l. *Project Description:* The existing Rollinsford Project consists of: (1) A 317-foot long, 19-foot-high concrete-masonry dam; (2) a 70-acre impoundment with a gross storage capacity of 456 acre-feet at a normal elevation of 71.25 feet National Geodetic Vertical Datum of 1929, including the 15-inch spillway flashboards; (3) an 82-foot-long, 52-foot-wide intake facility; (4) a 350-foot-long, 10-square-foot concrete penstock that empties into a 250-foot-long, 9-foot diameter steel penstock that directs flow to a 30-foot-long, 40-foot-wide reinforced concrete forebay that is integral with the powerhouse; (5) a 38-foot-long, 60-foot-wide concrete and brick masonry powerhouse containing two, vertical Francis turbine-generator units rated at 750 kilowatts (kW) each, for a total installed capacity of 1,500 kW; (6) a 38-foot-long, 34-foot-wide tailrace channel; (7) a 100-foot-long underground transmission line that extends from the powerhouse to a step-up transformer, where voltage is increased from 4.16-kilovolt (kV) to 13.8 kV; and (8) appurtenant facilities.

The Town voluntarily operates the project in a run-of-river mode using an automatic pond level control system, such that outflow from the project approximates inflow. The existing license requires the licensee to release: (1) A continuous minimum flow of 10 cubic feet per second (cfs) or inflow, whichever is less, from the dam to the bypassed reach; and (2) a minimum flow of 115 cfs or inflow, whichever is less, through the powerhouse to the downstream reach. The average annual generation was 5,837.9 megawatt-hours for the period of record from 2005 to 2018.

The Town proposes to: (1) Continue to operate the project in a run-of-river mode; (2) provide a minimum flow release of 35 cfs or inflow, whichever is less, into the bypassed reach; (3) install and operate an upstream eel ramp; (4) install and operate a downstream fish passage facility for adult eels and resident and migratory fish species; (5) implement nighttime turbine shutdowns from 8 p.m. to 4 a.m. during the months of September and October for 3

consecutive nights following rain accumulations of 0.5 inch or more over a 24-hour period; (6) conduct a study to quantify movements of river herring and American shad migrating downstream from the project tailwater through the bypassed reach to the project dam; and (7) consult with the New Hampshire and Maine State Historic Preservation Officers to determine the need to conduct archaeological or historical surveys and to implement avoidance or mitigation measures before beginning any land-disturbing activities or alterations to known historic structures within the project boundary.
