

San Dimas Station

Foothill Gold Line

Project Overview

The Foothill Gold Line from Glendora to Montclair is a 12.3-mile extension of the Metro Gold Line light rail system (currently called the L Line). The project will add new stations in Glendora, San Dimas, La Verne, Pomona, Claremont and Montclair - and will be built in phases.

The project broke ground in December 2017 and has completed two of four contracts. In October 2019, the Construction Authority initiated the main design-build contract with Kiewit-Parsons, a Joint Venture (KPJV) to build the fully-funded 9.1-mile Glendora to Pomona project segment. Major construction started in July 2020 and is expected to take five years to complete to Pomona. The segment from Pomona to Montclair is not yet funded. The Construction Authority is currently seeking the additional funding needed to complete the full project to Claremont and Montclair.

Los Angeles County's sales tax measure, Measure M, is funding the majority of the project to Pomona, along with residual Measure R dollars not used during the last phase of the project. The State of California is also providing a greenhouse gas reduction grant.

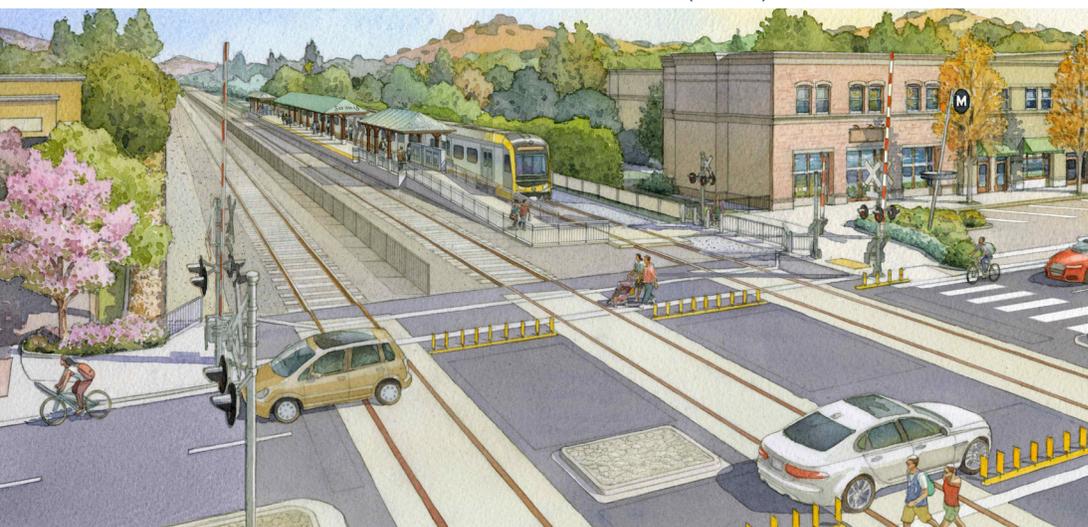

Possible Construction Phasing: The design-build contract awarded to KPJV includes the first 9.1 miles of the project from Glendora to Pomona. The segment from Pomona to Montclair, including the Claremont and Montclair stations, is not yet funded. The Construction Authority is currently seeking the additional funding needed to complete the project to Claremont and Montclair.

The project is overseen by the Foothill Gold Line Construction Authority (Construction Authority), an independent transportation planning, design and construction agency.

PROJECT FAST FACTS

- Two Construction Phases:** 9.1 miles (Glendora to Pomona); 4 stations
3.2 miles (Pomona to Montclair); 2 stations
- Major Construction Began:** July 2020
- Anticipated Completion Year:** 2025 to Pomona
TBD to Claremont & Montclair (contingent on the funding year)
- Daily Train Traffic:** More than 200 Gold Line trains.
- Capacity:** 200 passengers per light rail car; two- to three-car trains.
- Speed:** 55 mph (maximum)
- Train Power Source:** Electricity
- Parking:** 289-space parking facility including EV charging stations, bicycle parking and passenger drop off areas
- At-Grade (street level) Crossings:** 21 to Pomona (26 total to Montclair)
- New and Renovated Bridges:** 19 to Pomona (24 total to Montclair)
- Travel Time:** Once the line is in service, a trip from San Dimas to Pasadena will take approximately 27 minutes and further to downtown Los Angeles will take approximately 56 minutes.

