

NMFS has also determined that Atlantic bluefish is now overfished. The most recent assessment for bluefish, finalized in 2019 and using data through 2018, indicates that the stock is overfished because the spawning stock biomass is less than the minimum stock size threshold. This assessment incorporated new data from the Marine Recreational Information Program which revised our understanding of the level of recreational catch, spawning stock biomass, fishing mortality, and recruitment. The new data indicate that bluefish spawning stock biomass has been below the overfished threshold since 2014. NMFS has informed the Mid-Atlantic Fishery Management Council that it must develop a rebuilding plan for this stock.

Dated: November 22, 2019.

NMFS may use this data for general purpose statistics and program evaluation.

Affected Public: Primary respondents are businesses or other for-profit organizations (e.g., groundfish fishermen, fishing companies, partnerships, and shorebased first receivers), individuals or households, and state fisheries agencies.
