(Passport), to possess and use SNM for developing new technologies to detect special nuclear materials in cargo containers for the U.S. Department of Homeland Security (DHS), Domestic Nuclear Detection Office. The license was terminated at Passport's request since it no longer needed the sources for development of their cargo inspection system.

SUPPLEMENTARY INFORMATION:**I. Discussion**

The NRC has terminated License No. SNM-2016, held by Passport Systems, Inc., for possession and use of SNM at its facilities at 76 Treble Cove Road, in

North Billerica, and at 700 Summer St., Conley Terminal in the Port of Boston. Passport was contracted by the DHS to develop new technologies to detect special nuclear materials in cargo containers. The program included utilizing SNM placed inside fully loaded cargo containers and other concealments during testing of proprietary equipment to determine if it can locate SNM sources placed inside containers when surrounded by the cargo. The materials used consisted of Low Enriched Uranium and High Enriched Uranium constructed for DHS. The SNM consisted of SNM produced by Pacific Northwest National Laboratory, a highly enriched uranium metal source, low enriched uranium metal sources, and uranium oxides (UO₂ and U3O₈). The sources used under this license were constructed by and owned by the Department of Energy, who retains ownership.

The initial application for this license was received on November 5, 2010. The NRC issued Passport's SNM license on December 12, 2011. Prior to submitting its request for license termination on October 16, 2019, during NRC staff inspections of Passport's main office in North Billerica, MA, and its field office in the Port of Boston on August 29-30, 2018, and March 19, 2019, respectively, Passport stated that it had discussed its intention to terminate their SNM-2016 license since it no longer needed the sources for development of their cargo inspection system. Passport's use of the licensed materials was for testing newly developed detection equipment. Therefore, consistent section 51.22(c)(14)(v) of title 10 of the *Code of Federal Regulations* (10 CFR), the initial licensing action was categorically excluded from the need to prepare an Environmental Assessment or an Environmental Impact Statement. The NRC staff prepared a safety evaluation report for the termination of SNM-2018. This license termination complies with 10 CFR 70.38, the standards and requirements of the Atomic Energy Act of 1954, as amended, and the NRC's rules and regulations as set forth in 10 CFR Chapter I. Accordingly, this license termination was issued on May 4, 2020.

The NRC is issuing a revision to an existing guide in the NRC's “Regulatory Guide” series. This series was developed to describe methods that are acceptable to the NRC staff for implementing specific parts of the agency's regulations, to explain techniques that the staff uses in evaluating specific issues or postulated events, and to describe information that the staff needs in its review of applications for permits and licenses.

RG 1.187, Revision 1, entitled, “Guidance for Implementation of 10 CFR 50.59, ‘Changes, Tests, and Experiments’” (ADAMS Accession No. ML17195A655), endorsed, with clarifications, the guidance in Nuclear Energy Institute (NEI) 96–07,