SAN DIMAS STATION

SITE PLAN

The San Dimas Station will be located east of San Dimas Avenue. The station will be a center platform station, with light rail tracks on either side (one for westbound and one for eastbound trains). The single freight track that was located in the center of the rail corridor was relocated to the northern half to make room for the light rail tracks on the southern half of the corridor. While they will share the rail corridor, light rail trains and freight trains do not share tracks. The station's 289-space parking facility (with EV charging stations, bicycle parking and a passenger drop off zone) was recently approved to be relocated south of the railroad tracks, just west of San Dimas Avenue (on the site is the current San Dimas Park and Ride).

Construction – What to Expect

For efficiency of cost and scheduling, the project is built in layers by the design-builder (underground utilities, drainage, communication/systems, street crossings, bridge construction, ballast installation, track installation, etc.), with specialty crews moving from one place to another completing their layer. This process - which includes tens of thousands of work activities - allows the design-builder maximum flexibility to schedule crews and equipment, as well as arrange for needed materials. Current and upcoming construction notices are available anytime at foothillgoldline.org.

During construction, the community can expect temporary impacts (such as short-term lane closures, extended street closures at street crossings, noise mostly from construction vehicles, and other construction-related issues). Permanent changes will also occur due to the project, including safety enhancements at all street crossings (raised medians, red curbing and turn restrictions within 100 feet of the rail corridor at all street crossings), relocation of the freight track to the northern half of the rail corridor, new fencing and walls along the entire rail corridor, and new overhead lines to power the more than 200 Gold Line trains anticipated to run daily. Additionally, the intersection of Bonita Avenue/Cataract Avenue will be fully reconstructed, and a new traffic signal will be installed to replace the current stop signs. A new light rail bridge will be built over the Bonita Avenue/Cataract Avenue intersection for Gold Line trains only, requiring the permanent closure of Monte Vista Avenue at the railroad corridor to vehicles. The bridge and intersection changes are required by the California Public Utilities Commission for safety. A new pedestrian underpass will be built to allow north/south pedestrian access at Monte Vista Avenue. The freight track will remain at street level.

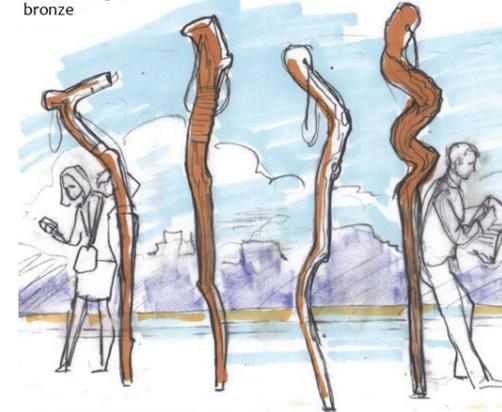

For safety, the following improvements are being made along San Dimas Avenue: (1) a new traffic signal has been installed at Commercial Street/San Dimas Avenue; (2) new right turn lanes are now complete on San Dimas Avenue at Bonita Avenue (one northbound and one southbound) and the traffic signals upgraded; and in the future (3) the San Dimas Park and Ride's eastern driveway (just south of the railroad tracks) will be closed permanently and a new driveway constructed at Commercial Street.

San Dimas Station Art Plan

San Dimas Station Artist Team:
Eugene Daub and Anne Olsen Daub

Eugene Daub and Anne Olsen Daub are the city-selected artist team for the San Dimas Station. Their artwork will capture the city's special "Sense of Place," born of a unique history in the citrus industry, a connection with the land, water and geography, its flora and fauna, along with cultural and community events and activities. There are no less than 25 parks and countless trails and hiking paths in the city. The station's various art plans celebrate the wonders of the parks, mountains and local history. A series of larger than life "walking sticks" located on the platform are inspired by the animals and notable historic characters of San Dimas. They are sentinels that remind the viewer of unseen wonders and majestic vistas of the San Dimas area. They evoke a sense of exploration and discovery. They are an ageless symbol of the explorer in all of us. Animal footprints will be located on the platform or on the canopy column bases. The plans developed for the station are delightful and interactive and allow the viewer an opportunity to pause and reflect on the city's unique character and place.
