

**How to resize a surgical mask to fit your child's face** from <https://huumangear.com>

 <p>How to resize a surgical mask to fit your child's face</p>	<p><b>Step 1.</b> Hold the mask vertically with the inside of the mask facing up</p>
	<p><b>Step 2.</b> Fold in the bottom part of the mask (the part that would go below your chin) halfway and then flatten the crease by pressing down on it.</p>
	<p><b>Step 3.</b> Fold in the top part of the mask (the part that would go above your nose) halfway on top of the bottom half you just folded, then flatten it as well.</p>
	<p><b>Step 4.</b> Still holding the mask vertically, stretch the ear strap and wrap it around your index finger, and then tie a knot.</p>
	<p><b>Step 5.</b> Remove your index finger from the knot, pull and then tighten the knot. <b>Step 6.</b> Repeat step 5 to the other side of the mask.</p>
 	<p><b>Step 7.</b> Open the mask carefully. <b>Step 8.</b> Flip the mask so that the inside of it is facing you. With your index finger, push the tip of the mask (near the ear strap and at the ends of the nose bridge) inward. There should be a small window where you pushed in the mask.</p>
 	<p><b>Step 9.</b> Flatten the part you pushed inward to fit the mold of the mask wall. Repeat on other side.</p>
