: All PSD tables are balanced on the different local marketing years.
