

- Case reports or series of case reports
- Cross-sectional studies/surveys
 - Prospective or retrospective (all applicable study types)
- For harms, we will start by searching for existing systematic reviews of interventions used during pregnancy, postpartum, or breastfeeding, regardless of their indication (*i.e.*, for any disease/condition, not only primary headaches). We will not enforce a date restriction when screening for eligible systematic reviews, but when multiple eligible systematic reviews exist for a certain drug/class of drugs, we will use the most recent or most complete one.
 - We will subsequently search for, and include, large primary studies of interventions not adequately covered by the existing systematic reviews of harms. The specific eligibility criteria (particularly pertaining to study design, minimum sample size, and publication date) will be determined based on available EPC resources, the number of interventions without adequate existing systematic reviews, and the volume of potentially eligible studies.
 - For harms, we will also search the U.S. Food and Drug Administration, other international equivalent agencies, and pharmacopoeia.

Dated: November 19, 2019.

Virginia Mackay-Smith,
Associate Director.
