Abstract: The National Emission Standards for Hazardous Air Pollutants (NESHAP) for Stationary Reciprocating Internal Combustion Engines (40 CFR part 63, subpart ZZZZ) apply to owners and operators of a stationary reciprocating internal combustion engines (RICE) at either a major or area source of hazardous air pollutant (HAP) emissions, except if the stationary RICE is being tested at a stationary RICE test cell/stand. A stationary RICE is any internal combustion engine which uses reciprocating motion to convert heat energy into mechanical work and which is not mobile. New facilities include those that commenced construction, modification or reconstruction after the date of proposal. This information is being collected to assure compliance with 40 CFR part 63, subpart ZZZZ.

In general, all NESHAP standards require initial notifications, performance tests, and periodic reports by the owners/operators of the affected facilities. They are also required to maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility, or any period during which the monitoring system is inoperative. These notifications, reports, and records are essential in determining

compliance, and are required of all affected facilities subject to NESHAP.

Form Numbers: None.

Respondents/affected entities:

Owners or operators of stationary reciprocating internal combustion engines (RICE).

Respondent's obligation to respond:

Mandatory (40 CFR part 63, subpart ZZZZ).

Estimated number of respondents: 910,177 (total).

Frequency of response: Initially, quarterly, semiannually, and annually.

Total estimated burden: 3,620,000 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: \$461,000,000 (per year), which includes \$41,700,000 in annualized capital/startup and/or operation & maintenance costs.

Changes in the Estimates: There is an adjustment increase in the total estimated burden as currently identified in the OMB Inventory of Approved Burdens. The increase in burden from the most recently approved ICR is due to an increase in the number of respondents. EPA estimates a linear growth in the industry sector with an additional of 1,284 new sources per year that become subject to the NESHAP, plus there is another 755,430 respondents which are responsible for only recordkeeping requirements. The capital/startup and operation and maintenance (O&M) costs have increased compared with the costs in the previous ICR due to an increase in the number of existing sources operating portable CO monitors.

Courtney Kerwin,

Director, Regulatory Support Division.
