

evaluated the efficacy and implementation of different strategies and measures for mitigating bycatch. The workshop produced some key technical outputs, including an extensive review of techniques across different gear types and species, together with a summary table and a draft decision-making tool (decision tree) which could be used to support management decision-making processes. The workshop recommended that FAO develop technical guidelines on means and methods for prevention and reduction of marine mammal bycatch and mortality in fishing and aquaculture operations in support of FAO's Code of Conduct for Responsible Fisheries, which are currently under development.
