SUPPLEMENTARY INFORMATION:

I. Abstract

This request is for extension of a current information collection. The National Estuarine Research Reserve System (NERRS) is a partnership between the National Oceanic and Atmospheric Administration (NOAA) and 22 states and Puerto Rico that protects more than 1.3 million coastal and estuarine acres in 28 Reserves for long-term research, monitoring, education, and stewardship, established under Section 315 of the Coastal Zone Management Act (CZMA) of 1972 (16 U.S.C. 1451), 16 U.S.C. 1461. The NERRS consists of carefully selected estuarine areas of the United States that are designated, preserved, and managed for research and educational purposes. The Reserves are chosen to reflect regional differences and to include a variety of ecosystem types according to the classification scheme of the national program as presented in 15 CFR part 921. As part of a national system, the Reserves collectively provide a unique opportunity to address research questions and estuarine management issues of national significance. The Reserves also serve to enhance public awareness and understanding of estuarine areas and provide suitable opportunities for public education and interpretation. Regulations provide guidance for delineating Reserve boundaries and additional guidance for

arriving at the most effective and least costly approach to establishing adequate state control of key land and water areas. Any qualified public or private persons, organizations or institutions may compete for research funding to work in research Reserves. In fact, applicants are almost always states.

Subsection 315(e)(1)(B) of the CZMA authorizes the National Ocean Service (NOS) to make grants to, or cooperative agreements with, any coastal state or public or private institution or person for purposes of supporting research within the NERRS. This program is listed in the Catalog of Federal Domestic Assistance under "Coastal Zone Management Estuarine Research Reserve, Number 11.420". Applications for such grants follow the provisions of 2 CFR 200. During the site selection and designation process, information is collected from states in order to prepare a management plan and environmental impact statement. Designated Reserves apply annually for operations funds by submitting a work plan; subsequently, progress reports are required every six months for the duration of the award. Each Reserve compiles an ecological characterization or site profile to describe the biological and physical environment of the Reserve, research to date and research gaps. Reserves revise their management plans every five years. A competitive fellowship program supports opportunities for graduate students to conduct research at each Reserve. This information is required to ensure that Reserves are adhering to regulations and that the Reserves are in keeping with the purpose for which they were designated.

II. Method of Collection

Respondents have a choice of either electronic or paper submissions. Methods of submittal include email of electronic forms, and mail and facsimile transmission of paper forms.
