

The Hydrosphere – Earth and Life Impacted by Water – and vice versa

A Free Four-Part Series
presented by Dr. Terri Woods

1/10 Rivers

1/17 Groundwater

1/24 Coasts

1/31 Glaciers and Climate Change

Lives of North Carolinians are significantly impacted by surface water, groundwater, and climate. We are seldom farther than a few hundred yards from a stream-or the ocean/sounds for those of us on the OBX.

Retired ECU Geology Professor Terri Woods reminds us that it is not enough to live near bodies of surface water, it is necessary to live with them.

Every Tuesday, January 2023 12 p.m. - 1 pm.

Attend one, two, three or all four

KDH Library or via Zoom
